The new standards invite two comments. To begin with, there is no requirement for duplicate testing of all lots of vaccine (although the Public Health Service is increasing the number of lots on which it is running tests). The reasons why PHS has not asked for full duplicate testing are that the Health Service hasn't the manpower or facilities to perform them, and doesn't believe duplicate tests are necessary. Last year, the vaccine used in the field trial was triplicate-tested because few laboratories were experienced in performing the tests, and as a test of the reliability of the safety tests themselves. The tests (especially the tissue culture tests) were found sufficiently reliable so that no purpose would be served by holding up immunizations this year until all lots of vaccine could be duplicate-tested.

The other comment is that the new testing procedures, as Dr. Scheele has said, make a safe vaccine safer. They lock up all the doors through which live virus could have got into the Cutter vaccine, or might get into other vaccine. However, they could and should have been developed before the Cutter incident. Failing that, they could and should have been developed without putting the immunization program into reverse.

In saying this, I am aware, of course, that I have the benefit of hindsight. Also, I am urging someone else to have shown courage, I, for one, might have lacked, had I been in the kitchen when the heat was on.

It seems to me that the Surgeon General should have announced, as soon as he realized that some of the Cutter vaccine had gone sour, that Cutter's polio vaccine production unit had been shut down and would not be reopened until it had been entirely rebuilt under the most severe safeguards. Simultaneously, he should have directed other manufacturers to perform a final after-bottling live virus test on a sample of adequate size. This would have provided immediate protection against live virus in the final product (however it got there), and enabled the immunization program to proceed. Any other needed changes in safety standards could then have been made later.

The Surgeon General must or should have recognized almost immediately the probability that he was dealing with live virus, and that how it got there was likely never to be settled for sure. Instead of first conducting

a scientific experiment to settle largely unanswerable questions, he should have been busy putting out the forest fire that the Cutter accident had started.

If he had paid attention to putting out the fire, much less damage would have been done to the immunization program, to the Public Health Service, to public confidence in the Salk vaccine, to the dignity of the medical profession in general, and, incidentally, to Cutter Laboratories. An ironical feature of the policy the Surgeon General and his superiors actually followed—ironical because this is a Republican, probusiness administration—is that it has served only to deepen Cutter's difficulties. If the Surgeon General had announced that the Cutter polio-vaccine unit would have to be rebuilt—which it will have to be anyhow, if the Berkeley firm again expects to sell the vaccine—Cutter's name would soon have dropped out of the headlines. The Health Service's prolonged refusal to say what the situation was at Cutter and what was being done only kept reporters asking questions and thus kept Cutter's name in the newspapers.

Perhaps the misguided silence on Cutter was merely one more manifestation of a failing that has plagued the Health Service and the Department of Health, Education, and Welfare throughout the vaccine mess. The Health Service and the Department not only hurt the polio program and themselves by doing the wrong things. They did it through plainly avoidable public-relations ineptness, typified by Dr. Scheele's penchant for announcements in the small hours of the morning and by Secretary Hobby's classic fatuity: "No one could have forseen the public demand for the vaccine."

Shortly before I left Washington, I stopped by for a chat with a friend in the Public Health Service who has nothing to do with polio or vaccines. "The only good thing this mess has shown," he said, "is that people are more discriminating than we think. Most of the kids who missed out on their shots will be back, though perhaps not as soon as they should be. But I don't know how our Service will come out. I asked a housewife who withdrew her youngster from the program at his school whether she'd lost confidence in the vaccine. 'No,' she replied, 'I'm just waiting for the Public Health Service to get itself squared away.' "

The Silver Subsidy

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an excellent editorial from the Wall Street Journal entitled "Silver Service," and an article from the Christian Science Monitor by George Ericson. Both the editorial and the article deal with the fictitious argument that the silver subsidy is a profit to the Government.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of June 1, 1955]

SILVER SERVICE

Silver a few days ago achieved a kind of parity with gold. Private buyers paid more for it than the 90.41 cents an ounce which the United States Treasury stands ready to shell out for it if it is mined in this country.

For the past 22 years this has not been the case. In 1933 American silver producers began receiving this special treatment, and it has amounted to a very substantial annual subsidy, since for almost the whole of those 22 years the market price has been far below the Treasury's buying price.

In contrast, gold, though much more widely regarded as a useful monetary standard, has sold most of the time at prices equal to or higher than the Treasury would pay for it. Silver, always jealous of gold, can now boast that it, too, stands on its own feet.

The silver mining industry can boast another honor. It has the distinction of being probably the inventor, at least in the United States, of price-support and stockpiling schemes for its own benefit. There was a Treasury silver-purchase program as far back as the 1870's—long before the American farmer had thought of any such thing. Of course, since the present silver program was started in 1933, other interests have caught on. Elaborate and permanent schemes of the same general kind, covering major farm commodities, have been adopted, and the idea also has spread to additional metals, including lead, zinc, mercury, and others.

But silver has a special magic of its own, by which even the Treasury benefits. Even though it pays more for silver than it's worth, it manages to make a profit on it—a secret which would be invaluable in the commercial world. The moment Uncle Sam buys an ounce of silver at 90.41 cents he lists it as an asset worth $1.29. Then he issues silver certificates on the basis of that new value. This process is called seigniorage, in reverence for the lords and kings who used to steal from their subjects in a similar manner.

You've probably got some of these certificates in your pocket right now. If you turned them in for the silver (in accordance with the promise on their face) you would, of course, lose about 30 cents of each dollar so exchanged. Fortunately, however, Uncle Sam will accept such bills in full payment of taxes on the $1.29-an-ounce basis of value. So Uncle Sam is rightly regarded in a better light than those old lords and kings.

Yet it is obvious that the Government could issue paper money of this kind without bothering to accumulate all that silver. It's got about 3 billion ounces of it, 15 times the world's annual production at the present rate. That's far in excess of any other stockpile in relation to output. Furthermore, this is one hoard that can't possibly have any real use in the war emergency.

Thus the silver stockpile is the first to have been started, relatively the biggest, and also the most useless. Quite a record for an industry about as big as the manufacture of gloves.

[From the Christian Science Monitor]

FEDERAL SILVER BUYING PROGRAM HELD ILLOGICAL

(By George Ericson)

Once more silver has crept into the limelight, with the price at a 35-year high. Consuming interests are in conflict with producers and all the old arguments pro and con current before and during World War II are being revived. The Government is sitting on top of the world's largest accumulation of the metal which is being augmented by Federal purchases of newly mined silver. At the same time industry is steadily increasing its use of the metal at rising prices, at a time when foreign countries are finding it difficult to obtain silver for coinage purposes.

Only this week Senator GREEN, of Rhode Island, took up the cudgels for the users of silver, as he has done on other occasions, and attacked the silver bloc of western Senators for trying to prevent hearings on his measure to repeal the Silver Purchase Act. This act in the eyes of most economists has outlived its usefulness. It obligated the United States to buy all the silver mined at a federally fixed price and retain it in stockpile until the price reaches 90.41 cents a troy ounce, after which the Government could sell out of "free stocks" to industry at say 91 cents an ounce, the slight difference between the two prices being accounted for by transportation costs.

SILVER BLOC FIGHT TO KEEP ADVANTAGE

The silver question is a classic example of how a subsidy serves the interests of one group while it nullifies the law of supply and demand. For decades the producing interests have been able to extract legislation which gives them substantially higher prices than would be possible in a free market. They have advanced the double-barrel argument that much of the silver thus bought becomes part of the monetary reserves of the currency system, and, too, that withdrawing price support would severally hurt zinc, lead, and copper companies, since silver is a valuable byproduct of mining such metals.

The latest tactic of the silver Senators is to delay hearings on a repeal measure, either on the assumption that indefinite postponement will prevent action, or that full publicity will alert the voting public to the irrationality of Federal silver buying. Such buying merely adds to the tons of silver put underground, now more than adequate as a monetary reserve, and produces an artificial scarcity which raises costs to the fabricating, photographic, and of late to the electronics industries, and, of course, to the public. With 1,285,000,000 ounces in the Treasury, and 410 million ounces loaned to our allies during World War II which is beginning to be repaid, any plea that we need silver, to stockpile it, is hollow.

UNITED STATES POLICY CAUSES SCARCITY OF THE METAL

With industry at large using more silver, 15 to 20 percent is the estimate, and with Mexican stocks depleted because of a 17 million-ounce purchase by Iran, the plight of the lend-lease countries who must repay the United States silver loan within 2 years from now is given emphasis. The largest borrowers, India, Pakistan, and Britain, unable to obtain the silver in any other way, have begun to substitute baser metals for their silver coins, and it is reported are using the silver content to pay the United States. Thus this country is doing on a minor scale what it did to China when the Silver Purchase Act pushed that country off the silver standard.

The opponents of a free market for silver said recently that "no worthwhile result could possibly accrue to the country" if the Green bill were enacted, since the New York market price and the Treasury selling price are now the same. To which Senator GREEN logically retorted that in that case there was no good reason why these Senators should oppose the repeal.

Of course, the western Senators hope that the $1.29 an ounce price, held to be its full monetary value, will eventually be attained. For every ounce purchased the Treasury can chalk up a gain of about 29 cents. Adding the profit on 400 million ounces owed us would enable the Treasury to claim a $640 million profit, no mean sum. However, the eastern Senators just say the the gain is fictitious. Will economic reasoning resolve this impasse between the producers and the users?

Taxation of Business Income Derived From Foreign Sources

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. COOPER. Mr. Speaker, I have recently received from the Secretary of the Treasury, the Honorable George M. Humphrey, a letter and accompanying memorandum pertaining to the taxation of business income earned abroad. The Secretary's letter recommended favorable consideration of legislation which would grant a lower rate of tax on corporate business income earned abroad, somewhat similar to the present tax treatment accorded income earned in the Western Hemisphere.

As chairman of the House Committee on Ways and Means, I introduced legislation, H. R. 7725, which would give effect to this recommendation of the Secretary of the Treasury which is in conformity with the President's recommendation as set forth in his message to the Congress on foreign economic policy of January 10, 1955.

For the benefit of those persons who are interested in this subject, I will insert at this point in the RECORD the letter which I received from the Secretary of the Treasury with the memorandum that accompanied that letter:

THE SECRETARY OF THE TREASURY,
Washington, July 27, 1955.

Hon. JERE COOPER
Chairman, Committee on Ways and Means, New House Office Building, Washington, D. C.

MY DEAR MR. CHAIRMAN: Last year, your committee and the House of Representatives included as part of the tax revision bill new provisions giving a lower rate of tax on corporate business income earned abroad, somewhat similar to that available since 1942 to income earned in the Western Hemisphere. Provision also was made for postponement of taxes on the income of foreign branches until it was removed from the country where it was earned, a treatment somewhat comparable to that now given to the income of foreign subsidiaries. These sections were omitted from the bill as reported by the Senate Finance Committee, but the report of that Committee stated the hope that provisions along these lines might be developed in the conference between the House and the Senate before final passage of the tax bill. This was not done. The Treasury Department has continued to examine the problem since that time.

I now submit to you a suggested draft of legislation designed to secure the results which were sought and apparently desired last year. This is in accord with the President's recommendation in 1954, which was reaffirmed in his message on foreign economic policy on January 10 of this year.

The purpose of this recommended legislation is to facilitate the investment abroad of capital from this country. At present our business firms are at a disadvantage in countries with lower taxes than our own when they have to compete with local capital, or capital from countries which impose lower taxes on foreign income than we do. Foreign countries are also under an incentive to increase taxes on United States enterprises up to the level of United States tax rates.

Capital investment will aid in the economic development of foreign countries. Participation by United States enterprises will encourage development along the lines we have followed in this country which are especially helpful in raising living standards, through high wages and mass markets, and which will promote the flow of international trade with the United States.

The Treasury staffs and I will be glad to be of such assistance as we can to you, your committee, and your staffs in any consideration which you may wish to give to the taxation of foreign business income. A memorandum explaining our analysis of three of the problems we have considered in this area is enclosed.

Sincerely yours,
G. M. HUMPHREY,
Secretary of the Treasury.

MEMORANDUM ON PROBLEMS IN TAXATION OF FOREIGN INCOME

The principal problem in developing recommendations for new legislation on taxation of income from foreign sources has been in the definition of foreign business income. Some argue for a broad definition, which would include not only income earned from significant business activity actually conducted abroad but also income from products made here and merely sold for delivery abroad. Others favor a definition related to a "permanent establishment" abroad, or to the existence of a business activity subject to taxation in the country where it is conducted. Still others prefer a specific listing of designated activities which are deemed to be of particular importance. Naturally, the representatives of almost every particular industry or activity argue that they should not be left out of any group which receives favorable tax treatment.

In our analysis of the problems of definition, the following principles have seemed important. (1) As a matter of national policy, it would not be desirable or wise for this country to subsidize exports by taxing profits from exports at a lower rate than profits from domestic sales. For this reason, a definition based, on ultimate destination, or place of delivery of goods produced, would not be satisfactory. (2) Small business should have the same potential advantages as larger businesses. (3) The standard selected should not be subject to manipulation by arrangements, for example, to rent an office or pay a small tax abroad to qualify for a substantial tax advantage at home.

The definition of foreign income suggested in the attached draft legislation revolves around the active conduct of a trade or business abroad, with the exception of export trade. It is a broad concept, related to economic activities which often involve capital investment and typically involve full participation and integration in the economy of the country where it is carried on. To avoid any tax motivation for companies to shift to foreign countries their production of goods intended for our own home markets, the importation to the United States of any substantial part of the products manufactured abroad would disqualify a company for the special tax treatment.

Inevitably there will be difficulties in administering this or any other definition of foreign income. In some instances it will be difficult to draw the dividing line between manufacturing which would qualify for the lower tax and minor assembly or repackaging which would not qualify. Such difficulties, however, should not stand in the way of an attempt to foster economic development through private capital investment.

Two problems, of more limited scope, exist in connection with the postponement of tax on income earned by foreign branches.

First, under present law the income from a foreign subsidiary corporation is not taxed until it is received by the domestic parent company. There is no legal basis for taxation by this country of such income so long as it is held abroad by the foreign subsidiary, regardless of how it is reinvested or shifted from the country where it is earned to other foreign countries. It has been proposed that foreign branches of United States corporations be given similar latitude to shift funds between countries with no intervening tax imposed by the United States until foreign income is finally repatriated.

A deferral of tax on foreign income until it is repatriated would give the maximum encouragement to foreign investment. However, such a provision would be subject to abuse. There could be indefinite postponement of tax by shifting profits earned in high-risk areas to low-risk investments in other places. The diversification and growth of foreign investment among firms already operating profitably abroad would receive greater benefit than that of firms presently operating solely in the United States. It therefore seems preferable to adopt deferral of tax on branch income on a limited basis, at least in the first instance.

The second problem concerns the simultaneous allowance of both a deduction and a credit for foreign taxes on income received through foreign subsidiaries. At present the earnings of a foreign subsidiary corporation, when received as dividends by the parent corporation here, are subject to the regular United States corporation income tax, but a credit is allowed against the United States tax for any foreign income tax paid by the subsidiary. The United States tax is imposed only on the subsidiary's net earnings after payment of the foreign income tax. The combined effect of the credit and deduction (under some combinations of rates) is a somewhat lower total tax, foreign and domestic, than the United States tax would be by itself. For example: when the foreign corporate tax rate is one-half of our rate (26 percent against our 52 percent), the combined effective tax on the foreign income (foreign and domestic) works out to only a little over 45 percent. This feature of the foreign tax credit was adopted in the Revenue Act of 1918. No recommendation has been made to change it, presumably because it has not seemed desirable to increase, directly or through technical changes, the present tax on foreign business income.

A similar treatment of foreign income taxes is suggested in the proposed taxation of income from foreign branches. This is not a necessary or essential part of the program, and is included only to secure similarity with tne taxation of income from subsidiaries, along the lines established by the 1918 Revenue Act.

Medical Profession Endorses Handling of Salk Vaccine by Secretary Hobby and Dr. Scheele

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

MINNESOTA STATE MEDICAL ASSOCIATION,
St. Paul, Minn., June 2, 1955.

Hon. WALTER H. JUDD,
Congressman, Fifth Minnesota District, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: The following telegram was sent to President Eisenhower, Mrs.

Hobby, and Dr. Scheele by the Minnesota State Medical Association.

We are sending it to you for your information.

"The Minnesota State Medical Association, in its 102d annual session in Minneapolis, unanimously endorses and commends the admirable way in which you, Mrs. Hobby, and Dr. Leonard Scheele have handled the Salk polio vaccine controversy. We believe implicitly in the honesty and integrity of the manufacturers, of the distributors, of the medical profession, and in the good sportsmanship of the American people to handle the situation in the proper manner without Federal controls. We wish to have you know we heartily commend your attitude in this whole matter.

"A. O. SWENSON, M. D.,
"President."

Sincerely yours,

R. R. ROSELL,
Executive Secretary.

Tax Policies of the Secretary of the Treasury

EXTENSION OF REMARKS
OF

HON. ROBERT W. KEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. KEAN. Mr. Speaker, on August 1, the gentleman from Indiana [Mr. MADDEN], in discussing the record of the 84th Congress, made a series of statements critical of the tax policies of the Secretary of the Treasury. Constructive criticism is always welcome. However, the statements of the gentleman were so ill-founded and misleading that they should not be allowed to go unanswered.

Following are some of the erroneous statements, and the true facts of the matter in each case:

The charge: That Secretary Humphrey's opposition to the Democratic proposal for an across-the-board $20 tax cut showed that "big business is truly in the saddle during this administration."

The facts: Secretary Humphrey opposed the Democratic proposal because it would have cost about $2.3 billion a year in revenue, and so would have deliberately increased deficit financing with all its inflationary dangers. It thus would have played fast and loose with the real welfare of all Americans.

The inflation which the proposal invited could have cost Americans far more than the tax cut would have saved them.

The Secretary, while opposing the $20-for-everybody tax cut, urged the Congress to continue responsible financial management of the Government's affairs by extension of, first, the corporate income tax rate at 52 percent; and, second, the excise taxes on tobacco, liquor, and so forth, which otherwise would have gone down automatically.

The charge: That 90 percent of the tax bill enacted in 1954 was "a windfall to the high-bracket taxpayers."

The facts: The administration's 1954 tax reduction program made reductions amounting to $7.4 billion, the largest dollar reduction in any one year in the country's history. Reductions included $3 billion in individual income taxes; $1 billion in excise taxes; $1.4 billion in various relief provisions of the tax revision bill; and $2 billion through termination of the excess-profits tax.

Two-thirds of the total $7.4 billion 1954 tax reduction program was for the direct benefit of individuals, the other third for the benefit of business. Of the $4.6 billion in reductions received by individuals, 37 percent went to individuals with incomes of less than $5,000. This group which received 37 percent of the relief had previously been paying approximately one-third of the total burden of the individual income taxes and the excises which were reduced in 1954. Individual income taxes were reduced 10 percent in the lower and middle income brackets, and only about 1 percent in the top brackets.

The charge: That "Secretary of the Treasury Humphrey engineered the excess profits tax repeal."

The facts: The Secretary has made it plain that he considers the excess-profits tax a bad tax. Practically all economists agree. However, the Secretary did not engineer repeal of the excess-profits tax. The truth is that, when revenue needs of the Government required it, he successfully sought a 6-month extension of this tax.

Actually it was legislation enacted in 1950 by the Democratic 82d Congress which provided for the automatic termination on June 30, 1953, of the excess profits tax. The huge budgetary deficits inherited by the new Republican administration in 1953 made immediate tax reductions financially unsound, and in spite of the very undesirable nature of the tax, President Eisenhower on May 20, 1953, found it necessary to recommend its extension for 6 months beyond the automatic termination date. Secretary Humphrey supported this recommendation. Therefore, the truth of the matter is that the Republican administration was actually responsible for keeping the excess profits tax for 6 months longer than the Democrats had provided.

The charge: This administration has given "handouts of about 19 billion" to big business through tax concessions "under the runaway-plant program."

The facts: This charge evidently refers to the provision for rapid tax amortization of emergency plants and equipment. The Revenue Act of 1950, enacted by the Democratic 82d Congress, provided special tax deductions for the 60-months amortization of facilities certified as essential because of the defense emergency. The Congress has not changed this provision of the law, and it continues to be adminstered as provided by the 1950 act. The maximum annual amount by which tax revenues were estimated to be decreased is $880 million in the fiscal year 1956. The aggregate decrease in revenues from 1951 through 1960 is estimated at $4.5 billion, and this will be substantially offset by revenue gains in the following years.

Secretary Humphrey has been one of the foremost in suggesting that the rapid tax amortization law be modified, and in this connection some recent remarks by J. A. Livingston in his well-known Business Outlook column in the Washington Post and Times Herald are interesting. Mr. Livingston wrote:

> As Humphrey sees it, incentives to expand plants no longer are needed. Since the fast writeoff was enacted, the excess-profits tax has been repealed, and the new Internal Revenue Code permits all businesses to quicken their depreciation—to take roughly two-thirds of the cost of a plant in one-half of its normal life.
>
> * * * * *
>
> Says Humphrey:
>
> "Certificates should be used sparingly and be confined to direct war requirements."

The charge: That the Eisenhower administration through Secretary Humphrey installed the "stock option plan which meant billions to the high-bracket taxpayers."

The facts: The provision for special tax treatment of restricted employee stock options was enacted in 1950 by the Democratic 82d Congress. There has been no basic change in this provision during the Eisenhower administration. In fact, the Republican tax revision law of 1954 made changes imposing some limitations on the use of the provision.

The charge: That "the Eisenhower tax brain trusters enacted the so-called rapid depreciation provision which allows corporations to charge off against taxes cost of new machinery, plant equipment, etc., which amounts between 15 to 20 billion."

The facts: The Eisenhower administration did indeed appreciate the need for a more flexible allowance of depreciation deductions than had been permitted under prior tax law. The President in his budget message of January 21, 1954, recommended changes in the depreciation provisions. He noted that the tax treatment of depreciation has far-reaching effects on all business, and liberalization would be especially helpful in the expansion of small business, whether conducted as individual proprietorships, partnerships, or corporations.

The need for change was also plainly evident to the Congress. In June 1953 some 70 statements urging liberalization of depreciation allowances were presented in hearings before the Committee on Ways and Means. It was pointed out that the rigid, long-standing rules were not in accord with modern business practice and economic facts. The situation was discouraging to plant modernization and economic progress, particularly when the investment was of a long-range character and involved a considerable business risk.

The revision of the depreciation provisions adopted by the Congress in the 1954 Internal Revenue Code will allow tax procedure of farmers, business concerns and others to conform to the economic reality of faster depreciation in the early years of the life of the property. The new methods allowed are in fact modest as compared to the action taken in other countries.

The decrease in Federal tax revenues resulting from these depreciation changes is estimated at $364 million in

the fiscal year 1955, $291 million of which is attributable to depreciation deductions of corporations and $73 million to businesses of individuals and partnerships. Actually, of course the more liberal depreciation allowance does not necessariy involve any loss of revenue. Taxpayers who take advantage of the new methods through larger depreciation deductions in current years will pay higher taxes in the future.

It is plain that talk of huge windfalls to big business and high bracket taxpayers from the administration's tax policies is nonsense. It is equally silly to charge Secretary Humphrey with responsibility for tax provisions enacted by Democratic Congresses under a Democratic administration.

Politically motivated attacks must be expected but those making charges should stick to the truth.

The Free Chinese Have Not Been Fooled by the Communists

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a prophetic speech given last February by Dr. V. K. Wellington Koo, Chinese Ambassador to the United States, at Rollins College, Winter Park, Fla., February 27, 1955. The Chinese have learned from bitter experience the true nature of the Communist movement. The West would have done better if it had paid more attention to the Chinese warnings:

ASIA AT CROSSROADS

In the present uncertain and insecure condition of the world, what goes on in Asia is of great importance. Asia is the oldest, the largest, and the most populous continent in the world. It is the birthplace of the founders of all the great religions, including Mohammed, Jesus, Buddha, and Confucius. It occupies two-thirds of the land area of the earth and possesses 55 percent of the world's population.

True, it is behind Europe and America in scientific knowledge, technological skill, and industrial development. Equally true it is materially poor and underdeveloped, and a vast number of its people are illiterate. But it is rich in natural resources, strategic metals, and human labor. Its potential power is unlimited.

Politically, Asia has been undergoing a rapid transformation from a colonial and a semicolonial status to one of equal position with Europe and America. The spirit of nationalism has been growing so strongly and fast that in the last decade 17 countries have regained their independence and become full-fledged members of the family of nations.

Because of the combination of these vital factors, international communism, which seeks to dominate the world, considers Asia as of great importance to its cause and finds it a happy hunting ground. No lesser Communist leaders than Lenin and Stalin urged upon their comrades the conquest and control of Asia as an indispensable step to the complete communization of the world. The seizure of the Chinese mainland, the invasion of South Korea, the Indochinese war, and the present Communist attacks against offshore islands of the Republic of China—just to give a few illustrations of the Communist activities—are all integral parts of the Communist plan to bring Asia behind the Iron Curtain in preparation for the conquest of what they call the capitalistic world.

On the Asiatic scene there are, broadly speaking, three groups of nations pursuing three different policies. One belongs to the Communist camp and comprises the Soviet Union with its satellites, including the Peiping regime, Outer Mongolia, North Korea, and Viet Minh, all of which take directives from the Kremlin and seek to promote the interests of international communism.

Definitely opposed to this group are the Republic of China, the Republic of Korea, the Philippines, Thailand, South Vietnam, Laos, Cambodia, Iran, the Arab countries in Asia Minor, Pakistan, and Japan. Some of these countries like Nationalist China and South Korea have made great sacrifices in resisting Communist aggression and are determined to continue their anti-Communist struggle. Others of this same group are fully aware of the threat of Communist imperialism and have not hesitated to adopt measures of self-defense. All of them have alined with the United States in one manner or another to strengthen the anti-Communist front through the conclusion of bilateral or muitilateral mutual defense pacts. The Treaty of Mutual Defense between the Republic of China and the United States concluded last December is the latest example of the bilateral agreements. The Manilla Pact and the SEATO Conference which has just ended in Bangkok are other samples of the collective efforts to check the forces of Communist aggression in Asia.

Between the Communist and the anti-Communist groups there is a third combination of Asiatic nations which pursues a policy of what is called neutralism. This group includes India, Burma, Ceylon, Indonesia, and Afghanistan. These countries do not appear to realize the menace of Communist imperialism either to the free world or to their own independence. They believe in peaceful coexistence with international communism and do not hesitate to urge their views upon other nations, often with the effect of encouraging the Communist regimes and embarrassing the free world. They do not seem to understand or to care that the political philosophy of international communism divides the world only into two classes: those that are for communism and those that are against it. Mao Tse-tung as well as Lenin, Stalin, Malenkov, Khrushchev, and other Communist leaders admit no neutrals and no fence-sitters in their plot to conquer the world. Unless international communism abandons its fixed objective of world domination—and of this there is as much chance as for a leopard to change its spots—neutralism serves, however unwittingly, only to promote the Communist cause. It is therefore not only unwise but dangerous for any country to try to appease international communism in the hope of inducing it to give up its program to communize the world and enslave all the peoples.

In view of the basic and inflexible objective of international communism, there is no ground for believing or hoping that peaceful coexistence between the Communist and the free world will be possible for any length of time. As early as 1919 Lenin lectured to his party comrades on world aims in these terms:

"We are not merely living in a state but in a system of states and the existence of the Soviet Republic side by side with imperialist states for a long time is unthinkable. One or the other must triumph in the end. And before that end supervenes, a series of frightful collisions between the Soviet Republic and the bourgeois states will be inevitable. That means that if the ruling class, the proletariat, wants to hold sway, it must prove its capacity to do so by its military organization."

From time to time the Communists, for reasons of their own, may adopt a less intransigent policy in dealing with the non-Communist world. But their apparently more conciliatory attitude must not be taken as a change of heart on their part or as a renunciation of their firm and ardent aspiration for world revolution. It is only a temporary expedient to promote their cause in a different guise. In the words of Lenin again: "The strictest loyalty to the ideas of communism must be combined with the ability to make all the necessary compromises, to 'tack,' to make agreements, zigzags, retreats, and so on, in order to accelerate the coming into power of the Communists."

In the light of the well-known purpose and policy of international communism, the advocates of neutralism in the so-called struggle between the East and West are really playing into the Communist hands. If they persist in their ill-chosen course, 1 of the 2 more likely developments will come to pass. Either they will find one day to their sorrow and dismay that their own countries have fallen victims to Communist guile and been taken into the Communist orbit against their will or, realizing at last the Communist menace to their own independence, they will choose definitely to join the anti-Communist nations and cooperate with them wholeheartedly to save themselves as well as the free world.

In the end Asia will have only two groups of nations pitted against each other: the Communist and the anti-Communist. One stands for dictatorship and enslavement, and the other for freedom and democracy. Which of the two groups will emerge victorious in Asia is a question of vital importance, for the outcome cannot but seriously affect the destiny of mankind. In the worldwide struggle of freedom versus Communist imperialism it is more than ever true that where Asia goes, there will go the rest of the world.

I am aware that there are people who believe and urge that in this global fight to preserve freedom against Communist dictatorship Europe should be saved first on account of its democratic tradition, scientific knowledge, industrial potential, technological skill and organizing ability. They favor a policy of appeasing the Communists in Asia in the hope of putting off the day of their own crisis. While I sincerely share the view that Europe should be saved from the grasping hand of international communism, I consider it a mistaken and dangerous idea to think that the leaders of Communist imperialism can be satisfied and reconciled with the winning of one-half of the world. Since the aim of international communism is to bring about world revolution and achieve global conquest, it is a common menace to all free nations and calls for united effort to resist it. If Asia should be lost to communism through the lack of cooperation of the free world, the days of Europe will be numbered.

It seems to me that the United States, the strongest bastion of democracy and the recognized leader of the free world, is pursuing a sound policy in stressing the importance of Asia to the cause of freedom and in striving to help her resist the onslaught of communism and preserve her freedom. I hope that this farsighted and statesmanlike endeavor will be loyally supported by its allies and friends in Europe as well as in Asia and elsewhere.

In the face of the flagrant Communist aggression in Asia, all the freedom-loving nations should see the writing on the wall and lose no time to close their ranks and pull together. For unity is strength and their unity is the more urgently needed

because the Communists are deliberately seeking to sow dissension among the Allies of the free world in order to weaken their position and make it easier to achieve their policy to divide and conquer. If Asia is successfully rescued from the Communist expansionist plot, she will be able not only to safeguard her own freedom but also rally to the aid and support of Europe in the event of an open challenge by the Communists. With Asia safe from the Communist menace, Europe and indeed the rest of the free world can look forward with greater confidence to a future of freedom and peace.

Politics Hurt Duck Shooting

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. METCALF. Mr. Speaker, I am gratified that the fine production of ducks in the Canadian prairie provinces permitted the Fish and Wildlife Service to allow Montana duck hunters an additional 15 shooting days this season.

With the increase, Montana will have a 75-day season on ducks, with bag and possession limits of 5 and 10, the same as last year.

Early this year, the duck hunters of western Montana asked for a migratory waterfowl season that would give them some shooting and, at the same time, be fair to eastern Montana hunters.

More than 4,000 signed petitions asking that that part of Montana west of the Continental Divide be taken from the central flyway and placed in the Pacific flyway. The request was based on the fact that mountainous wooded western Montana is much more like the area in the Pacific flyway than it resembles the plains of the central flyway and that the 80-day season of the Pacific flyway should apply to western Montana instead of the 60-day season of the central flyway.

These sportsmen of Montana are dedicated to the sound principles of conserving our waterfowl resource. They felt that a change would give hunters a reasonable opportunity to harvest this resource.

The senior Senator from Montana, Senator MURRAY, the junior Senator from Montana, Senator MANSFIELD, and I worked closely with the Montana Fish and Game Department and the Fish and Wildlife Service on this problem.

We met with Mr. John L. Farley, Director of the Fish and Wildlife Service.

Out of these meetings came a recommendation for an 80-day season for Montana, depending of course on the production of ducks, with a decrease in bag and possession limits if necessary. With the help of the ducks, we got a 75-day season, an increase of 15 days, with no decrease in bag and possession limits.

The June issue of Sports Afield magazine carried a discussion of proposals to liberalize waterfowl regulations. Michael Hudoba, the magazine's Washington editor, said that if there is to be liberalization of waterfowling rules, it should be in longer seasons—because that is where the average hunter gets a better break.

Since Mr. Hudoba wrote his article, the information has come in on this year's waterfowl population. And it is good. The breeding grounds of the prairie Provinces—Alberta, Saskatchewan, and northern Manitoba—produced a crop of ducks large enough so that the seasons could be lengthened. The article follows:

POLITICS HURTS DUCK SHOOTING

Will waterfowl regulations this fall be set to the whim of political expediency?

This is a question that your reporter can treat only from straws in the wind, with the hope that—for the sake of waterfowling's future—later developments may prove him wrong.

This issue was thrown wide open back when the Eisenhower administration lifted the directorship of the United States Fish and Wildlife Service out of career civil service status and made it a political appointment. As this report predicted, that move made the United States Fish and Wildlife Service of the Interior Department vulnerable to political pressures and recriminations, which always had been present, but not have substance of political meaning.

As a result, most potent pressures about waterfowl regulations are piling up on the higher echelon of the politically conscious Interior Department. Even though no information is yet practical on the status of this year's waterfowl populations or breeding-ground results, there are demands for baiting of waterfowl and for relaxation and zoning—types of measures that would add to expanded waterfowl kill.

Also facing a crisis is the enforcement of waterfowl regulations. The outcome will determine the future effectiveness of waterfowl rules. This is another political issue.

Senator JOHN BRICKER, Republican, of Ohio, had John Farley, Director of the Fish and Wildlife Service, in his office to discuss the waterfowl program. While no details of the talks are available, the effective activities of a Federal game agent in enforcing waterfowl regulations in northern Ohio, as reported in the Toledo Blade, did come under heavy fire.

Director Farley finds himself on the spot by the potency of a Senator and Assistant Secretary Orme Lewis, the top-level Interior Department Administrator of the Fish and Wildlife Service. Mr. Lewis, as well as Mr. Farley, has to answer to politics. If the enforcement activities of Federal game agent Fred L. Jacobson are affected, the resulting blow to the morale of the Fish and Wildlife Service enforcement staff would be disastrous.

And what of ducks, geese, doves, and migratory birds in such a mire of political currents? That's up to the sportsmen of our country. Either we can let the matter drift to an inevitable debacle, or we can demand that the best interests of a continuing migratory-bird population be served first.

It had been a long-standing policy of the Fish and Wildlife Service to resist zoning of a State for waterfowl shooting. Yet, the concern of early and late season waterfowlers is a pressing issue, accentuated by shortened seasons because of waterfowl declines.

The frustrations of the annual weather guessing game to get a good season for both early and late waterfowlers has developed a climate of impatience to zone. Until waterfowl populations are up enough to warrant extending the season to its previous long terms, the tug of war and weather guessing will continue.

But the Department of the Interior and its Fish and Wildlife Service have given in to zoning in one State (Long Island, N. Y.). As a result, at least eight States are strongly demanding a zoned waterfowl season.

The toughest issue, as far as political pressure is concerned, is baiting. While most of the States indicated they did not want waterfowl baiting, there are powerful demands piling in from at least three States for legalized baiting. This is the kind of pressure that politically vulnerable agencies find hard to resist.

Both zoning and baiting raise the basic question of what about waterfowl populations since these birds haven't shown any marked improvement. Yet both demands can only lead to increased kills of ducks and geese. And once zoning and baiting were set up as policies, they would be hard to get off the books in case of a sharp decline in migratory bird numbers. If that should happen, the average waterfowler, without club facilities, is certain to be squeezed out of his traditional sport.

If there's to be a liberalization of waterfowling rules, let it be in longer seasons. There is where the average waterfowler can expect his better break. But the average waterfowler is faced with the need to speak up strongly now, or subtle currents are likely to take his sport out of range.

Six Billion Dollars Versus Sixty Million People

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to place in the RECORD an article appearing in the August issue of the National Union Farmer.

The article in question concerns the activities of the natural gas monopolists. Gas consumers in Wisconsin are very much concerned with the windfalls that natural gas producers will reap unless some protection is given to the public.

The full text of the article, which I recommend to my colleagues, is as follows:

Ever since the dawn of democratic government the people have learned that they either must regulate the prices charged by a natural monopoly or take over that monopoly themselves, if they are not to be exploited right down to their socks.

In most countries, natural monopolies are directly owned by the government. In the United States on the other hand, the general trend has been toward private ownership and public regulation.

The law has been also that the owners of such monopolies (telephone, gas, electricity, water, etc.), are entitled to charge rates that will bring them a fair return on their prudent investment, and no more.

Of course they are always trying to "beat the game" by such tactics as inflating their costs and property values, and invading the commissions that are named to regulate them. Unceasing vigilance is the price the public pays, if it is not to be mulcted by profiteers in the price of necessities the people cannot do without.

History's boldest assault on the public's pocketbook, and the boldest raid on the public right to regulate natural monopolies, now is being staged in the form of the various

natural-gas bills before Congress. The stake is half a billion dollars yearly or more.

Natural gas occurs at many points in the United States, usually in combination with oil. In the last half century more gas was "flared" as waste into the air (thus wasting both gas and oil since the gas pressure is needed to drive up the oil) than the Nation has ever been able to use.

HUGE PROFITS

But in the past few years long pipelines have been driven to most parts of the United States, and the industry has rapidly grown to be the sixth largest in the United Stataes (including oil, it is the biggest). Profits have been huge. Many of the pipelines have been subsidized by the Government through tax amortization, ostensibly for defense purposes.

Nearly 20 million households, thousands of industrial plants and hundreds of electric power companies, public and private (many REA's included), are now natural-gas users.

The public has discarded billions of dollars worth of coal-and-oil burning equipment for $16 billion worth of natural-gas furnaces. And gas suppliers are natural monopolists—that is, you buy their gas, or move.

The situation is perfect for a move in and the huge gas and oil industry, with a war chest estimated at $1 million or more, and with a propitious political climate under the Eisenhower administration in Washington, is moving to make the sky the limit in what it can charge the public through the bills now before Congress.

INTERSTATE BUSINESS

The gas that comes into the kitchen range has almost invariably come across several State lines. This means that neither your city nor your State can effectively regulate the price you pay, if the price is not controlled clear from the wellhead.

By the well-known principle of bounce (which causes city consumers, for example, to pay 2.5 times as much for food as the farmer gets) every wellhead increase in the price of gas results in an increase several times as high at the kitchen range. About five times, or 500 percent, is the usual bounce.

Ever since 1938 when the first Federal regulation bill was passed, gas and oil companies have been trying either to interpret or legislate themselves out from under regulation.

More often than not the Federal Power Commission has sided with them, and Congress has passed one bill to end producer regulation, which President Truman vetoed.

Last year the United States Supreme Court held that the FPC could not shirk this duty, from which it had tried to escape, and shoved FPC's nose back against the grindstone of regulation. The Commission was by that time dominated by Eisenhower appointees. In apparent anger, it began granting interim increases as fast as gas producers and pipeline companies asked for them.

IKE SILENT NOW

Now there are rival bills before Congress. One would free gas producers from regulation, and thereby make the sky the limit for gas prices at the kitchen range. The other, by Senator DOUGLAS, Democrat, of Illinois, would confirm Federal regulation in line with the Supreme Court's ruling.

The battle cuts across partisan lines. The fate of the bills this year apparently rests upon administration support, and President Eisenhower, who first favored the "sky the limit" bill, has been silent since he learned that 60 million consumers would be adversely affected. This news apparently had been kept from him by his advisers.

Present prospects are that the big battle will come in the 1956 session of Congress, just before election. The question will be whether the interests of 60 million consumers outweigh those of the gas and oil cartel—$6 billion against 60 million people. The administration's heart is with the $6 billion.

William F. Gannon, of Revere, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by Joseph F. Dinneen entitled "Not All Top Detectives Work in the Big Cities," which appeared in a recent edition of the Boston Globe, of Boston, Mass. Mr. William F. "Bill" Gannon, about whom the article is written, resides in the congressional district which I have the honor to represent.

The best detectives are not all in the big city police departments. FBI records detail superior work in small city and town departments by sleuths not widely known. William F. "Bill" Gannon, of Revere, is one so cited in a follow-up report on the graduates of the FBI Academy.

Bill Gannon solved a baffling case with a clue that was about to melt before his eyes. The clue was a tire tread mark in the snow and the sun was rising, but the FBI had taught Bill how to make plaster casts in snow and loose sand so that they could be fixed before they vanished.

In midwinter a Revere engineering company reported that $2,500 worth of metal had been stolen from its plant yard during the night. It was not the first such theft. Other plants were having the same trouble. It may surprise some Bostonians to learn that there are several smelting furnaces in Chelsea and Everett. From the air, their fire-belching smokestacks give the city a Pittsburgh appearance.

When Gannon arrived at the scene at about 10 in the morning, he observed the tire tread impressions in the snow and knew just what to do. He had soaked up all of the techniques, on molds, the use of plaster of paris and cameras at the FBI Academy. He picked up a package of plaster of paris at a nearby drugstore and went to work.

He made a perfect cast, fixed it permanently with shellac and photographed it; then set out to find a truck with tires that matched. He knew that the only market for scrap metal was the smelting refineries in the area where it is transformed into ingots. He canvassed all of them and made a list of all sales of scrap to them for 24 hours after the robbery.

He called upon each seller, checked tire markings and eliminated them. At one place, the truck owners were not at home. A woman he talked with said they usually returned at 6 o'clock in the evening, but that night they did not show up, and Gannon reasoned that they must have been warned.

He placed the house under surveillance. They turned up at 4 in the morning and Bill found that the tires and the cast matched. The suspects had alibis. They protested that they found the junk on a Lynn dump; but the jury was convinced by Bill's cast and his photographs of the truck and tires. The truck owners went to jail.

Bill Gannon is a detective with an unusual background. Born in Everett in 1910, he moved with his family to Revere, where he was graduated from grammar and high schools. He went on to Bentley School and Boston University. He studied law for 2 years and decided that there was a career in police work. He was appointed to the Revere force in December 1941, but 3 months later he was in the Army. An astute officer trained him for counter-intelligence, and he was assigned to various commands, in different ratings, to do the job assigned. Whether he was a private, corporal, or sergeant, those around him never knew his real mission.

He spent 2½ years in Europe in counter-espionage and wound up ostensibly as a member of the 101st Airborne. He landed on the Normandy beachhead on D-day in the first wave, along with two other counter-espionage agents, to make contact with friendly agents behind the lines. He was then listed as a master sergeant on the Army payroll. Gannon was shot up and wounded soon after landing. His brother agents went on without him, and later Bill was invalided home.

He returned to the Revere Police Department and was appointed a detective. He was recommended for the FBI Academy, completed the course and was graduated. Today he sometimes smothers a grin when he watches counter-espionage agents and detectives perform on TV. He has one quirk that always surprises newsmen. He won't pose for a picture; doesn't like the idea of letting criminals become too familiar with his face and appearance.

People of Asia Want Freedom and Dignity More Than Material Comforts

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, some time ago, following a talk I gave before the Harvard Business School Club, I received a letter from a distinguished Washington lawyer which I believe merits sharing with a larger audience. The author, who was born in the Near East and trained in American institutions, sees our own country more clearly than we ourselves frequently do, because he sees us from the outside as well as from the inside. He also understands the spiritual revolution—in the broader sense of the word—that inflames the hearts and minds of the people of Asia and Africa who have had to fight for so long and hard, are still fighting, to gain human freedom. Until all of us understand that spiritual revolution, we will not fully succeed in our efforts to help these peoples with the overwhelming problems that beset them.

Under leave to extend my remarks, I include the letter:

DEAR CONGRESSMAN JUDD: It was such a genuine pleasure to have you as our speaker.

What you said was the more meaningful to me because I'm intensely interested in the Near East and our problem there is essentially the same.

I was born in the Near East and my family migrated to the United States in 1920 not to enjoy the comforts of life but to be free, period. Americans who are born into freedom take freedom for granted and think that our physical comforts and luxuries are our chief assets. And they conclude from this that it is these luxuries and comforts that we should transport to the underdeveloped areas of the world.

What people in Near East and Asia want and crave for is not goods but freedom and that irreducible minimum of human dignity with which God has endowed each human being. I'm afraid the crux of the problem is that those people have understood President Wilson's message and have been fired

by it—man's irresistible inner urge for freedom and dignity—but our own people have not understood that message because they never lacked or were deprived of those basic necessities of life.

What those people want and need desperately is not physical things but things of the mind and of the soul. Indeed, giving material assistance to these people is even harmful to us insofar as it indirectly indicates to them that we are unaware of their basic problems and needs. And as long as they feel that way, that we do not understand their real needs and problems, we can never achieve a meeting of the minds which is so essential to a solution of any human problem.

Thank you again for a most thrilling and satisfying evening.

Very respectfully,

ARTHUR H. DADIAN.

Frederic R. Coudert, Sr.

EXTENSION OF REMARKS

OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses concerning the distinguished father, lately deceased, of our colleague, Congressman FREDERIC R. COUDERT, JR.:

ADDRESS BY HON BERNARD A. GROSSMAN, PRESIDENT, CONSULAR LAW SOCIETY

Another loss, alas, reminds us of the admonition of Holy Writ: "Shed tears over the dead, and reflect."

For life is an invitation to reflection.

And we look back on the lives of two of our esteemed colleagues who have departed this world and we give expression to what made them beloved to us, and we record here the sad fact of their passing.

I speak of our kindly and helpful associates, the Honorable Frederic R. Coudert, and Prof. Boris Mirkine-Guetzevitch.

A familiar face, an encouraging smile, a fortifying word, a sustaining friendship have been taken out of our lives. It is hard to realize that these generous and mellow friends who were so much a part of our society are so suddenly and so dramatically separated from us.

They each lived so that his memory is respected. They each lived so that his life will not be forgotten. By making evident to us what one could accomplish, they each designedly illustrated to us how rich in promise we all are. They each believed reverently in the equality of all.

Large was our friends' bounty, and earnest was their spirit. We are the heirs of that bounty and of that spirit and charged with its maintenance and growth. It has been turned over to us to be enjoyed in the practice, and passed on to the future with pride and with reverence; a gift in trust from them who created it. In this manner we, at once its beneficiaries and its grantors, can renew our unity with our beloved colleagues and our fealty to the future.

It is the sacred wisdom of Holy Writ that we who remain on the outside of the curtain that separates mortality from immortality should gather and reflect on the lives of the departed, and not leave their memories to be breathed only by the requiem of the wild winds. The haunting thought that the past is lost is thus reappraised, and, with another look, a new hope is born. We may thus see something of each of them in our fellow man, and perhaps, too, in time merge much of each of them in all of us, giving rise to the living, precious thought that the past is not irrecoverable—that it lives on, in those who follow. Though we become separated in space and time, we may thus with profit and understanding see the dimensions of the departed.

Though they have hurried on, still their spirit lingers in our midst. The humanity they have fostered, the relationships they have awakened, the love they have planted have grown roots that have grown and spread and bound colleague to colleague and will continue to bind their followers to come, in a pilgrimage on this side of the curtain that will endure until that new era comes when the human rights and the human hopes with which they concerned themselves are as real in life as they were in their hearts.

Farewell, dear friends, farewell, until we meet again.

ADDRESS BY DR. IVAN SOUBBOTITCH, PROFESSOR OF INTERNATIONAL LAW, NEW YORK LAW SCHOOL; ASSOCIATE, COUDERT BROS.

Frederic René Coudert was born in New York on February 11, 1871. His father was a well known lawyer, the senior partner of Coudert Brothers, established in 1853, an able writer whose name appeared often in the public affairs of this city and State. The part the elder Coudert played as one of Dudley Field's opponents in the latter's attempt to have the State codify its law into a civil code is well recorded in the legal history of the last century. The father of the elder Coudert, an officer in Napoleon Bonaparte's defeated armies, came from France, having chosen this country as an asylum when he succeeded in escaping execution for his part in the effort to overthrow King Louis XVIII.

Frederic R. Coudert received successively from Columbia University the degrees of bachelor and master of laws and doctor of philosophy, the last in 1894, at the age of 23. He was admitted to the bar in 1892 and was engaged in active law practice until his death on April 1, 1955. During those 63 years of active practice he was always associated with the law firm founded by his father, after whose death he became the senior partner of that firm.

Mr. Coudert's activities were not confined to the practice of law. This man of talent, energy, and learning, took a very active part in many professional, educational, and intellectual institutions and movements, both national and international. This is not the proper place to review them all, and this note, written for the members of our Consular Law Society, is necessarily limited to Mr. Coudert's contribution to the development of international law, of which a great portion of consular law is a part. However, it should be remembered that Mr. Coudert was a trustee of Columbia University; that in 1913–14, at the critical period which preceded World War I, he acted in the capacity of special assistant to the Attorney General of the United States; that he was also a member of the International Olympics Committee. As a cavalry officer he served in the Spanish-American War. That he was a man of physical vigor and a sportsman is attested by the fact that when he was approaching his 80th birthday I saw him fencing at the New York Fencers' Club.

Throughout his life he remained an active member of our various bar associations and of international professional organizations, and during two-thirds of a century lawyers of our country and of foreign countries had the opportunity at numerous of their meetings to appreciate his talent and to enjoy his wit and humor. The monographs, letters to editors, and notes, etc., which he contributed to our law reviews, periodicals, and bar journals would fill several shelves. They cover every aspect of the law. He also wrote several books.

It is interesting to note that Mr. Coudert's first contact with international law occurred while he was still in law school, when his father was appointed an Agent of the United States to the International Arbitration Tribunal established by Great Britain and the United States to arbitrate the famous Bering Sea Controversy which had arisen between those two powers in relation to the seal herds. In this famous arbitration young Coudert accompanied his father to Paris and acted as his secretary.

Significantly it happened that Mr. Coudert's first contact with the United States Supreme Court occurred in a case which involved a question of consular law (*Iasigi* v. *Van de Carr* (1897, 166 U. S. 391)). There Iasigi, Consul General of Turkey in Boston, an American citizen, had been arrested in New York for alleged embezzlement committed in Boston. The warrant of arrest was issued by a magistrate of this city. Iasigi applied to the United States district court for a habeas corpus writ on the ground that he, being a foreign consul, could not be prosecuted in other than a Federal court. Young Coudert (he was then 26 years old) fully argued the question of consular privileges before the United States Supreme Court, but the question was rendered moot because the Turkish Government removed Iasigi from the consular office and withdrew his consular status.

The same year, young Coudert argued before the United States Supreme Court another case involving very important questions of recognition of states and governments, legal status of "de factor" governments and acts of state. This was the well known case of *Underhill* v. *Hernandez* (168 U. S. 250).

During the next 60 years he handled a most impressive number of cases involving international law and international conflict of laws, many of which dealt with consular law, such as *Rocca* v. *Thompson*, decided in 1912 (223 U. S. 317). Some of these have faded into oblivion, others have become "causes célèbres" and are found in practically every case book of international law.

There are few facets of international law with which Mr. Coudert did not deal, either in court or in his speeches and writings. Among the topics he covered and discussed were such subjects as those relating to the nature and character of international law, its relation to internal law, states, recognition, suits by and against foreign governments (the Black Tom explosion case), sovereignty, transfer of territory, nationality (citizens, nationals, subjects, aliens), law of peace, law of war, neutrality, aggression, international crimes, sanctions in international law, law of prizes (the famous Appam case), pacific settlement of international disputes, protection of rights of United States citizens from interference by foreign nations, international claims commissions, arbitration, treaties (the power to make them, their binding force and effect) and international organizations, such as the League of Nations and the U. N.

His contribution to our law went beyond international law. For cases he argued have come to be regarded as part of the structure of our constitutional law (e. g., the so-called Insular cases dealing with the status of our territory acquired from Spain in 1899 and of that of its inhabitants). The very important last portion of section 47 of our decedent estate law evidences his influence on our stautory law.

It is to the credit of Mr. Coudert that the great amount of work done by him in the field of international law and international conflict of laws was not merely theoretical or even practical, but that he was able to contribute to the application and development of international law by usefully influencing the thinking of the courts and of scholars as well as that of the public at large.

His legal philosophy was pragmatic. His general approach was humanitarian. His knowledge was vast. His professional skill was outstanding. He was a man far above the average, having a keen interest in the life of this Nation and of the international community.

He was a founder and later a president of the American Society of International Law. However, his reputation extended beyond the borders of the United States. He was one of the few Americans who have been elected by the Institut de Droit International to its membership. That institute appointed him a few years before his death to its committee of three, entrusted with the preliminary study of the reconstruction and readaptation of the international rules of the law of war. The draft report he presented to the institute last year, in performance of that task, was his last contribution to high-level legal scholarship in the international field.

One of the great qualities of Frederic R. Coudert was that, although he had reached the Olympian heights of international legal scholarship, he never lost contact with reality or with the comprehension of the interests and reactions of the common man. He was a realist who believed in justice and who was always eager to make law an instrument for human happiness.

Congressman Crumpacker Plans Tour of 24 Third District Communities

EXTENSION OF REMARKS
OF
HON. S. J. CRUMPACKER, JR.
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CRUMPACKER. Mr. Speaker, following my annual custom of bringing the services of my office directly to the people in their home communities, I am planning an official business tour of 24 cities and towns in the Third Indiana District while Congress is in recess.

My 1955 grassroots tour has been scheduled for November 14 through November 18 and will include visits to 7 communities in Elkhart County, 5 in St. Joseph County, 7 in La Porte County, and 5 in Marshall County.

A temporary office will be established in a central location in each community and local constituents will have an opportunity to confer informally with their Representative in Congress.

No advance appointments will be required. As in the past, I will be accompanied by a member of my Washington office staff and we will welcome the chance to be of service to any and all callers.

I have learned from experience, Mr. Speaker, that these tours are valuable for many reasons. As a supplement to the opinion polls I conduct each year by mail, they enable me to determine—through personal contact—the views and attitudes of my constituents on current national issues. They also give me the opportunity to report directly to the people on my stewardship in Washington.

With this in mind I am looking forward with pleasure to my 1955 tour of the Third Indiana District.

The complete tour schedule follows:

MONDAY, NOVEMBER 14

Osceola, fire station, 9 a. m.
Elkhart, courthouse, 10 a. m.
Middlebury, First State Bank, 2 p. m.
Bristol, townhall, 3:30 p. m.

TUESDAY, NOVEMBER 15

Wakarusa, Exchange State Bank, 9:30 a. m.
Goshen, courthouse, 10:30 a. m.
New Paris, State Bank, 2 p. m.
Nappanee, city hall, 3 p. m.

WEDNESDAY, NOVEMBER 16

Lakeville, townhall, 9:30 a. m.
Bremen, townhall, 11 a. m.
Bourbon, News-Mirror office, 1 p. m.
Argos, townhall, 2:30 p. m.
Culver, Citzen office, 3:30 p. m.

THURSDAY, NOVEMBER 17

North Liberty, post office, 9 a. m.
Walkerton, townhall, 10 a. m.
Plymouth, courthouse, 11 a. m.

Don't Let Them Take It Away

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an eloquent editorial from the July 22 issue of the Buffalo Evening News:

ANNIVERSARY OF A '52 DITTY

It was just 3 years ago that the 1952 Democratic convention opened to the rollicking tune of "Don't Let 'Em Take It Away."

Practically everybody was working at the time; a boom was on—and also a war. Now, 3 years later, things are also pretty good. About the only thing taken away is the war.

When the Democrats convened to sing their little ditty, the price level was almost exactly what it is today. The average factory worker then was earning $1.66 an hour; today $1.87. He was working an average of 40 hours a week; today 40.7 hours. His average weekly pay was $66.32; today $76.11.

In the second quarter of 1952, the average per capita disposable income (personal income after taxes) was at an annual rate of $1,478. In the second quarter of 1955, it was $1,619. The gross national product, when the Democrats convened in 1952, was running at the annual rate of $342.6 billion; today $383 billion. The national income rate then was $286.9 billion, of which $179 billion was labor income; today's national income rate is $319.8 billion, of which $214 billion is labor income.

"Don't Let 'Em Take It Away," they sang—but the people soon voted for Eisenhower regardless. And after 3 long years, just look where we are—wages 21 cents an hour higher, weekly paychecks nearly $10 fatter, the cost of living stabilized, taxes lower—and per capita purchasing power therefore $141 a year greater. Don't let 'em take that away.

Anti-Communist Seizure of Red Occupied Rumanian Legation in Bern

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish to insert the following letter from the president of the Foundation to Defeat Communism and concerning the seizure of the Red-occupied Rumanian Legation in Bern by young anti-Communists on February 14, 1955:

WASHINGTON, D. C., *August 2, 1955.*

DEAR CONGRESSMAN: On the night of February 14 of this year, a group of young anti-Communists seized the Red-occupied Rumanian Legation in Bern, Switzerland.

They had information that the new political set-up in the Kremlin was in the process of sending fresh instructions to their various organizations and agents in the free world, one of these being the MVD chauffeur of the enslaved Rumanian Legation. They thought a raid in that Communist den would surely yield valuable clues in this direction. In fact it uncovered the espionage activities of the Red diplomats. An entire arsenal was found in the legation—a short-wave radio transmitter, automatic guns, all kinds of projectiles, time bombs, rockets, and a large quantity of ammunition.

The action of the young patriots has aided freedom wherever freedom still exists. Their cause is the cause of free men everywhere.

This stirring event, aided by excellent coverage by the European press, produced an enormous impression on public opinion. According to the Swiss press, the important documents found clearly proved that the Legation was a spy center.

As an immediate result of the Bern affair, the authorities in Sweden, alerted by this incident, on closer investigation uncovered also an important spy ring centering around the Rumanian and Czechoslovak Communist Legations in Stockholm, thus bringing an added proof of the results of the action in Bern.

The raid against the Communist Legation established beyond the shadow of a doubt that this Legation and every Communist Legation and Embassy are all spy centers, nests of espionage against the citizens of whatever country that recognizes them, including the United States.

A study recently completed by a commission headed by Gen. Mark Clark stated generally, we have permitted the collection of vital secrets in this country with relative ease by the Communists. "The information we need, particularly for our Armed Forces, is potentially available. Success in this field depends on greater boldness at the policy level, a willingness to accept certain calculated political and diplomatic risks."

Let us help these men who risked their lives and willingly took calculated risks to prove that the Soviet Union carries on against the free world constant espionage and subversion.

Let us encourage other patriots to bring out with them vital documents by aiding the cause of these young men, and we will encourage others to perform like acts of heroism in the name of freedom and liberty thus producing vital intelligence that will inform the free world of premediated acts of treachery.

During the time the young men held the legation the tension and excitement were at

their height in Bern. The morning after the coup about 2,000 Swiss were gathered in front of the building and 200 Swiss police surrounding it. As the young patriots refused to surrender at first, the Swiss authorites, under heavy pressure from the Communists, organized a veritable siege against these lone anti-Communists, surrounding the premises with barbed wire and bringing up an infantry battalion and an armored tank.

The young patriots had made a vow to obtain the release of five men from Communist jails, a cross section of the persecuted leaders of the Rumanian resistance behind the Iron Curtain, among whom was the heroic Bishop Suciu. In these five men, they were symbolically asking the liberation of their people from the curse of Soviet slavery. It was a cry of these patriots which stemmed from the same source as that of a Patrick Henry, as it voiced the eternal struggle for individual freedom and national independence.

Remember President Eisenhower stating on June 29 of this year that until the peoples enslaved by communism "have a right themselves by their own free will, to determine their own form of government and destiny * * * there could be no real peace in the world."

Finally after 42½ hours, this action which had caused such an impact on public opinion, came to an end. The young men, before entering the police car, in full view of the crowd, nailed upon the wall of the Legation the insignia of free Rumania. Inside they left a note saying: "We shall return."

The young heroes are now in a Swiss prison awaiting trial. Renowned lawyers throughout the world immediately expressed their desire to collaborate in the defense.

It is in the interest of our anti-Communist fight that an American participation in this defense should also be assured. We plan to send two prominent lawyers from this country to give an American voice to the world-wide resounding debate between freemen and the tools of tyranny.

If the defense of these boys is adequately secured and their trial is brilliantly defended, American sons could well be spared the horror of occupation, torture, brainwashing, mock trials or any hideous instrument of Communist treachery.

These patriots have a message for the free world. Trials throughout history have altered the course of history and this trial can produce a great victory on the side of humanity, Christianity, and freedom.

Sincerely yours,

LOUISA GUNTHER,
President, Foundation To Defeat Communism.

Hells Canyon Giveaway

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, Hells Canyon, located on the Snake River, is more than 1,500 miles away from the people living in the Ninth Congressional District of Wisconsin, which I represent. Despite this great distance, from 15,000 to 20,000 farmers in my district have an important stake in the proposed Hells Canyon Dam projects.

These farmers are members of a great regional farm cooperative—the Farmers Union Central Exchange—which owns mineral-bearing deposits needed for manufacturing fertilizer. The Farmers Union Central Exchange and a number of other farm cooperatives are very much interested in development of the Hells Canyon Dam project.

On the basis of correspondence from farmers and farm co-ops in my district I know that the farmers are opposed to the dams proposed by the Idaho Power Co. The farmers and their cooperatives favor building a high dam by the Federal Government.

Under leave to extend and revise my remarks, I wish to place in the RECORD an editorial from the AFL News-Reporter. Here is the editorial:

Hells Canyon is of direct importance to the people of the whole Nation.

The Northwest has specific interest because a Federal high dam means irrigation, flood control, navigation, and recreational facilities not available with Idaho Power Co. dams. The people of the Northwest know also that the Federal high dam means lower power rates, more jobs—a total of 110,000 new jobs, 1,100 new retail outlets, 140,000 new households, and $525 million additional in retail sales.

The rest of the Nation has a stake because Hells Canyon is the last large remaining undeveloped dam site in America, deeper than the Boulder Dam site in Nevada. They want to be sure we do not squander our natural resources, neglecting flood control, irrigation and navigation, by handing them over for haphazard development by private interests.

They do not believe political debts should be paid at the expense of the rights of the people in natural resources that belong to all.

The rest of the Nation knows that only through the new low-cost power available through the Federal dam will new industry be attracted to the region. They know that new jobs, new homes, new retail establishments in the Northwest mean a greater demand for construction materials, household equipment, automobiles, and other products manufactured in other parts of the country.

The administration may try to delude the people by such phony terms as "partnership programs," "private enterprise," and "local initiative," but the fact of another giveaway is obvious.

The sneaky character of this new monopolistic move is evident in the delaying of the Federal Power Commission decision until the day after Congress adjourned.

Congress and Peace

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CHIPERFIELD. Mr. Speaker, as the 1st session of the 84th Congress draws to a close, I am impressed by the commendable record of achievements to its credit. The Foreign Affairs Committee made some significant contributions, particularly the Formosa resolution which authorizes the President to employ the Armed Forces of the United States for protecting the security of Formosa, the Pescadores, and related positions and territories of that area. The extension for another year of the Mutual Security Act also means much in our overall program designed for our own security and world peace.

Under leave obtained, I insert an editorial from the New York Times citing achievements in our foreign policy:

CONGRESS AND PEACE

Viewed in the perspective of the atomic age, the most notable of these achievements is undoubtedly the development of both intergovernmental and national unity on the broad outlines of a national foreign policy, the supreme aim of which is a just and lasting peace to avert the horrors of nuclear war.

As developed in both theory and practice this policy is based first of all on the concept of peace through strength, our own and that of other free nations joined together in self-defensive alliances to deter and if necessary to suppress aggression. But it is also based on a vision of international cooperation in all fields that might include, if the Communists are willing, a negotiated modus vivendi with the Communist bloc. This, of course, would be based not on acceptance of Communist conquests but on the worldwide application of the no-force doctrine in the settlement of international disputes that is also the basis of the United Nations Charter.

The chief architect of that policy is without doubt President Eisenhower, who has become in fact its personification. Through it he has not only refuted Communist propaganda against the United States but has also made himself and this Nation the world's chief hope for peace. But that policy could be as effective as it has proved to be only because of the overwhelming support it has received from Congress, and through it from the American people.

That this support of the policy of a Republican President could be organized in a Congress controlled by the Democrats is in itself a tribute to congressional patriotism, in particular that of the congressional leaders, Senators JOHNSON and GEORGE, and Speaker RAYBURN, and even more to the maturity of the American people and the efficacy of the democratic process. These factors subdued not only the traditional conflicts between the two parties, especially notable in view of the forthcoming election year, but also the intraparty disputes among the Republicans. * * *

As regards peace through strength, Congress can claim credit for some truly historic achievements in that it supplemented the North Atlantic alliance with measures that made Germany a member of that alliance and provided the initial weapons for Germany's rearmament; established a mutual defense alliance in Southeast Asia; authorized the use of our Armed Forces in defense of Formosa; made free China an ally, and brought freedom and independence to Austria.

These measures, in which other nations of course participated, changed the political and strategic face of the world and helped to break the ice jam of the cold war that finally led to the Conference of Geneva.

National Conservation Memorial Commission

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement

which I have prepared concerning the proposed establishment of a National Conservation Memorial Commission.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, a bipartisan group of 25 Senators, representing every geographical region of the Nation, have joined with me in introducing Senate Joint Resolution 101. I am advised that more than 30 Democratic and Republican Members of the House, also representing every section of the country, have joined with Hon. FRANK THOMPSON, JR., of New Jersey, in introducing a companion resolution, House Joint Resolution 400.

The purpose of these resolutions is to provide for the observance and commemoration of the 50th anniversary of the founding and launching of the conservation movement for the protection, in the public interest, of the natural resources of the United States.

The resolution sets up a National Conservation Memorial Commission which is directed to prepare and carry out a comprehensive plan for the observance and commemoration of the golden anniversary of the birth of the conservation movement in the United States and generally promote among the citizens of our country, a realization of the importance of protecting our natural resources.

All Government departments and agencies are directed to cooperate with and assist the Commission which in turn is instructed to cooperate with the governors of all of the States in carrying out its plans for observing the half-century milestone of the launching of conservation.

The President of the United States will serve as honorary chairman of the Commission. Other members will include Senators and Representatives from both political parties appointed by the Vice President and the Speaker of the House, representatives of national nonprofit organizations dedicated to conservation of various phases of natural resources, and 10 citizens from private life. All members will serve without compensation. The Commission will cease to exist not later than 1 year after the date of the observance of the birth of the conservation movement.

I think it is appropriate at this point to explain why it is so important to the future welfare of the citizens of our Nation that we properly commemorate the 50th anniversary of the birth of the conservation movement and through such action that we arouse, renew, stimulate, and maintain the greatest possible degree of interest of the greatest possible number of our citizens in the need for continuing conservation policies and programs that will preserve and protect our natural resources in the public interest.

The Commission can and will render such a vital service.

As recently pointed out by President Eisenhower and many informed leaders in Government, industry, labor, agriculture, science, and education, the problems involving the preservation and protection of our natural resources are as great today, if not greater, than ever before.

We only have to read the splendid and thought-provoking reports of the President's Materials Policy Commission in 1952, and study the proceedings of the meeting of the Mid-Century Conference on Resources for the Future in 1953 to realize how important and vital it is to our survival as a nation that we adopt and follow programs of action that will insure the protection of our natural resources and the intelligent and efficient use of them.

The President's Materials Policy Commission was headed by the Honorable William S. Paley and became known as the Paley Commission.

Under the general title of "Resources for Freedom" this Commission presented five comprehensive reports in addition to assembling a great deal of other valuable data. The five reports were entitled "Volume I: Foundations for Growth and Security"; "Volume II: The Outlook for Key Commodities"; "Volume III: The Outlook for Energy Sources"; "Volume IV: The promise of Technology"; and "Volume V: Selected Reports to the Commission."

To focus public attention on the findings and recommendations of this Commission should be one of the major achievements to stem from the observance of the 50th anniversary of the conservation movement.

The Paley Commission warns that our natural resources "will in the future demand much more thought and effort than we as a nation have seen fit to give them in the past."

At this point I should like to prescribe briefly the history of the conservation movement and how it was born 50 years ago.

The idea for the first conference of governors ever held in the history of the United States developed while President Theodore Roosevelt was the guest of the Inland Waterways Commission on a boat trip down the Mississippi River.

The idea and program for the conference were made public and developed by two members of the Waterways Commission, Hon. Theodore Burton, then United States Senator from Ohio, and Hon. Gifford Pinchot, of Pennsylvania, then the first head of the United States Forest Service.

President Roosevelt announced the calling of the conference in an address at Memphis, Tenn. He said then:

"As I have said elsewhere, the conservation of natural resources is the fundamental problem. Unless we solve that problem it will avail us little to solve all others. To solve it, the whole Nation must undertake the task through their organizations and associations, through the men whom they have made especially responsible for the welfare of the several States, and finally through Congress and the Executive. As a preliminary step, the Inland Waterways Commission has asked me to call a conference on the conservation of natural resources, including of course, the streams, to meet in Washington during the coming winter. I shall accordingly call such a conference. It ought to be among the most important gatherings in our history, for none have had a more vital question to consider."

The conference opened on the morning of May 14, 1907, with prayer by the Reverend Edward Everett Hale, then Chaplain of the United States Senate.

Then President Theodore Roosevelt spoke. He said in part:

"So vital is this question of conservation that for the first time in our history the chief executive officers of the States separately, and of the States together forming the Nation, have met to consider it. It is the chief material question that confronts us, second only—and second always—to the great fundamental question of morality.

"The occasion for the meeting lies in the fact that the natural resources of our country are in danger of exhaustion if we permit the old wasteful methods of exploiting them longer to continue. In the development, the use, and therefore the exhaustion of certain of the natural resources, the progress has been more rapid in the past century and a quarter than during all preceding time of history since the days of primitive man.

"All these various uses of our natural resources are so closely connected that they should be coordinated, and should be treated as part of one coherent plan and not in haphazard and piecemeal fashion.

"The time has come for a change. As a people we have the right and the duty, second to none other but the right and duty of obeying the moral law, of requiring and doing justice, to protect ourselves and our children against the wasteful development of our natural resources, whether that waste is caused by the actual destruction of such resources or by making them impossible of development hereafter."

Among the speakers at the conference in addition to the governors and Members of Congress were Andrew Carnegie, John Hays Hammond, Elihu Root, Gifford Pinchot, and James J. Hill.

The governors unanimously adopted a series of resolutions calling for a national policy and programs that would preserve and protect the forests, the water and streams, the soil and the range, the minerals, fuels, and all other natural resources.

A key phrase in these resolutions declared: "We, the governors of the States and Territories of the United States of America, in conference assembled, declare our firm conviction that this conservation of our natural resources is a subject of transcendent importance, which should engage unremittingly the attention of the Nation, the States, and the people in earnest cooperation."

The Governors' Conference on Conservation was the first of its kind—the first not only in America, but in the world. It may well be regarded by future historians as a turning point in human history. Because it introduced to mankind the newly formulated policy of the conservation of natural resources, it exerted and continues to exert a vital influence on the United States, on the other nations of the Americas, and on the peoples of the whole earth.

The conference set forth in impressive fashion, and it was the first national meeting in any country to set forth, the idea that the protection, preservation, and wise use of the natural resources is not a series of separate and independent tasks, but one single problem.

It spread far and wide the new proposition that the purpose of conservation is the greatest good of the greatest number for the longest time.

It asserted that the conservation of natural resources is the one most fundamentally important material problem of all, and it drove home the basic truth that the planned and orderly development of the earth and all it contains is indispensable to the permanent prosperity of the human race.

That great truth was never so true as now. It is therefore fitting that we as a Congress and a nation take all proper steps to observe this golden anniversary of the birth of the conservation movement.

New Dixon-Yates Fight Due on Hells Canyon Giveaway

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, I am one of those who believe that certain resources should be owned by the people and used for the benefit of all people. This philosophy is not original with me, for the late Senator Robert M. La Follette, Sr., of Wisconsin, and many other liberals of earlier generations entertained this belief.

It is for this reason that I have followed the developments pertaining to

the Hells Canyon Dam project. I realize that the fight on the Hells Canyon site goes back many years; however, the crucial period on development of the site is now.

As I have stated before on the House floor, thousands of farmers in the Ninth District of Wisconsin—which I represent—are interested in Hells Canyon. They are interested because their regional cooperative owns valuable mineral bearing land required in the making of fertilizer.

It appears that the Hells Canyon Dam projects are slated to become another Dixon-Yates deal. The Idaho Power Co. is bent on securing sites for its smaller dams. Advocates of the high-Federal dam believe that the peoples' interests can best be served by the high dam. From my study of the issues, I agree with the advocates of the high-Federal dam.

The CIO News contains a story which summarizes some of the issues at stake. Under leave to revise and extend my remarks, I wish to place in the RECORD the news story from the CIO News, as follows:

A new Dixon-Yates fight was promised by angry Democrats following a Federal Power Commission decision awarding development of the vast Hells Canyon power resources to the Idaho Power Co., an eastern private utility.

Advocates of a high-level Federal dam in Hells Canyon, a deep gorge on the Snake River separating Idaho and Oregon, pledged a last-ditch fight in the courts and in Congress.

Alex Radin, general manager of the American Public Power Association, called the decision a blow to Americans "who fervently believe in the full-scale development of our natural resources for this and future generations."

Senator MORSE, Democrat, Oregon, warned that the fight is "far from over" and predicted that in the end "the people's interest will prevail."

Senator NEUBERGER, Democrat, Oregon, branded the Idaho Power Co. "an absentee dominated company" with the "highest electric rate structure" in the Northwest, and charged that the company's program involved not "whole development but piecemeal exploitation" of the Hells Canyon site.

Senator KERR, Democrat, Oklahoma, predicted that "when Congress gets through with this one, it will be in the same junk pile where the remains of Dixon-Yates are now corroding."

The FPC decision, awarding permits to build three low-level dams on the Snake to Idaho Power, was reached on July 27. But it was not announced until August 4—after Congress had adjourned.

The fight over the Hells Canyon site goes back many years.

Termed the "last remaining great dam site in the Pacific Northwest," Hells Canyon was the subject long ago of an Army engineers' report supporting the feasibility of a single high-level Federal dam for flood control, irrigation, recreational facilities, and the production of low-cost electric power.

The Truman administration, backing up the advice of the Interior Department under former Secretary Oscar Chapman, recommended an authorization of Hells Canyon in 1953, as soon as post-Korea conditions allowed the Government to consider new starts on new major construction projects.

When Idaho Power Co. filed petitions for low-level dams that would forever preempt the site, Chapman's Interior Department intervened to fight the private utility's bid for control.

President Eisenhower in 1953 hastily dropped the Truman proposal from the first revised budget he presented to Congress. By midsummer, Interior Secretary Douglas McKay withdrew the Department's "intervention" against Idaho Power's application.

Abandoned by the administration, public power advocates intervened on their own responsibility and fought Idaho Power in hearings conducted for a year by an FPC hearing examiner, William J. Costello.

Costello produced a remarkable finding. He found as a matter of fact that "dollar for dollar the high dam would be the better investment and more nearly ideal development of the Middle Snake River." But, because he thought that Congress wouldn't pass an authorization bill, he recommended that Idaho Power be granted a permit for just 1 dam—not 3.

The FPC, with 4 of its 5 members appointed by Eisenhower, unanimously overrode Costello's recommendation to the extent required to go beyond the 1-dam permit. The FPC granted permission for all 3 low-level dams proposed by Idaho Power.

The fight in the courts will be based on charges that the FPC decision violates the law and disregards factual evidence about the relative merits of Idaho Power proposals and the high-level Federal dam.

The fight in Congress will begin with the fact that in the session just ended, Interior Subcommittees of both House and Senate voted to approve authorization of a Federal Hells Canyon project.

"It is inexcusable for the FPC to grant a license for a project which is awaiting action of Congress as a Federal undertaking," said Representative MAGNUSON, Democrat, Washington.

Pointing out that the FPC had heard oral arguments on July 6, MORSE said it was "incredible" that by July 27 the Commissioners "could have reviewed the voluminous records and testimony and exhibits" compiled in a year of hearings by Costello.

MORSE also urged the Office of Defense Mobilization to turn down Idaho Power's application for rapid tax writeoffs under the "tax bonanza" program.

Said Representative GRACIE PFOST, Democrat, Idaho, who won election last year on straight out advocacy of Hells Canyon in the Idaho district directly involved: "There can be no doubt that this administration believes what is best for the power trust is best for the people."

Mrs. Roosevelt Defends the President Against False Charges

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I include as part of my remarks the forthright article by Mrs. Roosevelt in which she defends President Eisenhower against an unjustified charge by a magazine published in New Jersey. The magazine said recently that—

Eisenhower is completely subservient to the Jewish plotters and is carrying forward their protocol plots steadily.

Mrs. Roosevelt says in part:

I am not a Republican but I believe that all of us, Democrats and Republicans alike, owe the office of the President, as well as the man who occupies it, respect and truth in our criticism.

Mrs. Roosevelt says the magazine's charges are nonsense. Her defense of the office of the President and of the man who occupies that office compares most favorably with the attacks leveled on Democratic Presidents in recent years by some of the members of the official family of President Eisenhower.

Mrs. Roosevelt's article follows:

[From the Washington Daily News]

NONSENSE

(By Eleanor Roosevelt)

I received a copy of a sheet from a newspaper sent by some people in Princeton, N. J. This, from my point of view, is a rather shocking development.

In the first place, it is openly antisemitic, so violently antisemitic it allows itself to say things which are completely untrue. In the second place, it attacks President Eisenhower in an outrageous way.

I am not a Republican but I believe that all of us Democrats and Republicans alike owe the office of the president, as well as the man who occupies it, respect and truth in our criticism. The criticisms in this sheet are far from true.

It is headed with a hammer and sickle on both side of the banner headline, "The Coming Red Dictatorship."

Here is one statement which, it seems to me, is unexcusable—"Eisenhower is completely subservient to the Jewish plotters and is carrying forward their protocol plots steadily."

What nonsense. How gullible can people be?

One must suppose the people who get out this sheet are writing what they believe, but if that is so one can only say that they are stupid beyond belief.

One thing about which I personally know the truth—they say: "The human rights covenant drawn up by Eleanor Roosevelt, Dean Acheson and two Russians, gives the government of any member nation and the U. N. the right, if it thinks itself threatened, to curb the freedom of the press and impose martial law and take over all industry and all labor."

AN EXAMPLE

Just to point out how inaccurate they are, here are the facts: No human rights covenant has been accepted by the General Assembly of the U. N. The Universal Declaration of Human Rights was not legally binding and could not do any of the things here put down and it was written by the representatives of 18 nations who worked together for over 2 years. So, picking out the United States and the Soviet Union as responsible for it is rather absurd to say the least.

One might laugh at a publication such as this—which is called Common Sense and carried a subtitle, "The Nation's Anti-Communist Paper"—if it were not so tragic such nonsense can exist in a country like ours.

Smile, Pardner, Smile, When You Say "Subsidy"

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, in the last 20 years the public has been carefully conditioned to believe that farmers are the only group in the

United States to receive subsidies. At various times I have drawn my colleagues' attention to the fact that other groups in our economy are also the beneficiaries of subsidies—subsidies which often exceed the total sums paid to farmers.

The August issue of the National Union Farmer contains an interesting article on subsidies paid to the oil and gas industry. The full text of the article follows:

The United States oil and gas industry enjoys a yearly subsidy from United States taxpayers of $1 billion or more—equivalent each year to the total cost of the farmers' price-support program for the 20 years from 1932 to 1952.

Because the tax subsidy of American corporations is more closely guarded than the secrets of the hydrogen bomb, the sum must be reckoned indirectly.

Fortune magazine has published profits before-and-after taxes, of 500 larger American industrial corporations. These figures allow the special subsidies granted oil-and-gas companies to be roughly computed.

Such companies are first allowed to subtract all development and drilling costs—including "intangible" costs such as overhead—and then are further allowed to subtract 27.5 percent of their gross income from oil and gas wells (not exceeding 50 percent of net). They pay income tax only on what is left. This subsidy is known as the "depletion allowance."

The 10 largest American industrial companies, excluding oil companies, in 1954 paid 48 percent of their net income in taxes, had 52 percent left. The 10 largest oil-and-gas companies paid 28 percent in taxes, and had 72 percent of net income left.

The 10 largest oil and gas companies kept, in 1954, a total of $597 million that they'd have paid out if taxed at the regular corporation rate. This $597 million represents the hidden subsidy granted these corporate oil giants by United States taxpayers under the "depletion allowance."

Standard Oil of New Jersey in 1954 was subsidized approximately $135 million. Gulf, $40 million; Texas Co., $93 million; Standard of California, $80 million; Socony, $65 million; Shell $30 million; Standard of Indiana, $40 million; Sinclair, $40 million; Phillips, $29 million; Continental Oil, $16 million; Sun Oil, $15 million.

All the rest of the industry together, companies and individuals, probably does not match the subsidy granted the "big 10" of $597 million, but even so the industry total is well over $1 billion yearly. These big companies own by far the largest gas as well as oil reserves, and are the real powers behind the drive to free the "independent gas producer" from Federal regulation, at an estimated additional cost to gas consumers of $500 to $800 million yearly.

Pile this sum on top of a billion-dollar subsidy and the big boys would really "have it made."

Federal Subsidies to Commercial Airlines

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two columns by Ray Tucker which appeared in the Wilkes-Barre Times Leader-the Evening News, one of June 30, 1955, and other on July 22, 1955. Mr. Tucker discusses the problem of Federal subsidies to commercial airlines and specifically of Federal subsidies to Pan-American Airlines:

[From the Wilkes-Barre Times Leader-the Evening News of July 22, 1955]

AIR GRANTS UNDER FIRE

(By Ray Tucker)

WASHINGTON, JULY 22.—Mrs. Eleanor Roosevelt has joined the Capitol Hill forces which seek to reduce or eliminate taxpayers' heavy subsidies to profit-making commercial aviation companies. Since her late husband inspired expansion of the system on the advent of World War II, her testimony will have considerable effect on future subsidy appropriations to beneficiary lines.

Mrs. Roosevelt's deep concern is reflected in the fact that she wrote to Senator STYLES BRIDGES, of New Hampshire, member of the Senate Appropriations Committee, at the behest of Senator PAUL H. DOUGLAS, of Illinois. She also wrote to all conference committee members on this question. Senator DOUGLAS had conducted a 3-day floor fight against further exploitation of American taxpayers by a few commercial airlines.

He forwarded copies of the CONGRESSIONAL RECORD on the debate to Mrs. Roosevelt and to many other influential financial, political, and civic figures. His replies have been 90 percent favorable, as Mrs. Roosevelt's letter to BRIDGES proves:

USE OF SUBSIDY MONEY

"I have just read a letter from Senator PAUL DOUGLAS," she wrote BRIDGES, "telling me about a situation which will come before you on the payment of airmail subsidies. You will have to decide whether the House figure of $40 million of the Senate figure of $55 million should stand, or whether you will make a compromise between the two.

"I know that you are thoroughly familiar with this question, and I only wish to say that for a number of years, I have watched this situation, including all the points which Senator DOUGLAS sets forth as regards Pan American and its subsidiaries."

She referred to Senator DOUGLAS' floor presenation, which revealed that Pan Am uses subsidy money to pay taxes, to finance luxury hotel losses, and to make profits. Although he lost the major battle, he did succeed in cutting the subsidy figure to $52,500,000.

EQUAL TREATMENT

"Why," continued Mrs. Roosevelt, "cannot audits be made of these companies just as well as of others and why should the entire (Pan Am—Editor's note) system not be treated as an entity, since that was the Supreme Court decision?

"It seems to me to be of interest to the country to have these subsidies made as low as possible, and to create a situation in which companies are treated equally by the Government."

Oddly enough, Senator BRIDGES, who is a Pan Am man, turned over Mrs. Roosevelt's critical letter to Carrol Cone, a former member of the Civil Aeronautics Board, a former Democratic National Committeeman from Arkansas, and now a well-paid vice president and political lobbyist at Washington for Pan Am, which enjoys the lion's share of subsidies and airmail pay—$31,920,000 for fiscal 1956.

MISREPRESENTATIONS

Cone's reply to Mrs. Roosevelt included numerous misrepresentations.

The Pan Am official said that "all financial transactions between Pan Am and other companies, affiliated or not, are subject to and under the continuing scrutiny and review of the Civil Aeronautics Board."

Chan Gurney, other CAB officials and General Accounting Office staff members have testified that there has never been a complete audit of Pan Am's complicated and bewildering financial and operational affairs. That is on the official record of Congress, the CAB and GAO.

OFFICIAL FIGURES

Cone said the Pan Am "enjoys no more favorable subsidy than that afforded to any other United States carrier." Official figures belie that statement. For fiscal 1955, Pan Am will enjoy a subsidy of $17,769,000. The next largest amount paid an airline firm is approximately $3 million.

However, the Bridges-Cone-Roosevelt exchange shows how politically entrenched, as of today, Pan Am is on Capitol Hill. It has led Capitol Hill to ask these questions:

Why should Senator BRIDGES, a Yankee legislator obligated with saving taxpayers' money, forward Mrs. Roosevelt's antisubsidy letter to such a special pleader as Cone? Why should Cone so misrepresent known facts and official statistics in his letter to the former President's wife?

And what does Mrs. Roosevelt think of this amazing example of politico-economic duplicity and doublecross?

[From the Wilkes-Barre Times Leader-the Evening News of June 30, 1955]

CUT IN AIR SUBSIDIES

(By Ray Tucker)

WASHINGTON, June 30.—Behind closed doors, a House-Senate conference committee is struggling today with a problem which may cost or save American taxpayers many millions of dollars. It will decide whether Pan American World Airways shall continue to fatten on Federal subsidies, which have totaled more than $1 billion since World War II.

The White House and a House appropriations subcommittee headed by Representative JOHN J. ROONEY, of Brooklyn, cut the 1956 subsidy figure proposed by the Civil Aeronautics Board from $55 million to $40 million. The reduction is not so important as the purpose behind it, which was to force Pan Am to adopt economies that would make it self-sustaining.

Pan Am gets the lion's share of taxpayers' money allotted to airlines subsidies. Its great overseas rival, Trans World Airlines, has just received a special citation from Postmaster General Arthur Summerfield, congratulating it for operating without subsidies. Most other lines, foreign and domestic, pay their own way.

DEBATE ON SUBSIDIES

In Senate debate on this question, Senator PAUL H. DOUGLAS, of Illinois, developed these facts about Pan Am's finances and its relationship with the CAB, the Treasury, and the General Accounting Office:

Pan Am receives between $8 million and $9 million a year from the Federal Treasury in order to pay its taxes to Uncle Sam. In some years, Pan Am has received more than it owed in taxes, but has simply pocketed the "windfall." The Treasury has never tried to recover the excess payments.

Pan Am operates a chain of luxury hotels in Latin America, with fancy bars, golf courses, and swimming pools, on which it loses between $2 million and $3 million a year. According to Senator DOUGLAS, this loss is financed by many taxpayers who cannot afford an air voyage to these luxurious hostelries.

FEDERAL OVERPAYMENTS

According to Postmaster General Summerfield, Pan Am owes millions to the Government for past overpayments it has received for carrying the mail, which is another form of subsidy. But despite Summerfield's urging, no suit to recover has been brought by the CAB or the Department of Justice.

Most amazingly, as several congressional investigations disclose, neither the CAB nor the Comptroller General have complied with legal requirement that they audit Pan Am's finances and operations. Both agencies have failed to comply with a Supreme Court decision to that effect, a decision which re-

vealed the Jurists' annoyance over this untidy state of affairs.

Despite Senator DOUGLAS' scorching analysis, a Senate Commerce Subcommittee, headed by Senator SPESSARD HOLLAND of Florida, increased the subsidy total from the House allowance of $40 million to $55 million. Although HOLLAND failed to answer the DOUGLAS indictment, the Senate voted for the larger amount by 51 to 25. Pan Am's lobbyists are extremely influential in the upper Chamber.

Thus, the subsidy problem comes to a climax before the House-Senate conference committee, now in session. It is expected that Pan Am will win.

SENATOR DOUGLAS' LETTER

Senator DOUGLAS, however, has carried his antisubsidy fight outside the Senate. He has scheduled a conference with Comptroller General Joseph Campbell for a detailed examination of Pan Am's financial position. In his letter to Campbell, Senator DOUGLAS said:

"I would be less than frank, if I did not say that I am very disappointed at the lack of information given to me by the General Accounting Office (which Campbell heads), in response to my repeated requests since February 25, 1954.

"As for my general question of possible waste and extravagance in the airline subsidy program, and my request for information as to ways and means whereby the expenditures of the Federal Government on this item could be reduced, I believe that I received nothing at all from the General Accounting Office."

Letter From Constituent

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. John H. Wilson, of Ripon, Wis., describing the memorial services held recently in commemoration of the 100th birthday of Hon. Robert M. La Follette, Sr.:

RIPON, WIS., *July 10, 1955.*

Hon. LESTER R. JOHNSON,
Member of Congress from Wisconsin, Washington, D. C.

DEAR LESTER: It was wonderful of you and Senator MORSE to give recognition to "Old Bob" on the 100th year of his birth. Both you and the Senator are excelent proponents geographically and spiritually of the principles that he represented and discharged.

The procedure of events at Madison which marked the observance was far better than I personally expected. Sunday morning commenced at the Society Building where a motorcade of about 54 cars was to take us to the birth spot of Bob, Primrose. On our way, the procession passed through Vernona where Senator MORSE had lived. Before we left, I had the pleasure of seeing Progressives that I had not seen in years like former Assemblyman Carlson, Harry Sauthoff, Gordon Sinykin, Fred Risser, and others. I shared the same car with a wonderful couple, former State Senator and past State Legion Commander, Kenneth Greenquest and his wife. At the brief ceremonies at Primrose, Bill Evjue delivered the address with Phil and Chief Justice Warren directly in front.

We returned to have dinner at the Memorial Union with brief introductory remarks there. The dinner was sponsored by the Dane County Bar Association.

The United States Chief Justice gave the principal address at the main event. Phil gave an excellent introductory address with others making remarks.

The day's activities ended at the grave at Forest Hill. Three floral pieces were at the grave. One basket, one wreath which Chief Justice Warren placed, and a red, white, and blue floral wreath given by local No. 1327, United Steel Workers, CIO, of Ripon.

Everyone was overly congenial and one never had to wait for introductions at the several occasions for everyone introduced themselves. The day is long to be remembered. The press states, of the gathering, only about 50 older Progressives were on hand with me in that list.

I am happy to see you working on the idea of reduction of the retirement age for women. It is the first step in the right direction for what must eventually have to come later. In fact, I would give you a 100-percent rating but only wish the rest of Congress or even a majority of Congress were with you.

This is longer than I had expected, but I did want to give you some report on things and I have done so as briefly as possible.

Cordially yours,

JOHN H. WILSON.

Legislative Output of the 1st Session of the 84th Congress

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal, Tuesday, August 2, 1955:

If the legislative output of the 1st session of the 84th Congress seems somewhat meager, surely part of the reason is that the times have no demanded earth-shaking decisions. For that circumstance we may all be thankful. There should be satisfaction, too, in the refusal of this Congress to do a number of things it was asked to do.

The urgent things, or the things which seemed urgent at the time, were done. President Eisenhower got without difficulty his free-hand authority regarding the defense of Formosa and a mutual defense pact with that island's Government. Other important foreign legislation—like extension of the Reciprocal Trade Act and ratification of the Paris pacts on Germany and of the Austrian state treaty—was in due course enacted. The administration was given about what it said it needed for national defense and for the general operations of the Government.

But this session's omissions are almost equally important. Thus Congress declined to accept the Democratic $20-a-head tax cut, a starkly political suggestion as inequitable as it would have been damaging to Federal finances. And while Congress approved the foreign-aid bill, it served notice of a certain disquiet about this indefinitely prolonged program by slashing some $560 million out of the administration's request for more than $3.2 billion.

* * * * *

Attempts to restore 90 percent of parity farm price supports, before the new flexible system has even had a chance to work, also got nowhere this year. That was likewise the destination of a proposed big new Federal intrusion into school construction, of further Government involvement in medicine through the reinsuring of health insurance, and of further liberalization—at increased tax cost, of course—of the just-liberalized social-security program.

Now it would be naive to suggest that Congress resisted all these temptations out of undiluted public-spiritedness. Some of the failures to act were fortuitous. In the case of the highway program, political rivalry produced a political impasse. Certain of the welfare schemes did not go far enough to suit the Democrats—yet it is incidentally ironic that under a Democratic Congress the welfare state did not expand as much as the Republican administration hoped. But whatever the motivations, the country was saved, at least for a while, a lot of unnecessary and costly new legislation.

And we suspect that, along with the more specific motives, there was a general awareness on Capitol Hill these past 7 months that these were not really burning issues in the Nation as a whole. If anyone can sense the people's mood, it is the politicians who depend on the people's votes. Had they felt powerful pressure for Federal highways or more Federalized medicine, it is a safe bet they would have acted.

Instead, the Members of Congress may have detected that the mood of a Nation at peace and unprecedentedly prosperous is not conducive to dramatic new legislation or even to great quantities of any kind of legislation. This session did well to reflect that fortunate situation.

It was not a do-nothing Congress, but its political sixth sense may have helped to keep it from doing many things the country can well do without.

Committee on Interstate and Foreign Commerce Activity Report

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PRIEST. Mr. Speaker, pursuant to section 136 of the Legislative Reorganization Act of 1946, Public Law 601, 79th Congress, and House Resolution 105, 84th Congress, I should like to submit a statement of the activity of the Committee on Interstate and Foreign Commerce for the 84th Congress, 1st session.

Notwithstanding circumstances that involved the committee in lengthy hearings and executive sessions on two different subjects, we were able to clear some extremely important legislation during the session.

In the field of health we reported and both Houses passed a resolution authorizing a 3-year study of the Nation's mental health problems. This resolution was frequently referred to in the course of the hearings as perhaps the most important legislation that was before the 84th Congress insofar as its ultimate effects on the welfare of the people are concerned.

When the announcement was made on April 12 that field tests conducted in 1954 proved the efficacy of the Salk vaccine, the committee immediately began a study of the problems presented by that important announcement. These problems were greatly accentuated by the dis-

covery of some live virus in batches of vaccine released by the Cutter laboratories.

The committee maintained a careful watch over all developments that followed and then, after hearing a panel of 15 top experts on the subject of poliomyelitis, reported legislation which we believe will be extremely helpful to the Nation as a whole in carrying on vaccination programs in the several States.

We reported legislation amending the Railroad Retirement Act to provide additional benefits for wives of retired railroadmen, and for widows who may be eligible to receive a widow's annuity under the act, and also eligible to receive social-security benefits in their own right.

In the field of aviation we reported legislation, which became law, making it possible for local service airlines to obtain permanent certificates, and a national airport program that should greatly assist in bringing our national airways up to date in line with the growth of the industry and the increased speed of planes.

Amendments to the Natural Gas Act were reported and passed the House but did not become law.

We reported a bill to provide for research in air pollution and this became law.

Reports were filed on newsprint and on the very controversial question that arose out of the conflict of opinion relating to a system of air navigation. This is commonly referred to as the VOR/DME/TACAN controversy, and it called for a very detailed technical study by the committee.

The detailed activity report follows:

ACTIVITY REPORT OF THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, 84TH CONGRESS, 1ST SESSION—BILLS REPORTED

The committee has considered and reported favorably the following bills:

H. R. 2225, permanent certification of local-service air carriers: Report No. 265, by Mr. Williams, March 22, 1955. Approved May 19, 1955, Public Law 38.

House Joint Resolution 256, providing for study of mental health: Report No. 241, by Mr. PRIEST, March 21, 1955. Approved July 28, 1955, Public Law 182.

H. R. 1816, to declare certain tidewaters in Boston nonnavigable: Report No. 421, by Mr. MACDONALD, April 18, 1955. Approved May 13, 1955, Public Law 34.

H. R. 6645, to amend Natural Gas Act—exemption of producers: Report No. 992, by Mr. PRIEST, June 28, 1955. Passed House, amended, July 28, 1955.

H. R. 5222, flammable fabrics—exempt scarves: Report No. 969, by Mr. KLEIN, June 28, 1955. House rule rejected, August 1, 1955.

H. R. 2866, nonnavigable waters in Acushnet River, Mass.: Report No. 909, by Mr. MACDONALD, June 23, 1955. Approved August 3, 1955, Public Law 212.

S. 928, providing for research in air pollution: Report No. 968, by Mr. CARLYLE, June 28, 1955. Approved July 14, 1955, Public Law 159.

S. 1250, nonnavigable waters in Pike Creek, Kenosha, Wis.: Report No. 908, by Mr. FLYNT, June 23, 1955. Approved July 26, 1955, Public Law 169.

S. 1300, nonnavigable waters in Greenwich Harbor, Conn.: Report No. 905, by Mr. HAYWORTH, June 23, 1955. Approved July 12, 1955, Public Law 152.

S. 1469, nonnavigable waters in Cedar Creek, Bridgeport, Conn.: Report No. 907, by Mr. Friedel, June 23, 1955. Approved July 12, 1955, Public Law 151.

Senate Joint Resolution 38, interstate compact to conserve oil and gas: Report No. 917, by Mr. HARRIS, June 27, 1955. Approved July 28, 1955, Public Law 185.

H. R. 4744, railroad retirement—dual benefits for widows: Report No. 1046, by Mr. PRIEST, July 1, 1955. Approved August 12, 1955, Public Law 383.

H. R. 5614, to amend Communications Act—protest rule: Report No. 1051, by Mr. PRIEST, July 1, 1955. Passed House, July 21, 1955.

H. R. 4090, radio call selectors on cargo ships: Report No. 1618, by Mr. Macdonald, August 1, 1955.

H. R. 7126, grants to States for purchase of Salk polio vaccine: Report No. 1186, by Mr. PRIEST, July 14, 1955. S. 2501 passed House, amended, in lieu, August 1, 1955. S. 2501 approved August 12, 1955, Public Law 377.

S. 1855, Federal airport assistance: Report No. 1190, by Mr. HARRIS, July 15, 1955. Approved August 3, 1955, Public Law 211.

The committee held public hearings as follows:

Number of public hearings:	
Entire committee	54
Subcommittees	30
Hours of sitting:	
Entire committee	183
Subcommittees	90
Printed pages of public hearings	2,980
Unprinted pages of public hearings	815

In addition to the above, the committee filed House Report No. 683, newsprint study, current newsprint outlook; House Report No. 592, investigation of the development of the common system of air navigation and traffic control; and printed as a committee print a staff report on State taxation of interstate trucking and the reciprocity problem.

Others, Too, Lean on Price Crutches

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to place in the RECORD an editorial from the Thorp Courier, edited by Robert Elkins of Thorp, Wis.

As the editorial points out, farmers are not the only people who lean on price supports. The editorial follows:

The Wall Street Journal suggests that the farmer has been leaning on price crutches so long that he can't handle himself without them.

Quite so, Mr. Wall Street Editor. But why confine your comments to the farmer?

Why not say something about the eastern industrialists who have been leaning on tariff price crutches for half a century or more? Tell them to learn to get along without them. Also, tell the other segments of our economy to throw away the crutches.

And remember, Mr. Wall Street Editor, that the farmer didn't start this price crutch business. Your pals in eastern industry did, and they did it so long ago that you've forgotten that they have crutches.

Check back in history a bit. The real agitation to do something for the farmers started in the twenties and the argument advanced then—a very solid one—was that industry was on price stilts and that the farmer needed some protection to place him on the same level. The contention was that "the farmer can't survive if he must sell in an open market and buy in a protected market."

That was the theme song when the famous McNary-Haugen bill was presented to Congress in the twenties. That was the gist of the argument in its favor. No one could provide a really sound answer against the farmers contention then, and no one can do it today.

Start a campaign, Mr. Wall Street Editor, to induce the eastern industrialists to abandon their price stilts. Then after you've accomplished that objective, come to the farmers and ask them to do likewise. But begin at home.

The farmer can battle his way in a free economy with no holds barred. He can take care of himself as well as anybody. But he has a right to expect the same economic rules for everybody.

MORE NOTES ON PRICE SUPPORTS

Even here in a farming area, you still find people who shake their heads and say they don't know about this price support business, it sounds like artificially maintaining prices.

Well, maybe it is, whatever that means, but look at it this way:

The several million farms in this country are each a separate business, run by individuals who are mostly unorganized, and despite that they have succeeded in producing all the food and fiber that this country needs, with some to spare. But being individual units, they have no marketing system they can control, except through the agency of their Government.

It's one thing to say a farmer ought to grow what he can get the most for and trust to luck to make a profit, the same as other people do, only it doesn't work that way and very few others function under such a system.

Take the car manufacturers. There are only 3 big companies, doing about 75 percent of the total business, and all told only 5 or 6 companies. If there were only 3 big farmers in this country, raising 75 percent of the cotton, corn, maize, etc., and 3 or 4 others raising all the rest, they wouldn't need any Government support prices, they'd just hold the food off the market until they got what they had to have.

Or take tractor manufacturers. The same thing is true. There are only 7 or 8 companies making all the tractors and other farm implements for all the farmers in this country.

And even so, car manufacturers and tractor manufacturers have price supports, in the form of tariffs.

As long as the farmland is divided up into small units, and we for one hope it will stay that way forever because if there's anything that keeps a democracy functioning it's a lot of small people who are their own boss and are economically uncontrolled by anyone else, then there has to be some method devised to let a farmer know when he starts a crop about what he can get for it when he finishes it. It's the most stabilizing fact in farming today, and it is now being proved right here in Williamson County.

Our only complaint is that the present Agriculture Department, headed by Secretary Benson, does not have much faith in it. Secretary Benson has lowered the support price at every chance he got, contending for

example that 70 percent of parity is better for the farmers than 90 percent. Parity, as you know, means a fair price, and what this means is that Secretary Benson believes 70 percent of a fair price is better than 90 percent of a fair price. When he ran for President, Mr. Eisenhower criticized the Democrats for supplying the farmers only 90 percent of parity, saying they were entitled to 100 percent. Now 100 percent of fairness never did seem like too much fairness to us, but it seems like at least 30 percent more than Secretary Benson believes in. Equal justice to all, except farmers, and 70 percent is enough for them.

The Superficial Aspect

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. MULTER. Mr. Speaker, the following article which appeared in the May 23, 1955, issue of the New Republic magazine is deserving of our attention:

THE SUPERFICIAL ASPECT—MORALITY MINUS MENTALITY

The affair of the Salk vaccine involves no moral turpitude, as far as the public is aware. It does not even involve political shenanigans, as most governmental stupidities do. Neither the administration nor the Republican Party had anything to gain by risking the snarl-up that has occurred, so this cannot be described as an instance in which inept politicians outsmarted themselves. They were not trying to be smart, they were only being natural; but the result is an exhibition that staggers the sourest cynics.

To an outside observer, judging entirely by the news that is public property, it seems improbable that the Government was guilty of a single evil thought in connection with this business. The trouble is that it was not guilty of any thought of any kind. It appeared to be serenely unaware that a special duty devolved upon it simply by reason of the magnitude of the problem. It was content to follow the routine established many years ago to protect the public against harmful or useless innovations in the field of medicine; it could not understand that the intense interest in this particular innovation imposed upon it a special responsibility.

In this case, as in nearly every other special problem that has been suddenly presented, the administration seemed to be obsessed with something like Harding's certainty that a "return to normalcy" is the great desideratum. The first consideration in the circumstances was to see to it that there should be no interference with the normal operations of free private enterprise; why worry about a few dead children as long as holy enterprise remained free from the defiling touch of creeping socialism? The administration seems shocked and amazed by the discovery that the public regards the children vastly more important than either the profits or the convenience of pharmaceutical corporations.

Many years ago normalcy was succinctly, if inadvertently, described by a Republican stalwart. In 1920, shortly after the nomination of Harding, he asserted publicly that the nomination was unexceptionable except for one minor objection. "Warren," the stalwart admitted, "lacks mentality."

Judging by its first 27 months the epitaph of the Eisenhower administration may be, "It lacked mentality." From the day when Charles E. Wilson barked into Washington without first qualifying, legally, for the position he was to hold, down to the hash made of the Salk vaccine, the most startling of the administration's activities have evidenced lack not of morality but of mentality.

Only a fortnight ago when Chou, the Chinese Communist, made the first gesture that might be regarded as conciliatory and was instantly slapped in the face by the State Department, it developed that the repulse was due not to any wicked determination to provoke hostilities but merely to the fact that neither Mr. Hoover, at the State Department, nor Mr. Eisenhower, at Gettysburg, knew exactly what Mr. Dulles, off fishing somewhere, thought of the gesture, Mr. Dulles dashed back to Washington and hastily retrieved the error, but not until the world had been given the impression that the administration in Washington really doesn't know which way it is heading.

Mr. Benson's modest proposal to plow under the marginal farmers; Mr. Wilson's dictum that what is good for General Motors is good for the United States; and Mr. NIXON'S remarkable propensity for spilling the beans, all are attributable less to evil thinking than to nonthinking.

Perhaps the most startling of all, yet ignored as trivial, was an incident nearly 2 years ago when Lodge, at the United Nations, was fighting with his back to the wall because Nehru had jumped the reservation and was leading the Comanches in a raid on the democratic stockade. A White House spokesman announced that the President, then in Denver, proposed to take the week off and do nothing except go golfing and fishing. The fact of the matter was that there was little else he could do, but for the President to announce publicly that he was going loafing at that critical moment was, well, just lack of mentality.

This has imposed a terrific strain on the one-party press. To do it justice, it has seldom suppressed the news, but it has suppressed apposite comment on the succession of blunders. To appreciate the difference one need only recall what followed when Truman, at a moment when foreign affairs were so critical that sober-minded men were fearing war in a matter of days, toyed with the idea of sending Chief Justice Vinson abroad as an additional negotiator. But he consulted Secretary of State Marshall, then in Paris, and Marshall disapproved, so Truman dropped the idea.

But some Judas—it was Truman's ill luck always to have an Iscariot lurking in the background—gave the story to the one-party press, and it squalled for a week, not because the President had done anything, but because he had momentarily thought of an injudicious move. Yet there may be a certain consistency in it. President Truman was denounced for thinking wrong; President Eisenhower is not denounced, perhaps for lack of evidence that he thinks.

Dixon-Yates Deal Buried But Not Forgotten

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, the Dixon-Yates contract attracted considerable interest outside the Halls of Congress. The reason for this interest outside of Congress rises out of the fact that the public had a stake in this and other phases of our power and resource development program.

I know that the REA cooperative patrons of the Nation were very much interested in the Dixon-Yates contract. It so happens that the Ninth District, which I represent in Wisconsin, is one of the strongest REA cooperative districts in the Nation. Thus, there was more than average interest by people in my district.

Under leave to revise and extend my remarks, I wish to place in the RECORD a story which appeared in the August issue of the National Union Farmer. The article summarizes very well the issues involved in the Dixon-Yates contract. The full text of the news story follows:

WASHINGTON, D. C.—The Dixon-Yates deal is dead, but it is a long way from buried and forgotten.

President Eisenhower sounded the death knell for the ill-starred project only 1 hour before Senator KEFAUVER, Democrat, of Tennessee, chairman of a Judiciary Subcommittee, was to open an unusual nighttime hearing on the involvement of high administration officials in what have been termed "scandalous" implications in the deal.

The Presidential announcement, which came out at the most unusual evening hour of 7 p. m. on June 30, made Senator KEFAUVER'S hard-hitting investigation falter—but only briefly. The 8 p. m. hearing was called off quickly, but soon thereafter the investigation was resumed.

Mainly as a result of the aggressive digging of Chairman KEFAUVER and subcommittee members LANGER, Republican, of North Dakota, and O'MAHONEY, Democrat, of Wyoming, the main outline of the Dixon-Yates contract's origin and its unusual course through Government channels has been made public.

The story reveals that the Dixon-Yates method was invented by the Nation's biggest utility financial firm, which placed one of its own vice presidents inside the White House to work out the details. The Dixon-Yates deal itself had the personal favor of President Eisenhower, who ordered independent Government agencies to accept and back it against their better judgment. With the President personally behind them, the Dixon-Yates promoters were able to draw several agencies of the Government into their fight to put over the deal. Investigating Senators have charged possible violation of the criminal laws in the case.

FACE SAVING AT BEST

The administration gave as its reason for calling off the Dixon-Yates contract the fact that the city of Memphis intends to build its own steam plant—so the private utility combine's project is not needed.

But Washington observers consider this a hasty face-saving excuse at best. Memphis officials testified under oath 8 months earlier that they wouldn't accept electricity from Dixon-Yates; and ever since they have openly—even noisily—been making preparations for building their own powerplant for Memphis.

And just 2 days before the President called off the deal, the Atomic Energy Commission voted 2-to-1 against giving up the contract in light of Memphis' plans to build its own plant. AEC Chairman Strauss has been one of the utility interest's most vigorous supporters in the administration.

Fear of scandal, rather than Memphis' plans, prompted the sudden reversal of the President. The Kefauver-Langer-O'Mahoney investigating team is proceeding hot on the trail nevertheless.

For those supporters of REA co-ops and public-power projects believe that not only has wrong been done, but that the full story of Dixon-Yates will reveal a pattern of a captive White House made into a willing tool of the Nation's big utility and financial interests.

In the spring of 1953, shortly after the Eisenhower administration took office, George Wood, board chairman of the First Boston Corp., came to Washington to see his "good friend" Joe Dodge, then Director of the Budget Bureau. First Boston Corp., a Wall Street financial institution, is the Nation's biggest utility financial agency.

GLIB REPLY

Wood arranged to have First Boston's vice president, Adolphe Wenzell, placed in the Budget Bureau as a paid consultant, for the purpose of working out a plan for the Eisenhower administration to deal with the Tennessee Valley Authority.

When Senator KEFAUVER asked Wood if he thought of the possibility that First Boston might get some business as a result of this arrangement, he replied glibly:

"I was sophisticated enough to know that would be a pleasant byproduct."

The administration, meanwhile, completely halted TVA's regular program of expansion to meet the rapidly growing demands for electricity from cities and co-ops in the area.

Wenzell worked up a plan whereby all of TVA's electric power operations would gradually be turned over to private utilities. The first step in Wenzell's scheme was the original blueprint for the Dixon-Yates contract. Wenzell told investigating Senators that he considers TVA galloping socialism—not just creeping socialism as President Eisenhower has called it.

There is a gap at this point as to just how Dixon and Yates, the heads of two utility holding companies, were brought into the still-secret negotiations. But Wenzell was called back, again as a consultant, by the new Budget Bureau Director, Rowland Hughes, to help negotiate the contract as a Government representative.

Wenzell sat on one side of the negotiating table part time. At night, and weekends, and during odd moments, he crossed over to the other side to consult with the Dixon-Yates combine. All the while, he was working to get his own company into the deal as financial agent for the Dixon-Yates combine.

A memorandum in May 1954, by First Boston Board Chairman Wood noted that First Boston expected to split the financing fee 60–40 with another Wall Street financial house.

PUBLIC LEARNS LAST

By June 1954, the now famous Dixon-Yates contract was completed, and for the first time the affair was announced publicly. At no time were competitive bids asked for. The utility interests, working from inside the White House, with the powers of the Presidency backing them up, had arranged a risk-free proposition that guaranteed them enormous profits. The public would lose $140 million or more over the terms of the contract, according to the administration's own admission.

In announcing the Dixon-Yates plan, President Eisenhower indicated that the electricity to be produced by the project was needed for the Atomic Energy Commission, and therefore AEC was contracting to make the purchase on the Government's behalf. Everyone familiar with the situation quickly perceived, however, that AEC's nearest installations were some 200 miles away from the Dixon-Yates plant, and that AEC was being drawn into the deal to act as a middleman to get around legal restrictions against feeding private utility power directly into the TVA system or directly to TVA-area local power distributors.

Here the scheme hit its first snags. Both the AEC and TVA Boards refused to approve the contract. President Eisenhower personally ordered them to change their stand and O. K. it. But criticism from Congressmen and TVA-area citizen groups mounted quickly.

When control of Congress passed to the Democrats in the 1954 election, the lame-duck Joint Committee on Atomic Energy rushed approval of the contract before Congress changed hands. Important safeguards were forced into the contract, but it remained extremely disadvantageous to the Government—and the taxpayer.

COMPLAINTS POUR IN

About this time, complaints about the secrecy and lack of competitive bidding in the deal were provoking serious criticism from many sources, including those normally friendly to the administration. Pressed hard for disclosure of the facts about how it was negotiated, President Eisenhower promised at a press conference that a full and complete disclosure would be made of everyone who took part in the negotiations, and all meetings that in any way dealt with it.

The President's voluminous disclosure was released. It contained no mention of the First Boston Corp., nor of Adolphe Wenzell, nor of Wenzell's original blueprint for the Dixon-Yates deal and the ultimate destruction of TVA's electric-power program.

Ever since Dixon-Yates was first announced, the city of Memphis had been discussing the possibility of building its own powerplant rather than submit to high-cost electric rates from the private-utility combine. Its determination to do so was complete, and on the record, many months ago. This became the second line of defense for those determined to block the deal.

But the discovery of Wenzell's double-dealing role in the contract negotiations, together with evidence pointing to him as the originator of the Dixon-Yates blueprint itself, gave foes of the contract a new and potent weapon. They chose Securities and Exchange Commission hearings on the financing plan for the project as a forum from which to spring their sensational discoveries of scandal.

The issue simmered along at about this stage through the early months of 1955. Foes of the Dixon-Yates proposal settled on a first-line strategy of blocking an appropriation of $6½ million for a Government transmission line to take power from Dixon-Yates across the Mississippi River into TVA territory.

WENZELL TURNS UP

But also, Senator LISTER HILL'S (Democrat, Alabama) probing into the deal turned up the presence of Mr. Wenzell—and his connection with the Dixon-Yates financial agent. The Alabama Democrat, in February, wrote to the Budget Bureau. The Director replied that Wenzell had no connection whatsoever with the Dixon-Yates deal. And although later sworn testimony disclosed that Wenzell was asked specifically by Director Hughes to work on Dixon-Yates, Hughes told Senator HILL that Wenzell was hired before he became Director.

President Eisenhower declared flatly in a news conference that Wenzell "was never called in or asked a thing about the Dixon-Yates contract." The President added: "He was brought in as a technical adviser and nothing else, and even before this contract was even proposed."

But just as attorneys for the State of Tennessee and TVA-area municipalities and co-ops were about to put Wenzell and other First Boston Corp. officials on the stand, the SEC hearing was abruptly called off. No explanation was given by the SEC—a highly unusual if not entirely unprecedented procedure.

KEFAUVER'S subcommitee determined to find out why the hearing was put off. SEC Chairman Armstrong refused to tell. Chairman KEFAUVER threatened to cite him for contempt of the Senate, and let him think it over for a day.

The reluctant Armstrong then admitted that no one less than Sherman Adams, the "Assistant President" who is frequently the "Acting President" in effect, had asked him to hold up the Wenzell testimony until after the House debate.

Bit by bit, the Kefauver hearings have drawn from the SEC Chairman the admissions that: (1) Adams talked about the political problem of the House transmission line vote in asking for the hearing postponement, (2) any similar request by foes of Dixon-Yates would have been ignored, and (3) that Armstrong, as SEC Chairman, gave consideration to the administration's political stake in Dixon-Yates in agreeing to hold up the hearing.

But most serious of all is the web of contradictory statements and evasions by high officials of the administration, all designed to prevent the public from knowing what has been done at its expense.

Man of the Mountain

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following address which was delivered at the Waldorf-Astoria Hotel on May 17, 1955, on the occasion of the presentation by the city of New York to Harry Hershfield of the honorary title and scroll of "Mr. New York." The address was delivered by Louis Nizer, and was reprinted by the New York Cardiac Home with a foreword by Robert F. Wagner, the mayor of the city of New York.

I am pleased to record it permanently as follows:

MAN OF THE MOUNTAIN

(By Louis Nizer)

FOREWORD BY ROBERT F. WAGNER, MAYOR OF THE CITY OF NEW YORK

Harry Hershfield has for several decades served with generous heart every charitable and civic undertaking in the city of New York. His fame has spread to the Nation. He has been the friend of Presidents, artists, and, above all, the average citizen, and he has held a unique place in their hearts. In recognition of his service and personality, I proclaimed May 17, 1955, Harry Hershfield Day, on which day he was designated "Mr. New York."

It was a heart-warming day for the greatest city in the world which has the greatest heart in the world. There was a parade. Policemen, firemen, actors, cartoonists, and other segments of our population paid tribute to Mr. New York. In the evening there was a gala banquet in the grand ballroom of the Waldorf Astoria, at which celebrities in all walks of life and some of his numberless friends paid him warm tribute.

On this occasion Louis Nizer's address evaluating Harry Hershfield was such an extraordinary fusing of humor and sentiment as to epitomize the whole occasion. From far and wide requests have poured in for copies of his address.

This reprint is the result. It is issued by the New York Cardiac Home to which the chairman of the event, Secretary of State Carmine de Sapio, presented $85,000, representing the proceeds from the dinner.

You are about to journey through some eloquent and exciting pages, and I am pleased as the chief executive of our city to join the chorus of all New York citizens in saying "Amen" to the sentiments there expressed.

ROBERT F. WAGNER.

ADDRESS BY LOUIS NIZER

Ambassador Patterson, distinguished guests, ladies, and gentlemen, I am sure that, after that introduction, you are eager to hear my address. Very well. My address is the Paramount Building, situated at the crossroads of the world at Hershfield Square. I suspect that, wherever you live or work you, too, live a little bit on Hershfield Square. For there is no citizen of this community who has not been touched by the good will, the good humor, and the good heart of the most popular guest of honor who has ever appeared in this historic ballroom—Harry Hershfield.

Today, by official proclamation of Mayor Wagner, he is Mr. New York. The sidewalks of New York are shining with happiness. The rivers which flow through New York are gleaming with gaiety. The automobile horns are honking their merry tunes. The skyscrapers are shaking with mirth. And the air is filled with a thunderous tumult of accumulated laughter in appreciation of the man who has made all our spirits lighter—Mr. New York himself—Harry Hershfield.

A human being is distinguished from all other animals by this capacity to laugh. Harry Hershfield is the greatest humanitarian of our day, because he keeps us in constant practice of that unique characteristic of the human race—laughter.

Every artist has an identification description. For many, many years—ever since Lincoln's day—Harry has been described as the man who walks with the mighty, but who has never lost the common touch. Indeed, he has walked with the mighty. Five Presidents of the United States have called him their friend. Statesmen, from Winston Churchill down, have paid him personal tribute. Great scientists, artists, and writers, have bestowed their affection upon him, but he has never lost the common touch—for the people have taken him into their hearts. This is in accordance with a great American tradition—to choose a humorist by popular choice to be the folk hero of his generation. It is our humorous folk hero who tells us the truth about our leaders and ourselves. He cleanses the democratic process by making us laugh at ourselves. Hershfield belongs to this long line of aristocracy in our democracy; Mark Twain, Josh Billings, George Ade, Robert Benchley, and Will Rogers.

I have had good opportunity to observe his hold upon the people. Frequently, I eat with him at the Algonquin Round Table. "Eat" is a bad description of it, for when you share a table with Harry, you choke and gasp for breath from laughter between bites. After lunch, he often walks with me to my office. It is only one block from Sixth Avenue to Broadway—but it is the most difficult block to traverse if you walk with Harry. As we pass the Lambs Club, great stars come out of the building and, upon seeing him, greet him with an enthusiasm out of all proportion to the need of professional recognition. Great actresses, like Helen Hayes, will come along and throw their arms around him. Sometimes, a woman will embrace him and kiss him on both cheeks, and he will say, as always: "So glad to see you." And, when she leaves, I will ask: "Who is that?" and he will say: "I don't know." The street cleaner raises his brush in salute. The shoeshine boy lights up with a smile which is brighter than his shine. And sometimes, when we pass the alleyway of the Belasco Theater, there is a drunken derelict lying in stupor, but he opens his swollen eyes and waves his hand, drawling: "Hello, Harry." I even believe the policeman's horse on that block neighs his salute to Harry as he passes. Yes, he belongs to all of us, for he has made us all happier.

There are people who carry germs, and infect others with diseases. We used to call them "Typhus Marys." There are also people who infect you with health and good will. Harry is such a person. If you are morose and moody, beware of him. If you are carrying the burdens of your business or public affairs upon your shoulders, shun him, you haven't a chance if you meet him. For, whether he is telling a story to 1 or to 25,000 at Madison Square Garden, his enthusiasm, his gaiety, his boyishness will infect you, and you will lose your sad face and walk away with stronger back, if not lighter burden. You can observe this procedure at any banquet at which Harry presides, there have been thousands of them. During dinner some distinguished governor or statesman will approach Harry ponderously, intending to pay him solemn compliment. Before he has finished, Harry has gracefully interrupted him and waved his finger to him to get closer and said: "Have you heard this latest story?" Then, watch the face of the victim. Within a few moments, a wide smile is spreading across his features; he begins to shake with laughter and his diaphragm, for the first time in a year, is moving violently up and down. He has been infected with good humor, and he walks away—having intended to give—but having received instead. He is now a germ carrier. Watch him, as he sits down at the end of the dais. There are guests on each side of him and he is still laughing. They want to know why. He tells them the latest story which Harry has told him. Now, watch their faces. Within a few moments, they have been infected too. They are roaring with laughter and there is a little pool of merriment which has been setup at that end of the dais. The same procedure is taking place at the other end of the dais, where another little pool of mirth is formed, and, soon, the whole dais, is in light-spirited mood. Then his laugh germ spreads to the whole audience, particularly when Harry speaks. And thus, for years, this man has been spreading epidemics throughout the city.

The city of New York is the largest laboratory test of the Biblical admonition: "Thou shalt live happily with thy neighbor." Here, we have all races, creeds, and religions living side by side; men of character and those who are characterless; men of culture and those who are ignorant. Despite the problems which exist in the city, the experiment has been brilliantly successful, and New York City continues to be the greatest metropolis on the face of the globe representing the happy conglomeration of many nationalities and peoples of all descriptions. Walt Whitman once said: "The United States is not a nation—it is a nation of nations." How true that is of New York.

Harry Hershfield is properly designated—Mr. New York. He represents, in himself, so many conglomerate qualities. Observe his Irish grey hair. Look at his Scandinavian blue eyes. Notice his Greek pallor. Watch his French vivacity; his Italian gaiety and love of music. Yes, and sometimes, I think he also has several wonderful Jewish characteristics, too.

I like to think of a symbol—New York as a huge melting pot, and Harry as Mr. New York, standing over it with a large stirring spoon. If the pot threatens to boil over with tensions; if there is coagulation, he pours some ingredients into the pot—they are always marked "humor." The tensions and anxieties subside—the even consistency of the contents is restored.

Freud commented on what he called "the peculiarly liberating and elevating effect" of humor. I do not pretend that Harry has social consciousness and that his humor is practiced with design. On the contrary, he is totally oblivious of high purpose. He tells stories because he enjoys making people laugh. He breathes laughter, as ordinary mortals breathe air. It is as necessary to him as oxygen. He is the only man I know who never needs a vacation, because what he is doing is sheer joy all the time. The effect nevertheless of his activities is to decrease our tensions; to make us laugh at ourselves; to give us a better perspective of the turbulent times in which we live.

So, if the subject which oppresses us is juvenile delinquency—Harry has a story: "Strike your child every day," he says. "If you don't know why, he does."

"The place to stop juvenile delinquency," he says, "is in the high chair—not the electric chair."

Is there a debate raging on progressive education? Harry addresses the teachers' groups and tells them of the mother who said to the teacher, "My child is very sensitive. If he does something wrong, beat the child next to him; that will be punishment enough for him."

Are we oppressed by the threat of communism? Harry lightens the mood. "A Communist is a man who minds his own business at the top of his voice." And he suggests "That the Communist leaders will find out that, when they have each other as friends, they do not need any enemies."

Is the country boiling over with indignation on the subject of loyalty tests? Harry tells the story of the applicant who answered every question satisfactorily but, finally, was asked, "What do you think of a man who goes horseback riding at 3 o'clock in the morning?"

"I would say he is very eccentric."

"Ah, poking fun at Paul Revere, are you?"

Is Harry addressing an Irish audience? He suggests that the Irish always fight among themselves—to be sure of having worthy adversaries.

Is he addressing a Jewish audience, proud of its ancestry? He brings them down a peg. A jew and a Christian were arguing about their heritage. The Jew said indignantly: "Why, when your ancestors were picking up acorns in the forest mine already had diabetes."

To the overwhelming majority of Protestants in this country, he suggests that some day he hopes they will have minority rights.

Is there a debate on the theatrical pages about the traditional conflict between critics and authors? Harry consoles the author: "Go to any public scquare and see if you can find a statue erected to a critic."

Is psychiatry the center of discussion? Harry tells about the psychiatrist who treated a man for an inferiority complex and after 2 years, reported: "I have good news for you. You have no inferiority complex. You are really inferior."

And Harry suggests a sign for a psychiatrist office: "A cure guaranteed, or your mania back."

Is there a current controversy about a strike? Harry tells the story of the woman who calls the owner of a store and says, "Please call my husband, Mr. Jones, to the phone." "We have no Mr. Jones working here," the owner replies. "I know," says the woman, "he is outside picketing your store."

Or, he makes the union people laugh a little bit at themselves when he tells the story of Mr. Bernard Baruch going to a fine restaurant with two men dressed in sweat shirts. The owner protests. "I can't help it," says Mr. Baruch, "I bought a hearing aid, and the union makes me carry two electricians."

Have we frontline headlines about a prison break? Harry suggests that every prison should be a pen with a lifetime guaranty.

Is there a filibuster in Washington? Harry reduces our indignation somewhat by suggesting that this Nation has wide, open spaces entirely surrounded by teeth.

Is he addressing a medical group? He tells the story of the doctor who prescribed that the patient eat only meat. The next day the patient was worse, and the doctor prescribed only vegetables. The patient could not understand the reversal. The doctor says, "You would be surprised to learn, my dear

man, how medicine has progressed in the last 24 hours."

Is there a judicial conference? Harry reduces the judicial pomp. There was a judge who made a record-breaking number of decisions. The reporters asked how he achieved this. "I listen to the plaintiff and decide," said the judge. "Don't you ever listen to the defendant?" asked the reporters. "I used to," said the judge, "but I found it befuddled me."

Is there a debate on the subject of modern art? Harry pours a vial of humor into the brew. A marriage broker introduced an ugly girl to a young man. The victim protested that the lady had misplaced eyes, a broken nose, and a deformed face. "Ah," said the marriage broker, "It is apparent that you do not like Picasso."

When Harry addresses the Army in Washington, he suggests that there is one plaque that will never be erected on the Pentagon Building, and that is, "George Washington slept here."

During the political campaigns, when the politicians are bragging about being self-made men, Harry says, "That certainly relieves God of a terrible responsibility."

Is divorce in the headlines? Harry tells of the wife who was a wonderful housekeeper. Every time she divorced she kept the house.

He is not a monologist; he is a creative humorist, and his witticisms are not merely funny—they have a profundity of their own, in capsuled form. "Don't laugh at the bull," he suggests, "he knew the meaning of the red flag before we did."

During an investigation of public officials, he comments that any man, who points an accusing finger, should remember he has three fingers pointing at himself.

When anyone makes a public statement about retaliation and revenge, Harry reminds him that if a man goes to dig a grave, he should always dig two.

So, he has gone through a lifetime telling another story and another story. If we could gather in all the laughter from his jokes, there would be a veritable cascade, a Niagara Falls of screaming hilarity such as has never been known in history.

I think it is time that we told him a story. I should like to tell you and him the story of the Man of the Mountain, written by Hawthorne. In New Hampshire, nature, with mystical ferocity, cast together stone boulders so that they formed a human face jutting out from the top of a mountain. The legend grew in the region that, some day, a man would come along who would have the same face as the man of the mountain and that man would be a noble, good, and true man. At the foot of that mountain there was a village, and a young man, I think his name was Ernest, decided to dedicate his life to finding the man who would have the face of the man of the mountain.

He traveled far and wide among the villages, and then to other States, and, finally, to other countries. And, each time, he brought back some famous scientist, political leader, artist, humanitarian, or philanthropist. A platform was erected at the foot of the mountain, and Ernest would introduce his celebrity to the villagers. He would extol the man's virtues, and ask them to compare his profile with the profile above of the man of the mountain, but, each time, the villagers found the resemblance lacking. They were unsatisfied that the good, noble, and true man had been found.

Ernest continued his task. He roamed far and wide across the earth but, always unsuccessfully. Finally, when he was gray and somewhat wan from his labors, he brought back a great poet who, he was certain, had the face of the man of the mountain. Again, all the villagers gathered and Ernest introduced the great poet from the platform at the foot of the mountain. The villagers, eager to have Ernest succeed after a lifetime of search, sympathetically compared the profile of the poet with the man of the mountain, but, again, shook their heads dolefully—the resemblance was imperfect. They were about to depart in dejection, when the leader of the community glanced up and, in the bronze light of the setting sun upon Ernest's face, he observed—sharply etched against the mountain—the profile which was identical with that of the man of the mountain. "Look," he cried out, "Ernest, Ernest, himself, is the man of the mountain."

The villagers turned sharply. Cries of exaltation emanated from the crowd. It was Ernest, himself—the introducer of all the great celebrities and distinguished men who was the man of the mountain. There was great rejoicing. A public holiday was declared. They marched in the streets and held a public festival to honor Ernest—the good, noble, and true man.

Need I elaborate this analogy? For 50 years, Harry Hershfield has been extolling the virtues of distinguished figures—telling you that they were great and noble men; but each time in our own minds and hearts we found the praise somewhat wanting. And now that he is gray and wan from his labors, the leader of our community—the mayor—with that unerring instinct which has characterized his other acts, cries out: "Look at Harry Hershfield—look at the introducer—he, himself, is the good and the noble and true man. He is Mr. New York." And we the villagers have looked and found that it was true. Today, we have celebrated by marching in the streets. And this evening, we have a public festival to honor the good and the noble and the true man—Harry Hershfield.

This honor bestowed upon him is one of the greatest ever conferred by the city of New York upon a living man in our memory. But there is something more unique than that. No other man in this Nation could have had this distinction bestowed upon him without evoking, in some quarters, jealousy or criticism. The only man to whom it could have been given with unanimous acclaim and affection; with universal comment, "What a wonderful man—I'm so happy he's getting this honor" is Harry Hershfield.

I know how youthful Harry's heart is; I know that he is going to be with us for decades to come. Indeed, the philosophers say that every man has a right to deduct from his years those moments in which he has done good for others. And, by this standard, Harry is very, very young indeed; for he has found the philosopher's stone—the secret of youth—laughter.

I wish to express a concluding thought which I hope will not be too tactless. When Mark Twain died, a one-sentence eulogy was delivered at his funeral: "This is the first day you have made us sad."

How delighted we are that we can tell Harry how happy he has made us, and how happy we are to be with him as his friends for long, long years to come.

Tonight, Harry Hershfield, we salute you—not only as Mr. New York, but as the man of the mountain, the good, the noble, the true man.

SENATE PROCEEDINGS SUBSEQUENT TO ADJOURNMENT

ENROLLED BILLS SIGNED AFTER SINE DIE ADJOURNMENT

Pursuant to the order of the Senate of August 2, 1955,

The following bills were signed after the sine die adjournment by the Vice President, which had previously been signed by the Speaker of the House of Representatives:

On August 3, 1955:

S. 125. An act for the relief of the State of Illinois;

S. 197. An act for the relief of Vincenzo Santagata;

S. 198. An act for the relief of Fillipo Mastroianni;

S. 204. An act for the relief of Fred P. Hines;

S. 393. An act for the relief of Chicko Suzuki;

S. 550. An act for the relief of John Axel Arvidson;

S. 714. An act for the relief of Alfio Ferrara;

S. 730. An act granting the consent of Congress to the States of Kansas and Oklahoma to negotiate and enter into a compact relating to their interests in, and the apportionment of the waters of the Arkansas River and its tributaries as they affect such States;

S. 732. An act to promote public cooperation in the rehabilitation and preservation of the Nation's important historic properties in the New York city area, and for other purposes;

S. 1014. An act for the relief of Henry Duncan;

S. 1033. An act for the relief of Ann Arbor Construction Co.;

S. 1041. An act to amend the Civil Service Retirement Act of May 29, 1930, as amended, to provide for the inclusion in the computation of accredited service of certain periods of service rendered States or instrumentalities of States, and for other purposes;

S. 1077. An act to provide for settlement of claims resulting from the disaster which occurred at Texas City, Tex., on April 16 and 17, 1947;

S. 1189. An act to permit national banks to make 20-year real-estate loans, and 9-month residential construction loans;

S. 1415. An act for the relief of Anna Mertikas;

S. 1681. An act for the relief of Cecile Doriac and her minor child;

S. 1792. An act to amend the Federal Employees' Group Life Insurance Act of 1954;

S. 1899. An act to authorize the improvement of the Amite River and its tributaries;

S. 1906. An act to authorize the Pueblos of San Lorenzo and Pojoaque in New Mexico to sell certain lands to the Navaho Tribe, and for other purposes;

S. 1917. An act to authorize the construction within Grand Teton National Park of an alternate route to United States Highway No. 89, also numbered U. S. 187 and U. S. 26, and the conveyance thereof to the State of Wyoming, and for other purposes;

S. 2049. An act to provide recognition of the 50th anniversary of the Devils Tower National Monument, Wyo., the first national monument, established by the President of the United States pursuant to the Antiquities Act of 1906; to authorize the addition of certain land to the monument, to permit land exchanges, and for other purposes;

S. 2088. An act for the relief of Ladislav Mencl;

S. 2126. An act to extend and clarify laws relating to the provision and improvement of housing, the elimination and prevention of slums, the conservation and development of urban communities, the financing of vitally needed public works, and for other purposes;

S. 2295. An act to amend section 313 of the Agricultural Adjustment Act of 1938, with respect to tobacco allotments;

S. 2339. An act to authorize the Secretary of the Interior to include capacity to serve the town of Glendo, Wyo., in a sewerage system to be installed in connection with the construction of Glendo Dam and Reservoir, and for other purposes;

S. 2514. An act to declare the portion of the waterway of West Haven and New Haven, Conn., known as the West River, northerly of a line running north 85°54'43.5" east from a point whose coordinates in the Corps of Engineers Harbor Line System are north 4,616.76 and west 9,450.80, a nonnavigable stream;

S. 2576. An act to amend the joint resolution entitled "Joint resolution to authorize the merger of street-railway corporations operating in the District of Columbia, and for other purposes," approved January 14, 1933, and for other purposes;

H. R. 5168. An act to provide for retirement of the Government capital in certain institutions operating under the supervision of the Farm Credit Administration; to increase borrower participation in the management and control of the Federal Farm Credit System, and for other purposes;

H. R. 6122. An act to remit the duty on certain bells to be imported for addition to the carillons of The Citadel, Charleston, S. C.;

H. R. 6182. An act to amend the Federal Property and Administrative Services Act of 1949 to make temporary provision for making payments in lieu of taxes with respect to certain real property transferred by the Reconstruction Finance Corporation and its subsidiaries to other Government departments;

H. R. 6193. An act to provide for the sale of certain war housing projects to the Housing Authority of Beaver County, Pa., for use in providing rental housing for persons of limited income;

H. R. 6199. An act to amend the act of October 14, 1940, to authorize the sale of personal property held in connection with housing under such act;

H. R. 6373. An act to amend the Domestic Minerals Program Extension Act of 1953 in order to extend the programs to encourage the discovery, development, and production of certain domestic minerals;

H. R. 6382. An act to amend the International Claims Settlement Act of 1949, as amended, and for other purposes;

H. R. 6887. An act to extend for 1 year the application of section 108 (d) and to amend section 2053 of the Internal Revenue Code of 1954;

H. R. 6904. An act to provide for entry and location, on discovery of a valuable source material, upon public lands of the United States, classified as or known to be valuable for coal, and for other purposes;

H. R. 7117. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1956, and for other purposes; and

H. R. 7289. An act to authorize the States to organize and maintain State defense forces, and for other purposes.

On August 4, 1955:

S. 664. An act for the relief of Mecys Jauniskis;

S. 756. An act to authorize the appropriation of accumulated receipts in the Federal aid to wildlife-restoration fund established by the Pittman-Robertson Act and to authorize the expenditure of funds apportioned to a State under such act for the management of wildlife areas and resources;

S. 2270. An act for the relief of Nadia Noland and Samia Ouafa Noland;

S. 2295. An act to amend section 313 of the Agricultural Adjustment Act of 1938, with respect to tobacco allotments;

S. 2296. An act to amend section 313 of the Agricultural Adjustment Act of 1938, with respect to tobacco allotments;

S. 2312. An act for the relief of certain Korean war orphans;

S. 2575. An act for the relief of Mrs. Gertrud Hildegard Nichols;

S. 2604. An act to increase the borrowing power of Commodity Credit Corporation; and

S. J. Res. 73. Joint resolution to establish a commission to formulate plans for a memorial to Franklin Delano Roosevelt.

On August 12, 1955:

S. 541. An act for the relief of Martin Aloysius Madden;

S. 550. An act for the relief of John Axel Arvidson;

S. 756. An act to authorize the appropriation of accumulated receipts in the Federal aid to wildlife restoration fund established by the Pittman-Robertson Act and to authorize the expenditure of funds apportioned to a State under such act for the management of wildlife areas and resources;

S. 1077. An act to provide for settlement of claims resulting from the disaster which occurred at Texas City, Tex., on April 16 and 17, 1947;

S. 1849. An act to provide for the granting of career-conditional and career appointments to certain qualified employees;

S. 2168. An act to amend the Fair Labor Standards Act of 1938 in order to increase the national minimum wage, and for other purposes;

S. 2253. An act to reemphasize trade development as the primary purpose of title I of the Agricultural Trade Development and Assistance Act of 1954;

S. 2501. An act to provide grants to assist States to meet the cost of poliomyelitis vaccination programs, and for other purposes; and

S. J. Res. 82. Joint resolution to authorize the Secretary of the Interior to execute a certain contract with the Toston Irrigation District, Montana.

On August 14, 1955:

S. 2039. An act to authorize the Secretary of the Interior to lease any unassigned lands on the Colorado River Indian Reservation, Ariz., and for other purposes; and

S. 2576. An act to amend the joint resolution entitled "Joint resolution to authorize the merger of street-railway corporations operating in the District of Columbia, and for other purposes," approved January 14, 1933, and for other purposes.

SENATE BILLS DISAPPROVED AFTER SINE DIE ADJOURNMENT

The President of the United States, subsequent to the sine die adjournment of the Senate, notified the Secretary of the Senate that, on the following dates, he had disapproved bills of the Senate of the following titles, together with his reasons for such actions:

On August 5, 1955:

I am withholding approval of S. 2171, an act "To amend the Subversive Activities Control Act so as to provide that upon the expiration of his term of office a member of the Board shall continue to serve until his successor shall have been appointed and shall have qualified."

The language of this bill is incorporated in identical terms in S. 2375, which I have approved today. Under the circumstances, approval of S. 2171 is unnecessary and would result in a nullity and possible confusion.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *August 5, 1955.*

On August 12, 1955:

I have withheld my approval of S. 204, 84th Congress, an act for the relief of Fred P. Hines.

The bill would direct the Administrator of Veterans' Affairs to pay to Mr. Fred P. Hines the sum of $778.78, which sum represents the amount claimed as the cost of private hospital and medical expenses incurred in connection with the treatment of a disability not connected with his active military service in the Spanish-American War.

On July 20, 1953, I submitted a message to the Senate (S. Doc. No. 62, 83d Cong.) returning without my approval S. 152, 83d Congress, a bill identical to this bill except that S. 204 eliminates the payment of attorney fees in connection with the claim. No new evidence has been submitted in the interim, and the legislative history of the current bill contains no information which would justify a change in my position in the matter.

Under the circumstances and for the reasons set forth in my earlier message, I could take no other action than to withhold approval of S. 204.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *August 12, 1955.*

I am withholding approval of S. 1041, a bill to amend the Civil Service Retirement Act of May 29, 1930, as amended, to provide for the inclusion in the computation of accredited service of certain periods of service rendered States or instrumentalities of States, and for other purposes.

This bill would provide additional retirement benefits to those Federal and District of Columbia employees who also have been, are now, or in the future may become employees of the States or of State instrumentalities on Federal-State programs financed either wholly or in part by Federal funds, in five types of agricultural programs and in programs of vocational education.

The bill is not approved because it would (1) make improper use of Federal funds to pay for services never received by it, (2) result in an unsound shifting of fiscal responsibility from State to Federal Government, (3) set an undesirable precedent, and (4) constitute an unsound approach to a desirable goal of increased employee mobility.

First, and most important, these additional retirement benefits would not be based upon Federal employment but on State employment. States and State instrumentalities are responsible for paying for services rendered to them, and there is no assertion that such obligations are not met. Federal retired pay is a basic element in the compensation system provided by the Federal Government in exchange for work performed by its employees. To provide additional compensation payable out of the Federal civil-service retirement fund on the basis of work performed for another employer appears to be an unnecessary and improper use of Federal funds.

Second, the financing principle followed in this bill is unsound. The Federal civil-service retirement fund has been built up by contributions from Federal employees and from the Federal Government as an employer. Under the bill the affected employees would now pay retirement contributions for their State service as if it had been Federal service but since the ultimate annuity payments would average several times such contributions, the major portion of the cost of this bill would be borne by Federal taxpayers. This shift of fiscal responsibility from the actual employer, the State or State instrumentalities, to the Federal Government would be accomplished with no corresponding transfer of funds. This unsound fiscal policy could become an even more serious matter if the program were to be extended to all employee groups having similar claims.

Third, the bill appears to establish an undesirable precedent for making similar payments on the basis of employment in many other Federal-State cooperative programs. The record on the bill indicates that over 80 such programs have already been identified. Extension of similar benefits to employees of all such programs would lead far afield.

Fourth, although the bill seems to have the sound objective of encouraging transfers of employees between State and Federal employment, I do not believe that it moves toward this objective in a proper manner. A firmer, more acceptable step would be to extend the Federal old-age and survivors system to include Federal employees. With employees of an increasing number of States also covered under that system, both Federal and State retirement systems would share a common base and all OASI benefits would be preserved in moving from one employer to another. Recommendations to the Congress will be made on this matter early in the next session.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *August 12, 1955.*

PROCEEDINGS OF THE HOUSE SUBSEQUENT TO SINE DIE ADJOURNMENT

MESSAGE FROM THE SENATE

Pursuant to a special order agreed to on August 2, 1955, the Clerk of the House, subsequent to the sine die adjournment of the Congress, received a message from the Secretary of the Senate announcing that the Senate had, on August 2, 1955, passed bills of the Senate of the following titles:

S. 530. An act for the relief of the Sacred Heart Hospital;

S. 872. An act for the relief of Sam Bergesen;

S. 938. An act to provide for the payment and collection of wages in the District of Columbia;

S. 1352. An act for the relief of A. J. Crozat, Jr.;

S. 1584. An act for the relief of Raymond D. Beckner and Lulu Stanley Beckner; and

S. J. Res. 93. Joint resolution authorizing the acceptance of a gift from the Ericsson Memorial Committee of the United States.

BILLS ENROLLED

Mr. BURLESON, from the Committee on House Administration, reported that, on the following dates, that committee had examined and found truly enrolled bills of the House of the following titles:

On August 3, 1955:

H. R. 5168. An act to provide for retirement of the Government capital in certain institutions operating under the supervision of the Farm Credit Administration; to increase borrower participation in the management and control of the Federal Farm Credit System; and for other purposes;

H. R. 6122. An act to remit the duty on certain bells to be imported for addition to the carillons of The Citadel, Charleston, S. C.;

H. R. 6182. An act to amend the Federal Property and Administrative Services Act of 1949 to make temporary provision for making payments in lieu of taxes with respect to certain real property transferred by the Reconstruction Finance Corporation and its subsidiaries to other Government departments;

H. R. 6198. An act to provide for the sale of certain war-housing projects to the Housing Authority of Beaver County, Pa., for use in providing rental housing for persons of limited income;

H. R. 6199. An act to amend the act of October 14, 1940, to authorize the sale of personal property held in connection with housing under such act;

H. R. 6373. An act to amend the Domestic Minerals Program Extension Act of 1953 in order to extend the programs to encourage the discovery, development, and production of certain domestic minerals;

H. R. 6382. An act to amend the International Claims Settlement Act of 1949, as amended, and for other purposes;

H. R. 6887. An act to extend for 1 year the application of section 108 (b) and to amend section 2053 of the Internal Revenue Code of 1954;

H. R. 6994. An act to provide for entry and location, on discovery of a valuable source material, upon public lands of the United States, classified as or known to be valuable for coal, and for other purposes;

H. R. 7117. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1956, and for other purposes; and

H. R. 7289. An act to authorize the States to organize and maintain State defense forces, and for other purposes.

On August 4, 1955:

H. R. 191. An act to regulate the election of delegates representing the District of Columbia to national political conventions, and for other purposes;

H. R. 929. An act for the relief of Mrs. Maria Del Mul;

H. R. 1003. An act for the relief of Mrs. Lorenza O'Malley (de Amusategui), Jose Maria de Amusategui O'Malley, and the legal guardian of Remon de Amusategui O'Malley;

H. R. 1235. An act for the relief of Vera Gregovich Kenter;

H. R. 1319. An act for the relief of Vasilios Linkopoulos;

H. R. 1641. An act for the relief of Mary Mancuso;

H. R. 1909. An act for the relief of Rodolfo Pugeda de la Cerna;

H. R. 2079. An act for the relief of Ingrid Liselotte Poch;

H. R. 2235. An act for the relief of Mrs. Margarete Gick Scordas.

H. R. 2339. An act for the relief of Monika Schefbanker;

H. R. 2704. An act for the relief of Kazuko Iwata Rausch;

H. R. 2897. An act for the relief of Chung Poik Cha and her minor child, Myra Poik Cha;

H. R 2907. An act for the relief of Thomas F. Harney, Jr., doing business as the Harney Engineering Co.;

H. R. 2916. An act for the relief of Mrs. Elfrieda Schoeppe;

H. R. 3063. An act to confer jurisdiction upon the United States District Court for the Northern District of California, to hear, determine, and render judgment upon the claims of the Bartlett Springs Co., and certain others;

H. R. 3195. An act for the relief of Rolf Hugo Neuman;

H. R. 4048. An act making recommendations to the States for the enactment of legislation to permit and assist Federal personnel, including members of the Armed Forces, and their families, to exercise their voting franchise, and for other purposes;

H. R. 4508. An act for the relief of Henry T. Quisenberry;

H. R. 4544. An act for the relief of Andrew Carrigan;

H. R. 4643. An act for the relief of Mrs. Lee Shee Yee (also known as Lee Lai Koon);

H. R. 4734. An act to amend the provisions of the River and Harbor Act of 1954 which authorize the Secretary of the Army to reimburse local interests for work done on a dredging project as Los Angeles and Long Beach Harbors, Calif., during a period ending on July 1, 1953, by extending that period to November 7, 1953;

H. R. 5074. An act for the relief of Miss Blanca Lina Rionegro;

H. R. 5082. An act for the relief of Mrs. Koto Makagawa;

H. R. 5469. An act to extend the authority of the Corregidor Bataan Memorial Commission, and for other purposes;

H. R. 5908. An act for the relief of Mrs. Johanna Eckles;

H. R. 5913. An act for the relief of Mock Jung Shee (Mock Jung Liu);

H. R. 6102. An act to change the name of Garza-Little Elm Dam, located in Denton County, Tex., to Lewisville Dam;

H. R. 6634. An act to provide for the conveyance of 1$\frac{3}{10}$ acres of land, more or less,

within the Grapevine Dam and Reservoir project to the city of Grapevine, Tex., for sewage disposal purposes;

H. R. 6741. An act for the relief of Elfriede Rosa (Kup) Kraft;

H. R. 7195. An act to provide for the adjustments in the lands or interests therein acquired for reservoir projects in Texas, by the reconveyance of certain lands or interests therein to the former owners thereof;

H. R. 7244. An act to provide for the striking of medals in commemoration of the 120th anniversary of the signing of the Texas Declaration of Independence and the Battles of the Alamo, Goliad, and San Jacinto in the year 1836;

H. R. 7245. An act to amend Public Laws 815 and 874, 81st Congress, which provide for assistance to local educational agencies in areas affected by Federal activities, and for other purposes;

H. R. 7618. An act to amend section 8 of the Civil Service Retirement Act of May 29, 1930, as amended;

H. R. 7684. An act to authorize the Atomic Energy Commission to pay the salary of a Commissioner during the recess of the Senate, and for other purposes; and

H. R. 7746. An act to provide tax relief to a charitable foundation and the contributors thereto.

ENROLLED BILLS SIGNED

The SPEAKER announced that, pursuant to Senate Concurrent Resolution 58, he did, on the following dates, sign enrolled bills of the following titles:

On August 3, 1955:

H. R. 5168. An act to provide for retirement of the Government capital in certain institutions operating under the supervision of the Farm Credit Administration; to increase borrower participation in the management and control of the Federal Farm Credit System; and for other purposes;

H. R. 6122. An act to remit the duty on certain bells to be imported for addition to the carillons of The Citadel, Charleston, S. C.;

H. R. 6182. An act to amend the Federal Property and Administrative Services Act of 1949 to make temporary provision for making payments in lieu of taxes with respect to certain real property transferred by the Reconstruction Finance Corporation and its subsidiaries to other Government departments;

H. R. 6198. An act to provide for the sale of certain war housing projects to the Housing Authority of Beaver County, Pa., for use in providing rental housing for persons of limited income;

H. R. 6199. An act to amend the act of October 14, 1940, to authorize the sale of personal property held in connection with housing under such act;

H. R. 6373. An act to amend the Domestic Minerals Program Extension Act of 1953 in order to extend the programs to encourage the discovery, development, and productions of certain domestic minerals;

H. R. 6382. An act to amend the International Claims Settlement Act of 1949, as amended, and for other purposes;

H. R. 6887. An act to extend for 1 year the application of section 108 (b) and to amend section 2053 of the Internal Revenue Code of 1954;

H. R. 6994. An act to provide for entry and location, on discovery of a valuable source material, upon public lands of the United States, classified as or known to be valuable for coal, and for other purposes;

H. R. 7117. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1956, and for other purposes; and

H. R. 7289. An act to authorize the States to organize and maintain State Defense Forces, and for other purposes.

On August 4, 1955:

H. R. 191. An act to regulate the election of delegates representing the District of Columbia to national political conventions, and for other purposes;

H. R. 929. An act for the relief of Mrs. Maria Del Mul;

H. R. 1003. An act for the relief of Mrs. Lorenza O'Malley (de Amusategui), Jose Maria de Amusategui O'Malley, and the legal guardian of Remon de Amusategui O'Malley;

H. R. 1235. An act for the relief of Vera Gregovich Kenter;

H. R. 1319. An act for the relief of Vasilios Linkopoulos;

H. R. 7618. An act to amend section 8 of the Civil Service Retirement Act of May 29, 1930, as amended;

H. R. 7684. An act to authorize the Atomic Energy Commission to pay the salary of a Commissioner during the recess of the Senate, and for other purposes; and

H. R. 7746. An act to provide tax relief to a charitable foundation and the contributors thereof.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced that, pursuant to Senate Concurrent Resolution 58, he did, on the following dates, sign enrolled bills of the Senate of the following titles:

On August 3, 1955:

S. 125. An act for the relief of the State of Illinois;

S. 197. An act for the relief of Vincenzo Santagata;

S. 198. An act for the relief of Filipo Mastroianni;

S. 204. An act for the relief of Fred P. Hines;

S. 393. An act for the relief of Chicko Suzuki;

S. 550. An act for the relief of John Axel Arvidson;

S. 714. An act for the relief of Alfio Ferrara;

S. 730. An act granting the consent of Congress to the States of Kansas and Oklahoma to negotiate and enter into a compact relating to their interests in, and the apportionment of the waters of the Arkansas River and its tributaries as they affect such States;

S. 732. An act to promote public cooperation in the rehabilitation and preservation of the Nation's important historic properties in the New York City area, and for other purposes;

S. 1014. An act for the relief of Henry Duncan;

S. 1033. An act for the relief of Ann Arbor Construction Co.

S. 1041. An act to amend the Civil Service Retirement Act of May 29, 1930, as amended, to provide for the inclusion in the computation of accredited service of certain periods of service rendered States or instrumentalities of States, and for other purposes;

S. 1077. An act to provide for settlement of claims resulting from the disaster which occurred at Texas City, Tex., on April 16 and 17, 1947;

S. 1189. An act to permit national banks to make 20-year real-estate loans, and 9-month residential construction loans;

S. 1415. An act for the relief of Anna Mertikas;

S. 1681. An act for the relief of Cecile Doriac and her minor child;

S. 1792. An act to amend the Federal Employees' Group Life Insurance Act of 1954;

S. 1899. An act to authorize the improvement of the Amite River and its tributaries;

S. 1906. An act to authorize the Pueblos of San Lorenzo and Pojoaque in New Mexico to sell certain lands to the Navaho Tribe, and for other purposes;

S. 1917. An act to authorize the construction within Grand Teton National Park of an alternate route to U. S. Highway 89, also numbered U. S. 187 and U. S. 26, and the conveyance thereof to the State of Wyoming, and for other purposes;

S. 2049. An act to provide recognition of the 50th anniversary of the Devils Tower National Monument, Wyo., the first national monument, established by the President of the United States pursuant to the Antiquities

Act of 1906; to authorize the addition of certain land to the monument, to permit land exchanges, and for other purposes;

S. 2088. An act for the relief of Ladislav Mencl;

S. 2126. An act to extend and clarify laws relating to the provision and improvement of housing, the elimination and prevention of slums, the conservation and development of urban communities, the financing of vitally needed public works, and for other purposes;

S. 2295. An act to amend section 313 of the Agricultural Adjustment Act of 1938, with respect to tobacco allotments;

S. 2339. An act to authorize the Secretary of the Interior to include capacity to serve the town of Glendo, Wyo., in a sewerage system to be installed in connection with the construction of Glendo Dam and Reservoir, and for other purposes;

S. 2514. An act to declare the portion of the waterway of West Haven and New Haven, Conn., known as the West River, northerly of a line running north 85° 54' 43.5" east from a point whose coordinates in the Corps of Engineers Harbor Line System are north 4,616.76 and west 9,450.80, a nonnavigable stream; and

S. 2576. An act to amend the joint resolution entitled "Joint resolution to authorize the merger of street-railway corporations operating in the District of Columbia, and for other purposes," approved January 14, 1933, and for other purposes.

On August 4, 1955:

S. 664. An act for the relief of Mecys Jauniskis;

S. 756. An act to authorize the appropriation of accumulated receipts in the Federal aid to wildlife-restoration fund established by the Pittman-Robertson Act and to authorize the expenditure of funds apportioned to a State under such act for the management of wildlife areas and resources;

S. 2039. An act to authorize the Secretary of the Interior to lease any unassigned lands on the Colorado River Indian Reservation, Ariz., and for other purposes.

S. 2127. An act to amend the Small Business Act of 1953;

S. 2296. An act to amend section 313 of the Agricultural Adjustment Act of 1938, with respect to tobacco allotments;

S. 2391. An act to amend the Defense Production Act of 1950, as amended, and for other purposes; and

S. 2501. An act to provide grants to assist States to meet the cost of poliomyelitis vaccination programs, and for other purposes.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, subsequent to the sine die adjournment of the Congress, reported that, on the following dates, that committee had presented to the President, for his approval, bills of the House of the following titles:

On August 4, 1955:

H. R. 100. An act to permit the mining, development, and utilization of the mineral resources of all public lands withdrawn or reserved for power development, and for other purposes;

H. R. 257. An act to amend section 112 (n) (8) of the Internal Revenue Code of 1939, relating to the suspension of certain periods of limitation while the taxpayer is on extended active duty with the Armed Forces, and to amend the Internal Revenue Code of 1954, with respect to tax treatment where the taxpayer recovers amounts held by another under claim of right;

H. R. 593. An act to convey by quitclaim deed certain land to the State of Texas;

H. R. 1393. An act for the relief of the E. J. Albrecht Co.;

H. R. 3024. An act for the relief of Margaret Mary Hammond;

H. R. 3908. An act to provide for the regulation of fares for the transportation of schoolchildren in the District of Columbia;

H. R. 4581. An act to amend the Internal Revenue Code of 1954 with respect to the tax on cutting oils;

H. R. 4763. An act for the relief of Elzie C. Brown;

H. R. 5249. An act to amend the Internal Revenue Code of 1954 to provide for refund or credit of internal revenue taxes and customs duties paid on distilled spirits and wines lost, rendered unmarketable, or condemned by health authorities as a result of the hurricanes of 1954;

H. R. 6263. An act to amend section 1233 and section 542 (a) (2) of the Internal Revenue Code of 1954;

H. R. 7018. An act to authorize subpenas in connection with the enforcement of the narcotic laws, and for other purposes;

H. R. 7034. An act to provide permanent authority for the relief of certain disbursing officers, and for other purposes;

H. R. 7035. An act to amend section 1 of the act entitled "An act to authorize relief of accountable officers of the Government, and for other purposes," approved August 1, 1947 (61 Stat. 720);

H. R. 7117. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1956, and for other purposes; and

H. J. Res. 330. Joint resolution to provide for the acceptance and maintenance of Presidential libraries, and for other purposes.

On August 5, 1955:

H. R. 191. An act to regulate the election of delegates representing the District of Columbia to national political conventions, and for other purposes;

H. R. 929. An act for the relief of Mrs. Maria Del Mul;

H. R. 1003. An act for the relief of Mrs. Lorenza O'Malley (de Amusategui), Jose Maria de Amusategui O'Malley, and the legal guardian of Ramon de Amusategui O'Malley;

H. R. 1235. An act for the relief of Vera Gregovich Kenter;

H. R. 1319. An act for the relief of Vasilios Liakopoulos;

H. R. 1641. An act for the relief of Mary Mancuso;

H. R. 1909. An act for the relief of Rodolfo Pugeda de la Cerna;

H. R. 2079. An act for the relief of Ingrid Liselotte Poch;

H. R. 2235. An act for the relief of Mrs. Margarete Gick Scordas;

H. R. 2339. An act for the relief of Monika Schefbanker;

H. R. 2704. An act for the relief of Kazuko Iwata Rausch;

H. R. 2897. An act for the relief of Chung Poik Chu and her child, Myra Poik Chu;

H. R. 2907. An act for the relief of Thomas F. Harney, Jr., doing business as the Harney Engineering Co.;

H. R. 3635. An act for the relief of Brigit Camara, also known as Brigit Heinemann;

H. R. 4508. An act for the relief of Henry T. Quisenberry;

H. R. 4544. An act for the relief of Andrew Carrigan;

H. R. 4581. An act to amend the Internal Revenue Code of 1954 with respect to the tax on cutting oils;

H. R. 4672. An act to increase the annuities of certain retired civilian members of the teaching staffs of the United States Naval Academy and the United States Naval Postgraduate School;

H. R. 5074. An act for the relief of Miss Blanca Lina Rionegro;

H. R. 5082. An act for the relief of Mrs. Koto Nakagawa;

H. R. 5168. An act to provide for retirement of the Government capital in certain institutions operating under the supervision of the Farm Credit Administration; to increase borrower participation in the management and control of the Federal Farm Credit System; and for other purposes;

H. R. 5249. An act to amend the Internal Revenue Code of 1954 to provide for refund or credit of internal revenue taxes and customs duties paid on distilled spirits and wines lost, rendered unmarketable, or condemned by health authorities as a result of the hurricanes of 1954;

H. R. 5546. An act for the relief of Francisca Alemany;

H. R. 5908. An act for the relief of Mrs. Johanna Eckles;

H. R. 5913. An act for the relief of Mock Jung Shee (Mock Jung Liu);

H. R. 6199. An act to amend the act of October 14, 1940, to authorize the sale of personal property held in connection with housing under such act;

H. R. 6600. An act to amend section 303 of the Career Compensation Act of 1949, to authorize travel and transportation allowances, and transportation of dependents and of baggage and household effects to the homes of their selection for certain members of the uniformed services, and for other purposes;

H. R. 6741. An act for the relief of Elfriede Rosa (Kup) Kraft;

H. R. 6994. An act to provide for entry and location, on discovery of a valuable source material, upon public lands of the United States classified as or known to be valuable for coal, and for other purposes;

H. R. 7018. An act to authorize subpenas in connection with the enforcement of the narcotic laws, and for other purposes;

H. R. 7024. An act to remove the manufacturers' excise tax from the sales of certain component parts for use in other manufactured articles, to confine to entertainment-type equipment the tax on radio and television apparatus, and for other purposes.

H. R. 7034. An act to provide permanent authority for the relief of certain disbursing officers, and for other purposes;

H. R. 7095. An act to provide that the tax on admissions shall not apply to certain athletic events held for the benefit of the United States Olympic Association;

H. R. 7289. An act to authorize the States to organize and maintain State Defense Forces, and for other purposes;

H. R. 7300. An act to amend the Internal Revenue Code of 1954 with respect to the tax treatment of income received from patent infringement suits; and

H. R. 7618. An act to amend section 8 of the Civil Service Retirement Act of May 29, 1930, as amended.

On August 12, 1955:

H. R. 191. An act to regulate the election of delegates representing the District of Columbia to national political conventions, and for other purposes;

H. R. 257. An act to amend section 112 (n) (8) of the Internal Revenue Code of 1939, relating to the suspension of certain periods of limitation while the taxpayer is on extended active duty with the Armed Forces, and to amend the Internal Revenue Code of 1954 with respect to tax treatment where the taxpayer recovers amounts held by another under claim of right;

H. R. 4663. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Trinity River division, Central Valley project, California, under Federal reclamation laws;

H. R. 4744. An act to amend the Railroad Retirement Act of 1937, as amended, and the Railroad Unemployment Insurance Act;

H. R. 5647. An act to repeal the manufacturers' excise tax on motorcycles;

H. R. 6182. An act to amend the Federal Property and Administrative Services Act of 1949 to make temporary provision for making payments in lieu of taxes with respect to certain real property transferred by the Reconstruction Finance Corporation and its subsidiaries to other Government departments;

H. R. 6263. An act to amend section 1233 and section 542 (a) (2) of the Internal Revenue Code of 1954;

H. R. 7245. An act to amend Public Laws 815 and 874, 81st Congress, which provide for assistance to local educational agencies in areas affected by Federal activities, and for other purposes;

H. R. 7628. An act to authorize the appointment in a civilian position in the White House office of Maj. Gen. John Stewart Bragdon, United States Army, retired, and for other purposes;

H. R. 7746. An act to provide tax relief to a charitable foundation and the contributors thereto; and

H. J. Res. 330. Joint resolution to provide for the acceptance and maintenance of presidential libraries, and for other purposes.

HOUSE BILLS DISAPPROVED SUBSEQUENT TO SINE DIE ADJOURNMENT

The President of the United States, subsequent to the sine die adjournment of the Congress, transmitted to the Clerk of the House a list of bills disapproved, together with his reasons for such actions, as follows:

On August 12, 1955:

I have withheld my approval from the bill (H. R. 1393) "For the relief of the E. J. Albrecht Co."

The bill directs the Secretary of the Treasury to pay $142,007.75 to the E. J. Albrecht Co. as reimbursement for actual losses sustained by it in performing its contract with the United States for the construction of the outlet works for Sardis Dam on the Little Tallahatchie River, near Sardis, Miss.

After an exhaustive review, the Court of Claims dismissed this claim as being without merit. While this decision was based on legal grounds, the opinion issued by the court in connection with its decision shows, particularly when taken in conjunction with the rest of the record, that there is no basis for affording relief to the contractor on equitable grounds. From these sources it is clear that the overriding causes of the losses which the contractor sustained were its own acts or omissions and the weather conditions it encountered in the performance of the work. I see nothing in these circumstances giving rise to equitable liability on the part of the Government.

The continued success of the policy of awarding public contracts by competitive bids depends, of course, on the knowledge that successful bidders will be held to their bids with the same strictness as if they were dealing with private contractors. Relieving bidders of losses occasioned by the submission of bids that were successfully low because of overoptimism or failure to account for risks would not only strike a serious blow at the integrity of the competitive bidding system but would be unfair to more provident bidders who might otherwise have received the awards. It would deprive the Government of benefits resulting from favorable circumstances occurring during the performance of a contract while requiring compensation for losses encountered as a result of unfavorable circumstances.

There are no circumstances in this case that would serve to distinguish it

from others wherein contractors with the United States have suffered losses for which the Government was not responsible. In view of this fact and in the absence of any equitable considerations in favor of the contractor, I perceive no merit in the claim for special treatment in this case.

Accordingly, I am constrained to withhold my approval from the bill.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *August 12, 1955.*

I have withheld my approval of enrolled enactment H. R. 6232, 84th Congress, "To include as Spanish-American War service under laws administered by the Veterans' Administration certain service rendered by Stephen Swan Ogletree during the Spanish-American War."

The effect of this legislation would be to determine by legislative decree, contrary to the facts, that, for the purpose of laws administered by the Veterans' Administration, Stephen Swan Ogletree rendered at least 70 days' active military service as a member of Company G, 2d Regiment, Alabama Volunteer Infantry, and was honorably discharged therefrom. No benefits would accrue by reason thereof prior to the date of receipt of an application to be filed subsequent to the date of its enactment.

There have been a number of affidavits submitted in support of Mr. Ogletree's contention that he served on active duty during the Spanish-American War. These affidavits are all dated some 29 or more years after the occurrence of the events to which they relate. In some, the affiant could "almost" swear that Mr. Ogletree served with Company G, 2d Regiment, Alabama Volunteer Infantry. In others, the affiant states that Mr. Ogletree did serve with that organization. However, most of these affidavits are entirely consistent with the official records of the organization which show that any service of Mr. Ogletree with that organization was prior to the time that it entered into active Federal service. In addition, the statement of one individual, who was of the opinion that Mr. Ogletree did serve in active Federal service, indicates that during such period the commanding officer of the company was J. H. Brazila. The records of the company show that Brazila did not command the company while it was in Federal service. Therefore, it is apparent that the passage of time has dimmed the recollection of the individuals who made these affidavits and that they have become confused as to the actual period of time during which the company was in Federal service or when Mr. Ogletree was a member thereof.

Military records pertaining to Mr. Ogletree show quite clearly that he was not a member of Company G, 2d Regiment, Alabama Volunteer Infantry, while that organization was in Federal service. The frequent muster rolls submitted on behalf of that organization, certified by the commanding officer and by the individual who acted as mustering officer, not only show the men who were present with the organization but also all men who were members of the organization during the period and who were absent for any reason whatsoever. The name of Stephen Swan Ogletree does not appear on any of these muster rolls.

Company G, 2d Regiment, Alabama Volunteer Infantry, was mustered into Federal service on May 31, 1898. During the Spanish-American War, regulations provided that before volunteer organizations were mustered into the service of the United States, the members thereof should be medically examined to determine whether or not they were physically qualified for active military service. Retained records of the 2d Regiment, Alabama Volunteer Infantry, clearly show that Mr. Ogletree was medically examined in accordance with such regulations, that he was rejected for service because of physical disqualification at least 12 days prior to the time that this organization was mustered into the service of the United States, and that he was returned to his home at Eufaula, Ala., through issuance of a "request for transportation," which provided as follows:

"M. No. 28570
Request for Transportation
Good for one days from date
Date. Mobile Ala May 19 1898
To The L & N RR Co
For John H. Nowlund and 26 men no pounds extra baggage, Co & Regt. Co "G" 2d Regt Ala Vols
From Mobile Ala
To Eufaula Ala
Via The L & N and Central of Ga
En route from Mobile Ala
To Eufaula Ala
Remarks; Recruit Co G. 2d Regt Ala Vol
Rejected by Medical Board
Issued on authority of telegram dated May 3 1898

H C CORBIN,
AG [Adjutant General]
[See otherside]

* * * * *
Stephen S. Ogletree
* * * * *

Section 131 of the Legislative Reorganization Act, approved August 2, 1946 (60 Stat. 812), provides, pertinently, as follows:

No private bill or resolution (including pension bills), * * * authorizing or directing * * * the correction of a military or naval record, shall be received or considered in either the Senate or the House of Representatives.

H. R. 6232 would change the military records of Stephen Swan Ogletree.

Section 207 of the Legislative Reorganization Act, supra, established the Army Board for the Correction of Military Records. That Board was established for the purpose of reviewing military records and recommending to the Secretary of the Army the correction of any such records, where, in the judgment of the Board, such action might be necessary to correct an error or remove an injustice. Upon the recommendation of the Board, the act authorized the Secretary to take corrective action. No application for the correction of the military records of Stephen Swan Ogletree has been received by that Board.

The Congress, by general legislation, has determined that cases of this character should be considered by the Army Board for the Correction of Military Records rather than by the Legislature itself. The affidavits which have been presented in Mr. Ogletree's behalf are entirely consistent with the fact that any service which he may have rendered was prior to the time that the organization was mustered into Federal service. Official records pertaining to the matter show quite clearly that Mr. Ogletree was not at any time during the Spanish-American War in the service of the United States. Under such circumstances, to determine by legislative decree that he rendered any active military service during such war and was honorably discharged therefrom would be entirely discriminatory. There is nothing in law or equity which would justify approval of this bill. To do so would confer upon Mr. Ogletree benefits provided for Spanish-American War veterans to which he is no more entitled than are other individuals who may have been members of local volunteer units prior to the time the unit was mustered into the Federal service, but who were physically disqualified for Federal service and were rejected prior to the mustering-in of the unit. I cannot, in justice, approve this enrolled enactment.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *August 12, 1955.*

I have withheld my approval from the bill H. R. 6887, "To extend for 1 year the application of section 108 (b) and to amend section 2053 of the Internal Revenue Code of 1954." This bill would extend for 1 year a section of the Revenue Code designed to facilitate certain railroad reorganizations. In addition, it would safeguard certain bequests to charity from the pyramiding effect of State and Federal inheritance and estate taxes.

Federal law properly exempts bequests to charity from estate taxation. In some situations, however, the intent of the Federal law is negated by the imposition of State taxes on charitable bequests. As a result of a provision of Federal law designed to prevent tax avoidance, such State taxes in turn give rise to increased Federal tax liabilities. H. R. 6887 is intended to relieve charitable bequests in these situations to the extent that Federal legislation can do so.

I am sympathetic with the objectives of both portions of the bill. However, I am informed that there are three defects in the part of the bill dealing with the estate tax, which are sufficiently serious to require my disapproval.

First, this legislation would often increase Federal tax liabilities on estates containing bequests to charity.

Second, the legislation would, in certain situations, accrue not to the benefit of charity but to other heirs.

Third, it would disturb existing well-established relationships between Federal and State inheritance and estate tax liabilities based on the credit against Federal tax liability allowed for taxes paid to States since 1926. Since the State tax on the charitable bequest is deductible under the bill, it would no longer be counted in determining the amount which may be claimed by the estate as a credit for State taxes paid

against the Federal tax liability. However, the tax imposed under the so-called State pickup laws, which are designed to absorb the full credit allowable against the Federal estate tax, is based upon the total State tax otherwise levied (including the tax on the charitable bequest). Consequently, many State pickup laws would not pick up the full amount allowable as a credit. Enactment of this bill would probably stimulate State legislation to enlarge the credit for taxes paid to States.

In view of these defects in the legislation, I must reluctantly withhold my approval from the bill, H. R. 6887.

My reluctance would be greater, however, had I not been advised that the defects in section 2 of the bill can be remedied and that section 1 and section 2, appropriately remedied, can be enacted so as to apply retroactively without any serious difficulty.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *August 12, 1955.*

I have withheld my approval from H. R. 7195, to provide for adjustments in the lands or interests therein acquired for reservoir projects in Texas, by the reconveyance of certain lands or interests therein to the former owners thereof.

The bill would authorize the Secretary of the Army to make adjustments in the land holdings of the United States acquired for five Texas reservoir projects (Belton, Benbrook, Garza-Little Elm, Grapevine, and Whitney Reservoirs) by reconveyance of certain lands to former owners, or the grantee, devisee, or successor in title of a former owner of contiguous property.

The Secretary has no authority to adjust land holdings where title has been acquired by purchase. The bill would provide the Secretary with authority to make such adjustments through reconveyance of lands or interests in lands to former owners at what the Secretary determines to be the original purchase price, adjusted to take into account improvements, damages, or interests retained by the United States.

However, H. R. 7195 goes further and requires the Secretary to determine whether the rights of a grantee, devisee, or successor in title of a former owner of contiguous property are equitably superior to the rights of the former owner himself. The law reports are replete with decisions which disclose the problems with which courts have been confronted in giving just recognition to asserted equitable interests in title to a tract of land. Moreover, in such cases the courts have enjoyed the historic cautionary benefits of the judicial process, such as notice and hearing, rights of intervention, the rules of evidence, and judicial precedents in a particular jurisdiction with respect to the application of equitable principles. The bill does not provide, and the Secretary of the Army does not have, comparable cautionary benefits for an administrative proceeding in which he would be required to engage in the subtle problems involved in weighing justly the equitable superiority or inferiority of the rights, on the one hand of a former owner of a tract, and, on the other hand, of those of the grantee or successor in title to a contiguous tract of property.

This provision would unjustly expose the Secretary to a series of burdensome and time-consuming administrative proceedings which are entirely alien to his statutory responsibilities. It would inevitably subject him to criticism from unsuccessful contestants. These unnecessary burdens and the attendant criticism can, and should, be avoided.

It is my firm opinion that, except for the return of lands or interests directly to the former owners or their heirs in cases of this kind, lands no longer required for project purposes should, if determined to be excess to the needs of the Department, be reported to the General Services Administration for disposal in accordance with general legislation providing for the disposition of excess and surplus Government-owned property. I see no reason for establishing a new and special category of priority holders based on a chain of title from a former owner of contiguous property.

I have approved legislation authorizing similar adjustments by reconveyance of lands to former owners (or their heirs) upon application by them at Demopolis lock and dam, Alabama, and at Jim Woodruff lock and dam, Florida and Georgia, because I am convinced of the soundness of the principle behind the revised reservoir land acquisition policy of the Departments of the Army and the Interior.

I recommend that the Congress reconsider H. R. 7195 and enact a bill along those lines for the five reservoir projects in Texas to which the bill is applicable.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *August 12, 1955.*

On August 14, 1955:

I have withheld my approval of H. R. 6373, an act "To amend the Domestic Minerals Program Extension Act of 1953 in order to extend the programs to encourage the discovery, development, and production of certain domestic minerals."

This bill, by congressional action, would direct the continuation of the existing domestic minerals purchase programs under the Defense Production Act for certain minerals after defense needs have been met. Moreover, it would continue such purchases at prices considerably in excess of market price. It would direct the establishment of two new manganese buying depots and the reopening of a third. It would commit an additional $150 million for the purchase of double the original program quantities of these minerals.

Pursuant to the Defense Production Act of 1950, as amended, certain purchase programs were established for these minerals during the Korean hostilities. Public Law 206 of the 83d Congress extended for 2 years the termination dates of these programs. H. R. 6373, in effect, would direct the expansion of these programs so as to require the Government to buy far greater quantities of these minerals than are necessary for defense purposes. As a result, Government assistance to the producers of several minerals will be continued under the guise of defense needs when such needs do not exist.

Furthermore, the fiscal arrangements that are provided for in H. R. 6373 are unsound. The bill would bypass the usual budgetary processes and the customary review by congressional committees. It would direct the use of the defense borrowing authority conferred by the Defense Production Act.

Finally, the provisions of H. R. 6373 would apply to only a small segment of the domestic minerals industry and would not reach the fundamentals of the problem. Indeed this bill would make solution of the overall problems of the industry more difficult.

I am conscious of the desirability of developing a long-range minerals program for the United States to assure an adequate mobilization base and to preserve a sound minerals economy. The Advisory Committee on Minerals Policy so advised and the Office of Minerals Mobilization has been established in the Department of the Interior to determine and recommend such a program. The funds to make the necessary studies have just become available, and work toward the development of a long-range program has begun.

The interests of the domestic minerals industry will be better served by proceeding with the careful development of a long-range minerals program than by approving a stopgap measure extending substantial Government aid to only a segment of the industry. Meanwhile, with the exception of a single manganese depot, the existing domestic minerals procurement program remains uncompleted, and sales by domestic miners to the Government will continue under the provisions of the regulations now in effect.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *August 14, 1955.*

REGULATION OF LOBBYING ACT

In compliance with Public Law 601, 79th Congress, title III, Regulation of Lobbying Act, section 308 (b), which provides as follows:

(b) All information required to be filed under the provisions of this section with the Clerk of the House of Representatives and the Secretary of the Senate shall be compiled by said Clerk and Secretary, acting jointly, as soon as practicable after the close of the calendar quarter with respect to which such information is filed and shall be printed in the CONGRESSIONAL RECORD.

The Clerk of the House of Representatives and the Secretary of the Senate jointly submit their report of the compilation required by said law and have included all registrations and quarterly reports received.

QUARTERLY REPORTS

The following reports for the first calendar quarter of 1955 were received after April 20, 1955, too late to be included in the published reports for that quarter:

A. Active-Retired Lighthouse Service Employees Association, Post Office Box 2169, South Portland, Maine.
D. (6) $921. E. (9) $530.74.

A. William B. Allen, 917 15th Street NW., Washington, D. C.
B. United Rubber, Cork, Linoleum and Plastic Workers of America, CIO, High at Mill Street, Akron, Ohio.
D. (6) $1,560. E. (9) $458.40.

A. American Dental Association, 222 East Superior Street, Chicago, Ill.
D. (6) $7,701.53. E. (9) $7,701.53.

A. American Hospital Association, 18 East Division Street, Chicago, Ill.
D. (6) $14,077.41. E. (9) $12,777.41.

A. American Library Association, 50 East Huron Street, Chicago, Ill.
D. (6) $237.70. E. (9) $4,561.85.

A. American Social Hygiene Association, Inc., 1790 Broadway, New York, N. Y.
E. (9) $2,800.

A. American Trucking Associations, Inc., 1424 16th Street NW., Washington, D. C.
B. American Trucking Associations, Inc., 1424 16th Street NW., Washington, D. C.
D. (6) $10,290.06. E. (9) $2,288.21.

A. AMVETS (American Veterans World War II), 1710 Rhode Island Avenue NW., Washington, D. C.
E. (9) $1,405.

A. Arnold, Fortas & Porter, 1229 19th Street NW., Washington, D. C.
B. Federal Republic of West Germany.
D. (6) $10,000.

A. Gibbs L. Baker, 917 15th Street NW., Washington, D. C.
B. Mastercraft Linen Fabrics Corp., 1071 Sixth Avenue, New York, N. Y.; Frederick J. Fawcett, Inc., 129 South Street, Boston, Mass.; and Hughes Fawcett, Inc., 115 Franklin Street, New York, N. Y.
D. (6) $1,270. E. (9) $40.55.

A. Wm. J. Barnhard, 351 Washington Building, Washington, D. C.
B. Gold Star Wives of America, Inc., 352 Washington Building, Washington, D. C.

A. Roy Battles, 744 Jackson Place NW., Washington, D. C.
B. The National Grange, Patrons of Husbandry, 744 Jackson Place NW., Washington, D. C.
D. (6) $3,000.

A. F. W. H. Beauchamp, 26 O'Farrell Street, San Francisco, Calif.
B. Transportation Association of America, 130 North Wells Street, Chicago, Ill.

A. Paul H. Bolton, 1001 Connecticut Avenue NW., Washington, D. C.
B. National Association of Wholesalers, Inc., 1001 Connecticut Avenue NW., Washington, D. C.

A. Boykin & DeFrancis, Shoreham Building, Washington, D. C.
D. (6) $8,000. E. (9) $1,266.80.

A. Homer L. Brinkley, 744 Jackson Place NW., Washington, D. C.
B. National Council of Farmer Cooperatives, 744 Jackson Place, Washington, D. C.
D. (6) $5,499.96. E. (9) $315.90.

A. Milton E. Brooding, 215 Fremont Street, San Francisco, Calif.
B. California Packing Corp., 215 Fremont Street, San Francisco, Calif.
D. (6) $1,000. E. (9) $575.

A. Eugene J. Butler, 1312 Massachusetts Avenue NW., Washington, D. C.
B. National Catholic Welfare Conference, 1312 Massachusetts Avenue NW., Washington, D. C.
D. (6) $2,875.02.

A. Cal-Sag Waterways Development Committee, Inc., 134 South La Salle Street, Chicago, Ill.
D. (6) $15,125. E. (9) $15,028.12.

A. Wallace J. Campbell, 1025 Vermont Avenue NW., Washington, D. C.
B. Cooperative League of the U. S. A., 343 South Dearborn Street, Chicago, Ill.

A. Julian W. Caplan, 1023 Connecticut Avenue NW., Wahington, D. C.
B. National Retail Furniture Association, 666 Lake Shore Drive, Chicago, Ill.

A. Paul M. Castiglioni, 412 Fifth Street NW., Washington, D. C.
B. National Federation of Post Office Motor Vehicle Employees, 412 Fifth Street NW., Washington, D. C.
D. (6) $499.98. E. (9) $393.04.

A. Theodore S. Chapman, 1734 N Street NW., Washington, D. C.
B. General Federation of Women's Clubs, 1734 N Street NW., Washington, D. C.

A. Classroom Periodical Publishers' Association, 38 West Fifth Street, Dayton, Ohio.
D. (6) $1,550.75. E. (9) $1,550.75.

A. The Clothespin Manufacturers of America, 839 17th Street NW., Washington, D. C.

QUARTERLY REPORTS

The following quarterly reports were submitted for the second calendar quarter 1955:

(NOTE.—The form used for reports is reproduced below. In the interest of economy in the RECORD, questions are not repeated, only the essential answers are printed, and are indicated by their respective letter and number.)

File two copies with the Secretary of the Senate and file three copies with the Clerk of the House of Representatives.
This page (page 1) is designed to supply identifying data; and page 2 (on the back of this page) deals with financial data.
Place an "X" below the appropriate letter or figure in the box at the right of the "Report" heading below:
"PRELIMINARY" REPORT ("Registration"): To "register," place an "X" below the letter "P" and fill out page 1 only.
"QUARTERLY" REPORT: To indicate which one of the four calendar quarters is covered by this Report, place an "X" below the appropriate figure. Fill out both page 1 and page 2 and as many additional pages as may be required. The first additional page should be numbered as page "3," and the rest of such pages should be "4," "5," "6," etc. Preparation and filing in accordance with instructions will accomplish compliance with all quarterly reporting requirements of the Act.

Year: 19------	REPORT PURSUANT TO FEDERAL REGULATION OF LOBBYING ACT	P	QUARTER 1st	2d	3d	4th
		(Mark one square only)				

NOTE ON ITEM "A".—(a) In General: This "Report" form may be used by either an organization or an individual, as follows:
(i) "Employee".—To file as an "employee," state in Item "B" the name, address, and nature of business of the "employer." (If the "employee" is a firm [such as a law firm or public relations firm], partners and salaried staff members of such firm may join in filing a Report as an "employee.")
(ii) "Employer".—To file as an "employer," write "None" as answer to Item "B."
(b) Separate Reports.—An agent or employee should not attempt to combine his Report with the employer's Report.
(i) Employers subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their agents or employees.
(ii) Employees subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their employers.

A. ORGANIZATION OR INDIVIDUAL FILING.—(1) State name, address, and nature of business; (2) if this Report is for an Employer, list names of agents or employees who will file Reports for this Quarter.

NOTE ON ITEM "B".—*Reports by Agents or Employees.* An employee is to file, each quarter, as many Reports as he has employers; except that: (a) If a particular undertaking is jointly financed by a group of employers, the group is to be considered as one employer, but all members of the group are to be named, and the contribution of each member is to be specified; (b) if the work is done in the interest of one person but payment therefor is made by another, a single Report—naming both persons as "employers"—is to be filed each quarter.

B. EMPLOYER.—State name, address, and nature of business. If there is no employer, write "None."

NOTE ON ITEM "C".—(a) The expression "in connection with legislative interests," as used in this Report, means "in connection with attempting, directly or indirectly, to influence the passage or defeat of legislation." "The term 'legislation' means bills, resolutions, amendments, nominations, and other matters pending or proposed in either House of Congress, and includes any other matter which may be the subject of action by either House"—Section 302 (e).
(b) Before undertaking any activities in connection with legislative interests, organizations and individuals subject to the Lobbying Act are required to file a "Preliminary" Report (Registration).
(c) After beginning such activities, they must file a "Quarterly" Report at the end of each calendar quarter in which they have either received or expended anything of value in connection with legislative interests.

C. LEGISLATIVE INTERESTS, AND PUBLICATIONS in connection therewith:

1. State approximately how long legislative interests are to continue. If receipts and expenditures in connection with legislative interests have terminated, place ☐ an "X" in the box at the left, so that this Office will no longer expect to receive Reports.

2. State the general legislative interests of the person filing and set forth the *specific* legislative interests by reciting: (a) Short titles of statutes and bills; (b) House and Senate numbers of bills, where known; (c) citations of statutes, where known; (d) whether for or against such statutes and bills.

3. In the case of those publications which the person filing has caused to be issued or distributed, in connection with legislative interests, set forth: (a) description; (b) quantity distributed, (c) date of distribution, (d) name of printer or publisher (if publications were paid for by person filing) or name of donor (if publications were received as a gift).

(Answer items 1, 2, and 3 in the space below. Attach additional pages if more space is needed.)

4. *If* this is a "Preliminary" Report (Registration) rather than a "Quarterly" Report, state below what the nature and amount of anticipated expenses will be; and if for an agent or employee, state also what the daily, monthly, or annual rate of compensation is to be. *If this is a "Quarterly" Report, disregard this Item "C 4" and fill out Items "D" and "E" on the back of this page.* Do not attempt to combine a "Preliminary" Report (Registration) with a "Quarterly" Report.

AFFIDAVIT

[Omitted in printing]

PAGE 1

NOTE ON ITEM "D."—(a) *In General.* The term "contribution" includes *anything of value.* When an organization or individual uses printed or duplicated matter in a campaign attempting to influence legislation, money received by such organization or individual—for such printed or duplicated matter—is a "contribution." "The term 'contribution' includes a gift, subscription, loan, advance, or deposit of money, or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make a contribution"—Section 302 (a) of the Lobbying Act.

(b) IF THIS REPORT IS FOR AN EMPLOYER.—(i) *In General.* Item "D" is designed for the reporting of all receipts from which expenditures are made, or will be made, in accordance with legislative interests.

(ii) *Receipts of Business Firms and Individuals.*—A business firm (or individual) which is subject to the Lobbying Act by reason of expenditures which it makes in attempting to influence legislation—but which has no funds to expend except those which are available in the ordinary course of operating a business not connected in any way with the influencing of legislation—will have no receipts to report, even though it does have expenditures to report.

(iii) *Receipts of Multipurpose Organizations.*—Some organizations do not receive any funds which are to be expended solely for the purpose of attempting to influence legislation. Such organizations make such expenditures out of a general fund raised by dues, assessments, or other contributions. The percentage of the general fund which is used for such expenditures indicates the percentage of dues, assessments, or other contributions which may be considered to have been paid for that purpose. Therefore, in reporting receipts, such organizations may specify what that percentage is, and report their dues, assessments, and other contributions on that basis. However, each contributor of $500 or more is to be listed, regardless of whether the contribution was made solely for legislative purposes.

(c) IF THIS REPORT IS FOR AN AGENT OR EMPLOYEE.—(i) *In General.* In the case of many employees, all receipts will come under Items "D 5" (received for services) and "D 12" (expense money and reimbursements). In the absence of a clear statement to the contrary, it will be presumed that your employer is to reimburse you for all expenditures which you make in connection with legislative interests.

(ii) *Employer as Contributor of $500 or More.*—When your contribution from your employer (in the form of salary, fee, etc.) amounts to $500 or more, it is not necessary to report such contribution under "D 13" and "D 14," since the amount has already been reported under "D 5," and the name of the "employer" has been given under Item "B" on page 1 of this report.

D. RECEIPTS (INCLUDING CONTRIBUTIONS AND LOANS):

Fill in every blank. If the answer to any numbered item is "None," write "None" in the space following the number.

Receipts (other than loans)

1. $_____Dues and assessments
2. $_____Gifts of money or anything of value
3. $_____Printed or duplicated matter received as a gift
4. $_____Receipts from sale of printed or duplicated matter

5. $_____Received for services (e. g., salary, fee, etc.)
6. $_____TOTAL for this Quarter (Add items "1" through "5")

7. $_____Received during previous Quarters of calendar year
8. $_____TOTAL from Jan. 1 through this Quarter (Add "6" and "7")

Loans Received

"The term 'contribution' includes a . . . *loan* . . ."—Sec. 302 (a).

9. $_____TOTAL now owed to others on account of loans
10. $_____Borrowed from others during this Quarter
11. $_____Repaid to others during this Quarter

12. $_____"Expense money" and Reimbursements received this Quarter

Contributors of $500 or more (from Jan. 1 through this Quarter)

13. Have there been such contributors?
Please answer "yes" or "no": _____

14. In the case of each contributor whose contributions (including loans) during the "period" from January 1 through the last days of this Quarter total $500 or more:

Attach hereto plain sheets of paper, approximately the size of this page, tabulate data under the headings "Amount" and "Name and Address of Contributor"; and indicate whether the last day of the period is March 31, June 30, September 30, or December 31. Prepare such tabulation in accordance with the following example:

Amount	*Name and Address of Contributor* ("*Period*" from Jan. 1 through _____, 19____)
$1,500.00	John Doe, 1621 Blank Bldg., New York, N. Y.
$1,785.00	The Roe Corporation, 2511 Doe Bldg., Chicago, Ill.
$3,285.00	TOTAL

NOTE ON ITEM "E".—(a) *In General.* "The term 'expenditure' includes a payment, distribution, loan, advance, deposit, or gift of money or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make an expenditure"—Section 302 (b) of the Lobbying Act.

(b) IF THIS REPORT IS FOR AN AGENT OR EMPLOYEE. In the case of many employees, all expenditures will come under telephone and telegraph (Item "E 6") and travel, food, lodging, and entertainment (Item "E 7").

E. EXPENDITURES (INCLUDING LOANS) in connection with legislative interests:

Fill in every blank. If the answer to any numbered item is "None," write "None" in the spaces following the number.

Expenditures (other than loans)

1. $_____Public relations and advertising services
2. $_____Wages, salaries, fees, commissions (other than item "1")
3. $_____Gifts or contributions made during Quarter
4. $_____Printed or duplicated matter, including distribution cost
5. $_____Office overhead (rent, supplies, utilities, etc.)
6. $_____Telephone and telegraph
7. $_____Travel, food, lodging, and entertainment
8. $_____All other expenditures

9. $_____TOTAL for this Quarter (Add "1" through "8")
10. $_____Expended during previous Quarters of calendar year

11. $_____TOTAL from January 1 through this Quarter (Add "9" and "10")

Loans Made to Others

"The term 'expenditure' includes a . . . *loan* . . ."—Sec. 302 (b).

12. $_____TOTAL now owed to person filing
13. $_____Lent to others during this Quarter
14. $_____Repayment received during this Quarter

15. Recipients of Expenditures of $10 or More
In the case of expenditures made during this Quarter by, or on behalf of the person filing: Attach plain sheets of paper approximately the size of this page and tabulate data as to expenditures under the following heading: "Amount," "Date or Dates," "Name and Address of Recipient," "Purpose." Prepare such tabulation in accordance with the following example:

Amount	*Date or Dates—Name and Address of Recipient—Purpose*
$1,750.00	7-11: Roe Printing Co., 3214 Blank Ave., St. Louis, Mo.—Printing and mailing circulars on the "Marshbanks Bill."
$2,400.00	7-15, 8-15, 9-15: Britten & Blatten, 3127 Gremlin Bldg., Washington, D. C.—Public relations service at $800.00 per month.

REGISTRATIONS

The following registrations were submitted for the second calendar quarter 1955:

(NOTE.—The form used for registration is reproduced below. In the interest of economy in the RECORD, questions are not repeated, only the essential answers are printed, and are indicated by their respective letter and number.)

FILE TWO COPIES WITH THE SECRETARY OF THE SENATE AND FILE THREE COPIES WITH THE CLERK OF THE HOUSE OF REPRESENTATIVES:

This page (page 1) is designed to supply identifying data; and page 2 (on the back of this page) deals with financial data.

PLACE AN "X" BELOW THE APPROPRIATE LETTER OR FIGURE IN THE BOX AT THE RIGHT OF THE "REPORT" HEADING BELOW:

"PRELIMINARY" REPORT ("Registration"): To "register," place an "X" below the letter "P" and fill out page 1 only.

"QUARTERLY" REPORT: To indicate which one of the four calendar quarters is covered by this Report, place an "X" below the appropriate figure. Fill out both page 1 and page 2 and as many additional pages as may be required. The first additional page should be numbered as page "3," and the rest of such pages should be "4," "5," "6," etc. Preparation and filing in accordance with instructions will accomplish compliance with all quarterly reporting requirements of the Act.

Year: 19_____

REPORT

PURSUANT TO FEDERAL REGULATION OF LOBBYING ACT

	QUARTER			
P	1st	2d	3d	4th
(Mark one square only)				

NOTE ON ITEM "A".—(a) IN GENERAL. This "Report" form may be used by either an organization or an individual, as follows:
(i) "Employee".—To file as an "employee", state (in Item "B") the name, address, and nature of business of the "employer". (If the "employee" is a firm [such as a law firm or public relations firm], partners and salaried staff members of such firm may join in filing a Report as an "employee".)
(ii) "Employer".—To file as an "employer", write "None" in answer to Item "B".
(b) SEPARATE REPORTS. An agent or employee should not attempt to combine his Report with the employer's Report:
(i) Employers subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their agents or employees.
(ii) Employees subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their employers.

A. ORGANIZATION OR INDIVIDUAL FILING:
1. State name, address, and nature of business.

2. If this Report is for an Employer, list names or agents or employees who will file Reports for this Quarter.

NOTE ON ITEM "B".—*Reports by Agents or Employees.* An employee is to file, each quarter, as many Reports as he has employers, except that: (a) If a particular undertaking is jointly financed by a group of employers, the group is to be considered as one employer, but all members of the group are to be named, and the contribution of each member is to be specified; (b) if the work is done in the interest of one person but payment therefor is made by another, a single Report—naming both persons as "employers"—is to be filed each quarter.

B. EMPLOYER.—State name, address, and nature of business. If there is no employer, write "None."

NOTE ON ITEM "C".—(a) The expression "in connection with legislative interests," as used in this Report, means "in connection with attempting, directly or indirectly, to influence the passage or defeat of legislation." "The term 'legislation' means bills, resolutions, amendments, nominations, and other matters pending or proposed in either House of Congress, and includes any other matter which may be the subject of action by either House"—§ 302 (e).
(b) Before undertaking any activities in connection with legislative interests, organizations and individuals subject to the Lobbying Act are required to file a "Preliminary" Report (Registration).
(c) After beginning such activities, they must file a "Quarterly" Report at the end of each calendar quarter in which they have either received or expended anything of value in connection with legislative interests.

C. LEGISLATIVE INTERESTS, AND PUBLICATIONS in connection therewith:

1. State approximately how long legislative interests are to continue. If receipts and expenditures in connection with legislative interests have terminated, ☐ place an "X" in the box at the left, so that this Office will no longer expect to receive Reports.

2. State the general legislative interests of the person filing and set forth the *specific* legislative interests by reciting: (a) Short titles of statutes and bills; (b) House and Senate numbers of bills, where known; (c) citations of statutes, where known; (d) whether for or against such statutes and bills.

3. In the case of those publications which the person filing has caused to be issued or distributed in connection with legislative interests, set forth: (a) Description, (b) quantity distributed; (c) date of distribution, (d) name of printer or publisher (if publications were paid for by person filing) or name of donor (if publications were received as a gift).

(Answer items 1, 2, and 3 in the space below. Attach additional pages if more space is needed)

4. If this is a "Preliminary" Report (Registration) rather than a "Quarterly" Report, state below what the nature and amount of anticipated expenses will be; and if for an agent or employee, state also what the daily, monthly, or annual rate of compensation is to be. If this is a "Quarterly" Report, disregard this item "C4" and fill out item "D" and "E" on the back of this page. Do not attempt to combine a "Preliminary" Report (Registration) with a "Quarterly" Report.

Appendix

Accomplishments of the Committee on Ways and Means During the 84th Congress

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. COOPER. Mr. Speaker, as chairman of the Committee on Ways and Means, I am pleased to call to the attention of the Members of the House of Representatives the outstanding record that was accomplished by the Committee on Ways and Means during the 1st session of the 84th Congress.

It is a record that was achieved only through the efforts of every member of the committee for which I would like to express my grateful appreciation. This legislative record involved arduous effort and long hours of work on the part of all concerned.

It is interesting to note how the workload of the Committee on Ways and Means has been increasing. More bills were referred to the committee during the 1st session of this Congress than were referred to it in all of the 81st and 82d Congresses. During the 1st session of the 84th Congress 752 bills were referred to the committee compared to 458 for the whole of the 81st Congress and 696 for the whole of the 82d Congress. In the 83d Congress 1,203 bills were referred to the committee. If the same number of bills should be referred to our committee in the 2d session of the 84th Congress as were referred to it in the 1st session, the total will run over 1,500.

The committee reported to the House 61 bills in the first session of this Congress compared to 54 in both sessions of the 81st Congress, 64 in both sessions of the 82d Congress and 52 in both sessions of the 83d Congress. In the 81st Congress 44 bills reported by the Committee became public law, 51 in the 82d Congress and 41 in the 83d Congress plus another that received a pocket veto.

For the first time during my service on the committee, each committee member was given an opportunity to request and get consideration of any bills pending before the committee which he, or any other Member of the House, had introduced in this session of Congress.

Of the 61 bills that were reported favorably to the House by the Committee on Ways and Means, 5 of them might be termed major legislation and 11 of them were bills on which specific requests for favorable action had been received from the administration. Thirty-two of the bills reported by the committee were enacted into law. It is expected that this number will increase next session as a result of consideration by the Senate of legislation originating in the Ways and Means Committee that is now pending in that body.

For the information of all interested persons, I will insert at this point in the RECORD a compilation of committee activities for the 1st session of the 84th Congress:

RECORD OF THE COMMITTEE ON WAYS AND MEANS, 84TH CONGRESS, 1ST SESSION

The following record of the Committee on Ways and Means sets forth in summary form the activities and accomplishments of the committee during the 1st session of the 84th Congress:

I. STATUS OF LEGISLATION

The status of bills pending before the committee during the 1st session of the 84th Congress is indicated in the table set forth below:

Status:	*Total bills*
Reported by the committee	61
Passed by the House	58
Reported by Senate Finance	33
Passed by the Senate	33
Enacted into law	32

(NOTE.—There are 25 bills reported by the committee which passed the House that are pending before the Senate Committee on Finance for action next session. There was a memorandum of disapproval on one bill, H. R. 6887.)

During the course of the 1st session, the committee met 80 times in executive session and held a total of 29 days of public hearings on a variety of subjects. Testimony was received from 329 witnesses in the public hearings, in addition to which a number of persons submitted statements with regard to the subject matter under consideration in lieu of appearances. Data concerning these hearings follow:

Subject	Days	Witnesses
Trade Agreements Extension Act of 1955	16	214
Prepaid income and reserves for estimated expenses	4	29
Revision of Philippine Trade Agreement	1	7
Customs Simplification Act of 1955	2	14
Public debt limit	1	1
Individual Retirement Act of 1955	2	41
Bonding period for distilled spirits	1	12
Upjeweling of watch movements	2	11
Total	29	329

II. BRIEF DESCRIPTION OF LEGISLATIVE ACTIVITIES

A. Tariffs and customs legislation

In the first session the committee took favorable action on 3 major bills affecting tariff and customs laws and 11 minor bills. The three major bills are as follows:

H. R. 1: This legislation, the Trade Agreements Extension Act of 1955, was one of the most important pieces of legislation to be considered by the committee and to pass both Houses of Congress during the first session. This legislation became Public Law 86. It continues through June 30, 1958, the authority of the President to enter into trade agreements and made other liberalizing and clarifying improvements in our reciprocal trade program. H. R. 1 prescribes the delegation of authority to the Executive for the establishment of our foreign economic policy which the President has described as the cornerstone of our foreign policy.

In the careful consideration of this legislation the committee held 16 days of public hearings and heard from 214 witnesses in addition to receiving voluminous material for inclusion in the printed record of the hearings. Seven administration witnesses of Cabinet rank appeared before the committee in support of the enactment of H. R. 1. In favorably reporting H. R. 1 to the House, the committee expressed the view that this legislation was a part of the answer to our objectives of increasing domestic prosperity, free world strength, and international peace.

H. R. 6040: This legislation, the Customs Simplification Act of 1955, provides improved procedures for the valuation of imports and conversion of foreign currency into dollars for the purpose of assessing customs duties. In addition, the legislation repeals a number of obsolete provision of the customs laws. In reporting this legislation to the House of Representatives, the committee expressed the view that its enactment would bring about greater speed of customs administration and increased certainty and commercial realism in our customs laws. This legislation passed the House of Representatives and is pending before the Senate Committee on Finance for action next session.

H. R. 6059: This legislation, the Philippine Trade Agreement Revision Act of 1955, authorizes revision of the 1946 trade agreement between the United States of America and the Republic of the Philippines. This legislation passed both Houses of Congress and became Public Law 196. Comparable legislation passed the Philippine Legislature and, after the signing of the agreement authorized by the United States and the Philippine legislation, the Chief Executives of the respective countries will proclaim the authorized modifications in the existing trade agreement. The legislation will further serve to strengthen the historic bond of friendship that has always existed between the peoples of the United States and the Philippines as well as improve the economic relationship between the two countries.

In addition to the above enumerated 3 major bills affecting our tariff and customs laws, the committee also took favorable action with respect to 11 tariff and customs bills of somewhat lesser importance. Among other things, these bills continued the suspension of duties on certain strategic and critical materials, extended the free entry period on gifts for members of the Armed Forces abroad and on household and personal effects brought into the United States under Government orders, and made appropriate adjustment in the tariff and customs status of certain other articles.

B. Tax legislation

During the 1st session of the 84th Congress the Committee on Ways and Means took favorable action with respect to 40 bills which amended the Internal Revenue Code. Many of these bills made important changes in our tax structure and one of them might be deemed to be a major bill as it was reported by the committee and passed by the House of Representatives. That bill was H. R. 4259.

H. R. 4259, the Revenue Act of 1955, as passed the House, provided a $20 tax credit

against the individual income tax for each personal exemption claimed by a taxpayer. In addition, this legislation provided a 1-year extension of the existing corporate normal-tax rate and of certain existing excise tax rates. In providing this $20 tax credit the committee expressed the view that this tax relief was necessary to support an expanding economy and to restore balance to our tax structure. While the House-passed version of H. R. 4259 granted across-the-board individual tax relief amounting to over $2 billion in a full year of operation to an estimated 71 million taxpayers, the net revenue effect of this legislation as passed the House was to increase receipts toward a balanced budget. This was to be accomplished through a more equitable distribution of the total tax burden among all taxpayers. The Senate deleted the $20 tax credit from the bill and as H. R. 4259 was enacted into law (Public Law 18) it merely provided for a 1-year extension of the existing corporate normal-tax rate and of certain existing excise tax rates.

Other tax legislation of somewhat major importance was H. R. 7201, which would revide a revised formula for the taxation of life insurance companies. This legislation passed the House and is presently pending before the Senate Committee on Finance for action next session.

The Committee on Ways and Means also prepared legislation, H. R. 4725, closing two loopholes in the Internal Revenue Code of 1954 which, it is estimated, would have cost the Treasury in excess of $1 billion. In taking this action to repeal sections 452 and 462 of the 1954 code (relating to prepaid income and reserves for estimated expenses) the committee directed a staff study to be made with a view to preparing legislation embodying the principles of these sections but providing adequate safeguards to prevent the existence of any loopholes.

The remaining 37 tax bills which were approved by your committee were designed to eliminate existing inequities in our Federal tax structure and to grant appropriate tax relief in certain hardship areas.

C. Social-security legislation

The Committee on Ways and Means prepared and presented to the House for favorable consideration major amendments to the social-security law. This legislation, H. R. 7225, the Social Security Amendments of 1955, provided (1) monthly benefits for disabled insured individuals who have attained age 50; (2) a reduction in the benefit eligibility age for women to 62 years; (3) continued monthly benefits for disabled children after they attain age 18; (4) expanded old-age and survivors insurance coverage; and (5) an adjustment in the contribution schedule. It is estimated that in the first year of operation these amendments will make old-age and survivors insurance benefits in the amount of $600 million payable to approximately 1 million persons. In the long run, it is estimated that 2.8 million people will be added to the benefit rolls who will receive approximately $2.2 billion in annual benefits. By making benefits available to eligible disabled workers, by providing for a reduced retirement age for women, and by continuing monthly benefits to children who become totally and permanently disabled before age 18, these important amendments to the old-age and survivors insurance title of the social-security law will remove serious benefit gaps existing under present law. The expanded coverage provided under H. R. 7225 will make available to an estimated 250,000 individuals and their families the protection of the old-age and survivors insurance system for the first time. H. R. 7225 provided for an adjustment in the contribution schedule that is designed to place the system in a stronger actuarial condition than exists under present law. H. R. 7225 passed the House of Representatives and is pending before the Senate Committee on Finance for consideration next year.

In addition, the committee also approved H. R. 5936, which continued old-age and survivors insurance wage credits for military personnel. This legislation passed both Houses of Congress and became Public Law 325.

D. Miscellaneous legislation

The committee approved 6 bills that might be grouped under this miscellaneous category. One of these bills, H. R. 4904, extended for 2 years, with amendments, the Renegotiation Act of 1951. This action was taken in view of the fact that expenditures for national defense are expected to exceed more than one-half of the total budgetary expenditures for the period that the renegotiation authority is extended by the bill. This legislation was approved by the Congress and became Public Law 216.

At the request of the administration, the Committee on Ways and Means took favorable action on H. R. 6992, a bill to extend for 1 year the existing $6 billion temporary increase in the public debt limit. This legislation was approved by the Congress and became Public Law 124.

The committee also favorably reported 2 bills designed to strengthen the enforcement of our narcotic laws, viz.: H. R. 2369 (Public Law 1) and H. R. 7018 (Public Law 362). Two other bills relating to certain Treasury administrative expenses (S. 1727, Public Law 57) and to the collection of State sales and use taxes on cigarettes (H. R. 6886, Public Law 335) were favorably reported by the Committee on Ways and Means.

III. SUBCOMMITTEES

During the closing days of the first session of the 84th Congress, 3 subcommittees were established. These subcommittees and their respective memberships are as follows:

The Subcommittee on Taxation of Life Insurance Companies: Hon. WILBUR D. MILLS, Democrat, Arkansas, chairman; Hon. NOBLE J. GREGORY, Democrat, Kentucky; and Hon. THOMAS B. CURTIS, Republican, Missouri.

The Subcommittee on Excise Tax Technical and Administrative Problems: Hon. AIME J. FORAND, Democrat, Rhode Island, chairman; Hon. EUGENE J. KEOGH, Democrat, New York; Hon. BURR P. HARRISON, Democrat, Virginia; Hon. A. S. HERLONG, JR., Democrat, Florida; Hon. THOMAS A. JENKINS, Republican, Ohio; Hon. RICHARD M. SIMPSON, Republican, Pennsylvania; and Hon. NOAH M. MASON, Republican, Illinois.

The Subcommittee on Narcotics: Hon. HALE BOGGS, Democrat, Louisiana, chairman; Hon. FRANK M. KARSTEN, Democrat, Missouri; Hon. EUGENE J. MCCARTHY, Democrat, Minnesota; Hon. FRANK IKARD, Democrat, Texas; Hon. JOHN W. BYRNES, Republican, Wisconsin; Hon. ANTONI N. SADLAK, Republican, Connecticut; and Hon. HOWARD H. BAKER, Republican, Tennessee.

Plans and procedures are presently being formulated with a view to arranging the activities of the above-mentioned subcommittees.

Hamilton on the Constitutionality of Treaties—No. 1 of a Series of Three

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, in his little known and almost forgotten Camillus letters—1795–96—Alexander Hamilton discussed fully the nature, purpose, and constitutionality of treaties between the United States and foreign nations. These letters applied specifically to the treaty with England negotiated by John Jay.

From his own knowledge as a member of the Constitutional Convention, and from his experience in President Washington's Cabinet, Hamilton wrote authoritatively on a question which is today troubling many people throughout the country. These letters are not to be found outside Hamilton's collected works, which are not readily available.

I ask unanimous consent to include in the Appendix of the RECORD part 1 of a series of three of Hamilton on the Constitutionality of Treaties.

There being no objection, part 1 was ordered to be printed in the RECORD, as follows:

CAMILLUS: LETTERS XXXVI, XXXVII, AND XXXVIII, BY ALEXANDER HAMILTON, ON THE NATURE, SCOPE, AND CONSTITUTIONALITY OF TREATIES—THE HISTORY OF THE REPUBLIC OF THE UNITED STATES OF AMERICA, AS TRACED IN THE WRITINGS OF ALEXANDER HAMILTON AND OF HIS CONTEMPORARIES

(Edited by John C. Hamilton (1857))

NO. XXXVI

It is now time to fulfill my promise of an examination of the constitutionality of the treaty. Of all the objections which have been contrived against this instrument, those relating to this point are the most futile. If there be a political problem capable of complete demonstration, the constitutionality of the treaty in all its parts, is of this sort. It is even difficult to believe, that any man in either House of Congress, who values his reputation for discernment or sincerity, will publicly hazard it by a serious attempt to controvert the position.

It is, nevertheless, too much a fashion with some politicians, when hard pressed on the expediency of a measure, to intrench themselves behind objections to its constitutionality—aware that there is naturally in the public mind a jealous sensibility to objections of that nature, which may predispose against a thing otherwise acceptable, if even a doubt, in this respect, can be raised. They have been too forward to take advantage of this propensity, without weighing the real mischief of the example. For, however, it may serve a temporary purpose, its ultimate tendency is, by accustoming the people to observe that alarms of this kind are repeated with levity and without cause, to prepare them for distrusting the cry of danger when it may be real: yet the imprudence has been such, that there has scarcely been an important public question, which has not involved more or less of this species of controversy.

In the present case, the motives of those who may incline to defeat the treaty, are unusually strong for creating, if possible, a doubt concerning its constitutionality.

The treaty, having been ratified on both sides, the dilemma plainly is between a violation of the Constitution, by the treaty, and a violation of the Constitution by obstructing the execution of the treaty.

The sixth article of the Constitution of the United States declares that "the Constitution and the laws of the United States, made in pursuance thereof, all treaties made, or which shall be made under the authority of the United States, shall be the supreme law of the land, anything in the Constitution or laws of any State to the contrary notwithstanding." A law of the land, till revoked or annulled, by the competent authority, is binding, not less on each branch or department of the Government than on each individual of the society. Each House

of Congress collectively, as well as the Members of it separately, are under a constitutional obligation to observe the injunctions of preexisting law, and to give it effect—if they act otherwise, they infringe the Constitution; the theory of which knows, in such case, no discretion on their part. To resort to first principles for their justification, in assuming such a discretion, is to go out of the Constitution for an authority, which they cannot find in it—it is to usurp the original character of the people themselves—it is, in principle, to prostrate the Government.

The cases must be very extraordinary that can excuse so violent an assumption of discretion. They must be of a kind to authorize a revolution in government; for every resort to original principles, in derogation from the established Constitution, partakes of this character.

Recalling to view, that all but the first 10 articles of the treaty are liable to expire at the termination of 2 years after the present war; if the objection to it in point of constitutionality cannot be supported—let me ask, who is the man hardy enough to maintain, that the instrument is of such a nature as to justify a revolution in Government?

If this can be answered in the affirmative, adieu to all the securities which nations expect to derive from constitutions of government. They become mere bubbles, subject to be blown away by every breath of party. The precedent would be a fatal one—our Government, from being fixed and limited, would become revolutionary and arbitrary—all the provisions which our Constitution, with so much solemnity, ordains "for forming a more perfect union, establishing justice, insuring domestic tranquility, providing for the common defense, promoting the general welfare, and securing the blessings of liberty to ourselves and posterity," evaporate and disappear.

Equally will this be the case, if the rage of party spirit can meditate, if the momentary ascendency of party, in a particular branch of the Government, can effect, and if the people can be so deceived as to tolerate—that the pretense of a violation of the Constitution shall be made the instrument of its actual violation.

This, however, cannot be—there are already convincing indications on the very subject before us, that the good sense of the people will triumph over prejudice and the acts of party—that they will finally decide according to their true interest, and that any transient or partial superiority, which may exist, if abused for the purpose of infracting the Constitution, will consign the perpetrators of the infraction to ruin and disgrace. But alas, what consolation would there be in the ruin of a party for the ruin of the Constitution?

It is time to enter on the momentous discussion. The question shall be examined in the four following views: 1. In relation to the theory of the Constitution. 2. In relation to the manner in which it was understood by the convention who framed it, and by the people who adopted it. 3. In relation to the practice upon a similar power in the confederation. 4. In relation to the practice under our present Constitution, prior to the treaty with Great Britain. In all these views, the constitutionality of the treaty can be vindicated beyond the possibility of a serious doubt.

1. As to the theory of the Constitution: The Constitution of the United States distributes its powers into three departments, legislative, executive, judiciary. The first article defines the structure, and specifies the various powers of the legislative department; the second article establishes the organization and powers of the executive department; the third article does the same with respect to the judiciary department; the fourth and fifth, and sixth articles, which are the last, are a miscellany of particular provisions.

The first article declares that "all legislative power granted by the Constitution shall be vested in a Congress of the United States, which shall consist of a Senate and a House of Representatives."

The second article which organizes and regulates the executive department, declares that the "executive power shall be vested in a President of the United States of America;" and proceeding to detail particular authorities of the Executive, it declares that the "President shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur." There is in no part of the Constitution any explanation of this power to make treaties, any definition of its objects, or delineation of its bounds. The only other provision in the Constitution respecting it, is in the sixth article, which provides, as already noticed, that all treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land, and this notwithstanding anything in the Constitution or laws of any State to the contrary.

It was impossible for words more comprehensive to be used than those which grant the power to make treaties. They are such as would naturally be employed to confer a plenipotentiary authority—a power "to make treaties," granted in these indefinite terms, extends to all kinds of treaties, and with all the latitude which such a power, under any form of government, can possess—the power "to make" implies a power to act authoritatively and conclusively, independent of the afterclause which expressly places treaties among the supreme laws of the land. The thing to be made is a treaty.

With regard to the objects of the treaty, there being no specification, there is, of course, a carte blanche. The general proposition must, therefore, be, that whatever is a proper subject of compact between nation and nation may be embraced by a treaty between the President of the United States, with the advice and consent of the Senate, and the correspondent organ of a foreign state.

The authority being general, it comprises, of course, whatever cannot be shown to be necessarily an exception to it.

The only constitutional exception to the power of making treaties is that it shall not change the Constitution, which results from this fundamental maxim that a delegated authority cannot alter the constituting act, unless so expressly authorized by the constituting power. An agent cannot new-model his own commission. A treaty, for example, cannot transfer the legislative power to the executive department, nor the power of this last department to the judiciary; in other words, it cannot stipulate that the President, and not Congress, shall make laws for the United States, that the judges, and not the President, shall command the national forces.

Again, there is also a national exception to the power of making treaties, as there is to every other delegated power, which respects abuses of authority in palpable and extreme cases. On natural principles, a treaty, which should manifestly betray or sacrifice the private interests of the state, would be null. But this preesnts a question foreign from that of the modification or distribution of constitutional powers. It applies to the case of the pernicious exercise of a power, where there is legal competency. Thus the power of treaty, though extending to the right of making alliances offensive and defensive, might not be exercised in making an alliance, so injurious to the state as to justify the nonobservance of the contract.

Beyond these exceptions to the power, none occurs that can be supported.

Those which have been insisted upon, toward invalidating the treaty with Great Britain, are not even plausible. They amount to this, that a treaty can establish nothing between the United States and a foreign nation, which it is the province of the legislative authority to regulate in reference to the United States alone. It cannot, for instance, establish a particular rule of commercial intercourse between the United States and Great Britain, because it is provided in the Constitution, that Congress "shall have power to regulate commerce with foreign nations." This is equivalent to affirming that all the objects upon which the legislative power may act, in relation to our country, are excepted out of the power to make treaties.

Two obvious considerations refute this doctrine: One, that the power to make treaties, and the power to make laws, are different things, operating by different means, upon different subjects; the other, that the construction resulting from such a doctrine would defeat the power to make treaties, while its opposite reconciles this power with the power of making laws.

The power to make laws is the power of pronouncing authoritatively the will of the nation as to all persons and things over which it has jurisdiction; or it may be defined to be the power of prescribing rules binding upon all persons and things over which the nation has jurisdiction. It acts compulsively upon all persons, whether foreigners or citizens, and upon all things within the territory of such nation, and also upon its own citizens and their property without its territory in certain cases and under certain limitations. But it can have no obligatory action whatsoever upon a foreign nation, or upon any person or thing within the jurisdiction of a foreign nation.

The power of treaty, on the other hand, is the power by agreement, convention, or compact, to establish rules binding upon two or more nations, their respective citizens and property. The rule established derives its reciprocal obligation from promise, from the faith which the contracting parties pledge to each other—not from the power of either to prescribe a rule for the other. It is not here the will of a superior that commands; it is the consent of two independent parties that contract.

The means which the power of legislation employs, are laws which it enacts, or rules which it enjoins; the subject upon which it acts is the nation of whom it is, the persons and property within the jurisdiction of the nation. The means which the power of treaty employs, are contracts with other nations, who may or may not enter into them—the subjects upon which it acts, are the nations contracting and those persons and things of each to which the contract relates. Though a treaty may effect what a law can, yet a law cannot effect what a treaty does. These discriminations are obvious and decisive; and however the operation of a treaty may, in some things, resemble that of a law, no two ideas are more distinct than that of legislating and that of contracting.

It follows that there is no ground for the inference pretended to be drawn, that the legislative powers of Congress are excepted out of the power of making treaties. It is the province of the latter to do what the former cannot do. Congress (to pursue still the case of regulating trade) may regulate, by law, our own trade and that which foreigners come to carry on with us; but they cannot regulate the trade which we may go to carry on in foreign countries; they can give to us no rights, no privileges there. This must depend on the will and regulations of those countries; and, consequently, it is the province of the power of treaty to establish the rules of commercial intercourse between foreign nations and the United States. The legislative may regulate our own trade, but treaty only can regulate the national trade between our own and another country.

The Constitution accordingly considers the power of treaty as different from that of legislation. This is proved in two ways: 1. That while the Constitution declares that

all the legislative powers which it grants shall be vested in Congress, it vests the power of making treaties in the President with consent of the Senate. 2. That the same article by which it is declared that the executive power shall be vested in a President, and in which sundry executive powers are detailed, gives the power to make treaties to the President, with the auxiliary agency of the Senate. Thus the power of making treaties is placed in the class of executive authorities; while the force of laws is annexed to its results. This agrees with the distribution commonly made by theoretical writers, though perhaps the power of treaty, from its peculiar nature, ought to form a class by itself.

When it is said that Congress shall have power to regulate commerce with foreign nations, this has reference to the distribution of the general legislative power of regulating trade between the national and the particular governments; and serves merely to distinguish the right of regulating our external trade, as far as it can be done by law, which is vested in Congress, from that of regulating the trade of a State within itself, which is left to each State.

This will the better appear from the entire clause. "The Congress shall have power to regulate commerce with foreign nations and among the several States and with the Indian tribes," which is the same as if it had been said, "The whole powers of regulating trade by law shall reside in Congress, except as to the trade within a State, the power to regulate which shall remain with such State." But it is clearly foreign to that mutual regulation of trade between the United States and other nations, which, from the necessity of mutual consent, can only be performed by treaty. It is indeed an absurdity to say, that the power of regulating trade by law is incompatible with the power of regulating it by treaty; since the former can, by no means, do what the latter can alone accomplish; consequently, it is an absurdity to say, that the legislative power of regulating trade is an exception to the power of making treaties.

Laws are the acts of legislation of a particular nation for itself. Treaties are the acts of the legislation of several nations for themselves jointly and reciprocally. The legislative powers of one state cannot reach the cases which depend on the joint legislation of two or more states. For this, resort must be had to the pactitious power, or the power of treaty. This is another attitude of the subject, displaying the fallacy of the proposition, that the legislative powers of Congress, are exceptions to, or limitations of, the power of the President, with the aid of the Senate, to make treaties.

CAMILLUS.

Hamilton on the Constitutionality of Treaties—No. 2 of a Series of Three

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD part 2 of a series of three of Hamilton on the Constitutionality of Treaties.

There being no objection, part 2 was ordered to be printed in the RECORD, as follows:

NO. XXXVII

It shall now be shown, that the objections to the treaty, founded on its pretended interference with the power of Congress, tend to render the power of making treaties, in a very great degree, if not altogether, nominal. This will be best seen by an enumeration of the cases of pretended interference.

First. The power of Congress to lay taxes, is said to be impaired by those stipulations which prevent the laying of duties on particular articles; which also prevent the laying of higher or other duties on British commodities than on the commodities of other countries, and which restrict the power of increasing the difference of duties on British tonnage and on goods imported in British bottoms.

Second. The power of Congress to regulate trade is said to be impaired by the same restrictions respecting duties, inasmuch as they are intended, and operate, as regulations of trade—by the stipulations against prohibitions in certain cases; and, in general, by all the rights, privileges, immunities, and restrictions in trade, which are contained in the treaty; all which are so many regulations of commerce, which are said to encroach upon the legislative authority.

Third. The power of Congress to establish a uniform rule of naturalization, is said to be interfered with, by those provisions of the treaty which secure to the settlers, within the precincts of the British posts, the right of becoming citizens of the United States, and those which, in certain cases, remove the disability of alienism as to property.

Fourth. The power of Congress "to define and punish piracies and felonies, committed on the high seas, and offenses against the law of nations," is said to be contravened by those parts of the treaty, which declare that certain acts shall be deemed piracy, which constitute certain other things offenses, and stipulate the reciprocal punishment of them by each.

Fifth. It is also said that the Constitution is violated, in relation to that provision which declares, that "no money shall be drawn from the treasury but in consequence of appropriations made by law"—by those parts of the treaty which stipulate compensations to certain commissioners, and indemnifications to Great Britain, in certain cases to be adjusted and pronounced by the commissioners; and generally, by all those parts which may involve an expenditure of money.

Sixth. The Constitution is said to be violated in that part which empowers Congress to dispose of, and make all needful rules and regulations respecting the territory, or other property of the United States, by those provisions of the treaty which respect the adjustment of boundary in the cases of the rivers St. Croix and Mississippi.

Lastly. The Constitution is said to be violated, in its provisions concerning the judiciary department, by those parts of the treaty which contemplate the confiding to the determination of commissioners certain questions between the two nations.

A careful inspection of the treaty with these objections in view will discover, that of the 28 articles which compose it, at least 17 are involved in the charge of unconstitutionality; and that these 17 comprise all the provisions which adjust past controversies, or establish rules of commercial intercourse between the parties. The other 11, which are the 1st, 10th, 17th, 18th, 19th, 20th, 22d, 23d, and 24th, except the 1st, are made up of provisions which have reference to war; the first merely declaring that there shall be peace between the parties. And it is a question, even with respect to all of these, except the 1st, and 10th, whether they also are not implicated in the charge inasmuch as some of their dispositions have commercial relations. Is not this alone sufficient to bring under a strong suspicion the validity of the principles which impeach the constitutionality of the instrument?

It must have been observed that the argument in the last number is applicable to all the legislative powers of Congress, as well as to that of regulating trade, which was selected, by way of illustration, on the ground of its being common to all. Indeed the instance of the regulations of trade is that which is most favorable to the opposite doctrine, since foreign nations are named in the clause the true intent of which, however, has been explained.

The same reasoning, too, would extend the power of treaties to those objects which are consigned to the legislation of individual States; but here the Constitution has announced its meaning in express terms by declaring that the treaties which have been and shall be made under the authority of the United States shall be the supreme law of the land anything in the Constitution or laws of any State to the contrary notwithstanding. This manifestly recognizes the supremacy of the power of treaties over the laws of particular States, and goes even a step further.

The obvious reason for this special provision, in regard to the laws of individual States, is that there might otherwise have been room for question—whether a treaty of the Union could embrace objects, the internal regulation of which belonged to the separate authorities of the States. But with regard to the United States there was no room for a similar question.

The power of treaty could not but be supposed commensurate with all these objects to which the legislative power of the Union extended, which are the proper subjects of compacts with foreign nations.

It is a question among some theoretical writers—whether a treaty can repeal preexisting laws? This question must always be answered by the particular form of government of each nation. In our Constitution, which gives, ipso facto, the force of law to treaties, making them equal with the acts of Congress, the supreme law of the land, a treaty must necessarily repeal an antecedent law contrary to it; according to the legal maxim that "leges posteriores priores contrarias abrogant."

But even in those forms of government, in which there may be room for such a question, it is not understood that a treaty containing stipulations which require the repeal of antecedent laws is, on that acount, unconstitutional and null. The true meaning is that the antecedent laws are not, ipso facto, abrogated by the treaty—but the legislature is, nevertheless, bound in good faith, under the general limitation, stated in another place, to lend its authority to remove obstacles which previous laws might oppose to a fair execution of a treaty.

One instance of the inconsistency, prevailing in the arguments against the treaty negotiated by Mr. Jay, is observable in this point. To get rid of the infractions of our treaty of peace with Great Britain by certain laws of particular States, it is strenuously maintained that treaties control the laws of States. To impeach the constitutionality of the treaty under consideration, it is objected, that, in some points, it interferes with the objects of State legislation. The express provision of the Constitution in this particular, quoted above, has not been sufficient to check the range for objection.

The absurdity of the alleged interferences will fully appear, by showing how they would operate upon the several kinds of treaties usual among nations. These may be classed under three principal heads: (1) Treaties of commerce; (2) treaties of alliance; (3) treaties of peace.

Treaties of commerce are, of course, excluded; for every treaty of commerce is a system of rules devised to regulate and gov-

ern the trade between contracting nations, invading directly the exclusive power of regulating trade which is attributed to Congress.

Treaties of alliance, whether defensive or offensive, are equally excluded, and this on two grounds: (1) Because it is their immediate object to define a case or cases in which one nation shall take part with another in war, contrary, in the sense of the objection, to that clause of the Constitution which gives to Congress the power of declaring war; and (2) because the succors stipulated, in whatever shape they may be, must involve an expenditure of money—not to say that it is common to stipulate succors in money, either in the first instance or by way of alternative. It will be pertinent to observe incidentally, in this place, that even the humane and laudable provision in the 17th article, which all have approved, is within the spirit of the objection; for the effect of this is to restrain the power and discretion of Congress to grant reprisals, till there has been an unsuccessful demand of justice. Nothing can better illustrate the unreasonable tendency of the principle.

Treaties of peace are also excluded, or, at the least, are so narrowed as to be in the greatest number of cases impracticable. The most common conditions of these treaties are restitutions or cessions of territory, on one side or on the other, frequently on both sides, regulations of boundary—restitutions and confirmations of property—pecuniary indemnifications for injuries or expenses. It will, probably, not be easy to find a precedent of a treaty of peace which does not contain one or more of these provisions, as the basis of the cessation of hostilities, and they are all of them naturally to be looked for in an agreement which is to put an end to the state of war between conflicting nations.

Yet they are all precluded by the objections which have been enumerated: pecuniary indemnifications, by that which respects the appropriations of money; restitutions or cessions of Territory or property, regulations of boundary, by that which respects the right of Congress to dispose of, and make all needful rules and regulations concerning the Territory and property of the United States. It is to be observed, likewise, that cessions of Territory are almost always accompanied with stipulations in favor of those who inhabit the ceded Territory, securing personal privileges and private rights of property; neither of which could be acceded to on the principles of that objection, which relates to the power of naturalization; for this power has reference to two species of rights, those of privilege and those of property. An act allowing a foreigner to hold real estate is so far an act of naturalization; since it is one of the consequences of alienism, not to be able to hold real estate.

It follows, that if the objections which are taken to the treaty, on the point of constitutionality, are valid, the President, with the advice and consent of the Senate, can make neither a treaty of commerce nor alliance, and rarely, if at all, a treaty of peace. It is probable, that on a minute analysis, there is scarcely any species of treaty which would not clash, in some particular, with the principle of those objections; and thus, as was before observed, the power to make treaties, granted in such comprehensive and indefinite terms, and guarded with so much precaution, would become essentially nugatory.

This is so obviously against the principles of sound construction; it, at the same time, exposes the Government to so much impotence in one great branch of political power, in opposition to a main intent of the Constitution; and it tends so directly to frustrate one principal object of the situation of a general government, the convenient management of our external concerns, that it cannot but be rejected by every discerning man who will examine and pronounce with sincerity. It is against the principles of sound construction; because these teach us, that every instrument is so to be interpreted, as that all the parts may, if possible, consist with each other, and have their effect. But the construction which is combated would cause the legislative power to destroy the power of making treaties. Moreover, if the power of the executive department be inadequate to the making of the several kinds of treaties, which have been mentioned, there is, then, no power in the Government to make them; for there is not a syllable in the Constitution which authorizes either the legislative or judiciary departments, to make a treaty with a foreign nation. And our Constitution would then exhibit the ridiculous spectacle of a government without power to make treaties with foreign nations; a result as inadmissible as it is absurd; since, in fact, our Coustitution grants the power of making treaties, in the most explicit and ample terms, to the President, with the advice and consent of the Senate. On the contrary, all difficulty is avoided, by distinguishing the province of the two powers, according to ideas which have been always familiar to us, and which were never exposed to any question till the treaty with Great Britain gave exercise to the subtleties of party spirit.

By confining the power to make laws within our jurisdiction—and by assigning to actions to the establishment of rules for our own Nation and those foreigners who come within our jurisdiction—and by assigning to the power of treaty the office of concerting those rules of mutual intercourse and connection, between us and foreign nations, which require their consent as well as our own; allowing to it the latitude necessary for this purpose, a harmonious agreement is preserved between the different powers of the Government: that to make laws, and that to make treaties; between the authority of the legislative and the authority of the executive department.

Hence, though Congress, by the Constitution, have power to lay taxes, yet a treaty may restrain the exercise of it in particular cases. For a nation, like an individual, may abridge its moral power of action by agreement; and the organ charged with the legislative power of a nation may be restrained in its operation by the agreements of the organ of its federative power, or power to contract: let it be remembered, that the nation is the constituent, and that the executive, within its sphere, is no less the organ of its will than the legislature.

Though Congress are empowered to make regulations of trade, yet they are not exclusively so empowered—but regulations of trade may also be made by treaty; and, where other nations are to be bound by them, must be made by treaty.

Though Congress are authorized to establish a uniform rule of naturalization, yet this contemplates only the ordinary cases of internal administration; in particular and extraordinary cases, those in which the pretensions of a foreign government are to be managed—a treaty may also confer the rights and privileges of citizens; thus the absolute cession and plenary dominion of a province or district, possessed by our arms in war, may be accepted by the treaty of peace, on the condition that its inhabitants shall, in their persons and property, enjoy the privileges of citizens.

The same reasoning applies to all the other instances of supposed infraction of the legislative authority: with regard to piracies and offenses against the laws of nations; with regard to expenditures of money, with regard to the appointment of officers, with regard to the judiciary tribunals, with regard to the disposal and regulation of the national territory and property. In all these cases, the power to make laws and the power to make treaties are concurrent and coordinate. The latter, and not the former, must act, where the cooperation of other nations is requisite.

As to what respects the commissioners agreed to be appointed, they are not, in a strict sense, officers. They are arbitrators between the two countries. Though in the Constitutions, both of the United States and of most of the individual States, a particular mode of appointing officers is designated—yet, in practice, it has not been deemed a violation of the provision to appoint commissioners or special agents for special purposes, in a different mode.

As to the provision, which restricts the issuing of money from the Treasury, to cases of appropriation by law, and which, from its intrinsic nature, may be considered as applicable to the exercise of every power of government, it is, in no sort, touched by the treaty. In the constant practice of the Government, the cause of an expenditure, or the contract which incurs it, is a different thing from the appropriation for satisfying it. Thus the salary of a public officer is fixed by one law, the appropriation for its payment by another. So, the treaty only stipulates what may be a cause of expenditure. An appropriation by law will still be requisite for actual payment.

As to the disposal and regulation of the territory and property of the United States, this will be naturally understood of dispositions and regulations purely domestic, and where the title is not disputed by a foreign power. Where there are interfering claims of foreign powers, as neither will acknowledge the right of the other to decide, treaty must directly or indirectly adjust the dispute.

So far then it is from being true, that the power of treaty can extend to nothing upon which, in relation to ourselves, the legislative power may act—that it may rather be laid down as a general rule, that a treaty may do between different nations whatever the legislative power of each may do with regard to itself. The exceptions to this rule are to be deduced from the unfitness and inconvenience of its application to particular cases, and are of the nature of abuses of a general principle.

In considering the power of legislation in its relations to the power of treaty, instead of saying, that the objects of the former are excepted out of the latter, it will be more correct, indeed it will be entirely correct, to invert the rule, and to say, that the power of treaty is the power of making exceptions, in particular cases, to the power of legislation. The stipulations of treaty are, in good faith, restraints upon the exercise of the last-mentioned power. Where there is no treaty, it is completely free to act. Where there is a treaty, it is still free to act in all the cases not specially excepted by the treaty. Thus, Congress is free to regulate trade with a foreign nation, with whom we have no treaty of commerce, in such manner as they judge for the interest of the United States; and they are also free so to regulate it with a foreign nation wtih whom we have a treaty, in all the points which the treaty does not specially except. There is always, therefore, great latitude for the exercise of the legislative power of regulating trade with foreign nations, notwithstanding any treaties of commerce which may be formed.

The effects of a treaty to impose restraints upon the legislative powers, may, in some degree, be exemplified by the case of the compacts which the legislature itself makes, as with regard to the public debt. Its own compacts are, in good faith, exceptions to its power of action. Treaties with foreign powers, for obvious reasons, are much stronger exceptions.

CAMILLUS.

Hamilton on the Constitutionality of Treaties—No. 3 and Last of a Series of Three

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD part 3 and last of a series of three of Hamilton on the Constitutionality of Treaties.

There being no objection, part 3 was ordered to be printed in the RECORD, as follows:

NO. XXXVIII. AND LAST

The manner in which the power of treaty, as it exists in the Constitution, was understood by the Convention in framing it, and by the people in adopting it, is the point next to be considered.

As to the sense of the Convention, the secrecy with which their deliberations were conducted, does not permit any formal proof of the opinions and views which prevailed in digesting the power of treaty. But from the best opportunity of knowing the fact, I aver, that it was understood by all, to be the intent of the provision to give to that power the most ample latitude—to render it competent to all the stipulations, which the exigencies of national affairs might require; competent to the making of treaties of alliance, treaties of commerce, treaties of peace, and every other species of convention usual among nations; and competent, in the course of its exercise for these purposes, to control and bind the legislative power of Congress. And it was emphatically for this reason that it was so carefully guarded; the cooperation of two-thirds of the Senate, with the President, being required to make any treaty whatever. I appeal for this, with confidence, to every member of the Convention—particularly to those in the two Houses of Congress. Two of these are in the House of Representatives, Mr. Madison and Mr. Baldwin: it is expected by the adversaries of the treaty that these gentlemen will, in their places, obstruct its execution. However this may be, I feel a confidence that neither of them will deny the assertion I have made—to suppose them capable of such a denial were to suppose them utterly regardless of truth. But, though direct proof of the views of the Convention on the point cannot be produced, yet we are not wholly without proof on this head.

Three members of the Convention dissented from the Constitution, Mr. Mason, Mr. Gerry, and Mr. Randolph. Among the reasons for his dissent, published by Mr. Mason, we find this clause: "By declaring all treaties supreme laws of the land, the Executive and Senate have, in many cases, an exclusive power of legislation, which might have been avoided by proper distinctions with respect to treaties, and requiring the assent of the House of Representatives where it could be done with safety." This shows the great extent of the power, in the conception of Mr. Mason, in many cases amounting to an exclusive power of legislation; nor did he object to the extent, but only desired that it should have been further guarded by certain distinctions and by requiring, in certain cases, the assent of the House of Representatives.

Among the objections to the Constitution addressed by Mr. Gerry to the Legislature of Massachusetts, we find one to have been "that treaties of the highest importance might be formed by the President, with the advice of two-thirds of a quorum of the Senate." This shows his idea of the magnitude of the power, and impliedly admitting with Mr. Mason the propriety of its extent, he seems only to have desired that the concurrence of the Senate should have embraced two-thirds of the whole body, instead of two-thirds of a quorum. But how small and how insignificant would the power of treaty be, according to the doctrine lately promulgated, with regard to its constitutional limit?

As to the sense of the community in the adoption of the Constitution, this can only be ascertained from two sources, the writings for and against it, and the debates in the several State conventions—while it was under consideration.

I possess not, at this moment, materials for an investigation, which would enable me to present the evidence they afford; but I refer to them, with confidence, for proof of the fact, that the organization of the power of treaty, in the Constitution, was attacked and defended with an admission on both sides, of its being of the character which I have assigned to it. Its great extent and importance—its effect to control, by its stipulations, the legislative authority, were mutually taken for granted, and upon this basis, it was insisted, by way of objection—that there were not adequate guards for the safe exercise of so vast a power; that there ought to have been reservations of certain rights, a better disposition of the power to impeach, and a participation, general or special, of the House of Representatives in the making of treaties.

The reply to these objections, acknowledging the delicacy and magnitude of the power, was directed to show that its organization was a proper one, and that it was sufficiently guarded.[1]

[1] The Federalist, No. XLII, has these passages: "The power to make treaties and to receive and send Ambassadors speak their own propriety—both of them are comprised in the Articles of Confederation, with the difference only that the former is disembarrassed by the plan of the convention, of an exception by which treaties might be substantially frustrated by regulations of the States." This plainly alludes to the proviso which has been cited and commented upon. "It is true that when treaties of commerce stipulate for the nominal appointment of consuls, the admission of foreign consuls may fall within the power of making commercial treaties." And in No. LXIV are these passages: "The power of making treaties is an important one, especially as it relates to war, peace, and commerce; and it should not be delegated but in such a mode and with such precautions as will afford the highest security, that it will be exercised by men the best qualified for the purpose, and in the manner most conducive to the public good." "There are few who will not admit, that the affairs of trade and navigation should be regulated by a system cautionsly formed and steadily pursued, and that both our treaties and our laws should correspond with, and be made to promote it." "Some are displeased with it (that is, the power of treaty), not on account of any errors or defects in it, but because, as the treaties, when made, are to have the force of laws, they should be made only by men invested with legislative authority;" "others, though content that treaties should be made in the mode proposed, are averse to their being the supreme law of the land."

It is generally understood that two persons were concerned in the writings of these papers, who, from having been members of the convention, had a good opportunity of knowing its views—and were under no temptation at that time, in this particular, to misrepresent them.

The manner of exercising a similar power under the confederation shall now be examined.

To judge of the similarity of the power, it will be useful to quote the terms in which it was granted. They are these: "The United States in Congress assembled, shall have the sole and exclusive right and power of entering into treaties and alliances, provided that no treaty of commerce shall be made, whereby the legislative power of the respective States shall be restrained from imposing such imposts and duties on foreigners as their own people are subject to, or from prohibiting the importation or exportation of any species of commodities whatsoever" (art. IX).

It will not be disputed that the words "treaties and alliances" are of equivalent import, and of no greater force than the single word "treaties." An alliance is only a species of treaty, a particular of a general—and the power of "entering into treaties," which terms confer the authority under which the former government acted, will not be pretended to be stronger than the power "to make treaties," which are the terms constituting the authority under which the present government acts; it follows that the power, respecting treaties, under the former, and that under the present government, are similar.

But though similar, that under the present government is more comprehensive; for it is divested of the restriction in the provision cited above, and is fortified by the express declaration, that its acts shall be valid notwithstanding the Constitution or laws of any State. This is evidence (as was the fact) of a disposition in the convention to disembarrass and reinforce the power of treaty. It ought not to pass unnoticed, that an important argument results from the proviso, which accompanies the power granted by the confederation as to the natural extent of this power. The declaration that no treaty of commerce shall be made restraining the legislative power of a State

In the address and reasons of dissent of the minority of the convention of Pennsylvania to their constituents, they state, that they had suggested the following proposition, among others, for an amendment to the Constitution, "That no treaty which shall be directly opposed to the existing laws of the United States in Congress assembled, shall be valid until such laws shall be repealed or made conformable to such treaty." This shows that it was understood that the power of treaty in the Constitution extended to abrogating even preexisting laws of the United States, which was thought exceptionable; while no objection was made to the idea of its controlling future exercises of the legislative power. The same address states, in another place, that the President and Senate "may form treaties with foreign nations, that may control and abrogate the Constitution and laws of the several States."

In the second volume of the Debates of the Convention of Virginia, which is the only part I possess, there are many passages that show the great extent of the power of treaty in the opinion of the speakers on both sides. As quotations would be tedious, I will content myself with referring to the papers where they will be found, viz, 91, 99, 131, 137, 143, 147, 150, 186. It will, in particular, appear that while the opposers of the Constitution denied the power of the House of Representatives to break in upon, or control, the power of treaties, the friends of the Constitution did not affirm the contrary, but merely contended, that the House of Representatives might check by its influence the President and Senate—on the subject of treaties.

from imposing such duties and imposts on foreigners as their own people are subject to, or from prohibiting the importation or exportation of any species of commodities whatsoever, is an admission (1) that the general power of entering into treaties, included that of making treaties of commerce; and (2) that without the limitation in the proviso, a treaty of commerce might have been made which would restrain the legislative authority of the State in the points interdicted by that proviso.

Let it not be said, that the proviso, by implication, granted the power to make treaties of commerce, under which Congress afterward acted; for besides that this is inconsistent with the more obvious meaning of the clause, the first article of the confederation leaves to the States individually every power not expressly delegated to the United States in Congress assembled. The power of Congress, therefore, to make a treaty of commerce, and every other treaty they did make—must be vindicated on the ground that the express grant of power to enter into treaties and alliances is a general, which necessarily included as particulars the various treaties they have made, and the various stipulations of these treaties.

Under this power, thus granted and defined, the alliance with France was contracted: guaranteeing, in the case of a defensive war, her West India possessions, and when the casus foederis occurs, obliging the United States to make war for the defense of those possessions, and consequently, to incur the expenses of war.

Under the same power, treaties of commerce were made with France, the Netherlands, Sweden, and Prussia. Besides that every treaty of commerce is necessarily a regulation of commerce between the parties, it has been shown in the antecedent comparison of those treaties,[2] with that lately negotiated, that they produce the specific effects of restraining the legislative power from imposing higher or other duties on the articles of those nations than on the like articles of other nations, and from extending prohibitions to them which shall not equally extend to other nations the most favored; and thus abridge the exercise of the legislative power to tax and the exercise of the legislative power to regulate trade.

These treaties likewise define and establish the same case of piracy, which is defined in the treaty with Great Britain. Moreover, the treaty with France, as has been elsewhere shown, with regard to the rights of property, naturalizes the whole French Nation.

The consular convention with France, negotiated likewise under the same power, grants to the consuls of that country various authorities and jurisdiction, some of a judicial nature, which are actual transfers to them of portions of the internal jurisdiction and ordinary judiciary power of the country; the exercise of which our Government is bound to aid with its whole strength. It also grants exemptions to French consuls from certain kinds of taxes, and to them, and French citizens, from all personal service, all which are extremely delicate interferences with our internal policy and ordinary jurisdiction.

Under the same power, the treaty with Morocco was formed, which, besides various other regulations relative to war, and several relative to trade, contains the rule that neither party shall make war without a previous demand of reparation, in restraint of the general discretionary power of Congress to declare war.

Under the same power, the treaty of peace with Great Britain was made. This treaty contains the establishment of a boundary line between the parties, which, in part, is arbitrary and could not have been predicated upon precise antecedent right. It also prohibits the future confiscation of the property of adherents to Great Britain: declares that no person shall, on account of the part he took in the war, suffer any future loss or damage in his person, liberty, or property, and provides for the release of such persons from confinement and the discontinuance of prosecutions against them.

It is difficult to conceive a higher act of control, both of the legislative and judiciary authority, than by this article. These provisions are analogous in principle, to those stipulations which, in the second and ninth articles of the treaty under examination, have given occasion to constitutional objection.

Under the same power, various treaties with Indians, inhabiting the territory of the United States, have been made, establishing arbitrary lines of boundary with them: which determine the right of soil on the one side and on the other. Some of these treaties proceed on the principle of the United States having conquered the Indian country, and profess to make gratuitous concessions to them of the lands which are left to their occupation. There is also a feature of importance common to these treaties, which is the withdrawing of the protection of the United States from those of their citizens, who intrude on Indian laws, leaving them to be punished at the pleasure of the Indians.

Hence it appears, that, except as to the stipulations for appointing commissioners, the treaties made under the confederation, contain all the features, identically or by analogy, which create constitutional objections to the treaty before us: they restrain, in certain instances, the legislative power to lay taxes; they make numerous and important regulations of trade; they confer the benefit of naturalization as to property; they define cases of piracy; they create causes of expenditure; they direct and modify the power of war; they erect, within the country, tribunals unknown to our constitutions and laws, in cases to which these are competent—whereas the treaty with Great Britain only provides for the appointment of arbitrators in cases to which our tribunals and laws are incompetent; and they make dispositions concerning the Territory and property of the United States.

It is true, that some of the treaties made under the former government, though subsequent to the proposing of the articles of confederation to the States, were prior to the final adoption of these articles; but still it is presumable that the treaties were negotiated with an eye to the powers of the pending national compact. Those with Great Britain, Sweden, Russia, and Morocco, and the convention with France, were posterior to the completion of that compact.

It may, perhaps, be argued that a more extensive construction of the power of treaty, in the confederation, than in our present Constitution, was countenanced by the union in the same body of legislative powers with the power of treaty. But this argument can have no force, when it is considered that the principal legislative powers with regard to the objects embraced by the treaties of Congress, were not vested in that body, but remained with the individual States. Such are the power of specific taxation, the power of regulating trade, the power of naturalization, etc.

If in theory the objects of legislative power are excepted out of the power of treaty, this must have been equally, at least, the case with the legislative powers of the State governments as with those of the United States. Indeed the argument was much stronger for the objection, where distinct governments were the depository of the legislative power, than where the same government was the depository of that power and of the power of treaty. Nothing but the intrinsic force of the power of treaty could have enabled it to penetrate the separate spheres of the State governments. The practice under the confederation for so many years, acquiesced in by all the States, is, therefore, a conclusive illustration of the power of treaty, and an irresistible refutation of the novel and preposterous doctrine, which impeaches the constitutionality of that lately negotiated. If the natural import of the terms used in the Constitution were less clear and decisive than they are, that practice is a commentary upon them, and fixes their sense. For the sense in which certain terms were practiced upon in a prior constitution of government, must be presumed to have been intended, in using the like terms in a subsequent constitution of government for the same nation.

Accordingly, the practice under the present government before the late treaty has corresponded with that sense.

Our treaties with several Indian nations regulate and change the boundaries between them and the United States. And in addition to compensations in gross, they stipulate the payment of certain specific and perpetual annuities. Thus a treaty in August 1790 with the Creeks (art. 5) promises them the yearly sum of $1,500. And similar features are found in subsequent treaties with the Six Nations, the Cherokees, and the North Western Indians. This last has just been ratified by the unanimous voice of the Senate. It stipulates an annuity of $9,500—and relinquishes to the Indians a large tract of land which they had, by preceding treaties, ceded to the United States.

Hence we find that our former treaties under the present Government, as well as one subsequent to that under consideration, contradict the doctrine set up against its constitutionality—in the important particulars of making dispositions concerning the territory and property of the United States, and binding them to raise and pay money. These treaties have not only been made by the President, and ratified by the Senate, without any impeachment of their constitutionality, but the House of Representatives has heretofore concurred, and without objection, in carrying them into effect, by the requisite appropriation of money.

The consular convention with France stands in a peculiar predicament. It was negotiated under the former government, and ratified under the present; and so may be regarded as a treaty of both governments, illustrative of the extent of the power of treaty in both. The delicate and even the extraordinary nature of the provisions it contains, have been adverted to. Though all reflecting men have thought ill of the propriety of some of them, as inconveniently breaking in upon our interior administration, legislative, executive and judiciary; only acquiescing in them from the difficulty of getting rid of stipulations entered into by our public agents under competent powers, yet no question has been heard about their constitutionality. And Congress have, by law, assisted their execution by making our judicial tribunals, and the public force of the country, auxiliary to the decree of the foreign tribunals which they authorize within our territory.

If it should be said, that our Constitution, by making all former treaties and engagements as obligatory upon the United States, under that Constitution, as they were under the confederation, rendered the ratification of the convention a matter of necessity—the answer is, that either the engagements, which it contracted, were already conclusive, or they were not—if the former, there was no need of a ratification; if the latter, there was no absolute obligation to it. And, in every supposition, a ratification by the Pres-

[2] Arts. 2, 3, and 4 of treaty with France; 2, 3, and 20 of treaty with Russia; 2 and 3 of treaty with Holland; 3 and 4 of treaty with Sweden.

ident, with the consent of the Senate, could have been predicated only upon the power given in the present Constitution in relation to treaties; and to have any validity, must have been within the limit of that power.

But it has been heretofore seen that the inference from this instrument is no less strong, if referred to the power under the confederation, than if referred to the power under the present Constitution.

How happens it, that all these invasions of the Constitution, if they were such, were never discovered, and that all the Departments of the Government, and all parties in the public councils should have cooperated in giving them a sanction? Does it not prove that all were convinced, that the power of treaty, applied in our exterior relations to objects, which, in the ordinary course of internal administration and in reference to ourselves, were of the cognizance of the legislative power, and particularly that the former was competent to bind the latter in the delicate points of raising and appropriating money? If competent to this, what legislative power can be more sacred, more out of its reach?

Let me now ask (and a very solemn question it is, especially for those who are bound by oath to support the Constitution), has it not been demonstrated that the provisions in the treaty are justified by the true and manifest interpretation of the Constitution—are sanctioned by the practice upon a similar power under the confederation, and by the practice in other instances under the present Government?

If this has been demonstrated, what shall we think of the candor and sincerity of the objections which have been erected on the basis of a contrary supposition? Do they not unequivocally prove, that the adversaries of the treaty have been resolved to discredit it by every artifice they could invent? That they have not had truth for their guide, and consequently are very unfit guides for the public opinion, very unsafe guardians of the public welfare?

It is really painful and disgusting to observe sophisms so miserable as those which question the constitutionality of the treaty, retailed to an enlightened people, and insisted upon with so much seeming fervency and earnestness. It is impossible not to bestow on sensible men, who act this part, the imputation of hypocrisy. The absurdity of the doctrine is too glaring to permit even charity itself to suppose it sincere. If it were possible to imagine that a majority in any branch of our government, could betray the Constitution, and trifle with the Nation, so far as to adopt and act upon such a doctrine—it would be time to despair of the Republic.

There would be no security at home, no respectability abroad. Our constitutional charter would become a dead letter. The organ of our Government for foreign affairs would be treated with derision whenever he should hereafter talk of negotiation or treaty. May the great Ruler of nations avert from our country so grievous a calamity.

CAMILLUS.

Outstanding Record of the House Post Office and Civil Service Committee

EXTENSION OF REMARKS
OF

HON. TOM MURRAY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. MURRAY of Tennessee. Mr. Speaker, the 1st session of the 84th Congress established an outstanding record with respect to postal and civil-service legislation. This is a record in which each Member of the House of Representatives may take just pride.

I feel that the members of our Post Office and Civil Service Committee, in particular, are deserving of the highest commendation for their contribution to this exceptional record. Both personally and as chairman of the committee I want to extend to each member my deep appreciation and sincere respect for a job well done. They have been most loyal and conscientious in their attendance at committee meetings. Their conduct at all times has been characterized by unselfish devotion to duty regardless of personal sacrifices. In my judgment, there is no other group so well informed on the many—and often controversial—problems of the postal service and the Federal civil service. It is a fair statement that much that was accomplished on these problems should be credited to their spirit of helpful cooperation and the information and evidence relating to legislation before the committee which has been developed through their individual and collective efforts.

POSTAL PAY AND POSITION CLASSIFICATION

An outstanding instance of the value of such concerted committee action is the enactment of the Postal Field Service Compensation Act of 1955—Public Law 68, 84th Congress. This was truly a committee bill, representing the product of the combined efforts of the entire membership of the committee. The act provides for an average of 8.1-percent increase in the salary of postal employees and corrects serious inequities in their salary schedules. At the same time, it establishes a new salary structure which reflects a more realistic relationship between the various positions in the postal service—particularly with reference to their duties and responsibilities—and the salaries of such positions. The basic provisions were contained in a bill reported by the House Post Office and Civil Service Committee.

Postal salaries and the classification of 500,000 postal positions are a tremendously complex and difficult subject. Full and complete hearings on the matter were held by our committee over a period of several weeks. The Postmaster General and his staff presented the proposal of the administration and advised the committee on technical and operating problems. The views and recommendations of all major employee organizations were received and given extensive consideration. A number of executive sessions were held in order to work out a solution of differences.

On the basis of the information developed in this very comprehensive deliberation our committee reached agreement on the principles and specific provisions of legislation to establish a complete new system of postal pay and position classification giving appropriate recognition, salarywise, to substantial differences in the levels of the duties and responsibilities of positions in the postal service.

This new postal salary law represents a great milestone in the development of a comprehensive and modern personnel program for the postal service. Our postal establishment is essentially a service organization, with more than half a million employees, and over 70 percent of its expenditures are for personal services. It is impossible, therefore, to overemphasize the importance of a sound and effective personnel program, from the standpoint of both management and employee benefits.

The new law, in addition to salary increases averaging 8.1 percent with a minimum of 6 percent for all employees, contains many other employee benefits as well as provisions which will contribute materially to efficiency and economy in postal operations.

Any postal employee will have the right to appeal to the Civil Service Commission in order to determine if his position has been placed in the proper salary level. The Post Office Department must comply with the decision of the Commission.

Each postal employee is protected against any loss of salary, and everyone will receive at least the minimum of 6 percent salary increase.

Progress of clerks and carriers—who constitute the major working force—through the automatic step-increases will be accelerated under the new law. Each step-increase will be larger than before and the employee will reach the top of his salary level in 7 years, instead of 9 years as had been the case.

Substitute employees, who previously were ineligible for longevity step-increases, will be entitled to the same automatic step-increases as regular employees.

Postmasters and supervisors, who heretofore had single salary rates, also will receive automatic step-increases as do other employees, thus for the first time being given a real incentive for superior performance in the form of salary recognition.

Any employee who is promoted will receive a salary increase which, at the minimum, equals the difference between the first step-rates of his old and new salary levels.

There will be far greater opportunity for promotion. The new salary schedule, which establishes 20 separate salary levels, permits placement of many employees in positions at levels above those they previously occupied. A large number of positions in the postal service warrant higher salaries than could be paid under the old law, and such higher salaries may be paid under this new law. The inclusion of positions in the regional and district offices in the same salary schedule also will open up greater promotional opportunities for qualified personnel.

Appointments at higher than the initial step-rate for any position in the postal field service will be permitted only in the cases of, first, persons who have been civilian employees in other branches of the Government; and, second, positions in the district or regional offices or which are professional or scientific in nature.

Postal employees will be changed from the semimonthly to the biweekly system of salary payments, providing 26 pay-

ments per year and thereby granting an extra day's pay each year. This will permit standardization of the payday on the same day of each alternate week throughout the year.

The present system of payments for Sunday and holiday work is continued, at the request of the clerk and carrier employee organizations.

One classified substitute will be permitted for every 5 regular employees—a continuation of the principle established under the old law which provided a 1-for-6 ratio.

The authorized travel allowance for postal transportation employees assigned to road duty is increased from $6 to $9 per day. This authorization is in conformity with the recent increase in authorized travel allowances for other Federal personnel.

The Postmaster General must submit a comprehensive report on operations under this legislation by January 15, 1956. Such report must include information, in summary and in detail, with respect to activities under the act and such other data as will enable the Committees on Post Office and Civil Service more effectively to perform their legislative review function under section 136 of the Legislative Reorganization Act of 1946.

The urgent need for this legislation has long been recognized. The attention of Congress has been directed to this need through its committees as well as the reports of special commissions. The postal salary system—or rather lack of system—in effect before enactment of this legislation completely ignored the principle of equal pay for substantially equal work. It made no provision for recognizing variations in the difficulty, responsibility, and qualification requirements of any postal position. Employees were paid solely on the basis of job titles and pay rates established by law for such titles.

To eliminate waste and achieve a greater measure of efficiency and economy in the postal establishment, it is essential that adequate recognition be accorded the responsibility of supervisory personnel. It is only with such recognition that the number of employees needed to perform the many tasks of the postal service may be reduced and kept at a minimum. The outmoded salary procedure previously in effect was a millstone around the neck of management, a major obstruction to all efforts toward improving postal service as well as the lot of postal employees.

FEDERAL EMPLOYEES SALARY INCREASE ACT OF 1955

Immediately after reporting the Postal Field Service Compensation Act of 1955, our committee took up the matter of increases for other classified Federal employees. Complete hearings also were held on legislation to adjust the salaries of these employees, at which representatives of the Civil Service Commission presented the views of the administration and representatives of employee organizations submitted their recommendations. On the basis of these hearings and information developed by the committee on its own initiative, the committee reported legislation to provide a 7½-percent salary increase for over one million classified Federal employees—see Public Law 94, 84th Congress.

One of the major factors in recommending this salary increase was the increase in cost-of-living. The last salary increase was granted effective July 1, 1951, when the cost-of-living index of the Bureau of Labor Statistics was 110.9. In January 1955, the index stood at 114.3, an increase of 3.4 points or 3.07 percent. Our committee reported a bill granting a 7.5 percent increase to every employee covered.

As in the case of the postal salary increase legislation, this increase for Federal classified employees likewise was truly a committee bill. The increase is substantially greater than the increased cost of living since the last pay raise, but in the view of the committee it is appropriate in order to provide these employees with increased real wages which will permit them to enjoy a general rise in their standard of living along with the millions of workers outside of Government.

BONDING OF FEDERAL EMPLOYEES

Long-sought legislation to authorize the Government to procure bonds for Federal employees—Public Law 323, 83d Congress—was reported by our committee. This legislation permits the procurement by the Government of blanket, position schedule, or other types of bonds—suitable for the numbers and types of employees involved—for Federal employees who are required by law or regulation to be bonded. These employees have had to pay for their own bonds, and will be relieved of this expense. The new procedure also will result in savings in administrative costs to the Government which will more than equalize the cost of procuring the bonds. This policy is in conformity with the best practice in private business and industry.

CAREER APPOINTMENTS FOR CERTAIN FEDERAL EMPLOYEES

The committee also approved legislation—Public Law 380, 84th Congress—to authorize the granting of career-type appointments for thousands of indefinite and temporary employees who are not eligible for such appointments under Executive Order 10577. Early in the year I wrote the Civil Service Commission, pointing out the necessity of providing for career-type appointments for these employees, but the Commission declined to adopt my recommendation. An employee not covered by the Executive order may obtain such an appointment if he occupied a position in the competitive civil service on January 23, 1955, served in the position from that date to the effective date of the legislation, has passed a qualifying competitive examination or within 1 year passes a noncompetitive qualifying examination, and has completed 3 years of satisfactory service in the competitive civil service.

INCREASES IN CIVIL SERVICE RETIREMENT ANNUITIES

The committee also worked out and reported legislation to increase annuities of retired Federal employees by 12 percent on the first $1,500 and 8 percent on all in excess of $1,500, except that no regular annuity will be increased to an amount in excess of $4,104—Public Law 369, 84th Congress. This will relieve a great deal of the hardship which many of our retired Federal employees have suffered because of the rise in cost-of-living.

GROUP LIFE INSURANCE

The Federal Employees Group Life Insurance Act of 1954 resulted in a inequity with respect to the interests which many employees and former employees hold in nonprofit beneficial associations that had been organized by groups of employees over the years. About 135,000 Federal employees were faced with loss of life insurance protection which they held as members of such beneficial associations. The committee action will make possible the continuance of such protection for these employees. Arrangements for the necessary amendment to the law was worked out with the Civil Service Commission—Public Law 356, 84th Congress.

TEMPORARY EMPLOYMENT IN THE POSTAL SERVICE OF CERTAIN EMPLOYEES

Public Law 286, 84th Congress, authorizes the employment on suitable work in the postal service of certain custodial employees—many of whom have previous postal experience—notwithstanding the laws which in general prohibit dual employment of Government personnel.

ALLOWANCES FOR UNIFORMS

Legislation to remove an inequity in the Federal Employees Uniform Allowance Act was approved by the committee—Public Law 37, 84th Congress. This legislation will permit that act to apply to employees who in the future may be required to wear uniforms, and also will require annual reports to Congress on the administration of that act.

SUBSISTENCE AND QUARTERS FOR CERTAIN CORPS OF ENGINEERS EMPLOYEES

The committee reported legislation—Public Law 35, 84th Congress—to provide for the furnishing of subsistence and quarters to approximately 2,500 employees of the Corps of Engineers whose rates of pay are established under the prevailing wage system. Although their pay rates are comparable to those for similar jobs in private industry, they have not been furnished quarters and subsistence as is generally the case in private industry. This legislation will place them on a par with employees in private industry in such respect.

PROHIBITION AGAINST GOVERNMENT EMPLOYMENT OF DISLOYAL PERSONS

The 84th Congress wrote into a single permanent law—Public Law 330, 84th Congress—the many provisions which have been carried in appropriation acts and other laws to deny Federal employment to disloyal persons and those who strike, or assert the right to strike, against the Government. Such employment will be a penal offense.

EQUALIZATION OF CERTAIN POSTAL SALARIES

In separate legislation—Public Law 90, 84th Congress—the committee removed an inequity in the postal salary laws whereunder a number of dispatchers in the motor vehicle service and other su-

pervisors were limited to salaries lower than similar workers with lesser periods of service. Some of these employees might have been required, without this legislation, to repay certain salary payments they had received.

MAILING OF KEYS AND IDENTIFICATION DEVICES

Existing law authorizing the return by mail of hotel and steamship keys was clarified and brought up-to-date by the committee—Public Law 238, 84th Congress. This will authorize transmission through the mails of keys, identification devices, and other small articles designated by the Postmaster General, at a postage rate of 5 cents for each 2 ounces or fraction thereof. The bill was strongly recommended by the Disabled American Veterans and other organizations which had developed convenient means for the identifying and returning of such articles.

MAILING OF PUBLICATIONS OF CHURCHES AND CHURCH ORGANIZATIONS

Under a simplified procedure approved by the committee—Public Law 170, 84th Congress—churches and church organizations no longer will be required to maintain subscription lists separate from their memberships in order to obtain second-class postage rates for mailing their publications. Publications of institutions of learning, trade unions, lodges, beneficial socieities, and similar organizations have had this privilege for some time.

OTHER COMMITTEE LEGISLATION WHICH BECAME LAW

Other legislation reported by the committee includes Public Law 65, 84th Congress, barring claims for unpaid money orders unless presented within 20 years, and Public Law 108, 84th Congress, authorizing transmission in the mails, under appropriate regulations, of live scorpions for purposes of medical research or the manufacture of antivenin.

BILLS PASSED BY THE HOUSE BUT NOT BY THE OTHER BODY

Several bills of special note reported by the committee were passed by the House but not acted on by the other body.

FREE MAIL FOR TROOPS IN KOREA

One of my greatest disappointments of the first session of the 84th Congress is the failure to obtain final action on legislation to continue the free mailing privilege for troops in Korea which expired June 30 of this year.

Free mail for these troops first was authorized in 1950, to expire in 1953. The expiration date later was extended to June 1955, unless terminated earlier by the President. When this final termination date approached without any word from the Department of Defense, I requested the views of that Department and the Post Office Department on an extension under the same conditions. Upon their failure to submit a timely recommendation, an arrangement was worked out with them to allow the troops to send mail free until such time as Congress could have an opportunity to act, and I introduced legislation—H. R. 7125—to fix a new expiration date of June 30, 1956, unless terminated earlier by the President.

This legislation, H. R. 7125, was unanimously approved by the House Post Office and Civil Service Committee and the House of Representatives, but has not yet passed the other body. I earnestly hope that prompt action will be taken in the next session on this urgently needed measure, which will provide our troops in Korea some small measure of convenience and necessity by granting them the right to send mail free to their families and loved ones at home.

The discontinuance of free mail for troops in Korea in my judgment has resulted in a severe blow to the morale and well being of these troops as well as their families and friends on the home front.

SAVING OF SALARIES OF EMPLOYEES WHOSE POSITIONS ARE DOWNGRADED

H. R. 3255 would prevent loss of salary for classified Federal employees whose positions are reclassified to lower salary grades. This measure applies the recognized principle of a savings provision for salaries of employees who have satisfactorily performed their duties for 2 or more years when their positions are downgraded. It applies to any downgrading on or after July 1, 1954, and will benefit an estimated 5,000 Federal employees who have suffered losses of salary through downgradings through no fault of their own. It will also be prospective in effect. The mere threat of this legislation forced the Civil Service Commission to revise its regulations so as to provide partial relief for these employees. The regulations, however, are deemed inadequate and the committee bill is designed to provide the necessary protection for these employees.

EXECUTIVE PAY

A bill entitled "The Federal Executive Pay Act of 1955"—H. R. 7619—providing needed adjustments in the salaries of top officials in the executive branch of the Government and certain others, was approved by the House Post Office and Civil Service Committee and passed by the House of Representatives, but was not acted on by the other body. The salary rates and the relationships between the various positions in this bill were very carefully worked out on the basis of administrative advice and recommendations and an extensive study in which our ranking minority member cooperated with me. The legislation was requested by the President, who outlined the general principles which he believed should be followed in the adjustment of executive salaries. Only Cabinet officers—$25,000 per annum—would receive salaries higher than those paid Members of Congress, while but 10 other officials would receive as much as a Member of Congress.

"PRAY FOR PEACE" STAMP

The committee and the House of Representatives unanimously approved H. R. 692, to authorize the use of first- and second-class post offices of a special canceling stamp or postmarking die bearing the words "Pray for peace," but the other body did not act on this bill.

Additional bills passed by the House and pending before the other body follow:

ACCOUNTING FOR PENALTY MAIL

H. R. 5856 will eliminate unnecessary paperwork by Government departments and agencies in their accounting for penalty mail materials. Approval of this legislation will result in savings of a large part of the present $3.8 million cost of such accounting. Needed fiscal information is available through other, less expensive means.

RENEWAL OF DEEPWATER MAIL CONTRACTS

H. R. 4569 will authorize renewal of contracts for carrying the mail on deepwater routes without advertising for bids, when it is in the interest of the postal service to do so. Such authority presently applies to contracts for inland-water routes, star routes, screen-vehicle routes, and mail messenger service.

LEGISLATION NOT APPROVED BY THE PRESIDENT—RETIREMENT CREDIT FOR CERTAIN STATE SERVICE

S. 1041, providing for allowance of civil service retirement credit for certain service on Federal-State projects financed by Federal funds rendered by persons who are retired on or after June 30, 1954, who make application for such credit, and who make appropriate contribution to the retirement fund, was disapproved by the President's memorandum of disapproval dated August 12, 1955.

EMPLOYEE BENEFIT LEGISLATION REPORTED BY OTHER HOUSE COMMITTEES

In this discussion of legislation for the benefit of Federal employees I want to mention in passing two important measures which were approved by committees other than the House Post Office and Civil Service Committee.

For some time past there has been general recognition of the need for revision of the dual-compensation statute which generally prohibits the receipt by retired commissioned officers of salary for a civilian position if such salary, together with retired pay, exceeds $3,000. Public Law 239, 84th Congress, reported by the Committee on Veterans' Affairs, increases this limitation to $10,000, thus permitting the utilization in civilian positions of the special qualifications of many of these retired commissioned officers.

The House Committee on Government Operations approved legislation—Public Law 189, 84th Congress—further amending the Travel Expense Act of 1950, increasing from $9 to $12 a day the maximum authorized allowances for Federal employees traveling on official business. This conforms to the provision in the postal pay legislation which increases by $3 the maximum authorized allowance for postal transportation employees assigned to road duty. These increases were necessary to compensate employees in travel status for increased costs of living.

COMMITTEE STUDIES AND INVESTIGATIONS

House Resolution 304, 84th Congress, approved July 13, 1955, authorizes the House Post Office and Civil Service Committee to conduct studies and investigations of certain specific matters relating to the postal establishment, the Civil Service Commission, and personnel programs, and civilian manpower utilization in the Government.

Pursuant to the resolutions, three standing subcommittees were appointed.

The Subcommittee on Post Office and Postal Operations is composed of JOHN DOWDY, Texas, chairman; EDWARD J. ROBESON, JR., Virginia; DANTE B. FASCELL,

Florida; JOE M. KILGORE, Texas; KATHARINE ST. GEORGE, New York; CHARLES S. GUBSER, California; ELFORD A. CEDERBERG, Michigan. Ex officio: TOM MURRAY, Tennessee; EDWARD H. REES, Kansas. This subcommittee has broad jurisdiction to conduct studies and investigations of postal operations.

The Manpower Utilization and Departmental Personnel Management Subcommittee is composed of JAMES C. DAVIS, Georgia, chairman; JOHN LESINSKI, JR., Michigan; HUGH Q. ALEXANDER, North Carolina; GRACIE PFOST, Idaho; CHET HOLIFIELD, California; ROBERT J. CORBETT, Pennsylvania; H. R. GROSS, Iowa; JOHN E. HENDERSON, Ohio; AUGUST E. JOHNANSEN, Michigan. Ex officio: TOM MURRAY, Tennessee; EDWARD H. REES, Kansas. This subcommittee is responsible for study and investigation of a number of specific matters relating to the more effective utilization of civilian manpower in the Federal Government.

The Subcommittee on the Civil Service and Personnel Programs is composed of JAMES H. MORRISON, Louisiana, chairman; GEORGE M. RHODES, Pennsylvania; JOHN E. MOSS, California; T. JAMES TUMULTY, New Jersey; CECIL M. HARDEN, Indiana; ALBERT W. CRETELLA, Connecticut; JOEL T. BROYHILL, Virginia. Ex officio: TOM MURRAY, Tennessee; EDWARD H. REES, Kansas. This subcommittee is responsible for study and investigation of the operations of the Civil Service Commission and of Federal civilian personnel programs.

These studies and investigations in part are extensions of similar ones completed in the last Congress, but largely will relate to matters which were not considered in such earlier studies and which, according to information and evidence developed by the committee in the present Congress, warrant the committee's attention.

The objectives of these studies and investigations are the achievement of greater efficiency and economy in postal operations and in the utilization of manpower by the Government, and the strengthening of civil service and personnel practices in order to increase their value as management tools and factors in better employee relations.

The legislative record of our committee speaks for itself. I regard it as a great privilege to serve as chairman of this fine committee and deeply appreciate the cooperation which each member of the committee has given.

Theater as Communication

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, a recent issue of the Saturday Review had an article entitled "Theater as Communication" which pointed out the effective contribution our cultural activities make to international understanding. I ask permission to insert this article in the Appendix of the RECORD in order to call attention to the important projects which have been taken during this past year.

There being no objection the article was ordered to be printed in the RECORD, as follows:

THEATER AS COMMUNICATION
(By Henry Hewes)

Exporting theater is one of the most effective ways the people of any nation have of communicating with the people of other countries. Who could be more winning tourists than the stars, director, and hands of a first-rate show? But "communicating" should not be thought of as propagandizing or a gimmick of prestige. What communicating means is the finding of mutual points of similarity beneath the surface of life in various lands, and under various systems of government, so that the people of the country in which the audience is located can come to recognize that foreigners are not strange monsters, but human beings with the same basic drives and feelings that they have.

For instance, on a visit to Soviet-controlled East Berlin last November I was touched and encouraged to find what had appeared to me cold citizens hostile to Western ideas of compassion and the tenderer emotions audibly sighing in sympathy with a sentimental piece of theater. The occasion was the ending of Bertholt Brecht's The Caucasian Circle of Chalk, when a little boy runs across the stage to the arms of his adopted mother during a test to decide to which of two parents he is to be awarded. The scene was evoking something fundamental to all human beings, independent of any propaganda message printed in the program.

Although this sort of communication should be the purpose of an international exchange of theater, there's more to a show than purity of heart. Someone's got to put up the dough. Governments who spend public funds to make possible the sending abroad of plays must sell the project to the people's representatives as more valuable than armament, dams, soil conservation, and other expenditures. This makes it strongly tempting for the theater to advertise itself as a cold-war weapon. And the fact that the Russian Government has spent nearly $2 billion on international theater exchange since the end of World War II strengthens the argument that a burst of Gorki must be countered by a volley of Thornton Wilder.

After obtaining funds from a reluctant Congress or from a less reluctant but extremely cautious State Department, the next step is to arive at a decision of what to send. And here again, since there is no recognized permanent theater company, and no guaranty of a continuation of the exchange program, the criterion is, "What will make this best impression?" What's worse is that this last question really means, "What will get a favorable reaction from the press of a big foreign city?" Complicating matters is the fact that a great many of our best plays are those highly critical of the American way of life, or those delving into abnormal behavior. These are put aside as bad ambassadors to people who know us—it is feared—only through this one play. Other countries escape this dilemma by sending classic drama, which is not representational of contemporary life. But young America has virtually no classic plays of our own to export, and no readily identifiable manner with the English classics which distinguishes our acting from that of England.

This year's advisory panel on the drama set up by the American National Theater and Academy found itself with a thoroughly proved asset in Porgy and Bess, and with a subsidy from a special President's fund this attraction was sent to many spots in Europe, the Middle East, and South America, where it could otherwise not have afforded to go. As for new productions, the panel was pretty well stymied. The State Department contract with ANTA provided only for travel expenses and losses incurred because of unfavorable rates of exchange, and not for the underwriting of the cost of production itself. For this and other reasons Salute to France came to be organized as a gesture of private philanthropy. The ANTA drama panel, with the advice of the State Department, assisted in making the choices, which in the end turned out to be the least controversial selections possible. Judith Anderson in Medea presented an Australian-born actress in a Greek play made American through the rewriting of our distinguished poet, Robinson Jeffers. The Skin of Our Teeth, a positive-thinking play by the broadly cultured Thornton Wilder, seemed an even better companion-choice when producer Robert Whitehead was able to persuade Helen Hayes and Mary Martin, two of our most extroverted performers, to play the leading roles. And to round out the program, Rodgers and Hammerstein's Oklahoma, which combines folk drama and American musical-comedy techniques, appeared the most likely of all to please a Paris audience to which musical comedy is an almost unknown experience.

The press cutings from Paris have indicated a mixed reaction to the program. With the possible exception of Miss Hayes' performance, none of it bowled over the French critics as did Porgy and Bess or even as did a Paris production of Arthur Miller's The Crucible earlier this season. On the other hand, we did break the cultural ice. If the French have not come to think of us as theatrical supermen, they have at least come to know us as spirited theatrical workers.

But Salute to France is not a good test case. The Paris Festival of which it is a part is more-or-less a tourist attraction held at a time of year when a large number of theatergoing Parisians are away for the summer. The real problem is to break down the barriers of misunderstanding between the people of entire foreign populaces and ourselves. This means allocating funds to make possible tours into the smaller and less glamorous cities and to more distant and more primitive lands.

The prospect of getting our established stars to undertake extended trips of this nature—even if we do succeed in convincing Congress of their desirability—is dim. A week in Paris is one thing. Three months in Southeast Asia at a nominal salary is far less attractive, and not a very sensible step for stars whose services are in demand and whose expenses at home are high.

Fortunately, there is an answer which has proved effective in many countries. A subsidized theater company composed mainly of young and unestablished players—though often led by two or three stars who prefer working in repertory—could take the American combination of vitality and sincerity to these areas. There are in New York today several off-Broadway groups who are proving how effective young semipermanent companies can be. Of these, one in particular has arrived at a very definite style of its own which makes any work it does an artistic achievement that could be exported with pride and confidence. This is Circle-in-the-Square, which—operating in the round under José Quintero's direction—usually interests visiting artists and critics more than almost anything on Broadway.

Its recent, The King and the Duke, though it received a negative reception from the Broadway critics, is the kind of thing that for better or worse is most representative of

America, and because it grows out of the writings of Mark Twain is about the nearest thing we have to a classic. Such a production would be ideal for the smaller cities of Europe and the Asiatic countries. It is real, it is honest, and it is more likely to cause unsophisticated people to find bonds of experience with us than more pretentious and ambitious forms of drama.

Another possibility—and this is as yet undeveloped—is that Actors Studio with its newly acquired facilities and its immense pool of young talent may mount productions that will utilize our actors' and directors' gifts to a greater extent and with a greater unity than has heretofore been achieved. If it does it may be the cementing of a definite American school of acting.

The ideal solution, of course, would be the setting up of a permanent resident company in New York City which would compare favorably with the national companies to be found in the theater capitals of every European country. The New York chapter of ANTA has made this project its primary goal and has made considerable progress in affiliating it with the Columbia University Arts Center. If a permanent resident company can get the support it deserves from both private and Government subsidy, it could provide a continuing source of characteristic American theater at its highest level. It could act as a flagship to all of American theater, could tour our own country, and could be sent abroad not as propaganda but as a true expression of our way of life.

Necessity To Meet the Nation's Health Needs

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. WOLVERTON. Mr. Speaker, a recent study conducted by the Ford Foundation, based on numerous individual personal interviews, indicates that Americans of all income groups are greatly concerned over health problems and how to meet the cost of illness. This concern also finds expression in the steadily climbing sales curve for health insurance policies and the increasing number of labor agreements which include health insurance at fringe benefits. Obviously, this great demand on the part of the American people for protection against the cost of illness must be recognized by State legislatures and the Congress.

During the 83d Congress, the Committee on Interstate and Foreign Commerce, under my chairmanship, conducted extensive hearings into health problems and voluntary health insurance. Throughout these hearings emphasis was placed on the present outlook for the treatment and cure of major diseases and how individuals may protect themselves against major medical expenses through voluntary rather than compulsory insurance arrangements. The hearings also highlighted the great need which exists for increased health facilities—including research into and treatment of diseases—and health personnel including physicians, research staffs, and nursing personnel.

There is no simple answer to our health problems. Rather, the answer must be sought in a multitude of measures. Individual health insurance is exceedingly costly and offers comparatively little protection. New ways must, therefore, be found of expanding group coverage. There is some hope that title I of the omnibus health bill now pending before the House Committee on Interstate and Foreign Commerce—the reinsurance title—may speed up experimentation with new group coverage in the health-insurance field and particularly with regard to major medical expenses. It is gratifying to learn that the Prudential Insurance Co. of New Jersey has shown commendable interest in this field by recently announcing a plan applicable to those of advanced years. This is a field in which there is great need for a workable plan.

Increasing amounts of private capital must be channeled into the construction of health facilities. I am greatly pleased that the administration has adopted in its proposed omnibus bill the principle of mortgage loan insurance for health facilities which was developed in the course of the hearings during the 83d Congress conducted by the Committee on Interstate and Foreign Commerce. This approach is not dissimilar to the plan that has proved an outstanding success in stimulating residential housing construction. There is every reason to believe that this approach might also be useful in providing additional privately financed health facilities.

In several communities, we have seen competition between health plans sponsored by State or local medical societies on the one hand, and lay-sponsored health plans on the other hand. Competition among these plans has resulted in more extensive coverage, thus greatly benefiting the members of these plans.

Industrial and labor health plans have been inaugurated under numerous collective-bargaining agreements. While many workmen are thus benefited with increased protection against the cost of illness, sight must not be lost of the fact that similar protection must be secured for individuals not employed in these industries.

Legislation now pending in the Congress would provide some Federal assistance for the construction of medical schools and non-Federal research facilities. Availability of these facilities would make possible the graduating of additional physicians and would provide space for additional research workers.

Finally, Congress has adopted legislation to assist in the financing of a study of present methods of treating mental illnesses. This study amounts to a critical self-examination conducted jointly by those who are primarily concerned with the treatment of mental diseases. The undertaking of this study holds out some hope for the future that we might be able substantially to improve treatment methods now employed. It also may result, I trust, in the improved utilization of available health personnel in the field of mental health.

In conclusion, the health needs of the Nation are so varied and complex with regard to different geographical areas and different diseases that no single answer will be able to meet all legitimate needs. In the case of many diseases, as for example in the case of venereal diseases and tuberculosis, the discovery of new remedies has radically changed our needs with regard to treatment of these diseases. I am hopeful that new discoveries will similarly ease the burden that other diseases have placed on individuals, communities, and governments—local, State, and Federal—but I also hope that the Federal Government will become increasingly active in sponsoring and supporting voluntary methods by which increased protection can be given to individuals against the cost of illness.

Closure of Gavins Point Dam

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. CASE of South Dakota. Mr. President, on July 31, 1955, the States of South Dakota and Nebraska celebrated the closure of Gavins Point Dam on the Missouri River by appropriate ceremonies.

The Honorable Wilber M. Brucker, Secretary of the Army, as one of his first official acts, participated in the ceremonies.

His remarks on this occasion clearly show that he appreciates and realizes the full impact of the many benefits that will come to the area and the Nation by the Missouri River development program. It was a most excellent address and I ask unanimous consent to have the speech in its entirety inserted in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS BY THE HONORABLE WILBER M. BRUCKER, SECRETARY OF THE ARMY, AT CLOSURE OF GAVINS POINT DAM, YANKTON, S. DAK., JULY 31, 1955

The closure of the Gavins Point Dam on the Missouri River has impressive national significance. Today the page is being turned to the beginning of another inspiring chapter in the history of the Missouri Basin—a region embracing all or part of 10 great States and comprising one-sixth of the land area of the United States. This new chapter will tell the story of tremendous advances in the agricultural, industrial, and commercial development of this entire region. It will record a steadily rising level of economic security and well-being for millions of Americans.

As Secretary of the Army, as one of my first official duties, I am particularly proud to be present, because of the leading role the Army—our Corps of Engineers—has played in carrying out the vast Missouri Basin development program, bringing to fruition the hopes and great expectations of generations of the people of this area.

I do not come here today as a neophyte in the field of water-resource development. No son of Michigan, surrounded by the Great Lakes, and which to a large extent owes its founding and growth to water, could fail to appreciate the vital part that water plays in the life of our Nation. Moreover, as Gov-

ernor of that State, and in other official and unofficial capacities, I have grappled with the myriad problems connected with harbors and inland navigation, lake levels, beach erosion, water diversion, drought relief, and other matters related to water, or the lack of it. I come with full understanding of your problems, of the difficulties you have experienced, and of the great good which you and your children's children will derive from the Missouri Basin program.

Gavins Point Dam is of extraordinary importance as a key installation of the entire program, the key to many of the major benefits flowing from that program. It is a symbol of all that has been accomplished in the last 20 years in harnessing "Old Muddy" and its tributaries from the furthest rivulet in northwestern Montana to the mighty volume of water discharged into the Mississippi at St. Louis.

When we recall that within a little over a century there have been 16 disastrous floods below this point, with a toll of tragedy reckoned in many lives, and property damage adding up to hundreds of millions of dollars—and at least a hundred lesser but still costly inundations—we are able to appreciate the true value of a control system which, although incomplete, already has largely robbed the great river of its power to destroy.

When we recall further the suffering and despair and huge economic loss caused by searing drought in this plains region during the last several decades, the significance of the fact that this vast system now makes the once waste waters of the Missouri readily available to irrigate the dry and thirsty land becomes strikingly apparent.

Nor are these the only great benefits conferred upon this area by the Missouri Basin development program. A third is hydroelectric power—power to lighten the farmer's labor and to extend his capabilities; power to vitalize new and highly productive industries and create new wealth; power which will add immeasurably to the prosperity of the entire basin.

A fourth benefit is the advantage to your commerce which will accrue from the stabilization of the Missouri throughout a distance of 760 miles from the authorized head of navigation—which, in time, may be extended upriver as economic factors warrant—to its juncture with the Mississippi. Before long the products of the Missouri Valley will be able to move in ever-mounting volume to the markets of the midcontinent along this waterway. Your industries will have freer access to the great trunk system of waterways reaching south to the oil and cotton fields of the gulf and along the coast of Florida and Mexico; up the Ohio to the present industrial heart of the Nation; north to the Twin Cities, and eventually to the Great Lakes and, by the St. Lawrence, to all the oceans of the world. It is a magnificent prospect.

I would hesitate to conclude even this abbreviated catalog of the benefits of the Missouri Basin development program without at least mentioning the recreational advantages provided by the creation of a chain of lakes along 1,200 river-miles through the rolling prairies. The satisfactions looked forward to by the residents of Yankton and its environs from the use of Lewis and Clark Lake, which will shortly fill behind this Gavins Point Dam, will be matched, and multiplied, a hundredfold, along the course of the Missouri northward to Fort Peck.

So far I have sketched the benefits of the development program largely in terms of advantage to the Missouri Basin itself. If I went no further, I would be guilty of drawing a very incomplete picture, because the benefits of this development accruing to the Nation at large are of incalculable value.

This big country of ours has become such a closely knit industrial, agricultural, and social entity that disaster in one area is keenly felt throughout the land. The tragic consequences of recurrent flood and drought here in the Missouri Valley have had adverse effects on the welfare of the entire United States.

Conversely, the increased productivity and prosperity of any section of the country is reflected from coast to coast and from border to border. When, for example, a waterway cuts the cost of marketing Nebraska grain, or brings fertilizer more cheaply to the fields of South Dakota, it helps to cut the cost of the food on every American table. When the stabilization of this great river, and the harnessing of its power attracts new industries to its banks, the entire Nation is the richer. The people who live in one section of our land are today full partners, both in adversity and in prosperity, with those who live in every other section.

Taking the long-range viewpoint, our national security—our continued existence as a free nation—depends upon a dynamic and expanding economy. Not only must we meet continuing defense requirements of a magnitude unprecedented in our peacetime experience—including heavy commitments to our friends and allies abroad—but we must also be prepared to bear the enormous burden of a full-scale war if it should be thrust upon us. All of this is superimposed on the necessity of supporting a constantly increasing population. Today there are more than 165 million people living in the United States; in 20 years, it is predicted, there will be 220 million, and we certainly want to make sure that these 220 million have no less high a standard of living than we enjoy today.

The backbone of our economy is our natural resources, which we have been exploiting with a prodigal hand for nearly two centuries. None of these is more important than water. Disregarding the huge amounts of water needed by individuals in their daily living—which is proving a serious and growing problem in our metropolitan areas as well—we need, as our economy expands, more and more water for industrial power, more and more water to turn dry but fertile land into productive farms, water to float our inland commerce, tremendous supplies of water to satisfy the seemingly insatiable appetite of modern technological processes.

Of course rain and snow, which are the sources of our water supply, continue to fall on our land, but our needs have grown so great and so specialized that we can no longer afford to take water for granted. We can no longer treat it as an inexhaustible resource and allow it to run a wayward and wasteful course to the sea. Where water is concerned, America is learning to face realities. Our necessities demand that it be controlled, that its power be turned from destruction to production, and that it be distributed, not in accordance with the whims of nature, but the requirements of man. If we fail to accomplish these ends, we invite the gravest difficulties, and perhaps disaster.

President Eisenhower pointed up the seriousness of the situation when he declared that: "If we are to continue to advance agriculturally and industrially, we must make the best use of every drop of water which falls on our soil or which can be extracted from the ocean."

In that statement he spelled out the basic philosophy behind his vigorous support of water resource development programs, such as this Missouri Basin program, which are being pushed forward as fast as the Nation's budgetary situation and economic health permit.

Although both as a public official and a private citizen I have long been aware of the increasing need for water conservation, and have had no little personal experience with the problems involved, it was a revelation to me to discover, as I delved into the matter from the viewpoint of the Army, the true magnitude of the Nation's requirements. For instance, our Corps of Engineers has at the present time a backlog of over $8½ billion worth of congressionally authorized construction, which is considerably more than all the construction the corps has done in the entire 134 years it has been engaged in civil-works programs. This huge backlog, General Sturgis tells me, has accumulated largely in the last 25 years, and is constantly growing greater. I might add that all these projects have been carefully screened. They are completely feasible from an engineering standpoint, and economically justified.

President Eisenhower has emphatically demonstrated his complete and continuing approval of this inland waterway program. This administration has initiated several worthwhile projects, and is devoting itself enthusiastically to completing them.

Among the many big projects in the engineer backlog on which work is now underway, and which the administration is pushing with redoubled vigor, are the complex central and southern Florida flood control and drainage project; the great Folsom, The Dalles, and Chief Joseph Dams in California, Oregon, and Washington; the 20-year project for the modernization of the Ohio River, and the Calumet-Sag Channel, which will link the Mississippi River system with the Great Lakes. The backlog also includes construction which will cost over $1 billion to complete the Army's part of this Missouri Basin program, including such big items as the Oahe and Big Bend Dams. We are going ahead with these as rapidly as possible. Many important projects, however, are still under study. These include deepening the Delaware River Channel, most of the units of the big flood control project on the Kansas River and its tributaries, and the Old River closure, which will eliminate the great and ever-present danger that the Mississippi will seek a new channel down the Atchafalaya River and isolate such cities as Baton Rouge and New Orleans on a bayou. I am happy to say that work on the Old River project will be started this year.

To me the existence of so large a backlog is sobering evidence of how rapidly our necessity is outstripping our development. It underscores the urgency that attaches to our water resources development programs. It also suggests that the efforts of the Federal Government alone, as limited by budgetary considerations, will not be sufficient to keep us ahead in this race. It must seek, as it is seeking, earnestly and persistently, to find ways in which local, State, and other non-Federal agencies and institutions country-wide can participate to a greater extent in the big job of resources development.

The success of the Missouri Basin development program as so far carried out is a dramatic illustration of how much can be accomplished through a close partnership among the Federal Government, the States, local communities, quasi-public agencies, and private citizens. It is an outstanding example of sound planning and proper coordination at all levels.

The Federal agencies—the Corps of Engineers, the Bureau of Reclamation, the Department of Agriculture, and others—have worked closely with the States of the Missouri Basin through the Missouri Basin Interagency Committee. Great credit for this approach, and the results achieved, is due to the farsighted State governors who over the years have provided inspired leadership and developed effective support throughout the basin. Much credit is also owed to the vision and judgment of the Members of the Congress.

The contributions of you South Dakotans and Nebraskans have been particularly noteworthy. The intense interest shown in basin development by your State executives dates considerably further back than the Pick-Sloan plan on which the program is

based. Governors Joe Foss and Vic Anderson and their distinguished predecessors have all been untiring in their efforts to bring this splendid concept into physical being. It would be impossible for me to pay individual tribute to the thousands of dedicated men and women in all walks of life who have devoted so much of their time, their energy, and their enthusiasm to achieving this success, but I feel I would be remiss if I failed to mention especially former Governor Sharpe, of South Dakota, who has been one of the most indefatigable and effective proponents of the basin program since its conception.

All who have had a part in this undertaking, no matter how large, can well be proud of what has been accomplished. There is no doubt in my mind that you will address yourselves with equal determination and enthusiasm to the big task of putting to practical, constructive use the full potential created by the Missouri Basin System. In the years to come, generations of Americans will have cause to bless you all for your efforts.

Résumé of the Activities of the Committee on Merchant Marine and Fisheries, 84th Congress, 1st Session

EXTENSION OF REMARKS
OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. BONNER. Mr. Speaker, under leave granted the chairman of all standing committees and subcommittees of the House, relative to the activities of their respective committees, I desire to include the résumé of the activities of the Committee on Merchant Marine and Fisheries, 84th Congress, 1st session.

At the outset of its work in the 84th Congress, the committee found itself with a fairly large number of new members who were unfamiliar with the scope and detail of its operations. Accordingly, arrangements were made with the various agencies under the committee's jurisdiction to present information concerning their activities. A series of open hearings were held for this purpose and the information thus received proved extremely useful in connection with bills and other matters considered later affecting the several agencies.

OPERATION OF TANKER TRADE-IN LEGISLATION

The preceding Congresses enacted legislation providing for the trade-in of 10-year-old tankers for credit toward construction of new vessels. At the hearings on the bill, the executive agencies charged with the responsibility of encouraging a merchant fleet for peace and war emphasized the need for tankers with a sustained speed of 18 knots. While this was not mentioned in the bill, the committee's report accompanying it referred to the necessity of such speed. Subsequently, it came to the attention of the committee that credits were being allowed for the construction of tankers of less than 18 knots speed. Early in the session hearings were held by the committee to obtain the facts. As a result, the Maritime Administrator stated that he would encourage the construction of the 18-knot type and that vessels of a lesser speed would not be approved without prior consultation with the committee.

The first transaction consummated involved the trade-in of tankers by Cities Service Oil Co. In order to assure itself that the law was being observed with respect to condition of the trade-in vessels, the committee sent surveyors to examine the vessels. It was found that the Maritime Administration had fully complied with the law in respect to the condition of the ships.

LABOR-MANAGEMENT RELATIONS IN THE MARITIME INDUSTRY

During the past session of Congress, the Merchant Marine and Fisheries Committee made notable strides in its examination of the ills that beset the American Merchant Marine. Extensive hearings were held on the relations between labor and management with a view toward assessing responsibility for the all-too-prevalent interruptions in service which have been costly not only in terms of Government money paid in subsidies, but also from the point of view of loss of cargo to foreign lines. At the hearings, representatives of Government, management, and labor were afforded opportunity to express themselves freely with respect to their problems, and it is reasonably certain that there has been an improvement in understanding among the various interests. The committee has every intention of continuing its interest in the field and considerable activity has been planned, by way of hearings and staff studies, during the recess in preparation for further work in the next session.

MERCHANT VESSEL REPLACEMENT

The problem of block obsolescence of merchant vessels has become of increasing concern to the committee. It is generally accepted that a ship has a useful life of 20 years. Virtually all of the American merchant marine consists of vessels built during World War II which are presently 10 to 13 years old. If no action is taken, they will all become obsolete within a span of 4 years beginning in 1962. In such an eventuality the shipyards would have more work than they could possibly handle at that time but in the meantime they would have practically no work, which would result in a loss of skilled manpower difficult to replace or reemploy.

To cope with this problem the committee held a series of hearings to develop ideas which would encourage construction of new vessels in the immediate future, not only to spread ship construction over a longer period but to obtain vessels of new designs better able to compete with foreign built tonnage. In connection with this problem, the future use of nuclear power in merchant vessels was explored. It had been suggested that some companies might delay replacing vessels, if atomic power on a commercially feasible basis, was "just around the corner." It was found that little or no effort was being made to experiment with atomic power for merchant ships. Hence, the committee reported a bill authorizing the construction of a prototype nuclear powered merchant vessel. This bill was passed by the House.

A number of subsidized lines indicated their willingness to enter into new subsidy contracts in which they would undertake replacements of existing vessels in the immediate future but were hesitant to do so because they believed that the new contracts would jeopardize favorable recapture positions in the old. To meet this problem, the committee reported a bill, subsequently passed by the House, that would enable the operators to enter into new contracts without losing the benefit of their old ones which had a year or two to run.

Plans presently underway call for the construction or conversion by private interests of 26 passenger, passenger-cargo, and cargo ships for service on essential routes. In addition, bills authorizing the sale of the passenger vessels *Monterey* and *La Guardia* were reported by the committee and passed by the House. Necessary work to prepare these vessels for operation on the west coast-Hawaiian run will result in more than $12 million in work for American shipyards.

FIFTY-FIFTY LEGISLATION

The committee continued its vigilance to assure proper functioning of the 50-50 Act to obtain a fair share of ocean-borne commerce in which the Government has a financial interest. In the Mutual Security Act of 1955, an attempt was made to eliminate the requirement that half of such cargoes be carried in American bottoms, but the integrity of the 50–50 concept was maintained. The necessary information to confirm the effectiveness of the concept had been developed early in the year when the committee, taking heed of certain protests as to its adverse effects, held hearings and brought in as witnesses the representatives of various viewpoints. As a result of these hearings the committee concluded that the law was working satisfactorily and that claims of harm to any American interest were unfounded.

WAR RISK INSURANCE

The continued operation of ships in peace and war requires that adequate insurance be available either from private or Government sources. No prudent shipowner will hazard a vessel, representing an investment of many millions of dollars, to the perils of the sea, natural or man-made, without sufficient insurance against damage or loss. History has shown that private underwriters are unwilling to continue coverage in case of hostilities and it is necessary for Government to take their place. Standby authority to assume marine risks had been given the Maritime Administration in 1950, and this authority was extended for an additional 5 years during the current session.

MERCHANT MARINE TRAINING

Competent leadership at sea is extremely important. To assure trained men to handle our ships, the United States Merchant Marine Academy was established in 1938. As experience demonstrated the value of its graduates both in war and peace to the merchant ma-

rine, it became evident that the time had come to place the Academy on a permanent basis, to take its place with Annapolis, West Point, and the Air Academy as an important part of our national defense. So, for the second time, the committee reported, and the House passed, a bill to give the Academy permanent status.

COAST AND GEODETIC SURVEY

Accurate charts and maps of the coastal waters are a necessity, not only to the merchant marine but also to the Navy and the fisheries. The duty of preparing such maps is entrusted to the Coast and Geodetic Survey in the Department of Commerce. This unsung but most important branch of Government is presently engaged, in addition to its more or less routine duties of mapping the coastline of continental United States, in the fairly urgent job of completing charts of the coast of Alaska. The importance of its work cannot be overemphasized, because the location of Loran stations and the whole effectiveness of this system of navigation is dependent upon accurate bearings. To increase the effectiveness of its work, the committee authorized the construction of two new survey vessels. These will be equipped with necessary facilities for helicopters and will permit the Survey to perform its duties with even greater efficiency. In addition, the committee considered and reported to the House, which subsequently passed, a measure designed to improve the operation of the Survey in respect to its purely internal functioning.

COAST GUARD

In the field of its Coast Guard jurisdiction, the committee reported, and the House subsequently passed, a number of bills designed to boost the morale and improve the efficiency of its operations. Discharges of enlisted men before expiration of their term of enlistment without loss of benefits, involuntary retirement of higher ranks of officers, and compensatory time off for personnel serving at isolated stations were considered and bills reported which passed the House. In the interest of the remaining civilian members of the former Lighthouse Service, bills were reported and passed making pension increases permanent and lowering the age limit for voluntary retirement to conform to limits in other Government retirement systems.

PHILIPPINE SHIPS

Since the close of World War II, a number of the smaller warbuilt coastal type vessels have been chartered to citizens of the Philippines for operation among the islands. The committee has been observing this operation for the past few years in the light of certain discriminations practiced by the Philippine Government against American shipping lines and agricultural interests. Having finally been convinced that the discriminations had been substantially removed or modified, the committee reported a bill authorizing the sale of the vessels to the present operators; the bill became law.

WILDLIFE RESTORATION

In 1937 the Pittman-Robertson Act was passed which provided for Federal aid to the States in wildlife restoration projects. The funds for such work were derived from the proceeds of an excise tax on sporting arms and ammunition. By reason of conditions created by the war, the full amount of the tax was not appropriated from 1939 to 1946, by reason of which a fund of over $13 million accumulated which, in equity, should have been distributed. A number of bills providing for various schemes of distribution were referred to the committee and, after extensive hearings, a bill providing for use of the fund over a 5-year period was reported to the House.

In the course of its work, the committee held 71 days of hearings and has reported 26 bills and resolutions to the House, of which 18 were passed and 13 have become law. While the committee reported 5 bills and resolutions to the House, the Senate companion measures, which were not referred to the committee, were adopted on the House floor and have either become law or are pending before the President for signature, making a total of 18 laws.

Activities of the House Committee on Government Operations

EXTENSION OF REMARKS
OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. FASCELL. Mr. Speaker, the following is a report of the activities of the Committee on Government Operations for the 1st session of the 84th Congress.

The Committee on Government Operations, formerly known as the Committee on Expenditures in the Executive Departments, was set up in 1816 to consider expenditures in the executive departments then consisting of State, Treasury, War, and Navy. As time went on and departments multiplied the number of such committees on executive expenditures became 11. In the 70th Congress, by a massive merger, these 11 committees became 1—the Committee on Expenditures in the Executive Departments. The ancient jurisdiction of these committees included abolition of useless offices, the economy and accountability of officers, the examination of the accounts of the Departments, proper application of public moneys, enforcement of payment of money due the Government and economy and retrenchment generally.

A logical restatement of this jurisdiction is found in Rule XI placing on the Committee on Government Operations the mandate to study the operation of Government activities at all levels with a view to determining its economy and efficiency.

The importance of this mandate to the Committee on Government Operations is emphasized by the fact that nowhere else is any provision made for the constant, continuing and overall scrutiny of the vast appropriated moneys of the Government.

The Bureau of the Budget winnows executive requests; the Appropriations Committee sifts the Bureau's recommendations and the General Accounting Office makes limited audits covering technical compliance. Only the Committee on Government Operations is charged with the duty of determining the economy and efficiency of the expenditure of so incomprehensible a sum as $65 billion a year.

As it is the business of the Appropriations Committee to keep a hand on the intake valve and a watchful eye on the gage measuring appropriations so is it the business of the Committee on Government Operations constantly to measure the quantity and quality of the resulting output.

The distinguished chairman of the committee, the Honorable WILLIAM L. DAWSON, has inaugurated a new plan of committee organization designed to accomplish this purpose. He has created seven subcommittees having the identical subject matter jurisdiction as do corresponding subcommittees of the Appropriations Committee. The following are the subcommittees and their chairmen:

Executive and Legislative Reorganization: Hon. WILLIAM L. DAWSON, chairman.

Military Operations: Hon. CHET HOLIFIELD, chairman.

Intergovernmental Relations: Hon. L. H. FOUNTAIN, chairman.

Public Works and Resources: Hon. EARL CHUDOFF, chairman.

International Operations: Hon. PORTER HARDY, JR., Chairman.

Legal and Monetary Affairs: Hon. ROBERT H. MOLLOHAN, chairman.

Special Government Activities: Hon. JACK BROOKS, chairman.

Thus when the Labor Department, for example, goes before a subcommittee of Appropriations on an appropriation item it will subsequently account to a similar subcommittee of Government Operations in respect to the expenditure of that item. In the meantime these two subcommittees have relations of continuing comity and cooperation on matters of common interest. The seven different subcommittees cover the entire field of executive expenditure.

This single act of legislative statesmanship promises to save many millions of the taxpayers' money. In fact, it should accomplish much more than has ever been done by either of the Hoover Commissions. In the first place the Commissions' recommendations were, at best, extralegislative and were seldom enacted. In the second place their recommendations were transitory and periodic.

The recommendations of the Committee on Government Operations have the high authority of legislative approval and the potentiality of securing respectful compliance because of the close cooperation of the Appropriations Committee. Again the recommendations of our committee are based on a surveillance that is constant and permanent and the committee always has the full use of the facilities of the General Ac-

counting Office for expert technical assistance.

A project so momentous and far reaching does not attain its full fruition overnight. It requires much planning, careful staff work, and extensive ground preparation.

An experienced staff made up of people dedicated to the public interest is being set up by the respective subcommittees. This qualified personnel is cooperating with the committees having substantive jurisdiction. The area of cooperation is unlimited and because our jurisdiction is prudential or adjective rather than substantive there are no areas of conflict.

With this work only just begun it is still possible to measure tangible results in terms of dollars saved.

Let me cite examples from our subcommittees. The failure to mention other instances does not mean that equal or greater savings are not being accomplished. In some instances disclosure would be premature and in any event the record would be too long.

The saving resulting from Congressman HOLIFIELD's Subcommittee on Military Operations may readily be projected by reading the comprehensive intermediate reports on military procurement of air navigation equipment, Federal catalog progress report, proposed disestablishment of San Pedro Naval Supply Depot, and Navy procurement of beverage base.

The Subcommittee on Intergovernmental Relations, under Congressman FOUNTAIN, has investigated a deal whereby the Agriculture Department, through the Commodity Credit Corporation, bought more than 80 million pounds of cheese at 37 cents a pound and agreed at the same time to sell it back to the same people a few days later at 1¾ cents to 2¾ cents a pound less. The cheese never moved from the warehouses but checks went from the Government to cheese processors and dealers in an amount of over $2 million. Congressman FOUNTAIN stated during the hearings he believed the transaction was illegal and that he intended to press for the recovery of the money. The Comptroller General of the United States in a recent letter to Congressman FOUNTAIN has stated it was his "opinion that the transactions were not premised upon bona fide purchases within the meaning of the Agricultural Act of 1949, and consequently, that payments thereunder were unauthorized and improper." Congressman FOUNTAIN has forwarded a copy of the Comptroller General's opinion on the legality of the purchase-resale transactions to the Secretary of Agriculture requesting that he be advised as to what action the Department would take.

Congressman CHUDOFF secured the revocation of an illegal automobile rental contract and disclosed irregularities in auto purchases and subsistence payments. His subcommittee is now engaged in investigating a matter of agency policy which jeopardizes $70 million of he taxpayers' money invested by he REA.

The cash returns from Congressman HARDY's study of the use of foreign currency accruing from surplus commodity sales abroad are not yet known.

Since the investigation of abuses of tax amortization certificates by Congressman MOLLOHAN there has been at least a temporary supervision of a policy which Secretary Humphrey says is currently costing the taxpayers $880 million a year.

Congressman BROOKS' subcommittee has investigated many so-called negotiated sales and leases where there has been no competitive bidding. In one instance alone where he insisted on readvertising the Laramie alumina plant, the Government received $173,000 more than it would have received had it not been advertised.

The work of Chairman DAWSON's Subcommittee on Executive and Legislative Reorganization, in pressing for unified procurement in the Defense Department, has not yet been completed. Assurances of cooperation have been received which, when translated into practice, will save unestimated but multiplied millions yearly.

While perhaps the greatest opportunity for the committee is in the fields just discussed it nevertheless exercises important legislative functions in considering legislation referred to it. A review of this part of the committee's work follows:

LEGISLATION

H. R. 3322, which was enacted into law as Public Law 61, was introduced by Congressman MCCORMACK and considered by a special Subcommittee on Donable Property under his chairmanship. The Federal Property and Administrative Services Act of 1949 authorizes donations of surplus property for educational and public-health purposes, and this program has made an important contribution to the welfare of the American people. As a result of a regulation by the Department of Defense in February 1954 a substantial amount of surplus property valuable for educational and public-health purposes was capitalized in working capital funds. The immediate result was to make this property unavailable for donation despite the fact that it might be excess to the requirements of the Department of Defense or the stock funds. Public Law 61 is essentially a restatement of the original purpose of the Congress in making provision for donations of surplus property for educational and public-health purposes. Its most important feature is to spell out the fact that property capitalized in a working capital fund shall not be held for sale as surplus property instead of being made available as donable property for educational or public-health purposes.

Public Law 16, considered by the committee as H. R. 2576, gives the President authority to transmit reorganization plans to the Congress in accordance with the Reorganization Act of 1949 at any time before June 1, 1957. The authority of the President to transmit reorganization plans would have expired on April 1, 1955.

Public Law 46 was considered by the committee as H. R. 6015. For a number of years executive agencies, in the interest of economy, have been entering into reciprocal fire-protection agreements. Such agreements were made with local governmental units and public or private organizations maintaining fire-protection facilities near Federal installations. In 1952 the Comptroller General ruled that expenditures could not be made for fighting fires on non-Federal property.

Public Law 46 specifically authorizes reciprocal fire-protection agreements and ratifies and confirms existing agreements. This law immediately saved the Federal Treasury a large amount of money. Even larger economies will result in the future because of expenditures which would have been necessary in the absence of this legislation. The Departments of the Army and Navy alone would have had to make an initial expenditure of almost $6 million and an annual recurring expenditure of approximately $20 million for personnel and equipment in the absence of reciprocal fire-protection agreements.

Public Law 148 was considered by the committee as H. R. 3758. This law clarifies the effect of the Federal Property and Administrative Services Act of 1949 and Reorganization Plan 20 of 1950. The law authorizes the General Services Administration, through the National Archives, to receive copies of agreements or compacts between the States. In doing so the law clears up the confusion which existed as to whether the Department of State or the General Services Administration is the proper depository for such records.

Public Law 189, considered by the committee as H. R. 6295, increases the maximum per diem allowance for subsistence from $9 to $12 and mileage rates for privately owned automobiles from a maximum of 7 cents per mile to 10 cents per mile. The maximum per diem allowance for employees who serve the Government without compensation was raised from $10 to $15. The law also provides that in the case of unusual circumstances the heads of agencies may prescribe conditions under which reimbursement for travel expenses may be authorized on an actual expense basis up to a maximum amount not to exceed $25 per day.

Public Law 200 was considered by the committee as H. R. 3757. This law gives authority to donate to the American National Red Cross surplus Government-owned property which was in the first instance donated to the Government by the Red Cross. Since this type of property was donated by the public for charitable purposes it was felt desirable to authorize the return of such property when it became surplus to the needs of the Federal Government.

Public Law 365 was considered by the committee as H. R. 7034. Section 1 of H. R. 7034 provides a permanent and uniform method for relief of disbursing officers by the Comptroller General. Under this legislation the Comptroller General may relieve disbursing officers of accountability when it has been determined that improper payments made were not the result of bad faith or lack of due care. Hitherto such relief was provided through private relief bills. Section 2 of H. R. 7034 authorizes reimbursement of dis-

bursing officers within the Department of Defense for payments made out of their own pockets to make up for physical losses or deficiencies of Government funds, vouchers, et cetera, when such losses occur in the line of duty and without fault or negligence on the part of the officers concerned. In this case too the legislation eliminates the need for private relief bills which have been utilized up to now to accomplish the same results. H. R. 7034 does not reduce the liability of the Government officials involved. The legislation merely changes the procedure for making desirable adjustments.

Public Law 334 was considered by the committee as H. R. 7035. This legislation does for accountable officers of the Government generally what H. R. 7034 does for disbursing officers in the Department of Defense.

Public Law 373 was considered by the committee as House Joint Resolution 330. This legislation provides a procedure for the preservation and administration by the Federal Government of the papers and other historical materials of any President or former President of the United States. House Joint Resolution 330 would enable our Presidents and former Presidents to plan for the preservation of their papers at the places of their choice in different parts of the United States. It makes possible a decentralized system of historical archives in cooperation with States, universities, institutions of higher learning, and other private institutions. This act would not only tend to assure the preservation of invaluable presidential papers but would serve to make them available to all who are interested in the history of their country.

Public Law 388 was considered by the committee as H. R. 6182. The problem of payments by the Federal Government in lieu of taxes is one of long standing. There has arisen a general feeling that temporary provision for such payments should be made in limited cases to take care of obvious inequities. Consequently, H. R. 6182 authorizes a payment in lieu of taxes on real property once held by the Reconstruction Finance Corporation and transferred on or after January 1, 1946, to any Government department. In such cases H. R. 6182 authorizes payments in lieu of taxes for a temporary period from January 1, 1955, to January 1, 1959. This legislation takes care of those commercial and industrial properties which had been on State and local tax rolls when they were held by the Reconstruction Finance Corporation but were removed from such tax rolls by accident of transfer from the Reconstruction Finance Corporation to a regular Government department or agency.

H. R. 7227, considered by the committee, was passed by the House. This legislation amends the Federal Property and Administrative Services Act of 1949 by adding another category of donable property. To date the Federal Government has appropriated approximately $241 million for civil defense, including $62 million for grants-in-aid. It was considered desirable therefore that provision be made for donation of surplus property which might be of use for civil-defense purposes. If H. R. 7227 is enacted into law, donations of surplus property may be made for civil-defense purposes as well as educational and public-health purposes. H. R. 7227 provides that the Secretary of Defense may determine, in the case of surplus property under the control of the Department of Defense, whether such property, not including common-use items, is peculiarly adaptable for civil defense. If such is the case, the Secretary of Defense is directed to allocate it for transfer by the General Services Administrator. In other applicable cases, including common-use items, the determination shall be made by the Federal Civil Defense Administrator who is to make a like allocation to the Administrator of General Services.

There are various general statutes which authorize transfer of surplus Government-owned property to States and their political subdivisions for enumerated public purposes. Nevertheless, from time to time special situations arise which call for special consideration by the Congress. The committee has had referred to it a substantial number of bills providing for specific transfers of real property for various public or charitable purposes. Where careful consideration indicates especially meritorious circumstances affected with a definite public interest the committee has recommended to the House, and the Congress has generally enacted, specific statutes authorizing transfers of particular parcels of real property.

The committee has also held hearings on a number of other bills which require further study before final action is taken on them.

A number of bills have been referred to the committee dealing with the termination of Government competition with private enterprise. The committee obtained the views of the principal departments and agencies concerned and held a meeting to consider the pertinent bills then pending before the committee; namely, H. R. 279, H. R. 687, and H. R. 6013. H. R. 7032 and H. R. 7382, dealing with the same subject matter, have since been referred to the committee.

The Bureau of the Budget has issued Budget Circular 55–4, requiring the executive agencies to inventory and study commercial activities which may be in competition with private enterprise, and so far as possible to dispose of the same. The committee desires to study and evaluate the reports made to the Bureau of the Budget, under Circular 55–4, before acting on legislation covering the same field. Section 638 of the defense appropriation bill expresses the latest sense of Congress on the problem of termination of Government competition with private enterprise but it has been declared unconstitutional by the President. A resolution of this conflict of judgment may well be an incident to the consideration of this legislation.

Hearings were held on related bills dealing with budgetary reform, H. R. 4009, H. R. 6558, and House Joint Resolution 346. H. R. 4009 would direct the Comptroller General to make studies for the appropriations committees in connection with budget items submitted to the Congress. House Joint Resolution 346 and H. R. 6558, both introduced by Chairman CANNON of the House Committee on Appropriations, aim at a balanced budget. House Joint Resolution 346 would require the submission of a budget which did not contain estimated expenditures in excess of estimated receipts for each fiscal year. H. R. 6558 would completely overhaul the budgetary system of the Federal Government. It would create an Office of the United States Budget in the legislative branch of the Government in order to provide effective congressional control over the budget of the United States. Mr. CANNON appeared before the committee and gave it the benefit of his great experience. In view of the complexity of the problem, the committee is continuing to study ways and means of strengthening the budgetary system.

Legislation to create a Department of Civil Defense is contained in House Concurrent Resolution 108, House Joint Resolution 71, House Joint Resolution 75, and House Joint Resolution 98. One approach contemplates a civilian department of defense within the existing Department of Defense. The other envisions a separate executive department of Cabinet status. The committee has placed these measures under special study.

H. R. 1864, to create a Department of Urbiculture, has been heard by the committee. Subsequently H. R. 7731, to create a Department of Urban Affairs has been referred to the committee. This legislation brings to the attention of the Congress the problem which has emerged with the urbanization of our population. There are aspects of urban living which may well require research, and technical assistance if Federal, State, and local programs are to be properly coordinated. The committee hearing on H. R. 1864 and its subsequent study of this bill, as well as H. R. 7731, may reveal the need for legislative recognition of the new problems of urban and metropolitan areas.

A hearing was held on H. R. 6854 which aims at achieving better coordination of transportation, traffic, and public utility management services. The bill proposes to centralize responsibility for these functions in the Administrator of General Services by amending the Federal Property and Administrative Services Act of 1949 to that end. This is one of the measures stemming from the studies of the Commission on Organization of the Executive Branch of the Government. In view of the fact that the committee is also considering that Commission's report on transportation functions and services of the Government, H. R. 6854 wil require further consideration in connection with the overall report on transportation.

REVIEW OF REPORTS OF THE COMPTROLLER GENERAL OF THE UNITED STATES

Under the rules of the House, the committee has the function of receiving and examining reports of the Comptroller General of the United States. During the 1st session of the 84th Congress some 50 audit reports on the operations of Government agencies were received from the Comptroller General,

as well as a substantial number of reports made because of special investigations. The committee has placed each one of these reports under study and has held hearings in order to obtain further information in connection with some of the reports.

The committee considers that it is of primary importance to the Congress to have the investigations and reports of the Comptroller General carefully examined. To this end the committee has instituted a program of carefully evaluating the reports and recommendations of the Comptroller General and of encouraging the adoption of many of the Comptroller General's recommendations by the executive agencies. There has also been a substantially increased use by the committee of the facilities of the General Accounting Office as provided by law. There is significant evidence that the initiation of these closer working relationships between the committee and the General Accounting Office has already resulted in adding to the effectiveness of the General Accounting Office as an arm of the Congress.

REPORTS OF THE COMMISSION ON ORGANIZATION OF THE EXECUTIVE BRANCH OF THE GOVERNMENT

The Commission on Organization of the Executive Branch of the Government—Hoover Commission—transmitted 18 reports to the Congress dealing with various aspects of Government operations. Of these 18 reports, 13 were referred by the Speaker of the House to the committee for study.

The committee has placed each of the 13 reports referred to it under study. Hearings have been held on the following reports: Food and clothing, surplus property, lending agencies, and transportation. The committee's study of these four reports is not yet completed.

Approximately one-fifth of the total expenditures of the Commission on Organization were devoted to its study of water resources and power. The report of the Commission on this subject is one of the most massive reports ever produced by any study commission. Moreover, its recommendations so vitally affect the general welfare that the committee has established a Special Subcommittee on Water Resources and Power in order to make a thorough study of the Commission's report on water resources and power. The Honorable ROBERT E. JONES, JR., is chairman of this subcommittee.

STUDY OF REPORTS FROM THE COMMISSION ON INTERGOVERNMENTAL RELATIONS

The report of the Commission on Intergovernmental Relations, together with its accompanying studies, has been referred to the committee for consideration. It consists of 15 separate volumes.

A comprehensive analysis of the Commission's report has been undertaken. That part of the Commission's report which is devoted to payments in lieu of taxes has already been considered in part in connection with the hearings held on H. R. 6182 which has been passed by both House and Senate.

INVESTIGATION OF GOVERNMENT OPERATIONS IN THE FIELD OF GOVERNMENT INFORMATION

The committee has been perturbed by the apparent tendency in the last 2 years for high Government officials to place increasing restrictions on the flow of information to the Congress, to the press, and to the public. The right of the people and their elected representatives to know what their Government is doing is basic to the maintenance of our free and democratic society. This makes it imperative that information about Government activities be available. Some restrictions are, of course, necessary in the interest of national security. But this necessity must not be used as a cloak for keeping basic and essential information from the Congress, the press, and the public.

Because of the importance of maintaining a free flow of information, the committee has organized a special study of Government organization, operations, and policies with regard to the availability of Government information. This investigation has begun under the aegis of a Special Subcommittee on Government Information with the Honorable JOHN E. MOSS as chairman.

A Special Subcommittee on Donable Property, with the distinguished majority leader, the Honorable JOHN W. MCCORMACK as chairman, considered and recommended for passage the important donable property bill and the equally important bill dealing with the preservation of Presidential papers.

It is appropriate at this point to record the committee's appreciation of the contribution of the committee staff to the success of the committee's efforts. The committee is proud of the high caliber of its staff and of the excellence of their work and their devotion to their duties.

Jesuits Ask Changes in United States Immigration Act

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, the Religious News Service, in its news report of Monday, July 18, published a dispatch from Rome reporting that the authoritative Jesuit magazine, Civilta Catholica, had published an article stressing the need to "abrogate or at least radically rewrite the McCarran-Walter Immigration Act."

The views expressed in this article, as reported by the Religious News Service, should be of great significance to all Americans.

I ask unanimous consent that the text of this dispatch from Rome, as reported by the Religious News Service, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JESUITS ASK CHANGES IN UNITED STATES IMMIGRATION ACT

ROME.—Civilta Catholica, noted Jesuit magazine published here, stressed the need to "abrogate or at least radically rewrite the McCarran-Walter Immigration Act" of the United States.

In an article discussing the American immigration law, the periodical said that it should be changed "in the name of justice and charity, not to mention the American Republic's national and international interests."

"Justice," it said, "is the condition and obligation of a sincere Christendom, and charity, its essence."

Civilta urged the American people, through their elected representatives, to repudiate bygone stereotypes and adopt an immigration policy that is more Christian and that conforms to the democratic principles on which the country was founded.

Wisconsin's Opportunities

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. WILEY. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a radio address made by me.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WISCONSIN'S OPPORTUNITIES

I am glad to report to you, through the courtesy of this station, on the great opportunities awaiting our State.

During this next quarter hour, I am going to answer a series of questions about the future of Wisconsin, as affected by developments in our Nation's Capital.

I am going to talk to you about matters of interest to you as an individual, and matters affecting your community and mine. That means Wisconsin roads, Wisconsin airports, and Wisconsin health; it means housing, fair taxes, old-age pensions, a worthwhile return for farming, and a wide variety of other necessary actions. Yes, it means peace for us and for our children.

I hope that you will enjoy this report, and I hope, too, that you will give me the benefit of your reactions to it.

AIRBASE IN KANSASVILLE

Question. First off, Senator WILEY, regarding Wisconsin's facilities itself, what are some of the major developments affecting the Badger State that you have been working on during the 1st session of the 84th Congress?

Answer. Perhaps the most important item was the completion of legislative action for the building of the new $16½ million jet airbase at Kansasville, in Kenosha and Racine Counties.

This Air Defense Command Base, will be located around 25 miles southwest of Milwaukee. It will cover around 4,000 acres. It will be named in honor of Wisconsin's Medal of Honor winner, the late Maj. Richard Ira Bong—a naming which I personally suggested in honor of this great hero.

This airbase, in Dick's honor, like the Nike-guided missile sites around Milwaukee—are necessary steps for the defense of our beloved country against possible enemy attack in this atomic age.

Question. Speaking of aviation, I know that Congress, too, has passed a major new Federal Aid to Airport Act, has it not, Senator?

Answer. That is right. Funds have been allocated for expansion of Wisconsin's and all America's airport system. And Wisconsin, will of course, gets its fair share of such funds.

Right now, airports all over our State could stand modernization and improvement. And we could stand new airports for many smaller cities which are not now served at all by airplanes. Modest-sized airports with small runways are now feasible; they can carry considerable passengers and cargo.

POPULATION INCREASE

Question. You look forward to a great increase in air traffic, don't you Senator?

Answer. That's right. In terms of future population alone, this great country of ours will number 225 million souls by 1975—just 20 years from now.

Four million babies are being born this year, and that means lots more mouths to feed and healthy babies to clothe over and above our present 165 million population.

Question. And for those 4 million babies, I know you feel that world peace must be our greatest goal?

Answer. Absolutely. No thinking person wants war, particularly an A-bomb—H-bomb war. Fortunately, thanks to the great leadership of President Eisenhower, we've made much progress toward peace. But we certainly dare not let our guard down or fall asleep.

CONNECTING CHANNELS ESSENTIAL

Question. We have looked at our population, at the problem of peace and at our peacetime and military airports. Now, how about water transportation, Senator?

Answer. Well, that brings up, of course, the vital issue of the Great Lakes connecting channels.

I am urging the United States Bureau of the Budget to set aside a million and a half dollars of engineering funds, commencing in January 1956. This will be to plan for the deepening of the Great Lakes connecting channels, west of Lake Erie. Once these engineering blueprints are prepared, final construction can begin. Then, the entire 2,300-mile Great Lakes Waterway will have become a reality.

Incidentally, in October, at Marquette University, it will be my pleasure to participate in a seaway conference.

HIGHWAY IMPROVEMENT

Question. We have looked at aviation and water, how about land transportation, Senator?

Answer. Well, unfortunately, the necessary bill for the President's highway improvement program didn't pass the Congress in the first session. The bill will have to come up next year.

This highway bill is tremendously important, becuase good roads mean highway safety. They mean low cost of transporting farm products, a healthy tourist industry, in addition to many cther advantages.

Fortunately, in spite of the delay on the new highway bill, work will continue on certain key Wisconsin highways.

Right now, Wisconsin receives around $20 million a year in Federal funds for all highway work. Around 452 miles of the Federal-State system of highways is in Wisconsin. Uncle Sam provides 60 percent of the funds for these vital roads, and the State of Wisconsin provides 40 percent.

Meanwhile, work on the rebuilding of Highway 41, south of Milwaukee to the Illinois border, and Highway 12, west to Eau Claire to Minnesota, will continue.

Question. Senator WILEY, you have referred to the highway bill as one of the major unfinished tasks of the Congress; would you tell us what other major subjects Congress is going to give its attention to when it starts its next session?

TAX REFORM

Answer. I am glad to do that, because there are quite a few bills which Congress is going to have to concentrate on. Let me list a few of them:

First, the time is overdue to take another look at heavy Federal taxes and the need for tax reform in general, in the light of modern conditions and changes.

Second, Congress must pass a bill widening social security and liberalizing its benefits. That means, for example, bringing lawyers, doctors, dentists, and other now-excluded professional people under Federal social security.

It means providing humanitarian aid to the totally and permanently disabled. It means lowering the age of eligibility for women. Thus, they could receive pensions at 60 years, instead of waiting the long years until 65. This liberal change is exactly what I have proposed in one of the bills that I personally have offered.

HELP THE FARMER

Question. What would you say is another major task for the new Congress?

Answer. Another task is to take a brand-new look at the farm-parity picture. As we all know, regrettably, Wisconsin milk checks have gone down and the farmer is in trouble.

With lowered farm purchasing power, the farmer can't buy the goods which the workers in the cities are manufacturing. The result is hardship all along the line. Obviously, therefore, the farmer must receive his cost of production plus a reasonable profit.

Whatever level of parity support is necessary to do justice by the farmer should be set—whatever level in the vicinity of 90 percent. Why? Because if the farmer is damaged by inadequate income, the rest of the Nation is in turn quickly harmed. Purchasing power tends then to drop everywhere.

VETERANS' SURVIVORS BILL

Question. Well, that covers social security and farming. How about other major tasks for the new Congress? What about veterans' legislation, for example?

Answer. There is an extremely important bill, affecting our 18 million veterans, their survivors and dependents, known as the Hardy survivors' benefits bill.

It has been passed by the House of Representatives, but not yet approved by the Senate.

This bill should be very closely studied and improved. Then a version of it should be enacted into law, so as to modernize and liberalize the program of looking after those who fought for our Nation on the field of battle, as well as their dependents and widows.

Question. Social security, farming, veterans' rights. What other major bills await Congress' attention next year, Senator WILEY?

HOOVER BILLS

Answer. Well, we have got to enact more of the Hoover Commission recommendations. These Hoover reports will save the taxpayer very considerable sums of money. They will result in greater efficiency and economy in Government. I personally have offered several Hoover Commission bills. I am particularly in favor of the Hoover Commission recommendation for getting the Federal Government out—I emphasize "out"—of certain businesses which it has been operating in unfair competition with private enterprise.

Then, turning to another subject, Congress should pass juvenile delinquency control legislation. I personally have offered a bill to help reduce the staggering rate of crime among our Nation's youngsters.

Third, Congress should resist attacks against our national forests, against parks and wildlife refuges. Instead, we must preserve the great outdoor heritage of our people—the great heritage of field and stream.

Question. Senator, you have listed a great many issues where you are seeking constructive action, and you've just touched upon a possible danger—attacks against conservation. Are there other particular issues where you feel Congress should kill unworthy bills?

FIGHT GAS INCREASE BILL

Answer. Yes, very definitely. The principal example is the dangerous natural gas increase bill.

If that bill passes the Senate next year, as it has already passed the House, we, of Wisconsin will be paying, over the long run, literally millions of dollars more for natural gas in our homes and factories.

This increase bill would unwisely destroy Federal controls over natural gas. The result would be to leave the consumer helpless and at the mercy of a few monopolistic companies. And so I will continue my fight against this bill, which would do so much harm to the consumers of Wisconsin.

TOURING WISCONSIN

Question. Well, I know, Senator WILEY, that in the weeks and months up ahead you have a vast number of speaking engagements all over Wisconsin, and you have referred to one of them at Marquette University.

Answer. That is right.

During Congress' recess, I will be visiting many areas of our State, talking to folks, getting their opinions, addressing their organizations. In addition, I will be participating in the work of various congressional committees, because, as you know, the work of the Congress does not stop when Congress recesses. Our committees continue right on with their regular jobs—12 months a year; and that is as it should be. Committees are investigating monopoly, for example. They are investigating the dope traffic problem, the Communist problem, and other issues affecting America.

Question. Senator WILEY, earlier in the broadcast you referred to the problem of farmers.

We have just a few moments now before leaving the air. Could you tell us some other things which you think ought to be done for the purpose of making sure that Wisconsin agriculture remains in a healthy condition?

SEVERAL-POINT DAIRY PROGRAM

Answer. I am glad to do so. I have set up a dairy program with several points, and I will just list a few of the points now.

First of all is this matter of fair farm parity return, to which I have already referred.

Next, we must expand the Wisconsin school milk program, such as I have proposed in a bill in this Congress.

Third, expand the number of dairy automatic vending machines. These machines dispense cartons or cups of milk in factories, schools, theaters, and other public places. They're a great help in increasing the drinking of milk.

Fourth, enact the Wiley bill for a dairy research laboratory at Madison. This laboratory would help find new byproducts of milk and new uses for its components.

Fifth, continue and intensify research into livestock diseases like brucellosis and bovine tuberculosis, as well as diseases of crops which impair the farmer's purchasing power.

Sixth, encourage Americans to increase their personal consumption of milk, butter, cheese, and nonfat dry milk solids.

Seventh, study the problem of lowering milk distribution costs. That means narrowing the difference in the price spread—the difference of 14 or 15 cents—between what the farmer gets at the farm and what the consumer pays for his milk in the city. Right now, the farmer is only getting around one-third of what the consumer is paying for the milk.

These, then, are just a few points in an overall farm program. Remember, they are not designed to give any special preference or favoritism, but merely to provide justice

for the farmer—for the one-seventh of all Americans who live on our farms—22 million Americans in all.

CONCLUSION

Question. Senator WILEY, you have referred to a great many issues of deepest interest to Wisconsin.

You have referred to Wisconsin airports, highway and water transportation, to conservation, fair taxes, the social-security problem, the veterans' pension problem.

You have pointed up your several-point program for Wisconsin farmers. You have discussed your continued opposition to arbitrary increases in natural gas rates.

I know that your listeners have enjoyed this broadcast, as I have in participating with you in it.

Answer. Thanks very much. It has been a real pleasure, through the courtesy of this station, to report to you.

I hope that you will be listening in later on when I deliver other addresses over this station.

Thanks very much for your attention, and good luck to you all.

This is your Senator, ALEX WILEY, signing off from Washington.

Accomplishments of the 1st Session of the 84th Congress With Respect to Nationality Interests

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, the 1st session of the 84th Congress is about to come to a close. Many observations and summaries of the work of this Congress have been made. I have prepared an analysis of the achievements of the past Congress with respect to the interests of the nationality groups of this country. I have summarized both the accomplishments and the failures.

We can be proud of the accomplishments but we should be determined to remedy the failures in the next session.

I ask unanimous consent that the statement I have prepared on this matter be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COMMENTS BY SENATOR HERBERT H. LEHMAN ON ACCOMPLISHMENTS OF THE 1ST SESSION OF THE 84TH CONGRESS ADDRESSED ESPECIALLY TO NATIONALITY INTERESTS

The recently concluded 1st session of the 84th Congress was remarkable for its accomplishments in the field of foreign relations. In this field the Congress showed a leadership which usually is vested in the President. In the absence of Presidential leadership, however, the Congress filled the vacuum and pointed the way to the achievement of substantial gains in regard to our relations with the other countries of the world.

There were, however, failures, too, both on the part of Congress and on the part of the Eisenhower administration.

The accomplishments were mainly in the direction of relaxing the tensions which have gathered in world affairs and of capitalizing at last on the gains for which the Truman-Acheson foreign policy of 1947–53 had laid the groundwork.

A treaty was at long last arrived at with Austria, and preparations made for the withdrawal of foreign troops from that country. The way is now clear for insisting that Soviet troops be withdrawn also from Rumania and Bulgaria, since the excuse for maintaining Soviet troops in those countries was for the purpose of maintaining a line of communication between Soviet Russia and Soviet occupation forces in Austria. This latter possibility, however, is without substantial significance since Bulgaria and Rumania remain securely pinioned behind the Iron Curtain.

A defense agreement was reached among the countries of Western Europe and the Federal Republic of Western Germany, firmly integrating Germany into Western Europe and making possible a German contribution to the defense of Western Europe. For the first time in this century an accommodation of relations between France and Germany has been achieved.

Authorization for the continuation of the reciprocal trade program was continued in the recent session of Congress, thus extending the possibility of decreasing barriers to world trade.

Authorizations and appropriations for foreign military and economic aid were again enacted.

Above all, however, the chief contribution of the recent session of Congress was in the support and leadership it gave for the steps leading to a relaxation of world tensions. The Geneva meeting at the summit was made possible—indeed it was originally suggested and advocated—by Senator WALTER GEORGE, the Democratic chairman of the Senate Foreign Relations Committee. The Democratic Congress not only gave unified support to the Big Four meeting and to the negotiations which ensued at Geneva, but effectively rebuked and forestalled the attempts of die-hard Republican neoisolationists to impede and jettison the Geneva Conference.

Democratic leadership successfully reversed the go-it-alone policy in Asia and overcame the effects of the phony unleashing of Chiang Kai-shek in January 1953.

The military strength of the United States was maintained in the face of administration recommendations for drastic cuts in our Armed Forces, including a proposed 10 percent cut in the strength of the Marine Corps. That proposed cut was rejected by the Democratic Congress.

The Democratic leadership in the Congress bottled up the Bricker amendment, designed to cripple and hamstring the President in his conduct of foreign affairs—unlike the Republican leadership in the previous Congress which allowed this proposal to come to a vote in 1954. On that occasion, the Bricker proposal was defeated by a bare one-vote margin. It is to be recalled that the Republican leader of the Senate, Senator KNOWLAND, voted for this incredible proposal.

The Democratic Congress went on record, in approving the McCormack resolution (introduced by Representative JOHN MCCORMACK, the majority leader in the House), in favor of independence and freedom for dependent and enslaved peoples.

Among the failures of the recent session of Congress—and most of these failures can be ascribed to the negative attitude of the administration and the obstructive tactics of a preponderant majority of Republicans—were:

1. The failure to ratify the Genocide Convention.

2. The failure to ratify the Human Rights Covenant.

3. The failure to amend the Refugee Relief Act.

4. The failure to amend the McCarran-Walter Act.

There were other failures, too, but the failures cited above were the most outstanding. These failures must be remedied in the next session. Only an aroused public opinion, indicating wholehearted support for prompt and effective action in these matters, will insure results.

Report on the Accomplishments of the Senate Committee on Interstate and Foreign Commerce, 1st Session, 84th Congress

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MAGNUSON. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a report on the accomplishments of the Senate Committee on Interstate and Foreign Commerce in the 1st session of the 84th Congress.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

Mr. President, this has been one of the busiest sessions for the Senate Committee on Interstate and Foreign Commerce in its history and the preparations we have made for continuing our work in the 2d session of the 84th Congress indicate that it is going to be an even busier and more important year.

The committee has jurisdiction over some of the biggest and most important industries in the Nation—communications, aviation, all land transportation, merchant marine and fisheries, and natural gas, and in each of these fields it conducted intensive hearings or investigations or initiated legislation.

To show at a glance what our committee has accomplished during the year, from the legislative standpoint, here is a table showing what we have done:

Number of Senate and House bills, resolutions, and amendments referred to committee	155
Number of bills reported by committee	46
Number of bills passed by Senate	43
Number of Senate bills pending in House committees	13
Number of Senate bills reported by House committee	20
Number of Senate bills passed House	21
Number of bills signed by President	23
Number of routine nominations referred to committee	572
Number of routine nominations confirmed	545
Number of major nominations referred to committee and confirmed	14
Number of executive meetings of full committee	18
Communications Subcommittee	1
Surface Transportation Subcommittee	2
Aviation Subcommittee	3
Merchant Marine and Fisheries Subcommittee	1
Automobile marketing	2
Total	27

Number of days of open hearings of full committee	21
Communications Subcommittee	2
Surface Transportation Subcommittee	4
Aviation Subcommittee	13
Merchant Marine and Fisheries Subcommittee	7
Payne subcommittee on S. 2060	1
Air Agreement Subcommittee	1
Freight car shortage	2
Total	51

In addition to work on these bills, we held long hearings on the bill amending the Natural Gas Act; on bills revising laws governing aviation; on multiple communications problems including television; on the necessity of providing quickly a second airport for Washington; on the trip-lease bill; on international air agreements; on the regulation of fish nets in Alaskan waters; on merchant marine bills; amendments to the Federal Airport Act and hearings on the Pacific coast tuna problems.

The committee reached no conclusion on the omnibus aviation bill before the committee and decided it would be better to postpone any decision until the next session when we may hold additional hearings.

The comunications problems are serious and our staff has been studying them intensively. In addition, we called in the outstanding manufacturers of television and radio sets in the country and discussed with them the acute problem raised by the use of VHF television and UHF television. We suggested that if the manufacturers would produce all-channels sets it would solve much of the problem facing the television industry today. The situation now is that of some 35 million television sets owned by viewers of this country, 5 million of them are UHF sets that cannot receive VHF signals and 30 million of them are VHF sets that cannot receive UHF signals. It is a tremendous investment our citizens have made—billions of dollars—and if we can alleviate the trouble no effort should be spared to do so.

Some manufacturers already have put on the market television sets than can be equipped at a small additional charge to receive both VHF and UHF signals and the older sets can be so converted at a small expense.

We also urged enactment of a bill to eliminate the excise tax on all-channel sets to encourage the manufacturers to produce them. This would about equalize the cost to the viewer with that of the UHF and VHF sets.

Carrying our study of television further, we have set up a voluntary ad hoc committee of the outstanding television and radio engineers in the country and they are studying means of making more room on the spectrum so that more VHF channels may be placed at the disposal of our people.

We are endeavoring, in our studies which will be pursued during the recess, to find a means of bringing television service to every part of the Nation and to the small communities which have had to resort to costly experiments in reflector stations and community-circuit television under which a signal is picked up from a distant station by an antenna usually at some high spot and redelivered to homes by cable. There are some 400 such services in this country that serve 300,000 homes who have an approximate investment of $25 million.

The Federal Communications Commission recently approved construction of low-powered broadcasting TV stations and this may result in bringing television to a wider audience and to smaller communities.

The Federal Communications Commission is also studying the proposals for pay-as-you-see television and a decision may be reached on this important subject next year.

In our studies of aviation, a point that stood out was the handling of our international air agreements. Our attention was attracted to this by the action of the Department of State and the Civil Aeronautics Board in agreeing to the International Air Agreement with the Republic of West Germany. Our committee was shocked to find that the two agencies had agreed to give the Germans permission to fly to Boston, New York, and Philadelphia and beyond. "Beyond," we learned, meant they could fly over our territory to Central America and South America and over the circle to Los Angeles and San Francisco and to other choice markets. Giving the Germans that right, we found, would be detrimental to our own lines who protested the action vigorously. Our airline officials had not been allowed to participate in the negotiations with the Germans and did not learn of the details until after the agreement was ready for signing.

At our insistence the signing was held up to give our airlines a hearing on their objections but 2 weeks after the hearings we were notified the agreement was being signed that day and was unchanged from its original form. The committee decided that Congress should know how international air agreements were reached, what privileges were granted the foreign airlines, and what this country received in return. Senator SMATHERS, chairman of our special subcommittee, is conducting our investigation into the international air agreements.

We initiated and the bill has been signed by the President to grant permanent certification to local or feeder airlines.

You know, of course, that we revived the Federal Airport Act and passed a bill granting $63 million a year for 4 years for construction, repair, and remodeling of airports throughout the Nation, which has been signed by the President.

In the aviation field we got extended for 5 years, until 1960, the Prototype Aircraft Act, which will provide Federal assistance in the development of prototype craft. We felt that Federal assistance is needed now in the development of air transports.

Our committee also took an interest in the wiretapping scandals divulged in New York, but decided to postpone action until investigations started by others were concluded.

We also approved bills for construction of a nuclear-powered merchant ship and a bill for putting nuclear power into a presently constructed hull. We referred both bills to the Joint Committee on Atomic Energy.

Our staff, following requests of a year ago, has investigated all phases of automobile marketing, including the so-called bootlegging of automobiles. That investigation is going on and our staff is watching closely the sales that will be made in August and September, the time of the year that brings the greatest pressure on the automobile dealers. It has prepared a survey of the "phantom" freight rates charged the dealers and the customers.

We held hearings on the lag of construction of tankers authorized by the last Congress and only recently, after hearings we had called, the Navy accepted bids for the lease of 8 of 15 tankers that are authorized for construction by private builders and to be leased to the Navy for 10 years. We have not completed our investigation into the terms of the leases but intend to see that the construction of the vessels is speeded up.

Our committee protested the practice of the Military Sea Transportation Service in competing with commercial American-flag vessels in carrying passengers and cargo. The Hoover report, stating that the MSTS should stop the competition, was about the same sort of protest that members of our committee have made. We believe the Department of Defense can correct much of the competition through administrative action. However, if it does not, we will have to hold hearings and report legislation in the next session that will curb the Department's activities in its transportation policy.

Lately the committee has had to step into the problem of the Japanese dumping Japanese-caught frozen and fresh tuna on our west coast where the practice threatens the very existence of our fishing fleet. We have insisted the State Department take immediate action to alleviate the threat to our tuna fishing fleet and look forward to a positive program in a few weeks.

We have also protested the Department of Defense practice of setting up on the Pacific coast maintenance and repair shops for Government ships which take that work away from commercial shipyards in the area.

The shortage of boxcars for hauling our harvests is being felt acutely in parts of the country and is going to become worse as the season advances. We were deeply concerned and sought to find a means of alleviating the situation but the answer is that there are just not enough such cars to meet the demand during harvest.

We have received promise from the railroads they will expedite the unloading and return of cars to their original areas and that they will step up the repair of boxcars in their shops. This will be helpful but will not solve the problem which has been with us every year during harvest time and will continue to plague the American farmers until sufficient such cars are constructed.

Our committee also participated in preventing the scuttling of the 50–50 law which requires that half of foreign-aid shipments move on American-flag vessels. That action prevented writing into the foreign aid and Commodity Credit disposal programs provisions setting aside the 50–50 law which has been of such great help to our American-flag vessels.

Bishop Zuroweste Tells Editors They Must Influence Souls in Catholic Thought and Action

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, recently, the Catholic Press Association held its annual national meeting in Buffalo, N. Y. My attention has been called to the keynote address delivered on that occasion by the Most Reverend Albert R. Zuroweste, of Belleville, Ill., assistant episcopal chairman for the press of the National Catholic Welfare Conference.

A report of Bishop Zuroweste's speech appeared in a recent issue of the Illinois Catholic Messenger.

I ask unanimous consent that this report be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BISHOP ZUROWESTE TELLS EDITORS THEY MUST INFLUENCE SOULS IN CATHOLIC THOUGHT, ACTION

BUFFALO.—The Catholic press was called upon here to extend its influence in the life

of the Nation, and three specific suggestions to this end were made to its editors and publishers.

Some 250 delegates from all parts of the United States and Canada, and visitors from New Zealand and the Philippines heard a bishop who had been a Catholic editor himself say:

"Your primary concern should be not only to reach souls but to influence souls in Catholic thought and Catholic action. It is not large numbers of subscribers which you need now, but readers whose lives are directed along the right way, the way of faith, because they read your product."

Delivering the keynote address at the 45th annual Catholic Press Association convention, Bishop Albert R. Zuroweste, of Belleville, Ill., told the Catholic journalists that they should:

1. Explain and defend the Catholic educational system.

2. Promote the instructions of the Holy Father regarding modesty in fashions, in motion pictures, and in entertainment in general.

3. Help to produce lay leaders by influencing readers in the proper approach to present-day Catholic porblems.

Bishop Zuroweste, who is assistant episcopal chairman of the press department, National Catholic Welfare Conference, spoke at the end of a day which saw a half score of separate meetings discuss problems confronting Catholic newspapers and magazines in this country and Canada.

The complete text of the bishop's address follows:

"In the absence of Bishop Gorman, Episcopal chairman of the press department, National Catholic Welfare Conference, whom I have the honor to represent tonight, I bring you the greetings and blessings of the bishops of the United States. The hierarchy of America is appreciative of the labors and zeal of the members of the Catholic Press Association.

"We are honored in the welcome extended to us by Bishop Burke, the beloved shepherd of this diocese, and we are indebted to Monsignor McPherson, the staff of the Victorian, and the entire local committee for their generous hospitality.

"Each year the members of the Catholic Press Association convene to consider the progress of the Catholic press, its current problems, and to study seriously ways and means of improving their product. Men and women, both cleric and lay, dedicated to the cause of the Catholic press, welcome this opportunity for discussion and are the first to admit there is always room for improvement. It is our hope that you will be inspired by the example of your fellow laborers and more firmly convinced that you are engaged in one of the most important apostolates of the church. Yours is a tremendous task, the producing of a Catholic paper or magazine geared to the needs of the moment.

"It is not necessary on this occasion to reemphasize the essential role of the Catholic press in the defense of the church today. The holy fathers, especially since the time of Leo XIII, have spoken plainly on this subject and have repeatedly stressed the importance of a strong and active Catholic press.

"The late Dr. Waldemar Gurian, former Notre Dame professor and international scholar, summarized the present duties of all engaged in the apostolate of the Catholic press when he characterized the Catholic publicist as one who tries to serve 'not just as a technical, day-to-day journalist, but as one who comprehends, clarifies, and influences his time.' Further, he stated: 'The Catholic journalist can no longer, as in the 19th century, be satisfied with a defensive position. * * * Mere defensive activity, confined to protecting the church by influencing public opinion, proves ineffective, however necessary it may be.'

"Since many of our diocesan papers have practically 100-percent coverage in their diocese, the potential for spreading truth and influencing Catholic thought is truly tremendous. Yet, I wonder if we are comprehending, clarifying, and influencing our times, I propose a few pertinent problems for your serious consideration.

"Today a field in which Catholic papers, magazines, and periodicals have a most important work to perform is the legislative one. Legislation introduced in local and State lawmaking bodies which is prejudicial to the rights of Catholics, in most instances is the result of bigotry founded on ignorance. Certain groups and organizations united to propagate the philosophy of separation of church and state have succeeded in building up fear in the minds of man. Laws or amendments to existing laws proposed for the benefit of Catholic children immediately are seized upon as a pretext to shout from the press, radio, and television that our American Constitution and Bill of Rights are being attacked. Writers and commentators wall loud and long that Catholics are endeavoring to divide the country, attempting to destroy religious freedom. These and many other false charges have filled the air in recent months. Fair and just legislation in behalf of Catholic children has been defeated in some States because legislators were influenced by anti-Catholic propaganda and lies. They were afraid because they were ignorant of the truth.

"The strength of the Catholic church is in its religious education system and today this system is the object of attacks from all sides. In 1952 Archbishop Noll said: 'The best thing we have in this country is our parish school system staffed by devoted religious men and women, yet 120 million non-Catholics have been led to believe that it is inefficient, divisive of our citizenry.' These words ring with more truth today than in 1952. And yet what have we done about it? Has there been a concerted effort on your part to give the true picture of Catholic education in this country?

"The Catholic press has a most important mission to explain and defend our education system. In this pressing problem the voice of the Catholic press must be heard also by the non-Catholic. The non-Catholic should be reached through the distribution of Catholic literature that will enlighten him and give him complete and exact information on this subject. Catholic laymen should be encouraged to subscribe to Catholic publications and send them to lawmakers, educators, and influential people in the community. If such interested laymen are not forthcoming, then Catholic publishers should undertake this mission themselves. This mission cannot be successful, however, unless Catholic publications breathe the spirit of Catholic doctrine and diffuse it in a clear, concise, and inteligent manner.

"Sometimes we wonder if the Catholic press is making even the Catholic aware of the blessings of our Catholic schools. Many Catholics are subjectively accepting many of the philosophies and theories of public education and public educators. We must beg our Catholic parents to provide Catholic higher education for their children while the opposite attitude should prevail. Catholic parents should be pleading with us to give more opportunity for Catholic higher education. The Catholic press can and should speak out logically, convincingly, and specifically on this point. We have nothing for which to apologize in our education system and the Catholic press need never compromise for one moment in expounding Catholic education and truth.

"Another problem that should be our concern is the failure of Catholic leaders to obtain an audience and make their voices heard above the din of confusion today. If one considers fashions, the movies, or the entertainment world in general, we find that little attention or heed is given to the Catholic voice or to the Catholic press. The shame of it all is that our own Catholic people seem unaware that the church has spoken on these matters. While many observe the legion of decency code, there are many, many more who completely ignore its recommendations. The trend of modern fashion to immodesty and violation of moral virtues is as prevalent among the Catholics as those who do not profess the faith. Not too long ago His Holiness, Pius XII, called attention of Catholics throughout the world regarding indecent attire and implored a return to Christian moral standards in dress. In spite of this, there still is prevalent a general disregard for the virtue of modesty. Catholic editors have an obligation to promote these instructions of the Holy Father and to exercise the greatest prudence when accepting advertisements for their papers and magazines. We cannot put the dollar above moral principles and virtues.

"Another question that should disturb us is the lack of Catholic lay leadership in the professional and college-educated group. True, there are some college graduates who are outstanding but they are the exception. Failure to produce Catholic leaders is a natural consequence of the materialistic philosophy of today which holds that man must attain a superabundance of this world's goods and not be burdened with spiritual and eternal things. There is a complete lack of the spirit of faith.

"The failure of Catholic college graduates to be of service to the church gives at least a semblance of truth to the oft-repeated statement that the church does not receive a fair return on its investment in Catholic education. Can you say as Catholic editors that the Catholic press serves the Catholic college graduate? Does it appeal to him? Much of this lackadaisical attitude toward the church and its program could be remedied if you strove constantly and courageously to influence your readers in the proper approach to present day Catholic problems.

"At the international congress of the international union of the Catholic press, held in 1954, the Holy Father in recommending personal virtues to the members said: 'The achievement of true service to the church must be consistently inspired by a lively faith.' The lack of this spirit of faith is the capital sin of society today. Its results are evident in the lives and conduct of Catholics everywhere. The spirit of faith shows us things as they are, in their true light and perspective, indeed as God Himself sees them. We are not forgetting for a moment that faith is one of the theological virtues when we emphasize that your obligation as Catholic writers is to present all things in the light of this faith and that this lively faith must ever be the source of your inspiration. Any other motive is unworthy of a Catholic editor or writer.

"While the Catholic press cannot be a book or a series of sermons, it nevertheless must teach Catholic doctrine and explain Catholic practice. Even in the human interest stories there must ever be the awareness of Catholic thought, Catholic faith.

"We realize that yours is a difficult task. Competing with over 1,780 daily newspapers that have combined daily circulation of more than 54 million copies, Catholic editors and writers must break through mountains of misinformation, propaganda, lies, and opposition to expound Catholic faith and morals. While the task may seem insurmountable, it is worth your best effort in every edition of your paper or magazine. If the spirit of lively faith penetrates more thoroughly and completely into the lives of both Catholic and non-Catholic, the results will astonish even the most optimistic.

"Recently I read in a Catholic Press Month article that the Catholic press is primarily interested in reaching more and more souls. I believe that your primary concern should be not only to reach souls but to influence souls in Catholic thought and Catholic action. It is not large numbers of subscribers which you need now, but readers whose lives are directed along the right way, the way of faith, because they read your product. While advertising campaigns and advertising copy are essential to a successful Catholic paper, you must spend yourselves with greater generosity in advertising the Catholic Church. Again I insist that the Catholic press must keep our Catholic people aware of current problems and give them the church's answer to these problems. It is well for you to remember that the work of the Catholic editor is a task which complements the work of the clergy of Christ.

"Yours is a special privilege to be called to labor in the Catholic press. You constitute the eyes, the ears, and the voice of the church. Too often we take you and your work for granted. And yet if we were deprived of your service, the loss would be tragic. We appreciate your spirit of loyalty to Holy Mother the church, to the Holy Father, and to the hierarchy. We are aware that each day brings a new challenge because each day reveals a new attack upon the church. There is no time when you can relax your vigilance because the enemy never sleeps. And yet the Catholic press offers a romance, an adventure that has its own reward. It is that unexplainable something that thrills the soul, invigorates the mind, and excites the will to give heroic service in the cause of truth and the divine depository of truth, the Catholic Church."

Proportional Representation (P. R.) in the Election of the President of the United States—No. 1 of a Series of Seven

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD No. 1 in a series of seven statements on proportional representation in the election of the President of the United States.

There being no objection, statement No. 1 was ordered to be printed in the RECORD, as follows:

No one thing in our constitutional and political system is more important than the principle of representation underlying the election of the President of the United States.

Senate Joint Resolution 31, widely known as the Lodge-Gossett amendment, proposes a constitutional amendment which would introduce a new method of electing the President on a principle of representation foreign to the Constitution and to the American political system. This principle is known as proportional representation and is commonly referred to by its friends and enemies as PR. This amendment has an interesting history which began long before Messrs. Lodge and Gossett came to the Congress or became associated with the proposal.

In 1937 the National Home Library Foundation in Washington, D. C., published a small book under the title "Proportional Representation: The Key to Democracy," by George H. Hallett, Jr. In the author's preface, Dr. Hallett writes:

"Some years ago I had the privilege of collaborating with C. G. Hoag, of Haverford, Pa., who is the real father of proportional representation in the United States, in a more comprehensive treatment of this same subject, published by the Macmillan Co. in 1926 under the title 'Proportional Representation'."

The first six chapters of Dr. Hallett's little book are devoted to the explanation of proportional representation and to a description of its use in various cities in the United States and foreign countries. Chapter VII is titled "How the Plan Should Be Used." Among the uses urged are:

Proportional representation for municipal councils.

Proportional representation for school boards.

Proportional representation for counties.

Proportional representation for legislatures.

Proportional representation for Congress.

Proportional representation for presidential elections.

On the last subject, proportional representation for presidential elections, Dr. Hallett writes:

"In theory there is no good reason why the principles of the single-house legislature and an executive appointed by it should not be applied even to our National Government when the National House of Representatives is made really representative. But any such development seems remote."

Then, Dr. Hallet continues:

"Congressman Clarence F. Lea, of California, is urging an amendment to the United States Constitution which would leave each State with its present number of electoral votes, but would divide them among the candidates in proportion to their popular votes. * * * For the choosing of presidential electors, of course, this simple arithmetical apportionment is quite as good as proportional representation with the transferable vote would be, for the electors are mere automatons. * * *

"Fortunately, the Lea amendment is a real possibility for the immediate future. In the 1933–34 session of Congress it was reported from committee unanimously, though it was prevented from coming to a vote by the pressure of other matters. President Roosevelt let it be known at that time that he was for it."

In his conclusion, Dr. Hallett writes:

"To sum up, proportional representation can be applied with great profit to all elected bodies whose business it is to make decisions on behalf of the voters. Its heartening victories so far should be only the beginning of a great nationwide adoption."

The earlier work referred to, Proportional Representation, by Clarence Gilbert Hoag and George H. Hallett, Jr., had been published by the Macmillan Co., 11 years earlier, in 1926. On page 325 of this work is set forth a draft of a constitutiondl amendment, which with certain modifications is now on the Senate Calendar as Senate Joint Resolution 31.

Proportional Representation was published 14 months before Representative Clarence F. Lea, of California, introduced in the 1st session of the 70th Congress (January 25, 1928), House Joint Resolution 181, which proposed a constitutional amendment to apply the proportional principle to the electoral votes in each State for President and Vice President.

Proportional Representation (P. R.) in the Election of the President of the United States—No. 2 of a Series of Seven

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD No. 2 in a series of seven statements on proportional representation in the election of the President of the United States.

There being no objection, statement No. 2 was ordered to be printed in the RECORD, as follows:

Senate Joint Resolution 31, now on the Senate Calendar, proposes to change by constitutional amendment the principles of representation of the executive branch of the Government of the United States.

This brief insertion, No. 2 in a series of seven, is from the Proportional Representation Review of April 1928, quarterly of the Proportional Representation League, and is titled "The Principle of Proportional Representation for Presidential Elections." The descriptive part of that article follows:

"THE PRINCIPLE OF PROPORTIONAL REPRESENTATION FOR PRESIDENTIAL ELECTIONS

"A constitutional amendment proposed by Congressman Lea

"On January 25, Hon. Clarence F. Lea, of Santa Rosa, Democratic Congressman from the First District of California, introduced a constitutional amendment[1] to apply the proportional principle to the electoral votes of each State in the election of the President and Vice President.

"Under the provisions of the amendment—

"1. The electoral college is abolished.

"2. Each State retains a number of electoral votes for President and for Vice President equal to the number of its Representatives and Senators in Congress.

"3. Each voter votes directly for his favorite candidate for President and his favorite candidate for Vice President.

"4. The electoral votes of each State in the choice of President and in the choice of Vice President are divided among all the candidates in proportion to the popular votes cast for them within the State.

"5. The candidates receiving most electoral votes for President and Vice President are elected.

"Except in its provision for a plurality decision in case there is no absolute majority, this amendment is the same in principle as the one advocated in the Proportional Representation Review for July 1920 and July and October 1924, and in Proportional Representation by Hoag and Hallett (pp. 320 to 328).[2] It does not provide complete equality of voting power by doing away entirely with electoral votes by States (for the very good practical reason that such a change

[1] H. J. Res. 181.

[2] This amendment differed from Mr. Lea's in allowing the decision to go into Congress in case no candidate has a majority, as provided in the Constitution at present, making more equitable provisions than the present ones, however, to govern the congressional decision.

would have little chance of ratification by the small States, which now have more than their share of the electoral college), but it does have advantages over the present system which are of the most fundamental and far-reaching importance. Some of these advantages may be summarized as follows:

"1. It would make the vote of every voter count for his favorite presidential candidate whether he votes with the majority in his State or not. At the present time a Republican vote in Texas or a Democratic vote in Pennsylvania—or a hundred thousand of them for that matter—has no effect on the result, for all the electoral votes of the State are credited to the candidate of the majority. The proposed amendment would divide the electoral votes of each State among all the candidates in proportion to their popular votes and so make every vote count.

"2. It would thus stimulate voting and contribute to the political education of the electorate. When no one except a member of the locally dominant party can hope to accomplish anything by voting, it is not surprising that only half of the qualified voters register their votes and campaigning is largely confined to a few doubtful States.

"3. It would make the best qualified candidates of all parties politically available for nomination regardless of their places of residence. Under the present system a candidate who does not live in one of the few large doubtful States is not politically available because it is the polling of most votes in those States rather than of most votes in the whole country that decides the election. In the last 12 presidential elections the Republican and Democratic Parties have nominated for President or Vice President 30 citizens of New York, Indiana, and Ohio, and only 18 from all the rest of the country together.

"4. It would make a reversal of the popular verdict less likely. When the minority votes in each State are disregarded, there is considerable chance that a candidate with a majority of the popular votes will fail to win a majority of the electoral votes and be defeated. This has already happened on three occasions.

"5. It would remove the present tremendous incentives to fraud, promises of patronage, and excessive expenditure of money in the doubtful States with large blocks of electoral votes. How great these incentives are is indicated by the fact that on at least four occasions the change of less than a thousand votes in a single State would have elected a different President.

"6. It would remove the device of personal electors, which is not only useless but dangerous. If any of the electors should for any reason fail to carry out the very specific duties now prescribed for them by the Constitution, or should vote contrary to their pledges, it might easily change the result. The electoral college system has actually been responsible for gravely serious controversies on several occasions.[3] In 1856 the electors of Wisconsin were prevented from casting their votes on the prescribed day by a severe blizzard. In the famous Hayes-Tilden dispute the personal eligibility of one elector was a deciding factor. Surely in so important a matter it is unwise to take such risks unnecessarily."

[3] For a telling description of the troubles already caused by the electoral college system and its sinister possibilities for the future, see The Electoral System of the United States, by J. Hampden Dougherty (G. P. Putnam's Sons, New York and London, 1906).

Proportional Representation (P. R.) in the Election of the President of the United States—No. 3 of a Series of Seven

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD, No. 3 in a series of seven statements on proportional representation in the election of the President of the United States.

There being no objection, statement No. 3 was ordered to be printed in the RECORD, as follows:

This chapter in the early development of Senate Joint Resolution 31 is from the Proportional Representation Review of October 1929, quarterly organ of the Proportional Representation League.

This publication was the organ of the Proportional Representation League, made up of apostles of a principle of representation foreign to the American political system.

The title of this article is "The National Elections of 1928," and applies specifically to the electoral college. In this article are included the most significant sentences of House Joint Resolution 106 of the 71st Congress, which language now appears in Senate Joint Resolution 31 pending before the Senate. The enthusiasm of the proportionalists for the application of this principle in the election of the President is clear from this article. The article follows:

"THE NATIONAL ELECTIONS OF 1928

"The electoral college

"The presidential election of 1928 illustrates well the defects of the system used. In Pennsylvania 1,067,586 and in New York 2,089,863 Democratic votes failed to elect a single presidential elector. The reason, of course, is that since each State votes for its electors on a general ticket, the party in the State that polls most votes captures all the seats, the ballots of all other parties in that State, whether few or many, being thrown away.

"In spite of the great element of chance in this system, it works out in most cases, of course, in giving the Presidency to the largest party. But not always; in 1876, for example, Tilden had most popular votes, but Hayes won the Presidency. The same thing happened on two other occasions.

"And that is not the only defect of the system; it also presents extraordinary temptations to corruption in States in which the scale is likely to be turned by a few votes. In the last election, though votes were worth but little in California where it would have required the change of 273,980 from Hoover to Smith to win that State's 13 seats in the electoral college, or 21,075 votes for each seat, they were worth a great deal in Texas where it would have required the change of only 13,003 votes to win the State's 20 seats, only 650 votes for each one. To go a step further, it would have required a change of only 416,055 votes in certain crucial States, out of a total presidential vote of over 36 million (or one-ninetieth of the votes cast) to have made Mr. Smith President rather than Mr. Hoover.

"The remedy for these grave defects in our system of choosing the President is explained fully in Hoag and Hallet's Proportional Representation,[1] pages 320–328. The chief change is the apportionment of each State's Presidential votes (the election of actual persons to serve as Presidential electors is not only useless but dangerous[2]) not all to one party but to the several parties in proportion to the votes they have cast in the election. For this apportionment neither the Hare system nor any other system of proportional representation is needed: all that is neded is to do a little sum in arithmetic as soon as the ballots have been counted. For example, in this last election, since in Texas Hoover polled 367,036 votes, Smith 341,032 votes, and other candidates 931 votes, Hoover would have been given, according to this plan, three hundred sixty-seven thousand and thirty-six seven hundred eight thousand nine hundred and ninety-ninths of the State's Presidential votes, and Smith would have been given three hundred forty-one thousand and thirty-two seven hundred eight thousand nine hundred ninety-ninths of them.[3]

"The most satisfactory way of bringing this change about is by an amendment to the Federal Constitution. A proposed amendment for the purpose will be found on pages 325–328 of Hoag and Hallett's book. A less comprehensive but excellent amendment with the same object was advocated in the House of Representatives by the Honorable Clarence F. Lea, of California, on June 7, 1929, and introduced by him for the second time,[4] as House Joint Resolution 106, on June 13, 1929. The most significant sentences of this resolution are as follows:

" 'The electoral-college system of electing the President and Vice President of the United States is hereby abolished. * * * Each State shall be entitled to a number of electoral votes equal to the whole number of Senators and Representatives to which such State may be entitled in the Congress. * * * Each person for whom votes were cast for President in each State shall be credited with such proportion of the electoral votes of that State for such office, as the vote for such person in that State for such office bears to the total vote of the electors[5] of that State for all persons for whom votes were cast for President.'

"Representatives in Congress

"For many years the Proportional Representation Review has published, after each congressional election, a summary of the results based on official sources. That of the elections of 1928 will be found in connection with this article.

"As usual, the results show some of the more obvious weaknesses of the system of election used, which differs from that used for presidential electors in apply the plurality principle to single-member districts instead of whole States. For example, 1,564,000 Democrats in the southern States of Alabama, Arkansas, Florida, Georgia,

[1] The Macmillan Co., New York, 1926. On sale by the Proportional Representation League, for its benefit, at 311 South Juniper Street, Philadelphia.

[2] See The Electoral System of the United States, by J. Hampden Dougherty, New York, 1906.

[3] It may be asked why the President cannot be elected directly by popular vote. The answer is brief—because so many of the less populous States enjoy representation in the electoral college in excess of their per capita share that it would probably be impossible to make any change in the Constitution of that sort.

[4] See the Proportional Representation Review for April 1928.

[5] Voters.

Louisiana, Mississippi, South Carolina, and Texas elected all of those States' 74 Representatives in Congress, whereas 1,769,000 Democratic voters in the northern States of Connecticut, Idaho, Iowa, Maine, Michigan, Minnesota, New Hampshire, North Dakota, Oregon, South Dakota, Utah, and Wisconsin, failed to elect a single one of their 69 Representatives.

"But this method of election not only fails to give the minority its share of the Representatives,, as in the cases of the southern Republicans and the northern Democrats, it sometimes fails to give even the majority its due. In New York the Democrats, with 1,989,000 votes elected 23 Congressmen, while the Republicans, with 2,072,000 votes elected but 20. Similarly in Maryland the Democrats, who cast 226,116 votes, elected 4 of the State's Representatives, and the Republicans with 234,848 votes elected only 2.

"Results of the congressional elections,[1] Nov. 6, 1928

State	Votes cast			Members elected			Members by proportional representation [2]

[1] Official figures as published by the Clerk of the House of Representatives.

[2] The figures in this column have been calculated as if each State were a single congressional district electing its allotted quota of Members by proportional representation with the single transferable vote (Hare system), assuming that each voter voted for all the candidates of the party for which he actually voted and for no other. If proportional representation were actually used the largest States would probably be divided into 2 or more multimember districts, but that would not interfere seriously with the proportionality of the result.

[3] This is the total vote for the Republican nominees who call themselves Republicans. 7 of them, with a total vote of 774,830, received the Democratic as well as the Republican nomination.

[4] This is the total vote for the Democratic nominees who call themselves Democrats. 1 of them, with a vote of 56,381, received the Republican as well as the Democratic nomination.

[5] The total votes given for Illinois are the totals of the votes cast for district Representatives in the 25 congressional districts. 2 Representatives were elected from the State at large.

[6] 2 of the 21 Republican Members were elected at large.

[7] This figure includes 61,697 votes for a Democratic candidate who received the endorsement of the Republican Party.

[8] These seats should have gone to the Farmer-Labor Party, which cast 251,126 votes of those listed under "Others."

[9] This seat should have gone to the Socialists who cast 103,700 votes of those listed under "Others."

[10] A number of the Republican and Democratic candidates received the endorsement of the Prohibition, Labor, and Socialist Parties.

[11] This is the total vote for the Republican nominees who call themselves Republicans. 4 of them, with a total vote of 291,384, received the Democratic nomination as well as the Republican.

[12] A proportional assignment on the basis of the totals for the whole country instead of State by State would be: Republican 246, Democratic 182, other parties (if they were united), 7. The discrepancy is due chiefly to 2 factors: (1) The vote in the South is very small in proportion to population, so that the apportionment of Members to States on the basis of population gives southern votes a greater value than northern votes; (2) the number of Members allotted to a number of the smaller States is too small to allow a satisfactory proportional assignment on a State basis.

"Besides these more obvious weaknesses of the congressional election system there are, of course, others that are not shown by the returns at all. We refer to the fact that even of those ballots that do help elect the candidate marked, many, often the majority, do not help the candidate wanted. For the old single-shot ballot used for congressional elections—the ballot that gives the voter no opportunity to say what shall be done with his vote if it cannot help the candidate marked—forces many voters, often the majority, to mark a candidate who, they think, has some chance and is not quite the worst of the lot.

"Sometime, therefore, when the people are ready, we hope the present system of electing Congressmen will be supplanted by one that is suitable for the purpose.

Proportional Representation (P. R.) in the Election of the President of the United States—No. 4 of a Series of Seven

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD No. 4 in a series of seven statements on proportional representation in the election of the President of the United States.

There being no objection, statement No. 4 was ordered to be printed in the RECORD, as follows:

Another chapter in the history of Senate Joint Resolution 31 is an article from the October 1928 issue of Proportional Representation Review, quarterly organ of the Proportional Representation League. This article, The Next President May Be a Minority Choice, is further evidence that Senate Joint Resolution 31 is the child of the Proportional Representation League and is based on the principles which that league would

have introduced into every phase of representative government in the United States:

"THE NEXT PRESIDENT MAY BE A MINORITY CHOICE [1]

"It is entirely posible that Mr. Hoover will receive a handsome majority of the popular vote this fall and yet be defeated, or that he will fail to receive as many popular votes as Governor Smith and yet be elected. Already on three occasions a President has been chosen who had fewer popular votes than his principal opponent,[2] and analysis of the figures at the last election shows that a recurrence of minority rule this fall is not unlikely. In fact, so long as the votes of each State in the electoral college are all counted for one candidate and the popular votes cast within the State for other candidates are disregarded, there can never be any assurance that the majority will win.

"In 1924 President Coolidge had a plurality over John W. Davis of over seven million popular votes and 246 votes in the electoral college. The electoral college stood 382 for Coolidge, 136 for Davis, and 13 for La Follette. Overwhelming as this lead appears, examination shows that it could have been wiped out entirely by a change of less than one million votes in 8 of the 18 Coolidge States which have at least 1 Democratic United States Senator and which may therefore be regarded as possible Democratic territory this fall. In fact, if the Democratic Party can hold the States it won in 1924 and capture by however small a margin only six of the large doubtful States as indicated in the table below, it will elect the President regardless of the total popular vote.

"Basis of possible Democratic victory

"Twelve Southern States which Davis carried in 1924: 136 electoral votes.

"New York (now has Democratic Governor and two Democratic Senators): 45 electoral votes.

"Ohio (now has Democratic Governor): 24 electoral votes.

"Massachusetts (Senator last elected is Democratic): 18 electoral votes.

"Missouri (now has two Democratic Senators): 18 electoral votes.

"New Jersey (now has Democratic Governor and one Democratic Senator): 14 electoral votes.

"Kentucky (Senator last elected is Democratic): 13 electoral votes.

"Total: 268 electoral votes.

"Majority that insures election: 266 electoral votes.

"Any losses from this list might easily be made up from the following 15 States with a total of 90 electoral votes, each of which has elected a Democratic Governor or United States Senator within the last 6 years: Arizona[3] (3 electoral votes), Colorado[4] (6), Delaware[5] (3), Iowa[5] (13), Maryland[3] (8), Michigan[5] (15), Montana[3] (4), Nevada[5] (3), New Mexico[6] (3), Rhode Island[5] (5), South Dakota[4] (5), Utah[7] (4), Washington[5] (7), West Virginia[5] (8), and Wyoming[5] (3). There is ample opportunity for a Democratic victory without a Democratic majority vote.

"On the other hand, there is a possibility of a Democratic majority vote without a Democratc victory. The Democrats could even poll more votes than the Republicans without changing the electoral vote of 1924 in the least. In fact, if Hoover can hold the 15 States which Coolidge carried with pluralities of more than 100,000 over Davis, he will win, even if all the other States go for his opponent by overwhelming majorities, for these 15 States hold a majority of the votes in the electoral college.

Footnotes at end of speech.

"Basis of possible Republican victory

"(The 15 Coolidge States in which Coolidge led Davis by more than 100,000)

"New York: 45 electoral votes.
"Pennsylvania: 38 electoral votes.
"Illinois: 29 electoral votes.
"Ohio: 24 electoral votes.
"Massachusetts: 18 electoral votes.
"Michigan: 15 electoral votes.
"Indiana: 15 electoral votes.
"New Jersey: 14 electoral votes.
"California: 13 electoral votes.
"Iowa: 13 electoral votes.
"Minnesota: 12 electoral votes.
"Kansas: 10 electoral votes.
"Connecticut: 7 electoral votes.
"Washington: 7 electoral votes.
"Colorado: 6 electoral votes.
"Total: 266 electoral votes.

"Majority that insures election: 266 electoral votes.

"Of course, any losses in this list might easily be made up from the 20 other States, with a total of 116 electoral votes, which President Coolidge carried in 1924.[8] There is also ample opportunity for a Republican victory without a Republican majority vote.

"Under the present method of electing the President, as under the district method of electing Congressmen, it is not the number of votes for a party which counts but the number cast for it in an advantageous location. In Pennsylvania, the Democrats can take nearly half a million votes from the Republicans without gaining a single elector. But a smaller gain in New York would switch the State's 45 electoral votes from the Republicans to the Democrats, and so give the party a net gain of 90. In the 12 Southern States which gave Davis his 136 electoral votes more than 900,000 Coolidge votes were cast—almost half as many as were cast in those States for Davis—but they secured no representation in the electoral college. In the New England States, exclusive of Massachusetts, on the other hand, a smaller number of Republicans—less than 700,000—elected 26 electors.

"A practical remedy: Proportional representation for the electoral college

"To give effect to all votes, wherever they are cast, and so remove the danger of defeating the popular choice, two remedies have been proposed. The obvious remedy of direct election from the country at large seems at present impracticable because it would reduce the voting power of the smaller States, which are now overrepresented in the electoral college, and so could hardly be expected to receive support from enough of them to write it into the Constitution.

"Another remedy, almost as effective, was proposed in Congress as early as 1877[9] and brought forward again in the last session by Congressman Clarence F. Lea, of California, and Senator David I. Walsh, of Massachusetts. It keeps the device of electoral votes but proposes to divide those of each State among the several candidates, giving each candidate the same share of the electoral votes that he has of the popular vote. For example, if Hoover polled four-ninths of the popular vote in New York, it would give him four-ninths of the State's electoral vote—20 out of 45—instead of none at all. And if Governor Smith polled six-nineteenths of the popular vote in Pennsylvania, it would give him 12 of the 38 electoral votes for Pennsylvania.

"This simple application of the proportional representation principle—which is now used for legislative elections in a large part of the civilized world and for electoral colleges in Finland and Denmark[10]—would give every voter a chance to make his vote count for the candidate of his choice. It would remove the distorted representation of the large States which is so likely under present conditions to upset the popular verdict.[11]

"A resolution by Senator Walsh, of Massachusetts

"Congressman Lea's resolution (H. J. Res. 181) for a constitutional amendment abolishing personal electors and providing for a proportional assignment of electoral votes was described in our April issue. Senator Walsh on May 8 introduced a concurrent resolution (S. Con. Res. 23) calling on the States to adopt proportional representation for the electoral college of their own accord, which they already have a right to do under the Constitution if personal electors are retained.

"The resolution follows nearly word for word a resolution introduced by Senator Magnus Johnson (Farmer-Labor) of Minnesota in 1925 and printed in full in the Proportional Representation Review for April 1925. It is being sent by Senator Walsh and William C. Lee, of Washington, with a supporting memorandum by Mr. Lee which Senator Walsh had read into the CONGRESSIONAL RECORD, to all members of the legislature and a selected list of citizens in the States of Massachusetts, Minnesota, Wisconsin, Nebraska, Ohio, and Tennessee, in the hope that one or more of them may be induced to put its suggestions into effect. This could very easily be done by means of the simplest sort of party list system, even without the names of the candidates for electors appearing on the ballot.

"Of course the only thoroughly safe plan, for reasons outlined in our issue for last April, would involve the abolition of personal electors by constitutional amendment."

Footnotes at end of speech.

[1] The substance of the first part of this article was sent out by the Proportional Representation League as a news release on June 21.

[2] When John Quincy Adams was elected over Andrew Jackson in 1824, when Hayes was elected over Tilden in 1876, and when Harrison was elected over Cleveland in 1888.

[3] Now has a Democratic governor and two Democratic Senators.

[4] Now has a Democratic governor.

[5] Now has one Democratic Senator.

[6] Senator last elected is Democratic.

[7] Now has a Democratic governor and one Democratic Senator.

[8] Or from Wisconsin (13 electoral votes), which has a Republican Governor and 2 Republican Senators and gave Coolidge a lead of 240,000 over Davis for second place in 1924; Oklahoma (10), which has 1 Republican Senator and went for Harding in 1920; and Tennessee (12), which went for Harding in 1920.

[9] By Representative Levi S. Maish and Senator Charles R. Buckalew, both of Pennsylvania. (See J. Hampden Dougherty, the Electoral System of the United States (New York, 1906), pp. 351 ff).

[10] In Finland the electoral college chooses the president; in Denmark it chooses the upper house of Parliament by proportional representation with the single transferable vote. In Sweden and the Netherlands also the upper house of Parliament is chosen by proportional representation by bodies (Provincial councils and other local authorities) which are themselves chosen by proportional representation.

[11] For fuller treatments of this proposal see Proportional Representation by Hoag and Hallett, pp. 320–328, articles in the Proportional Representation Review for July 1920, July and October 1924, and April 1928, and Mr. Dougherty's book cited in footnote 9.

Proportional Representation (P. R.) in the Election of the President of the United States—No. 5 of a Series of Seven

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD No. 5 in a series of 7 statements on proportional representation in the election of the President of the United States.

There being no objection, statement No. 5 was ordered to be printed in the RECORD, as follows:

This chapter is in the historical development of Senate Joint Resolution 31, which proposes to change the basis of presidential elections to the principle of proportional representation, is from the April 1930 issue of the Proportional Representation Review, which was the organ of the Proportional Representation League. This article welcomed Representative Clarence F. Lea's reintroduction in the 1st session of the 71st Congress his proposal to amend the Constitution with respect to election of the President and Vice President. The title of this article "Proportional Representation Proposed Again for Presidential Elections" is documentary evidence that the apostles of the proportional representation movement believed the plan for electing the President to be based on proportional representation. The article follows:

"PROPORTIONAL REPRESENTATION PROPOSED AGAIN FOR PRESIDENTIAL ELECTIONS

"A constitutional amendment[1]

"A measure before the present Congress which has been given far less attention than it deserves is the constitutional amendment by Congressman Lea of California[2] to abolish the electoral college and elect the President of the United States by popular vote without disturbing the relative voting power of the several States.

"Mr. Lea does not make the usual proposal of a direct nationwide plurality vote, for the very good reason that a sufficient number of the smaller States which would lose in voting power under that arrangement could not be expected to ratify it. He leaves each State its present allotment of electoral votes but distributes them among the candidates in proportion to their popular votes within the State.

"New York, for example, in the election of 1928, gave President Hoover 2,193,344 popular votes out of a total of 4,405,626. Since this was 22.403 forty-fifths of the votes in the State, Mr. Lea's plan would have given Mr. Hoover 22.403 electoral votes from New York, instead of all 45. And since former Governor Smith polled 21.346 forty-fifths, he would have received 21.346 of New York's electoral votes instead of none at all. Similarly in the States which Smith carried Hoover would have received his due share of the electoral votes, and the electoral vote for the whole country would have been much more nearly proportionate to the popular vote than it actually was.[3]

"Such a plan would have at least the following outstanding advantages:

"1. It would make a reversal of the popular verdict less likely. Three times already a candidate has been defeated for President who polled more popular votes than his successful opponent, simply because all the votes cast for him in States which he failed to carry were disregarded. In the last presidential election it would have required a change of only 417,000 votes in certain close States, or one-ninetieth of the total, to have elected Smith President, though Hoover would still have had a popular plurality of over 5 million. On the other hand it would have required a change of only 202,000 votes to have deprived Smith of all the electoral votes he did receive. A method of election under which the disposition of 2 percent of the popular votes can make all the difference between no electoral votes at all and election is obviously not to be trusted to elect the right man.

"2. It would give every voter the satisfaction of helping his favorite candidate for President whether he voted with the majority in his State or not. In the last presidential election three quarters of a million Republican votes in Massachusetts and 2 million Democratic votes in New York had no more effect on the result than so much waste paper.

"3. It would thus stimulate voting and contribute to the political education of the electorate. When no one except a member of the locally dominant party can hope to accomplish anything by voting, it is not surprising that only half of the qualified voters usually register their votes and that campaigning is largely confined to a few doubtful States.

"4. It would make the best qualified candidates of all parties politically available for nomination regardless of their places of residence. Under the present system a candidate who does not live in one of the few large doubtful States is usually not politically available because it is the polling of most votes in those States rather than of most votes in the whole country that decides the election. In the last 13 presidential elections the Republican and Democratic Parties have nominated for President or Vice President 31 citizens of New York, Indiana, and Ohio, and only 21 from all the rest of the country together.

"5. It would remove the present tremendous incentives to fraud, promises of patronage, and excessive expenditure of money in the doubtful States with large blocks of electoral votes. How great these incentives are is indicated by the fact that on at least four occasions the change of less than a thousand votes in a single State would have elected a different President.

"6. It would remove the device of personal electors, which is not only useless but dangerous. If any of the electors should for any reason fail to carry out the very specific duties now prescribed for them by the Constitution, or should vote contrary to their pledges, it might easily change the result. The electoral college system has actually been responsible for gravely serious controversies on several occasions. In 1856 the electors of Wisconsin were prevented from casting their votes on the prescribed day by a severe blizzard. In the famous Hayes-Tilden dispute the personal eligibility of one elector was a deciding factor. Surely in so important a matter it is unwise to take such risks unnecessarily.

"On March 14 the House Committee on Election of President, Vice President, and Representatives in Congress, to which Mr. Lea's resolution was referred, held a public hearing at which Mr. Lea presented a mass of instructive evidence in favor of his proposal, which was received by the committee with sympathetic attention. Mr. Hoag and Mr. Hallett of the Proportional Representation League also spoke."

The Proportional Representation League was equally interested in electing Members of the House of Representatives on their principles.

[1] The first part of this article was sent out on April 18 with the weekly editorial service of the National Municipal League.

[2] H. J. Res. 106, 71st Cong., 1st sess.

[3] The total popular votes of the three leading candidates, as published in the official statement of the Clerk of the House of Representatives, were: Hoover 21,388,300 (58.1 percent), Smith 15,005,443 (40.8 percent), and Thomas 266,549 (.7 percent). The total electoral votes were Hoover 444 (83.6 percent), Smith 87 (16.4 percent), and Thomas 0 (0 percent). Mr. Lea calculates that the total electoral votes under his proposed plan would have been Hoover 291.398 (54.9 percent), Smith 231.251 (43.6 percent, and Thomas 2.872 (.5 percent).

Proportional Representation (P. R.) in the Election of the President of the United States—No. 6 of a Series of Seven

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD No. 6 in a series of 7 statements on proportional representation in the election of the President of the United States.

There being no objection, statement No. 6 was ordered to be printed in the RECORD, as follows:

I have stated before in this series of items, which I have introduced into the CONGRESSIONAL RECORD and with reference to Senate Joint Resolution 31, now pending on the Senate Calendar and which proposes to introduce a new principle of representation in presidential elections, that the proponents of proportional representation were equally concerned with the election of House Members according to their plan.

Today's chapter in the historical development of Senate Joint Resolution 31 is in the nature of an aside from the Presidency because it deals with the election of Members of the House of Representatives. This article is titled "The Nation Misrepresented" and applies the principles of proportional representation to the congressional elections of November 1930. It is from Proportional Representation Review, quarterly organ of the Proportional Representation League.

It is especially important that this old article be brought to public attention. The adoption of Senate Joint Resolution 31 with respect to the election of the President will give impulse and force to the movement to elect the House of Representatives on the same principles. The article follows:

"THE NATION MISREPRESENTED

"An analysis of the last congressional elections [1]

"With the control of the next Congress still in the hands of Providence, it is pertinent to inquire whether the even balance in the representative body reflects a similar balance in the sentiments of the voters or whether the somewhat difficult situation which confronts the Nation is merely the result of faulty election machinery.

"A glance at the figures of last fall's congresisonal elections gives a first impression that the results were unfair to the Republicans: the Republican candidates for the National House polled 2 million more votes than their Democratic opponents.

"But this impression overlooks the fact that in large parts of the South the Democrats had no opposition and so did not need to poll their full vote.

"If, to avoid this error, one calculates State by State the proper representation of each party in proportion to the vote cast, it appears that the results actually were unfair to the Democrats: on such a proportional basis State by State the Democrats would have elected 225 Representatives to the Republicans' 204.

"But this also is inconclusive, for if the method of election had allowed due representation to minorities in conformity with the old American slogan about taxation without representation, hundreds of thousands of Republican votes would have been cast in the South and Democratic votes in the North which were not cast under present discouraging conditions. What the net result would have been no one can tell.

"The one thing certain from a careful examination of the figures is that the actual result was very much a gamble, depending on the disposition of a handful of votes in the close districts, and that the existing near-deadlock bears no necessary relation to the real wishes of the voters.

"Minority rule

"How defective is our present method of electing Congressmen as a means of reflecting public sentiment becomes very clear as the results are examined State by State.

"In two States the so-called majority system in single-member districts gave a majority of seats to the minority party. In West Virginia the minority party actually elected twice as many Represenatives as the majority, because its votes happened to be distributed more favorably in the geographical districts. Here are the figures:

"West Virginia

Party	Votes cast	Representatives elected	Representatives in proportion to votes
Republican	264,160	4	3
Democratic	264,951	2	3

[1] Analyses of previous congressional elections will be found in the Proportional Representation Reviews for October 1929, April 1927, April 1925, and earlier issues.

"Illinois [1]

Party	Votes cast	Representatives elected	Representatives in proportion to votes
Republican	1,002,947	15	13
Democratic	1,020,319	12	14
Others	5,808	0	0

[1] The total votes given for Illinois are the totals of the votes cast for district Representatives in the 25 congressional districts. 2 Representatives, 1 Republican, and 1 Democrat, were elected from the State at large.

"Minorities excluded

"Of course the minority party was more frequently underrepresented.

"In North Carolina the Republicans polled nearly two-fifths of the votes, but elected none of the State's 10 Representatives in Congress. This has been the usual state of affairs for many years, a temporary exception giving the Republicans two Congressmen (instead of their rightful four) in the Hoover landslide of 1928. The Republicans of North Carolina, by living in the State, increase its representation and so regularly contribute four Congressmen to the party they vote against.

"In Michigan the Democrats polled 170,000 votes—nearly a third as many as their Republican opponents—but elected not 1 of the State's 13 Members. Less than 170,000 Democratic votes elected 10 Members in Alabama, and 12 in Georgia.

"In Missouri the vote of the Democrats exceeded that of the Republicans by less than 10,000 in a total poll of nearly a million. Yet the Democrats elected three times as many of the State's Members.

"Missouri

Party	Votes cast	Representatives elected	Representatives in proportion to votes
Democratic	477,467	12	8
Republican	468,853	4	8
Others	743	0	0

"The results of many other States, summarized in the table on page 46 present incongruities almost as striking.

"With the minority votes in all districts, totaling many millions, going completely to waste, justice even to organized parties is not to be expected. Add the certainty of similar injustices in the primaries of each party and the failure of millions to vote as they feel or to vote at all because they have no hope of electing the sort of officials they really want, and the picture under present methods becomes hopeless.

"Representative government will not become a reality until the rules of the game are changed to assure all elements their fair share. This can easily be done without constitutional amendment when the American people realize its need. In fact, under the new apportionment act, any State could elect its members in the national House of Representatives by proportional representation, by act of its own legislature, without waiting for other States to do so.

"One-party elections

"Meanwhile the breakdown of the two-party system continues apace. The long-continued under-representation of the minority party has already, in most parts of the country, reduced it to a condition of innocuous desuetude. In four-fifths of the area of the United States a one-party system of government is, for practical purposes, in full effect.

"Under such conditions it is something of a stretch of the imagination to call either of the two great national parties either national or (if party be defined as in the Oxford dictionary as a body of persons united in a cause, opinion) a party. Each is an inharmonious aggregation of nearly all the warring elements in one part of the country. For the sake of participating in the primary of the major party, which has become the real election, low-tariff advocates in Pennsylvania register as Republicans and high-tariff advocates in Alabama as Democrats.

"How sharply and artificially the present methods of election have divided the country will be seen from the map on the back cover of this Review, and from the following tables:

"The solid South (Maryland, Virginia, North and South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, Oklahoma, Texas, New Mexico, and Arizona)

Party	Votes cast	Representatives elected	Representatives in proportion to votes
Democratic	1,999,638	107	80
Republican	761,143	[1]3	30
Others	3,083	0	0

"The solid Northwest (Michigan, Wisconsin, Minnesota, Iowa, North and South Dakota, Montana, Wyoming, Colorado, Utah, Nevada, Idaho, Washington, Oregon, and California)

Party	Votes cast	Representatives elected	Representatives in proportion to votes
Republican	3,693,043	74	57
Democratic	1,316,895	[1]7	20
Others	380,572	[1]1	5

[1] No more than 1 minority Member was elected in any one State.

"These tables make it clear that under proportional representation, even if no more opposition votes were cast than actually are cast under the present adverse conditions, there would no longer be a solid South or a solid part of the North. Each of the great parties would become truly national in scope.

"And since one could vote for the minority party without throwing one's vote away, there would be a real chance of an alinement on the basis of principles instead of mere geography.

"Results of the congressional elections,[1] Nov. 4, 1930

State	Votes cast			Members elected			Members by proportional representation [2]		
	Republican	Democratic	Others	Republicans	Democrats	Others	Republicans	Democrats	Others
Alabama	32,630	165,403		0	10	0	1	9	0
Arizona		52,342		0	1	0	0	1	0
Arkansas		145,108		0	7	0	0	7	0

Oklahoma	173,944	282,629	166	1	7	0	3	5	0
Oregon	116,642	107,187	4,696	2	1	0	2	1	0
Pennsylvania [11]	[11] 1,421,634	[11] 566,594	[11] 31,143	[11] 33	[11] 3	0	26	10	0
Rhode Island	113,354	105,968		2	1	0	2	1	0
South Carolina		16,163		0	7	0	0	7	0
South Dakota	106,429	55,718	7,926	3	0	0	2	1	0
Tennessee	[12] 72,354	132,615	1,908	2	8	0	3	7	0
Texas	45,281	249,450		1	17	0	2	16	0
Utah	80,981	62,828	10,944	2	0	0	1	1	0
Vermont	49,074	23,741	7	2	0	0	2	0	0
Virginia	54,451	109,013	1,466	1	9	0	3	7	0
Washington	205,942	75,424	8,017	4	1	0	4	1	0
West Virginia	264,160	264,951		4	2	0	3	3	0
Wisconsin	395,887	72,451	[13] 51,080	10	1	0	9	1	[14] 1
Wyoming	44,890	24,519		1	0	0	1	0	0
Total	13,067,579	11,048,971	660,157	218	216	1	[15] 204	[15] 225	[15] 6

[1] Official figures as published by the Clerk of the House of Representatives.

[2] The figures in this column have been calculated as if each State were a single congressional district electing its allotted quota of Members by proportional representation with the single transferable vote (Hare system), assuming that each voter voted for all the candidates of the party for which he actually voted and for no other. If proportional representation were actually used, the largest States would probably be divided into 2 or more multimember districts, but that would not interfere seriously with the proportionality of the result.

[3] This is the total vote for the Republican nominees who call themselves Republicans. 7 of them, with a total vote of 549,891, received the Democratic as well as the Republican nomination.

[4] This is the total vote for the Democratic nominees who call themselves Democrats. 1 of them, with a vote of 66,703, received the Republican as well as the Democratic nomination.

[5] The total votes given for Illinois are the totals of the votes cast for district representatives in the 25 congressional districts. 2 Representatives, 1 Republican and 1 Democrat, were elected from the State at large.

[6] Of these votes 271,599 were cast for candidates of the Farmer-Labor Party.

[7] Farmer-Labor.

[8] This is the total vote for the Democratic nominees who call themselves Democrats. 1 of them, with a vote of 39,340, received the Socialist as well as the Democratic nomination.

[9] Of these votes 163,286 were cast for candidates of the Socialist Party.

[10] Socialist.

[11] In the several Pennsylvania districts where the same candidate was nominated by 2 or more parties, the votes have been distributed to the proper parties but the election has been credited to the party to which the successful candidate actually belongs. 5 of the successful Republicans were endorsed by the Democrats, and 1 successful Democrat by the Republicans. In 5 cases the successful candidate had Prohibition, Labor, or Socialist endorsement.

[12] This total includes the vote cast for Republicans, 38,106, and for Independent Republicans, 34,248. Independent Republicans opposed the regular Republican candidates in 2 districts.

[13] Of these votes 47,520 were cast for candidates of the Socialist Party.

[14] Socialist.

[15] A proportional assignment on the basis of the totals for the whole country instead of State by State would be: Republicans 230, Democrats 194, other parties (if they were united), 11. The discrepancy is due chiefly to 2 factors: (1) the vote in the South is very small in proportion to population, so that the apportionment of Members to States on the basis of population gives southern votes a greater value than northern votes; (2) the number of Members allotted to a number of the smaller States is too small to allow a satisfactory proportional assignment on a State basis. See the opening paragraphs of this article.

Proportional Representation (P. R.) in the Election of the President of the United States—No. 7 and Last of a Series of Seven

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD No. 7 and last in a series of 7 statements on proportional representation in the election of the President of the United States.

There being no objection, statement No. 7 was ordered to be printed in the RECORD, as follows:

In concluding these essays in the historical development since January 25, 1928, I submit a copy of Senate Joint Resolution 181, 70th Congress, 1st session introduced by Representative Clarence F. Lea, of California.

During course in the Congress some of its language has been rephrased by the committee of the several intervening Congresses. The language rephrased over the years is indicated by italics. All of the language in roman type remains unchanged today in Senate Joint Resolution 31. The document follows:

"House Joint Resolution 181

"Joint resolution proposing an amendment to the Constitution of the United States providing for the election of President and Vice President

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, (two-thirds of each House concurring therein), That an amendment is hereby proposed to the Constitution of the United States which shall be valid to all intents and purposes as part of the Constitution when ratified by three-fourths of the legislatures of the several States. Said amendment shall be as follows:

"That the 12th amendment of the Constitution of the United States be, and is hereby, amended to read as follows:

"ARTICLE XII

"The electoral college system of electing the President and Vice President of the United States is hereby abolished. The President and Vice President shall be voted for by the people of the several States. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature. Congress shall determine the time of such presidential election, which shall be the same throughout the United States. Until otherwise determined by the Congress, such election shall be held on the Tuesday next after the first Monday in November *in every fourth year succeeding every election of a President and Vice President.* Each State shall be entitled to a number of electoral votes equal to the whole number of Senators and Representatives to which such State may be entitled in the Congress.

"Within 45 days after *the presidential* election, or at such time as the Congress shall direct, *the secretary of state* of each State, *or other corresponding officer of said State who, by the law thereof, has the custody of the official election returns thereof, shall make distinct lists of all persons voted for as President and of all persons voted for as Vice President* and the number of votes for each and the total vote of the electors of the State for all *candidates for such offices, respectively,* which lists he shall sign and certify and transmit sealed to the seat of the Government of the United States, directed to the President of the Senate—the President of the Senate shall in the presence of the Senate and House of Representatives open all certificates and the votes shall then be counted—each person *voted for as President or Vice President in each State* shall be credited with such proportion of the electoral votes *of said State for such office, respectively, as the vote for said person in said State for such office bears to* the total vote of the electors *of said State for all candidates for said office.* In making the computations, fractional numbers less than one one-thousandth shall be disregarded *unless a more detailed calculation would change the result of the election.* The person having the greatest number of electoral votes for President shall be President. *The person having the greatest number of electoral votes for Vice President shall be Vice President,* but no person constitutionally ineligible to the office of President shall be eligible to that of Vice President of the United States.

"This amendment shall take effect on the *1st day of July following its ratification.*"

For comparison with the above document, I submit Senate Joint Resolution 31 as reported by the Committee on the Judiciary of the Senate in this Congress:

"Senate Joint Resolution 31

"Joint resolution proposing an amendment to the Constitution of the United States providing for the election of President and Vice President

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That an amendment is hereby proposed to the Constitution of the United States which shall be valid to all intents and purposes as part of the Constitution when ratified by three-fourths of the legislatures of the several States. Said amendment shall be as follows:

" 'ARTICLE II

" 'SEC. 1. The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of 4 years, and together with the Vice President, chosen for the same term, be elected as provided in this Constitution.

" 'The electoral college system of electing the President and Vice President of the United States is hereby abolished. The President and Vice President shall be elected by the people of the several States. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature. Congress shall determine the time of such election, which shall be the same throughout the United States. Until otherwise determined by the Congress, such election shall be held on the Tuesday next after the first Monday in November of the year preceding the year in which the regular term of the President is to begin. Each State shall be entitled to a number of electoral votes equal to the whole number of Senators and Representatives to which such State may be entitled in the Congress.

" 'Within 45 days after such election, or at such time as the Congress shall direct, the official custodian of the election returns of each State shall make distinct lists of all persons for whom votes were cast for President and the number of votes for each, and the total vote of the electors of the State for all persons for President, which lists he shall sign and certify and transmit sealed to the seat of the Government of the United States, directed to the President of the Senate. On the 6th day of January following the election, unless the Congress by law appoints a different day not earlier than the 4th day of January and not later than the 10th day of January, the President of the Senate shall in the presence of the Senate and House of Representatives open all certificates and the votes shall then be counted. Each person for whom votes were cast for President in each State shall be credited with such proportion of the electoral votes thereof as he received of the total vote of the electors therein for President. In making the computations, fractional numbers less than one one-thousandth shall be disregarded. The person having the greatest number of electoral votes for President shall be President, if such number be at least 40 percent of the whole number of such electoral votes. If no person have at least 40 percent of the whole number of electoral votes, then from the persons having the two highest numbers of electoral votes for President the Senate and House of Representatives sitting in joint session shall choose immediately, by ballot, the President. A majority of the votes of the combined authorized membership of the Senate and the House of Representatives shall be necessary for a choice.

" 'The Vice President shall be likewise elected, at the same time and in the same manner and subject to the same provisions, as the President, but no person constitutionally ineligible for the office of President shall be eligible to that of Vice President of the United States.

" 'The Congress may by law provide for the case of the death of any of the persons from whom the Senate and the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate and the House of Representatives may choose a Vice President whenever the right of choice shall have devolved upon them.

"SEC. 2. Paragraphs 1, 2, and 3 of section 1, article II, of the Constitution, the 12th article of amendment to the Constitution, and section 4 of the 20th article of amendment to the Constitution, are hereby repealed.

" 'SEC. 3. This article shall take effect on the 10th day of February following its ratification.

" 'SEC. 4. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the States within 7 years from the date of its submission to the States by the Congress'."

They Chose Freedom

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an article by Mr. Eugene Lyons entitled "They Chose Freedom" which has been recently reprinted and presented as a public service in the press of America by the International Latex Corp. I want to take this opportunity to praise the International Latex Corp. for its many public services and for publishing its many items of humanitarian and national interest for the American people to read.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THEY CHOSE FREEDOM

Inmates of a refugee camp in West Germany scrawled these words on their barracks: "We chose freedom. Come in and see what we got."

An American journalist recently accepted their wry invitation. Inside the barracks he found a crowd of wretched men, women, and children wasting their lives in squalor, stench, and disease, provided with barely enough food for survival. In talking to them he learned that they were bitter, despairing, hopeless.

Unhappily that camp is not an exception. It is typical of about 200 in Europe and the Near East, where tens of thousands who chose freedom—often at the risk of death—have received only misery compounded by the passing of bleak years. Some of the unfortunates have been in camps for as long as 9 years.

Hundreds of thousands of other fugitives from communism, outside the official camps, are no better off. They live in ruined buildings, abandoned railway cars, and rudely converted crates. * * *

Perhaps the most tragic among the unadjusted escapees to our side are the younger men and women, including defectors from the Red army of occupation forces. They looked forward not only to personal freedom but to a choice of active participation in a genuine movement to liberate their native lands. With few exceptions they have been deeply wounded by disillusionment. * * *

It was inevitable that sooner or later the Soviets would take advantage of this situation.

Ever since the end of the war, Moscow has spared no energy to abuse, terrorize, and demoralize its runaway citizens. * * * There have been enough shocking instances of kidnaping and even murder, to rob the life of the refugee of a sense of safety.

But within the last year Moscow moved to supplement terror with doses of honey. It has launched an intensive campaign of redefection, geared to lure fugitives to return home. The Soviet Government—so the story runs—has been moved to pity by the condition of its prodigal sons and daughters. Let them come home and they will be welcomed with open arms.

In East Germany, a Committee for Return to the Homeland has announced itself, allegedly composed of refugees who had changed their minds and redefected. * * *

A newspaper put out by the committee is reaching former Soviet citizens all over the world, the United States included. "Brothers

and sisters," it says, "return and the motherland will welcome you. Even those who are guilty before the motherland will be forgiven."

Many exiles have been receiving letters from relatives—self-evidently dictated by the secret police—urging them to retrace their steps. "We miss you and yearn for you," the missives declare. "Please come back quickly to those who love you." The process of softening-up by propaganda is often followed by personal visits from Soviet agents, who play on the victim's homesickness and make rosy promises.

Cynical and transparent though the redefection drive may seem, it is becoming increasingly effective. Hundreds have already returned behind the Iron Curtain, thousands seem of a mind to do the same. In the refugee camps, the aforementioned journalist estimated, about 25 percent seem prepared to go back. They still hate the Communist system and are full of forebodings as to what will hapen to them. But their misery and hopelessness make them reckless and breed hopes in defiance of logic. They are easy targets for the Soviet manipulators.

Every fugitive who returns to the Soviet prisonland is a resounding moral and political victory for communism and, by the same token, a great defeat for the free world. The growing success of the Kremlin's redefection campaign is the measure of Western bungling in this area. The free world has been politically shortsighted and humanly callous. It has not lived up to the duty and the opportunity represented by those who chose freedom, confident of our humane feelings and political common sense.

The United States has spent, and continues to spend, millions of dollars in radio broadcasts and other activities intended to widen the gap between the Soviet regimes and their subjects. The effects of this investment are being canceled out by the flow of returning and repentant fugitives.

Each of the returners seems a living refutation of our claims, and the Soviets are past masters in making the most of this. There have, of course, been some efforts by free governments and voluntary agencies to assist the hard-pressed fugitives from communism. But they have been inadequate, frequently niggardly, and as frequently constricted with redtape.

It is late, but not too late, for massive countermeasures to offset the redefection campaign. Those concerned with what is called psychological warfare have no more excuse for ignoring the challenge. Voluntary agencies such as the American Friends of Russian Freedom, must be given larger means to conduct work among the escapees that, within the narrow limits as yet possible, has proved effective.

This is at once a call to humanity and a call to political wisdom. (Eugene Lyons in AFRF News Bulletin, New York.)

(Presented as a public service by International Latex Corp., Playtex Park, Dover, Del.)

Praise for House Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. WILLIS. Mr. Speaker, I wish to call attention to remarks of Mr. Bernard Baruch in commending the work of the House Un-American Activities Committee and congratulating its members for performing "a very difficult and very necessary job."

Mr. Baruch, making a surprise appearance at hearings on possible Communist infiltration of the entertainment industry, conducted by the chairman, Representative FRANCIS WALTER, Democrat, Pennsylvania; Representative GORDON E. SCHERER, Republican, Ohio; and myself, told our chairman:

You have a tough task to do and are doing it well. I have great respect for this committee, and because I happened to be in the neighborhood I thought I would come up and see what was doing today.

Later, discussing the hearings, he stated:

At a time like this no person should give aid or comfort to the Communists by what they say or do. Any person who has nothing to fear can answer anything. In this great country of ours, the only thing you have to fear is guilt.

Referring to the refusal of some witnesses to cooperate in testifying at committee hearings, Mr. Baruch added:

It is not a question of giving your associations, but of giving comfort.

The committee also drew support from the New York Herald Tribune which carried the following editorial:

A TIME TO SPEAK

It is difficult to feel anything but disgust and indignation toward the actors who have systematically refused to give answers to the questions put to them by Representative WALTER'S Un-American Activities Committee. These, after all, are citizens; and as citizens they have responsibilities as well as privileges. Not least of any man's responsibilities is to cooperate with lawful bodies bent upon lawful business for the country's good.

No one need assert that all congressional inquiries in the past have been conducted without flaw; nor even that there are no occasions when a man, struggling with his conscience or invoking a valid constitutional protection, may legitimately refuse to answer. But by every test the present occasion is one for cooperation. The time is to speak. Silence and obstruction cannot but carry an inference of conspiracy.

Let it be said at the start that the Walter committee, so long as it keeps on the track, is not trying to investigate the stage, or to establish a blacklist, or to prosecute individuals. It is tracing the outlines and the methods of the Communist attack upon American liberties. It follows that attack wherever the trail may lead.

The Congress, of course, does not have the right to make laws regulating the private entertainment business. But it does have the right, and the duty, to make such laws as may be necessary to safeguard the Republic against subversion and infiltration. To know the whole form of the Communist conspiracy, to see by what channels it operates, and to what degree it is effective in winning recruits—this is part of Congress' job. Representative WALTER is therefore engaged on a proper quest and he has pursued that quest within its due limitations.

In this light the studied insolence and calculated obstruction of the actors can surely not be justified. On Monday one declared to the chairman of the committee that "I will not join with you in an attack on the Constitution"; another protested that the committee was "invading my inner beliefs, my conscience and my associations." Such statements make mockeries of the facts. They take the old battle cries of liberty and pervert them to serve ends that, at best, are meanly personal and at worst are disruptive of the whole constitutional process.

Such an investigation as Representative WALTER is carrying on would have been extremely difficult to conduct with justice a year or so ago. Then an individual who admitted having fallen into the Communist trap, however briefly or however far in the past, too often found it difficult to get a job. But a balance has been restored, and it should be possible today to chart the nature of the Communist conspiracy without being unfair to the individuals whose testimony is sought.

If it proves not possible to do so, the blame must rest in large measure upon the kind of people who have been defying the present probe. By their willful denials they are stirring up again the worst of suspicions and passions.

The actors at Foley Square have done a disservice to themselves. What is infinitely worse, they have done a disservice to the cause of freedom, and to the cause of sanity and calmness and enlightenment.

Just How Silly Can Our Laws Become?

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, the July 27 issue of the Miami Daily News published an editorial entitled "Just How Silly Can Our Laws Become?" dealing with the application of the McCarran-Walter Act to a 4-year-old child, the daughter of an American citizen, who was ordered deported.

I ask unanimous consent that this interesting editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUST HOW SILLY CAN OUR LAWS BECOME?

How ridiculous can our immigration laws and their enforcement get?

Witness this: A 4-year-old girl, Jane Edith Thomas, of Dayton, Ohio, has been ordered deported as an alien. Her father is an American. In fact, those who hail from the blue grass country would consider him an especially fine American since he was born in Kentucky. Moreover, her father was an American soldier.

While stationed in Italy, Pvt. Leslie Thomas fell in love with and married an Italian girl. Later, when he was stationed in Trieste, then under allied occupation, Jane Edith was born to the couple.

Thomas was told that his little American daughter was automatically an American citizen, just as if she had been born after he had returned to the United States with his wife.

The American consul in Venice issued an American passport to Jane Edith when the family returned to the United States in March 1952. But in June 1952, Thomas received a letter from the consul saying it was all a mistake. His little daughter wasn't an American after all. The reason was that a child of an American who is born abroad is a citizen automatically only if the American parent has lived 10 years in the United States, 5 of which must be after the age of 16.

Thomas was 20 years old when Jane Edith was born, so he had lived in the United States only 4 years after he was 16. Now

ex-Private Thomas must take his little daughter to Canada or some place out of the country and apply for her entry as an alien.

Ever hear anything sillier than that?

Statue Proposed To Commemorate Creation of United Nations in San Francisco

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. ENGLE. Mr. Speaker, under leave to extend my remarks, I wish to include an article by Arthur Robinson, of Volcano, Calif., which appeared in the July 21, 1955, issue of the Amador Ledger, Jackson, Calif. The article depicts a really inspired idea for a statue to be erected in San Francisco's Golden Gate to commemorate the creation of the United Nations in San Francisco and to serve as a symbol of the ideals and objectives of the member nations for all time.

The idea for the statue—a counterpart of the Statue of Liberty—was first suggested by Anthony Caminetti, Jr., district attorney of Amador County, Calif., some 10 years ago and since then has gained widespread interest.

In an effort to assist with the project, I expect to introduce legislation which would grant congressional approval to the creation of a nonprofit organization for the purpose of receiving contributions for the construction of the monument from all over the world.

Mr. Robinson's excellent article follows:

IT HAPPENED ON MAIN STREET, U. S. A.

(By Arthur Robinson)

It could have happened in Paris on a bench along the banks of the Seine where men discuss world affairs and perhaps women, or around a cracker barrel in a Vermont grocery, or in a pub in England, or anywhere else in the world where people breathe the air of freedom and love liberty. The simple fact, however, is that it happened here in Amador County, in Bill Tam's gents' furnishing store, on Main Street, in Jackson.

Ten years later the news would go out to the world by radio and television and telegraph and cable.

President Roosevelt had died only 2 months before. The war in Europe had ended. Hitler and his demonology were incinerated dust in the rubble of Berlin. The first atomic bomb had not yet been triggered. The American flag was still to be raised on Iwo Jima by marines under the command of Brig. Gen. Harry Liversedge, a friend and neighbor. Hiroshima had been targeted in macabre secrecy for destruction by a weapon which was to menace the future of civilization. The war with Japan was moving toward a climax. A martial audit, compiled by several international organizations and officially reported the year before by the Vatican, indicated the total number of dead and wounded—military and civilian—was 56,460,000.

In Volcano (population 128, by a finger-counting census) a sapling Christmas tree had been planted. A bronze plaque below it read in part:

"This Christmas tree was planted during World War II in the prayerful hope that the spirit of Christmas would forever rule the relations of all men and all nations."

And in San Francisco the United Nations was being organized.

The bright light of hope was beginning to flicker again in the war-darkened hearts of people everywhere. Maybe, maybe the United Nations would succeed where the League of Nations had failed so dismally after the First World War.

Bill Tam's store in Jackson is much more than a mere emporium. It's a Main Street institution, a kind of conversational fountain where men gather to refresh themselves in small talk and sometimes barbed debate. In the back, where Bill sits behind an old and wonderfully cluttered rolltop desk, miners in the old days preempted the chairs in the shoe department and dug gold which assayed $107 a ton in the underwear department. Local political campaigns, championship prizefights and major league baseball pennants have been won and lost in the back of Bill's store, and at times the temperature of the conversation has gone from hot to freezing so quickly the mercury in the thermometer oozed out at both ends almost simultaneously.

In peacetime, you met friends from other parts of the county there and amiably passed the time of day.

In wartime, you shared anxieties * * * and news about county casualties.

It was there—10 years ago—while the United Nations was being organized—that Anthony Caminetti, Jr., the son of an illustrious father who had served under Woodrow Wilson as Commissioner of Irrigation, told me he had an idea and wanted to know what I thought of it.

And the idea?

A Statue of Justice, to be set up in San Francisco's Golden Gate, as a sister statue to the Statue of Liberty in New York Harbor.

Many years before, the people and children of France had reached deep into their hearts and shallow purses and pooled their frugal centimes in a fund which grew to such proportions that another idea which also seemed beyond realization at first became in fact and in spirit the visible and enduring embodiment of the basic principle on which the democracies of France and the United States were founded. Never before—in the sublimity of pure love—had one country sent to another such a gift as the Statue of Liberty.

Kipling had said, "East is East and West is West and never the twain shall meet."

Now, perhaps, with the Statue of Liberty in New York facing East and a Statue of Justice in the Golden Gate facing West, the twain would indeed meet in globe-girdling brotherhood and lasting peace.

I thought Mr. Caminetti's idea was a marvelous one and we went to work on it. I prepared some news releases and he collected $1,200—$250 of it the official contribution of the county by special act of the board of supervisors.

It takes time for ideas to ripen in the imaginations of some men. At San Francisco the statesmen of the world were too busy organizing the United Nations to add the weight of a statue to their grave burdens. The city of San Francisco authorities, on the other hand, were unwilling to carry the ball at the point at which we here in this small county, with our limited resources, were willing to hand it to them.

So the $1,200 remained in the bank.

And 10 years passed.

Several weeks ago, while listening to a broadcast from the commemorative sessions of the United Nations in San Francisco, I scribbled a draft of a telegram to Henry Cabot Lodge, Jr., the United States representative to the United Nations. Then I phoned Mr. Caminetti, now the district attorney. He and I had been on opposite sides of a violent political battle in the intervening years, but, of course, this was no time for letting personalities or the past obstruct the urgencies of the moment.

He agreed to send the telegram and he and I and Earl Garbarini, chairman of the board of supervisors, signed it.

Here's the telegram:

JACKSON, CALIF., *June 25, 1955.*

Hon. HENRY CABOT LODGE, Jr.,
United States Ambassador to the United Nations, San Francisco Memorial Opera House, San Francisco, Calif.:

Respectfully suggest a United Nations Statue of Justice to be erected in San Francisco's Golden Gate as an appropriate expression of ideals and objectives of member nations and as a dramatic counterpart of Statue of Liberty in New York Harbor. A fund of $1,200 raised here in Amador County specifically for such a purpose is available. Earnestly hope you will find it possible to submit suggestion for consideration of present commemorative session for such action as may be fitting. Please advise if you can accept our fund as first implementing step toward realization of idea. Perhaps people and children of all countries, as well as their governments, will want to join with the people and board of supervisors of this small California mountain county in such a worldwide undertaking of good will.

A. CAMINETTI, Jr.,
District Attorney for Amador County.
EARL J. GARBARINI,
Chairman, Board of Supervisors.
ARTHUR ROBINSON,
Volcano, Calif.

Copies of the telegram were sent to the top officials of the United Nations, to key figures in Washington, to Governor Knight, and Mayor Elmer Robinson, of San Francisco, and others.

Then things began to happen.

News about the idea began to crackle on the radio and television. U. N. delegates at the San Francisco Opera House were told about it. American and international news agencies sent stories about it everywhere in the world.

Main Street.

A small California mountain county.

It could have happened in Paris on a bench along the banks of the Seine where men discuss world affairs and perhaps women, or around a cracker barrel in a Vermont grocery, or in a pub in England, or anywhere else in the world where people breathe the air of freedom and love liberty.

For the record—proudly and humbly—it started here.

We have received many commendatory letters from those to whom copies of the telegram were sent. Two weeks afterward, Mayor Robinson of San Francisco announced the appointment of a local ways and means committee and requested the committee to submit a progress report not later than August 1. Mayor Robinson wrote us he has already received offers running into many thousands of dollars for a commemorative monument. We here hope that every member nation of the United Nations will support the idea financially. An implementing proposal to this effect, we believe, will be introduced at the next general session of the United Nations and, when that is done, a supporting resolution in Congress.

A hundred years ago, in a one-room law office in Springfield, Ill., an obscure man named Abraham Lincoln read aloud to his partner, Billy Herndon, from a slender book of poetry which had only a short time before been published. It was Walt Whitman's Leaves of Grass. In the years to come Lin-

coln was to speak with the same impassioned simplicity at the dedication of a cemetery for soldier dead in a small Pennsylvania town. Here are a few selected lines of Whitman's that Lincoln read:

"I announce what comes after me.
"I announce justice triumphant.
"I announce uncompromising liberty and equality.
"I announce splendors and majesties to make all the previous politics of the earth insignificant."

Ten years ago, as the United Nations was being organized, the bright light of hope began to flicker again in the war-darkened hearts of people. The other day, before leaving for the Four Power Conference in Geneva, President Eisenhower asked us all to pray for the success of the conference.

In the hand of the Statue of Liberty a torch reaches toward the sky.

May the bright light of hope flicker into a flame and burn forever in peace and justice in the hearts of all men.

Everywhere.

Legislative Powers of Congress Usurped by United States Court of Appeals

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. KING of California. Mr. Speaker, "eternal vigilance is the price of liberty," is an age-old maxim being proven again and again in our expanding national economy.

The inquiries made by investigating committees of Congress have uncovered rank abuse and misapplication of well-meaning laws. Laws enacted by Congress to enhance the general welfare and promote the national economy.

Usually these abuses arise by a creeping expansion of Government agencies' power, and are often not immediately apparent.

Such has been the case of the Home Loan Bank Administration. Commencing in 1937, rules and regulations were changed slightly here and there, which eventually provided a means of confiscating the peoples' savings. A plan of confiscation which has prohibited the aggrieved citizens—the savings depositors—from having prior notice, or court trial, for the seizure and confiscation of their property.

By the creeping agency changes in regulations, expanding its own power, the agency assumed a purpose foreign to, and destructive of, the congressional intent. Congress, in its enactments of 1932–34, specifically stated the primary purpose of such laws were to promote the general welfare and provide a safe place for the citizens to place their savings.

It is obvious from the language and legislative history, Congress never intended to provide an entity, though which the citizens' savings could be seized and confiscated. There is nothing in the act that indicates the citizen's right to redress to the United States courts, should ever be cut off. Nevertheless, the agency expanded its power by its self-made regulations, and by such self-enacted regulations, cut off court redress.

Such agency managed to concentrate the whole diabolical scheme into one man's hands. When the 5-man bipartisan Board, created by Congress, was abolished, the resulting 1-man Commissioner, claimed he was responsible to no one.

Armed with their own self-expanded regulations, the agency, in 1946, seized a solvent and prosperous $26 million savings association. Congress, through its special committee, headed by the Honorable HOWARD SMITH, unanimously condemned such action. The congressionally created agency blatantly defied Congress and claimed the United States courts were without power or authority to intervene.

To this day the seized $26 million of cash, United States Government bearer bonds, and other negotiable assets, have not been fully accounted for.

Every citizen may justly ask, How can such infringement of human rights happen here? The answer is simple. The United States appellate court—circuit court—has failed, on numerous occasions to perform their functions. Such failure has perpetuated the agency frauds.

Specifically, in 1952, the United States Circuit Court of Appeals for the Ninth Circuit, upheld the self-enacted agency regulations, which denied the jurisdiction of the United States courts to intervene or grant relief to the thousands of stricken homeowners, and the multithousands of savings investors, who were victims of the agency confiscation.

Congress, when it became fully convinced the courts had, in their ruling, disregarded the purpose and intent of the congressional enactment, attempted to correct the evil by adopting the Housing Act of 1954. Such act granted remedial and procedural rights to all aggrieved citizens. Such new enactment specifically granted jurisdiction to the United States district courts throughout the United States, to hear the claims of aggrieved citizens, and to enforce the laws of the United States.

The Government agency asked, but Congress refused, to limit this sweeping grant of remedial and procedural rights to new causes of action, and struck from the proposed bills all restrictive language. Thus, under the new law, old depositors as well as new, are given like protection under the law.

Congress, in its endeavor to protect its citizens against the misapplication of agency power, subordinated all conflicting laws in clear and specific language, as follows:

Insofar as the provisions of any other law are inconsistent with the provisions of this act, the provisions of this act shall be controlling.

This 1954 congressional enactment clearly subordinated prior United States circuit court rulings inconsistent therewith, and specifically granted to the aggrieved savings depositors and homeowners a right to a trial on the merits in the United States district courts, on their claims of fraud and confiscation against these Government agencies.

Nevertheless, the United States circuit appellate court, in defiance of the clear language of the congressional enactment and its legislative history, held, in July 1955, that such congressional enactment was inapplicable to the defrauded Long Beach citizens, and purely prospective. Thus, the circuit court denied our aggrieved citizens the protection of the laws enacted by Congress, and made applicable the language rejected by Congress. Thereby the circuit court has perpetuated the frauds and injustices perpetrated upon our citizens by a Government agency. The injustices and frauds of these Government agencies in the Long Beach seizure precipitated the remedial and procedural enactments by Congress in specifically granting jurisdiction to the United States district courts.

Congress did not create such appellate courts to supplant the wisdom of Congress in the enactment of laws. Congress, in creating the United States circuit appellate courts, did so with the intention, among other things, of upholding the constitutional guaranties to our citizens against fraudulent and capricious actions of agencies and bureaus.

Such courts, however, have not always proven capable. Congress recognized the fallibility of these appellate courts when it restricted such courts' power to hold unconstitutional congressional enactments by injunction.

Here, the United States circuit appellate court specifically denied our citizens the procedural and remedial benefits of laws enacted by Congress, and by injunction cut off the citizen's right to court protection and trial under the law. The citizen's constitutional guaranties against confiscation and seizure of their savings and property, are nullified. Self-expanded and self-created agency regulations are substituted for right and justice, and are sustained by the United States appellate court injunction.

The failure of the United States circuit appellate court to uphold the citizen's constitutional guaranty is plain. A full investigation of the congressionally created United States appellate courts is here indicated as a necessity. Perhaps a reorganization of such appellate judicial system may be a necessity in the light of its defiance of acts of Congress.

The example here emphasized is only one instance of the ever-mounting disregard of justice and equity by such courts.

Budget Estimates and Appropriations, 84th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. CANNON. Mr. Speaker, I include herein certain tabulations showing results of the work of the 1st session of the

84th Congress on appropriation bills as compared to budget estimates submitted. The first tabulation is in the usual form by bills, and divides them as between fiscal year 1956, fiscal year 1955 and prior, and one item not considered but included here for sake of completeness. Permanent appropriations—those which recur automatically under substantive law without annual action in the appropriation bills—are also added for purpose of showing a complete total.

Comparison of estimates and appropriations, 84th Cong., 1st sess.

Title	Estimates considered by House	Reported to House	Passed House	Estimates considered by Senate	Reported to Senate	Passed Senate	Public law	Increase (+) or decrease (−), appropriation compared with estimates
1. Fiscal year 1956 bills:								
Treasury-Post Office:

Grand total, session	54,932,761,488	52,264,909,758	50,930,566,116	55,200,833,729	54,006,871,816	54,034,424,706	53,124,821,215	−2,076,012,514
4. Permanent appropriations (estimate)							6,773,516,346	
Grand total, regular annual, supplemental, deficiency and permanent	54,932,761,488	52,264,909,758	50,930,566,116	55,200,833,729	54,006,871,816	54,034,424,706	59,898,337,561	−2,076,012,514

[1] Points of order made and sustained during consideration of the bill on the floor of the House reduced bill as reported by committee by $1,452,499,500. Amendments adopted on the floor increased bill by $27,900,000.

SUMMARY FOR THE SESSION

Budget estimates submitted to the House during the session totaled $54,932,761,488 against which the Committee on Appropriations recommended $52,264,909,758, or $2,667,851,730 less than the estimates. Bills as passed by the House totaled $50,930,566,116—below the committee totals only because of numerous items deleted from the supplemental, 1956 bill by points of order. Estimates considered by the Senate aggregated $55,200,833,729 and the bills as passed by that body totaled $54,034,424,706. Final amounts enacted aggregate $53,124,821,215, a total of $2,076,012,514 below the estimates submitted by the President.

Mr. Speaker, the reductions effected in the President's budget requests for appropriations are supportable. They are bona fide. They were made because there were reasons why they could be made. On the other hand, the totals appropriated during the present session for fiscal year 1956 as shown in the tabulation are not the final amounts. Supplemental estimates for 1956 are expected to be forthcoming in the next session. The final totals will be higher, but no one can now predict precisely how much higher.

COMPARISON OF REDUCTIONS

Mr. Speaker, at first glance the reduction of $2 billion plus in the budget estimates appears to compare unfavorably with the record of the 83d Congress. The 1st session of the 83d Congress reduced budget estimates by $12 billion and the 2d session effected cuts of $2.6 billion in the estimates.

But these bare totals do not reveal the whole story. It must necessarily be apparent to anyone acquainted with the facts that only within the Department of Defense could any wholesale budget adjustments of this magnitude be made. The reductions of $12 billion in the 1st session of the 83d Congress were composed in major part of reductions totaling $8 billion in the Department of Defense. The $8 billion reduction was made possible in turn by a cut of approximately $5 billion in the Air Force. In the 2d session of the 83d Congress the cut of $2.6 billion included $1.4 billion in the Defense Department.

Appropriations of the 1st session of the 83d Congress aggregated $54.5 billion. Appropriations of the 2d session were still lower, totaling $47.6 billion, or approximately $6.9 billion less. Following that same pattern, appropriations for the Defense Department in the 2d session were $5 billion below those for the 1st session.

The result of the reductions in defense in the 83d Congress is partially reflected in the estimates submitted by the administration to the present Congress. Total estimates submitted were $7.6 billion above appropriations voted by the 2d session of the 83d Congress. Requests for the Department of Defense were raised from $29.6 billion—the appropriation for 1955—to $33.7 billion for 1956, or $4.1 billion of the $7.6 billion total. The lion's share of the increase is for the Air Force.

The present Congress has met its responsibilities to provide for the national defense and has not therefore made any appreciable reduction in funds for defense. And, in so doing, it was necessary to appropriate above the reduced level of last year's appropriations—as the President requested.

The following table shows the situation I have just discussed:

Comparison of estimates, appropriations, and reductions, 83d and 84th Congs. (grand totals except permanent appropriations and miscellaneous private acts)

Congress and session	Estimates	Law	Decrease (−)
83d Cong., 1st sess	$66, 568, 694, 353	$54, 539 342, 491	−$12, 029, 351, 862
83d Cong., 2d sess	50, 253, 323, 985	47, 642, 131, 205	−2, 611, 192, 780
84th Cong., 1st sess	55, 200, 833, 729	53, 124, 821, 215	−2, 076, 012, 514

Department of Defense only (appropriations for defense military functions and military public works)

Congress and session	Estimates	Law	Decrease (−)
83d Cong., 1st sess	$42, 619, 931, 000	$34, 612, 317, 000	−$8, 007, 614, 000
83d Cong., 2d sess	30, 987, 055, 000	29, 617, 128, 486	−1, 369, 926, 514
84th Cong., 1st sess	33, 712, 815, 000	33, 076, 685, 026	−636, 129, 974

MAJOR NATIONAL DEFENSE ITEMS

Mr. Speaker, Department of Defense appropriations of course represent the preponderance of national security outlays. But substantial additional amounts appropriated annually either contribute directly to the national defense effort or result directly therefrom. Since the aggregate amounts represent about 80 percent of total appropriations, the following table is included in order to show the situation in more specific terms:

Major national defense and all other appropriations, 84th Cong., 1st sess.

[NOTE.—Excludes permanent appropriations]

	Estimates	Law	Increase (+) or decrease (−)
Regular annual 1956 acts:

DEFICIT SPENDING

Mr. Speaker, deficit spending continues. Not since fiscal year 1951 has the Government operated in the black. The budget for fiscal year 1956, submitted last January, forecast a deficit of $2.4 billions. Reductions made in requests for appropriations during this session will result in reductions in expenditures and if revenues hold to the January budget estimate of $60 billions, the deficit should be less than $2.4 billion.

Mr. Speaker, the Government has operated in the red in each of the 3 fiscal years of the present administration. The following tabulation shows the situation:

Estimates of budget receipts, expenditures, and deficit, fiscal years 1954, 1955, and 1956

[In millions]

Item	Fiscal year 1954, budget, 1956 (actual)	Fiscal year 1955			Fiscal year 1956, budget, 1956 (January 1955)
		Budget, 1955	Budget, 1956	Preliminary, actual, July 14, 1955	
Receipts	$64,655	$62,642	$59,000	$60,302	$60,000
Expenditures	67,772	65,570	63,504	64,494	62,408
Deficit	3,117	2,928	4,504	4,192	2,408

NOTE.—The last year in which a budget surplus occurred was fiscal year 1951 when, under a previous administration, there was a surplus of $3.5 billion.

The old debt ceiling of $275 billion was increased at the last session of Congress to $281 billion as a purely temporary measure. Failure to spend less than revenues taken in made it necessary during the current session to continue the $281 billion ceiling for another year and there is no convincing evidence of being able to return to the old ceiling by next year, much less going below it. All of this has happened when the Nation is at peace. We are not at war. Revenues are at the highest level in our peacetime history, yet expenditures continue to exceed them. The consequences are serious. The purchasing power of the dollar has been reduced, adversely affecting every American family. We cannot indefinitely continue spending more than we take in and expect to remain solvent. Furthermore, a sound, healthy economy is a basic cornerstone of our national defense program.

Mr. Speaker, the administration has already begun formulation of the budget which will be submitted next January. Unless the intervening months hold events now unforeseeable, it will be another peacetime budget. If the administration is to avoid further postponing fulfillment of its promise in the campaign of 1952, the next budget will have to be submitted in balance. It must be in balance if the purchasing power of family income and savings is not to be further reduced and further increase of the national debt avoided. If the President will submit a sound balanced budget, the Committee on Appropriations and the Congress will cooperate by holding down, and even further reduce, the spending requests. The appropriation bills returned to the President will be below the budget on which they are based, as they have been for many years.

SUPPLEMENTAL AND DEFICIENCY ESTIMATES

In 1950, the Congress approved the General Appropriations Act for 1951 which contained, as developed and recommended by this committee, a vastly strengthened antideficiency law. The control of the Congress over supplemental and deficiency estimates has improved considerably. In the present session, total supplemental and deficiency estimates for the fiscal year 1955 and prior fiscal years amounted to $985,276,193, and the ensuing laws appropriated $929,905,300. These amounts compare with appropriations previously enacted totaling $47,642,131,205 for 1955.

Of the supplemental and deficiency estimates for 1955 and prior years considered in this session, $928,500,000, or approximately 94 percent, represent items which are practically mandatory by virtue of substantive law. Appropriations in consequence of these particular estimates total $897,966,000, a modest reduction of about 3 percent in the estimates. Typical of the items largely beyond reach of the Committee on Appropriations are $420,611,000 for supplemental requirements of compensation and benefit programs for veterans; $238 million for added needs of the program of grants to States for public assistance; $99,375,000 for additional liquidation of contract authority for various phases of the highway aid programs; and $50 million in additional requirements for the payment of operating differential subsidies for merchant marine operations.

Aside from these major programs, items of purely contingent and deficiency nature considered in this session for fiscal years 1955 and prior totaled only $56,776,193, or one-tenth of 1 percent above the original estimates for the fiscal year 1955. Against these estimates, appropriations were made in the amount of $31,939,300, a reduction of nearly 44 percent below the estimates.

In recapitulation, of items submitted under the name of supplemental and deficiency estimates, the Congress made reductions of 44 percent in the less than 6 percent which were completely within the control of the committee and the Congress, but could only afford to make very conservative reductions of 3 percent in the 94 percent of the estimates which were based on spending programs more specifically established in substantive law.

As to supplemental estimates submitted during this session for the fiscal year 1956, and the Mutual Security Appropriation Act should properly be so considered, $5,203,347,412 out of the total of $5,385,892,822 resulted directly from legislation introduced during this same session. These large amounts include two major authorization bills, mutual security and military public works—estimates of $3,266,641,750 and $1,473,550,000, respectively—which were not passed until late in the session. Although reductions of about 15 percent in the estimates were effected, it should be apparent that proper consideration cannot be given, by either the committee or the Congress, to estimates of this magnitude with less than 4 weeks between enactment of the authorizing legislation and the adjournment date. The executive branch should submit the programs much earlier in the session so as to permit more adequate legislative consideration.

Defense Means Protection

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an important article on civil defense written by Mr. Lewis A. Dexter appearing in the summer 1955 issue of the American Scholar entitled "Defense Means Protection."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFENSE MEANS PROTECTION

(By Lewis A. Dexter)

Broadly speaking, we have in this country no grand strategy of defense. Defense means protection—for our basic warmaking strength, our industry, and our lives. We have provided effective measures of tactical defense for our Air Force and ground troops; we have given some thought to strategic defenses, once campaigns have been launched; but where is our grand strategy of protection?

In the past, great nations have had such a grand strategy. The British Fleet, for at least 250 years, protected the British people and industry from any serious threat of destruction. From Pepys to Admiral Lord Fisher, from Charles II to George V, the fleet served by design as a guaranty that England would still stand. For a considerably longer period of time, the Roman legionnaires on the frontiers made sure that the great metropolitan cities of the empire could not be attacked effectively by barbarian invaders.

The only grand strategy of defense which we now have in the United States is the grand strategy of deterrence. This means either that we hope we can frighten the enemy away by massive retaliation—if he does not get his punch in at our glass jaw first—or that we hope we can, by a well-organized system of continental air defense, make the cost of getting his bombers through on target very high.

Informed estimates, however, are in complete agreement that continental air defense under present or probable future circumstances cannot prevent some bombers from getting through on target. Gen. Hoyt Vandenberg estimated in 1951 that 70 percent of an attacking enemy's planes could accomplish their mission. If a few score planes could get through and deliver atomic or hydrogen bombs, or if these bombs could be exploded in various other ways, the greater part of the industrial productivity of the United States would be disrupted, and a very substantial number of us would be killed.

There seems to be no real hope of using the air arm as a means of defending ourselves from air attack, except to make it very unpleasant for the attacker. The approach, most recently put forward by Mr. Finletter, that we should deter the Russians by saying, "You can hurt us, but we can hurt you too," sounds as though it has much to recommend it. We say, "You can kill a quarter of our people and destroy half of our warmaking power. So what? We can kill as many of your people and destroy more of your warmaking power."

But, by itself, this policy is essentially unrealistic. Obviously, as writers like Walter Millis have pointed out, we are not going to run the risk of all-out atomic war if the Russians decide to occupy all of Vienna or to seize Sweden's mineral resources, because we are too clearly aware of how they might

retaliate. Presumably the Russians realize this. Is the bombing of Russian cities for the purpose of protecting Swedish resources worth provoking what could be the vaporization of Chicago or Detroit?

In any case, all our talk of retaliation leaves the timing up to the Russians. If they attack us, atomically, at the moment they choose, we shall answer back. But if they take the initiative, they can offset any advantages we may have, for in this kind of war, initiative is a tremendous value. It enables the attacker to exploit any weaknesses of his enemy. A vividly remembered recent experience serves to illustrate the point. If the Russians had attacked the cities that actually did give aid to areas damaged by hurricanes Carol, Edna, and Hazel, they would have compounded the effect of their attack.

Of course, all plans for continental air defense ought to be, and probably are, under constant reexamination. Improvements in warning systems, interceptor devices, capacity of fighter planes, and similar means of protection are greatly needed. However, there is one grave limitation in all apparent plans for continental defense. They accept as a basic hypothesis that decisions will be made both instantaneously and correctly, allowing no margin for error. Yet a few seconds snafu or a few hours delay, such as that which occurred at Pearl Harbor, would give the Russians all the leading time they need for decisive destruction.

Inevitably, human nature being what it is, delays and blunders can take place. Folly in higher command was not abolished after Pearl Harbor; inefficient commanders, delays in communication, fatigue, failure to define responsibility, and such will remain with us. Thus, a system of protection which assumes that everybody will act correctly, quickly, and wisely is not an effective shield. Any effective system of protection must allow a fairly large margin of error. This is a somewhat different situation from that which confronted the British Navy for several generations. It is true that Admiral Lord Jellicoe, like several of his predecessors, could lose the war in an afternoon by a wrong decision; but at least that decision had to be a positive one. Jellicoe had to be taunted or cajoled into staking everything on an attack which might fail. He could not lose the war in an afternoon merely by inaction. The American continental air-defense system may be ineffective simply because somebody fails do something quickly enough. This is certainly not an argument against continental air defense. On the contrary, it suggests that there is a great need for discovering more nearly foolproof methods for defending the continent. Incidentally, one of the advantages a democracy enjoys over a totalitarian regime with ideological motivations is that in a democracy, it is much easier to plan a program which can anticipate folly and inefficiency at command levels.

There is another approach to the problem of real defense which may give us a larger measure of protection, an approach which will not be invalidated by bungling or venality of normal proportions. This approach goes back to a basic, and usually overlooked, question: Why are we unsafe?

Note the formulation of the question. Not: Why can the Russians attack us effectively? Not: How many Russian planes can get through? How can we prevent them from getting through? These questions are vital, but they are secondary to that first asked: Why are we unsafe?

We are unsafe because (1) we are gathered in a few metropolitan concentrations; (2) we have developed an economy which is organized in terms of geographical specialization and division of labor; and (3) we have an elaborate network of communication and transportation, dependent on all kinds of delicate interrelationships, which underlies this system of geographical specialization and urban concentration.

By way of contrast: except by sheer luck, atomic warfare would not profit anyone trying to conquer the wandering Indians of South America who live off the countryside, have built no artifacts, no canals, railroads or factories. In other words, they offer no targets.

In China today the Communists have developed a mass army and guerilla techniques of warfare. They certainly would suffer from the devastation of some targets; but after an atomic attack, their basic military economy would continue to be more nearly capable of vigorous effective action than would ours.

Compared with today, towns in the United States in 1819 were relatively self-sufficient. They could keep going under their own steam for a long time. If Boston had been destroyed in 1815, Worcester, Nashua, and Providence could have continued to feed, clothe, govern and even arm themselves with reasonable effectiveness. All over the eastern United States, small, deserted furnaces exist. These were once metallurgical plants which could provide locally some of the weapons of war. During the War of 1812, when the British occupied Washington, how many producers were left without needed guidance? Very few. Today, in the age of the telegraph, Government contracts, railroads, and airplanes, how many industries would find it possible to make their own decisions if Washington were vaporized? Yet even Washington does not provide indispensable machinery parts like Detroit, Chicago, or Toledo, parts without which factory wheels all over the country would stop moving. To be sure, the Federal Civil Defense Administration in Battle Creek supposedly has plans for such an emergency, but the vast and sublime indifference of almost everyone to its efforts has meant that there are many holes in its program.

Today urban specialization, this setting up of targets for the enemy to destroy, is quite needless. Nineteenth century technology may have made the big city essential for big industry; the pasteurization of milk, the purification of water and the development of effective methods for sewage and garbage disposal made the big city livable for millions in the 1870–1900 period. The big city had for many an appeal which the smaller town did not have. For those to whom "variety is the spice of life," the city became the place to live. As most readers will realize, it is in the big cities that groups of like-minded people can find the supplies and companionship they crave. The scholar who needs a constant supply of new books, the medical researcher who must have a constant supply of new patients, the artist who simply seeks the company of his fellows—all these have for the most part flocked to the large cities.

But automobiles, airplanes, helicopters, the development of electricity and of natural gas pipelines, telephones and the two-way radio—all mean that the big city is no longer a technological necessity or a unique source of social satisfactions. The advantages of a city, with the possible exception of certain economic advantages of seaport cities in handling heavy goods, are not now particularly great. In fact, traffic congestion and the difficulty of building heliports in large cities mean that from an economic standpoint a ring of smaller cities could do business more effectively than large metropolitan areas. The constant push to the suburbs, migrations to Florida and to smaller towns show that in terms of pleasantness and attraction the metropolitan cities "have had it."

There is now no economic or social need for us to stay collected like so many lambs ready for the slaughter. We can spread out and thus very much reduce the danger of being crippled or destroyed by the vaporization of a few target cities. This was recognized on paper by the President's National Dispersion Policy, announced in 1951, but there has been little attempt to put that program into effect. Among many reasons, one of the most important is our intellectual and imaginative failure to grasp the fact that there can be a grand strategy of protection. American children shoot their playfellows when they play war games, but they devote litle thought to shielding themselves. Grown-up Americans often protect themselves from the reality of the current threat by thinking in terms of millions killed—sometime in the future—in Moscow or New York. While talking in such terms, they are indulging in political speculation without an uncomfortable sense of personal involvement and fate. No matter how learnedly they discuss the politics of the situation, they are exemplifying Riesman's description of political apathy.

The threat of war becomes immediate, however, if we start to plan the removal of our company or research project, or even work of literary criticism, from Boston or Washington to Canton, N. Y., or Cumberland, Md. We will then no longer think of the threat in terms of science fiction. Moreover, the consequent uprooting creates a problem for any individual or family. I tried to persuade a friend who teaches literary criticism that it would be desirable for his and his children's safety to take a job which he had been offered at a small college some distance from a target area instead of remaining in the big city where he now works. His immediate response was, "Well, they have no library there that specializes in my field; I'd have to do without books or borrow them on interlibrary loan, and that's a nuisance. People like you who try to get people to disperse are a menace." And his wife said, "Oh, I couldn't live in a small college town; I'm sure people gossip about you more there."

Of course, most people cannot automatically move to a town which is safely outside the target area. For the last 2 years I have been seeking suitable employment in fields in which I am capable, where I can be outside the target area. While I have heard of some 40 or 50 attractive openings in the heart of target areas during this period, I have not been told of one in a relatively safe city or town. Individual situation-wanted advertisements do not meet this problem, because in many types of activity almost all desirable jobs are concentrated within target areas.

For individuals to move out, institutions and industries have to move out. The fact that a large number of people in every institution and industry is reluctant to think about moving means that dispersion is likely to be put off, even though it is thought to be desirable academically. It is ridiculous in terms of the national interest for some of our great technical research agencies to be in the heart of probable target cities. The men who work there cannot be replaced. However, even if these men can be persuaded to take themselves and their families out from under the gun, the schools and institutions which support them cannot afford the loss of plant and equipment involved.

So, for a dispersion policy to be effective, there must be compensations and inducements to the vital institutions, industries, and people to duplicate their facilities or spread themselves out. Necessarily, such a program will cost a good deal of money, though probably less than an atomic armament, massive retaliation program carried to extremes. Certainly it would cost a lot less than the vaporization of big cities.

Nobody has appropriated any real money for a national dispersion policy yet. Aside from some pressure exerted on Government contractors and the removal of the Federal Civil Defense Administration from Washington to Battle Creek, nothing significant has been done by anybody anywhere to promote dispersion. The problem is to deter-

mine who must be moved outside target areas, how this can be done, what sort of inducement shall be offered and where facilities need to be duplicated in case of destruction. In the New Leader of November 29, 1954, Congressman RICHARD W. BOLLING and I discussed some of the inducements necessary to get industries and institutions to spread themselves out. Basically, however, what is needed is a careful investigation of these problems, the establishment of priorities and development of precise inducements. Congressman BOLLING, in a resolution introduced into the House, asked that a Joint Committee on the Economics of Atomic Defense investigate these issues. Senator HUMPHREY has introduced a similar (though not identical) proposal in the Senate. Undoubtedly, such a congressional exploration of the situation is imperative, but research by private institutions and agencies and by the executive departments is also to be hoped for.

Such research presumably should focus on issues like those just listed, but there are important additional ones. For instance, subsidization of the helicopter truck and bus industry might speed up materially the process of dispersal and make industrial spreading out very much more feasible; yet, so far, the Federal Government has been fairly timid about backing this industry. Similarly, the probable development of guided missiles with atomic war heads might change the problem of dispersal to some extent, just as the hydrogen bomb forced a radical revision in the early postwar industrial dispersion program which had assumed that everyone could move within the same market area. (The wider range of hydrogen-bomb destruction makes that assumption extremely dubious now.) Even so, we would be infinitely safer than we now are if the Federal Government had declared in 1946 that all new buildings must be outside the probable range of destruction of the atom bomb. If even this had been done, the Russian threat to us now would be far less than in fact it is.

Just as it would have been wiser in 1946 to take the development of superbombs into account as a possibility, so today it would be wiser to plan our programs of dispersion not only in light of what we know today's weapons can do to us, but also in view of what we may reasonably have to fear from those of tomorrow.

Perhaps, and this can never be answered certainly, tomorrow's weapons may really be absolute. In the history of organized warfare, men have forever been discovering weapons which puzzled and horrified them until they discovered some way of circumventing or partly circumventing their effects. Greek fire and gunpowder and even the Yankee habit of shooting directly at a man as a target were regarded as the most wicked possible military developments. Some people thought Napoleon could not be resisted, and the West waited for the grandsons of Genghis Khan very much as a rabbit waits for a boa constrictor.

The scientists who popularized the notion of the absolute weapon were utterly unfamiliar with the history of warfare and of military doctrine and were appalled by their own brainchild. Those who report today that atomic blasts may upset the genetic structure of the human race had their forerunners in the fearful men who foresaw the railroad as forcing women to beget monsters or miscarry.

All the ills and dangers we fear today may come to pass, but they are certainly less likely to take place if we attempt to find out how grand strategy and military commonsense may help us. Conceivably, it might be an argument against proposals which of themselves are unpleasant and disruptive to say, "After all, there is so little reason to hope, let's eat, drink, and pass social security laws, for tomorrow we die." But, by and large, a program of national dispersion would permit us to catch up with 20th-century technology.

Once we write off the dead hand of the past in the form of antiquated buildings and plants, city debts, obsolete roadways, and all the other things which keep us in cities, the spread-out population which is now possible could really enjoy life more. Almost every vital scientific research laboratory in a metropolitan university, for instance, could be rebuilt somewhere in the country and become a more pleasent and effective place to work. Once the difficulty of moving from one place to another is over, most scientists would find better living conditions for themselves. For one thing, they would rid themselves of the strain of traffic or the daily journey by public transit systems; for another, they could eliminate metropolitan noise.

"War," said Clausewitz, "is a continuation of politics." Defense and protection in 20th century America are also a continuation of politics in the widest sense—politics in terms of rural and urban redevelopment, national land use, helicopter transport subsidies, tax rebates, and the like.

If the reader has noticed that this article was written before the most recent announcements about radiation effects and the superbomb, I would like to point out that this new information does not, of course, alter at all the general point that defense means or should mean protection. Nor, in fact, does it alter the arguments for much dispersal. It seems to be the case that there is still a substantial possibility of securing survival through building shelters for those 15 to 20 miles beyond the point where the superbomb hits; but present expectations that each man will build his own bomb shelter involve a fantastic disregard of the advantages of mass production and cooperative action. However, there is at least a possibility that the best way to deal with the superbomb may be dispersal, on the one hand, for those who are not prime objects of enemy attack; and on the other, concentration for a small number of especially important military or productive factors—following in this instance the analogy of the castle town of the ninth century which served as a protection against Viking sea raiders. Concentrations for particularly important factors might be rendered especially defensible in various ways, provided that the rest of the population and of industry did not seek the same degree of protection. But in the absence of information, such possibilities are to be regarded as speculations. A major point for consideration is that there is obviously good reason for concealing from potential enemies the weapons and techniques for attacking them. But is there any good reason for concealing from ourselves what we must do—on rather a large scale—to protect ourselves? Would we not be able to figure out much better what kind of defense would protect us, what degree of dispersal is necessary, what sort of concentration is possible, if we had the information and background for continuing and widespread analysis of the system of defense and protection? In other words, if defense means protection, and protection means public participation and cooperation, perhaps defense also means public access to knowledge about protection.

The Late Paul Shafer

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. SHORT. Mr. Speaker—

I sometimes hold it half a sin
To put to words the grief I feel;
For words, like Nature, half reveal
And half conceal the soul within.

But, for the unquiet heart and brain,
A use in measured language lies;
The sad mechanic exercise,
Like dull narcotics, numbing pain.

In words, like weeds, I'll wrap me o'er,
Like coarsest clothes against the cold;
But that large grief which these unfold
Is given in outline and no more.

Mr. Speaker, almost 1 year ago—on August 17, 1954—an earthquake hit me and left me buried. Paul Shafer died. Just now I am struggling to dig out or get my head above water. I have not known whether I have been on land or sea.

Members of this House and all outside who knew us well said that Frank Fellows, Paul Shafer, and Dewey Short were a grand trio. It may be doubtful as to how grand we were, but certainly we were a trio. Bound indissolubly together by a common faith, purpose, and philosophy, we were a unit.

When Frank died, Paul and I went to his funeral in Maine. Paul and I would have preferred attending our own. We did not get to do all that we had promised and wanted to do on that particular occasion, because there were too many people present, and we knew some would not understand.

After our dear and beloved Frank left us, Paul and I were called the Gold Dust Twins. Though I knew his ill health and immeasurable grief over the death of his dear wife, Ila, only 6 weeks before his death, I was not prepared for the shock that hit me like a ton of bricks when Paul was cruelly snatched from me.

Life in Maine, Michigan, Missouri, and all over the world has not been the same to me. It never will be. The moon has dimmed, the stars have gone out, and the bright sun casts only a shadow and pall over me. My heart is heavy and heavier than the heart can bear.

But I know the sun still shines. God is in the heavens and all is right with the world.

Today I miss Frank Fellows and Paul Shafer more than ever before in my life. It is only the tender ties and precious memories of them that enable me to carry on. I shall carry on to the bitter end or unto the perfect day.

Though I paid a feeble tribute to Frank, unworthy of a great and good man, which had to be read by our good mutual friend, Hon. CLIFFORD DAVIS

of Tennessee, I have said nothing, until this moment—almost a year after his death—about Paul Shafer. Nothing I can say now would detract from his honor or add to his glory.

When Paul died, I did not go to his casket nor did I attend his funeral. I wanted to remember him in life, because he was so full of life. Though he is dead, he yet lives. Forever his good deeds will be a requiem sung by the angels.

Mr. Speaker, we treat our enemies with mean and contemptuous silence, but our friends with a silence that is sacred, that song can never sing, that tongue can never tell.

At this late date, almost 1 year since his death, I cannot begin to express what is in my mind and in my heart about Paul Shafer. He defies description. Rather should I "pronounce his name and let it go shining on in deathless splendor."

On this first anniversary of his death, I can only say that the dearest, sweetest, kindest, and best personal and political friend left me. Oh, what an aching void. In one sense it seems ages ago, and in another sense it seems only yesterday. He was closer to me than hands and feet, and I can now almost reach out and touch his smiling face. Paul had a heart bigger than a cow and a smile that would melt the stoniest faces. He loved people and people loved him.

Mr. Speaker, Paul Shafer with all his foolishness and playfulness—thank God he had it—was a great and good man. He fought the battle of life the hard way and understood people. He battled against heavy odds for high principles and never stultified his conscience. He believed that every person should paddle his or her own canoe but was always helpful to anyone in need. He sided with the weak, the poor, the wronged, and lovingly gave alms to people less fortunate than himself.

Paul Shafer never asked what he could get in return for his good deeds, but he had faith, knowing that whatever bread he cast upon the waters would return to him after many days. He was quick to anger at wrongdoing, but he was also quick to forgive. His big and generous heart could not carry a grudge for long. Paul Shafer loved his God, was devoted to his country, and was loyal to his friends. Honor and loyalty, Mr. Speaker, are about the highest virtues. Paul Shafer had both. His greatest pain was that he could not do more for his family, his friends, and his country. I have seen him on innumerable occasions suffer because he could not do more. Bless his soul.

Many are the times we disagreed without being disagreeable; often he repremanded me, usually to my benefit, and I have said harsh words to him, only to receive a big broad smile and a warm hug that melted my heart. True friends really understand. We did.

Mr. Speaker, methinks that perhaps I could pronounce a grand encomium upon Paul Shafer, but I know if I did, he would rise up in his simplicity, sincerity, humility, and honor from the ashes of his dust to strike me down. Already, I know he feels embarrassed.

I know it is now time to stop—maybe long overdue—but in closing, I want to bow down and thank our God that it was my rare privilege to have known and worked with one of the finest spirits, greatest souls, and best men ever born.

I loved Paul Shafer in this life and will love him increasingly throughout eternity.

Mr. Speaker, as I began these remarks with a quotation from Alfred Lord Tennyson, so I conclude with his immortal poem:

Break, break, break,
On the cold gray stones, O Sea!
And I would that my tongue could utter
The thoughts that arise in me.

O well for the fisherman's boy,
That he shouts with his sister at play!
O well for the sailor lad,
That he sings in his boat on the bay!

And the stately ships go on
To their haven under the hill;
But O for the touch of a vanished hand,
And the sound of a voice that is still!

Break, break, break,
At the foot of thy crags, O Sea!
But the tender grace of a day that is dead
Will never come back to me.

Professional Boxing Should Be Investigated

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. OSTERTAG. Mr. Speaker, last June I introduced a resolution calling for the creation of a select committee to investigate professional boxing. I regret that this proposal has not been acted upon. There is abundant evidence that such an investigation is warranted and needed. As of today, millions of sports fans believe they are watching rigged matches. Whether they are or not, only a full-scale investigation can determine. Those involved in the sport should welcome it, and the American public has a right to know the truth, whatever it is.

This is a job which can only be done by Congress, and in my judgment, Mr. Speaker, it can be done properly only by a select committee. No standing committee of the House can do more than investigate a single angle, but this is a many-angled problem. Three States—New York, Pennsylvania, and California—have launched investigations, but their jurisdiction stops at State boundaries, while boxing is national in scope, complex in its ramifications. Similarly, the standing committees of the Congress are limited by law as to the areas they can investigate, but this is a problem with many facets. Among the phases of it which should be looked into, for example are monopolistic practices in the staging and promotion of bouts, and in the use of communications facilities, particularly television; concealed ownership of fighters; gambling, tax evasion, and underworld influence in fight promotion; possible violation of interstate commerce statutes, and problems of intergovernmental relations.

I hope and trust that when the 2d session of the 84th Congress convenes, it will make the creation of a select committee to look into this matter a first order of business.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD a series of excerpts from various publications bearing on this matter:

[From Sports Illustrated of November 1, 1954]

SPORT OR DIRTY BUSINESS?

(By Budd Schulberg)

The Gavilan-Saxton turkey trot deserves a thorough airing. In fact, it may be time to ask again, as responsible sportswriters have been asking so long, whether boxing is going to be a legitimate sport or a dirty business? Jim Norris, the personable president of the IBC, as an honorable man and a true fight fan should welcome an investigation of the dark underside of boxing. It can destroy the sport as the Black Sox conspiracy might have ruined baseball if an effective commission had not been set up to protect our pastime from its inside jobbers. To say this is not to attack boxing but to attack the boxing racket.

[From the Buffalo Evening News of June 9, 1955]

THIS IS A FEDERAL JOB

If Congress runs out of things to investigate it might take a look at the boxing racket and the farflung interests of James D. Norris, president of the International Boxing Club. Mr. Norris' face is familiar to millions of television viewers who must look at it as a preliminary to watching the fights. His other connections with professional sports are less familiar to the home folks.

Recent testimony of Mr. Norris before the New York State Boxing Commission dealt with his acquaintance with Frankie Carbo, a nether-world character who is reputed to be a secret fractional owner of a number of fighters. Some of Carbo's fighters are even matched against each other with predictable results known only to Carbo.

Mr. Norris owns the controlling interest in Madison Square Garden and the scent from the recent commission hearing was too much for six highly reputable businessmen who have served on the Garden's board of directors. They resigned in a body Tuesday, complaining that they were captives of Mr. Norris.

Besides the Garden, Mr. Norris and his partner, Arthur Wirtz, control the Chicago Stadium and the Detroit Olympia. Mr. Norris is president of the Chicago Blackhawks in the National Hockey League and also controls the New York Rangers. A member of his family owns the Detroit Red Wings which does not make the competition particularly keen.

Discontent among the Garden directors is not confined to irritation over some recent fight scandals. They are also perturbed over the fact that the Garden no longer gets the big fights but has been reduced to the status of a TV studio for second-rate fisticuffs.

Since Mr. Norris and his associates control the fight business from coast to coast any single State boxing commission is helpless to do much about cleaning up the mess that has grown up since the fight game moved from the clubs into the front living room of a few million homes. A State commission's power is limited to barring dubious characters—either fighters or managers—from the local rings. If it went too far all that would happen would be the end of the fight game in that State. Either Mr. Norris' fighters perform for television or nobody does.

And this brings us back to our suggestion that Congress give the highly odorous fight business an airing. Involved are federally controlled communications and interstate control of the whole dubious business. The entire mess falls within the purview of Congress. Only Federal legislation will cure the situation.

[From Time magazine of June 20, 1955]

AT THE GARDEN GATE

The sudden and simultaneous resignation of six directors from the board of a big corporation is a pretty good sign that somewhere the gears are clashing. Not so with Manhattan's Madison Square Garden Corp.—or so said resigning Board Chairman Bernard Gimbel last week when he and his old friend and fellow director, James Dougan Norris, fist-fight promoter extraordinary, parted financial company.

A longtime fight fan, and an amateur boxer himself in his younger days, department store magnate Gimbel, 70, had served on the Garden board for 25 years, been its chairman for 10. But Barney Gimbel said firmly that his resignation had nothing to do with State Athletic Commissioner Julius Helfand's investigation into the affairs of Jim Norris' International Boxing Club, which has a stranglehold on big-time professional boxing. Yes, Gimbel was aware that Sports Illustrated had exposed the connections between multimillionaire Norris and underworld characters such as Frankie Carbo. Yes, he had heard Norris testify to his friendship with Carbo. Still Barney Gimbel insisted, "I do not know the man [Carbo] nor do I know who he knows or what he does. What I do know is that I had contemplated this move for 2 or 3 years becausing of increasing outside activities."

REBELLIOUS CAPTIVE

Other retiring directors had even less to say. For the record, Stanton Griffis, onetime United States Ambassador to Spain, was in Paris. Investment banker Jansen Noyes and motor millionaire Walter P. Chrysler, Jr. were "out of town." Financier William M. Greve, a man who temporarily gave up his United States citizenship in the 1930's, then returned home hurriedly from Liechtenstein just two jumps ahead of Hitler, was keeping his own counsel. One of the departing directors, demanding anonymity, told reporters: "We figured we'd get out while the getting was good." Only Wall Street investor (Goldman, Sachs) Sidney J. Weinberg, 63, a dollar-a-year man in Washington during World War II, spoke out. Norris and his friends, he said, had arbitrarily cut down the size of the Garden's executive committee from 8 to 3, making it clear that he wants a free hand in operations. "When 1 or 2 people control a company," said Weinberg, "you become a captive director."

MAN-SIZE JOB

Personable Jim Norris, whose inherited wealth is estimated conservatively at $50 million, has influence far beyond Manhattan. His assets run from Canadian wheat and West Indies sugar holdings to horses, hockey teams, Great Lakes steamships, sports arenas, and questionable friends. He and Ice-Show Promoter Arthur Wirtz control the Chicago Black Hawks hockey team and the Chicago Stadium. His brother and two sisters have a firm hold on Detroit's Olympia Arena and the Detroit Red Wings hockey team. Madison Square Garden owns the New York Rangers hockey team. (The Rangers, Black Hawks, and Red Wings make up half of the National Hockey League.) Norris' IBC has exclusive rights to promote prize fights in the Garden, Yankee Stadium, the Polo Grounds, the Detroit Olympia, and the Chicago Stadium. Just running the Garden is likely to be a man-size job from now on. To assist him, President Norris will have as new chairman of the board the Garden's former president, Brig. Gen. (retired) John Reed Kilpatrick, Phi Beta Kappa and two-time All-America end (Yale, 1909–10). Norris and Kilpatrick, along with Iceman Wirtz, own 60 percent of the Garden stock.

This ownership is not without its problems. The IBC, which can scarcely be distinguished from the Garden management by the naked eye, is faced with an antitrust suit challenging its monopoly of boxing matchmaking. And Commissioner Helfand's investigation, stirred up by the shabby boycott against Welterweight Vince Martinez (Time, June 6), is hardly likely to cool off just because Norris' boys last week finally found Martinez a fight.

[From Sports Illustrated of July 11, 1955]

Boxing society in New Orleans opened its arms to visiting New York mobster Frankie Carbo, who helped Blaise D'Antoni open his new saloon and watched politely as D'Antoni talked of new boxing and horseracing activities.

[From the New York Post of July 21, 1955]

HELFAND WILL HEAR BANNED RING PILOTS

Four suspended fight managers will be given a hearing by Julius Helfand, chairman of the State athletic commission, at an early date to answer written charges that will be filed within a few days.

The four managers, suspended for refusing to testify at the recent commission investigation of the Boxing Guild of New York, are Charley Bauer, Cus D'Amato, Bobby Melnick, and Bobby Nelson. They will be given hearings. No mention was made of two other suspended managers, Bill Daly and Tex Peite.

The investigation of guild activities was reopened by Helfand who questioned Joe Arata, former promoter at Eastern Parkway. Arata said his TV contract called for a maximum payment of $12,150 from a network and the guild imposed a minimum TV fee of $2,900 for each main event fighter. Arata said he complained but was told by the guild take it or leave it.

Arata said he understood the St. Nicholas Arena was paying only $2,100 as a TV minimum while receiving substantially the same money from a different network. Arata added his fee later was cut to $2,500 and still later to $2,100.

St. Nick's minimum later was sliced to $1,500, its current level. Eastern Parkway went out of business in May.

[From Sports Illustrated of August 1, 1955]

"HONESTY RATING"

Dr. George Gallup has published a poll which should interest boxing. "Do you think that any of the boxing matches you see on television are 'fixed' or not?" he asked. The replies:

	Percent
Yes, some are fixed	40
No	27
Don't watch TV fights	14
Not sure, no opinion	19

Says Gallup: "That adds up to about 41 million Americans who give the sport a questionable honesty rating."

Coal Exports Through Foreign Aid Program

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. CHIPERFIELD. Mr. Speaker, since October 1954 the following coal purchases have been made from foreign aid funds:

	Tons
Colorado	22,400
Kentucky	224,000
Alabama	67,200
Illinois	179,200
Washington	66,080
Utah	67,200
West Virginia	44,800
Indiana	112,000
Oklahoma	44,800
New Mexico	11,200
Pennsylvania	156,800
Pittsburgh seams	134,400
Total	1,130,080

Most of this is destined for Korea; some will go to Indochina, Greece, and Yugoslavia.

Through normal commercial channels an additional 3,201,184 tons have been purchased, of which 1,321,600 tons have been procured through the operation of a revolving fund.

A small additional amount has been bought out of foreign aid funds by the United States Government.

In all, the purchase of 4,653,824 tons of coal has been authorized for fiscal year 1955.

Exports of coal from October 1953 to September 1954 were 14,100,000 tons.

For the period October 1954, through June 1955—9 months—exports were 17,800,000 tons.

Anniversary of the Birthday of Johann Wolfgang von Goethe, August 28

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. FLOOD. Mr. Speaker, this month we celebrate an event which took place over 200 years ago, the birth of Johann Wolfgang von Goethe on August 28, 1749.

This great German poet was also dramatist, novelist, philosopher, statesman, and scientist. He is honored throughout the world, for his fame has traversed both time and nationality. He has been called the last universal man of the Western World.

The rise of any man from humble beginnings to the heights of renown appeals strongly to our imagination. Goethe, however, was born of a well-to-do and long-established family, with every facility for education. Temptations to an easier life must have been numerous, but his life's story discloses that he refused to tread the pleasant paths that opened to him, and took the way which led over the rough road of toil and action.

Goethe has left us in his autobiography an unforgettable picture of his childhood. The library, the art objects, and antiquities of his father's home in Frankfort-am-Main kindled the quick intelligence and imagination of the young boy. His education was carefully planned. In the earliest stages it was

conducted by his father and later was supplemented by tutors. He then studied at the universities at Leipzig and Strasbourg. There was hardly any field of study which Goethe did not survey. Meanwhile his literary powers were developing, as was evidenced in his letters and in his poetry.

When in 1775, at the age of 26, he was called to Weimar to serve the young duke, Karl August, as companion and tutor, there began for him a course in the practical application of his education to life. Here Goethe would have been free to devote much of his time to his poetry and writing, but, instead, he chose the role of servant to the people and the court. He remained in that service for over 50 years. As a public servant he worked hard as government official, administrator, theatrical manager, mining engineer, collector of art, and university chancellor. But at the same time he was furthering his studies in a number of fields. The literary results of these years are well known to all of us. Goethe incorporated more types of learning and more forms of spiritual discipline into his art than any man of his day—or of our own day, for that matter. He gave the world many pages of beauty as well as power, not only in thought but in form and style. The harmony, the balance, and the classicism that are associated with Goethe's work were not qualities that were bestowed upon him. They represent a mighty achievement, for, although Goethe spent his life in a small village and never stirred from Europe, yet he developed universal interests and universal sympathy. He will always be an inspiration to us because he transcends the narrow specialization of our day. Faust, his masterpiece, has had a great influence on literature and the arts the world over.

In examining Goethe and his varied life we like to think of those aspects of the man's character which we feel are relevant today, for, in celebrating this anniversary of his birth, we are not merely celebrating the fact that he was a great poet. What fascinates this mid-twentieth century about Goethe is, above all, the man himself. His energy and ability were remarkable. He possessed a powerful, ever-active mind. Perhaps most important of all was the fact that he did not make his life's journey over the much-traveled roads, but thought and acted independently and with originality and imagination. His life and work were remarkably creative accomplishments.

Goethe was devoid of affectation; he possessed that entire simplicity of manner and way of life which is the crowning result of the highest culture and the finest nature. His ideal of humanity and his never doubting belief in the dignity of the individual man have greatly influenced succeeding generations. The universal greatness of Goethe cannot be disputed. The inspiration of his greatness will remain a thousand years hence, for Goethe belongs to all ages and to the whole world.

Remarks of Dr. Joseph Lifshitz at Reception in Office of Hon. Herbert H. Lehman, of New York

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, on July 23, I had the honor of receiving a group of new Americans who belonged to the Workmen's Circle of New York. The occasion was inspiring and moving. Almost all of those in the delegation had come through years of suffering, persecution, and brutality in Nazi or Communist concentration and labor camps. They know from personal experience the terrors and the evils of totalitarianism and appreciate more than many others the blessings of our free land. They have been here only a few years, but already they are all American citizens. I believe that virtually all of them are gainfully employed and are loyal, hard-working, devoted citizens of our country. Their leader, Dr. Joseph Lifshitz, spoke in behalf of the group. His remarks were so eloquent and convincing that I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF DR. JOSEPH LIFSHITZ AT RECEPTION IN WASHINGTON OFFICE OF SENATOR HERBERT H. LEHMAN, JULY 23, 1955

My dear Senator LEHMAN, it is my privilege to have been assigned the honor of speaking for our group of the Schlome Mendelsohn branch of the Workmen's Circle.

First, we would like to express our thanks to you for your warm and gracious reception.

When we first discussed with the general secretary of the Workmen's Circle, Mr. Nathan Chanin, the matter of being received by a representative personality in American political life, our unhesitating choice was Senator LEHMAN. But this was not because you are the Senator of our home State, New York, but rather because more than anyone else we could think of, you personify the forces of democracy which contend against intolerance and tyranny and stand for a liberalized American immigration policy. It is through such a policy that it is possible for us and others like us to leave the places where we have been victimized and oppressed and find an open door to this great free country of America.

Having found the door open we eagerly entered through it and now in a very genuine sense we feel ourselves to be new-born souls, knowing for the first time what it really means to be free. Our gratitude for this, to you and to America, is beyond words to describe.

For who more than we can appreciate and understand what it means to be able to live, breathe, and to work as free citizens, as free human beings? We, the oppressed and hunted, we who were the objects of derision, we who were stepped upon, and who through miracles somehow survived the crematoria readied for us by the Nazis, crematoria, and gas chambers and firing lines, which had already destroyed six millions of our fathers, our mothers, our brothers, our sisters, and our children? And the same miracles which enabled us to survive the Nazis also enabled us to escape the police state, and the prison camps, and the brutal totalitarianism of Communist Russia.

With how much deep feeling, therefore, do we stand before you attempting to give words to our thanks and to the great esteem we have toward you, Senator LEHMAN, for the outstanding role you have played in our emancipation and for the democratic community which you represent in this country?

It was you and the American people who opened the gates to us, received us so warmly, and gave us the opportunity to rebuild our lives, to become productive citizens of this country, and to begin to give of ourselves, our talents and our devotion, and our energies, to the ever-increasing greatness of these United States in the same way as have so many immigrants before us.

We here are members of a branch of the Workmen's Circle, a fraternal organization of 70,000 members throughout the country, which was formed and built by earlier immigrants. For the 55 years of the organization's existence it has made considerable contributions to the economic, social, and cultural life of this country. We know that you are acquainted with the Workmen's Circle and we need not tell you about it.

You also know about the role the Workmen's Circle has played in molding the countenance of Jewish life in America and in being helpful to Jewish life all over the world.

Our own branch carries the name of Schlome Mendelsohn, one of the noblest figures of our old home life in Poland. He was our revered teacher and cultural leader and a builder of the modern, progressive Jewish school movement in Poland. He was able to emerge from the hell of nazism together with us, and came here to America only to pass from our midst in 1948. Our own branch was formed in 1950, and as new Americans, as survivors of the Nazi tyranny, as escapees from communism, as fighters of the underground, of the partisan movements, and of the ghetto uprisings against the Nazis, we deemed it appropriate to name ourselves after one of our most beloved comrades, Schlome Mendelsohn.

We want to state that we feel ourselves very much at home in the Workmen's Circle where we have joined those who were immigrants of earlier decades. Having entered such an organization, we feel ourselves already integrated into the American community, and even in the short number of years that we are in this country we have all become citizens of America and feel in this citizenship a pride and a triumph which we joyously proclaim.

Thus far I have only spoken of our gratitude, but we also want to express our assurance to you and to our fellow citizens of this country that America will find in us the loyalty and trustworthiness it has a right to expect from every citizen, and we shall give ourselves wholeheartedly to the defense of this country and the enrichment of its traditions and institutions.

We earnestly hope that the priceless opportunity given to us to enter this country and become citizens will also be given to those who are still refugees from tyranny—who, wherever they may find themselves, have little hope in life except to be received in a land of freedom and to breathe as free men as we do now in this country. They, as well as we, look principally to America as a haven of refuge for the oppressed and as a homeland for those who not only believe in freedom but wish to live in freedom. What greater tribute than this can be paid any country?

Again, Senator LEHMAN, with the greatest respect we thank you wholeheartedly for receiving us and adding so richly to this visit we are making to the Capital City of our country. Having come here to learn more about our institutions and our form of government, this visit with you has also made it possible for us to come face to face with one of the greatest exponents of American democracy. This occasion will always be one of our happiest memories.

The Military Reserve Bill

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Quarter of a Loaf" concerning the military reserves bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A QUARTER OF A LOAF

A military reserves bill has now emerged from Senate-House conference and will go to the floor of the two Chambers for presumptive approval this week. On the ground that even a quarter of a loaf is better than no bread it will probably receive the reluctant signature of the President.

This compromise with a compromise is slightly better than no bill at all for two reasons. First, it recognizes, at least in principle, that we ought to have a trained Reserve force. Second, it recognizes that something ought to be done to distribute the burden of service more equitably, and it attempts, therefore, to provide against a double obligation on the part of those who have already served their country.

Beyond this the measure does not go far. Not even the most optimistic can believe that it will attain its supposed objective, a pretrained Reserve of 2,900,000 men by 1960. And even the most hopeful can hardly imagine that its roughly 3 months of training on a strictly voluntary basis can supply really adequate preparation for an emergency. Moreover, the deliberate by-passing of the National Guard as a primary element in our Reserve strength may have temporarily spared a controversy but it seriously weakens the measure.

The presentation and adoption of any bill designed to provide a Reserve force recognizes the twofold character of a defense establishment. One component is the active forces. The other is the Reserve. They are equally vital. The strength of the Reserve becomes especially significant if there is any thought of cutting down on the active force.

Unfortunately, we have approached this two-pronged character of our defenses in what seems to be confusion. We have accepted the principles of universality of obligation and compulsory service in respect to the active force. We have now evaded these principles in respect to the Reserve force. The result, as embodied in the present legislation, is both contradictory and unrealistic.

Our legislators are obviously fearful of this bugaboo of universal service or training. We believe this apprehension to be entirely unfounded. Repeated public opinion polls have shown that Americans are willing to make the required sacrifices for the sake of national safety and national strength. Thus, in spite of the election year mentality, we believe that the next Congress has a clearly indicated duty. It must take up this measure again and put some substance into it. A quarter of a loaf isn't good enough.

For Distinguished Service in Congress

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, in the Sunday magazine section of the New York Times of July 24, there appeared a most interesting article written by former Senator William Benton, of Connecticut, a most distinguished American, whose penetrating and fruitful mind continues to be of benefit to all of us.

In this article, former Senator Benton cogently analyzes the duties and functions of Members of Congress, and proposes distinguished service awards to be given to Members of Congress for outstanding performance in the unsung day-to-day labors of the Congress which are so necessary but which receive so little public notice.

While I have some questions about some aspects of the proposal by Senator Benton, I think his article a most useful and arresting one. Surely it deserves a place in the CONGRESSIONAL RECORD.

I therefore ask unanimous consent that this thoughful article by former Senator Benton be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR DISTINGUISHED SERVICE IN CONGRESS—MANY A CONGRESSMAN DEVOTES HIMSELF QUIETLY TO THE PUBLIC WELFARE AND THE PUBLIC NEVER HEARS OF HIM—HERE IS A PROPOSAL TO REWARD THE UNSUNG LAWMAKER

(By William Benton)

As Congress lumbers toward its summer recess, the season of appraisal opens. Which Senators, which Representatives turned in the best performances, those most in the national interest?

How many questions are potentially more important than this—and on how many do we do a more careless, slovenly job? As a nation we dote on rating our athletes and our actors. We gladly debate the merits of writers, dentists, junior and senior executives, ministers of the Gospel, storekeepers, and even scientists. Do we lack the resourcefulness to assess key political policymakers and to bring them out in the open so that we can better judge their deeds and know who they are?

Reelection is no indication of outstanding national performance. Repeated reelection certainly demonstrates ability of some kind, but there are many second-raters among the old hands. Skill in getting things done for friends or hoped-for friends may determine a Congressman's reelection, but it is no gage of his performance in the national interest. Congressmen and Senators are flooded with requests from individual constituents. They often battle manfully for special benefits for their own districts or States and such services tend to be duly rewarded at the polls.

Nor is the amount of publicity a Congressman receives necessarily a clue to his national value. For lack of better routes to recognition, too many Members of Congress, in the battle for survival, struggle too hard for newspace and headlines. That they do cannot be blamed entirely on the newspapers. The newsmen who cover Capitol Hill average high in ability, but they are limited by the requirements of their craft. They don't seek to give ratings to Congressmen. Their news stories focus on controversial figures, or on that handful among the 531 Members of Congress who as party or committee leaders—usually by virtue of seniority—wield great influence.

In November of 1953 the Harry Dexter White case was in the headlines nearly every day, with Senator JENNER's committee centered in the spotlight. The House Un-American Activities Committee announced it was going to subpena, or request, former President Truman to testify about White. One of the House committee employees explained that the committee wanted to get into the act.

He was candid, if crude. For among all the crafts and professions, politics and the theater are the two in which personal publicity seems most important. Just as a good press is converted into ticket sales at the theater box office, so also is favorable publicity translated into votes at the polls.

The politician's thirst for attention is not inconsistent with democratic theory; one of his jobs is to discover and formulate and clarify what is on the public mind. Another is to try to give leadership to the public opinion. The danger arises when headlines are hunted cynically, when ignorance and prejudice are deliberately exploited, when phony or futile issues are raised merely for the sake of publicity.

A sorry example is Senator MCCARTHY'S recent offer to take part in a commando raid on the mainland of China to rescue American fliers, "if the Air Force will provide adequate cover." A light-hearted example is Senator NEUBERGER'S proposal for an investigation of the treatment of squirrels on the White House lawn.

The headline-aimed statement of the legislator is now far less commonly made on the floor of either House, or in any speech. In form, it can be a press release, or an interview, or a phone call to a columnist. An accusation or an attack is often good for space. So is a demand for an investigation.

An eye-catching bill or resolution can be tossed into the hopper for its 1-day story value. The alert solon with a flair for publicity can ride the news ticker with statements—and score a fair percentage of hits. And of course such statements often obscure the moderate and informed discussion that forms the solid substance of congressional activity. Thus the national distinction of a Congressman can in no sense be measured in column-inches.

Most Senators and Representatives, like other human beings, act out of a mixture of motives, and under a variety of pressures, among which publicity-pressure is only one. But if a given action will produce fast and favorable attention for themselves, many Members of Congress are quick to see its validity and importance. If the action promises hard work and no public recognition, it takes some of them longer to discern the same virtues in it.

This brings me back to my opening question, which can perhaps be reformulated like this: Is there a way to help rectify the imbalance of the headlines by providing a "moral equivalent" which in itself would be personally rewarding to the Congressman; which would generate publicity that in turn would be translatable into votes at the polls; and which would help elevate the tone and quality of the Congress? I have a suggestion toward this end which will be discussed later.

Where shall be look for the unsung—or unappreciated—heroes of Capitol Hill? Three types seems to stand out.

First, there is a kind of guild of professional craftsmen in Congress, men and women who without fanfare do the bulk of the heavy work of legislation—and rarely get so much as a stick of news-type for their pains. Chief among them are the committee specialists. They master the detailed and complex problems of legislation and of its impact on the executive branch.

Hours of solitary study, and faithful attendance at often tedious committee sessions lie behind the construction of appropriation bills, tax measures and major substantive legislation in all fields.

This is the nonglamorous drudgery which is the heart of effective work by Congress. Both Houses of Congress are sprinkled with Members who devote themselves to this work, and it is they who lead and educate their newer colleagues—or the lazier—or those who spread themselves too thin.

Perhaps, without injustice to anyone, Senator CARL HAYDEN, of Arizona, may be singled out to symbolize those in Congress who have performed magnificent services for years on end while remaining virtually unknown to the general public. Senator HAYDEN entered the House in 1912 when Arizona, our newest State, was admitted to the Union. Since 1927 he has served in the Senate, and now ranks second in seniority among the 96 (only Senator GEORGE is left ahead of him).

He speaks seldom, always softly, and never with the slightest tinge of rhetoric or passion. He is a tireless worker and his influence within the Senate is enormous. He has played an outstanding part in framing massive appropriation bills, more important on the average than any other task in Congress.

His advice is sought and heeded by Members of both parties. He is trusted by everyone. On a list of influential and effective lawmakers, no name would rank higher than his. Yet he is little known outside of Arizona and the city of Washington.

Senator GEORGE, of Georgia, has been an acknowledged master of revenue and taxation problems for a generation. The Republican counterpart for Senator GEORGE is Senator MILLIKIN, of Colorado. He, too, has a command of finance and revenue issues. One of his Democratic colleagues describes Senator MILLIKIN as the ablest advocate of the conservative viewpoint on revenue and financial policy who has appeared in the Senate in this generation.

The House boasts its full quota of greatly respected stalwarts. Until he assumed the chairmanship of the Joint Committee on Atomic Energy in a Republican Congress, the public had rarely heard of Representative W. STERLING COLE, of New York. The record of Representative COLE's contributions to the upbuilding of the Nation's nuclear defenses has been necessarily buried in the secret archives of that committee.

My second group of unappreciated heroes are by nature the reverse of headline-hunters. They are the pros. Senator HAYDEN and GEORGE and MILLIKIN were old pros long before their seniority put their names in the news columns as committee chairmen. Thus I am here talking about temperament and industry, plus the attitude toward politics that it is a great profession and a life's work.

The pros were described by one experienced congressional observer as "the men who keep their shirts on." They are rarely reformers. They may lack talent as speakers. Their power lies in their character and the force of their personalities, in the confidence they inspire in the minds of fellow Members.

These are the men who put out the fires and curb any latent tendencies to hysteria. They realize that hasty and ill-advised action by Congress can cause incalculable damage, and so they tend to advise patience and delay, and because they are respected their counsel is usually taken.

I shall make my point more clearly in this category, as in the former, if I pick names identifiable by the public even if not highly publicized except through long years of service and seniority. Two Massachusetts Congressmen can perhaps symbolize the pros: JOHN MCCORMACK and JOSEPH MARTIN, or the two Texans: SAM RAYBURN and LYNDON JOHNSON.

My third classification consists of those who risk their political fortunes to champion unpopular causes simply because they believe the cause is right. Very few of the pros are ever in this group. These are the men and women who seek to blaze the trail—to demonstrate the underlying justice of what they advocate. Their immediate reward can be a fusillade of personal abuse and billingsgate, or it can be merely the enlistment of a few more enemies. The end result can be, and sometimes is, defeat at the polls.

A personal experience of my own, in my early days in the Senate, may serve as a minor illustration.

When I was a very junior Senator in 1950—in fact, at the very bottom of the seniority ladder—a batch of Hoover Commission proposals for the improvement and reorganization of the Federal Government came before the Committee on Expenditures.

To my surprise, many of these worthy proposals had no Senate champion. I leaped into the breach, not, I like to believe, without some success on some of the Hoover proposals. One columnist said of me he couldn't decide whether I was a Sir Galahad or just naive.

Senator Kenneth Wherry helped me gain understanding of my lonely role. The proposal under debate by the Senate was to reorganize certain aspects of the Treasury Department's relationship to the banks. I was the only Senator to speak for this Hoover Commission proposal, which was opposed by the banks and which had no friends or supporters with any political impact. After my speech came the vote. The proposed reorganization mustered only seven "ayes."

Senator Wherry left his front-row seat as Republican leader and walked to my back-row seat, No. 96. We were personal friends from my State Department days. He said:

"Bill, your speech reminds me of my first as a Senator; I prepared it carefully; as I spoke I saw the old and distinguished heads nodding in approval; I thought I was doing fine; but when the vote came, I wasn't there. I didn't have the votes, and I remembered that as I walked off the floor Senator Reynolds, of North Carolina, came up to me and put a consoling arm around my shoulder. 'Kenny,' Senator Reynolds said to me, 'Kenny, we was with you as long as you was talking.'"

I learned that, more professional and experienced than I, the old hands in the Senate knew there was no political sex appeal in reorganization. There was little publicity in many of the proposals and almost no incentive in terms of popular support, meaning votes in the following election. But there could be real and terrible penalties in terms of the organized opposition of those who thought they stood to lose—whether they were bankers or railroads or Government employees or veterans. If no friends are to be won, and enemies are to be made, the choice for the Congressman can be difficult indeed.

Can we devise means of rewarding and drawing public attention to the work of the quiet—but invaluable—Senators and Congressmen? One suggestion I herewith propose is that the American Political Science Association each year, perhaps about September 1, award five citations for distinguished service in Congress to Members for outstanding unpublicized (or inadequately understood) performance as Members of the Senate or House during the session that began in January. No Member could win a citation more than once in 5 years.

The Political Science Association, which is controlled by scholars and students of government, is experienced in administering awards. Perhaps the association would conduct an advisory secret poll among the Members of Congress itself, another among the accredited correspondents in the congressional press galleries, and a third among the 200 or 300 top employees of Congress and its committees.

If the association is unwilling or proves unsuitable to administer the awards, perhaps the responsibility should go to the National Committee for an Effective Congress.

Such citations, I believe, would be greatly coveted. What would be at stake would be far greater than a medal or scroll or even the thousand dollars that might come with it. The citations would help reelect men and women who would not otherwise get the public credit they deserve. The awards would cause other Congressman to emulate the kind of congressional service which won the plaudits of the association. They would thus strengthen and improve the Congress. Doubtless there are better ideas toward this end; I hope my suggestion will stimulate them.

The Members of Congress are the most remarkable group that I have ever met anywhere; and in integrity, intelligence, and hard work they rank above any other group with whom I have ever worked. That is as great a tribute as I know how to pay to men and women who are so frequently kicked around, abused, misunderstood, and unappreciated.

Yet the prestige of Congress is slipping, and this is something far more serious than personal misfortune for the individual Members. (One butt of continuing attack by Communist propaganda is our Congress.) A loss of prestige for Congress is a national loss. Carried far enough, it could be a disastrous loss.

I am suggesting one way of helping our people achieve a better understanding of our Congress and how it works. At the same time my suggestion would, I believe, develop the prestige of the Congress and of those Members who contribute most to making it the great and effective body it is. Finally, I would hope that it would encourage an even larger percentage of the Congress to concentrate on those activities which promise to make our legislative process even more effective and to function ever more successfully in the public interest.

National System of Interstate and Defense Highways Act of 1955

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, I do believe that the majority of the Members of the House are anxious to have a good highway bill.

The President's proposal, along with the Fallon bill, was brought up in the last few days of the session without proper consideration. The President's proposal was not satisfactory to many Members, including me, because it would have cost the taxpayers $11½ billion in interest over a period of 30 years.

The Fallon bill was not acceptable, and I opposed it, because it provided for a tax in a legislative authorization bill which would be establishing a new parliamentary practice in the House of Representatives. The tax-writing function of the Congress is in the Ways and Means Committee exclusively and not in the ordinary legislative committees. In addition to that, there was a closed rule and no amendments could be offered to that taxation provision.

There is no doubt in my mind but what a good bill could be passed as everybody appreciates the necessity for it.

Some newspapers have been violently criticizing Members of Congress for submitting to the trucking lobby. I wish to say for the record that I was not approached by a single member of the lobby. I received some telegrams, yes, very few from my district; but there was nothing unusual in the number compared to the number of telegrams I have received on other controversial matters.

Verne D. Mudge

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the attached memorandum in appreciation of the fine service Mr. Verne D. Mudge has rendered the Committee on Armed Services of the United States Senate from 1947 until the present time as professional staff member.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

Whereas Verne D. Mudge has been a professional staff member of the Committee on Armed Services of the United States Senate from 1947 until the present; and

Whereas during this period of service he has demonstrated exceptional competence in assisting the committee under the chairmanships of Senator Chan Gurney, Senator Millard Tydings, Senator Leverett Saltonstall, and Senator Richard B. Russell; and

Whereas he has given the committee the benefit of his broad military experience while maintaining scrupulously a viewpoint of complete objectivity; and

Whereas by the energetic application of his talents Verne has contributed immeasurably to committee and Senate action on the many items of legislation affecting the Department of Defense and the national security enacted during the period of his service; and

Whereas he has endeared himself to the members of the committee and its staff by his outstanding ability, his wise and friendly counsel, and his loyalty to the members and staff of the committee; and

Whereas after 8 years of service Verne is resigning from his position on the staff of the committee: Now, therefore, be it

Resolved, That the Committee on Armed Services expresses its profound appreciation to Maj. Gen. Verne D. Mudge, United States Army, retired, for his dedicated service of the highest quality, and extends its sincere wishes for his future health and happiness.

Reflections on the Yalta Papers

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, in the July issue of that most eminent and respected publication, Foreign Affairs, there appeared an article entitled "Reflections on the Yalta Papers" written by Dr. Raymond J. Sontag, professor of history at the University of California.

Dr. Sontag, in this article, makes an assessment of the Yalta papers, both as leaked and as formally published, which should be read by every thinking American who has concerned himself with the controversial questions arising out of the famous Yalta Conference.

It is a fair article, written from the hindsight of the historian which, at the same time, undertakes to present the perspective of those who actually participated in the Conference. Thus we see Yalta not only by hindsight, but also through the eyes of those who were there.

I do not share some of Dr. Sontag's views concerning the naivete of Winston Churchill and Franklin Delano Roosevelt. I believe they were much more aware of the dangerous possibilities of Soviet intrasigeance and conspiracy than Dr. Sontag indicates. They felt, however, that an honest effort had to be made to prevent a split between the West and the East and to establish a climate of peace in the world. The failure of their effort did not dishonor that effort, as Dr. Sontag, himself, indicates.

Mr. President, I ask unanimous consent that this very thoughtful article by Dr. Sontag be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REFLECTIONS OF THE YALTA PAPERS
(By Raymond J. Sontag)

The Yalta papers could not have appeared under worse auspices. The decision to publish them was colored by partisan political motives. The leakage during the process of selection and editing of sensational passages throws a strange light on the supposedly tightened security regulations of the Department of State. The circumstances under which the documents as a whole were released to the press in the form of uncorrected galley proof were, to put it mildly, peculiar. Finally, it is doubtful whether all the important papers in the Pentagon files have been included.

The most unfortunate effect of the release of the documents to the press in proof form, months before publication of the finished volume, is that attention has been focused on the minutes of the Conference itself. This is inevitable because the minutes have by far the greatest interest as revelations. Of the preconference documents, which fill almost half the volume, only a few have attracted attention. Yet it is only from these papers that a clear view of the world as seen by the American negotiators, and of the objectives of American policy, can be obtained.[1]

The foreign-policy objectives of the United States in 1944–45, as set forth in the preconference papers, can still be studied with pride by Americans; and they should be placed by the rest of the world in contrast to Soviet policy as it has unfolded over the last decade. To see that contrast it is necessary to cite only a few examples. On Italy: "United States policy toward Italy is, briefly, to encourage the development of Italy into a democratic and constructive force in the future Europe and to assist Italy to become politically independent and economically self-supporting as quickly as possible." On Iran: "Our policy in this case is based on the American Government's recognition of the sovereign right of an independent nation such as Iran, acting in a nondiscriminatory manner, to grant or withhold commercial concessions within its territory." On liberated countries: "Insofar as the United States is concerned, the following 2 criteria could be applied to any proposed interim government: (1) that it should be dedicated to the preservation of civil liberties; (2) that it should favor social and economic reforms."[2]

These are not isolated instances. Through every statement of policy in the period preparatory to the conference there is evident the conviction that American interests would be best served by the independence and the economic revival of other nations, by the liberation of subject peoples, by the spread of social reform, and by the free cooperation of all countries in the United Nations. And throughout it is evident that the one central problem was believed to be to obtain Soviet support for the attainment of these objectives. That support obtained, the conviction was general that the world would enjoy peace.

Yalta was the supreme effort of the United States Government to obtain Soviet support for these objectives, an effort which ended in disastrous failure. The Yalta papers, for the first time, give the American people an opportunity to understand clearly why the effort was made and why it failed, and it is vitally important that we should achieve this clear understanding. The present writer had no part in the formation of policy during World War II, and at the time he viewed what was known of our policy toward the Soviet Union with foreboding. Examining the record a decade later, however, he is driven to the conclusion that in the circumstances of the time, and given the accepted military view of the probable duration of the war and of the distribution of power in the world after the war, no other policy was possible. One can go further and say that if the policy of the American Government in 1944–45 had not been attempted, wholeheartedly and to the point where its failure was clear without a shadow of doubt, the firmness of will and the serenity of conscience with which the American people today face a world full of ominous portent would have been impossible to attain.

In the winter of 1944–45 the duration of the war was uncertain. For planning purposes, it was assumed that the European war would be over, at the earliest, by July 1, 1945.[3] At the time of the Yalta Conference, the Russian armies seemed to have a clear road ahead of them across the great European plain; the western armies had not yet crossed the Rhine. In this situation, it was possible that the end of the war would find the Russians in possession of most of Germany, as they were already in possession of nearly all of what we now call the satellites.

Beyond the ending of the European war, there stretched the unknown duration of the Pacific war. For planning purposes, the end of the war against Japan was set at 18 months after the defeat of Germany.[4] While

Footnotes at end of speech.

Footnotes at end of speech.

this date was tentative and set merely for logistical purposes, there is clear evidence that the Joint Chiefs saw a hard fight ahead, as indeed there was. The probability that one atomic bomb would be ready by July 1, 1945, and more by the end of the year, was known.[5] But there is no evidence that the military had yet assessed the probable effect of atomic weapons on the length of the war, either in Europe or Asia.

If the war developed in this way, the whole strength of the United States would be concentrated in Asia for some time after the ending of the war in Europe, and if, during this time, the Russians were in undisturbed occupation of most of Europe north of the Alps and east of the Rhine, how would they use this time? Ambassador Harriman reported that, "the overriding consideration in Soviet foreign policy is the preoccupation with 'security'. * * * The Soviet Union seeks a period of freedom from danger during which it can recover from the wounds of war and complete its industrial revolution. The Soviet conception of security does not appear cognizant of the similar needs or rights of other countries and of Russia's obligation to accept the restraints as well as the benefits of an international security system."[6] This was ominous.

The situation in Asia was even more ominous. Within China, according to the briefing book papers of the Department of State, "there is now Kuomintang China, Communist China, and puppet [i. e., Japanese dominated] China. Kuomintang China is being weakened by dissident elements and widespread popular discontent. Communist China is growing in material and popular strength. Puppet China is filled with pockets of Communist guerrilla resistance." A continuation of this situation would be "detrimental to our objective of a united, progressive China capable of contributing to security and prosperity in the Far East." There was an even more dangerous possibility. If the U. S. S. R. entered the far eastern war, one line of attack might be from Outer Mongolia; Soviet troops could strike east and take over all of north China and Manchuria. The Department believed that as yet there was little to substantiate the fear that Russia intended to establish an independent or autonomous area in north China and Manchuria, but an open break between the Kuomintang and the Chinese Communists would tempt Russia to abandon her declared policy of nonintervention in the internal affairs of China. "It is our task to bring about British and Russian support of our objective of a united China which will cooperate with them as well as with us."[7]

Reading these documents, one sees clearly that the American policymakers, civil or military, had no confidence in their ability, while the war continued, to compel the U. S. S. R. to accept the American plans for the organization of the Asiatic mainland. Moreover, our Government was eager to secure early Soviet military intervention in the war against Japan, and recognized the necessity to pay for it. The problem as seen in Washington was both to insure early Soviet intervention and to bring the U. S. S. R. to recognize that a strong and friendly China was the best guaranty of Soviet security in Asia.[8]

Even after victory over Japan, in the view of American policymakers, the power of the United States directly to shape the future would be very limited. The strategic situation expected after the war is most clearly outlined in a letter which Admiral Leahy wrote to Secretary Hull on May 16, 1944, giving the view of the Joint Chiefs of Staff on a British proposal for the disposition of the Italian colonies.[9] While this letter was written many months before Yalta, it was accepted as the basis for policy by the Department of State in the briefing book for the Conference, and, so far as can be determined from the available evidence, the views of the Joint Chiefs had not altered during the intervening months. The central theme of the letter was the "revolutionary changes in relative national military strengths" resulting from the war, and particularly the phenomenal development of the Soviet strength, absolutely, and relative to the impaired strength of Britain. The situation which was expected to result from this shift now seems so remote that it is almost forgotten, but it must be recalled if American policy in 1945 is to be understood. Admiral Leahy wrote:

"It would seem clear that there cannot be a world war, or even a great war, which does not find one or more of the great military powers on each side. At the conclusion of the present war, there will be, for the foreseeable future, only three such powers—the United States, Britain, and Russia. Since it would seem in the highest degree unlikely that Britain and Russia, or Russia alone, would be alined against the United States, it is apparent that any future world conflict in the foreseeable future will find Britain and Russia in opposite camps. * * *

"In a conflict between these two powers the disparity in the military strengths that they could dispose upon that continent [i. e., Europe] would, under present conditions, be far too great to be overcome by our intervention on the side of Britain. Having due regard to the military factors involved—resources, manpower, geography, and particularly our ability to project our strength across the ocean and exert it decisively upon the continent—we might be able to successfully defend Britain, but we could not, under existing conditions, defeat Russia. In other words, we would find ourselves engaged in a war which we could not win even though the United States would be in no danger of defeat and occupation.

"It is apparent that the United States should, now and in the future, exert its utmost efforts and utilize all its influence to prevent such a situation arising and to promote a spirit of mutual cooperation between Britain, Russia, and ourselves. So long as Britain and Russia cooperate and collaborate in the interests of peace, there can be no great war in the foreseeable future.

"The greatest likelihood of eventual conflict between Britain and Russia would seem to grow out of either nation initiating attempts to build up its strength, by seeking to attach to herself parts of Europe to the disadvantage and possible danger of her potential adversary. Having regard to the inherent suspicions of the Russians, to present Russia with any agreement on such matters as between the British and ourselves, prior to consultation with Russia, might well result in starting a train of events that would lead eventually in [to] the situation we most wish to avoid."

Seen in the light of Admiral Leahy's letter, much that is puzzling in the Yalta period becomes understandable: Mr. Roosevelt's elaborate efforts to avoid the appearance of intimacy with Britain, even to create the impression of friction between Britain and the United States; American opposition to the delimitation of Anglo-Soviet spheres of influence in southeastern Europe; what seems now the shortsighted preoccupation of the Department of State with the possibility that the British and Soviet Zones in Germany might be administered along divergent lines. These and other aspects of American policy should be seen in relation to the conviction that, in the future, war between the United States and U. S. S. R. was "in the highest degree unlikely," that Anglo-Russia enmity was the one likely cause of war, and that the United States must avoid appearing to line up with Britain on questions of direct interest to Russia "lest postwar disunity of the three great powers be thereby fostered with all the possibility of ultimate impact upon the military position of the United States which such a disaster would entail."[10]

It is probable that one can go farther. On many questions Mr. Roosevelt's position at Yalta seems to waver, even to involve contradiction. When Mr. Churchill insisted that France must participate not only in the occupation of Germany but also in the Control Commission, Mr. Roosevelt at the outset joined Marshal Stalin in opposing the British proposal, and made disparaging remarks about the French which, read now, cause justified resentment. At the end of the conference, however, Mr. Roosevelt moved to the British position. Surely, in such cases the position of a statesman should be judged, not by isolated remarks on a single occasion, but by his long-term policy, and the policy of his responsible advisers. Mr. Roosevelt had shown himself a friend of France, and historians of the future are likely to describe American policy toward France, before and after Yalta, in the words the Secretary of State addressed to the President:

"It is in the interests of the United States to assist France to regain her former position in world affairs in order that she may increase her contribution in the war effort and play an appropriate part in the maintenance of peace. * * * In the long run this Government will undoubtedly gain more by making concessions to French prestige and by treating France on the basis of her potential power and influence, than we will by treating her on the basis of her actual strength at this time."[11]

Similarly, the real state of Anglo-American relations in 1945 cannot be determined on the basis of a few quips made by Mr. Roosevelt to Marshal Stalin; much more can be learned from the few words with which General Marshall justified his refusal to insist on precise formulation of American right of access to Bremen: "The broad policy had been decided and the good will was there."[12]

What requires explanation is the fact that, at the end of the Yalta Conference, the American delegation was convinced (so far as can be determined from evidence set down at the time, and not from undocumented afterthought) that Soviet support had in fact been won. In the last days a note of relief, even of rejoicing, breaks through the cold summaries of the proceedings.

To understand this rejoicing it is necessary to stress, not the concessions made by the Americans and the British, but the attitude and the promises of the Russians. On Poland, the Americans and the British stood firm until Stalin said that free elections could be held in about 1 month; then agreement was quickly achieved. On Germany, what seemed important at the time was that the Soviet Union agreed to a single administration for all the zones, thus apparently eliminating the possibility of disastrous friction between the occupying powers. On the Far East, the concessions to Russia in Manchuria, Sakhalin, and the Kuriles seemed justified not only because they insured Soviet military intervention in the war against Japan; these concessions also set limits to Soviet expansion in an area where there was no effective force to oppose Soviet expansion; finally, these concessions brought a Soviet promise to support the government of Chiang Kai-shek. When Molotov agreed to accept the American proposal that in the United Nations the veto should not be used in questions involving the peaceful adjustment of disputes, Mr. Roosevelt felt that this was a great step forward, and Mr. Churchill echoed the President's words, adding that the decision "would bring joy and relief to the peoples of the world."[13]

Footnotes at end of speech.

Footnotes at end of speech.

Over and above concrete concessions, there were Marshal Stalin's repeated protestations of his determination to "create for the future generation such an organization as would secure peace for at least 50 years," [14] and, in contrast to earlier exchanges between the allied governments, his disarming friendliness and apparent eagerness to continue the wartime cooperation into the years of peace which lay ahead. Even Mr. Churchill, whose detestation of communism went back to 1917, was persuaded to hope that "we were all standing on the crest of a hill with the glories of future possibilities stretching before us," while Mr. Roosevelt felt that the atmosphere "was as that of a family," and it was in those words that he liked to characterize the relations that existed between our three countries.[15]

Seldom in history has deception been so successful and so decisive as that perpetrated at Yalta by the Soviet leaders at the expense of Britain and the United States. Immediately after the conference closed, evidence began to accumulate that the Soviet promises were worthless. If the Americans alone had been deceived, one would be driven to conclude that they were deceived only because they were blind to the nature of their antagonists. Blind they certainly were. Nowhere in this volume is there anything which suggests that American statesmen were conscious that they were dealing, not with Russian national leaders, but with Communist revolutionaries determined to outwit and eventually destroy their allies, allies not from choice but because of the mad decision of Hitler to attack the Soviet Union.

Even those who urged a firmer policy in dealings with the U. S. S. R. did not make it clear that Russia was now, not a national state pursuing national interests, but the center of a revolutionary movement dedicated to the creation of a Communist world ruled from Moscow. Gen. John R. Deane believed that for the United States always to be "at the same time the givers and the supplicants" was "neither dignified nor healthy for United States prestige." But he also believed "we have few conflicting interests, and there is little reason why we should not be friendly now and in the foreseeable future." [16] Ambassador Harriman shared General Deane's views on the need for tougher bargaining with the U. S. S. R., but he also felt strongly "that the sooner the Soviet Union can develop a decent life for its people the more tolerant they will become. * * * I am satisfied that the great urge of Stalin and his associates is to provide a better physical life for the Russian people, although they will retain a substantial military establishment." [17] Such statements did little to undermine the belief, dominant in Washington, that Russian and American interests were identical, and that the only problem was to bring the Soviet leaders to a recognition of this fact.

But it was not just the Americans who were deceived at Yalta. Churchill also was deceived, and that was indeed a triumph for Soviet duplicity, for Churchill's denunciations of "the foul baboonery of bolshevism" are among the most magnificent examples of sustained invective in the English language. Here we touch the real root of Soviet success at Yalta: British and American consciousness of the consequences of failure to reach agreement with the Soviet Union. Churchill stated the cast with his customary precision when he presented the Yalta agreements to the Commons: "I decline absolutely to embark here on a discussion about Russian good faith. It is quite evident that these matters touch the whole future of the world. Somber indeed would be the fortunes of mankind if some awful schism arose between the Western democracies and the Russian Soviet Union."

The awful schism did arise. This volume makes abundantly clear that in 1944 and 1945 the American Government made an honest, a desperate, effort to secure Soviet friendship. At Yalta, the professions and promises of Stalin and Molotov convinced the American negotiators that Soviet friendship had been won, that Soviet good faith was assured. Almost immediately after Yalta the conviction was shaken, and slowly, much too slowly, it was destroyed by Soviet aggression. But if that honest and desperate effort had not been made at the outset it is hard to believe that we could now accept unflinchingly the tragically unfolding consequences of the schism between East and West.

The schism is not of our making. So much consolation we can derive from our failure at Yalta. Farther we need not go, and should not go.

Footnotes at end of speech.

[1] The preconference documents make untenable Mr. Byrnes' belief that Mr. Roosevelt "had made little preparation for the Yalta Conference," as well as the less directly stated suggestion that Mr. Roosevelt had no knowledge of the contents of the briefing book prepared for him by the Department of State (James F. Byrnes, Speaking Frankly. New York: Harper, 1947, p. 23). The briefing book consisted of papers summarizing the status of the problems likely to be discussed at Yalta, and stating American policy, or making policy recommendations, on each problem. It is almost certainly true that Mr. Roosevelt did not read most of the papers. However, there is clear evidence that the main points of many of the papers were known to him, and that he was familiar with the policy statements or recommendations in most of the important papers. I have used the statements of policy as given in the briefing book only when it seems clear that the statement was, in fact, American official policy.

[2] As only the galley proofs of the Yalta papers are available at this writing, and the precise title of the volume is uncertain, location of a paper within the volume can be given only by chapter and section within the chapter. The first quotation above is from a briefing book paper on United States Policy Toward Italy, printed in ch. 2, section entitled "The Italian Cabinet Crisis"; the second is from a dispatch from Stettinius to Harriman, October 30, 1944, printed in ch. 2, section entitled "Iran"; the third is from a briefing book paper on liberated countries, printed in ch. 2, section entitled "Liberated Europe and Spheres of Influence."

Amending Natural Gas Act

SPEECH
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6645) to amend the Natural Gas Act, as amended,

Mr. FRIEDEL. Mr. Chairman, I am opposed to H. R. 6645, a bill to amend the Natural Gas Act, and strongly urge that it be defeated.

As a member of the Interstate and Foreign Commerce Committee, I attended the many hearings that lasted for more than 3 months which were held on the bill we are considering today, namely, a measure to exempt natural-gas producers from control by the Federal Power Commission.

While I do not claim to be an expert on this subject, after listening to the voluminous testimony produced, both pro and con, it is my considered opinion that passage of this bill would not be in the best interest of the consumers. I voted against the measure in committee and shall do so again on the floor today.

Testimony before our committee has revealed that regulation of the natural-gas industry is necessary. It was developed that an urgent need exists for a study of the operations of the pipeline companies, the distributors, as well as the producers. My constituents and most of the people of the great city of Baltimore feel that if the producer is not controlled, prices charged to the consumers would then be substantially increased.

I am personally very much alarmed by the great variations in the price of natural gas at the consumer level. I should very much like to know why the distributor in Baltimore charges $1.14, while in Chicago the price is only 89 cents, in Detroit 55 cents, and in Cleveland only 27 cents.

Until such studies can be accomplished, I deem it our duty to protect the consumers by voting against this bill. After such a thorough inquiry will have been completed, we will then be in a much better position to regulate the industry in the best interests of all concerned.

Record of Activity of the Committee on the Judiciary of the House of Representatives, 1st Session, 84th Congress

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. CELLER. Mr. Speaker, the Committee on the Judiciary of the House of Representatives submits its record of activity during the first session of this Congress. As chairman of the committee, I do this in the knowledge that its contributions to the achievements of the 84th Congress could not have been effected without the concentrated work and devotion of the members of the committee and the staff.

Of the 8,843 bills introduced in the House, a total number of 3,959 were referred to the Committee on the Judiciary, thus giving this committee about 45 percent of the total number of House bills.

Among the 3,959 referred to this committee are the following: 817 public House bills, 12 public Senate bills, 2,815 private House bills, 315 private Senate bills. Thirty-three public House bills reported by the Committee on the Judiciary were pending in the Senate at the time of adjournment. Twenty-three public bills acted upon by the Committee on the Judiciary have been enacted into law. Three hundred and twenty-seven private bills were enacted into private law.

The committee held a total of 114 hearings during the session on 3,959 bills.

We believe it is a good record and we invite review of the detailed account of the work of the five standing subcommittees into which the committee itself is divided, as hereinbelow set forth:

SUBCOMMITTEE NO. 1—GENERAL JURISDICTION OVER BILLS AS ASSIGNED, SPECIAL JURISDICTION OVER IMMIGRATION AND NATURALIZATION

Public bills: Subcommittee No. 1 had 104 public bills referred to it for action.

A group of nine bills dealing with the transportation and distribution of obscene matter were considered by the subcommittee. H. R. 3333, amending chapter 71 of title 18, United States Code, so as to strengthen the provisions barring the transportation of indecent and obscene matter, was reported by the subcommittee. A similar Senate bill, S. 600, was amended on the floor of the House by the substitution of the provisions of H. R. 3333. That bill, approved by both Houses of Congress and signed by the President, became Public Law 95.

H. R. 2854 to increase the penalties for seditious conspiracy, advocating the overthrow of the Government and conspiracy to advocate the overthrow of the Government was recommended favorably by the subcommittee. The bill was reported, passed the House, and was pending in the Senate at the close of the session.

The subcommittee drafted and recommended for enactment a bill to facilitate the admission into the United States of wives and children of Spanish sheepherders who had been admitted under laws authorizing the admission of such sheepherders. The legislation also provided for a more humane approach to the waiver of minor criminal offenses of persons seeking to enter the United States. The subcommittee incorporated into the bill an amendment to the Refugee Relief Act of 1953, as amended, so as to apply that law to refugees in Spain. An additional committee amendment was designed to correct a situation involving a number of aliens admitted under the displaced persons laws, who misrepresented their nationality or country of birth to avoid forced repatriation to Communist-controlled countries. The bill, H. R. 6888, was reported to the House, and was passed on July 30, 1955. The bill was not acted upon by the Senate prior to adjournment.

The subcommittee, after hearings at which representatives of the American Bar Association and the State and Justice Departments appeared, recommended an amended bill to provide for a commission to conduct a study of the problems in the field of international legal procedure with the purpose of formulating suggested rules of international judicial procedure. A clean bill was introduced embodying the recommendations of the subcommittee and reported to the House, H. R. 7500.

The committee has heard from a large number of witnesses in the course of hearings on H. R. 3, a bill to establish rules of interpretation governing questions of the effect of the acts of Congress on State laws. It is contemplated that hearings on this legislation will be continued at the next session of this Congress.

The subcommittee held 33 meetings, 8 of which were hearings on public bills.

The extent of work of this subcommittee cannot be appreciated without a review of its activity in the area of private legislation. The following table sets this forth:

House bills:	
Private laws enacted	270
Bills pending in Senate	99
Adverse action by Senate committee	2
Reported in House, Senate bills substituted on House floor	5
Passed by Senate, amended, in which the House has not concurred	3
On House Private Calendar	1
Recommitted	2
Tabled by committee	291
Bills disposed of by inclusion in two omnibus bills	64
Bills rejected under committee rules	37
Departmental reports submitted, no action taken	935
Departmental reports requested and not received	283
Number departmental reports requested	199
Total House bills	2,191
House joint resolutions:	
Private law enacted	1
Private law pending	1
Total joint resolutions	2
Senate bills:	
Private laws enacted	131
Vetoed	1
Tabled by committee	15
Pending	151
Total Senate bills	298
Total number of bills and joint resolutions	2,491
Total number of private laws	[1] 412

[1] Ten Senate bills, not referred to the committee, were called up on the floor of the House and have become private laws.

In addition, final congressional action was taken on several concurrent resolutions, as follows:

Three House concurrent resolutions, approving the favorable recommendation of the Attorney General in 611 cases submitted to Congress pursuant to the provisions of section 4 of the Displaced Persons Act of 1948, as amended.

Two House concurrent resolutions, favoring the granting of permanent residence in 409 cases submitted to Congress by the Attorney General pursuant to section 6 of the Refugee Relief Act of 1953, as amended.

Two Senate concurrent resolutions, approving 256 cases submitted to Congress by the Attorney General in which suspension of deportation was recommended.

Two Senate concurrent resolutions, withdrawing suspension of deportation in two cases.

One Senate concurrent resolution, providing for the reenrollment of S. 195.

Totals: 5 House concurrent resolutions, 5 Senate concurrent resolutions.

SUBCOMMITTEE NO. 2—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED, SPECIAL JURISDICTION OVER CLAIMS

During the session the subcommittee conducted hearings on 14 different days. These covered public as well as private claims measures. Consideration was given 296 bills.

The following tabulation indicates the workload of this subcommittee in connection with claims against the Government:

Referred to subcommittee:		
Private, House bills	599	
Private, House resolutions	15	
Private, Senate bills	12	
		626
Public, House bills	68	
Public, House joint resolution	1	
Public, Senate bills	3	
		72
Total		698
Reported to committee:		
Private, House bills, favorably	194	
Private, House resolutions, favorably	14	
Private, Senate bills, favorably	7	
		215
Public, House bills, favorably	17	
Public, Senate bills, favorably	1	
		18
Total		233
Private, House bills, adversely	66	
Private, Senate bills, adversely	1	
		67
Public, House bills, adversely	2	
Public, Senate bill, adversely	1	
		3
Total		70

Reported to House:		
Private, House bills	227	
Private, House resolutions	14	
Private, Senate bills	6	
		247
Public, House bills	17	
Public, Senate bill	1	
		18
Total [1]		265

[1] This total includes 33 private House bills reported under rule 7 of the committee, which authorizes the chairman to report bills which have been favorably reported by the committee in the previous Congress.

Passed House:		
Private, House bills	212	
Private, House resolutions	14	
Private, Senate bills	7	
		233
Public, House bills	16	
Public, Senate bill	1	
		17
Total		250
Pending in Senate:		
Private, House bills	168	
Public, House bills	15	
Total		183
Public laws enacted (claims)		2
Private laws enacted		57
Bills vetoed		3

A substantial amount of the subcommittee's time was devoted to the bill (H. R. 4045) relating to the Texas City disaster. This legislation concerned some 8,000 claims against the United States for death, personal injury, and property damage. As a result of the disaster over 570 people were killed and 3,500 more injured. The claims were litigated for over 5 years in the Federal courts under the Tort Claims Act.

The subcommitte held extensive hearings in which it heard not only the representatives from the Department of Justice, but also the attorneys who represented many of the claimants. It also studied and examined the record of the court litigation, which consisted of over 39 volumes and some 40,000 pages. In addition, the subcommittee held some 10 executive sessions on this legisltion. As a result, it recommended legislation substantially different from the bill as introduced, and as changed, it was passed by the House late in this session of the Congress. Because the House disagreed with the Senate's recommendations, it was necessary to go into conference. However, both Houses adopted the report of the conferees and the legislation has been cleared for Presidential action.

The subcommittee has scheduled 4 days of hearings in California on H. R. 7763, a bill looking toward the early settlement of the Japanese-American evacuation claims. As a result of the evacuation and exclusion of people of Japanese ancestry from the west coast during World War II, the Government recognized claims by people who suffered losses due to the evacuation. There remain over 2,500 claims unsettled, totaling approximately $60 million. It is hoped that the hearings on this bill will result in providing additional methods for the expeditious settlement of these remaining claims. It is some 13 years now since the evacuation of these people, and it is felt that it is only proper and fair to recompense the remaining claimants as speedily as is reasonably possible to help them rehabilitate and readjust themselves.

GENERAL JURISDICTION

In addition to claims bills, Subcommittee No. 2 handled a number of pieces of general legislation. These included civil rights bills, bills to establish a public defenders system in the courts of the United States, legislation concerning criminal laws, mileage allowance increases for marshals and their deputies, proposed modification of the Lucas Act—Public Law 657, 79th Congress—and bills to provide a remedy for persons who are slandered or libeled by Members of Congress.

Hearings were held on July 13, 14, and 27 on 51 civil-rights bills before Subcommittee No. 2. These bills would provide extensive Federal protection of civil rights. Among the proposals considered were the following: The creation of a Fair Employment Practices Commission to eliminate racial and other discriminations in employment, prohibitions on racial and other discriminations in federally supported housing, federally supported education, interstate transportation and the armed services, prohibitions on interference with the right to vote, and other rights, privileges, and immunities secured by the Constitution or laws of the United States, and anti-lynching, anti-poll-tax, and anti-peonage legislation.

Other bills would create a joint congressional committee on civil rights and establish a Federal commission on civil rights to gather information concerning the protection of civil rights in the United States and report annually to the President. In addition, there are proposals to reorganize the Department of Justice by providing an additional Assistant Attorney General to head a civil rights division and to authorize additional FBI personnel to enforce civil-rights legislation.

Hearings were held on a number of bills to authorize the establishment of a public defenders system in the courts of the United States. Full time or part time defenders would be appointed to represent indigent defendants charged with Federal crimes. These bills are now under consideration by the subcommittee.

A number of bills concerning the criminal laws have been before Subcommittee No. 2. H. R. 5205, a bill to include all members of the armed services in Federal criminal law protection now afforded the members of the Coast Guard, was favorably reported by the subcommittee and the full Judiciary Committee and is now pending on the Consent Calendar of the House.

Hearings were held on other legislation concerning the criminal law. H. R. 4930 and H. R. 4932 would provide the defendant with an appeal against an excessive criminal sentence while H. R. 799 and H. R. 5264 would establish the making of contradictory statements under oath as perjury. These bills are now under consideration by the subcommittee.

Preliminary hearings were held on two bills, H. R. 4299 and H. R. 5753 to modify the Lucas Act—Public Law 657, 79th Congress. These bills would render less stringent the requirements as to requests for relief so as to make more World War II contractors' claims eligible for consideration.

The subcommittee held hearings on two bills, H. R. 271 and H. R. 641, to provide remedies for persons who are slandered or libeled by Members of Congress. These bills were adversely reported by the subcommittee and tabled by the full committee.

In view of the fact that all other Federal employees received increases in mileage allowances for travel on official business, Subcommittee No. 2 favorably reported H. R. 4019, to authorize an identical mileage allowance increase for United States marshals and their deputies. This bill passed the House on July 25, 1955, and an identical bill, S. 2592, was then substituted for it.

Number of public bills referred to subcommittee	79
Number of hearings held	7
Number of public bills reported to full committee	14
Number of reports filed	2
Number of public bills passed House	0
Number of public bills pending in the Senate	0
Number of Senate bills disposed of	0
Number of public bills approved by the President	0
Number of public bills pending approval of the President	0

SUBCOMMITTEE NO. 3—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED SPECIAL JURISDICTION OVER PATENTS, TRADEMARKS, COPYRIGHTS, AND REVISION OF THE LAWS

The primary functions of this subcommittee are three. It processes all bills of a general nature which are assigned to it. It also handles legislation relating to patent, trademark, and copyright laws. In addition, it has jurisdiction over the revision of the laws, classifying the general and permanent laws, as they are enacted, into the 50 titles of the United States Code.

Out of a total of 69 days which were available for subcommittee hearings, 23 days of hearings were scheduled. In other words, this subcommittee held hearings on an average of 1 for every 3 days. In addition, the subcommittee held 14 executive sessions.

GENERAL LEGISLATION

With respect to general legislation, the workload of Subcommittee No. 3 was substantially increased during the 1st session of the 84th Congress. Aside from patent, trademark, copyright, and codification bills, which are treated, for subcommittee purposes, as special legislation, there were referred to the subcommittee during the 1st session 30 bills relating to general legislation. Among the general judiciary bills handled by this subcommittee was one—H. R. 3882—requiring the registration of persons trained in the espionage service and tactics of foreign governments. This legislation will give important assistance to our law-enforcement agencies in combating subversive activities in this country.

Important assistance to our defense agencies is expected to result from the enactment into law of H. R. 3885—Pub-

lic Law 60—which permits the waiving of performance and payment bonds in connection with Coast Guard contracts.

The subcommittee also processed the bill, H. R. 3702, which passed the House but has not been acted upon as yet by the Senate. That bill amends the Motor Vehicle Theft Act by making it a crime to transport stolen truck trailers and semitrailers in interstate commerce.

Following full public hearings, the subcommittee took favorable action on a bill, H. R. 5649, which will restrain the abuse of the use of the writ of habeas corpus in the lower Federal courts by prisoners convicted in State courts of State crimes. This bill was recommended by the Administrative Office of the United States Courts and has the approval of both the State and Federal judiciaries.

H. R. 3233, which passed the House, relates to the Fugitive Felon Act, and makes it a Federal criminal offense for anyone to cross State boundaries to avoid prosecution for the crime of arson.

Another bill which was enacted into law—Public Law 136—on which this subcommittee acted, was H. R. 4221, which authorizes certain staff personnel to administer oaths and take acknowledgments of inmates in Federal penal institutions. This legislation will not only result in the savings of time for our Federal prison officials but will also eliminate the necessity of moving inmates in and out of the prison offices.

The House also passed H. R. 5417, which broadens the class of postal workers who are prohibited by law from seeking to increase the compensation of postmasters through the sale or pledge of postage stamps.

PATENTS, TRADEMARKS, AND COPYRIGHTS

Another important phase of this subcommittee's work relates to patent, trademark, and copyright laws. One of the major pieces of legislation regarding patents has been the bill (H. R. 7416) to increase the fees payable to the Patent Office for the registration of patents and trademarks. Extensive hearings were held on this legislation and the committee favorably reported a bill which would increase patent and trademark fees generally. This legislation it believed necessary for many reasons, among which is to help expedite and therefore shorten the period for processing patent and trademark applications.

A piece of legislation which this committee reported to the House—H. R. 2128—concerned the extension of the terms for certain patients whose exploitation and use was curtailed during World War II and the Korean conflict. As in the case of patent-fee increases, extensive hearings were conducted on this legislation, and it is presently pending in the Rules Committee, where a rule has been requested.

An inventive contributions award bill—H. R. 2383—also passed the House in the closing days of this session, which will foster invention for our national defense by authorizing monetary awards to those people who make meritorious inventive contributions to our Government in aid of our national defense.

The subcommittee also reported out and the House favorably acted upon H. R. 5876, a bill to amend the copyright laws to permit the deposit of photographs in lieu of the actual works for people seeking copyrights.

REVISION OF THE LAWS

The primary work of the subcommittee with respect to the revision of the laws—the classification of public laws to appropriate titles of the United States Code and the District of Columbia Code—has been carried on currently in conformity with the policy of classifying the laws immediately upon their promulgation. With the large volume of bills awaiting the President's signature the total number of public laws will undoubtedly exceed 450 for this session. The last laws will be classified as soon as practicable upon their receipt from the Government Printing Office.

As soon as possible after the classification of all of the laws of this session, copy will be forwarded to the Government Printing Office for the printing of Supplement III of the United States Code and Supplement IV of the District of Columbia Code. It is hoped that these supplements will be available in the early part of next year.

The law revision functions of the committee consist, in part, of promulgating and keeping up to date the official United States Code which now consists of 6 volumes comprising over 10,000 pages. Supplement II to the code containing the additions to and the changes in the laws enacted during the 2d session of the 83d Congress has been prepared from editorial copy consisting of nearly 28,000 cards to be inserted in the text of supplement I. Delivery is expected within the next month. It will consist of 1 volume of 1,563 pages, an increase of 1,000 pages over the prior supplement.

The work of preparing Supplement III to the District of Columbia Code containing the laws to January 4, 1955, was completed early during this session. The supplement contains notes to decisions of the court from January 3, 1951, to July 1, 1954. It consists of 2 volumes totaling approximately 500 pages.

Supplement IV of the District of Columbia Code containing the laws to the end of the first session of the 84th Congress and the notes to the court decisions as of July 1, 1955, is also in the process of preparation and should be ready for delivery during the latter part of this year. It will also consist of two pocket parts to be inserted in the two volumes of the 1951 edition.

The other phase of the law-revision work—that of preparing bills to enact into law separate titles of the United States Code—has been going forward steadily. Since the last report of the subcommittee, title 13, Census, has been enacted into law and subcommittee action has progressed on title 16, Conservation and Reclamation; title 20, Education; title 23, Highways; and title 43, Public Lands. Only recently a bill—H. R. 7768—was introduced by me to revise title 39, the Postal Service. The draft for this bill was prepared in cooperation with the Post Office Department over a period of almost 1 year. In addition, bills to revise title 21, Food, Drugs, and Cosmetics; title 10, Armed Forces; and title 32, National Guard, have already passed the House and are pending in the Senate. It may be of interest to mention that title 10, Armed Forces, has been in preparation for some 7 years and consisting of 817 pages, is almost the largest bill ever introduced in the Congress. This bill first consolidates the present title 10, Army and Air Force; title 34, Navy; and the provisions relating to the Department of Defense into one title to be known as title 10, Armed Forces; and second, enacts the laws relating to the National Guard as title 32.

In addition to the codification bills that have been introduced, a committee print has been prepared and published covering the proposed codification of the laws relating to reclamation and conservation, title 16, United States Code. A committee print of a proposed report of this bill has also been printed and given wide distribution with the view of introducing a bill early in the next session of the 84th Congress. Also progress has been made on the draft of a bill to enact title 44, Public Printing.

The subcommittee has cooperated with the other subcommittees of this committee and with other committees of the House with respect to the form and style and legislation affecting titles of the United States Code which have been enacted into law.

Subcommittee No. 3, Committee on the Judiciary

Bills referred	68
Hearings held	23
Bills reported to full committee	20
Bills reported to House	14
Bills passed House	11
Bills pending in Senate	8
Senate bills processed	1
Bills which became public law	2
Bills awaiting Presidential action	1

SUBCOMMITTEE NO. 4—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED, SPECIAL JURISDICTION OVER BANKRUPTCY AND REORGANIZATION

To improve the administration of the bankruptcy laws, Subcommittee No. 4 held hearings on and favorably reported bills authorizing increases in the compensation of referees and trustees in bankruptcy. These bills are designed to make highly qualified persons available as referees and trustees. H. R. 4791, pertaining to referees' compensation, passed the House May 17, 1955, and H. R. 5047, pertaining to trustees' compensation, passed the House on August 1, 1955. These bills are now pending in the Senate.

In the 1st session of the 84th Congress, Subcommittee 4 held hearings on and favorably reported other bills designed to improve particular aspects of the bankruptcy laws. H. R. 256, clarifying the definition of "salesmen" in the priorities section of the law, passed the House on July 5, 1955, and H. R. 6247, conforming the handling of unclaimed bankruptcy funds with other unclaimed funds of district courts, passed the House July 30, 1955. These bills are now pending in the Senate.

General legislation assigned to Subcommittee No. 4 has covered a wide range of subjects. For example, there have been before the subcommittee more than 100 bills concerning holidays, celebrations, and the incorporation of patriotic and other organizations. In addition, action has been taken on general legislation dealing with the temporary extension of various emergency statutes, the amendment of the Contract Settlement Act of 1944, the amendment of criminal laws, and the restoration of court jurisdiction over certain civil cases.

The emergency legislation on which Subcommittee No. 4 held hearings and took action concerns title II of the First War Powers Act and war-risk hazards. Public Law 58 extends the effectiveness of title II of the First War Powers Act to July 30, 1957. This legislation authorizes expeditious contracting procedures essential to national defense. Public Law 125 extends to July 1, 1956, legislation providing benefits for civilian employees who are injured, killed or captured by enemy or other military action. These war-risk hazard and detention benefits are essential for effective recruitment of qualified civilian personnel for overseas employment, such as construction work on military installations.

The criminal laws concerning threats against the President were amended by Public Law No. 53 to include the President-elect and Vice President in their protections and subsequently the House passed H. R. 6621 to include the Vice President-elect in this protection and to clarify the law. This bill is now pending in the Senate.

Subcommittee No. 4 held hearings on and favorably reported two bills to rectify certain injustices. H. R. 7418 was ordered favorably reported by the subcommittee on July 27, 1955. This bill would amend the Contract Settlement Act of 1944 to give miners of strategic minerals during World War II an opportunity to have their claims for fair compensation determined on the merits by the contracting agencies involved. H. R. 5862 was ordered favorably reported by the subcommittee on July 27, 1955, to restore court jusrisdiction over cases involving claims for overtime pay during World War II. A 1951 statute inadvertently deprived courts of jurisdiction over these then pending cases.

Number of public bills referred to subcommittee	168
Number of hearings held	11
Number of public bills reported to full committee	24
Number of reports filed	16
Number of public bills passed House	15
Number of public bills pending in the Senate	5
Number of Senate bills disposed of	1
Number of public bills approved by the President	8
Number of public bills pending approval of the President	1

SUBCOMMITTEE NO. 5, COMMITTEE ON THE JUDICIARY—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED, SPECIAL JURISDICTION OVER ANTITRUST MATTERS

This subcommittee exercises jurisdiction over a variety of subjects with special jurisdiction over antitrust matters. Among the subjects assigned to this subcommittee were such matters as congressional and judicial salaries, with Federal judicial administration, wiretapping, and antitrust problems.

During the first session of the 84th Congress this subcommittee had referred to it 62 bills on which 49 hearings were held. Nine bills were favorably reported to the full committee of which 8 received favorable action in the House. Five of these bills were approvad by the President.

One of the bills enacted into law provided for a Commission on Security to make a study and report of the Government's security program both within the Government iself and in private industry insofar as national defense and security are involved.

This subcommittee also managed the bill which increased the salaries of Members of Congress and Federal judiciary.

Two bills relating to antitrust were also enacted into law. One of these bills increased the penalties for criminal violations of the antitrust laws. The other was of a twofold nature and provided for a uniform statute of limitations with regard to antitrust litigation and also created a right of action on the part of the Government to recover actual damages in antitrust suits.

At the close of the first session of the Congress this subcommittee had reported to the full committee a bill providing for Federal control over wiretapping. This measure was recommended to the full committee after lengthy hearings had been held and a clean bill written.

Another measure enacted into law abolished the divisions in the judicial district of Nebraska.

This subcommittee also conducted a series of hearings which will be reopened at the next session of Conress on a number of bills relating to the Federal judicial system throughout the country as well as a number of bills providing for additional judges in the circuit and district courts.

ANTITRUST MATTERS

The Antitrust Subcommittee carried out a comprehensive series of hearings on current problems in the antitrust field.

The purposes of the hearings were to examine current antitrust enforcement, recommendations made by the Attorney General's Committee to Study the Antitrust Laws, the forces involved in the merger movement, the growing problem of industry concentration and to secure up-to-date information from political, industrial, agricultural, and labor leaders concerning the new monopoly problems which they face because of the new forces transmuting the economy. Hearings on these matters extended over a period of 18 days in the course of which 55 witnesses were heard representing all points of view. For example, a number of Members of the House and Senate experienced in the field offered their counsel. Various leading professors in economics and antitrust law gave their observations and recommendations. Leading governmental officials testified regarding current antitrust enforcement. Leaders in the fields of business, labor, farming, and banking, in their various branches, made available their detailed and practical experience of the economic life of the country. Testimony was adduced from experts regarding the impact, or lack of it, of the antitrust laws in the field of foreign trade.

As a result of the testimony received it is possible to isolate many antitrust problems facing the country and possible solutions to these problems. A committee report is currently being prepared for these purposes.

These exploratory hearings resulted in a number of bills being introduced: One of these bills, H. R. 5948, is designed to bring asset acquisitions by banks within the purview of the Celler-Kefauver Antimerger Act of 1950 and thus check the current wave of bank mergers which is causing the demise of a large number of strong, independent competing banks. The bill was approved by the subcommittee and the full committee and reported favorably to the House, after hearings held to obtain the views of all interested parties.

Hearings were also held by the subcommittee on H. R. 6875 which would remove the provision for mandatory treble damages in private antitrust suits and provide the judge with discretion as to the extent of damages. Where the violation is willful it would be mandatory under the bill to assess full treble damages. Final subcommittee action has not yet been taken.

The subcommittee has been concerned with the problem of businessmen serving in key Government posts without compensation. These so-called w. o. c.'s receive salaries from their usual employers while on loan to the Government for service in such agencies as the Department of Commerce. Hearings held by the subcommittee on this subject have demonstrated the dangers presented by the conflict of interests involved for w. o. c.'s and the possibility of Government abdication of policymaking functions to the representatives of groups having a particularized interest in the continued increase of economic concentration.

An important series of bills referred to the subcommittee are H. R. 11 and a number of companion bills which would remove "good faith meeting of a competitor's price" as a defense against a charge of price discrimination under the Robinson-Patman Act where the effect of the discrimination may be substantially to lessen competition. The subcommittee has requested various governmental agencies to submit their views on these equality-of-opportunity bills.

Several bills have been introduced to cope with the increasing number of industrial mergers which has been occurring in recent years. One bill would require any corporation with assets over $1 million to give 90 days' notice to the Department of Justice and the Federal Trade Commission before consummating a merger. Another bill would require not only advance notification but suspend a merger in the event a complaint is filed by the enforcement agencies. Still an additional bill would give the Federal

Trade Commission authority to seek a temporary restraining order preventing a merger pending Commission determination of its legality.

The subcommittee has also been concerned with the increasing degree of concentration in the textile industry which has been caused in the main by merger activity. A detailed staff report on this subject has been issued which examines in detail various mergers which have occurred together with the factors which gave rise to those mergers.

SUBJECT MATTER OF SPECIAL INVESTIGATIONS

First. Industrial mergers and economic concentration.

Second. Administration of the Celler-Kefauver Antimerger Act of 1950 by the Department of Justice and the Federal Trade Commission.

Third. Bank mergers.

Fourth. Retention of mandatory treble-damage provision in private antitrust suits.

Fifth. Composition and organization of Attorney General's National Committee to Study the Antitrust Laws.

Sixth. Recommendations of Attorney General's National Committee to Study the Antitrust Laws.

Seventh. Government personnel serving without compensation—w. o. c.'s.

Eighth. Government advisory groups.

Ninth. Business Advisory Council for the Department of Commerce.

Tenth. Operations of the petroleum cartel and the Iranian consortium.

Eleventh. Comparison of per se and rule of reason approach to antitrust law interpretation.

SUBJECT MATTER OF GENERAL INVESTIGATION

First. Price discrimination and the Robinson-Patman Act.

Second. Exclusive dealing contracts under the antitrust laws.

Third. Retail distribution practices and the antitrust laws.

Fourth. Resale price maintenance—fair trade—laws.

Fifth. Patent antitrust problems.

Sixth. Antitrust injunctive procedures and legislation.

Seventh. Attorney General's Advisory Opinions.

Eighth. Antitrust consent decrees.

Ninth. Antitrust aspects of automobile distribution.

Tenth. Monopoly problems in the airlines industry.

Eleventh. Antitrust aspects of foreign trade.

Twelfth. Antitrust problems affecting brokers.

Thirteenth. Antitrust problems concerning the petroleum industry, the aluminum industry, the steel industry, the cement industry, the dairy industry, private utilities.

Fourteenth. Economic bigness.

Fifteenth. Antitrust problems affecting small business, labor, agriculture, cooperatives.

Sixteenth. Industries exempt from antitrust laws.

Seventeenth. Exclusive dealing contracts under the antitrust laws.

Eighteenth. Federal incorporation statute.

Nineteenth. The effect of Government procurement on economic concentration.

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. QUIGLEY. Mr. Speaker, although it is appropriate that Congress has considered legislation to provide for a civilian medal of merit to those in our Nation who have contributed greatly to its welfare, it sometimes strikes me as incongruous that we do not make a blanket presentation to those honored and industrious citizens who give of themselves and their time unstintingly for service in the Ground Observer Corps. These people are truly the unsung heroes of the cold war who, notwithstanding the general apathy of the Nation toward potential defense measures, have given and will give a full measure of devotion to their volunteer duties, assuring that those of us who are more complacent will have adequate warning of any possible aggression.

I am indeed proud that in my congressional district reside groups of citizens who have an outstanding record of accomplishment in this regard. One such group is located in Adams County, Pa. The Adams County volunteers of the Ground Observer Corps have not only adhered to the pattern throughout the Nation in providing personnel for manning the observation posts, but they excel by far the normal pattern by providing a full 24-hour coverage. This is indeed a unique accomplishment because all too often we hear and read of Ground Observer Corps posts which are manned only part time. Some, unfortunately, have no coverage at all. The good citizens of Adams County have taken on this duty as they do other requisites of American citizenship, not halfheartedly or on a part-time basis but fully and without thought of material reward.

Although any attempt to give personal credit would perhaps detract from those who hold no particular positions of official responsibility, I believe that proper notice must be taken of the contribution of Mr. W. H. Armor, who is the Ground Observer Corps chief for Adams County. Undoubtedly, the inspiration which he has given to others is, in great part, responsible for the outstanding work being done by the volunteer observers. It gives me additional pleasure to report that through the cooperation of Mr. Fred Rettace, burgess of Littlestown, Pa.; Mr. Gerald Daley, supervisor for Ground Observer Corps at Littlestown, and with the active cooperation of the junior chamber of commerce, the commissioners of Adams County are financing the construction of an all-aluminum, prefabricated Ground Observer Corps observation post, which will be installed atop the high school in Littlestown. This is, to my knowledge, the first such type installation in the Nation, and highlights the fact that the Adams County organization has made a forthright step in creating and holding the interest of the people in the importance of the work being done by the Ground Observer Corps.

I believe it to be appropriate that proper notice should be taken of the accomplishments of these fine people, who sacrifice without reward for the defense of this Nation, and I am pleased to do so as their Representative in Congress.

Mutual Security Appropriation Act

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include a detailed analysis of Public Law 206, providing appropriations for mutual defense assistance. This was prepared for my study by Elizabeth Edward, American Law Division of the Library of Congress. I think it will prove of value for reference to my colleagues.

The analysis follows:

Public Law 208, 84th Congress

(Mutual Security Appropriation Act, 1956)

MUTUAL DEFENSE ASSISTANCE

Military assistance:	
Appropriation	$705,000,000
Unobligated and unreserved balance	33,900,000
Total, military assistance	738,900,000
Direct forces support	317,200,000
Defense support:	
Europe	85,500,000
Near East and Africa	113,700,000
Asia:	
Appropriation	800,000,000
Unobligated balance	25,000,000
Total, Asia	825,000,000
Total defense support:	
Appropriation	999,200,000
Unobligated balance	25,000,000
Total	1,024,200,000
Total mutual defense assistance:	
Appropriation	2,021,400,000
Unobligated balance	58,900,000
Total	2,080,300,000

DEVELOPMENT ASSISTANCE	
Near East and Africa	$73,000,000
South Asia	51,000,000
American Republics	38,000,000
Total, development assistance	162,000,000
TECHNICAL COOPERATION	
General authorization	$127,500,000
United Nations program	24,000,000
Organization of American States	1,500,000
Total, technical cooperation	153,000,000
OTHER PROGRAMS	
Special Presidential fund	$100,000,000
Special assistance in joint control areas	21,000,000
Intergovernmental Committee for European migration: Appropriation	12,500,000
United Nations Refugee Fund	1,200,000
Escapee program	6,000,000
United Nations Children's Fund	14,500,000
United Nations Relief and Works Agency:	
Appropriation	58,366,750
Unobligated balance	3,633,250
Total	62,000,000
North Atlantic Treaty Organization	3,700,000
Ocean freight charges:	
United States voluntary relief agencies	2,000,000
Surplus agricultural commodities	13,000,000
Total	15,000,000
Control act expenses	1,175,000
Administrative expenses	33,500,000
President's fund for Asian economic development	100,000,000
Total other programs:	
Appropriation	366,941,750
Unobligated balance	3,633,250
Total	370,575,000
Total, mutual security appropriation	2,703,341,750

GENERAL PROVISIONS

1. Authorizes the use of funds for (a) rents in the District of Columbia, (b) expenses of attendance at meetings, (c) employment of aliens, by contract, for service abroad, (d) maintenance, operation, and hire of aircraft, (e) purchase of automobiles, (f) entertainment with in the United States up to $15,000, (g) exchange of funds, (h) expenditures up to $50,000 of a confidential character other than entertainment, (i) insurance of official motor vehicles in foreign countries, (j) rental, lease, repair, and alteration of quarters outside of the United States to accommodate Government employees, (k) expense of preparing and transporting to their former homes the remains of persons or members of families of persons who may die while participating in activities under the Mutual Security Act or other act directly related to the purposes theerof, (l) purchase of uniforms, (m) employment of chauffeurs, (n) medical examinations of dependents of overseas personnel or candidates for overseas positions on the same basis as for employees or candidates, (o) per diem in lieu of subsistence to persons participating in any program of furnishing technical information and assistance while in countries other than their own and other than the continental United States, (p) expenses authorized by the Foreign Service Act, (q) ice and drinking water for use abroad, (r) services of commissioned officers of the Public Health Service and of the Coast and Geodetic Survey with certain limitations herein prescribed, (s) travel expenses with certain restrictions herein prescribed.

2. Requires a semiannual report to Congress of engineering fees in excess of $25,000 to any one firm on any one project.

3. Limits to $25 million the amount of foreign currencies or credits owed to or owned by the United States which shall remain available until June 30, 1956, without reimbursement to the Treasury, for liquidation of obligations incurred against such currencies or credits prior to July 1, 1953, pursuant to authority contained in the Mutual Security Act and other acts pursuant to which funds were authorized.

4. Directs that foreign currencies generated under the provisions hereof shall be utilized only for the purposes for which the funds providing the commodities which generated the currency were appropriated.

5. Prohibits the use of funds generated as a result hereof for payments on account of the principal or interest on any debt of any foreign government or on any loans made to such government by any other foreign government.

6. Prohibits the obligation and/or reservation of more than 20 percent of the funds made available hereby during the last 2 months of the fiscal year.

7. Makes funds available from July 1, 1955.

8. Requires an accounting of funds allocated to the Department of Defense for military assistance.

9. Continues antistrike provisions.

Amending Mutual Security Act

SPEECH

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 2090) to amend the Mutual Security Act of 1954, and for other purposes.

Mr. VORYS. Mr. Chairman, I yield 30 minutes to the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, this debate on American foreign policy and what we should do in the mutual security program in support of that policy—has been going on at this time of year for about 8 years now. It comes this year during a period that is particularly interesting and crucial.

For 8 years we have been fighting a sort of trench warfare. We began with our backs almost against the wall for we had disarmed after World War II. Once in a while you hear somebody say, "You can't blame the Soviets for being suspicious and difficult. They have to arm and extend their control over their neighbors in order to defend themselves against United States encirclement."

We should not let anybody get away with that charge because the facts deny it totally. At the end of the war the United States had greater military, industrial, and economic superiority over any potential enemies than any country in history ever had on the land, in the air, on the sea, and under the sea. If we had had in our national soul a single grain of imperialistic design on any other country, we could have imposed our will on the Soviet Union and on the Communists in China easily.

What did we do with our military superiority? You know the answer—and so do the Communists. We took it to pieces within 1 year and threw it out the window.

When we began reluctantly to rearm and to build this program of aid to other threatened countries in 1948 and especially after Korea, we really made great strides. But everything we have done in all these years has been the belated consequence and not the cause of Soviet aggression and imperialism. We have been in the trenches, so to speak, defensively fighting back, trying to save ourselves and a free world.

Now, in trench warfare you can hold back an enemy and keep from getting run over; but you cannot win a war in trenches. Some day you have to move out of the trenches and try to get a victory in the relatively open field of maneuver.

That is the point at which we have arrived as we discuss this year's program. Our leaders are going now to a conference at the so-called summit. We are moving out into a more open field. The dangers there are greater than they have been at any time in the last 8 years because one wrong step, one miscalculation, one succumbing to the clever tricks or wiles of the enemy could lead to disaster. But on the other hand, getting out into the open after having built up a stronger position than we occupied a few years ago, gives us a chance, perhaps, to win a victory.

It has been said here today that we cannot foresee what will happen if we continue this program. That is right. I cannot foresee exactly what will happen or how long it must go on, and neither can anyone else. But I can foresee what will happen if we do not continue the program, and so can you. The free world will go down.

The gentleman from Texas [Mr. DIES] has just said that there is no stopping the Communist conspiracy and that the Soviet Union, like every other aggressor in history, will not stop and cannot stop until it is checked. I could not agree with him more. But how does the gentleman propose to check the aggressor? That is the question. As my distinguished and beloved chairman [Mr. RICHARDS] has already asked: how does the gentleman propose to check it?

Mr. DIES. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield.

Mr. DIES. Evidently, the gentleman does not understand my position at all. My point is that you do not check him by this program.

Mr. JUDD. What program does the gentleman suggest?

Mr. DIES. While this program after World War II was essential and was helpful because of the weakened condition of many of the countries, like many

other programs, once it begins, it never ends. My point is there is no justification for the permanent continuation of this program, and you are making it a permanent program.

Mr. JUDD. It must go on, my friend, until we win. The alternative is to lie down and surrender. The gentleman, I am sure, does not suggest that.

Mr. DIES. Suppose that Russia decides to prolong the cold war. Suppose that Russia since she profits by the cold war because she gets money from her allies and carrying on the cold war is not a liability to her because her allies are not a liability, but are a source of revenue—suppose Russia decides to prolong the cold war.

Mr. JUDD. There is reason to believe Austria, today, and perhaps East Germany also, have become a liability to Russia; and so she has let Austria go, under the guise of promoting peace, making a virtue out of a necessity.

Mr. DIES. Suppose that Russia wanted to continue the cold war for another 50 years; do you advocate the continuation of this program for another 50 years?

Mr. JUDD. I hope the gentleman will listen and I will try to deal specifically with that very question.

Mrs. FRANCES P. BOLTON. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield to my distinguished colleague on the committee.

Mrs. FRANCES P. BOLTON. I merely want to call to the gentleman's attention the fact that the gentleman from Texas has not answered his question.

Mr. JUDD. No, he has not.

Mrs. FRANCES P. BOLTON. Some of us would like to have the answer as to what the gentleman from Texas would suggest.

Mr. DIES. If you would give me some time, I would tell you what I propose to do. If you had listened to me 15 or 20 years ago, you would not have had this thing.

Mr. JUDD. Others of us can say that also—and with equal truthfulness. But that does not help us with our present problem.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield.

Mr. GROSS. Is the gentleman saying that Austria was a liability to Russia and that she got out of there for that reason?

Mr. JUDD. Yes, there is a lot of evidence to show that Austria had become a liability to the Soviet Union in her new peace posture.

Mr. GROSS. With the millions of dollars that she has collected in reparations and will continue to collect?

Mr. JUDD. She is still getting those reparations, but Austria and East Germany to some extent have become more of a liability than an asset to the Soviets. They know they cannot count on the East Germans. And the men in the Kremlin are smart enough to try to get rid of a liability, especially if they can gain an advantage thereby. They will always trade off a pawn, such as Austria, if thereby they think that maybe they can fool us into letting them have the king, which is a neutralized, demilitarized Germany. Does the gentleman want to let that happen?

Mr. Chairman, this program has certainly cost us a lot of money—but it has also produced a lot of good results.

You are not satisfied, and I am not satisfied, with those results. But there is nothing to gain by underestimating or denying them. When we started in 1947, Greece was wavering on the fence. Turkey has hanging in the balance. Everybody was holding his breath with respect to Italy. France was on the ropes. Without our aid none of them could have made it. Then Germany would have been surrounded on three sides, England isolated, and all Europe behind the curtain, working for the Kremlin against us.

Look at them today. Some, to be sure, are still not in too healthy condition. But Greece is free. Turkey is free, Italy is free. France is free. The Low Countries and Denmark and Norway are free. West Germany is free, stronger than anyone could have expected, and on our side. Best of all, they are united. And England too, has joined the European team for the first time in centuries. Anything in that record to be ashamed of?

In the Far East, South Korea is still in bad shape because of mistakes in judgment we and our European allies made in 1951 in not seizing victory there when it was within our grasp. But the Republic of Korea is still free. The patient is not well—but he is alive.

Japan is still free—and what would Japan's prospects be if Korea were not free?

Formosa is still free—and strong and steadfast. Free China never could have made it without this program of assistance.

The Philippines are still free. Most of southeast Asia is still free.

I do not like some of the statements of Mr. Nehru, but more important than his statements is India. He will not be there forever, but India will be. And India is free.

How can anyone say the mutual security program has failed? Show me any results from any other program, comparable to these. Actually it has saved us money—given us more defense at less cost.

I will take my guidance on this point from the Chairman of the Joint Chiefs of Staff, and I ask you to read our hearings, beginning on page 239, where Admiral Radford said:

> First of all I would like to state that the military aid program is part and parcel of the United States Defense Department program. The expenditures abroad in support of our alliances do not differ in purpose, scope, or objective from our own military expenditures. The fact that this part of our program is not included in the Defense Department budget is more a matter of procedure and administration than of substance.
>
> In this connection, I can assure you that were it not for the strength which has been generated in the past 5 years by our allies, and in most instances made possible by our military aid programs, the requirements of our own program would be much larger.

You vote against this mutual security program and you vote to spend more money, not less. This is the Chairman of the Joint Chiefs of Staff telling you what it would cost us to build strength of our own:

> The United States and its allies have established a series of bilateral and multilateral defense alliances designed to deter aggression and to prevent war. These alliances must be given full support by all participants if they are to be effective. Our participation cannot be limited to the buildup and maintenance of our own Armed Forces. The provision of military assistance to our allies, when combined with the resources which they contribute, results in the development of collective military strength much larger than the United States could provide or maintain on its own.

Mr. Chairman, that is the justification for this program. You can find plenty of mistakes in it, as in every program. It is our duty to police it, discover and eliminate the waste, try to plug the loopholes, adjust to meet new situations, correct bad judgment, and so forth. But the basic philosophy is sound. Why abandon what is succeeding?

Some complain that this ally or that leader does not like us. May I say once again that the objective is not to make other people like us? It is to help them stay free, to give them the capacity to maintain their own independence, to enable them to keep their country out of the hands of the Kremlin, so that their territory, their manpower, their resources, their strategic bases cannot be used by the enemy against us.

I asked the gentleman from Texas what he would propose that we do. Let me for a moment analyze the possible courses, just as a doctor sits down and examines all the things that he might conceivably do for a sick patient.

What are the main possible courses that we might follow? There are about five, it seems to me.

First, we could give up. Peace is the easiest thing in the world to get. You can have it any day, if you are willing to surrender—the peace of enslavement. But we will not do that. We are not that kind of people. So I pass that one by.

What is the second possibility? A showdown now. Mr. Churchill says there may be about 3 years in which we will still have atomic superiority. Well, then, why not settle the issue now, finish the thing up while we can win it?

If we were strictly logical and had only electronic brains instead of human minds and hearts, doubtless that is what we would do. But we are not strictly logical. We are not mechanical devices. We are human beings. We have a certain kind of culture, and if we were to start a preventive war, we would have abandoned that culture and would be destroying the very things that we talk about and say we are arming ourselves to defend. We could do it, but we will not. You know it, and I know it. So it is unrealistic to spend any more time on that course.

What is the third possibility? We could continue to do what we have done too often, namely, drift—stumble is perhaps a more accurate word—from one

crisis to the next. We get into a jam, and we take a strong, firm stand until it begins to get results. Then what do we do? The Kremlin pulls out its bag of tricks, and we tend to abandon the strong, firm policy which is working, and go back to the soft, weak policy which always fails. We have done that again and again.

Contrast our conduct with that of the Kremlin. When the Communists are winning they are as hard as nails. They would not give the French even a 24-hour truce at Dien Bien Phu to evacuate the wounded, but when they are losing or in trouble, as the gentleman from South Carolina has pointed out, oh, they become so gentle and so friendly.

When you watch a prizefight on television, you sometimes see one fighter along about the eighth round suddenly become very affectionate with his opponent. How ardently he embraces him. But you do not misunderstand that maneuver. You do not imagine that means the first fighter has decided he does not want to win the fight, that he loves his opponent so much he just wants to give up. You know that a clinch means the boxer is in trouble. He clinches so that he can rest, or recover from a blow, or gain time in order to be able perhaps to come back in the next round and knock the opponent out. A clinch is not to end the fight, but to try to win it.

What does his opponent do? Does he obligingly help him out? No; he knows that is the time to pour it on, keep the weakened man in trouble, press him to the ropes, and win the fight.

I do not remember much from my military training in World War I. But I do remember a maxim to the effect that the most profitable operation in war is to pursue a retreating enemy.

But we generally do not follow that maxim in diplomatic and economic warfare. In fact, we do the opposite. When we are losing, we are tough; we get up off the floor after our Pearl Harbors, tighten our belts, and go to it until we win. But when we are winning, that is the time we go soft. The Commies know it. That is why we are now turning on the charm. Their truculence made us firm and strong. We have gained ground. They want us to let up, to become soft and weak again.

When people ask us what we should do, now that the Commies seem to be getting human, seem to want peace, the answer is not to weaken or abandon the firmness and strength that are getting results, but rather to stick to them, to keep doing resolutely just what we have been doing.

What is in the Communist bag of tricks with which they hope to beguile us again as they have on several previous occasions?

The first and easiest trick is to smile. That does not cost them anything at all and it has proved singularly effective in the past. When Vishinsky was their representative at the United Nations and things were going badly for them anywhere, he would return from Russia, smile for reporters, shake hands, speak civilly for as long as a week; and thousands of good Americans would say, "Why, they are getting real friendly, there must have been a drastic change of policy in the Kremlin, they now want peace, too." And away would go at least 25 percent of our resolve.

Molotov has been using it on his present mission to San Francisco. He tries on a cowboy hat instead of scowling. Chou En-lai used the same trick with great success at Bandung, as he had with our representatives in Chungking in 1945–46.

The object always is to disarm us, to put us off guard, to make us hesitate or waver. But if we look at it coldly, we know that any change of attitude on the part of the Communists has come about not because of our weakness, but because of our strength and the strength of the free world. Let us not foolishly abandon the cause of our success at the very moment when it is beginning to achieve success.

The second trick that the Kremlin pulls to soften us up is to offer trade. Lenin said: "We can always count on the cupidity of the capitalists."

They used it in 1933. It was a time of mass unemployment and economic depression in our land. Litvinov smiled and said: "Why not recognize the Soviet Union? We will be glad to expand greatly our trade with the United States and help you out of your depression—if you will just recognize us."

We recognized them. What was the result? Did our trade increase? No; it promptly decreased. It has never been as high a single year since 1933 as it was each of the 5 years prior to 1933. Why? Because trade to the Communists is a weapon, just like a bomb or a bayonet. They do not trade as we do, for commercial reasons, to better the lot of their people, to improve relations with other countries. Their objective in 1933 was recognition. Having achieved that, why should they help us out of our depression? They loved it that we had mass unemployment. They hoped it would get worse, that we would crack up, have riots and disorder, even revolution.

When the Reds were being pushed back in Korea and they wanted to liquidate that blunder on their part, Moscow announced a big trade conference in Moscow. We did not go; we were beginning to wake up. But some of our European allies rushed right over. They urged us to make a deal with the Communists in Korea in order to expand everybody's trade. The Kremlin promised that it would increase its trade with the free world more than 300 percent in 1 year. What happened? The West gave up its advantageous position in Korea and accepted a stalemate there more readily, I am sure, than Moscow expected. So trade between Russia and the free world, instead of going up 300 percent as promised, went down 40 percent. It is a good trick. And it is being pulled again right now.

The third trick the men in the Kremlin and their colleagues in Peking use—the cruelest one—is the prisoner-of-war trick. To let out some prisoner of war does not cost them anything. That is what they have been saving the prisoners for—to use them for bargaining purposes when the going gets rough.

If they refuse to release our prisoners, we are tempted to make greater concessions in order to get our boys home. If they do release a few, we are tempted to make greater concessions in order to show our gratitude. The Reds win either way.

They worked the trick with great skill in Korea when they were losing there. Remember Little Switch? That was used to get us into negotiations for Big Switch. But they did not let all the prisoners out in Big Switch as they promised. They held some back to buy us off the next time we might perhaps get the upper hand.

And just to keep us from forgetting those still held, they let out a few occasionally as a means of tantalizing and torturing the relatives, squeezing the hearts of the mothers whose sons are prisoners of war. It is a cold, calculating exploitation of the concern we have for our citizens, for any human beings. They do not care about the men or what happens to them, but they know we do care. We already have paid a big price at Panmunjom, supposedly to get these prisoners home. But if they can make us buy them again with concessions in the Formosan Straits, or admission of Red China into the U. N., why not? It is a wonderful trick, the prisoner-of-war trick. But I do not believe we are going to fall for that one again.

We come now to their fourth trick, another old one, but perhaps the most successful—the "peace" trick. Lenin taught them that it is just as important to know when to retreat as it is to know when to advance. But he counseled that if they must retreat, then they should try to make it look like an advance. If they must accept a defeat, camouflage it as a victory.

In the spring of 1951 they were licked in Korea; 2 or 3 of their divisions were demoralized; they were overextended and overstrained. The Trans-Siberian Railway, bringing supplies, had broken down. Their aggression had failed. They had to give up the effort. But how could they extricate themselves and make their defeat look like a victory? First, they got our allies to pressure us to withdraw MacArthur and handcuff Van Fleet in order, so it was said, "to avoid extension of the war."

Even so, our forces and the South Koreans fought with such bravery and skill that finally in June of 1951 Malik had to get up and propose "truce talks." But did he suggest that the Reds wanted a truce because they were defeated in battle? No, indeed. It was only because Communists are so opposed to bloodshed. And then they started the chant, all over the world, "We want peace. We want peace. We want peace."

They are doing the same thing again today and millions of high-minded sincere people are falling for it—I do not criticize, I am trying only to analyze and to urge that we keep awake and understand the situation this time. Millions

are tempted to say, "Well, since they want peace let us have it."

But genuine peace is not what they want. They want victory and talk of peace is the means by which they hope to get, not peace, but the fruits of victory.

As I said here last January during the debate on the Formosa resolution, quoting Chou En-lai:

A truce is the military equivalent of the political tactic of coalition.

A truce to us means a step toward ending a war; to them it is a military tactic designed to win the war. Why should we fall for that trick again?

Does that mean we should refuse to talk with them? Of course not. We have no ulterior motives or designs, nothing to be embarrassed about, nothing to hide. We should always be willing to present our case—with the maximum objective of a genuine agreement that will end aggression and liberate the enslaved; and the minimum objective of making clear to all the world that if no just agreement can be reached, then it is they, not we, who are blocking peace.

I must add frankly that a study of Communist theory and practice makes one doubt an agreement based on liberty and justice can be reached. But I am sure they will want an agreement to talk further, because indefinite, long drawn-out talks can be to their advantage. Remember it was during the 2 years of Communist stalling in the talks at Panmunjom that they got the H-bomb and thereby drastically reduced our military superiority.

It is right that we should talk but we must not yield on matters of honor, justice, or human liberty. On protocol, yes; on principle, no.

Jesus talked even with the Devil but He did not give in to him.

We have every right and duty to go and present our position, but we must never again take Communist words as a substitute for deeds.

Because we in the West are accustomed to settling disputes by negotiations and then signing pieces of paper, we insist that procedure is the only alternative to a war with the Communist bloc. So in the past when we went to a conference, we generally got a piece of paper while they got a piece of territory. Whereupon we would have another conference, at which we got another piece of paper and they got another piece of some one's territory. And then still another conference so that we could get still another piece of paper and they another piece of someone's territory. Naturally they would like to have us do it again.

Fortunately, I think our present administration is awake to this situation and does not intend to fall into that sort of trap.

What is needed for our representatives to win for freedom at coming conferences? Two things: One is strength; the other is skill in the use of that strength. We here cannot do anything about the skill. That is in the hands of our Chief Executive and his team. We trust and hope and pray that he will have adequate skill and resourcefulness with God's help. I think he will.

Recently I sent to the President a statement I had made elsewhere of some views on certain aspects of this subject. He wrote back in part as follows:

I do not construe your letter and enclosure as divergent from our present policies, although you do seem to be apprehensive that we may be outfoxed one way or another. We shall do our best not to be.

I read that here for the benefit of any others who may be apprehensive. Our President was a careful, but resourceful and brilliantly successful soldier. He has had plenty of experience in Europe with this present adversary. It was he who organized free Europe to resist it. We can be sure he does not intend as he puts it, to be outfoxed now.

But he cannot win without strength. This is the ingredient we in Congress can do something about. The Commander in Chief and his associates have got to do the talking and the maneuvering but no matter how great their skill, it cannot be successful unless we provide the strength. We shall determine today what kind of cards they are to have in their hands tomorrow. For this is not a poker game, where bluff may be a decisive factor. Our representative cannot win by bluff because the Communists know very well what our cards are. Our men have got to have the cards; and a sound and strong mutual-security program is one of the strongest cards that we can possibly put into their hands.

Mr. Chairman, it is said we must have peaceful coexistence with the Communists. But how can you coexeist with a tiger?

One way is inside the tiger.

Another way is to have the tiger in a cage—containment.

Still another way is to be strong enough to compel peaceful coexistence. No man who understands tigers goes into the cage empty handed, trusting to the good will of the tiger. For it is not the nature of tigers to deal with men on the basis of good will.

So no man who wants to live ever gets into a cage with a tiger without a chair to hold the tiger off, a whip to divert the tiger's attention, and a gun to use if worst comes to worst. He has to be strong enough to compel peaceful coexistence.

Likewise, no sensible person gets into the same room with a man who is trying to kill him—unless he is strong enough to restrain the would-be murderer.

That is the fourth possible course we can follow with the Communist enemy; and because of the nature of that enemy, its will to deception and conquest, it is the course we must follow. Not surrender; not preventive war; not drifting and vacillating. But steady, patient, consistent firmness and strength to compel peaceful coexistence and to defend human freedom.

Until when? Until the Communist conspiracy fades or changes.

It will fade or change ultimately, I am completely confident, because of its own inherent cruelties, contradictions, and immoralities. We cannot now know when that will be; but however long the time, we have got to be united, firm, and strong to compel peaceful coexistence until the forces of religion, of education, of human desire for freedom can change the nature of the Communist movement.

That is the fifth course and the only ultimate solution. Mankind will not have a secure peace until the Communist movement abandons its program of world conquest. That can happen only when it ceases to be Communist. That is the truly fundamental task—to change Communists, which means to change men. To change men is the business of religion and education. Private forces must work at that while governments are following the fourth course, doing all they can to provide greater opportunity for religion and education to function.

Governments can hold back armies, governments can feed hungry millions, governments can help other governments, governments can buy time. But governments seldom win people, or change them.

So let us not fool ourselves. We must not overestimate this governmental program of building strength any more than we should underestimate it. What we must do is to pursue it with intelligence and vigor in order to hold back the forces of destruction and slavery until they can be changed, until we and the free world can create such better conditions for human beings that their attraction and appeal cannot be kept from penetrating to those now cut off behind the Iron Curtain, and cannot be indefinitely resisted by those who erected that curtain.

To pursue the course of patient firmness and strength with intelligence and vigor requires that in addition to keeping ourselves strong here at home, we must help keep the free world free. How can we keep the free world free? It has two parts, the strong countries and the weak.

The first step in the Communist's program is not war; that is the last step. The first step is subversion. Since they cannot readily subvert the strong countries, they concentrate their efforts on subverting the weak. Where are they? Mostly in Asia and Africa.

What do they do with the strong? They seek to divide the strong.

That has been and still is their world program: To divide the relatively strong countries—mostly in Europe and around the North Atlantic; while seeking to subvert the weak countries—mostly in Asia and Africa.

That tells us what our program must be—we must not let them succeed in either dividing the strong or subverting the weak. We must, if possible, hold together the coalition of the strong around the North Atlantic, while preventing any more losses to the Communists in Asia. Or, to turn it around, we must reasolutely work to build greater strength and unity among the peoples still free in Asia, while blocking the skillful efforts of the Reds to break up NATO and our other alliances with the stronger countries in the west.

That means the President and the Secretary of State must, in a sense, carry water on both shoulders. We cannot do all our western allies would like—or we would lose Asia. We cannot do all we

could and would like to do in Asia, for example, with respect to Free China and Vietnam—or we might jeopardize our ties with certain western allies, particularly Britain and France.

We could have complete unity around the North Atlantic, for a time, if we were willing to let Asia go. Or we could concentrate largely on Asia, where some European allies do not cooperate too well, and possibly be alienated from those allies.

Neither of those results would be good for our own security. So we have to go ahead with a two-pronged policy, because our own security requires that both Europe and Asia be in the hands of friends, rather than of enemies.

It is a tough job—and it is easy to find fault with us. One group charges us with "selling out" Asia to please England. The other group charges us with endangering our alliances in the west, "going it alone," in order to "save Chiang Kai-shek and Syngman Rhee"—as they put it. Yet we see with increasing clearness that we must keep both Europe and Asia free, if we are to save either. The planet is now one strategic area. A major breakthrough on any front will have disastrous effects on all the others.

How can we prevent subversion of the weak? The answer is simple, though very difficult. Help the weak become strong.

How can we help the weak become strong? To many the answer was to give them lots of American money. That was our first instinct. Naturally we tried it and of course it did not succeed.

Then the idea was to give them American goods—millions of tons of food, fertilizer, fiber. That helped, but of course it too was not enough. It was like a transfusion that tides a patient over an acute emergency, it keeps him alive until these forces can perhaps be brought into operation that will enable him to start building his own blood. He cannot live indefinitely on somebody else's blood.

Then many said, "Let us give them our tools and our know-how." But, that too was not enough. For our money, our goods, our tools are all results; what they need most is the causes—so they can produce those results for themselves.

What are the causes which have led to our superior tools and machinery, more productive know-how, more plentiful goods, and greater wealth? It is not that we are smarter than they are, or have greater basic resources. It is because of a philosophy of life and Government, a political and economic system you and I inherited from our forefathers which gives opportunity and incentive for every man to get ahead, to improve his lot. The really unique thing we have to contribute is not just the results of the system, but the secret of it. It is certain of our ideas that they need most. In our preoccupation with sharing our gadgets, we almost forgot for a time that others would not use our machines efficiently until they had the ideas; and once they have the ideas, they will produce more and more of their own tools, goods, and wealth.

The main thing, as the gentleman from West Virginia [Mr. BYRD] said earlier, is to share with them the ideas, the spiritual concepts, the concern for individual human beings and their welfare that are the real source of all the greatness that has been achieved here.

Once again, we have to have a two-pronged program, a judicious balance as we seek to contribute both the fundamental concepts and values, and the concrete results of those concepts and values—with the former increasing and the latter decreasing.

But are all these enough? No. In addition to keeping ourselves strong, and helping the weak to become strong, our foreign policy must have also the negative objective of trying to prevent any more gains by the enemy. We must not let it win any more victories—whether political, diplomatic, economic, or military. That is why we have in this bill another reaffirmation of American opposition to the admission of Communist China to the United Nations. It is not just because there is no legal or moral basis for admitting a declared lawless aggressor into a union of supposedly peace-loving states; but because such admission would be a tremendous, perhaps decisive, political victory for the Communists.

Most of the governments of Asia are still young and shaky. Our purpose is to enable them to become strong enough to resist Communist pressures and blandishments. But how can we expect small, weak countries right across the border from giant Communist China, to defy her, if the U. N. accepts her? How can the weak resist if the strong embrace? To admit Red China to the U. N. would be to give communism the ball game in Asia.

It is because the countries there know this, even if we do not, that some of them are flirting with Red China. If the West is ultimately going to recognize the Communist regime—as so many shortsightedly advocate—why should the Asians not get in on the ground floor, and perhaps thereby gain some good will from the Reds? It will not succeed. Recognition would not satisfy the Communist objectives. It would only increase their capacity to gain their objective which include all of Asia. But if a good many in the West are fooled, why should anyone be surprised that some Asians are taken in too?

Mr. Nehru, for example, is not pro-Communist; he is scared, and he imagines he is a realist. He obviously is convinced the Chinese Communists are going to prevail. Why then should he not try to make a deal or a compromise with them that will perhaps save him and his own country?

We also cannot let the Communists achieve any more economic victories. That is why we cannot resume or expand trade with them. If they are not an enemy, why are we drafting our boys and taxing our people to build stronger armies, navies, and air fleets against them? If they are an enemy, how can anybody seriously suggest that we do anything to make them stronger? And what they need most right now in addition to a breathing spell and relaxation of our pressures on them, is a chance by expanded trade to overcome their grave deficiencies.

Mr. Chairman, there is one more component we must not forget as we plan a foreign policy adequate to the problems and dangers we face. Our concern for the free is not enough; we must also keep faith with the enslaved.

When any proposal is made, no matter from what source, we should first test it by this criterion: What would its probable effect be on the more than 800 million people behind the Iron Curtain? We must never forget them. Because they are our strongest allies; they cannot be fooled; and they are in a position to do the enemy most damage at the right time—which means they are the most important allies we have. They must be encouraged and enabled to resist from within as the free world resists from without.

Right now they are demonstrating both their will to resist the Communist tyrants and the effectiveness of their resistance. Why are there severe food shortages in Russia and the satellites? It is not because of drought, it is not because of floods, it is not because of insufficient land; those are countries that have always had agricultural surpluses.

It is because the people there obviously want freedom more than they want food. They are deliberately cutting down food production, even at the expense of their own calories, in order to weaken the despotic regime over them.

Mr. Chairman, we must never do anything to destroy the hope or weaken the will, or strike despair into the hearts of the enslaved peoples behind the Iron Curtain. And, they cannot be expected to continue to weaken the tyrants from within if we help those tyrants from without. Our true hope is in the oppressed, not in the oppressors.

Well, Mr. Chairman, here we are moving out of the trenches into open field maneuvering. The payoff of years of effort is at hand. This is no time to hesitate or falter. I recognize fully all the difficulties and the dangers and the weaknesses and the inadequacies of the mutual security program. But I do not see how anyone can study the whole situation and escape the conclusion that must of our hope for the future lies in continuing and constantly improving that program.

When people ask, "What shall we do in view of the Kremlin's recent shift in tactics?" The answer is, "Keep on doing what we have been doing—only better." It is what we have been doing that is responsible for the shift in tactics. Hold fast to the course which is beginning to succeed. If we do that, please God, we may be nearer an end of this awful struggle than we realize.

In conclusion, Mr. Chairman, let me summarize the three paths we are being urged by various groups to take.

Some say we should be prepared just to continue this cold war for 30, 40, or even 50 years. I doubt that we could or would do that. It would be too costly and frustrating for Americans to accept.

Some say that since we cannot continue for decades, we have to end it now. But the only way we can end it

now is on terms that would mean we had lost it.

Rather, we have to win the cold war. And we have to win it before they are in a position to start a hot war. If we do not do that, if we just continue the cold war without decision until they can become strong enough to start the hot one, we will have failed. For to win the cold war then, would only precipitate the hot war which it is our hope and purpose to avoid.

Mr. Chairman, the only way to end a war with this kind of an enemy anywhere is to win it.

To win the cold war requires that we weaken the capacity or the will of the enemy—or both—to start a hot war. That will have been accomplished when he no longer has hope of victory.

This bill is dedicated to helping win the cold war as the surest way to end it and to prevent the atomic war we want so desperately to avoid if we can without loss of honor or freedom. It is the surest way to make possible the dawning at last of the peace for which so many millions have longed and labored, a peace that will last because based on justice and freedom and human brotherhood.

Battle for the Minds of Men

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I am taking this time to inform the House on the proposal that will be presented early in the 2d session of the 84th Congress for a new and simple approach to the problem of winning the battle for the minds of men.

In the 1st session of the 84th Congress we have given major attention to the strengthening of our defense and the solidifying of the protective forces of the nations of the free world. But we realize that the conflict between two ideologies will be determined, not on battlefields, but in the minds of men.

This is a report of progress as well as a statement of future plans.

It will be recalled that when the appropriation bill for the Department of State was under consideration, I offered an amendment to include an item to make available to men and women everywhere, in inexpensive editions and translated into native languages, the classics of American democracy.

What I had in mind as comprising the classics of American democracy were those writings that had fired the early Americans in the periods of the conception and development of our own democracy. In a sense they may be compared to the books of the Bible, which were written by different men and at different periods and later were selected, with some but relatively small differences in versions, as constituting the foundation sources of a faith. It is proposed to select those classic books that constitute the foundation sources of American faith in democracy.

WHAT ARE THESE CLASSIC BOOKS?

What were the writings that inspired the minds of Americans in the beginning of our democracy and in the succeeding stages of its development? To what sources now shall turn the peoples in other lands who are searching for the eternal truths of self-government?

I am not referring to present-day writings. They are interpretations and evaluations, many of them of excellent quality. They may be regarded, however, in some quarters of the world, where the battle for the minds of men is keen and close, as propaganda for an American nationalism. Moreover, they are copyrighted works and not available except by arrangement.

The classics of democracy that hold the eternal truths of government for, by, and of the people now belong to all the world. All that is necessary is, first, to make the proper selection; second, to translate them into native languages; third, to print them in inexpensive paperbound editions; and, fourth, to give them grassroots sales distribution.

INTEREST IS WIDESPREAD

Many Members of the Congress on both sides of the aisle have shown heartening interest in the program to make available in this manner to all peoples everywhere the classics of democracy that inspired our forefathers. Several of our most distinguished colleagues, whose reputation for constructive statesmanship is of the highest, have been most active in the preliminary spadework.

My own interest was whetted by reports from the foreign correspondents of the Chicago Daily News to which I shall refer later. Following the publication of these reports, I moved an amendment to an appropriation bill to permit the immediate start on a classics-of-democracy program. It was ruled out of order, because there was no previous authorization. Judging from its reception by my colleagues, and the many pledges of support volunteered, I think the amendment would have been adopted.

Since that time much work has been done in preparation for presenting to the session convening in January the proposal for authorization and the request for adequate appropriation to launch the program. I wish at this point to express my deep appreciation to the distinguished gentleman from New York [Mr. ROONEY], the able chairman of the Subcommittee of the Appropriations Committee, for his friendly interest and cooperation. Also to the distinguished gentleman from Ohio [Mr. FEIGHAN], a pioneer in this field and extremely well-informed in all phases of the problem. Congressman FEIGHAN participated with me in many conferences with Dr. Theodore C. Streibert, the Director of USIA, and members of his staff, all of whom were most gracious and helpful.

Expression of appreciation likewise goes to the editors and foreign correspondents of the Chicago Daily News, including Paul Leach, for many years the very able head of the Washington Bureau, and Van Allen Bradley, the literary editor, to Dr. Harold Fey, executive editor of the Christian Century, to Jerome G. Kerwin, chairman of the Charles R. Walgreen Foundation at the University of Chicago; to Richard P. McKeon, professor of philosophy at the university and a State Department visitor to universities in India; to Emery T. Filbey, vice president emeritus of the University of Chicago; to Thomas B. Stauffer, instructor in houmanities at Wilson Junior College, and to Leland G. Stauber.

HOW CLASSICS WILL BE CHOSEN

I think it will be of interest to my colleagues to learn that the first phase of the program is now under way and will be completed by the time we reconvene in January. That is the selection of the classics of American democracy that enlightened American opinion would present in translated and inexpensive editions for the reading of the world.

The list we thing should not be the compilation of one person or of one group. Hence Congressman FEIGHAN and I have undertaken to correspond with a large and representative list of educators, editors, and leaders of religion, labor, industry, patriotic women's, and other organizations. They are being asked each to submit a list of 20 classics of American democracy. The works receiving the greatest number of votes can be accepted as bearing the stamp of American public approval. As to the writings that are included in all lists there can be no question. Congressman FEIGHAN and I are being counseled and aided in this survey by Dr. Fey, Mr. Kerwin, and Mr. Stauffer.

Some of the classics of American democracy that have been suggested are:

Emerson, Moral and Political Essays.

Benjamin Franklin, Autobiography.

Jefferson, Writings.

Abraham Lincoln, Writings.

Madison, Hamilton, Jay, the Federalist Papers.

John Lock, Of Civil Government.

Judge Learned Hand, the Spirit of Liberty—USIA has world rights in this publication.

John Stuart Mill, Considerations on Representative Government—On Liberty.

David Thoreau, Walden, Writings on Liberty.

Alexis de Tocqueville, Democracy in America.

Thomas Paine, Common Sense.

Rousseau, Social Contract.

The Constitution.

The Declaration of Independence.

These merely are suggestions. It is possible some should be omitted, certain that others should be included. The poll of the editors, educators, leaders in all activities, will decide the official list.

WHY PROGRAM IS NECESSARY

Theodore S. Repplier, president of the Advertising Council, Inc., recently returned from 6 months' study of information and propaganda methods in the Orient, Near East, and Europe under the auspices of the Eisenhower Exchange Fellowship, makes these comments:

Millions of people in free Europe and Asia look upon the Soviets as idealists, and Americans as dollar-mad materialists.

To many, the Communists are the champions of the common man. America appears to champion nothing but its own safety. * * *

Our propaganda program needs to use more of the skills and talents of America.

Along the same line, Evangelist Billy Graham was quoted—Christian Science Monitor, May 24, 1955:

America ought to do something about the bad and false impression many foreigners have of her. The general picture of America abroad as fostered by the press, tourists, and moving pictures is that of a land of murder, crime, and violence, sexual excesses, and general immorality.

These reports coming from two widely separated sources, in juxtaposition with the fact that the 84th Congress has just appropriated $2,703,341,750 for mutual security, an appropriation including technical assistance designed to raise living standards in Asia, Africa, South America, and Eastern Europe, indicates the need for an objective review of our propaganda methods.

COMMUNIST DOMINATION GROWS

While events at Geneva may mean that the sun of a better day is rising on the international horizon, we must never lose sight of the fact that the Soviets are masters of the technique of conquest by infiltration and subversion. Moreover, that world conquest is their long-range goal even though it may temporarily seem to be eclipsed by a jovial diplomacy and an international sweetness and light.

While the free world is endeavoring to hold its own, Communist domination has been growing. Today one-third of the world's population is under Communist control. Of 800 million Communists, 600 million have been added since World War II, 89 million are numbered among the European satellites; the others are Asiatics.

Most of the Asiatics living in the free world are enjoying a new but tenuous freedom. For example, there is India. At one time its people, living on the edge of want, blamed their distress upon the British. Today the British are gone, but not poverty and all attending ills.

The bright ray of hope in this picture, we find at Manila and Bandung. The leadership of the Filipinos at Manila gave living proof that the United States is not to be classified as an exponent of colonialism and exploitation, despite some diplomatic misadventures. At Bandung, representatives of the nations of Asia and Africa quoted the language of the Declaration of Independence, the Magna Carta, and the Gettysburg Address.

HERE IS THE WORLD PICTURE

Why have the Communists succeeded in presenting themselves as idealists, champions of the common man, despite the fact that Africans and Asiatics have quoted the philosophy of domcracy? There are several answers to that question, but one is obvious: communism has made its literature easily available all over the world. It has spent millions spreading the literature of its ideology wherever anyone can read.

The Chicago Daily News has requested its foreign correspondents abroad to report upon the sale and availability of standard works presenting the philosophy of democracy on the one hand and communism on the other. Here are some of the results.

ENGLAND

From the letter of Ernie Hill, Chicago Daily News correspondent, London, England:

1. There are numerous bookstores that sell Marx and company at low cost. The Communist Party itself operates 36 regional bookstores and sells at below cost. Then there are several privately run stores that sell Communist literature at a profit * * * but still the costs are extremely low because they get them for almost nothing. Chief among these is Collett's. The manager recently wrote a letter to the Manchester Guardian stating that neither he nor his help were Communists, that they were selling Communist books because there was a demand for them. He pointed out that they also sold American books, although their trade is largely in Communist literature.

They sell Howard Fast's most venomous books at less than they sell American books. The Communists publish Howard Fast in London and send his books everywhere in the world to be sold at prices below normal.

Central Books at Red Lion Square also is in this business. It currently is advertising a new Russian book, A Book for Parents, at 7 cents a copy. It also is pushing a booklet, Public Education in the U. S. S. R., for 10 cents.

Nowhere can you buy Jefferson, Adams, Lincoln, for anything like these prices.

2. Communist pamphlets are very cheap and are given away in some of the 36 Communist bookstores. Prices range from 7 to 10 cents. A similar American paperback runs at least 30 cents.

3. There is considerable discussion of basic political philosophy at the London School of Economics, Oxford, and Cambridge. In London, the Socialist Party discusses little philosophy. It is a straight question of the working man against the investors, management, and inherited wealth.

Generally the people of England understand the basic philosophy of Marxism.

They also understand the basic philosophy of democracy in the United States. Since their own form of government is just about as democratic as ours, they are inclined to take these things for granted.

Collett's bookstore I have discovered is usually crowded with Indian students from the London School of Economics. They are generally very left wing and form a bloc of malcontents in Britain. There are something like 50,000 Indians in London and environs.

4. Practically everything from the United States and Union of Soviet Socialist Republics is available in London. In English of course.

5. American information libraries are rather inadequate to meet the Union of Soviet Socialist Republics challenge. There are only three—London, Manchester, and Edinburgh. The London library has 40,000 volumes but the other two only 4,000 each.

Manchester and Edinburgh are outposts of the London Library and handle mail requests for books to be loaned.

It is probably unfortunate that the London USIS library is in Grosvenor Square, one of the most expensive and exclusive districts of London. Very few people from East and South London ever come to Grosvenor Square, even to borrow books from the USIS. I have noticed that in some of the other world capitals the USIS library is located in a downtown area where all classes of people pass daily.

Grosvenor Square now houses the American Embassy's five buildings, the United States Navy's large establishment, and the American school for children up to 11, three residences of Indian millionaires, and a few assorted British millionaires and peers.

The library is a good one with adequate reference books but it perhaps is badly located to give the maximum benefits.

The USIS people say the trend is toward reducing library facilities rather than expanding them. * * *

The fact remains that we have nothing to compare with their (U. S. S. R.) cheap books distribution plan and are not likely to have anything. * * *

The world's opinions of the United States largely are formed from the motion pictures they see. Some of the pictures we export do us more harm than 100,000 anti-American Russian pamphlets.

ITALY

From the Chicago Daily News Bureau, Via Oreste Tommasini 13, Rome, Italy, comes this report:

1. There are many Communist bookshops in Rome, usually near neighborhood Communist headquarters, which have club rooms and reading rooms. All the Communist classics as well as later writings on Communist education for children, Communist education for workers, labor unions, etc., are available in Italian, at approximately half the price of the paperbacks in Italian on American political and economic thought.

2. There are no American bookstores, though there is a commercial English bookstore which stocks American writings and orders them. Italian bookstores handle American books in English and in translation. The State Department has a program whereby Italian publishers translate and print American books. Instead of giving a subsidy, the Americans promise the Italian publisher they will buy a few thousand copies. These copies are then distributed free to libraries and universities in Italy, and among the people the Embassy calls public opinion molders.

3. There is a tremendous difference between the distribution methods of the Soviet Union and the United States of America. The Soviet Union subsidizes books in Italian with broad mass appeal, at a very low price, through the large Communist Party and the books are available in neighborhoods. The Americans, on the other hand, concentrate on getting their books into the hands of the intelligentia, students, and professional classes. For example, three recent books on American political thought, translated into Italian by Italian publishers, for sale in Italian bookshops and also distributed free to Italian libraries by the USIA are: The U. S. and the Permanent Revolution (cost paperback about $2.50); Peter Drucker, the New York Society (cost paperback about $3); David Hutton, the Promise of Productivity (cost paperback $3.50). That is a lot of money for an Italian earning about $100 a month. The printing is good, the paper is nice.

4. The Soviet Union's information library is run for them in the Communist Party headquarters. We, on the other hand, have a beautiful, quiet, restful library on the Via Veneto, the smartest street in downtown Rome. It is full of lawyers, doctors, economists, students, etc., but no ordinary Italian would have the nerve to walk in, even though it is on street level and a sign says "free entrance." I accompanied a young Italian architect who wanted to see some of our architectural magazines because he couldn't believe he wouldn't be thrown out of such a smart place. Now he goes there all the time and the building and House and Garden type of magazine is his joy in life. I fear there are many Italians like him who would not have gone in unless introduced or accompanied by an American.

The American fashion magazines are slit to pieces by Italian women who go in with razor blades to cut out pictures of clothes, furniture, interior-decorating ideas. Also little ads concerning gadgets get cut out, indicating that Italian manufacturers take them, because they often appear on the Italian market within a few months after such a product is advertised in one of our home magazines. I think this is fine and shows our magazines are read. However, our librarians deplore the fact that the magazines get messed up and clipped. I think we ought to supply more of these magazines and let them clip away. It's cheap enough propaganda.

Here are the facts on the books Italians drew out of our American library during 1954.

A. Fiction: 21,229 withdrawals. This included Hemingway, Faulkner, Dreiser, and 19th century classics such as Melville, etc. There are no mystery books or purely popular fiction.

B. Literary criticism, poetry: 3,846.

C. Books on art: 3,781.

D. Political philosophy and psychology: 1,105.

Under political philosophy and psychology I found, in Italian: George Kennan's American Diplomacy; John Dewey, Democracy and Education; James Byrnes, Speaking Frankly; Walter Lippmann, The Good Society; Tom Paine by Dos Passos; a translation of the American Constitution; biographies of Jefferson, Franklin, but not their works; John Foster Dulles' War or Peace (looked like it had never been read, but it was there in Italian).

"Question. Why are not the Italian intelligentsia interested in our books on political philosophy?

"Answer. We judge America on what she does, not on what she says. We know all about that anticolonialism theory, but it does not work out that way in the U. N. (He was referring to our backing of France in Indochina and North Africa.)"

On the other hand, there is interest in American economic theory. Here Italians believe we practice what we preach. Almost all the books on the American way now being distributed in universities and asked for concern our economic theory of productivity, etc.

NOTE.—During 1954 the American Library drew 87,198 readers during the 227 days of the year it was open. The American Library closes on all Italian as well as American holidays and during the siesta hours between 1 and 4. This is a mistake; it could draw five times as many readers if it were open on holidays and during the siesta hour. Working Italians, apart from students, cannot possibly visit a library and browse during the hours when it is open: 9:30 to 1 and 4 to 7 excepting on Saturday afternoons when it is closed. All around the world I have found American libraries closed during the time when most people have leisure. This makes no sense to me.

The Communist bookshops and reading rooms, I notice, are always open on workers' holidays, when ordinary people have time to read.

The United States has two libraries in Italy, in Rome and Milan. The Soviet Union has its publications available through the Communist Party in every village and hamlet. Mass distribution of Communist literature is successful, because it goes into the towns and hamlets. We concentrate on the biggest cities. We think public opinion molders of Italy are in Rome and Milan. I am not so sure.

FRANCE

From Bill Stoneman, Chicago Daily News Bureau, 23 Rue de la Paix, Paris, France:

1. There are at least six bookshops in Paris which are devoted almost exclusively to the sale of Communist literature and which offer the works of Marx, Engels, Lenin, and Stalin in either Russian or French.

Two volumes of Marx-Engels which cost 24 rubles ($6) in Moscow cost 360 francs ($1) in Paris. Das Kapital, which costs 20 rubles ($5) in Moscow, costs 360 francs ($1) in Paris.

Works of the basic American political philosophies are difficult to buy in France because of the high cost of American books and the current shortage of American foreign exchange available for the purchase of books.

It is possible, however, to obtain practically anything one wants at Galignani's on the Rue du Rivoli where English books have been sold since 1800. Prices are excessive from the French point of view. A book costing $5 in New York is priced at 2,250 francs, the equivalent of $6.40.

However, a vast volume of good American literature is available in English through British publishing houses. They sell English and American classics in paperback pocket-size books at extremely low rates. The Nelson classics sell for 265 to 465 francs (80 cents to $1.40 approximately). The standard average price for a French paperback book is about 600 francs ($1.85). A very high percentage of American books are published in England and sold at less than half the price which is charged for American books.

Jefferson, Adams, and Lincoln are regarded here as peculiarly American figures many of whose ideas were acquired from British or French political philosophers. There is no natural market in France for their works or books concerning them. The principal British men of letters and formers of political thought are available in pocket classics at low cost.

There are reputed to be 38 French publishing firms, more or less controlled by the French Communist Party.

On the other hand most of the independent publishers in this country would normally turn out a large volume of anti-Communist literature because there is a heavy demand for it and, partly too, because of the influence of Catholicism.

2. The Communists churn out a lot of pamphlets and small-sized propaganda books, papers, and periodicals. They can be had in the half dozen openly Communist bookshops.

The United States alone turns out a number of giveaway publications which, on the whole, seem to be very well done and in any case are a lot more attractive than the Russian or Communist stuff.

American publications available here in France include Information and Documents, a twice-monthly periodical dealing with interesting developments in the United States and Franco-American relations; a series of brochures containing particularly significant statements by American leaders issued as part of the Plan of Peace series; and Problems of Communism, a very well-done booklet issued monthly and containing intelligent and telling attacks on the Soviet system by well-known writers of various nationalities.

The peace and liberty organization which is a militantly vigorous anti-Communist propaganda organization (financed by the United States) puts out a giveaway booklet called Defense of Truth also very well done.

3. France is a country of intellectuals and congenital philosophers and there is a greater interest in the study of political philosophy than in most countries.

The United States is not recognized as having any particular philosophy in the same sense that Russia lives on and by Marxist philosophy but the traditions of Anglo-Saxon liberalism and democracy are respected and understood. It is only when someone or something appears to challenge the fundamentals of the American system that the United States fails to enjoy the full respect of decent-minded Frenchmen.

4. Koestler's extremely damning books and Joseph Scholmer's violently anti-Communist book Vorkuta have been best sellers in France.

5. There is a large, well-organized, and heavily patronized American lending library with 15,000 volumes on the Champs Elysees. (This is presently being transferred to the left bank.) There are smaller libraries in Lyons, Lille, Strasbourg, and Marseilles.

GERMANY

From Chicago Daily News correspondent in Bonn, Germany:

The position in Germany is complicated. The Communist Party of Germany (KPD) is legal. It publishes several newspapers and maintains its own bookstores in several large cities.

By and large you won't find any of these publications in ordinary bookstores or newspaper kiosks.

There is a trial before the West German constitutional court to have KPD declared illegal (March 31, 1955).

Marx and Engels rank as German philosophers to whom a large number of non-Communist Social Democrats still pay lip service, although the Social Democrats no longer call themselves a Marxist Party. Their works can be obtained, but there isn't much demand for them, or so it seems. Postwar editions have been few and limited for the most part to scholarly as opposed to political purposes. One combined catalog, with which I checked, listed only a new edition of the Early Writings of Marx.

The Stars and Stripes Army bookstands often have a good selection of Modern Library Giants, sometimes including Das Kapital in English translation.

Everything published in the Soviet Zone of Germany has a pronounced Soviet slant.

There is no KPD as such; only the Socialistiche Einheits Partei, or Socialist Unity Party, the SED, a forced amalgamation of the Social Democrats and the Communists which is unrecognized in Western Germany although it continues to be legal in West Berlin and presented candidates in the December election.

The principal newspapers of the Soviet Zone can still be obtained by anyone with a reasonable excuse for having them. They are not on sale publicly in the West, but I get them every day, 2 days late, from my regular newspaper dealer.

Pravda and Izvestia are available through a similar arrangement.

The Soviet Zone maintains extremely close and strict control over western publications. * * * Simple possession of a Western newspaper has been enough in some cases to produce a charge of warmongering.

From time to time it is proposed that there be a freer exchange of cultural and scientific publications between West and East Germany, but not very much has been achieved.

Works of Lenin and Stalin in German translation can be obtained only in the Soviet Zone. They are available in Russian in several large bookstores that specialize in foreign publications. One of these, in Nuremberg, had a sizable display at a meeting of Soviet refugees near Munich last summer. There were not only the Soviet originals but also a number of anti-Soviet publications in German from the Nazi period. They are described as antiquarian.

At the end of the political spectrum there is no limit to what may be published under the guise of memoirs or experiences from the Nazi and wartime periods. * * *

Basic political books in English are available at United States and British reading rooms which are scattered throughout Western Germany and Berlin and are well patronized.

I am astonished also at the number of translations that can be obtained in bookstores. Bullock's biography of Hitler, Wheel-

er-Bennett's study of the Wehrmacht, Churchill, Chester Wilmot's Struggle for Europe come immediately to mind.

All of these are of British origin, for which there are two reasons. Dollar royalties still are difficult to manage for German publishers; comparable books do not seem to have been written about Germany or Europe in the United States of America.

CANADA

Frank Flaherty reports from Canada:

Regular bookstores stock Communist classics put out by Modern Library and they sell for about $1.25. Modern Library editions of United States political classics are also stocked. There is no Communist bookstore in Ottawa but there is one in Toronto and perhaps one other in western Canada.

Outside of certain academic circles I don't notice much interest in questions of fundamental political philosophy. Communist principles are rarely discussed, Communist tactics often. There is no feeling that the basic philosophy of the United States lacks expression. There is too little understanding of what it is.

FAR EAST

Somewhat in contrast with the experience of Mr. Flaherty stand the observations of our Study Mission to Southeast Asia and the Pacific after visiting the USIA libraries of the Far East:

The fact that they [the libraries] are heavily used is an indication of their worth. Moreover, they are not only visited by the student and the casual reader but in a number of countries they service government officials, civil servants, and academicians. Most of the works are in English. In contrast the study mission noted the large number of Communist works printed in local language on sale in local bookstores for small sums because of heavy subsidy. These books were attractively bound and printed on expensive paper. The study mission recommends increased efforts by our agencies toward the development of a vigorous program of translation, publication, and distribution. The market is there, as evidenced by the eagerness on the part of the population to absorb foreign ideas.

The Christian Science Monitor, May 23, 1955, noted that the Communists have built a new broadcasting station at Pyongyang, North Korea's capital. They announced that personal letters from North Koreans would be read to relatives and friends in South Korea. During the first quarter of this year 2 million books, many of them editions of Marx, Engels, Lenin, and Stalin, were published or imported into North Korea.

Our own Congressional Library has given me a survey of Communist literature available in the Near and Middle East as well as an idea of its distribution. This survey I will refer to later in my remarks.

MEXICO

To Miss Joy A. Dickens, assistant to the cultural attaché of the United States Embassy in Mexico, I am indebted for a pamphlet, Lista General de Obras del Fondo de Cultura Popular, A. C. In this pamphlet are listed more than 100 Communist publications, including several pages devoted to the works of Stalin, Lenin, Marx, Engels. Miss Dickens writes:

The books are representative of the publications being distributed by the Communists through commercial channels. Their outlet is a local bookstore called Fondo de Cultura Popular. Most of the books are published in Moscow and generally sell for between 5 pesos (approximately 40 cents) and 12 pesos (96 cents). If these books were published as a commercial venture, they would be very cheap at double the price.

It might be interesting at this point to mention that about 12 percent of our books are published in Spanish; the Communist book list was 100 percent in Spanish.

NEAR AND MIDDLE EAST

The following report on Communist literature in the Near and Middle East is furnished me by Robert F. Ogden, Chief, Near East Section, Library of Congress:

The amount of Communist literature in the languages of the area, Arabic, Turkish, Persian, etc., actually in circulation has varied greatly with the political fortunes of the Communist parties and institutions active in the area. When such organizations have been banned, the amount of literature available for purchase and actually in circulation naturally decreased.

Since World War II, Communist Parties have been active in the majority of the countries of the area, with the exception of Turkey, Saudi Arabia, and some of the smaller units. Such parties have been particularly active in Iran, Iraq, Syria, Lebanon, and prepartition Palestine.

The literature used was at first locally printed but the trend is now toward Moscow imprints. The literature is of three general types: (1) Literature directed toward the idea of the peace movement and the propaganda through the orthodox churches; (2) literature dealing with the theory and accomplishments of communism, particularly the Soviet Union; (3) literature directly attacking the United States or the foreign policy of the United States.

This Section has not made a special attempt to collect such literature but some samples that have come to the Library of Congress usually by transfer are listed below. There are no examples in Turkish for the reason that Turkish control of printing and distribution of such literature has been particularly rigid and successful.

ARABIC

1. Translation: Conference of all the churches and religious sects in the Soviet Union for discussion of matters of the defense of peace.

No date or place of printing or author except the note "originated in the patriarchate of Moscow." The conference took place in May 1952.

2. Translation: America, the United States of America (in latin type), the country of the yellow satan.

3. Translation: The Way (magazine). Organ of the Israel Communist Party on problems and theory and practice. Published also in Hebrew.

4. Translation: That the Soviet people may go forward under the banner of Lenin-Stalin toward victory.

PERSIAN

5. Translation: The Great Civil War in the United States. (Moscow 1944.)

6. Translation: Orders of the High Command of the Grand Army. (Moscow 1945.)

7. Translation: Teymur and His Group (a boy's novel).

COMMUNIST PUBLICATIONS IN SOUTH ASIA

Horace I. Poleman, Chief of South Asia Section of the Library of Congress, furnishes the following report:

Communist publications fall into the three classes:

1. Russian classics (Tolstoy, Gorky, etc.) published in English in de luxe editions and sold for a few cents each.

These appear in all bookstores.

2. Pamphlets of 25–100 pages in English with attractive covers published in Russia and China and in the area of south Asia, interpreting life in Russia and China in most glowing terms. They are sold for a few cents each and appear in book bazaars everywhere.

3. Books and pamphlets in the principal vernacular (Hindi, Urdu, Bengali, Panjabi, Gujarati, Marathi, Tamil, Telugu, Malayalam, Kanhada) interpreting in simple language the principles of communism and benefits communism would bring to the peoples of these countries. They are mostly by nature authors, published in the area and sold everywhere for a few cents each.

The Peoples Publishing House in Bombay, with branches in other large cities is the principal publisher and distributor of Communist publications in the area. It has bookstores and counters by the hundreds throughout the area. It is believed to be subsidized by the Russian Government. It publishes attractive pamphlet and book material in English and the vernaculars.

Since the educated people of the area are highly literate in English, Russian classics appear there only in that language. The material in the vernaculars is intended largely for people with little education.

Photographs of title pages of two books in English are provided, and a photograph of a title page of the constitution of the Communist Party of India in Hindi, all published by the Peoples Publishing House (Jana-Prakasana Grha).

COMMUNIST PUBLICATIONS IN SOUTHEAST ASIA

The following report is by Cecil Hobbs, Reference Librarian for Southeast Asia, Library of Congress:

1. Thailand: The sale or distribution of Communist publications in any manner has been banned by the Thai Government. Prior to this ban the Ta Chung Wen Fa Co., later known as the Hua Chiao Bookstore, sold Communist publications issued by the Foreign Languages Publishing House in Moscow. The books and pamphlets were printed in English, Thai, or Chinese.

2. Burma: Communist books and pamphlets are sold freely in the bookstores and bazaar stalls throughout Rangoon. The subject presented in the publications deal with Communist doctrine in general and the story about the development of communism in China in particular. All Communist publications which appear in both English and Burmese may be purchased for a very few pyas or kyats (e. g., from 5 cents to 35 cents).

3. Indonesia: Communist publications—books and pamphlets issued in English, Indonesian, or Chinese—are easily purchased in the principal cities. Scores of bazaar stalls carry the Communist publications along with non-Communist publications, but in larger cities—like Medan, Djakarta, Soerabaja, and Bandung—there are a couple of large bookstores which stocked and sold Communist publications almost exclusively.

Four kinds of publications were stocked in these Communist bookstores: (1) Those which present the general Communist doctrines; (2) those which pertain specifically to communism in Indonesia; (3) those which tell about communism in China; and (4) Communist comic books of a propaganda nature. These publications are issued in English, Indonesian, or Chinese. In most instances the books and pamphlets are not in expensive binding, usually paperbacks, and are sold at a very low price.

The Communist publications in the English language carry the imprint of the Foreign Languages Publishing House in Peking and Moscow.

4. Malaya, Singapore, Indochina, and Philippines: Communist publications are rarely seen in the bookstores of these countries. Apparently firm controls are exer-

cised, although I know of no ban on Communist publications like that in Thailand.

While the picture I have presented is not complete it is derived from varied sources and covers a reasonably wide area. It is not reassuring, much less flattering; but it should jolt us out of our complacency. The world is changing. People who once stolidly accepted the status quo today are hungering for the philosophy which we enunciated in the Declaration of Independence and built into our Constitution. It is not enough that we are a world power. World leadership is within our grasp. We must reach out and seize the opportunity.

The struggle to win the hearts and minds of people all over the world is in progress. With confidence in the teachings of their own political philosophers the Communists are putting a book into the hands of anyone who can read, comic books into the hands of children. With confidence in the power of their political and economic philosophies they are sending Marx, Engel, Lenin, and Stalin into every village and hamlet where one person can read. Their books are within easy reach of the purchasing power of every worker.

Our own program is commendable but obviously inadequate. The reports which I have quoted indicate that we are not reaching the grassroots. Bandung has indicated an awakening in Asia and Africa which we must not underestimate. The democratic philosophy which was the inspiration of our own national beginnings cannot fail to fire those whose aspirations are like our own. Unless we act now we shall awake from our complacency to find that our effort has been too little and too late.

Mr. Speaker, I have now completed my report of progress. I have outlined what is intended when we reconvene. The program is as simple as simplicity itself. It is to win the battle for the hearts and minds of men in foreign climes with the same classics of democracy that won the hearts and minds of the men and women who built these United States. I look forward hopefully to the 2d session of the 84th Congress.

Summary of Legislation Considered by the House Committee on Banking and Currency, 84th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. SPENCE. Mr. Speaker, there follows herewith a summary of the legislation considered by the Committee on Banking and Currency during the 1st session of the 84th Congress. For the benefit of the membership of the House each legislative act is preceded by a caption reference, together with the public law number, the House reports relating to the legislation, and the bill number of the legislation as considered in the House.

BANKING, CREDIT, AND FINANCE

INTERNATIONAL FINANCE CORPORATION

(Public Law 350, H. Rept. No. 1299, S. 1894)

This act, approved August 11, 1955, authorizes the President to accept membership on behalf of the United States in the International Finance Corporation, authorizes the payment of the United States subscription of $35,168,000, contains several provisions of law necessary to make our membership effective, and provides for the coordination of the United States representatives to the IFC by the National Advisory Council on International Monetary and Financial Problems. The bill requires the approval of Congress for certain major actions on behalf of the United States with respect to the IFC, namely, voting for an increase in capital or subscribing to additional stock, accepting amendments to the articles of agreement, and making any loan to the Corporation.

The International Finance Corporation will be an international organization, whose members must be members of the International Bank. It will be affiliated with the International Bank through common membership in their Boards of Directors and Boards of Governors. The President of the International Bank will be the Chairman of the Board of the IFC, and the management and operations of the two institutions will be closely coordinated in the interest of achieving maximum efficiency with a minimum staff. The authorized capital of the IFC will be $100 million. The amount available for subscription by each member will be proportionate to that member's subscription to the capital stock of the International Bank.

The objective of the International Finance Corporation will be to encourage the growth of private enterprises in its member countries, particularly the less developed areas, by:

First. Investing in productive private enterprise, in association with private investors without Government guaranties of repayment where sufficient private capital is not available on reasonable terms:

Second. Serving as a clearinghouse to bring together investment opportunities, private capital, and experienced management;

Third. Creating conditions conducive to and otherwise stimulating the productive investment of private capital.

These objectives were generally recognized and sought by the previous administrations.

The International Finance Corporation is intended to provide venture capital but is not authorized to invest in capital stock or to assume responsibility for managing an enterprise in which it has invested.

There is almost universal agreement that increased investment and development would be desirable in less developed areas of the free world. Many benefits would result to the people of those areas through raising their standard of living, often tragically low; the United States could anticipate increasing consumption of American agricultural and industrial products; and the entire free world would gain by relaxation of the discontent and unrest which make a fertile field for Communist activity.

It is hoped that by channeling private investment into the less developed areas the International Finance Corporation will lessen the need for public grants and loans.

Currently private United States and other capital flowing into the underdeveloped regions is concentrated in relatively few areas and industries, particularly oil and mining. Private capital for general industrial and commercial purposes in these areas is generally conceded to be inadequate.

One of the problems of the underdeveloped regions is the low rate of capital formation. What capital there is, all too frequently is invested in the more highly developed areas. It is hoped that the examples of productive and profitable enterprises which the IFC will help to start in these areas will generate local confidence and increase the available supply of local capital.

INSCRIPTION OF "IN GOD WE TRUST" ON ALL UNITED STATES CURRENCY AND COINS

(Public Law 140, H. Rept. No. 662, H. R. 619)

This act, approved July 11, 1955, requires that the inscription "In God We Trust" be placed upon the currency of the United States and requires that hereafter the same inscription also appear on all coins of the United States. The Bureau of Engraving and Printing is now undertaking, for purposes of economy, the designing of a new process for the printing of the currency which will require the preparation of new dies, rolls, and plates. In connection with this redesigning of the currency it will be possible to include the inscription "In God We Trust" in the new design with very little additional cost. In order that the Government not be faced with the substantial expenditure running into hundreds of thousands of dollars that would be required to make such a change if it were made other than at the time of redesigning the currency, the act provides that the inscription be incorporated in the new design at such time as new dies for the printing of currency are adopted in connection with the current program of the Treasury to increase the capacity of presses utilized by the Bureau of Engraving and Printing.

With respect to coins, the act would simply make mandatory the existing procedure of placing the inscription on all coins of the United States. Presently the inscription is only mandatory with respect to the denominations of silver coins on which it was inscribed prior to May 18, 1908, but in practice in recent years it has been placed on all coins.

NATIONAL BANK 20-YEAR REAL ESTATE LOANS

(Public Law 343, H. Rept. No. 1349, S. 1189)

Under section 24 of the Federal Reserve Act, national banks are presently authorized to make mortgage loans secured by first liens upon improved real estate. The amount of any such loan may not exceed 50 percent of the appraised value of the real estate and no loan may be made for a period longer

than 5 years, except that any such loan may be made in an amount not exceeding 60 percent of the appraised value of the real estate and for a term not longer than 10 years if the loan is amortized and the installment payments are sufficient to amortize 40 percent or more of the principal of the loan within a period of not more than 10 years. National banks are also permitted to make construction loans for residential and farm construction, but the maturity may not exceed 6 months. Such construction loans are classed as ordinary commercial loans.

This act, approved August 11, 1955, makes three changes in these existing national bank loan authorities. In the case of 40 percent amortized residential mortgage loans not exceeding a 10-year maturity, the percentage of the loan to the appraised value is increased from 60 to 66⅔ percent. New authority is granted for national banks to make residential real-estate loans in an amount not exceeding 66⅔ percent of appraised value and for a term not longer than 20 years if the loan is secured by an amortized mortgage, deed of trust, or other instrument which provides for complete amortization of the principal of the loan within the 20-year period. The 6 months' limit on construction loans is increased to 9 months.

As a matter of practice national banks have been making real-estate residential loans in effect for an extended period through making a 10-year loan, 40 percent amortized within the period, and then at the end of the period recasting the unpaid balance into a new loan with a 10-year maturity. The 20-year maturity permitted by the new act is thus primarily for the interest of the borrower in that it enables him to definitely set his complete home-financing plan at the time he undertakes the obligation. The change from 6 to 9 months in the construction loan maturity is more realistic with actual conditions and may well serve to increase the availability of funds for such financing.

ADVERTISEMENT OF NATIONAL BANK LIQUIDATION

(Public Law 266, H. Rept. No. 1337, S. 1187)

This act, approved August 9, 1955, changes the advertisement requirements of existing law with respect to a national bank that is placed in voluntary liquidation. Under existing law whenever a vote is taken to place a national bank in liquidation the board of directors must cause notice of that fact to be published for a period of 2 months in a newspaper published in the city or town in which the bank is located, and also in a newspaper published in the city of New York. The New York City newspaper notice originally was required because national banks formerly issued notes which circulated as currency and because the circulation of these notes was often wide it was deemed desirable to have notice of a pending liquidation published in New York, then the financial center of the country, in addition to the notice to all creditors that was given locally. With the cessation of the issuance of such notes, every national bank having circulating notes outstanding deposited lawful money to cover same with the Treasurer of the United States and all such notes may be redeemed at the Treasury. Therefore the need for publication of notice in New York no longer exists. This act repeals that requirement but retains the local publication requirement and makes clear that local publication must be in every issue of the local newspaper so that all creditors will have notice to present their claims against the bank.

BANK HOLDING COMPANY ACT OF 1955

(H. Rept. No. 609, H. R. 6227)

This bill, passed by the House on June 14, 1955, and not yet acted upon by the Senate, contains 5 major provisions.

First, the bill would set forth a declaration that it is the policy of the Congress (a) to control the creation and expansion of bank holding companies, (b) to separate their business of managing and controlling banks from unrelated business, (c) generally to maintain competition among banks and to eliminate the danger inherent in the undue concentration of economic power through centralized control of banks, and (d) to subject bank holding companies to examination and regulation.

Second, the bill would define a bank holding company as any company which either (a) controls 25 percent or more of the voting shares of 2 or more banks or of a bank holding company, or (b) is found by the Board of Governors of the Federal Reserve System, after notice and opportunity for hearing, to exercise a controlling influence over 2 or more banks. Certain exemptions from the definition of "bank holding company" would, however, be provided. These are as follows: (a) Any corporation a majority of the shares of which are owned by the United States or any State; (b) banks which own or control shares solely in a fiduciary capacity—except where such shares are held for the benefit of all or a majority of the persons beneficially interested in such bank; and (c) any mutual savings bank, or any nonprofit organization operating exclusively for charitable, religious, and similar purposes which would otherwise be a bank holding company by reason of its ownership of bank stock on the effective date of the act.

Third, the bill would require bank holding companies to obtain the prior approval of the Board of the Federal Reserve System before acquiring additional bank stocks or assets. The Federal Reserve Board, before granting approval of any application, would be required to ask for the recommendation of the agency that chartered the bank or banks involved, the Comptroller of the Currency in the case of a national bank and the State supervisor in the case of a State bank. If such an agency denied approval within 30 days that action would be final, but if approval was granted then the Board in the light of the overall situation still could make its own determination.

Fourth, the bill would require bank holding companies within a maximum of 5 years to divest themselves of interests in nonbanking enterprises. Suitable tax relief on the distribution of such interests made at the order of the Board, or where because of such an order a company chooses to distribute its holdings of bank shares so as to cease to be a bank holding company, would be provided.

Fifth, the bill would prohibit a bank subsidiary of a bank holding company from investing any of its funds in, or lending any of its funds on the security of, the stock or other securities of the holding company of which it is a subsidiary, and other subsidiaries thereof, and would prohibit the bank from making loans to its bank holding company and other subsidiaries.

HOUSING

INCREASE IN FHA MORTGAGE INSURANCE AUTHORIZATION

(Public Law 10, H. Rept. No. 66, S. J. Res. 42)

Early in the session it became apparent that the FHA mortgage insurance authorization would be fully committed in the first quarter of the year. Accordingly, the committee reported House Joint Resolution 202 which provided for a $1.5 billion increase in this authority to enable the FHA to go into the spring and summer building season without any interruption in mortgage insurance operations. A companion measure Senate Joint Resolution 42 was passed in lieu of House Joint Resolution 202 and became law on March 11, 1955.

HOUSING AMENDMENTS OF 1955

(Public Law 345, H. Repts. 913 and 1622, S. 2126)

The Housing Amendments of 1955, approved August 11, 1955, contain five title modifying existing law in several respects as noted in more detail in the summary which follows. Title I of the new act deals with FHA title I home repair and modernization loan insurance authority, FHA title II mortgage insurance authority, slum clearance, and urban renewal, public housing, independence of the Home Loan Bank Board and planning advances for community facilities. Title II relates to an expanded program for public facility loans. Title III broadens the college housing program. Title IV revises and extends the military housing program. Title V grants continued authority for the farm housing program.

FHA title I: FHA title I provides a system of insurance for home repair and modernization loans. Under this program more than 18.5 million home repair loans have been made since inception of the program in 1934. Currently the loans average about $550 in size and more than 80 percent of them are made to finance repairs to single-family dwellings. This program is continued to September 30, 1956, under the terms of the Housing Amendments of 1955.

FHA title II: FHA title II provides mortgage insurance programs for sales housing, multifamily rental housing, cooperative housing, and housing in urban renewal areas. The mortgage insurance authorization for this title of the act is increased by $4 billion over the outstanding balance of mortgages insured and outstanding commitments as of July 1, 1955. The size limit of an individual mortgage on a multifamily project built by a private sponsor is increased from $5 million to $12.5 million

and 2 of the project programs, section 213 (b) (2) cooperative housing and section 220 (d) (3) new urban renewal area housing are placed on a more liberal basis of valuation for mortgage insurance, the change being from estimated replacement cost to an estimated value basis.

Provisions added to section 213, cooperative housing, and section 207, rental project insurance, make clear that projects containing 8 or more dwelling units—rather than 12 or more under existing regulations—could qualify for these types of mortgage insurance. The FHA Commissioner is directed to appoint a special assistant with adequate staff to expedite operations under the section 213 cooperative housing mortgage insurance program. Authority is added to permit insurance under section 213 of mortgages on Government-owned housing being disposed of under provisions of existing law.

The section 221 insuring authority designed to assist in relocating families displaced by slum clearance or redevelopment operations is modified so that this liberal mortgage insurance also would be available to families in an urban renewal area even though the families are not required by governmental action to leave the area. The cost certification requirement of existing law is amended to make it inapplicable to sales housing insured under section 221 of the act.

A new insuring authority is provided to cover the insurance of mortgages on trailer courts or trailer parks. Such mortgages, however, cannot exceed $1,000 per trailer space or $300,000 per mortgage. The insurance will be written under FHA section 207 which provides that the FHA Commissioner may require regulation as to rents, charges, capital structure, rate of return, and methods of operation, so as to provide reasonable rentals to tenants and a reasonable return on the investment.

A technical amendment permits the FHA to make final settlement of certificates of claim held by mortgagees any time after the sale or transfer of title by FHA on sales housing acquired by FHA through default on section 203 or section 603 insured mortgages.

FEDERAL NATIONAL MORTGAGE ASSOCIATION

Authority is given the Federal National Mortgage Association under its special assistance function, to enter into advance commitments totaling not more than $50 million outstanding at any one time to purchase FHA cooperative housing mortgages—section 213 mortgages. Of this authorization a $5 million limitation is applicable to any one State.

DEFENSE HOUSING AND COMMUNITY FACILITIES

The defense housing mortgage insurance program—a special program contained in FHA title IX—has now expired. To permit orderly conclusion of this program authority is granted for recognizing commitments on any project which has previously been designated by the President under the authority of the act.

SLUM CLEARANCE AND URBAN RENEWAL

The new act makes three changes in the slum clearance and urban renewal programs. They are as follows: First, the amount of grant authority is increased by $500 million over a 2-year period; second, the amount of grant authority over and above the State limitation—10 percent any one State—is increased from $35 million to $70 million to be used in States where more than two-thirds of their limitation had been obligated; and third, limited loan funds are made available to assist communities in redeveloping open or predominantly open areas for commercial use.

URBAN RENEWAL IN TERRITORIES

The Territorial Enabling Act of 1950 is amended so that the Territories might take advantage of the financial assistance available for urban renewal activities as well as for carrying out slum-clearance and redevelopment projects.

PUBLIC HOUSING

An authorization is provided for new contracts for loans and annual contributions for an additional 45,000 low-cost public housing units up to July 31, 1956, under the United States Housing Act of 1937. Restrictions formerly in the law, that the community have a workable program, that a title I slum clearance or urban renewal program was being carried out, that the project was needed to meet title I relocation requirements and that the Housing and Home Finance Administrator determine the number of units neded, were eliminated. The public housing units authorized are thus made available to any communities which desire to participate in the program.

Authorization is granted the Housing and Home Finance Administrator to sell at fair market value a war housing project known as Welles Village to the housing authority of Glastonbury, Conn., subject to the approval of the legislative body of that town, for use as moderate rental housing.

During the war the Government constructed a large amount of temporary housing at Richmond, Calif. This was built under the Lanham Act. To facilitate the orderly redevelopment of this area the Housing and Home Finance Administrator is authorized to sell the underlying land to the city or local redevelopment agency upon terms calling for one-third down with the balance due within 1 year at 4 percent interest.

HOME LOAN BANK BOARD

The new act reestablishes the Home Loan Bank Board as an independent agency of the Government and changed its name to the Federal Home Loan Bank Board. Hereafter its annual reports will be made directly to the Congress rather than to the Housing and Home Finance Administrator as was the case when it was a constituent agency of the Housing and Home Finance Agency pursuant to Reorganization Plan No. 3 of 1947.

The Federal Home Loan Bank Act is also amended to make certain technical changes, including right to remove a member institution because of insolvent condition, more equitable apportionment of elective directors of a Federal home-loan bank, and clarification of the right of a Federal Savings and Loan Association to make FHA title I or VA property improvement loans to the full extent permitted by the FHA or VA. Provision is also made for charging an equitable admission fee of a savings and loan association becoming an institution insured by the Federal Savings and Loan Insurance Corporation.

COMMUNITY FACILITIES ADMINISTRATION

The Housing Act of 1954 provided for a 3-year program of assistance by the Housing and Home Finance Administrator to assist communities in developing a reserve of planned public works. Appropriations of $10 million were authorized, and not more than 5 percent of the funds could be expended in any one State. The new act places this program on a permanent basis, increases the authorized appropriations to $48 million on a revolving-fund basis, and increases the State limitation from 5 percent to 10 percent. The salary of the Community Facilities Commissioner in the Housing and Home Finance Agency was made the same as for the heads of the other constituent agencies of the HHFA.

PUBLIC FACILITY LOANS

The Housing Act of 1954 placed in the Housing and Home Finance Administrator authority to make public facility loans and authorized appropriations of $50 million for that purpose. The program has been inactive due in large part to the very limited amount of funds actually appropriated. Title II of the new act authorizes the Housing and Home Finance Administrator to establish a revolving fund for this purpose, not exceeding $100 million outstanding at any one time, from funds borrowed from the Treasury. The Administrator is authorized to make loans to political subdivisions for essential public works where financial assistance is not otherwise available on reasonable terms. Such loans are to be of such sound value or so secured as to reasonably assure repayment. The maturity limit is 40 years. Priority in processing applications is granted to communities of 10,000 or less population for basic public works, including water, sewer, and gas systems for which there is urgent public need.

COLLEGE HOUSING LOANS

Title III of the new act amends the college housing loan provisions of the Housing Act of 1950 in the following respects:

First. The purposes for which such loans can be made is broadened to include other essential service facilities as well as housing and dining facilities.

Second. The terms of new loans is extended from 40 to a maximum of 50 years.

Third. The interest formula is changed, the effect of which is to reduce the rate on new loans or loans on which disbursements have not been completed from the present 3¼ percent rate to 2¾ percent.

Fourth. The test of existing law that the institution cannot otherwise obtain credit on generally comparable terms is changed to a test of equally as favorable terms. By regulation the Administrator had interpreted "generally comparable" to mean within one-fourth of 1 percent of the HHFA rate. The effect of

the change will be to make more educational institutions eligible for the loans from the Government.

Fifth. The amount of the revolving loan fund is increased from $300 million to $500 million of which not more than $100 million may be used for other educational facilities.

Sixth. The eligible borrower may also be a nonprofit affiliated building corporation established for the sole purpose of providing facilities for the institution as well as the educational institution itself.

Seventh. The loans may not be made on facilities completed prior to filing of an application for a loan.

MILITARY HOUSING

Title IV of the new act extends to September 30, 1956, the life of the existing FHA title VIII—Wherry Act—military housing program and amends it in the following major respects:

First. An insurance authorization of $1,363,500,000 is established for this program, in addition to the general FHA insurance authorization.

Second. Insurance is to be issued for units which the Secretary of Defense determines are needed to meet essential military requirements, or for personnel for whom adequate housing is not available at reasonable rentals within reasonable commuting distance of a military installation. If the Federal Housing Commissioner does not concur in the Secretary's determination, he may require the Secretary to guarantee the insurance fund against loss on the mortgage in question.

Third. The amount of the insured mortgage may not exceed the FHA estimate of replacement cost, including the cost of land, physical improvements, and onsite utilities; and it may not exceed an average of $13,500 per family unit for the part of the project attributable to dwelling use; and it may not exceed the lowest acceptable bid submitted by a qualified builder, as determined by the Secretary of Defense after consulting FHA. Also, the replacement cost of the property—including the estimated value of any usuable utilities within the boundaries of the property where owned by the United States and not provided for out of the proceeds of the mortgage—cannot exceed $13,500 per unit.

Fourth. The mortgage must mature in not more than 25 years, and bear interest at not more than 4 percent.

Fifth. The cost certification provisions of section 227 of the National Housing Act are made inapplicable to this program as contracts are let on competitive-bid basis.

Sixth. The program is extended to include the Coast Guard as well as the military departments.

The Federal National Mortgage Association is authorized to make commitments to purchase, and to purchase, service, and sell mortgages insured under the new military housing program, but the total amount of purchases and commitments outstanding at any one time could not exceed $200 million.

The Secretary of Defense is authorized to enter into contracts with any eligible builder for the construction of housing on Government land at or near a military installation, after competitive bidding in accordance with the Armed Services Procurement Act of 1947. Under such contracts, the housing will be placed under the control of the Secretary of Defense as it becomes available for occupancy and the capital stock of the builder corporation will be transferred without cost to the Secretary. The Secretary of Defense is authorized to acquire unimproved land and, with FHA approval, existing Wherry housing, for purposes of the military housing program, through purchase or other transfer or through condemnation proceedings; and provisions are included to protect the interests of the owners in condemnation cases.

The Secretary of Defense is authorized to maintain and operate housing acquired under the program and assign quarters in such housing to military and civilian personnel. The military department concerned may use appropriations for quarters allowances or appropriate allotments, and rental charges to civilian personnel, to pay the obligations of the mortgagor with respect to the housing. Such payments cannot exceed an average of $90 a month per housing unit, and cannot total more than $9 million per month, nor more than $90,000 per month for housing for the Coast Guard. Maintenance and operation expenses are not to be paid in this manner, but are to be paid out of funds appropriated for the purpose.

Miscellaneous provisions of title IV of the new act provide for procurement of services of architects and engineers, authorize necessary appropriations, and contain saving provisions necessary to complete operations—including operations with respect to projects certified by the Atomic Energy Commission prior to July 1, 1956—under the existing Wherry Act.

FARM HOUSING

The Housing Act of 1949 authorizes the Secretary of Agriculture to make, first, long-term loans to farmers having adequate farms who are nevertheless unable to obtain private credit on reasonable terms; second, similar loans supplemented by modest contributions for 5 years, where the farmer is unable to undertake to repay the loan in full and the farm is not adequate but capable of being improved to the point where it is self-sustaining; and third, modest loans and grants to help farm families on very poor farms to undertake minor improvements or minimum repairs to farm dwellings where necessary to remove hazards to the health or safety of the occupants, and modest loans for enlargement and development of farms.

Title V of the new act provides the following additional authorization for farm housing under title V of the Housing Act of 1949, as amended, to be available on or after July 1, 1955: First, $100 million in the amount of loan funds which can be obtained from the Treasury; second, $2 million per annum in the amount of annual contribution commitments for housing on potentially adequate farms; and third, $10 million in the amount of appropriations authorized for loans and grants for improvements and repairs of farm dwellings and other buildings, and loans for the enlargement and development of farms.

CONVEYANCE OF CERTAIN WAR HOUSING PROJECTS TO THE CITY OF WARWICK, VA., AND THE CITY OF HAMPTON, VA.

(Public Law 80, H. Rept. No. 664, S. 755)

This act authorizes the Housing and Home Finance Administrator to sell and convey at fair market value, as determined by him on the basis of an appraisal made by an independent real estate expert, war housing projects VA–44061 and VA–44067 located in the cities of Warwick and Hampton, Va., to the respective cities, or to a public housing authority for such cities. The sale could be made to the cities jointly or to an authority for both cities or to an agency or corporation jointly established or sponsored in the public interest. Project VA–44061, known as the Ferguson Park war housing project, consists of 1,188 permanent family dwelling units constructed in 1942 for war workers in the Newport News area. It is located in the city of Warwick, Va. Project VA–44067, known as the Copeland-Newsome project presently consists of 3,886 units of the so-called demountable-type housing of which 2,164 units are located in the city of Warwick and 1,722 in the city of Hampton. The provisions of the act are effective only during a period ending 6 months after the date of approval, which was June 16, 1955.

SALE OF CERTAIN WAR HOUSING PROJECTS TO THE HOUSING AUTHORITY OF BEAVER COUNTY, PA.

(Public Law 326, H. Rept. 1338, H. R. 6193)

This act authorizes the Housing and Home Finance Administrator to sell and convey to the Housing Authority of the county of Beaver, Pa., at fair market value as determined by him, for use in providing rental housing for persons of limited income, seven war housing projects located in Beaver County. These 7 projects containing 1,130 dwelling units were built during World War II to house workers engaged in industries essential to the national defense effort. However, before any of these projects may be sold to the Housing Authority, it must first be offered by the Administrator to a duly organized mutual ownership or cooperative organization for not exceeding 120 days. Also no such project may be sold to the Housing Authority until the Administrator has received from the Attorney General of Pennsylvania an opinion that said Housing Authority has legal authority to acquire, pay for, and operate such project as a rental housing project for persons of limited income. Terms could not exceed 30 years with interest on the unpaid balance at a rate not exceeding 5 percent. The authority granted in this act will expire on the first day of the sixth month following the month in which the act is approved. The act was approved August 9, 1955.

SALE OF PERSONAL PROPERTY HELD IN CONNECTION WITH LANHAM ACT HOUSING

(Public Law 349, H. Rept. No. 1339, H. R. 6199)

This act, approved August 11, 1955, authorizes the Housing and Home Finance Administrator to sell to any agency organized for slum clearance or to provide subsidized housing for persons

of low income, at fair market value personal property of a war-housing project which is not sold with the project. Any sale would be made on a cash basis payable at time of settlement. This will enable a local housing authority to purchase equipment which it has been using in any combined operation of war housing and low-rent housing projects. Where a housing authority has been using equipment in such a combined operation, the sale of the equipment to some one other than the housing authority would require the housing authority to purchase at considerably greater expense new equipment to replace any items sold to others. This would in some measure increase the Federal subsidy for annual contributions to the project. Sale of such equipment to the local authority would obviate such increase and permit the authority to continue to have available the equipment which it has been using to service all its projects.

CONVEYANCE OF CERTAIN WAR HOUSING PROJECTS TO THE CITY OF NORFOLK, VA.

(Public Law 284, H. Rept. No. 1341, S. 2351)

The committee reported H. R. 7073 a companion bill to S. 2351. In the House the reported bill was laid on the table and S. 2351 passed in lieu thereof. The bill became law on August 9, 1955. Under its provisions the Housing and Home Finance Administrator is authorized to sell at fair market value war housing projects VA–44075 and VA–44184, located in the city of Norfolk, Va., to the city of Norfolk, to the Norfolk Redevelopment and Housing Authority, or to any agency or corporation established or sponsored in the public interest by the city. These projects of demountable-type construction presently contain 3,493 units. The city of Norfolk through its redevelopment agency is engaged in an extensive redevelopment program and has indicated that the projects are needed to house families displaced by this program. The authorization will remain effective during a period of six months after the date of approval of the act.

CONVEYANCE OF CERTAIN WAR HOUSING PROJECTS TO THE STATE OF LOUISIANA

(Public Law 235, H. Rept. No. 663, H. R. 5512)

This act, approved August 4, 1955, authorizes the Housing and Home Finance Administrator to convey to the State of Louisiana projects LA–16011 and LA–16012 in consideration of the payment of $300,000 in three equal annual installments. These projects consist of 255 permanent dwelling units constructed early in World War II on land leased from the State of Louisiana to provide dwelling accommodations for military personnel assigned to the Alexandria Air Force Base. They were designed, with the aid of an architect employed by the State, in a manner which would permit their conversion to eventual hospital use. The State would be required to pay the first installment within 6 months after the date of approval of the act.

TRANSFER OF WAR HOUSING PROJECTS TO THE CITY OF MOSES LAKE, WASH.

(H. Rept. No. 1340, H. R. 6298)

This bill, which passed the House on July 30, 1955, but has not been acted upon by the Senate, would amend section 601 (g) of the Lanham Act so as to permit the transfer of 2 war-housing projects, Wash–45206 and Wash–45402, to the city of Moses Lake, Wash. These projects contain a total of 172 temporary family dwelling units. Moses Lake is one of the comparatively few communities in which on December 31, 1948, more people were living in temporary family accommodations than were listed in the census of 1940. In such cases transfer of the temporary Government-owned housing accommodations can be made to the community or local slum clearance agency without cost other than for payment of the land involved.

SALE OF GOVERNMENT-OWNED HOUSING TO THE CITY OF HOOKS, TEX.

(H. Rept. No. 1554, H. R. 7540)

The committee reported this bill on July 28, 1955, but inasmuch as the Congress adjourned on August 2, action was not completed on this measure by the House. Under its provisions the appropriate Government agency is directed to sell and convey the North Village housing project—Texas–41142—whenever it is declared surplus to the needs of the Government, to the city of Hooks, Tex., at fair market value as determined on the basis of an appraisal made by an independent real estate expert. The project consists of 248 housing units and was transferred to the Department of the Army on December 3, 1948, by the Housing and Home Finance Agency. It has been used to house personnel at the Red River Arsenal, near Texarkana, Tex., but it now appears that the project is no longer required for that purpose.

CONVEYANCE OF A WAR HOUSING PROJECT TO THE BOSTON HOUSING AUTHORITY

(Public Law 217, H. R. 6980)

The committee held hearings on this bill but due to the fact the bill was passed by unanimous consent the same day the bill was ordered reported, no formal report was filed by the committee. This act, approved August 3, 1955, directs the Housing and Home Finance Administrator to sell and convey war housing project Mass–19051 to the Boston Housing Authority for use as a relocation project under applicable local law. The project contains 873 dwelling units. The sale would be at fair market value as determined by the Administrator on the basis of an appraisal made by an independent real estate expert. Payment in full would be required within a 30-year period with interest on the unpaid balance of not to exceed 5 percent per annum. The authorization would be effective for 6 months after approval of the act unless such time limit was extended by the Administrator.

ECONOMIC

DEFENSE PRODUCTION ACT AMENDMENTS OF 1955

(Public Law 295, H. Repts. No. 1343 and 1630, S. 2391)

The committee reported a companion bill H. R. 7470, the provisions of which were substituted for S. 2391. The conference substitute retaining the Senate bill number, extended the Defense Production Act of 1950, as amended, to the close of June 30, 1956, and made certain changes therein. The declaration of policy of the act is amended to reflect the emphasis now being placed on preparedness programs. Authority is granted the President to make provision for the development of substitutes for strategic and critical materials when it will aid the national defense. Authority for allocation of materials in the civilian market is modified so that if this authority is again made use of a more realistic base period can be employed. Provision is made for an intensive study by the Office of Defense Mobilization of the share of procurement going to small business concerns. The voluntary agreements authority, under which there is exemption from the antitrust laws, is restricted to those covering primarily military items but permit certain existing nonmilitary agreements to continue subject to review by the Attorney General within 90 days after approval of the act to determine if they should be allowed to continue. The provisions of the law authorizing the use of industry employees serving without compensation from the Government and who are exempted from the conflict-of-interest statutes, are materially strengthened to prevent possible abuses. Authority is granted the President to provide for the establishment and training of a nucleus executive reserve for employment in Government during periods of emergency. The limit on the expenses of the Joint Congressional Committee on Defense Production is increased from $50,000 to $65,000 in any fiscal year and an increase to the going rate is authorized for stenographic reporting services. The act is made effective as of its previous expiration date. The act was approved August 9, 1955.

EXTENSION OF THE SMALL BUSINESS ACT OF 1953

(Public Law 268, H. Rep. No. 1350, S. 2127)

This act extends the life of the Small Business Administration for 2 years until July 31, 1957. It also makes the following changes in the Small Business Act of 1953: First, the limit on an individual small-business loan is increased from $150,000 to $250,000; second, the interest rate on Small Business Administration loans—both direct and participation—is limited to not more than 6 percent per annum; third, the $250,000 loan limitation is waived on any loan extended to any corporation formed and capitalized by a group of small-business concerns with resources provided by them if such corporation is formed to produce or secure raw materials or supplies. If such a loan is for the purpose of constructing facilities, it may have a maturity of not to exceed 20 years plus such additional time as is required to complete such construction. These loans are to be made at an interest rate of not less than 3 nor more than 5 percent per annum. The employee limitation otherwise applicable to small-business concerns does not apply in the case of any such new corporation. Agreements pertaining to such a new corporation when approved by the SBA would not be subject to the proceedings of the antitrust laws; fourth, the Administrator of the Small Business Administration when requested to do so by any small-business concern—or any Government department or agency—is

required to issue an appropriate certificate certifying an eligible small-business concern as a small-business concern in accordance with the criteria expressed in the Small Business Act of 1953. Offices of the Government having procurement or lending powers or engaging in the disposal of Federal property or allocating materials or supplies, or promulgating regulations affecting the distribution of materials or supplies are required to accept as conclusive the Administrator's determination.

This act also makes it mandatory that all bids and invitations for bids under the Armed Services Procurement Act of 1947 contain specifications which will give a prospective bidder sufficient information to permit him to bid.

COMMODITIES

COMMODITY CREDIT CORPORATION

(Public Law 344, H. Rept. 1559, S. 2604)

This act increases the borrowing power of the Commodity Credit Corporation from $10 billion to $12 billion in order to enable the Corporation to carry out existing commitments by the Government for price support on 1955 crops.

The Commodity Credit Corporation is a federally chartered corporation and is the instrumentality through which price support is extended on farm commodities through loans, purchase agreements, and purchases, in accordance with existing legislation. The price-support operations constitute the major activity of the Corporation, but it also operates a storage facilities program, a supply and foreign-purchase program, and a commodity-export program. It also performs other activities authorized by Congress. The President's budget each year describes fully the various programs carried out by the Corporation, all of which are within the framework of laws enacted by the Congress.

The Corporation is managed by a Board of Directors which is appointed by the President and confirmed by the Senate. It is subject to the general supervision and direction of the Secretary of Agriculture who is, ex officio, a Director and Chairman of the Board.

As required by its Federal charter, the Corporation utilizes private trade facilities, including banks, cooperatives, commercial warehouses, handlers, and others to the maximum extent practicable.

TEXAS CITY TIN SMELTER

(H. Rept. 661, S. Con. Res. 26)

This concurrent resolution expresses the sense of the Congress, first, that the Government-owned tin smelter at Texas City, Tex., should be continued in operation until June 30, 1956, and as long thereafter as may be hereafter authorized by the Congress; second, that the President have conducted a study and investigation so as to make recommendations to the Congress upon the most feasible methods of maintaining a permanent domestic tin-smelting industry in the United States; third, that in making such study and investigation, the President shall consider the possibilities of private lease or sale of the Government smelter as well as continued Government ownership and operation of this facility; fourth, that appropriate arrangements be made so that the Texas City plant and facilities, as well as nonsecurity information concerning them, shall be shown to interested private persons; and fifth, that the President shall, on or before March 31, 1956, report to the Congress the findings of this study and his recommendations with respect to the future operation of the tin smelter.

MISCELLANEOUS

TEMPORARY EXTENSION OF CERTAIN HOUSING PROGRAMS, THE SMALL BUSINESS ACT, AND THE DEFENSE PRODUCTION ACT

(Public Law 119, S. J. Res. 85)

This joint resolution providing for a 1-month extension of certain housing programs, the Small Business Act, and the Defense Production Act was necessary to prevent the expiration of these programs and acts while the Congress was completing action on the basic bills amending and extending these programs and acts. After informal consideration of the 1-month extension resolution by the committee, the chairman called up S. J. Res. 85 by unannmous consent in the House and it was passed by the House on June 28, 1955, and approved by the President on June 30, 1955.

MEDAL FOR DR. JONAS E. SALK

(Public Law 297, H. Rept. No. 1351, H. J. Res. 278)

This act, approved August 9, 1955, directs the Secretary of the Treasury to strike an appropriate gold medal to be presented to Dr. Jonas E. Salk in recognition of his great achievement in the field of medicine for his discovery of a serum for poliomyelitis. The act also authorizes the Secretary of the Treasury to strike bronze duplicates of the medal to be sold at a price sufficient to cover the costs involved.

TEXAS COMMEMORATIVE MEDAL

(Public Law 338, H. Rept. No. 1342, H. R. 7244)

This act, approved August 9, 1955, provides for the striking of medals in commemoration of the 120th aniversary of the signing of the Texas Declaration of Independence and the Battles of the Alamo, Goliad, and San Jacinto in the year 1836. The Secretary of the Treasury is authorized and directed to strike and furnish at cost to the Texas Heritage Foundation, Inc., 2,000 medals of appropriate design and inscription. The act also authorizes the manufacture and sale by the mint to the public of bronze duplicates of this medal upon authorization from the Texas Heritage Foundation, Inc.

BENJAMIN FRANKLIN MEDAL

(Public Law 259, H. Rept. No. 1553, S. 463)

This act, approved August 9, 1955, authorizes and directs the Secretary of the Treasury to strike 71 bronze medals with an appropriate design and inscription to commemorate the 250th anniversary of the birth of Benjamin Franklin occurring on January 17, 1956. Twenty-one scientific, educational, and welfare societies of which Benjamin Franklin was a member are specifically designated to be recipients of medals. The remaining 50 medals are to be presented in cooperation with the 250th anniversary committee of the Franklin Institute to other enterprises, institutions, and societies founded or helped in their early development by Benjamin Franklin.

Need for Modernization of Old Apartment Buildings

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1955

Mr. O'HARA of Illinois. Mr. Speaker, in Chicago we have the very serious problem of preventing the decay of old-established residential districts through lack of financing for the rehabilitation and modernizing of apartment buildings that were erected in a past era. They are substantially built, with many years of usefulness ahead of them, but they are not modern. Moreover, in the years of depression, of war, and the period of necessary retrenchments and controls, many of them were not kept up as would have been the case in normal times.

The situation we face in Chicago, and I presume there is a similar situation in other larges cities, is this:

First. With adequate financing these buildings can be restored, can be made attractive to renters, and profitable to owners, a credit to the neighborhoods in which they are located, or

Second. With such financing unavailable, the buildings will continue to deteriorate, and with their decay will drag down the communities of their location.

I have had much correspondence on this subject with many persons in the district I represent, including John Usher and other leaders in the fight to halt the blight of neighborhoods on the beautiful south side of Chicago. The housing bill that came from the Banking and Currency Committee, of which I am a member, offers some aid in specifying that valuation shall be based on estimated replacement cost rather than value. I think it should have gone further. The amendment I offered in committee, I thought more adequately to meet the situation, was referred to the Rains Housing Subcommittee for further study and report back with recommendations to the second session.

Mr. Speaker, I am extending my remarks to include an article in the June 1955 number of the NAHB Correlator, by William L. Slayton, assistant director of the National Association of Housing and Redevelopment Officials, to which my attention has been directed by D. E. Mackelmann, the very able deputy housing coordinator of the city of Chicago.

The article follows:

WHAT'S WRONG WITH URBAN RENEWAL?

(By William L. Slayton, assistant director of the National Association of Housing and Redevelopment Officials; previously, he worked for the Division of Slum Clearance and Urban Redevelopment of the HHFA, and was assistant director of the Urban Redevelopment Study)

Section 220 of the Housing Act of 1954 has been hailed as the key to urban renewal. It is aimed at providing the financing for housing rehabilitation and for the construction of new projects in urban renewal areas. At this writing, not one loan has been insured under section 220, although the act was signed by President Eisenhower last

August 2. Nor does it seem likely that a loan will be insured under section 220 in the near future. This lag has created considerable apprehension.

The question in many minds: has FHA made section 220 unworkable, or does it not realize that merely writing new regulations for a new concept will not necessarily overcome the inertia of traditional inaction?

The fact that FHA has issued regulations which present great obstacles for the builder makes him uneasy, and never really sure that FHA and HHFA are willing to recognize, advocate, and support what it takes to make the 220 program work.

There are two kinds of 220. The first is most similar to section 203. It covers both new and rehabilitated housing, but is applicable only if such housing is in renewal areas. Terms under 220 for new housing are the same as for new housing under section 203.

The major question in 220 is valuation and this applies to both rehabilitation and new construction. Under section 220, FHA does not apply the economic soundness test; it applies the test of acceptable risk. A special insurance fund is set up for 220 mortgages. From the outset, Congress has recognized that 220 is specially designed for the properties in areas that need renewing; that it is different from the normal mortgage insurance program under section 203. FHA has recognized this distinction.

The question is whether FHA has recognized the distinction to the extent they must, if 220 is to be of any real help.

At present, FHA says that in valuating a structure to be rehabilitated, it will consider as completed those elements of the renewal plan which the city has authority to carry out. If the plan calls for parks, playgrounds, a school, etc., FHA will assume that these will be built and their valuation of the structure to be rehabilitated will reflect this assumption. FHA also will assume that if the plan calls for the enforcement of the housing code, all the structures in the area will be brought up to the minimum standard.

But valuating structures on the basis of neighboring structures being improved to the level of minimum standards only does not mean a very high valuation for the structure to be rehabilitated. The aim is to rehabilitate, where possible, considerably above minimum housing standards, but FHA won't recognize such an attempt in the urban renewal plan.

NO CREDIT FOR VOLUNTARY PROGRAM

A key part of an urban renewal plan is the program for voluntary rehabilitation, a program by which the city tries to encourage home owners to rehabilitate to levels above the minimum standards. Yet, FHA says that unless there is legal authority to require rehabilitation to standards higher than the minimum housing code, it cannot recognize such higher standards in its valuations. If FHA will not recognize the higher standards called for in the renewal plan, there is no encouragement to the home owner to achieve them, because FHA won't give him a valuation that would recognize the amount he puts into the rehabilitation of his home.

For example, the housing code calls for only a kitchen sink. If the home owner decided to undertake a complete modernization job, FHA would have to say under present regulations that it could not increase the value of the structure above the value that would be added by the installation of a sink alone. The reason? The character of the area holds down the value of the house, and FHA has no assurance that the area will be improved to standards above that of the housing code.

So, it becomes a vicious circle. FHA says it can't give higher valuations until the property in the area is actually rehabilitated to these higher standards; the home owner can't obtain high enough valuations to permit rehabilitation to the higher standards. If urban renewal is to provide rehabilitation to standards above the housing code, FHA is going to have to give. Maybe it needs some congressional prodding.

RENTAL HOUSING ALSO BOGGED

Section 220 also provides for financing new construction and rehabilitation of multifamily rental housing, particularly for slum clearance and urban redevelopment projects. Before the Housing Act of 1954, only section 207 was available for financing these structures, and 207 provided only 80 percent mortgages. Section 220 provides for 90 percent financing of these structures and consequently—on the surface, at least—encourages financing rental housing on redevelopment sites.

But valuation is still a question. The law specifies value rather than estimated replacement cost, and FHA, therefore, is concerned about the environment in which these projects are built. FHA will assume that the proposed redevelopment project will be completed as it is outlined in the plan, but it is hard for FHA not to overemphasize the character of the surrounding area. The fact that these projects are often located where the surrounding area is something less than desirable makes FHA feel that the value of the project should therefore be reduced.

A project may cost $1 million to build. A 90-percent mortgage becomes a 72-percent mortgage if FHA says the value of the project is but $800,000. FHA sets a value of $800,000, because the area in which it is located will produce rents which, when capitalized, will produce a value of only $800,000.

Section 220 for rental housing in redevelopment projects is not going to work unless value approximates estimated replacement cost (in this example, $1 million); and if this is to result, FHA must value the project on a self-contained unit basis, not on the basis of the character of the surrounding area.

These redevelopment projects are, in fact, large enough to provide their own environment. FHA could, if it wished, reach a value in most cases that actually approximates estimated replacement cost. But FHA appears to be somewhat sticky on this point.

Sponsors of section 220 applications for rental housing are being hurt on the question of value. They are also being hurt on the question of builder's profit. The law says that under cost certification, the cost of the project may include a reasonable allowance for builder's profit.

The Senate report on the Housing Act of 1954 indicates that this amount is not to exceed 10 percent of all other costs. At the time the report was written, it was clearly understood by many of us that FHA would allow a 10 percent builder's profit, recognizing that the profit allowed was based on more than just a contractor's fee, and that it represented equity created, rather than immediate cash return.

If builders are to be attracted to rental housing in redevelopment areas, FHA must recognize all of the elements that go into making the risk attractive. They must recognize the venture capital aspect of the program, and not think of it in terms of a builder contracting to perform a specific job, and being assured of receiving the fee specified.

The builder of rental housing is not in the same position as is the contractor bidding on a job. It is different also in that on a $5 million contract job, the builder receives his profit ($250,000–$500,000) when the job is completed. In rental housing under section 220, the builder's profit on a $5 million project ends up as equity in the project; not as an immediate cash return. In brief, if FHA were to allow a full 10 percent builder's profit, the builder would still have to put up about 3 percent of his own cash ($150,000 on a $5 million job) and his profit would constitute merely an equity in the project, unreturnable unless the project paid off. FHA, however, does not seem inclined to recognize this basic fact.

FHA, no doubt, would really like to make 220 work for both rehabilitation and redevelopment. After all, its success is important to the administration's housing program. But FHA must be made to realize that it cannot follow a policy of fearing criticism for following a realistic policy. The only reasonable solution is to have FHA and HHFA assure real leadership, stating clearly and unequivocally that if 220 is to work, the problems of valuation and builder's profit must be met head-on, and then proceed to adop regulations that will make the program work. In short, nothing in the law prevents 220 from working, but restrictive regulations and administrative policies do.

The Vital Need for Developing Inland Transportation Routes to Sources of Raw Materials on the American Continent

---

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks, I include the following article by James M. Mead, formerly Senator from the State of New York, now a member of the Federal Trade Commission:

THE VITAL NEED FOR DEVELOPING INLAND TRANSPORTATION ROUTES TO SOURCES OF RAW MATERIALS ON THE AMERICAN CONTINENT

(By Hon. James M. Mead, member of the Federal Trade Commission, and formerly Senator from the State of New York)

America's growing dependence on foreign sources for raw materials, especially metals, presents a serious problem. It affects vitally the ability of our country to maintain its industrial strength and to be assured of having an adequate supply of materials essential to national defense.

We have been exhausting our mineral resources at a terrific rate. Today, we must go to far distant parts of the world to bring in many minerals and materials because we do not have enough here at home to meet the demands of our economy and the requirements of national defense. There was a time when the United States could be regarded as self-sufficient in most of the raw materials it required. But two world wars, and the tremendous expansion of our industrial production, have worked increasingly to deplete many resources of which we formerly had an adequate supply.

The great ore deposits of the Mesabi Range in Minnesota are no longer able to supply the growing requirements of our iron and steel mills, and we are already seeking foreign sources for needed iron ore. We must also look to overseas sources for many other essential materials, including metals that are vital to our national security. We are going farther and farther from our shores to obtain more and more of these raw materials. Our present lines of supply run to such distant areas as Malaya, South Africa, India, the Philippines, Australia, and other far-away places.

We shall continually need to look for new sources as deposits at home become exhausted, or as those in distant lands fall into hostile hands or otherwise become unavailable to us.

Long ocean voyages of freighters required to bring these essential supplies to our shores involve costly transportation. These lines of supply extend over thousands of miles of open seas. They are difficult if not impossible to protect in time of war. They are vulnerable to enemy attack at many points by submarine, mines, aircraft, and other weapons. They require large naval forces for convoy and patrol duty, thus tying down a great part of our naval strength that may be sorely needed to protect our coastal cities and harbors and to carry the war directly to the enemy.

Access to the needed supplies is essentially a problem of transportation. It is a problem of finding or establishing transportation routes that can be protected and kept open for bringing in a continuous, uninterrupted flow of materials without which our industrial strength, our free economy, and our national defense cannot be effectively maintained. Transportation becomes a vital and critical factor in our dependence on foreign sources for strategic and other needed raw materials. Even in peace time, transportation to bring raw material from distant foreign lands adds tremendously to the cost of production. Our mills and factories must necessarily pass this cost on to consumers, thus burdening all those who use or consume the products of our industries, and making it more difficult for American manufacturers to compete in world markets.

The vulnerability of overseas transportation in time of war presents a most serious situation. We need to prepare ourselves against it. Experience has shown that ocean transportation routes can be so menaced by submarines as to cut us off from vital materials, or to make it so difficult in getting supplies through as to handicap us in the prosecution of any war. These dangers persist, despite the use of tremendous segments of our naval forces for patrolling and defending overseas supply lines. Experts agree, as reported by a Senate subcommittee, that in time of war, "it will be at best so costly as to make it almost prohibitive in lives and vessels to ship strategic and critical materials for war across the major oceans from Europe, the Mediterranean, Africa, Far and Near East, and Australia." [1]

American industrial capacity constitutes one of our weapons of defense superior to that of any hostile nation that may be tempted to attack us. However, that superior weapon of production may become impotent if our foreign supply lines for strategic raw materials are cut off. If we cannot maintain the needed continuous flow of raw materials to our factories, our advantage in superior industrial production disappears.

Our danger in this respect may be relieved to some extent by stockpiling of strategic materials. However, stockpiling can at best be only temporary and partial relief in the long pull of a major war in which huge quantities are required to fed our furnaces and factories.

A subcommittee of the Senate in studies touching this problem has reported: "We must recognize our greatest weakness is the dependency on very distant countries across the major oceans for the needed raw materials, without which we cannot fight a war or live in peace." [1]

To lessen our dependence upon vulnerable and costly overseas supply lines, it becomes a matter of vital importance to the Nation that we develop sources of raw materials nearer home with access by overland routes which can be protected from enemy action.

Fortunately, there are possibilities open to us for developing such access by overland transportation to sources of needed raw materials on our own continent. These land routes would not be exposed to enemy attack at sea. Because of their inland protection, they could be maintained to bring us uninterruptedly a steady flow of needed raw materials. For this purpose, action should be taken without delay in three directions:

1. The unbuilt stretches of the Inter-American Highway, leading from the United States through Mexico and Central America to the Panama Canal and beyond, should be completed. This highway would afford overland accessibility to the rich mineral resources of the Central American countries and beyond to those of South America.

2. Additional and improved routes should be opened for more adequately linking the Alaskan Highway with the United States. Connecting feeder roads in the Alaskan Territory should also be completed for tapping the rich mineral resources in the interior of that region. Such extension of the northern highway would afford us a protected inland supply route for bringing the great resources of Alaska and northwestern Canada to the industrial centers of our two countries, thus lessening dependence upon sea lanes that are exposed to enemy attack.

3. The St. Lawrence seaway, which has now been authorized, should be completed as expeditiously as practicable, thereby making available efficient transportation in adequate volume to bring the great iron ore deposits of Labrador to the iron and steel producing plants in the Great Lakes area. Also, other Canadian resources of strategic materials can thereby be effectively channeled to this heart of American and Canadian industry.

To the south of our border, the Inter-American Highway has already been built in large part. It is routed for thousands of miles from the United States through Mexico, through the Central American states to Panama. Beyond Panama, it is projected in a course that would, when constructed, connect up the national highway system of South America with the United States, as well as with the intermediate nations. Filling in the unbuilt gaps would bring to completion an arterial highway binding together the nations of the Western Hemisphere and strengthening our natural bond of neighborly friendship.

The tourist trade alone would bring business and opportunity for understanding to the people of the Central American states. It would go far to protect these small nations against Communist infiltration.

Development of their natural resources would follow inevitably upon the establishment of accessible transportation. It would enable those countries to reap the benefits of their own economic wealth for the advancement of their people. It would result in their selling to us raw materials which our industrial plants require for continuous operations.

Completion of the Inter-American Highway would afford the United States a comparatively safe inland route over which to bring in strategic raw materials. It would relieve us in very substantial measure of our dependence upon ocean transportation which is most difficult to maintain in time of war. During World War II, it was a matter of great concern that we had no overland means of getting necessary raw materials where they could be found on our own continent. Our ocean supply lines to and from far distant sources were so costly to maintain and so menaced by the enemy that the Navy recommended the immediate completion of the Inter-American Highway. The highway was viewed as affording a land route to which we could resort and thus avoid the heavy losses of life, ship, and cargo from which we were then suffering due to enemy subs. Besides these terrific losses, the overseas supply lines were tying down large contingents of our naval forces on convoy and patrol duty when these were sorely needed to do battle elsewhere.

When, as a Member of the Senate, I succeeded to the chairmanship of its Truman committee, the Navy urged construction of the Inter-American Highway as a needed alternate route for raw materials. It recommended this construction work be completed notwithstanding the fact it would have added seriously to the manpower shortage we were then experiencing. The Inter-American Highway would afford us access to the rich, natural resources of the Central and South American countries by overland transportation. Enemy submarines could not cut us off from needed raw materials of the type we could bring by this overland route from our neighbors to the south.

Congress has appropriated small sums for cooperation with Central American countries toward furthering construction of the missing links. But these funds are so small as to provide little more than token assistance, leaving the work to proceed at such slow rate that many years would be required to bring it to completion. The project needs to be speeded up.

Much of the same considerations apply to the desirability of having the Alaskan Highway improved and linked more adequately to the United States; also to having more branch feeder roads leading from the northern end to interior areas where minerals vital to our war potential are obtainable.

This highway was built under emergency conditions at great expenditure of money and effort. It runs from Dawson Creek in British Columbia to Fairbanks, Alaska, a distance of over 1,500 miles. The most direct access is from Great Falls, Mont., over a rather circuitous highway leading north through Canada, a distance of some 1,000 miles. New and more adequate routes are needed for reaching the Alaskan Highway from the United States, and more feeder roads at the northern terminus are required for reaching the rich mineral deposits of the interior.

Such additional construction should be undertaken immediately. Joint agreement on the routes through Canada should be arranged with the Canadian Government as soon as possible. It is important that these additional routes as well as the feeder roads be pushed to completion without delay in order that vitally needed mineral and other resources of Alaska and neighboring Northwest Canada may become accessible by a protected overland artery of transportation. Raw materials can thereby be fed into industrial United States and Canada by such inland transportation, making both nations less dependent upon ocean routes which are costly and difficult to defend.

The St. Lawrence seaway is another project in an enlightened program on this subject. The seaway will aid materially to make available the vast iron-ore deposits which were recently tapped in Labrador, and also the great mineral and timber resources of eastern Canada. That waterway will afford abundant transportation for bringing such heavy and bulky materials in adequate quantity into the heart of the Great Lakes industrial area where so much of our raw material consuming industries are located. It will also serve as a further link with the Alaskan Highway for bringing materials from Alaska and northwest Canada into the Great Lakes industrial empire. It will form a part of an integrated system of transportation which will enable us to keep our own and Canadian industries supplied. They can thus be kept operating for the common defense of the continent and with unity of

[1] Report by Minerals, Materials, and Fuels Economic Subcommittee of the Senate Committee on Interior and Insular Affairs, July 1954.

purpose to advance the economic well-being of all the people.

Transportation is vital. The economy of any area and its expansion and growth are perhaps more favorably influenced by transportation than by almost any other factor. It is indispensable to the opening up of resources of undeveloped territory. It provides the means for contact and business intercourse essential to that economic enlightenment of peoples which promotes peace, friendship, and understanding.

Completion of the three arteries of transportation—the Inter-American Highway to the south; the Alaskan Highway to the northwest; and the St. Lawrence seaway to the northeast, all on our own continent, will benefit our neighbors as well as ourselves. They form the parts of a program that should be pushed to completion with all possible speed to serve the needs of our national defense and to advance the prosperity and happiness of our neighbors in the Western Hemisphere.

MINERAL DEPOSITS KNOWN OR REPORTED TO EXIST IN CENTRAL AMERICAN STATES

Costa Rica: Rare earths, gold, manganese.

El Salvador: Asbestos, gold and silver, lead and zinc, petroleum, mercury, sulfur.

Guatemala: Antimony, chromite, gold and silver, graphite, iron, lead and zinc, manganese, mica, molybdenum, petroleum, quartz crystals, mercury, sulfur, titanium.

Honduras: Antimony, bauxite (aluminum ore), gold and silver, iron, manganese, mercury, nickel, petroleum, zinc.

Mexico: Antimony, arsenium (arsenic), beryllium, bismuth, cadmium, celestite, chromite, fluorspar, gold and silver, graphite, iron, lead, manganese, mica, molybdenum, nickel and cobalt, petroleum, mercury, sulfur, tin, titanium, tungsten, uranium, vanadium.

Nicaragua: Antimony, copper, emetine, gold, lead and zinc, nickel, petroleum, mercury, sulfur, tin.

Panama: Manganese, quebracho, gold.

The Central American States are also sources of the following important agricultural products: Bananas, cacao, castor oil, coconut oil, coffee, cordage fibers, cork, cotton, kapok, lumber, chinchona bark, sugar, wool, rubber.

Major Actions of 1st Session of 84th Congress in International Affairs

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include my report to my constituents in the Second District of Illinois on the actions of the 1st session of the 84th Congress in the field of our relations with other nations.

The report follows:

BARRATT O'HARA'S REPORT FROM CONGRESS

DEAR FRIEND: As a world power, our relation with other nations is of importance. I will try to give you the complete picture of what the Congress did in this field in the year 1955.

Major legislative actions of the 84th Congress in the field of international affairs were eight public laws (66, 86, 91, 129, 138, 196, 285, and 350), 2 House concurrent resolutions, 2 Senate resolutions, and 7 treaties ratified by the Senate.

Public Law 66, continued to July 1, 1956, suspension of duties and import taxes on metal scrap. The others I will cover in order.

PUBLIC LAW 86

H. R. 1, reciprocal trade agreements

Public Law 86 extends the Reciprocal Trade Agreements Act from June 12, 1955, the date of its expiration, to June 30, 1958. It probably is the most important enactment of the 1st session of the 84th Congress. Failure to extend the trade agreements would have been a serious blow to our economy and, I am afraid, to our national security. Chicago, in the center of a large industry area, would have felt the full force of the blow.

Nevertheless, Public Law 86 was enacted only after the bitterest of fights. The debate in the House was colorful and dramatic. Members sat motionless in their seats in rapt attention. On an early vote on a parliamentary move we actually were defeated by 29 votes, 178 to 207.

The reversal came only after Speaker RAYBURN had taken the well (where Members stand when addressing the House) on one of the few such occasions and threw everything that he had in eloquence and prestige into the scales. The result was we won the next rollcall by 2 votes, 193 to 191. At another critical stage, when defeat seemed imminent, former Speaker MARTIN took over for the minority leadership. This time we squeezed through by 1 vote, 193 to 192. There were 49 absentees—illustrating the importance of attendance. So with the full force of (1) the administration, (2) the majority leadership, and (3) the minority leadership, the victory was won only by an eyelash.

On the motion to recommit, the vote was 199 yea, 206 nay, and on the final passage 295 to 110.

Reason for strength of opposition was that old-school protectionists had teamed up with Members from the coal and other areas where unemployment was attributed to the importation of fusel oil, glassware, and some other articles.

The intensity of the Members from hard-hit West Virginia and the mining districts of Pennsylvania heightened the emotional atmosphere in which the battle was waged. They felt that they were fighting for home and fireside. (Major cause for decline in use of coal actually was dieselization of railroads. Another: We cut our importation of blue cheese from Denmark, and Denmark canceled her orders for United States coal and transferred them to Poland. World trade is not a one-way street.)

The bill passed by the House was the bill recommended by President Eisenhower on the Cordell Hull pattern. Senate amendments watered it down. This watering down was made primarily by changes in the "escape clause," the "peril point," and "national security" provisions. The escape clause previously applied to an industry adversely affected by foreign imports. It now applies to specific commodities produced within the industry.

Reciprocal trade agreements were inaugurated in 1934. The United States now has agreements with 42 nations carrying on 80 percent of world trade, totaling over $40 billion a year. The United States exports 20 percent of the goods in world trade, imports 15 percent. That means that while we furnish a rich and necessary market for friendly foreign countries, they actually buy 5 percent more from us than we sell to them. Furthermore, but for the reciprocal agreements these foreign nations would not have the dollar buying power to do business with us.

It is estimated by the Department of Labor that 4½ million jobs in the United States are dependent on the foreign market, both export and import. In 1951 agricultural exports reached $4 billion, representing the production of from 50 to 60 million acres of cultivated American farms. Since then the falling off of farm exports has resulted in lower farm prices, increased surpluses, acreage restrictions. Similar repercussions would attend the decline of our industrial exports.

But even more important: the surest path to security and peace is trade on a fair and equitable basis. During the past year Russie has negotiated many new reciprocal trade agreements with her satellites, some with neighboring European countries. We have entered into no new agreements. Meanwhile Red China flirts with Japan, knowing that Japan to eat must have imports and to exist industrially must have a market for her manufactured wares. I think you will approve my casting of your vote for Public Law 86.

PUBLIC LAW 91

H. R. 5695, import tax on copper

This continues to June 30, 1958, the suspension of the copper import tax. While the United States is the world's largest copper producer, it consumes (thanks in part to the auto industry) more than it produces. Countries that benefit from a duty-free market for their copper are Chile, Canada, Mexico, Peru, and Africa.

PUBLIC LAW 129

H. R. 5923, Inter-American Highway

This I rate among the constructive accomplishments of the first session of the 84th Congress. It authorizes the immediate appropriation of money sufficient to complete the construction of the Inter-American Highway (from the Mexican border clear through to the Panama Canal) within 3 years.

Total cost will be $112,470,000. The United States assumes $74,980,000 as its share. Combined share of cooperating countries is $37,490,000 on a 2-to-1 matching basis. A wise investment, I think, having in mind (1) hemispheric security and solidarity, (2) development of neglected and heretofore isolated areas, and (3) the closer knitting together of the peoples of Pan America in understanding neighborliness. It is to our own mutual interest that we should live with our neighbors south to the canal on the basis of real personal friendship.

Hence I regard the decision to hurry the Inter-American Highway to completion as a heartening advance in good international relationships. Moreover, to complete the project in 3 years will require an enlarged fleet of road building equipment with skilled operators and personnel from the United States, meaning jobs for workers here in our factories and on the site of the project.

I was interested in learning from the debate of the progress already made. In answer to a question Congressman CLARE HOFFMAN was assured that today he could drive from his district in Michigan to the northern part of Guatemala without leaving a good hard road. (Later I heard that the road approaching Guatemala is not too good, almost impassable during the rainy season from May through October.) It seems that Mexico completed her own road to the Guatemalan border entirely at her own expense, and that Guatemala extended a portion of the highway from her border at her own expense.

In all, Mexico has built 1,600 miles of highway. That left 1,590 miles to complete the highway to the Panama Canal. On this the United States has been working in cooperation with Central American republics since 1934, has spent $57.7 million to date. There remains to be completed 25 miles in Guatemala, 134 miles in Costa Rica, and 14 miles in Panama, which are now impassable.

Three years more and you can pack the family in your automobile and go sightseeing all the way to the Canal. Look for mobile

home settlements multiplying in tropical scenic locations in Central America. With the present blockstops removed, the highway will open up a new era for the Central Americans and our relations with them. It will stimulate development of new agricultural areas and of natural resources. New possibilities will be opened to United States capital and the promotion of trade.

Here are some interesting figures cited in the debate: In the year we started on the highway program our exports to Central America totaled $116 million. In 1954 our exports to those countries totaled $950 million. Imports grew in value from $78 million to $560 million. In 1954 American tourists in the Caribbean area spent over $1 billion.

Public Law 129 passed the House by a vote of 353 to 13. I think I used your vote wisely and as you would have approved in supporting the measure and opposing all delaying and weakening amendments.

PUBLIC LAW 138

S. 2090, Mutual Security Act

Public Law 138 is the basic legislation (the authorization, not the actual appropriation) for (1) military assistance and (2) technical aid to other countries in the fiscal year 1956. It also authorizes contributions (among others) to United Nations Technical Assistance Program ($24 million), Organization of American States ($1.5 million), United Nations Refugee Fund ($1.4 million), for CARE and surplus foods transportation ($15 million), for resettlement of refugees ($6 million), to U. N. Agency for Palestine Refugees ($65 million), to U. N. Children's Fund ($14.5 million).

Authorizations total $3,252,868,000. This is $486,993,000 more than similar authorizations for the fiscal year 1955, an increase of about $0.5 billion.

Briefly, this is the world picture as reflected in Public Law 138 and as presented in the debate:

Europe

Grants and technical assistance practically at an end. Present drive is to make friendly nations militarily strong. Please note this language: "The Congress believes it essential that this act should be administered * * * to promote greater political federation, military integration, and economic unification in Europe." Something in the nature of a United States of Europe would seem to be the indicated objective.

Further reason for military assistance to friendly nations is given in the statement of congressional policy (sec. 549): "To defend themselves against aggression and contribute to the security of the free world" and "to assume an equal station among the free nations * * * and to fulfill their responsibilities for self-government."

Under Marshall plan, inaugurated in 1948 exclusively as economic-aid program, $17 billion was distributed in 4 years, the peak being reached in 1950. This put our European allies on their feet economically. The 1956 authorizations for defense and military assistance exceed $1 billion, only $98 million for grants and direct technical assistance.

Spain, Yugoslavia, and the city of Berlin are the beneficiaries of the latter. Spain, now furnishing large military bases to the United States, needs improvement of railroad lines and powerplants, also irrigation and reclamation to bolster her agricultural economy. Yugoslavia, flirting but in her way holding the line in Eastern Europe in alliance with Greece and Turkey, will get some $46 million for technical assistance and machinery imports. A gesture with a calculated risk—keeping Tito independent of Moscow by giving him some United States help.

Asia

Aim is to help in development of resources and raising of living standards, to offset Soviet technique of conquest by infiltration and subversion. In this area (771 million people, third of world population) money so earmarked, no military assistance except for Korea and Formosa.

Illustration of tentative projects: development of Mekong River (of potential value to Cambodia, Laos, and Thailand), fisheries, minerals, transportation.

Providing for nonmilitary assistance to Asia is $1.4 billion. Loans rather than grants, wherever possible, is emphasized. Chairman Richards pinpointed the reasoning: "The people of India have blamed their lot on the British. Now the British are gone they are finding the problem of raising their standard of living both difficult and complex. If they cannot show results their ears will be turned to Moscow."

Near East, Africa, Latin America

Drive in these areas is on the development front. For assistance in building dams, powerplants, and other works to accelerate the fight on poverty and meager living conditions $73 million is earmarked for the Near East and Africa, $38 million for Latin America. In addition they will share in the technical cooperation and crop improvement program, $127.5 million direct United States aid, $153 million through U. N. This I think is a sound program. A world without poverty is a world without the tensions that breed wars, also a world of buying markets for our wares.

Red China

Section 12 of Public Law 138 declares it the continuing sense of Congress that Red China should not be admitted to the United Nations.

PUBLIC LAW 196

H. R. 6059, Philippine trade agreement

Until 1946 the United States had no experience in granting independence to a part of its territory. Trade with the Philippines had been on an inter-American basis. When we granted independence trade had to be transferred to the basis of one sovereign nation dealing with another sovereign nation. But economic relationships do not change spontaneously with those of a political nature. There must be a period for readjustments. So in 1946 we entered into a reciprocal free-trade agreement with the Philippine Republic. It provided (among other items) for gradual imposition of customs duties, beginning with 5 percent a year and reaching 100 percent by 1974.

In 1953 the new Republic, making real progress but having its own problems in rebuilding from the war, requested a revision of this agreement. Representatives of both countries met in Washington in the fall of 1954 and worked out the revisions covered in Public Law 196.

What Public Law 196 does is to give the Philippines a needed assist in building up her economy.

Importance of this legislation is, it (1) strengthens our friendship with the Philippines; (2) butresses a cathedral of democracy in the Far East; and (3) highlights the policy of our Government to help other peoples attain political independence and economic stability. The story of our treatment of the Philippines and our continuing friendship is the best answer to evil propaganda.

PUBLIC LAW 285

H. R. 6382, international claims settlement

American citizens have claims against Russia (dating back to the czars), Bulgaria, Hungary, Rumania, and Italy that total possibly more than $1 billion. They are based upon war damage, nationalizations, and prewar governmental debt (bonds). On hand to pay these off is $41 million; $9 million received from Russia in 1933; $5 million from Italy in 1947; and $27 million realized from the blocked assets of Bulgaria, Hungary, and Rumania.

Public Law 285 authorizes the Foreign Claims Settlement Commission to proceed with the distribution. Purpose of the legislation, recommended by the President, is to get the money (little in proportion as it is) to the claimants without further delay. There is only a slim chance, if any, of anything further being realized. A matter of clearing up the bankrupt estate of war and fallen dynasties.

PUBLIC LAW 350

S. 1894, International Finance Corporation

Presently there are two banks supplying capital for the development of backward areas under the point 4 programs: (1) The International Bank, to which the United States makes the largest contribution of any of the participating nations, and (2) our own Export-Import Bank. The latter has made an enviable record, with tremendous results achieved and at a substantial profit to the Federal Government.

Public Law 350 authorizes United States participation (with 42 other nations) in a third bank, the International Finance Corporation, to make risk loans not acceptable to the existing 2 banks. Capital of IFC, $100 million; our contribution, $35.1 million.

IFC concept was endorsed in 1954 by U. N. by a 50 to 0 vote, met with favor at recent Pan-American Conference in Brazil. Venture (risk) capital badly needed in countries South of us. Possible forerunner of consumer credit in Latin America, now under serious consideration to bolster buying power of those countries.

This measure was cleared through the Banking and Currency Committee, of which your representative is a member. In committee and on the floor of the House I gave it my full support, but only with the assurance that IFC would not compete (and ultimately undermine) the Export-Import Bank.

In committee I asked Secretary of Treasury Humphrey if it was the intention of IFC to raise additional capital by the marketing of its debentures. He replied he hoped IFC could be as successful in that regard as the International Bank.

In my remarks on the floor of the House (CONGRESSIONAL RECORD, August 1, 1955, p. 10964) I stressed the advisability of caution against excessive offerings of bond issues since, in the case of the International Bank, about 85 percent of its debentures had been marketed in the United States. IFC is to make risk loans. Until we see how it works out, with the contribution our Government is making, I hope the risk will not be passed on to individual American investors. It is so easy for persons with modest savings and no financial advisers to get hurt.

RESOLUTIONS

Senate Resolution 93, disarmament

Creates a bipartisan committee of 10 Senators to make study of proposals for disarmament and control of weapons of mass destruction.

Senate Resolution 127, captive nations

Proclaims the hope of the Senate that peoples in "captivity of alien despotisms shall again enjoy the right of self-determination * * * and that the sovereign rights of self-government shall be restored to them all in accordance with the pledge or the Atlantic Charter."

House Concurrent Resolution 149, communism and colonialism

Declares that 'Communist imperialism and other forms of colonialism constitute a denial of the inalienable rights of man." Expresses the sense of Congress that foreign policy and influence of United States "support other peoples in their efforts to achieve self-government or independence under circumstances which will enable them to assume an equal station among the free nations of the world."

House Concurrent Resolution 157, reaffirms hope for peace

This is the resolution adopted unanimously by House and Senate on the occasion of the meeting at San Francisco commemorating the 10th anniversary of the United Nations. It "reaffirms the deep desire of the people of the United States for an honorable and lasting peace, and expresses the hope that the people of all the nations of the world join with the people of the United States in a renewed effort for peace." The President is requested by the Congress to convey an expression of such reaffirmation and such hope to the assembled nations.

TREATIES

Article II, section 2, paragraph 2 of the Constitution states that the President "shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur."

During the first session of the 84th Congress by the required two-third votes the Senate ratified the following treaties:

1. Treaty for collective mutual defense of southeast Asia signed by United States, Australia, New Zealand, Philippines, Thailand, Pakistan, Great Britain, and France. Ratified February 1, 1955, by vote of 82 to 1.

2. Treaty for mutual defense signed by United States and Republic of China. Ratified February 9, 1955, by vote of 64 to 6.

3. Treaty signed by United States, England, France, and West Germany terminating occupation of West Germany and recognizing sovereignty of Federal Republic. Ratified April 1, 1955, by vote of 76 to 2.

4. Protocol to North Atlantic Treaty signed by 14 nation members of NATO admitting West Germany. Ratified April 1, 1955, by vote of 76 to 2.

5. Protocol of International Telecommunication Convention at Buenos Aires signed by Unitde States and 82 other countries cooperating in regulation of radio frequencies. Ratified April 1, 1955, by vote of 63 to 3.

6. Treaty for the reestablishment of an independent and democratic Austria signed by the United States, Great Britain, France, U. S. S. R., and Austria. Ratified June 17, 1955, by a vote of 63 to 3.

7. Conventions governing treatment of prisoners of war and protection of civilians in time of war, signed at Geneva, August 12, 1949. Ratified July 6, 1955, by vote of 77 to 0.

As your representative, I have had no part in treatymaking. I have added them merely to complete the picture of international affairs.

NOTE.—There is much talk in Washington of the growing national stature of Senator WALTER F. GEORGE and Congressman JAMES P. RICHARDS, chairmen, respectively, of the Senate and House Committees on Foreign Affairs. RICHARDS' handling of bills on the floor of the House was masterful, attracted favorable comment of Members and observers. Congressman THOMAS GORDON, Chicago, is No. 2 man on the committee, next to RICHARDS. He is quiet, effective, a very valuable aid to the chairman.

Cordially and sincerely,

BARRATT O'HARA,
Member of Congress.

A Tribute to the Japanese American Citizens League on Its 25th Anniversary

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to take this opportunity to report to my colleagues in the Congress that I have arranged to have presented to the National Headquarters of the Japanese American Citizens League, in commemoration of their 25th anniversary as a national organization, an American flag which has flown over the Capitol of the United States.

My colleagues, both here in the House and in the Senate, who are acquainted with the membership and purposes of the Japanese American Citizens League, more popularly identified as the JACL, and who have supported, particularly after World War II, many of its legislative suggestions which have not only greatly enlarged the area of racial freedom and human dignity in this Nation but have also demonstrated our national and international good will toward those of Asian origin, will, I am confident, applaud this presentation of our flag, with all that it means, to this exemplary organization which has personified, as few organizations with similar objectives have, their slogan, "For better Americans in a greater America."

I know that many of my colleagues, of both political parties from every geographical section, join with me in congratulating the JACL on their first quarter century of dedicated service to our country, in general, and to our Americans of Japanese ancestry, in particular.

To appreciate just how much has been accomplished in the past 25 years, one need only look back in mind's eye to 1930, when the ill effects of the Japanese Exclusion Act of 1924 were still clearly visible and Japanese Americans were suspect people concentrated only on our west coast. In contrast, examine their position today as accepted and assimilated fellow Americans who are known and welcomed throughout the entire land. To have accomplished so much, for any people, in such a short time, and against such odds of prejudice and discrimination, with so little in the way of financial and political backing, is not only a tribute to the leadership and membership of JACL but also to the system of government and the democratic processes which gave opportunity and incentive for such progress in human relations.

As we wish for JACL, its officers and its membership, another quarter century of successful attainment in the common cause of trying to make our land a better place in which to live and work, may I add the hope that the next 25 years to come will not be under the same trying circumstances either for our Nation or for Americans of Japanese ancestry.

JACL IDENTIFIED WITH JAPANESE IN AMERICA

Seldom can the history of a people be identified with a single organization. But, uniquely and unmistakably, the annals of persons of Japanese ancestry on the United States mainland during their most crucial and tumultuous quarter century, when their destiny in this country was secured for all time to come, is the story of JACL.

Indeed, had it not been for JACL, with its skillful use of the tools of democracy, it is doubtful that those of Japanese origin in this land would enjoy the healthy and promising status that is theirs today as integrated and loyal Americans.

JACL's record belies the facts that Americans of Japanese ancestry are among the fewest in numbers and the youngest in average age of all our many nationality groups, being only some 85,000 average about 30 years in age; that they are only one generation removed from the emigrants of an Asian land whose culture, language, and heritage are quite different from that of most Americans who trace their origins to Europe; and that they were persecuted and prosecuted as perhaps no other racial minority in our Nation's experience.

FIRST CONVENTION, SEATTLE, 1930

Over the Labor Day weekend in 1930, some 112 Nisei, or American-born citizens of Japanese ancestry, representing 10 local civic clubs in Washington, Oregon, and California, met in Seattle and organized the Japanese American Citizens League to encourage Americanization among both the citizen and alien Japanese and to promote the general welfare of the group by securing the repeal or nullification of racially restrictive State and Federal laws which circumscribed their opportunities for full citizenship and economic and social development.

Indicative of their spirit, even so long ago, was their insistence that there be no hyphen between the words "Japanese" and "Americans," for these Nisei declared that they were not hyphenated Americans with divided allegiances, but only loyal Americans. The word "Japanese," they carefully explained, was merely a descriptive adjective modifying the important noun "American" and was used only for purposes of identifying the special problems of the group.

At successive biennial national conventions held in Los Angeles in 1932, in San Francisco in 1934, in Seattle again in 1936, in Los Angeles again in 1938, and in Portland in 1940, JACL delegates met to review their program and progress and to chart new projects to make more meaningful for Japanese Americans the equality which should have been theirs as native-born citizens.

Each succeeding national convention witnessed a growth in membership and chapters, with the last pre-World War II conclave in Portland attracting almost a thousand delegates from over fifty chapters. In 1940, the national council, which is the policymaking agency, welcomed the intermountain district council, comprising Utah and Idaho, the first district council outside the West Coast where the overwhelming majority of all persons of Japanese ancestry in the United States resided.

PRE-WORLD WAR II DECADE

During their first decade of existence as a national organization, JACL was able to secure special legislation enabling alien Japanese who had served honorably in our Armed Forces in World War I to become naturalized citizens and providing for the expeditious naturalization of Nisei wives who had lost their citizenship by marriage to alien Japanese. But they were neither able to persuade the Congress to eliminate race as a qualification for naturalization, nor to repeal the Japanese and other Orien-

tal exclusion laws. Success in these efforts might conceivably have averted war in the Pacific.

On local, municipal, and State levels, JACL chapters were active in promoting economic and educational opportunities, in eliminating discriminatory and prejudicial practices and ordinances which were the outgrowth of the "yellow peril" hate campaigns of an earlier era, and in refuting vicious charges of unassimilability by demonstrating civic responsibility.

In spite of their youth and inexperience, in spite of voluntary, part-time work, for there was never any money for staff or offices, the JACL was remarkably successful even in the prewar period when their major attention was devoted to building up an organization with responsible membership and leadership.

In this connection it should be remembered that unlike most other nationality groups in this country, because the alien, parent generation from Japan was barred by Federal statute from the privilege of naturalization, the older, more experienced Japanese were not in a position to provide the leadership and guidance that proved so helpful to other national minorities in our midst in their earlier, pioneering days.

When it became apparent that international tensions between the nation of their birth and the land of their ancestry were increasing to the danger point, in August 1941, the national board composed of the nationally elected officers and the chairmen of the various district councils, who serve as the governing body between biennial national council conventions, met in San Francisco, voted for a modest budget, and appointed an executive secretary, a paid staff member for the first time in their history, to prepare if possible for any eventuality.

WORLD WAR II

But the war came before any real progress was made to build up the organization or to prepare the Japanese-American communities on the Pacific coast for the tragic events that were to follow.

Because these Americans with Japanese faces looked like the enemy, and because hate and hysteria were fomented against this defenseless segment of our population, all persons of Japanese ancestry, through no fault of their own, became suspect in the minds of their own Government as well as their neighbors.

The leading alien Japanese, who were subjects and nationals of Japan because by our laws they could not become naturalized citizens, were interned as a precautionary measure by the Federal Bureau of Investigation. The Japanese language and other community newspapers were closed down. The various Japanese settlements on the west coast were in confusion and in fear. And so, the leadership of the whole suspect population was thrust upon the JACL, still a relatively young organization dependent almost entirely on voluntary help. The average age of the American-born Nisei at that time, it might be noted, was still in the late teens.

To the credit of JACL, they did not shirk their responsibilities even under the most trying of circumstances.

JACL tried to persuade the Government and the American people to distinguish between enemy Japan and loyal Japanese-Americans, but in vain. Various interests, some legitimate, but most not, goaded the Army into ordering the mass evacuation of all persons of Japanese ancestry, citizens and aliens alike, to barrack camps in the interior wilderness, without trial or hearing of any kind, when martial law had not been declared and our courts were supposed to be functioning.

JACL AND THE EVACUATION ORDERS

JACL at first protested as best they could the validity and the necessity for the exclusion orders. But when the orders were described as having been dictated by "military necessity," even though disagreeing with that finding, JACL urged all its members and all others of Japanese ancestry to cooperate in their own removal as their ultimate contribution to the national defense, even though such cooperation would cause property losses in hundreds of millions of dollars and incalculable suffering, misery, and humiliation.

It was this unprecedented cooperation that resulted in the mass evacuation of some 110,000 civilians without incident and forced reappraisal of the so-called Japanese problem, for it was inconceivable that disloyal or dangerous persons would not have at least attempted to embarrass the Army and provoked bloodshed, thereby providing the enemy with valuable propaganda in its efforts to gain the support of fellow Asians.

Dr. Milton S. Eisenhower, now president of Pennsylvania State College, paid tribute to JACL's leadership in this matter when, as the first director of the War Relocation Authority, which was established by Executive order to supervise the detention program following the military removal phase, he testified before a congressional appropriations subcommittee in 1942 for funds with which to effectuate his task.

RIGHT TO SERVE IN MILITARY DEMANDED

Over the Thanksgiving weekend, 1942, long after the evacuation itself had been completed, delegates from all 10 relocation centers and from the "free zones" gathered in emergency national session in Salt Lake City, Utah, and, after reaffirming their faith in their Government, unanimously adopted resolutions demanding the right to serve in the Armed Forces which had been denied them by selective service after the outbreak of war, and the opportunity for those remaining in camp to leave and seek normal lives and employment to aid the national defense in the Midwest and in the East.

The first of these resolutions paved the way for the formation of the now fabled 442d Regimental Combat Team, that most-decorated military unit in American military history for its size and length of service, composed entirely of volunteer Japanese Americans from the Territory of Hawaii, where, incidentally there was no mass evacuation, and, more impressively, from behind the barbed wire fences of these desert camps where our own Government had incarcerated them. Seldom, if ever, has there been a greater demonstration of faith in country than this.

Other Nisei troops served in Combat Intelligence against the Japanese enemy in the Pacific and with other Armed Forces units in Europe.

Meanwhile, the War Relocation Authority initiated a program of gradual resettlement from the wilderness centers to midwestern and eastern communities which discovered that Japanese Americans, too, were human.

FIRST POSTWAR NATIONAL CONVENTION

After the end of hostilities, when many of its members who had served in the 442d and in G–2 in the Pacific returned to try to translate their wartime exploits into positive good for their parents and families, JACL held its first postwar biennial national convention in Denver, Colo., in the spring of 1946, and there determined upon a threefold program to secure the kind of acceptance and equality which would forever safeguard persons of Japanese ancestry in this country from a repetition of their World War II tragedies:

Legislatively, to secure equality in and under the law, and particularly in the matter of naturalization privileges in order that the alien parents of these gallant Nisei might share, at long last, in that precious United States citizenship which would nullify all of the hundreds of anti-Japanese laws sanctioned by that racially ineligible to citizenship classification in our Federal code; also, to repeal the Japanese Exclusion Act along with all of the remaining racial prohibitions against immigration from Asia.

Judicially, to seek in the courts the invalidation of all discriminatory statutes, and especially the alien land laws of some 13 Western States by which the Japanese had been denied the right to economic opportunities through the ownership and occupation of land; and

Educationally, to conduct nationally a public information campaign to publicize the wartime record of devotion and sacrifice of all persons of Japanese ancestry and to gain the good will and support of their fellow Americans for their legislative and judicial objectives.

That in the 9 years since the Denver convention the JACL has just about attained all of their major objectives is plainly evident, although just how remains a "miracle of democracy," as one old Japanese pioneer described it at a recent naturalization ceremony.

JACL has utilized the tools of a representative government in such an effective manner that they are today a model that can well be emulated by others seeking justice and equality of treatment.

MANY MEMBERS HAVE HELPED

Many Members of Congress, from the West as well as from other sections of the country, Republicans and Democrats alike, have actively participated in the enactment of these remedial and corrective statutes which have been enacted in the past decade.

Reading of the testimony before congressional committees and the RECORD on the debates in the Congress on the many bills which have given a new meaning to democracy to these recently "suspect" Americans amount to a testament of

recognition and esteem seldom voiced by lawmakers.

For my part, I am proud of having been associated with JACL's postwar program from the beginning. In fact, in Japan in 1925 I became convinced we must eliminate the racial barriers in our immigration and naturalization laws if we hoped to have lasting peace in the Pacific. I urged such legislation in my first year in Congress, 1943. But not until 1948 was it possible to get enough change in national thinking to give some hope for success. I then drafted and introduced the so-called Asian provisions of what is now the Immigration and Nationality Act of 1952. These proposals provided that all racial, though not numerical, exclusions to immigration be repealed and that the privilege of naturalization shall no longer be limited to specially designated races and nationalities. No person of whatever race or origin was to be ineligible to American citizenship because of race, color, or national origin.

SUMMARY RECORD OF ACHIEVEMENT

Those noncontroversial features of the Immigration and Nationality Act of 1952, providing for naturalization and immigration privileges to the Japanese and other Asians, would not have been attainable so soon after the war with Japan without the remarkable efforts of JACL and hence represent its most noteworthy achievement. For through their enactment alien Japanese were, for the first time in United States history, invited to become naturalized citizens in the land of their choice, and the citizenship of their American-born became unqualified and untainted.

The Congress has also approved legislation providing some compensation for certain real and personal property losses suffered as a consequence of the evacuation. Some thirty millions of dollars have been paid to more than 20,000 exacuees as a token of congressional regret that the loyalty of the Japanese-American population was misjudged, and to provide restitution and simple justice. The claims program is not yet completed, however, and amendments to expedite and liberalize the remaining payments are presently before the Congress.

Through general and private legislation, I have been told, some 500 ordinances and laws that were once directed against persons of Japanese ancestry in this country have been repealed or invalidated and that at the present time there are no statutes anywhere in the land specifically discriminatory against the Japanese.

The JACL coupled their congressional campaigns with special activities in the various State legislatures concerned to eliminate the remaining vestiges of the "anti-Orientalism" of the early 1900's.

In the field of litigation, too, nationally and in the States, JACL has successfully argued the unconstitutionality of discriminatory laws which restricted the opportunities of persons of Japanese ancestry and subjected them to indignities. The alien land laws, the prohibition against commercial fishing, racial restrictive covenants, segregation in public places and schools, exclusion of jury lists—all these and more have been determined in favor of the Nisei and the immigrant generation, their new citizen-parents—not always pleaded alone by the JACL but in some cases in concert with others similarly seeking more equitable consideration as citizens in this democracy.

The American people now know and welcome Americans of Japanese ancestry. They are no longer confined in the main to the west coast but are to be found in every State in the Union, accepted by their neighbors and completely assimilated into their respective communities.

I have been advised by the JACL, as they prepare for their next quarter century of service, that Americans of Japanese ancestry enjoy a far better status in this country than ever before, even in the best of prewar days. Today they are confident of their future, for under the leadership of the JACL they are, in fact, better Americans in an America made greater by their contributions.

In 1930, JACL was a few hundred members in 10 small chapters scattered in Washington, Oregon, and California. Today JACL, based upon its solid record of accomplishment, boasts more than 15,000 active members in 88 chapters in some 32 States and the District of Columbia.

TOUCHSTONE OF DEMOCRACY

The JACL story for their first 25 years is an inspiring document of democracy in action at the best, an epic which could have been written only in America and which completely refutes the hate and race mongers of only a few years ago who charged that the Japanese, by their very character, were unassimilable into the American cultural pattern, which itself, as we all know, is made up of the cultures and the contributions of all the many peoples who have immigrated to these shores since time immemorial, as did the ancestors of all of us.

But perhaps even more important in the long pull of history is that what the JACL has accomplished here in the United States is living proof to all the free peoples of the world, and especially to those in the Far East who are so important to us as a nation today, that the democratic way is best, for it makes possible the correction of abuses and wrongs and the achievement of justice and redress on the basis of the complete record and of individual merit, not race, color, creed, or national origin.

Ours is an imperfect democracy, it is true. But the JACL has proved that it is a constantly improving one which continually strives to forge an ever more perfect union.

Congratulations to the Japanese American Citizens' League, their officers, and their members on this historic milestone in human relations.

All of us have learned much from their quarter-century history, and all of us can gain much by putting into practice, as they have so nobly done, their national slogan, "For better Americans in a greater America."

Report to the Voters of the 10th Congressional District of New York

EXTENSION OF REMARKS
OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mrs. KELLY of New York. Mr. Speaker, with the adjournment of every session of Congress, I have reported to each enrolled voter of my district. It is my great privilege and proud responsibility to be the Representative of the 10th Congressional District of New York. I answer personally every letter written to me. I have served thousands of my constituents in their personal problems. It is an honor not only to be your Representative but also to be a ranking member of the Foreign Affairs Committee of the House, assigned as chairman of the Subcommittee on Europe.

My office in Washington is open 6 days a week. Letters sent there receive my immediate attention. The address is: EDNA F. KELLY, Member of Congress, House of Representatives, Washington 25, D. C.

I direct myself now to the report of the 84th Congress.

President Eisenhower's request for a Republican Congress during the congressional campaign in 1954 was rejected by the voters on Election Day. It was rejected because the American people had been accustomed to and they wanted a return to a pattern of constructive legislation instituted during Democratic administrations. During this period programs of farsighted social legislation had been accomplished by courageous men and women who fearlessly met the problems of the day. Many of these important measures, instituted for the benefit of the public welfare, were denounced as "too socialistic" by the Republican Party—the same party which gave unstinting support to the affairs of big business.

Thus the election returns of 1954 brought into being the 1st session of the 84th Congress, Democratic by a slight majority and under Democratic leadership. Many obstacles confronted this Congress, not the least of which was a review of the 41 Presidential commissions which had been established during the 83d Congress to evaluate policies of former Democratic administrations. It came as no surprise to the sponsors of these policies that they were not found wanting. What has surprised many is that, in the process of continuation or extension, policies became Republican with no reference to their Democratic foundation. Many Republican legislators reserved their previous stand not because of the intrinsic merit of the policy but solely on its sponsorship.

In my report I shall address myself first to issues relative to foreign policy—international—and, second, to the issues encompassing the domestic field—national.

INTERNATIONAL

It must be borne in mind that the foreign policy of the Republican administration is the basic foreign policy forged by the Democratic Party. This policy has been making history since 1945 when the United States, first, joined the United Nations; second, established the ECA program; third, enacted the mutual defense pact; fourth, initiated the mutual-security program, including point 4; fifth, ratified the North Atlantic Treaty and other regional pacts.

This is the policy that was called a "lack of foreign policy" by the Republican Party in the presidential campaign of 1952. They contended that the policy of containment of the Democratic Party was against the liberation of the enslaved peoples of the world. In their reappraisal they soon realized that liberation, as they saw it, could not be achieved without resort to war.

Coexistence is now offered to a hopeful world. In 1925 Stalin called for a period of coexistence as a temporary measure. In 1955 the smiling successors of Stalin put coexistence on one side of their scale of justice and on the other the enslaved people of small countries whose promised freedom is a mirage. Coexistence in that light is an impossible dream between the free and the slave world. It means appeasement—accepting the status quo of the world.

The mutual-security program, commonly referred to as foreign aid, authorizes and appropriates funds which implement the foreign policy of the United States. This year Congress gave $2.7 billion to the President to be used as our share toward the collective security of the free world. A Democratic Congress gave the President full authority to transfer these funds to any region of the world. Flexibility was deemed necessary to meet the many crises of the present day. This new money plus the carryover of past years amounts to over $12 billion.

Republican acceptance of the farsighted foreign policy of the past 10 years may be noted in excerpts from statements made during this session by leaders of the Republican Party before meetings of the Foreign Affairs Committee.

Secretary of State, John Foster Dulles:

It (mutual-security program) has been unique in the whole history of the world • • • This program of mutual security continues to be an essential part of our overall policy of seeking to bring those rulers who now follow the line of international communism to see the futility of the policy of attempting world conquest.

Director of the Foreign Operations Administration, Harold E. Stassen:

The military assistance which has been furnished to our allies in NATO and to the other countries in the free world has provided a firm foundation for collective defensive strength and has served as an effective deterrent against Communist military aggression.

A provision of the foreign-aid program—MSA—requires that countries recipient of American aid permit continuous "inspection and review" of the use of the aid. This provision is based upon common sense. The Executive may give military or economic aid to any country if he deems it advisable for national security.

For this reason I want inspection of United States aid in all countries to be carried out by United States missions as ordered by Congress. Any nation refusing this inspection should be refused aid. Yugoslav military authorities have turned back every recent effort by United States officials to increase their observation of the military-aid program. Yet, with United States military aid Yugoslavia has been able to reequip her army, one of the biggest in Europe, with largely American material instead of Russian.

The premise upon which American policy toward Yugoslavia is based is that we want Yugosalvia to be a strong country with a free and independent citizenry. And deviation toward the satellite status it occupied in the Communist camp would of necessity change American policy. Recently, the mood of the Yugoslav dictator has been critical of the West and cordial to the Soviet Union. On July 29 a report come from reliable sources that Yugoslavia and the Soviet Union have equated their debts with each other.

Once again I introduced an amendment to the mutual security bill to cut off all aid to Yugoslavia, including new authorization of about $40 million and several hundred million dollars of undelivered materiel from previous programs. The United States has already given over $1 billion.

My amendment was not adopted, but the Appropriations Committee of Congress cut the assistance requested by President Eisenhower. There is great flexibility, however, under the terms of the MSA bill of 1955. The Executive is enabled to transfer funds on a global basis as crises arise. It is his sole responsibility now to discontinue assistance when and where the provisions of the law are violated.

One of the first acts of the 84th Congress was to grant authority to the Executive to employ the Armed Forces of the United States for protecting the security of Formosa, the Pescadores, and related positions and territories of that area. This mesaure, passed almost unanimously, presented to the world a united and determined people supporting their President in a moment of crisis. Such determination on the part of free people is the key to peace in this atomic age. President Eisenhower requested this authority when danger was imminent and it has not been rescinded. The Executive receives daily secret reports which are not available to Congress. Possessing this knowledge, he alone must decide what action to take in order to decrease the tensions between the free world and the Communist bloc.

I was a member of the ad hoc Committee on Foreign Affairs which reported on and had passed by the House H. R. 2097, a bill to adjust the annuities of Foreign Service officers who retired before July 1, 1949, and the widows of such officers. It provides for a $324 increase. No additional charge against government is made for this disbursement. The Foreign Service Retirement and Disability Fund, to which the personnel contributed, will bear the cost.

This increase involves about 250 people, plus 90 who had not hitherto been eligible, all of whom are of advanced age. It adjusts their retirement pay to the equivalent of the cost-of-living increase given to Federal employees by an act of Congress in 1952. I was responsible for the amendment in the bill which included the widows of the officers and also for the across the board increase of $324 as against a percentage increase.

On other international issues the President had the confidence and support of the Democrats. This was given to prove to the world that Congress was unified in support of our President, while at the same time many of us realized that further implementation was urgently needed. Treaties ratified were:

First. South-East Asia Treaty Organization—SEATO.

This is a NATO-like collective security pact for the Far East. It is in the blueprint stage.

Second. Security Pact with Nationalist China.

Third. West Germany approved as sovereign State and a member of NATO.

Fourth. Restored independence to Austria.

This is the same treaty which was sponsored by the Democratic administration over 10 years ago and refused over 200 times by U. S. S. R. I believe that this treaty should have been changed in line with present conditions. Under its terms U. S. S. R. will take the same reparations as previously planned despite the fact that in the interim of 10 years Austrian economy has been drained by Soviet occupation. Will not the United States now be asked to help this independent nation economically, thereby helping to pay U. S. S. R.?

Fifth Vietnam.

In this country is one of the most critical situations in the Far East. I was one of several members of the Foreign Affairs Committee who guided the administration to continue their positive support of South Vietnam. We requested that the administration refuse cooperation with the French in undermining the new Ziem regime. Proof had been given us that the French Army was sustaining the anti-Government forces.

The reciprocal trade bill stands as a recognition of the real fact that the United States has accepted its role of political and military leadership of the free world. It recognizes that we cannot fight economic wars with our political and military allies. The importance of the extension of the reciprocal trade program which was initiated by the Democratic administration in 1934 is noted by the priority number 1 given it by the present administration.

Reciprocal trade was one of the most bitterly debated issues in the 84th Congress. In this legislation, the President is permitted to enter into mutual tariff reduction agreements with other countries. Hearings are held on the various commodities before this reduction action can be taken and the Tariff Commission must report when a peril point is reached so that serious harm to United States industry will be avoided. If the United States is to sell its goods freely in other countries, it must also buy

freely in those countries. This is only logical. The United States produces more than 40 percent of the world's total output of goods and services although only 5 percent of the world population is found in the United States. To those who feel that we are self-sufficient we must point out that we have to turn to other countries for our supplies of copper, chrome, lead, zinc, oil, manganese, and other vital commodities.

The greatest opposition to the President's request for this reciprocal trade legislation came from his own Republican Party. The bill was passed only because of the help given the President by the Democrats in the House led by Speaker SAM RAYBURN. Had President Eisenhower given forceful assistance and more active support for this famous program, a less protectionist bill would have been enacted. As finally passed, it is the weakest version of the program instituted by the late Cordell Hull two decades ago.

NATIONAL DEFENSE

In the category of national defense, the draft law was extended for 4 years and the draft of doctors and dentists for 2 years. The Reserve bill—Public Law 305—is not too satisfactory because of the National Guard features. The administration's proposed Reserve bill involved a reduction in the standing Armed Forces and an increase in quantity and quality of the military reserves. The reduction in standing forces is under way and should be completed within the year. In the bill proposed by the President, young men including veterans, would be required to give active service in the Reserve or National Guard. The present 800,000-man paid Reserve would be increased to 2.9 million trained and ready reservists by 1960.

The Congress objected to many features of the President's measure. It was felt that compulsion, particularly of experienced veterans, was unfair, and that the bill would open the door to compulsory military training. Also, this bill would have forced some of our citizens to serve against their wills in racially segregated National Guard units. When the bill was finally voted on by both the House and the Senate, little of the original wording remained. Under the enacted bill, almost all compulsion was omitted and no person who had served in the Armed Forces is required to participate in the Reserve program. Persons serving in the future have Reserve obligations up to 6 years, depending on their degree of active participation. Incentives were provided whereby young men would volunteer in their total draft and Reserve obligations.

Since 1952 the Democrats have opposed the $5 billion cut in the Air Force recommended by President Eisenhower. When the U. S. S. R. demonstrated this year that their air strength may exceed that of the United States, Congress took the matter into its own hands and as a result jet production has been increased by 35 percent. The cutback by the administration has set back United States air strength by 2 years or more. Certainly this is false economy on the part of the Republican administration.

In a similar manner and for the same reason Congress demanded that the Marine Corps strength be maintained. Forty-six million three hundred thousand dollars above the amount recommended by President Eisenhower was appropriated which will prevent a 22,000 manpower cut in this strategic service.

Public Law 141 authorizes $237 million program of Atomic Energy Commission projects.

Public Law 44 authorizes funds for expansion of existing research facilities of the National Advisory Committee for Aeronautics.

Public Law 161 authorizes $2.3 billion program for construction of foreign military bases and housing.

Public Law 211 authorizes $63 million grants-in-aid to States for airport construction for 4 years.

NATIONAL ECONOMY

Early in this session, the Democratic-controlled House proposed a $20 tax reduction but this was declared by the President to be irresponsible. Yet, it was his Republican-controlled Congress which in 1954 gave tax relief to corporations and to coupon clippers at a far greater loss of revenue to the Government than would have been lost had the $20 tax reduction been allowed. The tax law of 1954 gave big business a method of tax forgiveness. This was detected by my Democratic colleague from New work, the Honorable HERBERT ZELENKO. The Democratic-controlled 84th Congress amended the Revenue Act of 1954 in an effort to help balance the budget next year. The following is a quotation from the remarks of Congressman ZELENKO on the floor of the House:

Under the act as it was written last year every big-business man in this country is this year getting a double deduction, and I say that is a tax reduction. It is a tax forgiveness. It adds up to about $5 billions. Here is the way it works, right from the act, and I will give it to you in small figures.

A business house having an income of $10,000 and expenses of $2,000 before the enactment of this statute would have a taxable income of $8,000. Under the act of 1954, this business can now estimate what its costs will be in the year 1955 in the way of expenses, at least what they were in 1954, another $2,000, making a taxable income of not $8,000 but $6,000, keeping the extra $2,000 in what is called reserve, which just means the Government does not get it. The Government will never recoup that money because in 1956, if this statute remains on the books, the business house will again estimate its future expenses for 1957, and on and on forever, so that in this particular year of 1954 I say there are $5 billions which the Government will never see because of some hocus pocus, high-powered accounting which was written into the 1954 act.

I was glad to support the repeal of this section.

Public Law 18 extends to April 1, 1956, existing excise tax schedules and the 52-percent corporate income tax.

Public Law 268 extends the life of the Small Business Administration for 2 years and increases its revolving fund for loans to a total of $175 million.

Public Law 135 raises the penalties under the Sherman Antitrust Act from $5,000 to $50,000.

Under Public Law 124, a temporary increase of the debt limit from $275 to $281 billion to June 30, 1956, was effected.

Public Law 216 extends the Renegotiation Act for 2 years to December 31, 1956, to provide for recovery of excessive profits from defense contracts.

Public Law 137 grants the Federal Government the right of action to recover damages under the antitrust laws, and establishes uniform statute of limitations.

AGRICULTURE

Several bills in this session were of special interest to the farmers of our country:

Public Law 70 revises the formula for allocation of rural electrification loans.

Public Law 166 extends for 2 years the period for making emergency loans to farmers and stockmen.

In addition, steps were taken to curb commodity speculation and to curtail market manipulations in certain agricultural products. The House passed the bill to restore rigid farm price supports, but the measure was not considered in the Senate. The President had asked for a continuation of the flexible price-support program which is now in effect. The Senate Democratic leadership successfully resisted the drive by the farm bloc to restore rigid farm price supports at 90 percent of parity, although the House voted to restore the sliding scale with 90-percent supports for basic commodities. I opposed this action in the House and I will continue to do so. I regret that the fruits of farm labor, including perishables, are supported by a law which forces the Government to purchase and store these products. If necessary, the Congress should remain in session until it develops a plan feasible to consumer as well as farmer. It does not make sense that the taxpayer-consumer should pay taxes to keep food at a ceiling which prohibits consumption and forces purchase and storage by the Government.

As of August 3, 1955, the total value of surplus agricultural commodities stored by the Government was $5,370,029,000. As of that date, the Government inventory showed the following surpluses:

Butter, in excess of 184 million pounds at 63.9 cents per pound; total cost, $118,067,000.

Cheese, in excess of 272 million pounds at 40.3 cents per pound; total cost, $109,954,000.

Dried milk, in excess of 141 million pounds at 17.1 cents per pound; total cost, $24,192,000.

Wheat, in excess of 933 million bushels at $2.59 per bushel, total cost, $2,422,809,000.

Total, $2,675,022,000.

On the foregoing items, we have the following approximate storage charges per month: Butter, $324,348; cheese, $375,000; dried milk, $102,543; wheat, $15,348,000, approximately $511,000 per day.

The approximate monthly storage charges for all agricultural commodities amount to $23,723,000 or, a yearly expense of $284,676,000. This is what it costs to store $5,370,029,000 worth of surplus agricultural commodities in a year. No wonder then, that the Congress

was forced to increase the borrowing power of the Commodity Credit Corporation to $12.5 billion a year.

Public Law 387 increased from $700 million to $1.5 billion the funds for the sale of these surplus agricultural commodities for foreign currencies. Further endeavor to reduce these surpluses through sale abroad was included in the foreign-aid bill which stipulates that not less than $300 million of the money appropriated in this law for the fiscal year 1956 could be used to finance the export and sale of these surpluses for foreign currencies. Neither of these measures is a solution to the agricultural problem which is critical. The problem is not insoluble, but it must be approached from a bipartisan viewpoint both politically and regionally. Then surpluses would be a blessing and not a burden.

HOUSING

Public Law 345 authorizes the construction of 45,000 public housing units which is 10,000 more than were requested by President Eisenhower but they are by no means enough to supply the needs in this critical social problem. This law provides for slum clearance and community redevelopment, as well as for FHA and military housing programs.

The passage of the Housing Act constituted a definite victory for the Democrats. The Republican opposition tried to repeat its action on the 1954 housing bill which killed public housing.

Public Law 343 permits national banks to issue real estate, residential and farm construction loans on a more liberal basis than the previous law had permitted.

LABOR

Public Law 381 increased the minimum wage under the Fair Labor Standards Act from 75 cents to $1 per hour effective March 1, 1956. President Eisenhower favored an increase to only 90 cents an hour.

Public Law 383 raises the limitation on the amount of railroad retirement annuities to spouses to the maximum payable under social security laws.

In this session, there was effected a complete revision of Federal salaries, including post office employees, classified workers, administration officials, Members of Congress, and Federal judges. Also, the retirement benefits of Government workers were brought to a more realistic level by increasing them between 8 and 12 percent.

HEALTH

Public Law 377 authorizes appropriations to supply polio vaccine free to the States for their State polio vaccination programs.

Public Law 159 authorizes a 5-year program of $3 million a year for research into the causes of air pollution.

Public Law 182 authorizes $1.25 million for study and research in the field of mental health.

WELFARE

Public Law 311 authorizes the expenditure of $15 million during the next 2 years for processing of wheat and corn into flour for distribution to States for needy families. The Eisenhower administration opposed this measure.

Public Law 61 improves the administration of surplus property for educational and public health purposes.

Public Law 71 authorizes a survey of the New England area to determine the possibility of preventing loss of life and property from hurricanes.

VETERANS AND SERVICEMEN

The Congress this year enacted several measures of particular benefit to veterans and servicemen.

Public Law 7 to permit persons in the Armed Forces on January 31, 1955, to continue accrual of educational benefits;

Public Law 20 which provides incentive pay increases of 6 to 25 percent and allowances for members of our Armed Forces;

Public Law 88 which extends to June 30, 1956, the Veterans' Administration program for direct loans for purchase or building of homes and authorizes appropriations of $150 million;

Public Law 299 which applies retirement income tax credit provisions to members of Armed Forces;

Public Law 325 which provides social security wage credits for military service before January 1, 1956;

Public Law 180 which extends to July 15, 1956, the time for a Korean veteran to apply for mustering-out pay.

BUDGET

The Democrats claim cuts of $1.6 billion from the President's budget estimates. Including interest on the debt and other fixed charges, estimates total $60.8 billion. The appropriation bills carried $59.1 billion. It usually happens that cuts made in money bills in one session are restored in deficiency bills the following January. Only at the adjournment of the Congress, and not of its first session, can we estimate how much has been saved.

Table of appropriations, 84th Cong., 1st sess.

Title	Budget estimates	Amount as passed (House)	Amount as passed (Senate)	Amount as enacted
1955 supplemental	$833,950	$25,000	$1,013,950	$1,013,950
1955 2d supplemental	920,523,454	857,187,429	945,412,835	898,805,875
1955 2d urgent deficiency	25,263,475	25,263,475	25,263,475	25,263,475
Treasury	604,398,000	595,818,000	603,348,000	599,598,000
Post Office	2,754,817,000	2,685,700,000	2,754,104,000	2,721,720,500
U. S. Tax Court	1,035,000	1,035,000	1,170,000	1,170,000
Labor [1]	470,116,000	417,792,900	418,838,900	418,303,650
Health, Education, Welfare	1,949,465,861	1,907,403,361	1,973,740,700	1,942,886,850
Interior [2]	313,353,056	297,925,546	327,987,088	317,573,627
Agriculture [3]	897,684,574	880,260,050	884,433,923	883,051,623
Independent offices	5,639,790,000	5,845,595,375	5,848,394,500	5,842,458,500
State	147,267,197	126,769,977	147,549,608	137,450,905
U. S. Information Agency	88,500,000	80,500,000	88,350,000	85,000,000
Refugee relief	16,000,000	16,000,000	15,000,000	15,000,000
Justice	201,485,000	197,525,000	200,445,000	198,735,000
Judiciary	30,279,715	29,603,250	30,640,810	30,116,510
Defense	32,232,815,000	31,488,206,000	31,882,915,726	31,882,815,726
District of Columbia [4]	175,405,300	166,901,780	169,456,749	168,843,440
Commerce [5]	1,347,800,000	1,105,810,000	1,298,897,300	1,227,385,000
Related agencies	18,593,000	17,875,000	18,295,000	17,975,000
Executive Office of President	8,780,700	8,670,700	9,747,700	9,747,700
General agencies	18,920,000	13,220,000	17,418,600	17,418,600
Public works [6]	1,789,165,000	1,372,122,800	1,377,491,000	1,365,613,500
Legislative	67,572,138	66,298,175	93,025,527	92,808,972
Mutual security	3,266,641,750	2,638,741,750	3,205,841,750	2,703,341,750
1956 supplemental [7]	1,927,785,868	224,276,628	1,830,078,814	1,656,625,802

[1] Also carried in this bill, but not included in above total, are appropriations for: National Labor Relations Board, $8,000,000; National Mediation Board, $1,187,000; and the Federal Mediation and Conciliation Service, $3,134,000.
[2] Includes funds for Forest Service, Department of Agriculture. Funds for power administrations and for reclamation projects this year are carried in a public works appropriation bill.
[3] Figures are for cash appropriations only. This bill also carries $388 million in loan authorizations, and an advance authorization of $250 million for soil conservation subsidies.
[4] Includes direct Federal contribution of $17,892,700; balance to be derived from District revenues.
[5] Includes funds for Civil Aeronautics Board.
[6] Includes funds for Army civil functions (rivers and harbors, flood-control projects), $553,955,000; Atomic Energy Commission, $575 million; TVA, $27,053,000; and other power and reclamation agencies.
[7] Reduced in House by raising of points of order.

INCOMPLETED LEGISLATION

Final action on some very important issues was left for the 2d session of the 84th Congress. The reasons for this varied with the bills but in no case was it because Members of Congress were anxious to adjourn. Some bills of controversial nature were blocked in committee; others were recommended too late in the session and required further hearings and study. Many of these bills will be studied during adjournment and will be considered early in the next session.

FEDERAL HIGHWAY BILL

It must be borne in mind that the Democratic majority in Congress is slight and that within both parties are those who oppose new trends. By title, many programs were acceptable but certain provisions contained in the legislation caused the rejection of many bills. The Federal Highway bill is an excellent example.

Republicans and Democrats recognize the great need to increase the Federal investment in highways. The Presidential Clay committee recommended a $101 million Federal and State program for the decade ahead, and it was on this recommendation that the President's highway program was based. The Clay committee recommended financing by a Federal bond issue which would have increased the national debt. The taxes, in this method of financing, are hidden and the burden of the cost is placed on future generations.

The Democrats reported a pay-as-you-build plan, increasing user taxes on gasoline, diesel fuel tires. In the final test the nay votes of 128 Democrats and 164 Republicans defeated the Federal highway bill. As the Democratic floor

leader, Congressman McCORMACK remarked, "Everyone wants a road bill but no one wants to pay for it."

SOCIAL SECURITY

Extensive committee hearings and discussion took place in this session on the subject of social legislation but few of the bills considered were enacted. It is hoped that early attention will be given these measures when the Congress reconvenes in January. The most important of these bills is H. R. 7225 to amend the social-security laws. This bill passed the House but was not acted on in the Senate. The bill—

Lowers the retirement age for women from 65 to 62, bringing immediate benefits to 800,000 additional women;

Brings disability benefits to some 250,000 workers aged 50 of more;

Continues disability benefits for children even after they have reached age 18; and

Extends coverage, mainly to certain professional groups.

I introduced two measures on the subject of social security; one to lower the retirement age for all—men and women—from 65 to 60; and the other, to extend coverage to lawyers.

NATURAL-GAS BILL

The House of Representatives passed the natural-gas bill by a vote of 209–203. It was not considered in the Senate. I voted against this measure because I feel that Federal regulation of gas prices at the wellhead assures a more reasonable price to the consumer than otherwise.

The controversy on this bill did not include the method or pricing natural gas to the ultimate consumer. Local utilities which buy gas from the interstate pipelines and bring it into homes and business houses are monopolies and are regulated by local or State authorities.

Nor was the dispute over the prices which pipeline companies charge local utilities. These prices have been regulated for almost 20 years by the Federal Power Commission. The arguments on the bill were concerned solely with the method of pricing the gas which the so-called independent producers sell to interstate pipelines.

I believe that competition among pipelines seeking a supply of gas can have but one effect—an increase in the price of gas. Under FPC regulation the pipelines have done very well in profits for themselves. Federal control insures adequate protection of public interest.

SCHOOL-CONSTRUCTION PROGRAM

H. R. 7535 to authorize Federal assistance to the States and local communities in financing an expanded program of school construction was reported to the House on July 28 but was not reached for consideration before the Congress adjourned. This measure carried an authorization of $400 million a year for school construction. It must be borne in mind that New York City alone needs this amount to improve its schools. A great deal of study is needed on this very important legislation.

ADMISSION OF HAWAII AND ALASKA TO STATEHOOD

In reporting the bill for the admission to statehood of Alaska and Hawaii, the Rules Committee voted a closed rule which precluded the offering of amendments to the bill. The House, therefore, recommitted the bill to the Committee on Territories and Insular Affairs. I favor the admission of these territories, and I have so voted when the opportunity has been given to me.

IMMIGRATION

In 1952 I voted against the passage of the Walter-McCarran Act, and I voted to sustain President Truman's veto of this legislation. In the 83d and again in the 84th Congress I introduced amendments to correct the inequities in this law. I am hopeful that in the coming session of this Congress the Judiciary Committee, under the chairmanship of my distinguished colleague and neighbor, the Honorable EMANUEL CELLER, will grant hearings on my amendments or on similar bills so that the inequitable provisions of our immigration laws can be removed from the statute books.

TAFT-HARTLEY ACT

This law, also known as the Labor Management Relations Act, was not amended in the 1st session of the 84th Congress. Many bills to amend the law—and a few to repeal it—were introduced in the session but the Committee on Education and Labor held no hearings on the subject and consequently did not report any bill of this nature.

JOINT COMMITTEE ON INTELLIGENCE MATTERS

In this session, I introduced House Concurrent Resolution 29 to establish a Senate and House Committee on Intelligence Matters. This resolution was not adopted, but along these lines, the Congress enacted Public Law 304, creating a Commission on Government Security to review the present security program and to make recommendations to Congress by December 31, 1956. There are many items on the credit side of the ledger in the concerted actions of the Democrats of the 84th Congress in this Republican administration—the administration which President Eisenhower predicted "will not tolerate any deviation from an uncompromising code of honesty and ethics in Government service." Democrats investigating alleged deviation demonstrated their maturity when they showed—in the words of Arthur Krock, of the New York Times, "a commendable disposition to weigh carefully" testimony given the McClellan subcommittee before passing judgment.

EQUAL PAY FOR EQUAL WORK

I introduced H. R. 3228 to provide that women in industry shall be paid the same wages that are paid to men in the same type of work. Many other Members of Congress have introduced similar bills which undoubtedly will be a factor in helping me to obtain an early hearing on my bill in the next session.

CONCLUSION

The cold war predicted for a Republican Executive and a Democratic Congress did not materialize. The 1st session of the 84th Congress adjourned with a commendable record of achievements which far outweighed its shortcomings. Cooperation was given the President on all issues of benefit to our people.

It has been pointed out that clearer recommendations made to the Congress by the President would result in more expeditious enactments. Indecision and attempts to compromise the many intra-party differences has had deterring effects on many issues. It is to be hoped that these issues will be resolved in the 2d session of the 84th Congress.

A Tribute to Majority Leader John W. McCormack

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. LANE. Mr. Speaker, I ask consent to publish in the Appendix of the CONGRESSIONAL RECORD the following editorial which appeared in the Telegram-News, of Lynn, Mass.

Members of Congress, because of their close association with the majority leader, are familiar with his hard work, his many accomplishments, and his undisputed ability as a leader of the Democratic Party.

It is good to know that our high opinion of him is also shared by the folks back home.

Reflected in may editorials, of which the one printed below is but a sample.

MAJORITY LEADER MCCORMACK'S REPORT

One of the ablest men to ever sit in Congress is Majority Leader JOHN W. MCCORMACK. The success of the 84th Congress is due largely to his efforts.

The Telegram-News today publishes the majority leader's report. It is a masterpiece and should be read as it is a fortright analysis of the major achievements of 84th Congress which "represents an era of enlightenment in the field of party politics that is unsurpassed in the history of America."

Congressman MCCORMACK explains clearly and with emphasis the reason for voting for many measures proposed by President Eisenhower. He says: "So that there will be no mistake, may I say we voted for those measures on the Democratic side of the House not because we favored and followed the President. We voted for those measures because we favored and fought for the public interest."

He also said: "The majority party refuses, as a matter of principle, to abandon the position it has already maintained as a party of the people. Nor will we change our course just because the President, a formerly devoted subordinate of President Truman, has embraced Democratic policies, lock, stock, and barrel unto himself."

The present Congress, under the leadership of Congressman MCCORMACK, worked in the interest and welfare of the people and to the defense of the country.

Congressman MCCORMACK ably points out what this Congress has done in the following statement: "This session has written a record of constructive action. The record clearly shows that partisanship has been subordinated to the good of the Nation and the welfare of our people; a record that is in sharp contrast to that of a recent Republican Congress under reverse circumstances."

Congressman MCCORMACK is an ideal leader of a great party. He is well qualified to

keep alive the fine traditions the party has established in American history.

Mrs. McCormack, his wife, is a gracious lady. She has been in Washington with the Congressman all the years he has served and has been a wonderful helpmeet during the many trying days.

Queen of All Christians

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by the Honorable Elias F. Shamon, justice of the Boston Municipal Court, Boston, Mass., entitled "Mary Holds High Place in Devotions Among Catholics of Eastern Rites," which appeared in a recent edition of the Pilot, Boston, Mass.:

MARY HOLDS HIGH PLACE IN DEVOTIONS AMONG CATHOLICS OF EASTERN RITES

Eastern art, early in the history of the Catholic Church in the East had as one of its objects the teaching of the faithful the sublime role of Mary as the queen of the world.

She is depicted as an empress on a throne with her Divine Son instructing humanity from her bosom. She was known as Maryam, which is a Syro-Aramaic word denoting "Mistress of the Sea" and "Hope," also "The Brilliant One."

In ascertaining the place of Mary in the Near East, we cannot lose sight of the devotion to motherhood in that part of the world. The family, especially children, have always held first place in the life of the people of the Near East. Motherhood was sacred as it was obedience to God's command to increase and multiply. Hence, Mary, as the Mother of Christ the Man, and Christ the God, was sublime in the devotion to her of Near Eastern Christians.

It is true that the Scriptures do not devote too much to Mary, since her role as the Mother of God had been accomplished. Her place became obscured, though by no means unimportant. The faithful learned of her more, by tradition and the teaching of the church, which condemned and rejected many mythical accounts of Mary, spread by well-intentioned but uninformed theorists.

Works of Byzantine artists depict her as nursing the Infant Jesus. She is also shown with her arms extended, the Infant Jesus in her bosom. A common Eastern picture of Mary is one showing her looking into eternity, imposing, regal, and motherlike, seated on a golden throne. In pictures depicting her with angels, with the Angel Gabriel, the artist shows her not kneeling to convey the thought that she is superior to the angels, being higher in dignity. One of the earliest paintings of Mary is that of Our Lady of Perpetual Help.

OFFICIAL RECOGNITION

In Rome, by decree of Constantine in 314 A. D. officially recognizing the Catholic faith, the devotion to the Virgin Mary became public for the first time. This was more than two centuries after basilicas and churches in honor of the Assumption were built at Ephesus and Jerusalem. Such were also built in Antioch, Nazareth, Jerusalem and other places in the Holy Land. Devotions to Mary, were numerous in the Near East in the early centuries, and today, in the Lebanon, along the roads leading to the summit of the highest peaks, statues of Mary dot the countryside.

But it was after the promulgations of the Council of Ephesus, 431 A. D., which declared that Mary was not only the mother of Christ the Man, but also the mother of Christ the God, that the whole Christian world began a universal and open devotion to Mary. It is well to remember that the Council of Ephesus gave to the Western World the prayer, "Holy Mary, Mother of God—" in order to keep before our minds constantly the importance of its condemnation of the false doctrine of the Nestorians who thought that Mary was not the mother of God but only the mother of Christ the Man.

The Church at Rome always recognized and accepted fully the Eastern Church's deep devotion respecting Mary, and was deeply influenced by it and by liturgical feasts devoted to her. In fact, within the first seven centuries of the Church, seven Popes were from the Eastern Church and their influence being Eastern, they intensified the devotion of the Western Church to Mary.

ASSUMPTION

At the Church of the Assumption in Jerusalem in the East, the first official feast in honor of Mary was celebrated in 529 A. D. In the West, the Feast of the Assumption did not become official in Rome until the reign of Pope Sergius I (687–701 A. D.), an Eastern Pope of the Maronite Rite. In the East, Mary was looked upon as a martyr. Her birthday was celebrated on the day of her death.

The feast of the conception of St. Anne was commenced in the seventh century in the East, which was homage paid to St. Anne as the mother of Mary.

Although it was not until 1854 that the Catholic Church promulgated as a dogma of faith the doctrine of the Immaculate Conception, and the doctrine of the assumption was not declared to be a dogma of faith until the year 1954, the Eastern Church from the early centuries universally taught and believed the doctrine of the immaculate conception and the assumption. St. Ephrem, who was called the doctor of Edessa, and the harp of the Holy Ghost, preached throughout the East the doctrines of the immaculate conception and the assumption in the fourth century. He is pictured as saying, "Even my bones shall arise from the grave and proclaim that the Blessed Virgin Mary is the Mother of God.

Ireland, profoundly influenced by eastern liturgy, was the first country in Europe to celebrate the feast of the conception of St. Anne in the ninth century. In Egypt, the Hail Mary became incorporated in the Coptic liturgy, in which she was called the Source of Grace. The Moslems who conquered the Holy Land in the 7th and 8th centuries, had great respect for Mary, as they considered her the Mother of a great Prophet. The Moslems destroyed all images but spared those of Jesus and Mary.

In the Byzantine liturgy, common to both the Melkite and Greek Orthodox Churches, Mary is mentioned about 20 times.

Eastern poetry refers to Mary as "The New Ark of Noah," the "New Ark of the Covenant," "The Burning Bush of Moses," "The Son of Salvation," "The Fountain of All Grace."

The Catholic Melkites celebrate 9 feasts in Mary's honor, and the Greek Orthodox (Schismatic churches) also celebrate 9 feasts in Mary's honor; the Maronites, 10 feasts; the Armenians, 6 feasts; the Chaldeans 7; the Copts, 9.

In Lebanon the faithful abstain and fast on Saturday in honor of Mary, and during the month of May at the most beautiful shrine of Our Lady of Lebanon at Harissa, Maronite pilgrims sing this hymn:

"Blessed Mary. God has chosen thee from amongst the whole world, as He saw thee the most pure of all creatures. For 9 months He remained in thy womb, and from thy body, He has taken His own—Alleuluia.

Social-Security Amendments of 1955

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. COOPER. Mr. Speaker, during the 1st session of the 84th Congress, the House of Representatives by a vote of 372 yeas, 31 nays, with 2 Members voting present, approved legislation which would make important and meritorious changes in our social-security law.

The legislation, H. R. 7225, was designed to eliminate certain benefit and coverage gaps existing in the present old-age and survivors insurance system. The improvements with respect to benefits which would be accomplished by this legislation are that benefits would be available to women at age 62 instead of age 65, disability benefits would be made available to permanently and totally disabled insured workers who have attained age 50 and over, and benefits for disabled children beneficiaries age 18 and over of insured workers would be continued. The elimination of coverage gaps would be accomplished by extending coverage to self-employed professional groups—except physicians—who are now excluded, to certain farmers, to turpentine workers, and to employees of the Tennessee Valley Authority and Federal home-loan banks.

To improve the actuarial soundness of the old-age and survivors insurance program and to compensate for the added cost to the system that would result from these important amendments, an adjustment would be made by H. R. 7225 in the social-security tax schedule.

In addition, an advisory council on social-security financing would be established by this legislation to review the status of the Federal old-age and survivors insurance trust fund.

For the information of the Members of Congress and other interested persons, I am inserting at this point in the RECORD a summary of the principal provisions of the social-security amendments of 1955, H. R. 7225.

This legislation is now pending before the Senate Committee on Finance where it is expected consideration will be given to it during the forthcoming 2d session of the 84th Congress.

SUMMARY OF PRINCIPAL PROVISIONS AND EFFECTS OF SOCIAL SECURITY AMENDMENTS OF 1955, H. R. 7225, AS PASSED BY THE HOUSE ON JULY 18, 1955

GENERAL SUMMARY

The bill would make seven changes in the old-age and survivors insurance program. It would:

1. Reduce from 65 to 62 the age at which women (workers, wives, widows, and parents) may become eligible for benefits.

2. Provide cash disability benefits for permanently and totally disabled workers aged 50 and over.

3. Provide continuation benefits for disabled child beneficiaries over age 18 of insured workers.

4. Provide extension of coverage to the self-employed professional groups now excluded (except physicians), to certain farmers, to turpentine workers, and to two groups of Federal employees.

5. Increase the contribution rates of the program.

6. Set up an Advisory Council on Social Security Financing to review the status of the Federal Old-Age and Survivors Insurance Trust Fund in relation to the long-term commitments of the old-age and survivors insurance program.

7. Make certain technical amendments in the program.

SUMMARY OF PROVISIONS

I. Eligibility age for women

A. The age at which women beneficiaries (workers, wives, widows, and parents) can qualify for benefits would be reduced from 65 to 62.

B. The change would be effective for the month of January 1956.

C. About 1,200,000 women would be eligible for benefits beginning with January 1956. About 800,000 could draw monthly benefits immediately; the remaining 400,000 are working or are the wives of workingmen who can draw benefits if their earnings or their husbands' earnings stop.

II. Disability insurance benefits

A. Benefits would be payable to qualified disabled workers who attain age 50.

B. Benefits would not be provided for dependents of a disabled worker.

C. To be insured for disability benefits the disabled worker would have to:

1. Be fully insured; and

2. Be currently insured; and

3. Have 20 quarters of coverage in the last 40 quarters ending with the first quarter of disablement.

D. The definition of disability would be the same as in present law for freezing the insurance rights of disabled persons (except there would be no presumed disability for the blind).

E. Where an individual is also receiving a workmen's compensation benefit or another Federal benefit based on disability, the disability benefit under the old-age and survivors insurance program would be reduced by the amount of such benefit.

F. In order to promote rehabilitation, an individual performing services in the course of a rehabilitation program carried on under an approved State plan would nevertheless be considered disabled (not able to engage in any substantial gainful employment) for a year after he first rendered such services.

G. The first month for which disability benefits would be payable would be January 1955.

III. Benefits for disabled children

A. The disability must have begun before the child attained age 18.

B. The child must have attained age 18 after December 1953 and must have been eligible for benefits before age 18.

C. The benefits would be first payable for the month of January 1956; a child who previously had been entitled to benefits and whose benefits had been terminated would have to file a new application.

D. Between 500 and 1,000 disabled children would become eligible on January 1, 1956. Some 250 to 500 children currently attaining age 18 would be continued on the rolls annually in the future.

IV. Extension of coverage

A. Coverage would be extended to:

1. Professional self-employed groups now excluded, except physicians—that is, lawyers, dentists, osteopaths, chiropractors, veterinarians, naturopaths, and optometrists (200,000 persons).

2. Employees of Federal Home Loan Banks (200 employees) and additional employees of the Tennessee Valley Authority (13,000 employees).

3. Agricultural workers engaged in the production of turpentine and gum naval stores (20,000 workers).

4. The above provisions would be effective January 1, 1956.

5. Rental income from a farm under certain conditions.

B. The status of share farmers covered under present law would be clarified to resolve any doubt in favor of their being self-employed for coverage purposes.

C. The following technical changes affecting coverage would be made in the Internal Revenue Code:

1. Employees of nonprofit organizations who were on the payroll when the organization elected coverage but did not elect coverage at that time would be given a limited time in which to elect coverage;

2. Nonprofit organizations would be enabled to acquire coverage for the quarter in which coverage is elected;

3. District of Columbia credit unions, whose employees are covered under OASI, would be subject to the OASI employer tax.

V. Tax rate changes

The schedule of tax rate increases would be accelerated and the ultimate rate raised above that in present law:

[In percent]

Years	Employers and employees		Self-employed	
	Present	Proposed	Present	Proposed
1956–59	2	2½	3	3⅜
1960–64	2½	3	3⅜	4½
1965–69	3	3½	4½	5¼
1970–74	3½	4	5¼	6
1975 and after	4	4½	6	6¾

VI. Establishment of advisory council on social-security financing

A. Purpose: To review the status of the old-age and survivors insurance trust fund in relation to the long-term commitments of the program.

B. Membership: Commissioner of Social Security as Chairman, plus 12 other members is to be appointed by Secretary of Health, Education, and Welfare representing, to the extent possible, employees and employers in equal numbers and self-employed persons and the public.

C. Report: Report and recommendations, including recommendations for changes in old-age and survivors insurance tax rates, would be submitted not later than January 1, 1959, for inclusion in the trustees' report to be submitted to Congress by March 1, 1959.

D. Duration: Council to go out of existence after submittal of report. However, a new council, similarly constituted and with same functions and duties, would be appointed not later than 2 years prior to each ensuing scheduled increase in tax rate, and would report its findings and recommendations not later than January 1 of year preceding year in which the scheduled increase is to occur, for publication in next ensuing trustees' report.

VII. Technical amendments

Technical amendments would be made to aline old-age and survivors insurance requirements with change to April 15 date for income-tax reporting; to put computations involving disability periods on an annual basis; and to preserve relationship between old-age and survivors insurance and railroad retirement programs.

VIII. Costs

The level premium cost, on intermediate basis, as percent of payroll, is as follows:

	Percent of payroll
Present law (current estimate, 1955)	7.51
Increase in cost resulting from proposed changes:	
Reduction in retirement age for women	.56
Monthly disability benefits beginning at age 50	.37
Extension of coverage	—.01
Continuation of benefits to disabled child beneficiaries beyond age 18	(1)
Total	.92
Revised law	8.43

[1] Less than 0.005 percent.

IX. Benefit payments

Additional benefit payments under the bill on an annual basis are as follows:

[Amounts in millions]

First year (1956):	
Reduction in retirement age for women	$389
Monthly disability benefits	200
Extension of coverage and continuation of benefits to disabled children	2
Total	591
Long run (1980):	
Reduction in retirement age for women	1,292
Monthly disability benefits	859
Extension of coverage and continuation of benefits to disabled children	43
Total	2,194

Agricultural Progress, 1953–55

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Agricultural Progress, 1953–55."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AGRICULTURAL PROGRESS, 1953–55

Since January 1953, the United States Department of Agriculture has moved swiftly and aggressively to meet many complex and serious farm problems. Through well-timed purchase programs, special merchandising promotion, and other constructive action in commodity markets, the Department first slowed the fall, then brought relative stability to farm prices after a sharp 4-year decline.

When drought struck in widespread areas of the country in 1953 and 1954, the Department immediately made low-priced feed and liberal credit available to farmers.

The Department has helped producers and warehousemen undertake the greatest expansion of on-farm storage facilities and commercial-type storage capacity in history. The Department has helped increase export trade in American farm products by cooperating closely with other agencies that func-

tion in the international field, by making full use of existing and new foreign trade legislation, and by carrying on positive negotiations with foreign governments and commercial interests.

In the meantime, the regular functions of the Department have been strengthened. A sound reorganization of Department agencies has made it possible to meet the real needs of agriculture more effectively than ever before. A cooperative review of the departmental field services was conducted. The review indicated that the Department's field staff is doing a good job and that there is general public commendation for the services being rendered; but it also disclosed certain activities where improvements can, and will, be made. This survey was a phase of the continuing review of United States Department of Agriculture activities aimed at improving services to the public. Increased emphasis has been placed on fundamental research and education programs.

The principle of flexibility has at last been applied in price programs as contemplated by Congress in the Agricultural Acts of 1948, 1949, and 1954. Flexible price supports for the basic commodities, which become partially effective with the 1955 harvests and fully operative in 1956, are designed to work toward better balanced production. These supports, ranging between 75 and 90 percent of parity, are the highest ever written into peacetime agricultural legislation.

AGRICULTURAL SITUATION AND OUTLOOK

The economy is growing at a healthy rate, production is increasing absolutely and on a per worker basis, consumer incomes are rising, and higher average standards of living are in prospect.

Though the parity ratio of prices received by farmers has declined for over 4 years, nearly two-thirds of the drop occurred before the present administration took office.

Between February 1951 and January 1953 (23 months), prices received by farmers dropped from 113 to 94 percent of parity—a decline of 19 points. But from mid-January 1953, about the time Secretary of Agriculture Ezra Taft Benson took office, to July 1955 (30 months), prices have fallen 10 points.

Realized net income of farm operators for the calendar year 1955 is expected to be close to $12 billion. On a per capita basis income of persons on farms rose slightly in 1954 over 1953. This was true both of income from all sources and income from farm sources alone.

United States agricultural exports in 1954–55 rose for the second consecutive year. Foreign markets took about 7 percent more farm products in the fiscal year 1954–55 than in the year earlier—which in turn had been 4 percent above 1952–53. Under current programs designed to export surplus farm products, further improvement in export outlets is expected.

Balance sheet

The financial position of United States agriculture continues good. Farm assets on January 1, 1955, totaled $163.5 billion, compared with $161.3 billion on January 1, 1954. The equities of farmers and other owners of farm property increased from $144.2 billion on January 1, 1954, to $145.5 on January 1, 1955. Total farm debt was $17.1 billion on January 1, 1954, and $18.0 billion on January 1, 1955.

Improvement in the dairy industry

The economic position of the United States dairy industry improved considerably after the spring of 1954, when Secretary Benson adjusted support prices on milk and butterfat to 75 percent of parity effective April 1, 1954. Production of milk has leveled off after having increased for nearly 2 years. Month by month, from December 1954 through April 1955 milk production was at a lower rate than a year earlier. During May and June, however, it slightly exceeded year ago levels.

Our people are using more dairy products. Consumption of milk products from commercial sources has increased, reflecting larger consumer incomes and lower retail prices since April 1, 1954. In addition, civilians consumed increased quantities of dairy products made available from Government stocks. Consumption of butter rose 6 percent in the 1954–55 marketing year. Cheese consumption rose 10 percent. CCC stocks of dairy products since the end of July 1954 have been reduced about 50 percent. CCC holdings of all dairy products at the end of July 1955 were about 600 million pounds and CCC butter purchases during October-July were 56 percent below the corresponding period a year earlier. By the end of 1955–56 marketing year, prospects are for comparatively small holdings of butter and nonfat dry milk and moderate quantities of cheese.

Improvement in the poultry industry

A policy of the Department in the past 2½ years has been to stimulate self-help programs. With the poultry industry beset by price troubles in the fall of 1954, the Department met with groups representing the egg, broiler, and turkey sections of the industry. Publicity following these meetings was an important supplement to regular outlook channels as a means of explaining to producers the influences which affect prospective prices.

During the early months of 1955, prices of broilers and farm chickens came back strongly. Average prices received by farmers for all chickens were between 87 and 90 percent of parity during April and May, as compared with about 75 percent of parity a year earlier.

At about the turn of 1955, broiler prices rose to a profitable level, and have continued so to midsummer.

Farmers raised fewer replacement pullets in the spring of 1955, and on June 1 the number of young chickens was 18 percent below the year before. After August, when current egg production would normally reflect the addition of new pullets to the laying flock, egg prices are expected to rise above last year.

The 1955 crop of heavy-breed turkeys is likely to be about up to the 1954 record, although the period of marketing in 1955 is likely to be more heavily concentrated later in the season than last year. On account of this change in timing, partly influenced by meetings with industry advisory groups, early fall prices are likely to surpass 1954. The poultry industry is setting its own house in order without Government subsidy or interference.

Plentiful foods program

The plentiful foods program achieved particular effectiveness in helping to meet marketing problems by increasing the movement of these foods through normal channels or raising the prices at which they moved. Beef, eggs, and dairy products are notable examples. Special merchandising programs on these items, conducted in cooperation with the industries, were instrumental in moving production of these commodities to consumers through regular channels of trade. The June dairy month program in 1955 stimulated increased consumption. Household purchases of butter were 14 percent above June 1954, and the customary May–June dip in butter consumption was virtually wiped out. Purchases of American cheese were up about 16 percent and Swiss cheese purchases almost 14 percent.

Beef

Early in 1953, beef prices were under strict Government control and grading of beef was compulsory. Beef prices were under immense downward pressure. One of the administration's first actions was to remove these restrictions—and beef began to move more readily into consumption.

A vast purchase program of boneless beef and carcass beef during the heavy fall marketing period helped stop and then reverse the price decline. At the same time, the Department in cooperation with the industry carried on an aggressive campaign to sell more beef through normal trade channels.

Thus the beef industry was helped to a sounder footing without resort to price supports on cattle and without undue involvement of Government in the livestock and meat industries.

Wheat

Following the approval by growers of wheat marketing quotas for 1956, Secretary Benson announced a 6-point program designed to improve the quality of future wheat crops and to minimize controls over production and utilization of this important crop.

He said the Department would:

1. Undertake to place in effect upon the 1956 wheat crop appropriate discounts in price supports for certain designated varieties of wheat, especially those suitable primarily for feed purposes. Premiums will be provided for quality wheat.

2. Continue its several programs aimed at achieving maximum practicable exports of wheat and flour.

3. Continue efforts to secure favorable congressional action authorizing the Secretary to broaden the noncommercial wheat area.

4. Continue efforts to secure favorable congressional action on legislation now before the Congress to exempt wheat growers from marketing quota penalties if all the wheat produced on their farms is consumed on the farms where produced.

5. Request legislative extension of special durum acreage provisions for the 1956 crop. Despite the excessive stocks of wheat, available supplies of durum wheat, used mainly for spaghetti and macaroni, are expected to continue short.

6. Give special consideration to programs which will further encourage farmers to make needed adjustments in their pattern of land use. This would be both on land ill-suited to crop production and on better lands where it would be advantageous to shift a part of the acreage to hay and pasture. The program now being developed for the Great Plains is an example of this.

The national wheat acreage allotment for 1956 will be the maximum permissible in view of the supply situation—55 million acres, the same as for 1955. Price support will be at not less than 76 percent of parity, or $1.81 per bushel, national average.

The problem of accumulated wheat stocks is a major one. The wheat carryover on July 1 was estimated at slightly more than 1 billion bushels, an all-time high. About 95 percent of this carryover was owned by Commodity Credit Corporation which had an investment of nearly $2.5 billion in wheat. This year's wheat harvest is expected to reach 860 million bushels.

Exports for the marketing year which ended June 30 hit 270 million bushels, an increase of more than one-fourth over the previous year. It is expected that exports for this marketing year will remain around the 270-million-bushel figure. This would mean a reduction of from 40 to 50 million bushels in the wheat carryover next July 1—the first decline in several years.

Cotton

Our carryover stocks of cotton practically doubled between 1953 and 1955, increasing from about 5.6 million bales to 11 million. By November 1955 it is estimated that the CCC will hold about 8 billion bales of cotton at a cost of about $80 million a year for storage and handling charges alone. The

trend of our exports on the other hand has been downward in the past 10 years.

The administration has endeavored to cope with this problem through acreage allotments and marketing quotas, as well as through extraordinary efforts to reduce the surpluses in being. For example, the USDA has given authorizations for the export of 600 million bales of cotton between August 1 and December 31, 1955, under title I of the Agricultural Trade Development and Assistance Act.

Unfortunately, several measures recommended by the administration to help deal with the cotton problem were not enacted into law. Thus, cotton legislation, which would have facilitated the establishment of more realistic premiums and discounts for the various qualities of cotton, failed to pass. This change was needed to encourage farmers to produce grades and staples of cotton most desired by domestic and export markets. Legislation which would have permitted the Department to sell qualities of cotton in excess supply at less than the minimum price in effect under existing law also failed to pass. Authority is needed to permit adjustments in price-support levels to make our cotton more competitive with foreign cotton and synthetic fibers. Legislative proposals to permit greater flexibility in cotton prices did not receive final action.

Increases in per capita consumption of food

The Department assisted industry groups in stimulating demand for meat and dairy products and improving prices to producers with favorable results. In 1954 our people ate more beef, eggs, and chicken and turkey per person than ever before. Promotion programs increased the prices at which these products moved. The per capita meat consumption of over 153 pounds in 1954, the same as in 1953, was close to a record, being exceeded only in the period 1905–08. Preliminary indications at mid-1955 pointed to a level of per capita food consumption slightly above the 1954 rate—which was 2 percent above 1947–49 and 13 percent higher than in 1935–39.

Since the change in price-support level on butterfat and the institution of special departmental programs to encourage consumption of butter has risen about a half a pound per person; this is equivalent annually to about 80 million pounds of butter and 1.6 billion pounds of milk.

LEGISLATIVE ACCOMPLISHMENTS

The Eisenhower administration has built a solid and effective record of accomplishment in agricultural legislation. It has continued, improved, and expanded farm legislation fitted to present-day needs; removed regulations and restrictions made obsolete by changing economic conditions; and charted new courses designed to make American agriculture sounder, to promote the health and security of farm families and to conserve and improve natural resources. The legislative record includes:

1. A more workable and equitable price-support program.

2. The Agricultural Trade Development and Assistance Act of 1954. In 1955 the authorization of sales under this act was raised from $700 million to $1.5 billion.

3. A measure to permit farmers to deduct some soil-conservation expenditures from farm income in computing income taxes.

4. A liberalized Farm Tenant Act to expand loan services for farmers to buy and improve family-type farms. The authority to make FHA emergency loans was also extended.

5. Public Law 482, providing additional health facilities of special importance in rural areas.

6. Drought disaster assistance.

7. Reestablishment of the Farm Credit Administration as an independent agency.

8. Approval of Reorganization Plan No. 2, which gave the Secretary authority to streamline the Department for better service.

9. Increased funds for research and education.

10. Amendment of the mining law to prevent abuses of and to safeguard natural resources.

11. Measures to provide more soil and water conservation.

12. Extension of social security protection to farm families.

13. The return of the agricultural attachés to the direct supervision of the Department of Agriculture, which helped strengthen efforts to expand foreign markets for United States agricultural products.

14. Elimination of acreage controls for durum wheat.

15. All farmers made eligible for cost-sharing payments on conservation practices, regardless of their participation in crop-control programs.

16. Improvement in basic legislation governing Rural Electrification Administration; the State allotment formula was modified permitting more concentration of funds in areas where extension of electric power are most needed.

17. Increase in borrowing authority of CCC from $10 billion to $12 billion.

PRICE SUPPORTS

This administration believes that price supports should be flexible—adjustable to conditions of supply and demand—rather than rigid.

When supports at rigid 90 percent of parity were inaugurated during World War II, it was generally agreed that this was strictly an emergency program—to end when more nearly normal marketing conditions returned.

The platforms of both major political parties in 1948 endorsed flexible price supports. So did the then President of the United States. So did the then Secretary of Agriculture.

Flexible supports were the heart of the Agricultural Act of 1948. A year later they were the core of the Agricultural Act of 1949. When the Korean war broke out, Congress again postponed the effective date for flexible supports, but left this key provision for a long-range peacetime program in the law. What was done essentially in the act of 1954, passed by the 83d Congress, was to allow the major parts of the Agricultural Act of 1949 to take effect.

Rigid price supports encourage unrealistic patterns of production. When support levels are out of line, output tends to outrun demand. Downward pressure on prices develops and increased support activity becomes necessary. Surpluses move into Government hands. Government holdings of farm commodities on June 30, 1955, had a cost value of over $4.5 billion—equal to more than 15 percent of total farm cash receipts in 1954. In addition, the CCC had loans of over $2 billion on farm crops.

Programs primarily for the support of farm prices and farm income in fiscal 1954 required an estimated $962 million. This was more than the Department spent for all other activities combined—research, education, soil conservation, forest service, credit services, marketing services, inspection, regulation, and all the rest.

Surpluses are expensive to store. The Government's bill currently is a million dollars a day. Only small quantities can be sold in the open market at break-even prices; the bulk can be disposed of only through subsidized sales or donations resulting in large losses to Government. Furthermore, surpluses make necessary onerous production controls—acreage allotments and marketing quotas.

Recognizing the shortcomings of rigid supports, Secretary of Agriculture Benson said early in 1953, "Price-support laws will be carried out faithfully in every respect. There are mandatory price supports at 90 percent of parity on the so-called basic commodities for 1953 and 1954. Other laws provide for supports on other farm products. While enforcing these laws, there will be formulated long-term programs which will more fully and effectively accomplish our overall objectives."

With the assistance of about 65 groups, including the National Agricultural Advisory Commission, farm organizations, agricultural colleges, and many other groups and individuals, a considerable number of farm program recommendations were brought together by the Department of Agriculture. These recommendations, submitted to Congress in January 1954 by President Eisenhower, became the basis for the Agricultural Act of 1954.

The new law, embracing the principle of flexibility, provides for supports on basic commodities in the range of 82½ to 90 percent of parity for 1955 crops, and 75 to 90 percent after 1955—the level of support to depend upon the size of the supply. New parity provisions, which previously were not allowed to operate for certain basic commodities, are scheduled to become effective on a transitional basis January 1, 1956. Set aside provisions, intended to lessen the impact of changing over from a rigid to a flexible price-support basis, already are in use. In the case of wool and mohair, the new legislation introduces a new system of incentive payments. The new program makes it possible for all domestic wool produced to move into consumption, assures equitable returns to growers, encourages efficient production and marketing, and requires a minimum of governmental interference with producers and processors.

SURPLUS DISPOSAL PROGRAMS

The Department of Agriculture has made good headway in developing practical disposal outlets for the surplus stocks it owns. In the January 1954 to May 1955 period, about $2,052,000,000 worth of surpluses were disposed of through the following channels:

	Percent
Domestic sales	26
Export sales	35
Sales to foreign governments	1
Transfers to other Government agencies	10
International barter	7
Donations	21
Total disposals	100

Domestic sales

Sales in the January 1954 to May 1955 period have totaled about $529 million. Feed grains, especially corn, and dairy products have been among the more important commodities sold.

Noncommercial sales

Disposals in this category, largely to foreign governments and international relief organizations, have amounted to $18 million. Wheat and nonfat dry milk have been the principal items sold.

Transfers

Legislation now in effect authorizes the transfer of commodities from CCC's price-support inventory to the International Cooperation Administration, Department of Defense, Veterans' Administration, and to schools for use in lunch programs. The value of items transferred during the 17 months total $202 million.

International barter

Commodities from CCC's inventories have been bartered for materials produced in foreign countries. Barter operations in the January 1954 to May 1955 period amounted to $148 million, consisting largely of wheat, corn, and other grains.

Donations

To prevent waste, section 416, Agricultural Act of 1949, as amended, authorizes CCC to donate its food commodities for certain uses both in the United States and abroad. In the January 1954 to May 1955 period, donations have amounted to $430 million, largely representing donations of dairy products for school-lunch use in the United States and for relief purposes abroad.

School milk program

In the field of food distribution, a major achievement was successful introduction of the new special school milk program, to increase use of milk by children in school, in preference to moving it into Government purchase channels. During the fiscal year, this program resulted in children drinking well over 400 million additional half-pints of milk in schools. As a result of operating experience in the first year, modifications have now been made in the program which will make it even more useful next year in increasing the consumption of milk in schools.

School lunch

Participation in the national school lunch program showed another substantial increase. The number of children eating lunches under this program rose to a new high total of more than 11 million in more than 59,000 schools.

Export sales

Sales have totaled about $721 million in the January 1954-May 1955 period, wheat being the most important single commodity, although corn and other feed grains, cotton, cottonseed oil, linseed oil, and tobacco have been marketed in considerable quantities.

Public Law 480

Contributing to the heavy volume of export sales is activity under title I, Public Law 480 (the Agricultural Trade Development and Assistance Act of 1954), which authorizes the sale of CCC-owned surpluses for foreign currencies.

Under title I of of the act, the Commodity Credit Corporation was authorized to incur costs not in excess of $700 million over a 3-year period in financing the sale of surplus agricultural commodities for foreign currencies. The act provided that such currencies could be used for the development of new markets for United States agricultural products, meeting United States obligations abroad, and other purposes beneficial to this country's foreign interests.

As of June 30, 1955, programs for the sale of agricultural commodities under title I reached a total of $468.8 (CCC cost) and $360.8 million (export market value). The commodities included under agreements with 17 countries involve about 53 million bushels of wheat, 62 million pounds of tobacco, 647,000 bales of cotton, and 141 million pounds of cottonseed oil.

Countries covered by these agreements were: Turkey, Yugoslavia, Chile, Peru, Pakistan, Spain, Argentina, Israel, Finland, the United Kingdom, Italy, Japan, Korea, Austria, Thailand, Colombia, and Greece.

Operation of title I utilized private trade channels to the maximum extent and, in accordance with the law's requirements, was carried out without displacement of this country's usual foreign marketings, without undue disruption of world agricultural prices, and with assurance that farm products sold would not be diverted to unfriendly countries.

MEETING THE DROUGHT

To battle the drought that persisted throughout about a third of the Nation, the Department took action on two fronts—immediate and longer term.

On the immediate front, departmental programs made it possible for eligible farmers and ranchers to get emergency credit, cost-share help in conservation work, hay at reduced transportation cost, and certain feed grains below the market price. Farmers and ranchers in 19 drought-designated States obtained some 50,000 loans, amounting to about $72 million. Of a total of $9,900,000 advanced to 18 States taking part in the hay program, $5,445,000 had been drawn by States as of June 30, 1955, to help pay hay hauling costs in 1,055 counties. In the feed grain program, 1,170,846 purchase orders were issued during the fiscal year to farmers and ranchers who bought more than 58 million hundredweight of grain through established feed dealers at a saving of $49,654,628.

On the longer range front, Secretary of Agriculture Benson, after a personal tour of drought-stricken parts of the Great Plains, called an emergency meeting of USDA specialists, representatives of the 10 Great Plains States land-grant colleges, and the governors of those States (Denver, May 30-June 2.) Proposals developed at this meeting were reviewed by a wide variety of interests. Later meetings sparked State programs designed to move the area's agriculture toward desired goals.

The USDA moved promptly to adjust its own programs to Great Plains needs. In cooperation with State experiment stations the USDA's Soil Conservation Service doubled the rate of soil mapping in the region, and made plans to further accelerate the work. SCS hopes to complete the survey of this vast area by June 30, 1959. Immediate attention is being given critical areas where soil survey data are needed at once as a basis for land use shifts.

Other USDA agencies are working out program modifications that will sharpen their effectiveness in making use of crop insurance, credit, cost-sharing in conservation work, research, and education and technical assistance as tools for use in development of a better land use program for the Great Plains.

CONSERVING OUR NATURAL RESOURCES

Conservation of soil, water, and forest resources has high priority in programs of the Department of Agriculture.

With assistance from USDA in research, education, conservation, planning and application, cost-sharing and credit programs, farmers and ranchers of the United States have become world leaders in protection and improvement of these resources.

Soil-conservation districts

Acting under provisions of State law, farmers and ranchers have organized 2,665 local soil-conservation districts, which include 90 percent of the Nation's farm and ranch lands. The Department is providing direct technical assistance in planning and applying conservation practices to more than 1½ million cooperators in these districts.

Cost sharing

Through the agricultural conservation program the public shared with farmers the cost of certain conservation measures to protect, improve, and make better use of soil and water resources. Special cost-sharing to augment the regular practices was made available to meet emergency conditions due to drought and floods.

It is estimated that total accomplishments since the beginning of ACP on some of the conservation measures for which cost-sharing has been approved are now about: 1.1 million miles of terraces for erosion control on 21½ million acres; 1¼ million dams and reservoirs for erosion control, livestock, and irrigation water; 1¼ million acres reforested, 110 million acres stripcropped, and 75 million acres of permanent vegetative cover established on crop or pastureland.

Protecting water resources

A significant extension of the Department's conservation program has developed under provisions of the Watershed Protection and Flood Prevention Act (Public Law 566) which was enacted in August 1954. Under this act, for the first time, the Department is equipped to help groups in small watersheds to build small dams and other water management structures needed for flood prevention as well as to make conservation planning more effective by extending it to entire small watersheds. In the first 10 months after its enactment, 347 watershed groups in 37 States had applied to the Department for assistance under terms of this act. By July 1, 1955, 68 of these projects in 33 States had been approved for planning.

Saving our timber

In the national forests, timber production reached a new high of 6,328,000,000 board feet in fiscal 1955. This sale of timber brought a return of $70,680,000 to the United States Treasury. The first pulp mill in Alaska began operation, with a continuing supply of raw material to come from the Tongass National Forest. National forest ranges provided 5,686,802 cow-months and 8,442,932 sheep-months of grazing. Recreational visits totaled over 40 million in 1954, more than double the highest prewar figure.

The Department cooperated with 43 States, also Hawaii and Puerto Rico, in the production and distribution of trees to farmers and other landowners for planting woodlands and shelterbelts. The 465 million trees produced in 1954 represented the highest production in the history of the Nation. The Department also cooperated with the States and Hawaii to provide organized protection against fires for State and private forest lands. Cooperative protection was extended during the year to 3½ million additional acres of privately owned land. Under a cooperative program between the Department and the State forestry agencies, technical advice in woodland management was given to 32,000 farmers. Technical assistance was also provided other public agencies, such as the Department of the Army, and large forest industries.

Significant results were obtained in numerous research projects during the year, aimed at finding better ways to manage and protect forests and ranges, improve the yield of usable water from forest watersheds, and determine new and better ways of using wood.

RURAL DEVELOPMENT PROGRAM

In April 1955, Secretary Benson sent a report on low-income rural areas to the President along with a series of recommendations, which call for more technical and credit aid for small farmers, better training for their children, special research, more industrial investment in these areas, and a large measure of local control over the program.

In cooperation with the States, the Department has begun planning on the rural development program to raise levels of living in certain areas of the Nation where many farm families have long suffered from inadequate incomes. This is a program to assist those small farmers who have gained little or nothing from the price-support programs of recent years.

Bills have been introduced in the Congress for increased extension work and FHA lending authority to aid small farmers. And officials of the Department of Agriculture and other Federal departments have met with officials of 28 States to discuss cooperative planning and operations.

In fiscal 1956 pilot operations were planned for 50 counties. Committees of local people are expected to help the program in these counties. These pilot operations were designed to provide experience and information for use as the program is broadened. Unfortunately the funds requested to get the program operating effectively were not appropriated by the Congress.

MORE EMPHASIS ON RESEARCH AND EDUCATION

From fiscal 1951 to fiscal 1953, United States Department of Agriculture budgets for research operations were not increased. For fiscal year 1954, an increase of $2.6 million

was appropriated. For fiscal year 1955, we requested and Congress appropriated a further increase of $12.3 million for research. For fiscal 1956, agricultural research funds were increased another $8 million.

The additional research money helped to step up many lines of scientific investigation, including those to devise new uses and open wider markets for farm products, especially surplus commodities; to make livestock production more efficient and lower costs to farmers; to find better forage crops, especially for the Great Plains and southern areas; and to speed up soil conservation studies. More than half the additional funds went directly as grants to States to conduct experiments on local problems.

A stepped-up cooperative program with the States to eradicate brucellosis from the Nation's dairy and beef cattle herds got underway with a special $15 million appropriation augmenting other moneys available for this purpose. The long fight on foot-and-mouth disease in Mexico, in which the United States Department of Agriculture cooperated with Mexican officials, was successfully concluded by eradicating the disease and the border again was opened to livestock imports.

Extension work in cooperation with State and county governments was further strengthened during the year to take research results, situation, and program facts to farm people and help them fit the latest facts together on their own farms.

An increase of more than $7 million in Federal funds and $3½ million more from State legislatures provided for employment of 915 additional county extension workers and 110 State extension specialists and supervisors. Major emphasis was placed on a total farm and home unit approach to the problems farm people face. The Department and the States signed new extension memoranda of understanding during the year with major emphasis on localized extension educational work.

Marketing research

In the field of marketing research much effort was directed to holding down costs and improving marketing efficiency.

Development of improved aeration and fumigation methods for stored grains is effecting savings amounting to millions of dollars a year. By recirculating methyl bromide gas through stored wheat, for example, the cost of the chemicals required to protect 1,000 bushels was cut from roughly $5 to $1. With a billion bushels of wheat now in the carryover, the actual saving in the marketing process is obvious. Aeration through recirculation of air, recently developed, also is preventing spoilage of grains in storage. Both these processes are applicable not only to wheat but also to corn and other stored grains.

A study of efficient equipment and methods in self-service meat departments in grocery stores showed that sales per man-hour rose one-fourth when suggested improvements were adopted in a group of test stores. In the check stores, where the changes were not made, there was practically no change in the sales rate. The study points the way toward a corresponding reduction of costs in many stores.

Another study showed that a saving of $80 a carload could be effected in packing and shipping lettuce from California to New York, by shifting from the old WGA wooden crate, ice-packed in the packing shed, to dry-packing in fiberboard cartons in the field of vacuum-cooling.

Other marketing studies pointed the way toward substantial economics and improvements in marketing many commodities. These include lower cost methods of storing seed cotton at gins, large savings through more efficient methods and facilities in storing grains, a way to reduce injuries and consequent quality loss in turkeys during the slaughter process, substantial reductions in costs of handling apples at packing plants, improved management for wholesale produce markets, and numerous other improved practices.

CREDIT

Agencies of the Department continued their problems of supplementing private credit in assisting farmers to operate, purchase, enlarge, and improve their farms, and to meet emergency credit needs.

During fiscal 1955, Farmers Home Administration launched a new loan program. The water facilities loan program, formerly operating only on a direct loan basis and only in 17 western States, was replaced by an expanded soil and water conservation loan program operating in all States and possessions. Loans in this program are for approved soil-conservation practices as well as for water conservation and use.

The use of private funds rapidly expanded during the year. Funds for soil and water conservation loans, as well as for loans to purchase, enlarge, or improve farms, come from (1) funds advanced by private lenders with repayment insured by the Government; and (2) appropriated funds. Loans from insured funds far outnumbered those from direct appropriations in both the soil and water conservation and farm ownership loan programs.

Production and subsistence loans continued to assist family type farm operators to operate their farms efficiently and on a sound basis. These loans are for seed, feed, fertilizer, equipment, livestock, and to pay other operating costs.

For all these loans borrowers had to be unable to obtain adequate financing from private or cooperative lenders. All were required to advance as promptly as possible to private or cooperative credit to meet their farming needs.

For farmers and ranchers unable to obtain credit elsewhere to meet operating expenses, special livestock loans that were first made available in 1953 were continued through the 1954–55 fiscal year.

In addition to the special livestock loans, emergency loans were made from a revolving fund to farmers in areas, designated by the Secretary of Agriculture, in which it was found that this type of assistance was needed. The loans were to help farmers continue normal operations when, due to production losses or economic reasons, they needed credit they could not obtain from other sources. A total of 1,607 counties in 35 States were designated for emergency loans during the 1954–55 fiscal year.

ELECTRICITY: A FARM TOOL

Rural telephones

Telephone loans approved by REA for improving and extending telephone service in rural areas amounted to $52,744,000 for fiscal year 1955. There were 147 separate loans to telephone companies and nonprofit associations in 33 States and Alaska. This brings to more than $234 million the total in REA telephone loans to 351 borrowers. More than half a million farms and other rural establishments will have modern dial telephone service as a result of these loans. As of June 30, 1955, 157 telephone borrowers had already used REA loan funds to place in service a total of 553 dial exchange offices for rural service.

Applications for telephone loans are being processed by REA at a rate which cut down the backlog to about half of what it was a year ago. This backlog reached a low of $46 million at the end of March 1955. An increased flow of applications since then has brought the amount of applications on hand to about $51 million.

Rural electrification

More than half of the Nation's electrified farms are served by systems financed by REA loans. In the 1955 fiscal year, REA made new loans of $167.5 million to meet rural power system needs and cut its backlog of applications down to $97 million, the lowest since 1947. The total amount of REA electric loans is now $3,050 million. REA electric borrowers have repaid more than 15 percent of the funds actually advanced to them, together with over $200 million in interest. Only 19 out of the 1,000 borrowers are behind schedule in their repayments. Overdue payments amount to less than $500,000.

Nearly a quarter of last year's loans were earmarked for generation and transmission facilities for borrowers in power-deficient areas of the country. These included two new power co-ops in Colorado which will integrate their output with that of nearby power company systems. The average amount of kilowatt-hours consumed on farms served by REA borrowers has doubled during the last 7 years.

Atoms for agriculture

Studies are under way to determine the practicability of atomic energy as a source of power for rural electrification. REA has a team of specialists cleared to study developments in the nuclear field. Several REA borrower groups have agreements with the Atomic Energy Commission for studying the engineering and economic possibilities of this new source of power. One REA borrower proposes construction of an experimental atomic-energy plant in its area.

While indications are that atomic energy is still not competitive with conventional fuels, the studies currently under way promise that as soon as nuclear power becomes feasible, rural electrification will be in a position to benefit from this development.

Foreign Aid: People Are Insisting It Should End

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, the people who pay the taxes that go to pay for the foreign-aid program are way ahead of the Congress in insisting that it is time to terminate this policy.

As part of my remarks I am including an editorial from the Janesville (Wis.) Gazette on the subject. The Gazette has always been an advocate of the program and at all times went along with it. The editorial, however, now raises the question of the end of foreign aid.

Mr. Speaker, at this time in connection with this matter some Members of Congress are attempting to convince the public in speeches and in press releases that foreign aid is good for our economy, in that it takes surplus farm products off our hands and generally keeps men employed.

This is an unsound and fallacious argument, Mr. Speaker, because it is only half true. The prosperity that results from American handouts overseas must be paid for and that is done by the sweat of American taxpayers.

There is no profit, Mr. Speaker, for anybody, including the farmers, workers or business when one pays $5,000 for a $3,000 automobile.

Advocates of the giveaway foreign-aid program should be truthful and tell the whole story by admitting that this policy unless soon terminated, will continue to increase our national debt and compel the taxpayers to face a bigger tax burden in the future.

END MUST BE NEAR ON FOREIGN AID

Foreign aid appropriations, which represent the difference between a solvent American Government and one operating in the red, will come up in a broadcast and TV debate this week. In favor is Senator JOHN SPARKMAN, Alabama, Democrat, and against, Senator WILLIAM E. JENNER, the Indiana anti-Eisenhower Republican.

The arguments which they present, at the extremes of the issue, shed but little light on the problem. Senator SPARKMAN, for example, asks if it is in the national interest to disarm South Korea, or to give up our military bases in Japan, the Middle East, North Africa, Great Britain, and France. Obviously, we have no such intention.

Senator JENNER, on the other hand, says that foreign aid is a gigantic boondoggle, with those in charge of administration more interested in building a political machine for themselves and creating pressures for continued foreign spending than they are in American interests in the world.

Certainly there is a measure of truth—sometimes forgotten—in his comments that "what we call foreign aid buys American coal and books, wheat, and radio services, it gives orders to American manufacturers and farmers." To that extent, it undoubtely has support of groups which stand to gain. It is not nearly so clear, however, that we extend "no military aid to any country, for a purpose which the United Nations—that is, Soviet Russia—"might object to."

A good deal of the foreign aid serves a much less dramatic, though perhaps equally questionable purpose when it finally reaches foreign countries. A new report from Norway, for example, shows that the remaining unused funds from America have been allocated by agreement, 50 million krona for defense; 15 million for productivity purposes, and 24,400,000 for development projects.

Norway, it appears, has received $460 million in American dollars, nearly all in grants of aid, made available to importers in exchange for Norwegian currency. Says the Norwegian Government report: "Although Kr. 2,370,600 of the Kr. 2,460,000 in counterpart funds has already been used, the largest part, Kr. 1,931,000, went to pay off and cancel money bills issued by the Germans during their wartime occupation of Norway. Other major allocations included Kr. 325 million for defense purposes; Kr. 86 million for special investment projects; and Kr. 28,560,000 to finance the Norwegian Productivity Institute."

This gives a broad picture as to foreign aid for one of the dozens of nations helped. American dollars here prevented financial calamity.

The need for aid following the war was staggering. The United States shouldered the burden and the results have been amazingly good, at least from the viewpoint of world economic recovery. In retrospect, it appears that the job might have been accomplished effectively at substantially lesser cost. Inevitably, immense sums were unwisely or needlessly spent but most Americans will not criticize too strongly a task which now appears to be complete.

That does not go for the overgenerous gifts which Congress voted just before it adjourned. It was shown then that nearly $9 billion in foreign-aid money remained unspent, estimated to be adequate for 3 years. With this figure before them, the Congressmen nevertheless authorized three and a half billion more.

While we are willing to forgive some unwise spending and to acknowledge the need and the general success of the foreign-aid program in the 10 years since 1945, we are entitled now to assurance that this program is not a permanent burden. There must be an end somewhere, and that time is not when American has financed every possible need of every foreign nation. We have unsatisfied needs at home, and we should give attention to our own welfare and to tax relief for our citizens.

Excise-Tax-Structure Revision

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. FORAND. Mr. Speaker, the Honorable JERE COOPER, chairman of the House Committee on Ways and Means, has established a Subcommittee on Excise Tax Technical and Administrative Problems to make a basic study of our excise-tax structure with a view to correcting inadequacies and inequities that may exist in the administrative and technical aspects of that structure.

It was my privilege to be named chairman of this important subcommittee. My committee colleagues who will serve with me as subcommittee members are: The Honorable EUGENE J. KEOGH; Hon. BURR P. HARRISON; Hon. A. S. HERLONG, JR.; Hon. THOMAS A. JENKINS; Hon. RICHARD M. SIMPSON; and Hon. NOAH M. MASON.

Because this is the first comprehensive revision of our excise-tax structure to be undertaken by the Congress in contemporary times, I am sure that I speak for my colleagues on the subcommittee, as well as for myself, when I say that we view this important undertaking as a responsibility that is to be performed conscientiously and diligently.

At an organizational and agenda meeting of the subcommittee it was agreed that public hearings would be held by the subcommittee beginning October 4, 1955, to last for 2 weeks. In agreeing to these hearings the subcommittee decided that they would be limited to technical and administrative problems in the excise-tax area and that the question of excise-tax rates would not be considered by the subcommittee.

For the information of interested persons, I am inserting in the RECORD at this point a copy of the release which the subcommittee authorized me to issue announcing the public hearings and setting forth the scope and plan of the hearings:

HON. AIME J. FORAND, chairman of the Subcommittee on Excise Tax Technical and Administrative Problems of the House Committee on Ways and Means, today announced that the subcommittee has scheduled public hearings on excise tax problems to begin on October 4, 1955. It is the firm intention of the subcommittee to conclude the hearings in not to exceed 2 weeks. Chairman Forand stressed the fact that the hearings would be limited strictly to technical and administrative problems and will not be concerned with questions of excise-tax rates.

Members of the subcommittee are: The Honorable AIME J. FORAND, Democrat, Rhode Island, chairman; Hon. EUGENE J. KEOGH, Democrat, New York; Hon. BURR P. HARRISON, Democrat, Virginia; Hon. A. S. HERLONG, JR., Democrat, Florida; Hon. THOMAS A. JENKINS, Republican, Ohio; Hon. RICHARD M SIMPSON, Republican, Pennsylvania; and Hon. NOAH M. MASON, Republican, Illinois.

Representatives of the Department of the Treasury will be invited to open the hearings to present to the subcommittee those problems which have come to the attention of the Treasury Department and also to outline in detail the procedures followed in collecting and administering the various excise taxes. Following the testimony by the Treasury representatives, public witnesses will be scheduled in the order of the following excise categories in which they may be interested:

1. Retail taxes;
2. Manufacturers excises;
3. Excises on facilities and services (admissions, communications, transportation, etc.);
4. Documentary stamp taxes;
5. Excises on wagering, coin-operated devices, bowling alleys, etc., and regulatory taxes (except those on narcotics); [1]
6. Import taxes;
7. Taxes on distilled spirits, beer, and wines;
8. Taxes on tobacco products; and
9. Other excises.

Within each of these categories industry representatives and others desiring to testify on an entire category will be scheduled for first appearances. Other witnesses will be scheduled according to the order in which the taxes on which they wish to testify appear in the Internal Revenue Code of 1954. In the interest of avoiding duplication of testimony, it is requested that to the maximum extent possible an industry group select one spokesman to present the views of that industry.

To facilitate the orderly consideration of excise tax problems by the subcommittee, witnesses are requested to divide their prepared testimony into three broad groupings to the maximum extent possible. The three groupings are:

1. Administrative problems, such as, but not limited to, those arising in connection with procedures followed with respect to publication of rulings, refund requirements, and the system of review of excise tax rulings;

2. Technical problems relating to broad groups of excises, such as, but not limited to, the determination of a fair manufacturers' price and the treatment of leases in the case of the manufacturers' excise taxes; and

3. Technical problems relating to individual excises, such as, but not limited to, the timing of the collection of the tax in the case of tires, the treatment of reclaimed oil in the case of the tax on lubricating oil, and the treatment of charitable and similar organizations in the case of the tax on admissions. A witness may testify on more than one of these groupings, but it is requested that each grouping be clearly separated and captioned in the copies of the prepared testimony.

Persons interested in appearing at these hearings may arrange to do so by writing to the clerk of the Committee on Ways and Means, room 1102, New House Office Building, Washington 25, D. C., by not later than September 24, 1955. It is requested that prospective witnesses indicate in their letters to the clerk the categories on which they

[1] The subcommittee will not consider regulatory excises on narcotics in view of the existence of another subcommittee of the Committee on Ways and Means with jurisdiction over this subject.

will testify, and where pertinent, the sections of the 1954 Code on which they will testify. Witnesses should also indicate the minimum amount of time required for their testimony.

Statements may be submitted for the record in lieu of an appearance. A witness interested in more than one of the excise categories set forth above may testify on each category at the time of its consideration by the subcommittee. An an alternative to multiple appearances by a witness who is interested in more than one category, testimony may be given on the subject or subjects of major importance to the witness and briefs submitted for the record concerning other topics of interest.

Witnesses will be notified of the scheduled date of their appearance. The hearings will be held in the committee hearing room in the New Office Building and will begin each day at 10 a. m.

It is requested that witnesses submit 40 copies of their prepared statements to the committee clerk at least 4 days in advance of their scheduled appearance. In the event that a witness desires to make copies of his testimony available to the press, it is suggested that an additional 40 copies be submitted to the clerk for that purpose.

Failure of Our Foreign Policy in Germany

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, Robert McCormick, of the NBC staff, is an outstanding authority on the European political situation. Recently he participated in a TV program entitled "Comment" and it was my privilege to have heard him. His first two sentences came as a shock to me and I immediately requested a copy of his statement for insertion in the RECORD. NBC graciously granted my request and Mr. McCormick's remarks follow:

COMMENT

(By Robert McCormick)

Perhaps the most disillusioned group in our foreign service is in Germany. The things that happened in West Germany, just before and just after she was made a sovereign nation, are sometimes difficult to believe.

We must remember that the Allies had 10 years to figure out what to do with their particular chunks of what was the Third Reich. They had more than 3 years for the specific planning that led to ratification of the Paris agreements.

Yet when sovereignty actually came to Germany, we were caught flatfooted on a number of issues that superficially may seem to have little international significance, but which are extremely important to our prestige in all of Europe.

For example: Sovereignty had literally just become official, when a phone rang in Army headquarters in Heidelberg; it was the office of the West German Finance Ministry, requesting an audit, forthwith, of the Army welfare fund. The welfare fund is made up of the profits of the Army-supervised PX, the liquor stores, theaters, and such, as well as the revenue from the monopolistic bookstores run by the Army newspaper Stars and Stripes. The funds are used to provide recreational facilities—bowling alleys, tennis courts, and so on, for the American soldiers who help defend Germany.

But the Germans wanted the audit so they could figure out how much to tax the fund.

About the same time, the Finance Ministry came out with a truly startling proposal; while the United States was figuring out how many millions of dollars worth of military equipment it should give the new German Army, Finance Minister Schaffer and his boys decided we would have to pay what amounted to an import tax, on all the military equipment we had ordered before sovereignty, but which would be delivered after sovereignty, and yet these goods were to be paid for, with occupation funds—the money defeated Germany had to put up, to finance the occupation.

The total bill presented us—between a million-and-a-quarter and two-million dollars.

Then came another surprise. Just about the time of the explosion over our agreement with the Lufthansa—an agreement under which the reborn Germany airline was to get extraordinary concessions in routes involving American territory—just at this time, Germans announced they were reimposing an old Nazi tax, a so-called turnover tax on all foreign air traffic over Germany. The tax would be 4 percent of the prorated revenue received by our airlines, for all freight and passengers carried over German territory. When I left, the argument was still going on, but the Lufthansa got its agreement.

Then there was the question of the State Department's PX, commissary, and clubhouse. The PX is a modestly stocked general store in the American community just outside the West German Capital of Bonn; the commissary sells food, much of it purchased on the German economy, and the club is just a club.

Such establishments are routine diplomatic establishments in almost every country in the world, even in Russia; but the Germans decided the PX and the commissary should be closed, and the club severely limited in its operations. They asked for an inventory of club stocks 1 day before sovereignty became official.

The action was based on another Nazi regulation, dating back to 1939, forbidding collective imports by diplomats; they can bring in anything they please individually, without paying import taxes, but they cannot import, tax free, goods for the use of all.

The American Embassy solved this embarrassing predicament by asking the Army to supply the two stores; the Army had been more foresighted, and worked out a written agreement covering its own installations.

So far as the club was concerned, it was technically divided into three parts: American, French, and British diplomats can drink tax-free American whisky and eat commissary food; other diplomats must bring their own; Germans cannot buy anything but beverages on which full taxes have been paid.

There are lots of other angles: Such as Germany's traditional severe restrictions on the importation of agricultural commodities, restrictions which we failed to get changed in 10 years of occupation.

The result of all this was simply that we looked awkward, and sometimes downright silly.

Yet in the midst of making concessions, we did other things that were quite out of character. Ambassador Conant, for example, had a private train, financed with occupation funds.

There are no longer any occupation costs for Western Germany, but when I left, Conant still had his three-car diesel train, to the tune of $109,000 a year.

The Ambassador's train was supported by the Berlin occupation funds by the beleaguered people of West Berlin, fighting for their existence, deep in the Russian Zone.

But on those other matters—taxes and PX's, and so forth—we realized, too late, that we made one mistake after another; one of our very top diplomats in Bonn told me bluntly, "Our only excuse is plain boneheadedness."

Another of those caught napping said ruefully, with a belated show of ferocity, "From now on, we'll just have to adopt different methods, in dealing with the Germans."

He was righter than he knew—and also later. The Germans cannot be blamed for extracting all they can from us.

But our lack of detailed preparation for sovereignty, as indicated by these incidents; our failure to stand up against unreasonable demands; disclose our naivete and inexperience in foreign affairs, for all of Europe to see. This experience shows up most sharply, in the day-to-day operations, where major policies laid down at the top, are actually carried out.

And that's the truly disturbing aspect, of our personal relations, so to speak, with sovereign West Germany.

Selective Military Service

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. O'HARA of Illinois. Mr. Speaker, since the enactment of Public Law 118, I have received many letters of inquiry from young men as to how they are affected by this legislation. I presume such has been the case with many of my colleagues.

By unanimous consent I am extending my remarks to include the analysis of Public Law 118 prepared on my request by the Library of Congress and which I hope will prove as helpful to my colleagues as it has to me. The analysis follows:

PUBLIC LAW 118, 84TH CONGRESS (AMENDMENTS TO THE UNIVERSAL MILITARY TRAINING AND SERVICE ACT)

Section 101:

(a) Exempts from training and service under provisions of the Universal Military Training and Service Act any person who serves on active duty subsequent to June 24, 1948, for not less than 18 months in the armed forces of a nation with which the United States is associated in mutual defense activities. Denies this exemption to nationals of country having no such reciprocal provisions for United States citizens. Credits active duty prior to June 24, 1948, in the armed forces of World War II allies with whom the United States is associated in mutual defense activities in the computation of the 18-month service period.

(b) Exempts from training and service under the Universal Military Training and Service Act one who (a) has served honorably in the Armed Forces for a minimum 1-year period on active duty after September 16, 1940, or (b) subsequent to September 16, 1940, was discharged for the convenience of the Government after having served honorably on active duty in the Armed Forces for a 6-month minimum period, or (c) served a minimum 24 months as a commissioned officer in the Public Health Service, or in the Coast and Geodetic Survey except during time of war or national emergency. Sub-

jects this provision to provisions relating to medical, dental, and allied specialist categories (U. S. C. 50 App.: 454 (i)).

(c) Exempts from training and service in the Armed Forces persons who enlist in the State National Guard prior to attaining age 18½ after such persons having reached age 28.

(d) Prohibits consideration of the shortage or surplus of an agricultural commodity in determining where a person should be granted a deferment on the grounds that such person's employment is necessary to the maintenance of national health, safety, or interest.

Section 102: Extends the regular draft for 4 years (until July 1, 1959).

Section 103: Extends the Dependents Assistance Act for 4 years (until July 1, 1959).

Section 201: Extends the Doctors Draft Act for 2 years (until July 1, 1957).

Section 202: Exempts from induction under the Doctors Draft Act: (a) medical, dental, and allied specialists over age 35 who have applied for a commission in one of the Armed Forces in any such categories and have been rejected on the sole ground of physical disqualification; or (b) medical, dental, and allied specialists upon reaching age 46.

Section 203: Continues existing law which authorizes additional pay for commissioned officers in medical, dental, and veterinary corps of the Armed Forces serving on active duty.

Soviet Union Mobilizing Athletes Prior to 1956 Olympic Games

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. BUTLER. Mr. President, as further evidence of the efforts of the Soviet Union to befoul the Olympic games, I ask unanimous consent to have included in the Appendix of the RECORD a very illuminating article which appeared in the sports columns of the New York Times on Sunday, April 3, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOVIET UNION MOBILIZING ATHLETES PRIOR TO 1956 OLYMPIC GAMES—INTENSIVE DRILLS SLATED THIS YEAR—RUSSIA SETS UP VAST SPORTS PROGRAM, WITH TESTS TO BE HELD ALL OVER NATION

(By Clifton Daniel)

Moscow, March 21.—They say in Moscow that it has not yet been decided whether the Soviet Union will take part in the next Olympic Games in Australia. However, the Russians will be ready in '56.

Moscow's sports authorities have already been alerted by the showing of Soviet sportsmen in the past winter's competitions—they suffered reverses in speed skating, skiing, and ice hockey—and have begun to make plans for improving their performance.

Mentioning the Olympics, the newspaper Trud, publication of the trade unions, said today that "to carry the banner of Soviet sports through the coming international competitions with honor, serious, meticulous preparation is necessary, a mobilization of all the forces of the sporting organizations of our country."

Plans for such a mobilization have already been laid. During this year and next the whole sports manpower—and womanpower—of the Soviet Union will be assembled, reviewed, and tested in a vast series of competitions.

If Soviet athletes then appear in Australia, they should be formidable bidders for team supremacy. If they fail, it will not be for lack of preparation.

NOT CONSIDERED BY FANS

Even 5 years ago sports fans had scarcely considered the possibility the Soviet Union, which was so rarely represented in international competition, would emerge as one of the top contenders for world honors.

The appearance of Soviet athletes as serious challengers at the Helsinki Olympics, at ski meets in Switzerland, at the Henley regatta, and in almost every other field of sports took other contestants—and spectators—by surprise.

At Helsinki the Soviet competitors won 38 gold medals, 54 silver medals, and 16 bronze.

At the moment Soviet athletes claim 85 world records, not all yet confirmed by international bodies.

During the past 5 years, Soviet sportsmen have battered their own country's records—more than 2,000 times and have broken world marks more than 200 times, according to the record books here.

How did it happen?

The answer very simply is that the Soviet Union takes sports seriously, probably more seriously than any other country in the world. It spends more time, effort, and money on athletics than anyone else.

A POLITICAL ASPECT

This intense attention to sports, like almost everything else in the country, has a political and ideological aspect.

"The Communist Party and Government consider physical culture and sport as one of the means of Communist education of the working people, strengthening their health and their preparation for work and the defense of the Socialist fatherland," the daily newspaper Sovietsky Sport has remarked.

"Massiveness," it said, "is the characteristic feature of Soviet sport."

Facts and figures underline the point:

There are now in the Soviet Union 1,200 stadiums and 55,000 other physical culture and sports establishments such as gymnasiums, swimming pools, ski runs, hostels for hikers, and so on.

Physical education is compulsory in all schools. In addition, 120,000 children attend 180 special sports schools.

Theoretically, every able-bodied Soviet citizen should strive for some degree of proficiency in physical culture. The movement called Ready for Work and the Defense of the U. S. S. R. sets norms of athletic achievement for all ages up to and beyond 46.

VAST TRAINING PROGRAM

The country has 13 institutes for training physical education teachers and coaches. Instruction in physical education also is given in teachers' training institutes. Altogether, these institutes have 40,000 students.

There are 350,000 volunteer amateur physical education instructors, trainers, and coaches in the country.

Almost every large institution—whether factory, farm, Government office, or department store—has a physical culture "collective" to which all the athletes in the institution belong. Even the farmers have their organizations with millions of members.

The number of such "collectives" has grown from 37,000 in 1948 to 62,000 in 1954, and the number of members has tripled.

Sports clubs are organized under the auspices of the trade unions, which spend 20 to 25 percent of their funds for athletics. Every big trade union has its own nationwide network of clubs, the names of which—Dynamo, Spartak, and so on—are now familiar abroad.

Aside from trade-union funds, the Soviet Government has appropriated this year more than 30 billion rubles for public health and physical culture.

Sports activities of various kinds are coordinated for the country as a whole by the All-Soviet Union Sports Committee, which operates directly under the Soviet Council of Ministers—that is, the cabinet.

The committee oversees the expenditure of all Government funds for physical culture. It arranges the annual sports schedule and championships, determines qualifications for sportsmen, oversees the physical education program in the schools, supervises the training of coaches, conducts scientific research in sports problems, provides sports facilities for the general public, and so on.

The committee has branches throughout the country, and keeps on the lookout for competitors wherever they may be.

All this activity means that Soviet athletes are generally ready for competition at any time. M. M. Peslyak, one of the vice chairmen of the sport committee, remarked the other day, "There is nothing new or cardinally different in preparing for the Olympic games as compared with our general preparations."

THREE WEEKS TRAINING

Soviet athletes, he said, are expected to train all year. If, for example, an ice skater has no facilities for skating in summer, he is expected to maintain his general physical condition and to participate in some other form of competition to keep in trim for his specialty.

"If a sportsman doesn't keep to this," Peslyak remarked, "he isn't a sportsman at all."

If and when the Soviet Union decides to go to the Olympics, the various sections of the sports committee, each affiliated with its international counterpart, will select teams. These teams will have 3 weeks of special training before leaving for Melbourne.

In the meanwhile, the trade-union clubs will be holding competitions all over the Soviet Union this year. The games will come to a climax in August with an all-Union "Spartakiada" (the name is taken from ancient Sparta, whose people were renowned for endurance) in the Dynamo Stadium in Moscow.

Next year an even more comprehensive Spartakiada of the peoples of the U. S. S. R. will take place in a great new stadium to be built in a bend of the Moscow River.

Elimination contests will be held at factories and farms, in districts, towns, regions, and republics, among sports clubs and student groups.

Finally, teams of the best athletes from each of the 16 Soviet Republics and from the 2 largest cities, Leningrad and Moscow, will meet here in July and August for the all-Soviet Union championships in 20 different games and classes of sports.

The Spartakiada champions would surely present a formidable challenge at Melbourne.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes, which follows:

KEENOTES

(By Representative ELIZABETH KEE)

Talk, talk, talk. Endless talk. Repetitious talk. Droning on, never seeming to stop.

That is often the popular conception of Congress at work, or, for that matter, of any legislative body outside the Iron Curtain or other totalitarian areas. Democracy in action seems to mean, and seems to require, millions upon millions of words and hours upon hours of debate to settle anything or to settle nothing.

We find it in the PTA meeting as well as in the township commission, city council, State legislature, or the Congress—in other words, wherever people who are free to do so gather to agree (if they can) on common action in their mutual interest.

Is all of this talk necessary? Perhaps yes, perhaps no. Of course, we must allow all sides to be heard, but must we encourage them all to speak at such great length? Is anyone convinced of anything about 8 minutes or 15 or 20?

Have you ever heard a speaker rise and say he really had nothing important to say—and then take a half hour to prove it?

On the other hand, have you ever had the delightful experience of hearing someone who had risen to speak reluctantly and after much prodding, as if fearful of wasting the listener's time, compress into a few minutes a whole philosophy, and a thrilling outlook on life, and leave you almost breathless in the inspiration you have felt from this?

I think we can agree that an experience of this kind happens quite seldom. Usually we are deluged with dull talk, bored to tears with the deadly use of stale phrases, made to feel almost on the edge of our nerves' capacity to endure by the long arguments over nonessentials.

On the other hand, out of this freedom to bore each other in public speech, and to argue endlessly with each other in public forums, comes the solid basis of our freedom, because—seldom though it seems to happen—out of this comes the occasional burst of brilliance which lights our way through difficult paths of public policy.

I sometimes fret over the excessive talk in the Congress and when I saw the official résumé of congressional activity for the period from January 5 through July 31 of this year, I shuddered in the thought of all of the millions of words we had to listen to.

The CONGRESSIONAL RECORD, in that period, carried more than 16,000 pages of proceedings and extraneous matter. Estimated roughly at about 2,000 words per page, it runs to nearly 33 million words.

Of course, not all those words were spoken. Much of this material is merely placed in the RECORD for the subsequent review by those Members interested in reading it. This took up 5,642 pages of RECORD Appendix. But the nearly 6,000 pages of proceedings in the Senate represent probably 10 or 12 million words actually spoken by the 96 Senators, whereas the 4,868 pages of proceedings in the House would represent perhaps 6 or 8 million words actually spoken by the 435 House Members. While we in the House did not talk as much as the Senators did, and while we maintain a strict limitation on debate in the House in contrast to the unlimited debate in the Senate, we still had 456 hours and 58 minutes of talk, talk, talk in the House in the 6 months up to July 31, and that does not count the many, many additional hours of debate and hearings in committee.

Some of the more critical Members refer to all of this by the somewhat inelegant term "yakity yak."

No matter what you term it, it is a lot of talk. Some would dismiss it as sound and fury, signifying nothing. But occasionally—just every once in a long while—there is meaning, and inspiration, and enlightenment, and the pure delight of fine speech and real eloquence in all of this wordage. And that makes it all worthwhile.

Accomplishments of the 1st Session of the 84th Congress

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. YOUNG. Mr. Speaker, now that the 1st session of the 84th Congress is drawing to a close, it is appropriate that we look back over the past year and appraise the accomplishments of this legislative body.

In the field of Federal employee benefits, the 84th Congress has established an unprecedented record. It has approved more legislation than any similar session in history. As there are nearly 2½ million Federal workers in this country, this legislation will have far-reaching effects upon the economy and welfare of our citizenry. In order for the Government to serve its people effectively, it must be staffed by loyal and competent employees, and I believe that the laws enacted by this Congress will do much to restore, protect, and improve the dignity, prestige, and morale of those citizens who have chosen the Federal service as their life work.

As it is my honor and privilege to represent in the House of Representatives a State which has one of the highest percentages of Federal employees in the Nation, I have followed this legislation with a great deal of interest. I should like at this time to summarize the major beneficial laws that were enacted by this session.

PAY RAISES

A record number of pay increases were voted by this Congress. Raises were granted to 500,000 postal workers and to more than 1 million classified employees. The pay boosts to the postal employees were combined with a job reclassification system and averaged 8.1 percent. The classified employee received an across-the-board increase of 7.5 percent. This was the first general increase given to these groups since July 1951.

CARRIER STATUS

By the enactment of Public Law 380, more than 50,000 Government indefinite employees were given career status. The new law opens the way for career status to indefinite employees who have passed civil-service examinations and who have completed at least 3 years of satisfactory Federal service. The employees must be recommended by their agencies to the Civil Service Commission to obtain career status.

RETIREMENT LEGISLATION

Two major measures were passed in the field of retirement legislation. The first bill would raise the pensions of Foreign Service members who retired prior to July 1, 1945, by 25 percent, and this increase would gradually be cut back to 5 percent for those who retired after July 1, 1948.

The second measure would increase the annuities of the 300,000 civil-service retirees and survivors. It provides for an increase of 12 percent on the first $1,500 and 8 percent on the balance for employees who had retired prior to July 1, and by lesser amounts thereafter for those retiring.

DUAL COMPENSATION

The approval of H. R. 5893 provided for an increase in the dual compensation limit for military retirees in both Federal civilian salaries and military retirement from $3,000 to $10,000.

S. 2403, which authorized dual employment of custodial employees in post-office buildings operated by the General Services Administration was also approved.

TRAVEL ALLOWANCES

Legislation was approved to increase the maximum per diem allowance for subsistence and travel expense from $9 to $12 and to raise the mileage allowance from 7 cents to 10 cents a mile.

INSURANCE

Legislation was approved to authorize the Government to take over the 135,000 life insurance policies held by employee beneficial associations for present and former Federal employees.

SURETY BONDS

Approval of H. R. 4778 authorized Federal agencies to pay for blanket bonds to cover their employees. Prior to the passage of this measure, employees whose jobs required them to be bonded had to pay for their own bond premiums.

UNIFORM ALLOWANCES

The passage of Public Law 37 makes the Federal Employees Uniform Allowance Act applicable to all Federal employees who are required to wear a prescribed uniform, thereby extending the up-to-$100 annual allowance to additional employees.

LOYALTY PROVISIONS

The Congress wrote into a single bill the many provisions which appeared in the various appropriation bills to prohibit employment by the Government of persons who are disloyal or who believe in the right to strike against the Government.

STATE RETIREMENT

A measure to extend civil-service retirement benefits to former District and State government employees was passed by both houses but failed to gain the approval of the President. In his veto message, the Chief Executive said that he would substitute a proposal at the next session to bring Federal employees under the social-security system, thereby giving Federal and State employees the common base of retirements sought by this measure and avoiding the disadvantages of civil-service expansion.

Report to the Constituents of the 12th Congressional District of New York

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. DORN of New York. Mr. Speaker, I have endeavored to remain in close

contact with the people of the 12th Congressional District of New York, whom I have the honor to serve. I have attempted to let all of its residents know that the office here in Washington and the Brooklyn office in the Federal Building have been open to them at all times. It has been my aim to assist them in their problems with the Federal Government. At the same time I have attended, congressional duties permitting, meetings, functions and gatherings in order that I may know more intimately the people I represent in Washington. My aim is to cement a close relationship between the Congressman and his constituents.

On Saturdays I have been in my Brooklyn office to receive all who wished to discuss their problems with me personally. During the week, it was my pleasure to receive in Washington, the Brooklyn visitors who called on me.

I have made every effort to have some contact with as many of my constituents as possible. To this end, and shortly after President Eisenhower delivered his state of the Union message, I mailed a questionnaire to the voters of the district requesting that they express their opinions concerning the legislative program outlined by the President.

I deeply appreciate the assistance I received from the thousands of voters who replied. And in that connection, I should like to call attention to the wisdom of the great Irish statesman, Edmund Burke, who in stating what a Representative should be and what a constituent should expect of his Representative, one wrote:

> A Representative should live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. Their wishes ought to have great weight with him; their opinions high respect; their business unremitting attention * * * but a Representative's unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to any man, or to any men living. * * * Your Representative owes you not his industry only, but also his judgment.

Now that the first session of the 84th Congress has wound up its work, I consider it both fitting and proper that the people of my district should know how I have served them. I have therefore drawn up this report which I now submit to the House. It is my intention to have it circulated as widely as possible throughout the 12th Congressional District of New York so that the people may know of the activities of their Representative.

In the short span of 7 months, the length of the congressional session this year, my office has sent out a total of 163,000 pieces of mail. Of this, 150,000 were the questionnaire. The remaining 13,000 letters were in direct reply to mail received from the district, and my communications with the executive agencies. This total, when broken down further shows that an average of 86 letters per workday go out to and in behalf of the people I am privileged to serve.

During this session I have personally introduced numerous pieces of legislation. A vital measure which I am firmly convinced should be enacted is one to revise the Status of Forces Agreement and certain other treaties and international agreements, so that foreign governments will not have criminal jurisdiction over American Armed Forces personnel stationed within their boundaries.

Another very important piece of legislation which I have sponsored is an amendment to the Social Security Act to reduce from 65 to 60 the age at which wives and widows may qualify for benefits under the law.

Still another important bill I have introduced is an amendment to the Civil Service Retirement Act of 1930, to increase the annuities of retired Federal employees. This did pass the Congress and was signed by the President. The House bill did not carry my name, but rather a committee bill was acted upon; however, the provisions were identical.

Another bill I introduced is designed to prevent the pollution of waters in nearby regions. The passage of this legislation would make it unlawful to dump in the ocean chemicals and other materials harmful to fishing.

As a result of a bill introduced by me, President Eisenhower was authorized and gave to Irving Berlin in January 1955, a gold medal in recognition of his services in composing many patriotic songs, including God Bless America, which became popular during World War II. This was following a precedent created by a similar act in 1936, authorizing the presentation of a medal to George M. Cohan.

Among other legislation introduced by me and now pending before their respective committees are: An act calling for the erecting of a monument in honor of Capt. Samuel Chester Reid—through extensive research I have found that this famous naval hero is the actual designer of the American flag as it is today—he is buried in an unmarked grave in our own Greenwood Cemetery in Brooklyn; an amendment to the Communications Act of 1934, which would increase the penalty for transmitting false distress signals by radio—I am sure everyone recognizes the necessity for the tightening of the present law, because of the recent hoax.

An accomplishment of which I am very proud is one involving the religious designation placed by the armed services on members' "dog tags." Formerly, any religion other than "C," Catholic; "J," Jewish; and "P," Protestant, was designated by a mere "X." Members of the Eastern Orthodox faith felt that this made them second-class personnel in the Armed Forces, and asked my assistance in getting the Department of Defense to permit the addition of "E. O.", Eastern Orthodox, as authorized initials for the tags. Though I introduced a bill to provide for this, it was not necessary to be acted upon, for I was able to persuade the Secretary of the Army that this was a reasonable request. The necessary regulations have now been issued providing that all religious denominations have a letter designation on the "dog tags" of the armed services personnel.

During this past session also, I was pleased that the culmination of my 3 years of work in behalf of the tenants of Vanderveer housing which resulted in the recent replacement of the old board of directors by members of the Federal Housing Administration. It is hoped that this will eventually improve the living conditions and lower the rents for the tenants of Vanderveer.

Although the 84th Congress was under the control of a Democrat majority, the Republicans have managed to get enacted much of the program requested by the President. The bulk of the administration's defense program was approved. So, too, was its housing program. We were able to defeat a Democrat-sponsored measure to restore the 90-percent-of-parity agriculture support bill. Its passage would have increased food prices to the consumers and in turn raised the cost of living.

The President's program for the distribution of the Salk vaccine to eligible children and expectant mothers was passed. Additional funds for the construction of schools were appropriated, for areas affected by Federal activities. Many measures for the benefit of veterans were enacted with bipartisan support. By this means also, we were able to obtain pay raises for Federal employees, postal employees, and an increase in the annuities of retired Federal employees.

It is pleasant at this point to note that the Republican administration has continued to wage the peace. This has been done by the initiation and persistence of a strong foreign policy based on firmness and strength.

On the domestic scene the Republican administration has helped to produce the greatest era of prosperity that the world has ever known. The transition from the war economy of the Korean conflict to a peacetime economy has taken place without sacrificing prosperity. Government wage, price, rent, and materials controls have come to an end. The cost of living has been stabilized.

In the preceeding paragraphs I have tried to show you, the people of the 12th Congressional District of New York how I have personally tried to serve you. You are the people who elected me to represent you in the Congress of the United States. If there is any way in which I can be of service to you in my congressional capacity, please do not hesitate to call upon me. Both my Washington and Brooklyn offices remain open. I have a competent staff, and my services and theirs are yours. I want you to know that even when the Congress is not in session, I am on the job.

Split-Level Government

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. BUTLER. Mr. President, an editorial entitled "Split-Level Government," appearing in the July 11, 1955, issue of the Salisbury Times of Salisbury, Md., places the concept of Federal-State

responsibilities in unusually clear focus, particularly in the context of these times.

As a member of the Commission on Intergovernmental Relations, whose recommendations formed the basis of this editorial, I request unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPLIT-LEVEL GOVERNMENT

The long-awaited report of the Commission on Intergovernmental Relations, most important of the commissions set up by the Eisenhower administration, was worth waiting for. It has cleared up a mischievous fallacy.

The fallacy is that friction between the Federal Government and State and local governments indicate they must always be in competition. This has caused thoughtless critics to reach the conclusion there should be steps taken to get rid of one or the other governments in order get rid of the friction.

Thus, home rule and State's rights zealots have blamed everything on the Federal Government and yearned to trim its wings. Ultranationalists have blamed everything on the provincialism of "local yokels" and yearned for Federal authoritarianism.

Under the moderate chairmanship of Meyer Kestnbaum, the Commission on Intergovernmental Relations—a group of 25 earnest experts—reached the moderate and obviously sensible conclusion that Americans rely equally on local, State, and Federal Governments and that each level of government should be strengthened, therefore, not weakened.

This runs contrary to the prejudice of everybody who yearns to knock out one level of government to enhance the authority of a competitor. It justifies the labor and the cost of the report, the first official study of its kind since the deliberations in the Constitutional Convention of 1787, when the issue of federalism versus nationalism first was debated.

In total effect, the report's recommendations all partake of the same philosophy—that only fools think there can be easy answers to difficult problems. The difficulties that almost baffled the Founding Fathers are still intact. The Commission on Intergovernmental Relations has made numerous recommendations to regularize the operation of split-level government, but it has successfully resisted the temptation to think they can be solved by razzle-dazzle extremism.

Veterans' Administration Hospital in Washington, D. C., Area

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. TEAGUE of Texas. Mr. Speaker, through the courtesy of Col. Waldron E. Leonard, president, Metropolitan Area Council of Veterans' Organizations, I have received the unanimous resolution of the council urging the appropriation of necessary funds for the construction of a new veterans' hospital to serve this area. The need is real and with the civil-defense question clarified, I hope that we shall see definite progress toward achieving this goal during the current year. This hospital is listed in the Veterans' Administration long-range plan for replacement. Under permission previously granted, I include the text of the resolution and signers thereof:

Whereas veterans' organizations in the District of Columbia and the metropolitan area have repeatedly gone on record of supporting a veterans' hospital in the metropolitan area; and

Whereas the Council of Veterans' Organizations of the Metropolitan Area, which membership consists of the commanders of veterans' organizations, did express unanimous approval to request funds be allocated and approved by the budget committee for the construction of a hospital in the metropolitan area: Therefore, be it

Resolved, That a copy of this action be forwarded to the Honorable OLIN E. TEAGUE, chairman of the Veterans' Committee of the House of Representatives, with the request that he contact the Veterans' Administration and ask that this construction be included in their budget now being prepared; and that similar resolutions be made available to interested parties and Members of Congress, seeking their support for this project.

Louis G. Zindel, Jr., District of Columbia Department Commander, American Legion; Samuel J. Flicksinger, Catholic War Veterans of America, Inc.; Morgan D. Bingham, District of Columbia Department, Disabled American Veterans; John Wilson, Department Commander, USWV; W. G. Copley, Past Department Commander; Elvin M. Luskey, Past Department Commander; Paul E. Reider, Camp Commander, Astor No. 6; John A. Martin, Past Department Commander; Robert W. Livingston, Urell Camp; John F. MacAboy, Past Department Commander; Glen Seamans, Urell Camp; Peter Roesle, Hardin Camp No. 2, Wm. G. Stirb, Past Commander, Miles Camp No. 1; Wm. F. Smith, Urell Camp; O. Bailey, Past Department Commander; E. A. Johnson, Department Adjutant; W. Townsend Raplee, Commander, 10th District, American Legion, Department of Virginia; William A. Hickey, Jr., Irish War Veterans, United States of America; Sidney S. Haines, AMVETS, District of Columbia Department; James P. O'Laughlin, Mount Vernon Chapter No. 22, Military Order of the Purple Heart; Bernard Hipperman, Jewish War Veterans of U. S. A.; Francis C. Wood, Department Commander, Veterans of Foreign Wars; Patrick T. Ryan, Army and Navy Legion of Valor; Robert L. Moran, Department of Virginia, 10th District, Veterans of Foreign Wars; David L. Brigham, Department Vice Commander, South Maryland District, American Legion.

Conservation of Our Natural Resources

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. YOUNG. Mr. Speaker, on several past occasions I have commented on legislation enacted by the 84th Congress which provides for the multiple use of the surface resources of our public lands, provides for their more efficient administration, and amends the mining laws to curtail abuses of those laws by a few individuals who usually are not miners.

This legislation, which may be officially cited as the act of July 23, 1955—Public Law 167, 84th Congress, 69th Statutes at Large, page 367—deals with a matter of vital interest to the people of Nevada and our other Western States. It is of interest to all of the people of the United States because the resources of the public domain belong to them.

The House Interior Committee, in reporting H. R. 5891, and the Congress in approving this bill which became Public Law 167, made clear their determination to assure maximum utilization, and conservation of all of the public domain surface and subsurface resources—minerals, materials, timber, grass, recreation, water, fish, wildlife, and waterfowl. Operation of this new law with respect to vegetable and mineral values was discussed in my remarks of July 30, 1955. Today, I address myself to its effect on our fish, wildlife, and waterfowl resource values.

EFFECT ON HUNTING, FISHING, AND WILDLIFE MANAGEMENT OF MINING LAW ABUSES

In our report accompanying H. R. 5891 to the House, the Interior Committee pointed up some of the abuses under the mining laws at which this legislation is aimed. Examples cited, together with testimony on the bill, make it clear that detrimental effects on hunting, fishing, and wildlife management come about primarily because of the activities of two groups of pseudominers which I will call first, antifishing and antihunting mining locators; and, second, antimining fishermen and hunters.

In the first group are those miners who make a location, promptly post it with a "no trespassing" sign, and thus deny access to the located lands by agents of the Federal Government charged with the responsibility of managing wild game habitat or improving a fishing stream; blocked, too, is access to adjacent lands. Mining claims located astraddle fishing streams, or flanking hunting areas—when posted—serve to thwart effective management and the desirable controlled harvest by hunters and fishermen of our fish and wildlife resources.

In the second group are those individuals who combine a desire to hunt or fish with a declared interest in mining. A group of fishermen-prospectors will locate a good stream, stake out successive mining claims flanking the stream, post their mining claims with "no trespassing" signs, and proceed to enjoy their own private fishing camp. So, too, with hunter-prospectors, except that their blocked-out mining claims embrace wildlife habitats; posted, they constitute excellent hunting camps.

The multiple effect of activities of both such groups is obvious; a waste of valuable resources of the surface on lands embraced within claims made for a purpose other than mining; for lands adjacent to such locations, fish, wildlife, and recreational values wasted or destroyed because of increased cost of manage-

ment, difficulty of administration, or inaccessibility; the activities of a relatively few pseudominers reflecting on the legitimate mining industry and, of course, nothing added to our mineral or material wealth through mining activity.

The provisions of Public Law 167 deal directly with such abuses.

OPERATION OF PUBLIC LAW 167

Subsection (b) of section 4 of Public Law 167 is aimed directly at ending abuses such as those described in the foregoing comments. It provides that hereafter located claims under the mining laws shall be subject, prior to patent issuance, to the right of the United States to manage and dispose of the vegetative surface resources thereof and to manage other surface resources, except mineral deposits subject to location under the mining laws. This subsection also makes such claims subject, prior to issuance of patent, to the right of the United States, its permittees and licensees, to use so much of the location surface as may be necessary for access to adjacent lands.

With respect to the reservations in the United States to use the surface and surface resources, particular attention is called to the proviso which qualifies them:

Any use of the surface of any such mining claim by the United States, its permittees, or licensees, shall be such as not to endanger or materially interfere with prospecting, mining, or processing operations or uses reasonably incident thereto.

I do not believe I can improve upon the statement by Mr. Charles H. Callison, the eminent and articulate conservation director of the National Wildlife Federation, with respect to the effect of section 4 (b). In his appearance before our committee, after citing examples of abuses at which this particular provision is directed, Mr. Callison declared:

We interpret the language of section 4 (b) * * * as corrective of this situation. A claimant who files pursuant to this act will not be able legally to post his claim against trespass by hunters or fishermen. He cannot deny access to the Federal Government or its licensees or permittees when access is intended for the purpose of harvesting or otherwise managing the fish and wildlife resources, so long, of course, as such access does not "endanger or materially interfere with prospecting, mining, or processing operations or uses reasonably incident thereto."

The foregoing applies to mining claims located after July 23, 1955.

With respect to claims located before the effective date of Public Law 167, dealt with in sections 5 and 6 of the act, the restrictions and limitations of section 4 would apply only in two instances: First, when—after compliance by the responsible Federal agency with the carefully drawn notice requirements—the claimant actually receiving notice of the initiation of the quiet title action provided for—fails to submit a statement setting forth pertinent information as to his claim, and thereby constructively waives his right to not come under the provisions of section 4; and second, when, under the provisions of section 6 of the act, the owner of any unpatented mining claim made before the date of the act, actually waives and relinquishes his right to not come under the restrictions and limitations of section 4.

Understanding on the part of the public of these desirable provisions of Public Law 167 will, I am confident, add substantially to our ability to conserve and utilize to the maximum all of our public domain resources.

H. R. 6263

SPEECH
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. JENKINS. Mr. Speaker, the Senate has added an amendment to H. R. 6263 changing the definition of "personal holding company" in the Internal Revenue Code of 1954.

Section 542 (a) (2) of the Internal Revenue Code of 1954—defining the term "personal holding company"—provides for treating charitable foundations or trusts as "individuals" in determining the stock ownership test for personal holding companies. This provision was new in the 1954 code and is so broad in its wording as to include investment companies which have been wholly owned by charitable foundations for many years and would thereby for the first time require treatment of such investment companies as personal holding companies.

Certain long-established charitable trusts have, solely for business reasons, owned and controlled certain of their investments through the means of a separately formed investment company. Such company is, of course, subject to payment of the customary Federal income taxes and is used as a matter of convenience in the businesslike handling and development of enterprises requiring additional capital from time to time in their expanding activities. If such organzations are to come under the rule for personal holding companies then they would become subject to the penalty tax applicable thereto. This would make it impracticable to conduct their activities on a normal business basis involving carefully planned reinvestment to provide required capital to meet the needs of growth situations such as public utilities with resulting expansion of income. The alternative would require dissolution of such investment companies which would deprive the Federal Government of the income tax now being paid by such companies.

The Senate amendment amends this provision of the 1954 code in a limited manner so that certain long-established charitable foundations may retain the tax status under which they have operated for many years.

The Senate amendment amends section 542 (a) (2) of the Internal Revenue Code of 1954 which deals with certain charitable foundations. Three conditions must be met. The foundation must be organized or created before July 1, 1950. Second, at all times on or after July 1, 1950, through the close of the taxable year such foundation must own all of the common stock and at least 80 percent of the total number of shares of all other classes of stock of the corporation. Thirdly, such foundation must not be denied exemption under section 504 or such trust must not be denied the unlimited charitable deduction under section 681 (c) and, for this purpose, the income of the investment company is treated as though distributed to the foundation or trust to the extent of their proportionate interest in income available for distribution as dividends. Also, for purposes of this last condition it is provided that the restrictions in sections 504 (a) (1) and 681 (c) (1) of the 1954 code against unreasonable accumulations will not apply to income attributable to property of a decedent dying before January 1, 1951, which was transferred, either to an inter vivos trust during his lifetime or was transferred under his will to such trust.

This Senate amendment applies only with respect to taxable years beginning after December 31, 1954.

Mr. Speaker, a bill to accomplish the same purpose as the Senate amendment was introduced by my distinguished friend from Colorado [Mr. CHENOWETH]. I might also state that I brought the problem to the attention of the Committee on Ways and Means, where it was considered fully. I have no hesitancy in stating that our committee would have favorably reported out a bill to take care of this problem had not the Senate adopted this amendment. Under these circumstances, I urge the House to accept the Senate amendment.

Report to the People of the Second Congressional District of New York

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DEROUNIAN. Mr. Speaker, under leave to extend my remarks, I include a report to the people of the Second Congressional District of Nassau County, N. Y. It is a continuing pleasure for me to represent such a fine district, and I feel that my constituents should have readily available to them my voting and attendance record during the 1st session of the 84th Congress.

This record includes all rollcall votes and all quorum calls. It collects in one place information which otherwise can be found only by studying thousands of pages of the RECORD.

The descriptions of the bills are for identification purposes only and I have not attempted to describe them in detail or to dwell upon the issues involved.

They do not, therefore, always reflect the nature or true purpose of the legislation. I shall, however, be pleased to furnish more complete information concerning any particular bill, the issues involved, and the reasons for my vote, upon request. The footnotes at the end of this record will indicate the reasons for any absences.

Voting and Attendance Record, Representative STEVEN B. DEROUNIAN, 2d District, New York, 84th Cong., 1st Sess.

Roll-call No.	Date	Subject and action taken	Vote
	1955		
1	Jan. 5	Quorum call	Present.
2	Jan. 5	Election of Speaker (Rayburn 228, Martin 198)	MARTIN.
3	Jan. 25	H. J. Res. 159, authorizing President to employ Armed Forces of United States for protecting Formosa, etc. (Passed 410 to 3.)	Yes.
4	Jan. 27	H. R. 587, to provide that persons serving in the Armed Forces on Jan. 31, 1955, may continue to accrue educational benefits under Veterans' Readjustment Assistance Act of 1952. (Passed 366 to 0.)	Not voting.[1]
5	Feb. 8	H. R. 3005, to extend Universal Military Training and Service Act and Dependents' Assistance Act to July 1, 1959. (Passed 394 to 4.)	Yes.
6	Feb. 16	H. R. 3828, to adjust salaries of judges of United States courts, United States attorneys, and Members of Congress. (Passed 283 to 118.)	Yes.
7	Feb. 17	Quorum call	Present.
8	Feb. 17	H. Res. 142, motion to end debate on question of a closed rule on H. R. 1. (Defeated 207 to 178.)	Yes.
9	Feb. 17	H. Res. 142, to permit 5 hours of debate and amendments from the floor on H. R. 1. (Defeated 193 to 191.)	No.
10	Feb. 17	H. Res. 142, closed rule on H. R. 1 to prohibit amendments from floor. (Passed 193 to 192.)	Yes.
11	Feb. 18	H. R. 1, motion to recommit to committee with instructions to amend to require President to comply with recommendations of Tariff Commission except when national security is involved. (Defeated 206 to 199.)	No.
12	Feb. 18	H. R. 1, to extend for 3 years authority of the President to enter into trade agreements, final passage. (Passed 295 to 110.)	Yes.
13	Feb. 23	Quorum call	Absent.[2]
14	Feb. 24	Quorum call	Present.
15	Feb. 25	H. R. 4259, motion to recommit to Committee on Ways and Means in order to delete provision calling for $20 credit against individual income tax for each personal exemption in tax year 1955. (Defeated 210 to 205.)	Yes.
16	Feb. 25	H. R. 4259, to provide 1 year extension of existing corporate normal tax rate and of certain excise tax rates, and to provide a $20 tax credit against individual income tax for each personal exemption. (Passed 242 to 175.)	No.
17	Mar. 1	H. R. 3828, conference report on bill to adjust salaries of judges of United States courts, United States attorneys, and Members of Congress. (Passed 223 to 113.)	Yes.
18	Mar. 10	Quorum call	Present.
19	Mar. 10	H. R. 4720, to provide incentives for members of the uniformed services by increasing certain pays and allowances. (Passed 399 to 1.)	Yes.
20	Mar. 16	Quorum call	Present.
21	Mar. 18	H. R. 4903, supplemental appropriations for fiscal year 1955, for an additional $4 million for United States contributions to United Nations program of technical assistance. (Passed 175 to 107.)	Not voting.[3]
22	Mar. 21	Quorum call	Present.
23	Mar. 21	H. R. 4644, to increase postal employees' salaries an average of 7.5 percent. Suspension of the Rules. (Defeated 302 to 120.)	No.
24	Mar. 21	Quorum call	Present.
25	Mar. 21	H. R. 4951, directing a redetermination of the national marketing quota for burley tobacco for 1955–56. (Defeated 260 to 152.)	No.
26	Mar. 22	Quorum call	Present.
27	Mar. 22	H. Res. 170, to disapprove of the disposal of some of the Government-owned synthetic-rubber plants. (Defeated 283 to 132.)	No.
28	Mar. 23	Quorum call	Present.
29	Mar. 23	H. Res. 171, to disapprove of disposal of some of the Government-owned synthetic-rubber plants, as recommended by Rubber Producing Facilities Disposal Commission report. (Defeated 276 to 137.)	No.
30	Mar. 24	Quorum call	Present.
31	Mar. 28	Quorum call	Present.
32	Mar. 29	Quorum call	Present.
33	Mar. 30	H. R. 4259, conference report extending corporate and excise taxes for 1 year and deleting the $20 income tax credit for each taxpayer and his dependents. (Passed 387 to 8.)	Yes.
34	Mar. 30	H. R. 5240, amendment to restore a provision limiting to $1 per month the fee to educational institutions for reports on veterans. (Defeated 227 to 154.)	Yes.
35	Apr. 13	Quorum call	Present.
36	Apr. 20	Quorum call	Present.
37	Apr. 20	H. R. 4644, amendment to the postal pay raise which would increase the annual rate for certain classes of employees and raise the overall increase from 7.5 to 8.2 percent. (Passed 224 to 189.)	No.
38	Apr. 20	H. R. 4644, motion to recommit to Committee on Post Office and Civil Service. Defeated 287 to 125.)	Yes.
39	Apr. 20	H. R. 4644, on final passage of the bill as amended to grant a postal pay raise of 8.2 percent. (Passed 324 to 85.)	No.
40	Apr. 21	Quorum call	Present.
41	Apr. 21	H. R. 4393, to provide for construction and conversion of certain modern naval vessels. (Passed 373 to 3.)	Yes.
42	Apr. 27	Quorum call	Present.
43	May 3	Quorum call	Present.
44	May 4	Quorum call	Present.
45	May 5	Quorum call	Present.
46	May 5	H. R. 12, amendment to remove peanuts as one of the basic commodities in the farm price-support program. (Defeated 215 to 193.)	Yes.
47	May 5	H. R. 12 to recommit to Committee on Agriculture. (Defeated 212 to 199.)	Yes.
48	May 5	H. R. 12, to restore the 90 percent of parity supports for the basic commodities. (Passed 206 to 201.)	No.
49	May 9	Quorum call	Present.
50	May 9	S. 1, to recommit conference report on the postal pay raise bills to conference committee. (Defeated 275 to 118.)	Yes.
51	May 9	S. 1, on final passage of conference report on postal pay raise bills. (Passed 328 to 66.)	No.
52	May 9	H. Res. 223, to authorize consideration of the bill to permit statehood for Hawaii and Alaska. (Passed 323 to 66.)	No.
53	May 9	Quorum call	Present.
54	May 10	Quorum call	Present.
55	May 10	Quorum call	Present.
56	May 10	Quorum call	Present.
57	May 10	H. R. 2535, to recommit to committee the bill authorizing statehood for Hawaii and Alaska. (Passed 218 to 170.)	Yes.
58	May 11	Quorum call	Present.
59	May 11	Quorum call	Present.
60	May 12	Quorum call	Present.
61	May 12	Quorum call	Present.
62	May 12	H. R. 6042, appropriations for the Department of Defense, amendment deleting language requiring approval of congressional committee prior to disposal or transfer of work traditionally performed by civilian employees of Department of Defense. (Defeated 202 to 184.)	Yes.
63	May 12	H. R. 6042, papropriations for the Department of Defense, final passage. (Passed 384 to 0.)	Yes.
64	May 17	Quorum call	Present.
65	May 18	Quorum call	Present.
66	May 19	Quorum call	Present.
67	May 19	Quorum call	Present.
68	May 19	Quorum call	Present.
69	May 23	S. 727, to increase the salaries of judges for the District of Columbia. (Passed 283 to 33.)	Yes.
70	May 25	Quorum call	Absent.[4]
71	May 25	H. Res. 244, to create a select committee to investigate the White County, Ind., Bridge Commission. (Passed 205 to 166.)	Not voting.[4]
72	May 25	H. R. 2851, to make agricultural commodities owned by the Commodity Credit Corporation available to needy persons in areas of acute distress. (Passed 344 to 1.)	Not voting.
73	May 26	Quorum call	Absent.[4]
74	May 26	S. 727, to recommit to conference committee a bill which would raise salaries of District of Columbia judges to an amount greater than previously voted by the House. (Passed 170 to 165.)	Not voting.[4]
75	May 26	Quorum call	Absent.[4]
76	May 26	H. R. 5881, to recommit to committee the bill which provides for Federal compensation in non-Federal reclamation projects and for participation by non-Federal agencies in Federal reclamation projects in order to limit the scope of the bill to 17 Western States instead of all 48 States. (Defeated 229 to 62.)	Not voting.[4]
77	June 1	Quorum call	Present.
78	June 1	H. R. 3990, to recommit to committee the bill which authorized the Secretary of the Interior to investigate projects for conservation, development, utilization of the water resources of Alaska. (Defeated 278 to 79.)	No.
79	June 7	S. 2061, to increase salaries in the postal service by an average of 8 percent and to provide for reclassification. (Passed 410 to 1.)	Yes.
80	June 8	H. R. 5923, to authorize an appropriation to complete the Inter-American Highway. (Passed 353 to 13.)	Yes.
81	June 13	Quorum call	Present.
82	June 14	Quorum call	Present.

Footnotes at end of tables.

Voting and Attendance Record, Representative STEVEN B. DEROUNIAN, 2d District, New York, 84th Cong., 1st Sess.—Continued

Roll-call No.	Date	Subject and action taken	Vote
83	June 14	H. R. 1, acceptance of conference report on the Trade Agreements Extension Act of 1955. (Passed 347 to 54.)	Yes.
84	June 14	H. R. 6227, to provide for control and regulation of bank holding companies. (Passed 371 to 24.)	No.
85	June 15	Quorum call	Present.
86	June 15	H. Res. 210, to authorize an investigation of the Federal Open Market Committee of the Federal Reserve Board. (Defeated 214 to 178.)	No.
87	June 16	Quorum call	Present.
88	June 20	S. 67, to increase salaries of civil service employees by about 7.5 percent. (Passed 370 to 3.)	Yes.
89	June 20	H. Con. Res. 109, authorizing the appointment of a congressional delegation to attend the NATO Parliamentary Conference. (Passed 337 to 31.)	Yes.
90	June 20	H. R. 6205, to raise the per diem allowance for subsistence and travel expenses for Federal employees from $9 to $13. (Passed 320 to 41.)	Yes.
91	June 21	H. R. 4663, to authorize the Secretary of the Interior to construct, operate, and maintain the Trinity River division, Central Valley project, California, and to authorize an appropriation of $225 million therefor. (Passed 230 to 153.)	No.
92	June 22	Quorum call	Present.
93	June 22	H. R. 6040, to recommit to committee the customs simplification bill with instructions to strike out sec. 2, which would make export value the primary basis for assessing ad valorem duties. (Defeated 232 to 143.)	No.
94	June 23	H. Con. Res. 149, expressing the sense of Congress that the United States in its international relations should maintain its traditional policy in opposition to colonialism and Communist imperialism. (Passed 387 to 0.)	Yes.
95	June 27	H. R. 6992, to extend for 1 year the existing temporary ceiling on the public debt of $281 billion. (Passed 267 to 56.)	Yes.
96	June 27	Quorum call	Present.
97	June 27	H. R. 6829, to authorize certain construction at military, naval, and Air Force installations. (Passed 316 to 2.)	Yes.
98	June 28	Quorum call	Present.
99	June 28	H. R. 3005, to recommit the conference report to committee. (Defeated 221 to 171.)	No.
100	June 28	H. R. 3005, to extend the Universal Military Training and Service Act and the Dependents Assistance Act for 4 years and to extend the Doctors-Dentists Draft Act for 2 years. (Passed 389 to 5.)	Yes.
101	June 28	Quorum call	Present.
102	June 29	Quorum call	Present.
103	June 29	S. 727, to recommit the conference report on the bill which adjusts the salaries of the judges of the courts of the District of Columbia. (Defeated 226 to 158.)	No.
104	June 30	Quorum call	Present.
105	June 30	S. 2000, to authorize appropriations for and carry forward the mutual security program. (Passed 273 to 128.)	Yes.
106	July 1	Quorum call	Present.
107	July 1	Quorum call	Present.
108	July 5	Quorum call	Present.
109	July 6	H. R. 3210, to recommit the bill which would authorize the State of Illinois and the Sanitary District of Chicago to test, on a 3-year basis, the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway. (Defeated 316 to 74.)	Yes.
110	July 7	S. 2090, to adopt conference report authorizing appropriations for the mutual security program. (Passed 262 to 120.)	Yes.
111	July 11	Quorum call	Present.
112	July 11	H. R. 7224, to authorize appropriations for mutual security during fiscal year 1956. (Passed 251 to 123.)	Yes.
113	July 12	Quorum call	Present.
114	July 13	H. R. 6766, to adopt conference report authorizing appropriations for the AEC, TVA, and certain agencies of the Departments of the Interior and the Army, including a reduction in funds available to the Atomic Energy Commission and an additional 107 unbudgeted projects for which engineering studies were uncompleted. (Passed 316 to 92.)	No.
115	July 13	H. Res. 295, to provide for consideration of H. R. 7089, a bill to provide benefits for the survivors of servicemen and veterans. (Passed 376 to 24.)	Yes.
116	July 13	Quorum call	Present.
117	July 14	Quorum call	Present.
118	July 18	Quorum call	Present.
119	July 18	H. R. 7225, to amend the Social Security Act to extend coverage to certain disabled persons who are at least 50 years of age, to women at 62 years of age, to certain disabled children over 18 years of age, and to certain occupational groups. (Passed 372 to 31.)	Yes.
120	July 18	Quorum call	Present.
121	July 18	Quorum call	Present.
122	July 19	Quorum call	Present.
123	July 19	Quorum call	Absent.[4]
124	July 20	Quorum call	Present.
125	July 20	H. R. 7214, to amend the Fair Labor Standards Act to make the minimum wage $1 an hour effective Mar. 1, 1956. (Passed 362 to 54.)	Yes.
126	July 25	Quorum call	Present.
127	July 25	Quorum call	Present.
128	July 25	Quorum call	Present.
129	July 25	H. R. 7000, to agree to the conference report on the Reserve Forces Act of 1955. (Passed 315 to 78.)	Yes.
130	July 26	H. Res. 314, to provide for 3 hours' debate on H. R. 7474, the Federal-State highway construction bill. (Passed 274 to 129.)	Yes.
131	July 27	Quorum call	Present.
132	July 27	H. R. 7474, to recommit this highway bill to committee and to substitute therefor the administration bond financing proposal for highway construction. (Defeated 221 to 193.)	Yes.
133	July 27	H. R. 7474, final passage on the highway construction bill, which included the increasing of certain taxes. (Defeated 202 to 123.)	No.
134	July 28	Quorum call	Present.
135	July 28	H. Res. 317, to provide for 3 hours of general debate on H. R. 6645, to amend the Natural Gas Act. (Passed 273 to 135.)	Yes.
136	July 28	Quorum call	Present.
137	July 28	H. R. 6645, to recommit to committee the amendment to the Natural Gas Act. (Defeated 210 to 203.)	Yes.
138	July 28	H. R. 6645, on final passage of bill to amend the Natural Gas Act, to remove from control of the Federal Power Commission natural gas producers and gatherers. (Passed 209 to 203.)	No.
139	July 29	Quorum call	Present.
140	July 29	S. 2126, to adopt Wolcott amendment to the Housing Act of 1955, which struck authorization of 135,000 public housing units. (Passed 217 to 188.)	Yes.
141	July 29	S. 2126, on final passage of the Housing Act of 1955. (Passed 396 to 3.)	Yes.
142	Aug. 1	Quorum call	Present.
143	Aug. 1	H. Res. 299, to grant to the Small Business Committee on additional $35,000 for operating expenses. (Passed 231 to 134.)	No.
144	Aug. 1	S. 2576, to repeal franchise of Capital Transit Co., operating in District of Columbia, providing public operation, with District of Columbia obligated to make up deficits. (Defeated 215 to 150, a ⅔ majority being required to suspend rules.)	No.
145	Aug. 1	Quorum call	Present.
146	Aug. 2	Quorum call	Present.
147	Aug. 2	S. 2126, to adopt conference report on Housing Act of 1955. (Passed 187 to 168.)	No.

[1] On this day, Mrs. Derounian and I greeted the arrival of a new son, Steven Blake.
[2] In Nassau County on official, congressional matters.
[3] At Army Ordnance Proving Ground, Aberdeen, Md., on official business.
[4] Leave of absence granted on account of the death of my father.
[5] Attending a meeting with the Honorable Herbert Hoover, Jr., Acting Secretary of State.

AN EXPLANATION OF TERMS

Of necessity the report contains parliamentary and legislative terms with which the reader may not be familiar. An explanation of some of these terms may, therefore, be helpful:

First. A quorum call consists of a calling of the roll of Members to determine whether or not a quorum—a majority of Members—is present. No business may be conducted when it is found that a quorum is not present.

Second. Recommittal: Generally, on all important bills, a motion to recommit the bill to a committee, with or without instructions, is voted upon by the House before it votes upon passage of the bill. If such a motion is adopted, it means that the bill will be changed, delayed, or even killed. However, when a motion to recommit is accompanied by instructions, the vote generally indicates whether the Member is in favor of or opposed to the change in the legislation proposed by the instructions and does not necessarily indicate his position on the bill as a whole. A motion to recommit with instructions, if adopted, does not kill the bill.

Third. The type of bill can be determined by the letters which precede its number. All bills that originate in the House are designated by an H; those that originate in the Senate by an S. There are four main types:

1. H. R. (S.) designates a bill which, when passed by both Houses in identical form and signed by the President, becomes law.

2. H. J. Res. (S. J. Res.) designates a joint resolution which must pass both Houses and be signed by the President before becoming law. It is generally

used for continuing the life of an existing law, or in submitting to the States a constitutional amendment, in which case it does not require the signature of the President but must be passed by a two-thirds majority of both Houses.

3. H. Con. Res. (S. Con. Res.) designates a concurrent resolution. To become effective it must be passed by both the House and Senate but does not require the President's signature. It is used to take joint action which is purely within the jurisdiction of Congress. Many emergency laws carry the provision that they may be terminated by concurrent resolution, thus eliminating the possibility of a Presidential veto.

4. H. Res. (S. Res.) designates a simple resolution of either body. It does not require approval by the other body nor the signature of the President. It is used to deal with matters that concern one House only, such as changing rules, creating special committees, and so forth.

Fourth. Rule: Important bills, after approval of the committee concerned, go to the House Committee on Rules where a rule, in the form of a House resolution (H. Res.), is granted covering the time allowed for debate, consideration of amendments, and other parliamentary questions.

Fifth. Suspension of the rules: This action limits debate and does not permit the right of amendment.

Sixth. Conference: Representatives from both Houses of Congress meet in conference to work out differences existing in the legislation as passed by the two bodies. Upon conclusion of their conference, a report is submitted to each House setting forth the agreements reached. Each House then must act by way of adopting or rejecting the report in whole or in part.

Seventh. Ordering the previous question: A motion to order the previous question, if adopted, shuts off further debate on the question before the House and prevents further amendments to such proposition.

Eighth. A bill may pass, or be defeated, by one of the following kind of votes:

1. Voice vote: The Speaker first asks all in favor to say "aye" then those opposed to say "nay." If there is no question as to the result, this is sufficient.

2. Division: If the result of the voice vote is in doubt, the Speaker asks those in favor to stand, then those opposed to stand. He counts in each instance and announces the result. If he is in doubt, or if demand is made by one-fifth of a quorum, then—

3. Tellers are ordered. A Member on each side of the question is appointed as teller, and they take their places at each side of the center aisle. Those in favor walk through and are counted. Those opposed do likewise. The result settles most questions, but any Member, supported by one-fifth of a quorum, can ask for a rollcall. This privilege is guaranteed by the Constitution.

4. Rollcalls place each Member on record on the particular measure involved. Each Member's name is called and his vote recorded. Rollcalls constitute the official voting record of the House.

The outcome of various votes are indicated in parentheses in the record above. In the case of rollcall votes, the actual vote is shown.

Legislative Record of Hon. Irwin D. Davidson, of New York, 1st Session, 84th Congress

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DAVIDSON. Mr. Speaker, as a freshman Congressman, I should like the record to show that I am cognizant and deeply appreciative of, not alone the great honor but also the opportunity for public service which the people of my district have afforded me. I have worked hard to do the kind of job they had a right to expect of me. My efforts were in many fields of legislative activity. For their critical examination and the consideration of the House, I submit a compilation of the major bills which I have introduced this year. In some instances, it can be reported with pride, perhaps pardonable for a first-year Congressman, that I was successful. In others, it is my intention to continue to strive for favorable consideration next year.

I have introduced a fairly large number of bills and for convenience list them here in 12 major fields for legislative action.

1. CONSUMERS

House Resolution 220 introduced April 21, referred to the Committee on Rules: This resolution would authorize the establishment of a special congressional committee to study consumer problems such as false advertising, pricing practices, governmental activities for the protection of the consumer, including the desirability of establishing a consumers agency in the Federal Government or increasing the power and scope of the Federal Trade Commission. I have requested hearings before the Rules Committee and am hopeful that these may be held shortly after Congress reconvenes.

2. AUTOMATION

House Resolution 221, introduced April 21: This resolution would establish a congressional committee to study the effect of automation on the American economy, giving particular attention to the need for revision of social security, workmen's compensation and other laws. Following my introduction of this resolution, the Joint Committee on the Economic Report announced they would undertake such an investigation. Hearings will be held in October.

3. NARCOTICS

House Joint Resolution 225, introduced February 18, 1955: This resolution would completely revise our efforts to control narcotic importation, selling, and addiction. A companion bill has been introduced in the Senate by a bipartisan group of over 40 Senators, including Senators LEHMAN, KEFAUVER, SALTONSTALL, and PAYNE. Under this resolution, the Federal Government would set up a chain of narcotic treatment clinics across the country, the FBI and Justice Department would take over enforcement of our narcotic laws and stronger penalties for violations would be imposed. The measure is pending in the Ways and Means Committee and I have exchanged correspondence with the chairman of that committee and believe that hearings will be held next year.

H. R. 7838, introduced August 2: This bill contains two major parts, one of which deals with narcotic addicts. We spent many months preparing this and several other bills along similar health-education lines. These are listed later on. Under H. R. 7838, $5 million is authorized to aid the States on a matching basis to build narcotic addict hospitals, treatment centers, and rehabilitation facilities. This is an extension of the well-known Hill-Burton law, and I have high hopes that there will be favorable action on it.

4. SALK VACCINE

House Joint Resolution 278, introduced April 14: This resolution, authorized the coining of a special gold medal for Dr. Jonas E. Salk in recognition of his wonderful work in developing the polio vaccine. I am proud to say it was unanimously passed by the House and Senate and became law on August 9 when the President signed it. The medal will be prepared and presented to Dr. Salk by the Secretary of the Treasury. Bronze replicas of the medal may be sold to the public by the Treasury.

H. R. 5983, introduced May 3: The purpose of this bill was to authorize the President to control the distribution and price of the Salk vaccine. It is interesting to note that I introduced the medal resolution which passed just 2 days after the announcement of the development of the vaccine when everyone was elated at Dr. Salk's success. Three weeks later, due to the scandalous administrative handling of the vaccine and the press reports of favoritism and black marketeering I found it necessary to introduce control legislation. My bill would have given the President standby power to put the controls into force as he thought necessary.

5. CIVIL RIGHTS

I introduced a series of civil-rights bills on February 2. They were referred to the Committee on the Judiciary and at my request hearings were held on July 13 and 14. I testified on July 14. No report has been filed as yet by the committee, and I will continue to press for some affirmative action. The bills which I introduced are as follows:

H. R. 3417, outlaw the poll tax as a condition of voting in any primary or other election for national officers.

H. R. 3418, reorganize the Department of Justice by establishing within it a division for the protection of civil rights.

H. R. 3419, prohibit intimidation or coercion of voters in national elections,

making such action criminal and providing penalties of $1,000 fine and/or 1 year in jail.

H. R. 3420, strengthen the laws relating to peonage, involuntary servitude, and slavery. This bill extends the prohibition against shanghaiing to all means of transportation instead of just to vessels.

H. R. 3421, prohibits activities such as Klu Klux Klan marauding on the public highways or on the private property of another.

H. R. 3422, establishes a Commission on Civil Rights in the executive branch of the Government.

H. R. 3423, an omnibus bill establishing a Joint Congressional Committee on Civil Rights, a Civil Rights Commission, strengthening the laws protecting civil rights, and prohibiting discrimination in interstate transportation. The latter provision would extend the historic decision of the Supreme Court prohibiting so-called separate but equal school facilities to cover interstate transportation. It is high time this outrageous discriminatory, deceptive concept was eliminated entirely.

H. R. 3575, to protect the rights of all persons, including aliens, within the United States and to prohibit lynchings.

H. R. 3576, a separate bill containing the prohibition against discrimination in interstate transportation. This bill was referred to the Interstate and Foreign Commerce Committee. By introducing several versions of the same bill, the chances of obtaining action is increased.

6. MINIMUM WAGE

H. R. 3424, introduced February 2: My bill to increase the minimum wage is the companion bill to that introduced by Senator LEHMAN. It provided for an increase in the national minimum to $1.25 per hour, and would establish minimums in Puerto Rico and the Virgin Islands of 80 cents the first year, and increase it there 5 cents per year for the next 5 years until it reached $1.05 an hour. I appeared before the House Committee on Education and Labor in support of my bill. While we were successful in obtaining passage of a bill to increase the mainland minimum to $1 an hour—10 cents more than the Republicans said they wanted—we were unable to obtain any real action on the Puerto Rican situation. I plan to introduce new legislation at the next session to cover this glaring need. The cost of living in Puerto Rico is higher than it is on the mainland, but the prevailing wages are much lower. This has a very adverse effect not only on the Puerto Rican standard of living, but on industry here in New York where more and more employers are leaving to open plants in the South and in Puerto Rico or the Virgin Islands. This tendency must be stopped.

7. HOUSING

H. R. 3926, introduced February 10: This was the first housing bill which I introduced and it provided for special low-rent housing for the aged.

H. R. 6745, introduced June 9: My bill provided for 150,000 units of public housing and a change in procedure in slum clearance financing. By the change contained in my bill, which has been passed by Congress, FHA will no longer be able to stall this program. My bill also closed a loophole in the slum-clearance law. Without my amendment, there could be vast windfalls. This provision of my bill was approved by the House committee, but due to the action of the Republican leadership was rejected and has not passed. I will introduce it again at the next session. In addition, I proposed that a study be undertaken to establish a system for insuring the equity which small-home owners have in their homes so that in the event of economic reversals beyond their control, they would not lose all the money which they put into the house. The committee reported on this suggestion and it will be studied by the housing subcommittee during the recess.

8. REFUGEE RELIEF AND IMMIGRATION

H. R. 4432, introduced February 25: This is the bill to amend the so-called McCarran-Walter Act. Senator LEHMAN and I introduced it the same day. It makes 10 major changes in the existing discriminatory immigration law including:

First. Elimination of the national origins quota system;

Second. Elimination of discrimination between naturalized and native-born citizens;

Third. Elimination of special immigration barriers against Negroes and orientals;

Fourth. Permission for immigration of up to 250,000 persons each year; and

Fifth. Establishment of statutory review and appeals procedures in case of deportation, exclusion, or denials of visas.

This bill, like my bill to amend the Refugee Relief Act has been referred to the Judiciary Subcommittee headed by Congressman WALTER. Senator LEHMAN and I and several other Congressmen are continuing our efforts to obtain consideration of these bills.

H. R. 6161 was introduced May 10 in conjunction with Senator LEHMAN. This bill is designed to completely revise the refugee-relief law. It provides for:

First. Appointment of a new Administrator of Refugee Relief;

Second. Sponsorship and assurances for refugees by recognized welfare agencies;

Third. Increasing the number of visas by 15,000.

Fourth. Extending the law to December 31, 1960;

Fifth. Broadening the definition of the word "refugee";

Sixth. Elimination of the 2-year documented history requirement;

Seventh. Elimination of necessity for certificates of readmission to country of departure;

Eighth. Elimination of the word "ethnic" from the law;

Ninth. Raising the age for orphans eligible for admission from 10 to 14;

Tenth. Broadening the provisions for adjustment of status of aliens presently in the United States; and

Eleventh. Repeal of the visa priority system.

9. BANKS

H. R. 5710, introduced April 20: This bill would require the national banks to comply with State laws relating to their branch-banking activities. It would remove the disadvantage at which the State banks are now placed. The companion bill has passed the Senate.

10. NIAGARA POWER

H. R. 5878, introduced April 27: Senator LEHMAN and I introduced this bill to permit the New York State Power Authority to develop hydroelectric facilities at the Niagara. It would also require the power authority to give preference in the distribution of such power to municipal and nonprofit cooperative electric companies. I testified before both the House and Senate Public Works Committees in support of the bill, but thus far the utility monopoly has been able to keep both bills bottled up in committee. The administration has vigorously opposed this bill and advocated another giant giveaway to the big-business combine. You may be sure that we will not let that happen. The Niagara belongs to all the people of New York, and will be developed by them and for them.

11. TAFT-HARTLEY

H. R. 6023, introduced May 4: This bill, if enacted, would repeal that portion of the Taft-Hartley Act which permits the States to pass the so-called right-to-work laws. These laws prevent legitimate union activities and have been condemned as reactionary antiunion measures throughout the Nation. The Republican leadership is fighting to prevent consideration of any revision of the Taft-Hartley law.

12. SCIENCE, HEALTH, AND EDUCATION

H. R. 7838, introduced August 2: This is the bill which I described in part under the "Narcotics" heading. In addition to those provisions, my bill would also provide $20 million for assistance to the States on a matching basis for the construction of psychiatric hospitals and psychiatric treatment and rehabilitation centers. There is at present a shortage of over 500,000 hospital beds throughout the country; the greatest single shortage exists in the field of mental illness. This bill seeks to overcome this great deficit.

H. R. 7839: This is the second bill which I introduced on August 2 as part of a program to stimulate science education and expanded health activities. The bill provides for 10 college scholarships per State each year for high school graduates who qualify in national mental examinations. The program would be similar to the GI bill and as long as the students make satisfactory progress they may remain enrolled under the plan. An additional group would enter each year, and certain students could continue under the scholarship into graduate schools. The purpose of this bill and H. R. 7840, is to increase the number of United States scientific personnel. Statistics show that we are rapidly and steadily falling behind Russia in the number of trained scientific people who graduate each year. At present there is a national shortage of doctors, nurses, dentists, engineers, laboratory

technicians, and many other scientists. New research is limited by this shortage. If we hope to continue the scientific advances we have been making, this shortage must be overcome.

H. R. 7840: This is the last bill which I introduced, and would provide $250,000 to finance the cost of preparation, publication, and distribution of science teaching text and laboratory manual supplements for use in public elementary and secondary schools. The manuals would be prepared by qualified private science teaching groups.

These last three bills were introduced on the final day of the session so that interested groups would have time to study them and so that reports could be obtained from the governmental agencies concerned before Congress meets in January. I have already requested these reports and have asked that public hearings be held as soon as possible next year.

The above constitutes a rather full report on my legislation. During the congressional recess we shall have hearings on automation, narcotics, housing, and the merchant marine.

"The Catholic Gift to the Public Schools": Editorial by the Most Reverend John F. O'Hara, CSC, Archbishop of Philadelphia, Discusses How Catholics, in Addition to Their Federal, State, and Local Tax Payments, Contribute More than $1 Billion a Year in "Grants" to the Nation's Public Schools

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. GRANAHAN. Mr. Speaker, in view of the widespread interest among Members of Congress in the problems of our schools, and in view of the fact that there is now pending on the calendar of the House a bill for Federal aid to education, I would like to call the attention of the Congress to a very important discussion of this matter by a very distinguished constituent of mine, the Most Reverend John F. O'Hara, CSC, Archbishop of Philadelphia.

From time to time Archbishop O'Hara has commented editorially in the Catholic Standard and Times of Philadelphia on some of the broad aspects of the problems of education. I was pleased and honored to place in the Appendix of the CONGRESSIONAL RECORD an editorial of his which appeared in the Catholic Standard and Times earlier this year. I was gratified by the comments of so many of my colleagues in the House who expressed their appreciation to me for having placed this material in the RECORD.

The latest editorial by Archbishop O'Hara on this matter, entitled "The Catholic Gift to the Public Schools," appeared in the Catholic Standard and Times of Philadelphia on last Friday, July 29. It discussed in detail some facts which are not generally known in connection with what might be called the subsidy—or rather, subsidies—which Catholics in the United States, through the Catholic schools and otherwise, provide for public schools. In this editorial, Archbishop O'Hara places those facts on view in a clear and impressive manner.

CATHOLIC SUBSIDY OF $52 PER PUPIL IN NORTHEAST PUBLIC SCHOOLS

For instance, he shows that through the very operation of the Catholic schools, the States of the Northeast are able to spend $247 per year per pupil in the public schools. If there were no Catholic schools in those States, the same amount of public-school funds would provide only $195 per pupil. As the archbishop points out, this amounts to a Catholic subsidy of $52 per pupil per year in the public schools in the Northeast—the States from Maine to Pennsylvania.

For the North Central States—Ohio to Kansas—this subsidy is $29 per pupil per year. In the West—Rocky Mountains to the Pacific—it is $17 per pupil in the public schools per year. In the South—Delaware to Oklahoma—it is $6 per pupil. As the archbishop analyzes these figures, it comes to a total of $620,692,000 per year in this particular Catholic gift to the public schools.

Another Catholic gift to the public schools, the archbishop declares in this editorial, is in the $500 million of Catholic school construction per year. The other subsidy referred to school operating costs; this one refers to construction of buildings. If the $500 million of Catholic school construction were not put into place each year, the same amount would have to be spent out of public tax funds to provide public-school facilities for the children now going to Catholic schools. Added to the $620,692,000 previously referred to, that makes a total of $1,120,692,000 in annual Catholic grants, if you will, to the public-school system.

A TOTAL CATHOLIC SUBSIDY TO PUBLIC SCHOOLS EACH YEAR OF $1,120,692,000

These figures do not, of course, take into consideration the State and local taxes which Catholic citizens pay for the support of the public schools, or the Federal taxes which they pay which help to support any Federal program of aid to education, including the present program for aid to the so-called impacted areas. The total of $1,120,692,000 refers only to amounts which the public schools would have to spend each year in addition to present expenditures if the Catholic schools did not exist; that is, assuming the States would be making the same effort per pupil as they do now.

In legal terminology, this is a grant-in-aid.

The editorial declares.

Nothing is expected back. There are no bonds, there is no interest to pay. This grant for operating expenses frees other moneys for school construction. The total present grant for the public schools, then, is the annual expenditure of $500 million for Catholic-school construction, plus the $620,692,000 for operating expenses, or a grand total of $1,120,692,000.

The editorial also states this interesting fact:

Turning back to the table which shows the cost per pupil for current operations, we find that the South presents the acute problem. The small Catholic population in that section makes a magnificent gift—$56,466,000—to the public schools, and this is more than the total expenditure for operating public schools in 19 of the States of the Union. But it spreads thin over the almost 10 million pupils in that section.

If the Catholic-school population of the South were sufficient to provide for that section the bonus the Northeast enjoys ($52 per pupil) the expenditure in the South, with no additional taxation, could be $190 per pupil, or only $5 less than the expenditure in the Northeast and $4 more than the expenditure in the North Central States.

CATHOLIC GIFT TO PUBLIC SCHOOLS EXCEEDS PROPOSED FEDERAL AID

Mr. Speaker, I believe these facts shed needed light on an important problem, helping to bring understanding of the magnificent contribution to American education now being made by Catholics and the Catholic schools.

I should like to include the entire text of the editorial in the CONGRESSIONAL RECORD. I am informed, however, that it cannot appear as part of these remarks because arrangements have already been made for it to appear under a separate heading of the CONGRESSIONAL RECORD Appendix which in the temporary RECORD will carry tomorrow's date, that is, August 2. I urge all Members to give it their attention—page A5682.

Since there is to be, this November, a White House Conference on Education for which the Congress has appropriated funds, and since there is pending legislation to adopt a Federal aid program which would include $400 million a year of direct Federal grants, it is worth noting, as this editorial by Archbishop O'Hara points out, that:

The Catholics of this country, by the construction and operation of their own schools, are doing considerably more for the public schools than the Federal Government proposes to do.

H. R. 6887

SPEECH

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. JENKINS. Mr. Speaker, the Senate has added an amendment to this bill, H. R. 6887. Under present law, a deduction for the Federal estate tax is granted for bequests to charity. Under the Senate amendment, a deduction would also be granted for the amount of any estate, succession, legacy, or inheritance tax imposed by a State upon the transfer by the decedent for public, charitable, or religious uses as described in section 2055.

The deduction for charitable bequests allowed by section 2055 of the 1954 code for bequests to charity is measured by the amount the charity actually receives and not the amount of the bequest. For

example, if a State imposes a tax on the charitable bequest and the State tax must be paid from the charitable bequest, the Federal estate-tax deduction would be limited to the amount of the bequest less the State tax paid from the bequest, and the Federal estate tax would be increased by the corresponding increase in the taxable estate of the decedent. If the additional Federal estate tax thus arising must also be paid out of the charitable bequest, the charitable deduction will, in turn, be reduced and the estate tax correspondingly increased. By this pyramiding of tax on tax, the Federal estate tax can be increased by much more than the State tax on the bequest and the combination of these two taxes can result in the dissipation of a large part of the bequest that the testator intended to be used for a charitable purpose.

To prevent the charitable purpose of the testator from thus being frustrated and to carry out the national purpose of not subjecting charitable bequests to the estate tax, the Senate has added a provision that will grant a deduction for Federal estate-tax purposes for the amount of any estate, succession, legacy, or inheritance tax imposed by a State upon a transfer by the decedent for public, charitable, or religious uses as described in section 2055 of the 1954 code. Thus, the estate will receive the same deduction whether or not a State tax is imposed upon a bequest, legacy, devise, or transfer that is deductible under any paragraph of section 2055 (a) of the 1954 code.

The deduction will be disregarded in computing the credit for State death taxes under section 2011 of the 1954 code.

The amendment to section 2053 of the 1954 code will apply with respect to the estate of decedents in any case in which the last date prescribed by law for filing the Federal estate tax return is on or after April 1, 1955.

Speech Delivered by Hon. Abraham J. Multer, of New York, at the 46th Annual Convention of B'Nai Zion at Monticello, N. Y., on June 4, 1955

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. MULTER. Mr. Speaker, it was my privilege to be a guest speaker at the 46th annual convention of B'nai Zion on June 4, 1955, at Monticello, N. Y.

The 4-day convention began on June 3, 1955, and was attended by many distinguished leaders of Jewry including Yehuda Harry Levin, counselor of the Embassy of Israel, and the Honorable Bartley C. Crum, former member of the Anglo-American Commission of Inquiry on Palestine.

The speakers at the 4-day convention included Supreme Court Justice Arthur Markewich, president of B'nai Zion; Dr. Harris J. Levine, past president of B'nai Zion and president of the Jewish National Fund; Mendel N. Fisher, executive director of the Jewish National Fund; Benjamin E. Gordon, chairman of the B'nai Zion Foundation; Herman Z. Quittman, secretary of B'nai Zion. Among the many others who contributed to the success of the convention were Nathaniel S. Rothenberg, Hyman J. Fliegel, Norman G. Levine, Rudolph Edelson, Elias Epstein, Dr. Samuel Margoshes, Dr. Jacob I. Steinberg, Dorothy S. Levine, Hon. Harry A. Pine, Louis K. Bleecker, Benjamin Dantzker, Alazar Kushner, Joseph Kleiman, Dr. Sidney Marks, A. A. Redelheim, Herman Sperling, and Mike Funk.

I believe the text of my remarks on that occasion may be of interest to our colleagues. They are as follows:

Mr. Chairman, distinguished guests upon the platform, fellow members and friends, I am in a somewhat difficult position. Our nassi (president) has already complimented the ladies. All of the compliments that can be thought of, together with our congratulations, have been extended to Herman and his good wife and to their son. You have been told the story about the silver and I understand the ladies have collected about all the silver that is available in exchange for the raffle tickets. Well, that sounds illegal. I mean, in exchange for a share in a diamond ring that somebody is going to take home.

I could talk about Jewish national fund, but Mendel Fisher didn't send me a letter. I could talk about the national lawyers committee of the Jewish National Fund Foundation, but I don't know whether I should because Abe Tuviem gave me his promise he would play customer's golf with me tomorrow, if I did. I am not sure that I want to play that kind of golf with him. Of course, as Judge Markewich told you, I did submit an advance copy of some of the things I intended to say tonight and part of them he has already used in his script. But I have learned from past experience that what you are going to send to the press as advance copy of your speech, don't send to any of the speakers that are going to precede you on the platform. So maybe I will fool him. Although you can't help but talk about some of the same general subjects at a meeting of this kind, I will try to put it in just a little different language than he has already used and try to save something also for those that are going to follow me on the platform at this convention. That may save you from the boredom of too much repetition.

Now I chose for the topic of my brief comments tonight not what the Jewish national fund has done during the years, not what B'nai Zion has done during the years, not what you are going to do in the years to come as you strengthen your membership by bringing new blood into the organization, not by talking about how you are the backbone of the Zionist movement and have been and will continue to be, nor about the fact that the Jewish national fund could hardly carry on without the aid of B'nai Zion.

I have chosen a topic which I am sure is uppermost in your minds as it must be in the minds of every Jew throughout the world and that is, "What is wrong with our American Government?"

Now there are a great many things that are right about our American Government, but there are 1 or 2 things that are wrong. Some of those things that are wrong touch you and me very closely. And you and I and our friends will have to do something about it.

Now within the meaning of the words "What is wrong with our American Government?" you can very easily take anyone of three topics.

You could take our immigration laws, and I touch upon that first so there will be no doubt in anybody's mind that I am not being political in my criticisms about government today because although I am a Democrat, I am very much ashamed of the fact that the immigration laws of this country bear the names of two Democrats and I think most highminded Democrats disown the principles of both the late Senator McCarran and my colleague, who still sits with me in the House of Representatives, Mr. WALTER, as written into the McCarran-Walter Immigration Act. I have said many times before, and I will say many times again, that act is a blot upon the history of our country and both parties are responsible for it. However, the leader of the Republican Party, the President of these United States, must bear the responsibility for that law not being corrected, and, to his everlasting shame, history will record that he made a deal, a political deal with the authors of that Immigration Act not to press for amendments of it, in exchange for a refugee act that is a fraud and a scandal. If the act has not been properly administered up to the present time, he must also bear the blame for that. In blaming him for that today let us recall that a certain Senator, whom I need not name, no longer holds a whip hand over the President or over his Secretary of State or over the Republican Party. If the McCarthy nominee in charge of that program is still there and in charge of it, our President, together with his Secretary of State, must bear the blame for it.

I refer to the Immigration Act because it indicates a lack of sympathy on the part of Americans in high official place, a lack of sympathy for the needs and for what must be done to help people outside of our country who can't otherwise be helped.

Now I come to the second of the things that I think is wrong with our Government. It is typified by the following quotation from a member of the President's Cabinet and if when she reads it, if she does read, in the newspapers anything that I have said here tonight and says that the quotation was taken out of context of the speech she made on Thursday, my answer is "Yes." Deliberately I have taken it out of context.

Let me read what Secretary Hobby said to a graduating class at the Presbyterian Medical Center on Thursday of this week and I quote: "Lacking your training, lacking your experience and your knowledge, we will at times seem remarkably inept." Those are the words used on Thursday of this week by Mrs. Hobby, Secretary of the great Department of Health, Education, and Welfare of this country. That is the same lady who has not found time to attend before the congressional committees and explain why she was so inept in the handling of the Salk vaccine program in this country. She has time to make speeches and attend parties but on every day that she was supposed to attend before a congressional committee she claimed either illness or that she had to chase off to some place distant from Washington.

What she said typifies the ineptness of the administration in charge of the executive department of our American Government. That also typifies the lack of sympathy of those people in high Government place. I pointed out to you a moment ago their lack of sympathy for the foreigner. Now I am pointing out to you the lack of sympathy for our own children and for our own country's welfare. I am sure you will agree with me that the Canadians and the Canadian Government do not love their children any more than we do and their government does not have any more desire to protect their chil-

dren than our Government should have to protect ours. But the ineptness of the administration indicates its lack of sympathy with human problems. We provide free vaccines and toxins for our cattle without socializing the cows or the farmers. But to do as much for our children, Mrs. Hobby tells us will drive us into socialization of medicine.

Is it any wonder that we should be so concerned about the lack of sympathy of this same Government and these same high-placed Government officials with the problems that concern us so dearly and so closely as they involve the Middle East and particularly the new state of Israel for which you and I and our fathers and mothers labored so long and so hard, and for which we will continue to work hard.

It is hard to understand how we could have a President in these United States who voices his desire for worldwide peace and who talks about his interest in human beings, how liberal he is where the human element is involved and how conservative he is where property values are concerned, and yet takes so little interest in what his Secretary of State is doing.

I do not agree for one moment with any of those who attribute any anti-Semitism or any anti-Jewishness to our Secretary of State. At the same time I refuse to concede that there is a single Jew anywhere in these United States who is one bit less patriotic and less loyal to this country than is our Secretary of State. I refuse to believe that there is a single Jew anywhere in these United States who would not put the national security of this country ahead of even the national security of the new State of Israel. But none of us are called upon to do that. You need not put our national security ahead of the national security of any other people or any other country in order to work for and bring about a genuine peace in the world.

Sholom is the word that resounds through our Torah. Sholom is the word that is preached to us from the day we are old enough to understand. Sholom is the word and the principle and the concept that Jews have carried with them wherever they have gone from time immemorial and which we will always preach and practice. It would seem, however, that everybody except our State Department knows how to bring about peace in the Middle East. We are told on every side that the greatest accomplishment of this Republican administration in Washington is worldwide peace. I suppose we must concede that there is no worldwide war.

We might even further concede that there is no declared war. At the same time, unless we stifle our senses, we must know that there is no peace. The protestations of our State Department that it desires peace in the Middle East can be likened to a doctor treating a mental patient, afflicted with homicidal tendencies by telling him, "behave yourself" and while using expressions of good behavior to him, hands to this mental patient a loaded gun.

I have many times urged that peace in the Middle East can very quickly be established if our Government took the position that we would give no aid to the Arabs unless they consummated in good faith treaties of peace with the State of Israel. I have also many times urged that if we gave to the Arab States economic aid, we could divert the Arabs' attention from their military threats and desires to improving their standards of living. Everyone but our State Department seems to understand that you can't establish peace by encouraging violence. If you can't do it in the treatment of juvenile delinquency, how can you do it with adults? We know if you want to prevent crime you don't do it by teaching people how to use drugs or guns or weapons.

But our great Government can't understand that nations are groups or congregations of people and you must treat them as you would treat humans and you can't encourage peace by delivery of military armaments.

At the recent conference in Bandung a declaration on Palestine was adopted. Israel was not invited to attend. The Arab States were invited to and did attend. The declaration as there adopted referred to the existing tension in the Middle East and I quote, "of the danger of that tension to world peace." The declaration called for the implementation of the United Nations resolutions on Palestine and, over the objections of the Arabs, the declaration included a call for, and I quote, "the peaceful settlement of the Palestine question." This is just one more resolution that the Arabs will ignore.

What right have we or anyone else to think the Arabs would pay any more attention to this resolution than to past resolutions which called upon them to renounce their belligerencies, to call off their blockades, to extend their armistice agreements to final peace settlements, and to integrate the Arab refugees into the Arab economies?

Every day that goes by without our Government making earnest efforts to establish peace in the Middle East and every utterance of the thought that armaments to the Arab states can establish peace is further proof of the Communists that our Government talks peace and acts war.

To those who say I am too critical of our Government, I say I am critical only when I can offer a solution. I don't pretend to be omniscient. I don't pretend to be infallible. But I have offered a solution. Maybe there is another solution or even a better one. If there is, then I call upon our Government to announce what that solution is and try to implement it.

As I see it, the solution is not military aid but a firm insistence upon suspension of hostilities and of all blockades and then move in with economic aid and teach these people to live as decent humans and to learn to love their neighbors as themselves. All a Jew ever asks anywhere is to be permitted to love his neighbor as himself and to be permitted to treat the stranger in his midst as one who belongs. That, my friends, is my brief message to you tonight. I do hope that in the year ahead you will continue the fine work you have been doing and that at the next convention we can get together and celebrate genuine world peace.

H. R. 257

SPEECH
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. JENKINS. Mr. Speaker, the Senate amendment to H. R. 257 adds a new section to the Internal Revenue Code of 1954 which is complementary to section 1341 of the code.

Section 1341 deals with the situation where a taxpayer mistakenly includes an item in his gross income of a prior year(s), and in a later year is required to restore the money or property which gave rise to the item of income in the prior year. Where the restored item amounts to $3,000, or more, section 1341 allows the taxpayer the option of: First, deducting the restored amount in the tax year it is restored to a third party; or, second, computing the tax for the restoration year without deducting the amount restored, and then lowering the tax of the taxable—restoration—year by the amount of decrease in tax caused by excluding the restored item(s) from the income of the earlier year(s) in which reported.

The Senate amendment simply extends a similar option to a taxpayer who, mistakenly believing that a third party had a claim of right to money on property, takes a deduction for the item or items in an earlier year or years. An amendment along this line has already been approved by the Committee on Ways and Means. The House should have no objection to the Senate amendment.

Foul Ball

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. NEUBERGER. Mr. President, my attention has been called to a recent editorial in the Journal of the Iowa State Medical Society. It discusses aspects of recreation and juvenile delinquency, two subjects recently discussed at a conclave of champions hosted by the President at a White House luncheon. Mr. President, this editorial may express extreme opinions, perhaps the examples cited should by no means be considered typical. However, Mr. President, it merits wide reading and objective consideration. Questions raised in the editorial deserve considered answers—from the special committee of champions the Vice President heads to the school board in the most remote hamlet. I ask for unanimous consent, Mr. President, for its inclusion in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOUL BALL

About 350 years ago, the aristocrats of London became tired, for the moment at least, of their customary amusements, among which were bearbaiting and cock fighting, and of the people who staged them. Casting about more or less at random, they hit upon the novel idea of organizing companies of children to replace adult actors in their theaters, and the innovation achieved immense popularity. The youngsters' ineptness proved highly entertaining, and if, as frequently happened, they obviously could not understand what they were required to speak, or if the situations and the lines were clearly inappropriate to their youth and innocence, the audiences were especially delighted. In those days no one thought that the exploitation of children was reprehensible, but if anyone had made such a suggestion, no doubt one of the originators of the scheme would have dreamed up the idea that it was a means of preventing juvenile delinquency.

The Little League system, in which 8- to 12-year-olds are being introduced to championship-competition baseball, is little more

than a repetition of what happened in the first Queen Elizabeth's time. Little boys are put under considerable pressure to work—rather than play—several hours a day at learning and exhibiting skills for which, in most cases, their stage of development does not equip them.

It is inevitable that the process of growing has sapped junior's strength, and his muscular coordination is by no means what it will be after 4 or 5 more years, but papa—and often mamma, too—have made it crystal clear to him that he must make the team, or stay on the team or not let the team down on penalty of losing their affection and esteem. Furthermore, since the practice sessions and games usually last through his family's dinner hour (the adult provocateurs cannot come to supervise and enjoy them at any other time), junior eats peanut-butter sandwiches by himself at 8 o'clock each night, instead of sharing in the well-balanced meal that his mother prepared for the rest of the family to eat at 6, and he misses out on the impromptu conclave incident to the family meal, at which he could have learned valuable lessons and bolstered his impression of his family's solidarity.

The idea that the Little Leagues prevent 8- to 12-year-olds from getting into mischief is no more than a rationalization. People merely have stumbled upon a new potential group of entertainers. In Iowa, at least, little boys infrequently get into serious mischief, for they are subject to relatively few temptations. Thus they have little need for the amount and intensity of outside-the-home activity that such programs force upon them. Rather, when adults preempt playing fields for the use of such little children, they force older boys—the potential delinquents—out of the parks and into the streets. Indeed, on one field that we know of, the grown-ups erected a fence across what used to be the middle of the outfield, with the result that grown boys and men are unable to play a game of baseball there at all.

Are those sorts of goings-on modern, or even sensible? Who, if anyone, will benefit, other than the type of man who buys his son a catcher's mitt and mask before his wife has been released from the maternity ward at the hospital?

In Des Moines, opprobrium has been heaped upon members of the board of education for refusing Little Leagues the right to use school diamonds on Sundays. In this instance we are fully in sympathy with the board. Though we have no statistics to support us, we are certain that a very considerable share of citizens regard games as a highly improper Sunday activity, and they are trying to get their sons and daughters to think so, too. Certainly it is not within the province of an elected board—as it likewise should not be the right of the Little Leagues' managers—to interfere with that sort of home training.

As regards some other phases of the athletic program for youngsters, however, we hold views at variance with those of most school boards in the State, for we think that the school officials have permitted an altogether disproportionate emphasis on competitive athletics and subsidiary activities in the high schools.

Football and boys' basketball in the larger schools, and basketball for both girls and boys in the smaller ones are being permitted to disrupt both academic work and family life. Practice sessions last from 3:30 to 6 or even 6:30, rather than from 3:30 until 5 or 5:30, with the result that boys and girls are prevented from getting home before dark and in time for dinner. There almost never is an opportunity for an athlete to consult his teachers after school hours, nor is there sufficient energy left him for any after-dinner school work or for the minor domestic chores, the chief benefit of which is the impression they give a child of his responsibility for helping maintain the home. Furthermore, so many interscholastic games are scheduled that some of them must be run off on school nights, with the result that both participants and student spectators are even prevented from getting to bed on time. Frequent pep fests are permitted during schooltime, some of them lasting more than an hour, and when a basketball team has been unusually successful, a series of tournaments deprives participants and nonparticipants alike of 1, 2, or 3 weeks of classroom work.

Our school boards should be reminded that they have been entrusted with educational plants and equipment worth hundreds of thousands of dollars, and are employing teachers at an average wage of about $2.50 per hour, each. The dollars-and-cents cost of closing school for an hour a week—not to mention a whole day or a whole week—and of sanctioning schedules that sap student's learning efficiency should give them serious concern.

Then, too, there is the very real danger that sports heroism will make boys and girls feel grown up prematurely. The tears into which girl basketball teams frequently dissolve when they have been eliminated from a touranment aren't symptomatic of anything good. Our sons distress us when they demonstrate the techniques of eye gouging, hip-throwing, and spiking by which their coaches have taught them to cripple their opponents. And we wonder what has happened to the high ideals of sportsmanship when they tell us the coach says a football player is no good unless he gets mad. But we are most worried when an overdose of adulation from his friends and his elders, and the acclaim given him by a sportswriter has made a son of ours feel so grownup and self-sufficient that he is no longer tolerant of the advice and restrictions that we want him to accept. Because we live in Des Moines, rather than in any of a couple of hundred smaller Iowa towns, our daughters haven't been subjected to that sort of head-turning, a circumstance for which we are deeply thankful.

We want our children to have physical training, and we want them to enjoy themselves by playing games, dancing, singing or engaging in any other sort of harmless recreation. But we don't think it is good for them to feel compelled always to win, and we want them to be treated as children and to think of themselves as children until they have attained emotional, intellectual, and physical maturity, together with as much of an education and of moral training as we and their teachers, unimpeded, can provide them.

Philadelphia Scientists Have Been Pioneering in the Field of Space Satellites and in Urging Official Attention to the Significance of Satellite Experiments

---

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. GRANAHAN. Mr. Speaker, the announcement on Friday, July 29, that the first artificial satellite project had been authorized was the herald of a new age—one which conjures up pictures of space travel, and interplanetary communication. We have every right in the world to feel proud of what our country is doing and to celebrate the fact that we live in a time when men have the courage and the vision to "set their hearts on the stars." Yet we should also remember that this new advance will bring new problems and new responsibilities.

Earlier this year, members of the Philadelphia Astronautical Society wrote to me to enlist my interest in this matter of artificial satellites, suggesting that the time had come for the United States seriously to consider work of this nature. Mr. Thomas Purdom, secretary of the Philadelphia Astronautical Society, asked my opinion on the subject and wanted to know if I thought work of this nature was practical. I replied that I thought it was a situation wherein the scientists should tell us what is involved and how practical or impractical it might be. I suggested that asking a Member of Congress whether the satellite projects were practical was a little like asking a Member in 1933 his views about the practical aspects of an atomic bomb.

THE LEVITT PROJECT: "MINNIE"

Subsequently, I was pleased to receive from Mr. Purdom a short description or outline of a satellite project proposed by Dr. I. M. Levitt, of the Franklin Institute at Philadelphia, one of a number of projects which had been capturing the interest of the scientific world. His project was given the nickname "Minnie." This is not the project finally decided upon by the Federal Government, but the work and thought which went into it are certainly worthy of note, and the members of the Philadelphia Astronautical Society have long felt that it is a very practical approach. I am including the outline of the Levitt project—"Minnie"—at the end of these remarks under unanimous consent of the House, since I think it will be of great interest to all Members, and particularly in view of the announcement of last Friday at the White House.

As to the significance of the satellite project we are undertaking, the scientists who have devoted so much study to this problem believe it is most important for us to understand what is involved.

For, as they point out, within 24 hours after the announcement, a controversy was developing over whether or not to share the satellite's data with the entire world. This is not the place to offer any opinions on that controversy, because as the scientists tell us, there are good arguments on both sides, but it is the place to point out that such a controversy exists and that there will be other and greater controversies in the years to come, as we reach farther and farther into space.

THE MOST AWESOME INSTRUMENT OF POWER EVER DEVISED

The secretary of the Philadelphia Astronautical Society, Mr. Purdom, wrote me that beyond this first unmanned satellite looms the first manned space station, an achievement which reputable scientists have said could be as close as 10 to 15 years away. When that station is established, barring unforeseen solutions to the tensions between nations,

we will be faced with the problems of controlling the most awesome instrument of power ever devised by man.

The manned satellite, we are told, would be the ideal launching platform for guided missiles with hydrogen bomb warheads. Its owners would be able to destroy any spot on the earth they chose, any time they wanted to. Its construction would mean nothing less than military domination of the earth.

All of this means, according to our scientists, that we will one day in the future be faced with the same problems the atomic bomb and the hydrogen bomb have brought us—the problem of controlling the new and frightful and unbelievably destructive instruments of power which the scientists are placing in our hands. They say that as of last Friday, July 29, this new problem we face is no longer academic. We are living in the dawn of the interplanetary age, and the problems that age will raise, our scientists tell us, will demand the fullest capacities of our minds and hearts. The consideration of these problems is the job of statesmen everywhere and of all politically aware citizens.

Science has now again impressed us with the fact that we are living in a larger world in a different time than we had realized a few years ago or a few days ago. To the scientists must go the credit and the thanks for giving us the powers to expand our horizons. Few of us will be so timid as to want to turn back and to hide from the advances which science makes possible. But as the secretary of the Philadelphia Astronautical Society put it:

We must now reach within ourselves and find that courage and wisdom which will give us the right to say we are large enough men to live in this vastly enlarged world.

Mr. Speaker, on that sobering note, I include here as part of my remarks a fascinating outline of an imaginative pioneering effort in the field of space satellites, a discussion of the project Minnie, proposed by Dr. I. M. Levitt, of the Franklin Institute, as follows:

THE LEVITT PROJECT: "MINNIE"

DESCRIPTION

Dr. Levitt's proposed satellite project, nicknamed 'Minnie," consists of a four-stage liquid-fuel rocket. The bottom stage will be the improved version of the V–2 and the upper three stages will be smaller rockets of types which already exist. Stage four would contain a balloon covered with aluminum foil and weighing about 10 pounds. When the last stage had taken up orbit about 200 miles above the earth, the balloon would be released and inflated to a diameter of 15 feet by a small CO2 cartridge. Then it would circle the earth like a new moon, balancing the centrifugal force caused by its terrific speed against the pull of earth's gravity.

COST OF THE PROJECT

Minnie will cost less than $10 million. This is less than the cost of a B–52 bomber. It is also less than 1 percent of the entire 1953 guided missile program. And in many ways Minnie will be one of the most important single missiles in our entire development program. She will pay for herself in money saved.

SIGNIFICANCE TO NATIONAL DEFENSE

Minnie will fit into the defense picture in several ways:

1. By using the moving satellite to triangulate the entire earth and parts of it, more accurate maps will be made at less expense (the ultimate savings will be several times the cost of the satellite). In this way the problems of accurately guiding missiles over intercontinental distances will be simplified and the accuracy of such missiles will be increased.

2. By similar techniques, the satellite will be used to determine the average value of the gravitational constant of the earth. This seemingly abstract value is of great use in the search for oil. Many field surveys into fruitless areas could be eliminated and many untapped fields opened if we knew the value of this constant. Once again the money saved will be several times the cost of the project.

3. As a propaganda device. Visible as a bright new star every evening, racing across the sky in a few minutes, the satellite would be a symbol of our strength and a warning to aggressors of what we are capable of developing.

DETERMINING THE ORBIT

Calculating the satellite's exact orbit will be as easy (to the astronomers) as calculating the orbit of a new comet. The satellite will be photographed against a background of stars and these photographs will show us its position in terms of what the astronomer calls right ascension and declination. This information will uniquely determine the path of the satellite's orbit around the earth. The hard part of the job will be tracking the beacon—it will cross from horizon to horizon like a plane 3 miles up moving at 225 miles per hour—but modern instruments in use at White Sands can do the job with only a few modifications.

TRIANGULATING

Since the observer will know the satellite's position at any time, three observations will allow him to determine his own position. Surveying nowadays, particularly in flat, featureless lands, often calls for expensive installations and highly paid crews. The satellite would not only save us a good deal of money but would increase the accuracy of our meaurements. The Atlantic Ocean, for instance, has been measured to within a thousand feet, using the moon and the same methods that would be used with the satellite. With Minnie lending a hand, the width of the Atlantic could be measured to within a hundred feet—which is particularly significant when firing guided missiles over intercontinental distances where an error of a thousand feet could mean much wasted time and money.

THE GRAVITATIONAL CONSTANT

With the aid of gravity meters, the modern geophysicist is able to explore the surface of the earth and map its gravitational field. Variations in this field are sometimes due to light deposits of oil under a salt dome. If the explorer knew the precise value of the average gravitational constant for the earth, he would be able to determine whether these variations are truly significant. Field surveys into doubtful areas could be eliminated and a part of the $5 million per year now spent on exploratory diggings in the United States could be saved. The effects of gravity on Minnie's orbit could be used to determine this important constant, which cannot be accurately measured by present methods.

SOME MISCELLANEOUS QUESTIONS

What about meteors?

If the satellite is struck by a meteor, nothing of any importance will happen. The carbon dioxide will leak out but the satellite will not be deflated. In space there is no external pressure to force it out of the shape it has already attained.

What will Minnie lead to?

Though there are practical reasons for the project, and though it will pay for itself in a few years, Minnie is also important for the things to which she will lead. The knowledge of missile design gained will enable us to put instrumented rockets into space. These more complex satellites will not only have value to the military and to persons interested in weather forecasting, but will also give us information about conditions beyond the atmosphere. Such information, eventually, will lead to the establishment of a manned space station. And from there the future is wide open.

How much work is being done now?

We don't know, but there is as much reason to believe no project is underway as there is to believe one is. Despite the logical reasons for building an unmanned satellite, many rocket engineers seem to be hesitant about the idea, a reaction which is almost traditional when dealing with great technical developments. The position was best summed up by Dr. Levitt in his original paper on the satellite delivered before the International Astronautical Federation Congress at Innsbruck: "In time the [satellite] beacon could be a natural evolution of the guided-missile program but the time can be shortened if a directive is issued for the establishment of a beacon."

Revising Our Federal Election Laws

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1955

Mr. UDALL. Mr. Speaker, when we resume our work next year we will once again face a recurrent responsibility—the task of revising our Federal laws relating to corruption in elections. This task has confronted Congress in virtually every session during the past 30 years, and it is one which we cannot afford to shirk any longer.

The latest attempt to effect revision of these laws has been embodied in the proposed Federal Elections Act of 1955, introduced in the Senate—S. 636—by Senator THOMAS C. HENNINGS, JR., and by myself in the House of Representatives—H. R. 3139. The Senate Subcommittee on Privileges and Elections, under the chairmanship of Senator HENNINGS, conducted extensive hearings on this measure, and an amended bill was favorably reported and is now an the calendar of that body. In the House, the Subcommittee on Elections, under the chairmanship of the able Representative from South Carolina [Mr. ASHMORE], has also conducted hearings during the past few months. I would especially like to commend Mr. ASHMORE and his committee colleagues for the manner in which they conducted their hearings. I can personally testify to the nonpartisan consideration which they gave the bill, and to the serious and thoughtful nature of their hearings. Their task has not been an easy one, nor a thankful one, for they will receive little commendation for their labors.

I cannot emphasize too strongly the need for this bill, or one of a similar character. Existing laws are unques-

tionably inadequate, and they add fuel to an all too prevalent belief that political personalities are venal men. I am proud to be a Member of the Congress of the United States, and I know my colleagues all possess similar pride. And yet, because of the miserable laws concerning the use of money in elections, many of the American people regard us all with suspicion. To some we are knaves, to others we are worse. For many people believe that politics is necessarily a quasi-corrupt profession. As long as we are content to conduct our elections under such inadequate laws, this attitude will remain in the minds of many of our citizens.

Reform of Federal election laws is urgently needed, and such reform will eventually be realized. If Congress does not act next year, the elections of 1956 will clearly and dramatically illustrate once again the defects of our present laws. A recent Gallup poll revealed that over two-thirds of the public advocates stricter Federal election laws. I am convinced that this number will continue to grow, until eventually we will be forced to act. I hope that such action will be taken next year.

The intergrity of our Government is closely related to the nature of the election process. That process in turn depends on the laws which regulate it. The people will continue to demand better and more adequate election laws, until eventually Congress enacts them.

I do not believe, however, that enactment of this measure alone will produce the situation which is our objective. American politics cannot be truly representative until all of our people participate actively. To encourage such participation, Senator HENNINGS and I also introduced bills to make political contributions in modest amount tax exempt, in the belief that increased financial participation will in turn lead to participation of other kinds, and that political contributions will be placed on a plane of equality with other public-spirited contributions. I hope that this latter bill also will receive favorable consideration at an early date next year.

Resolutions Adopted by 53d Annual Convention of the Oregon State Federation of Labor

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. NEUBERGER. Mr. President, the 53d Annual Convention of the Oregon State Federation of Labor was held July 25 through July 29, 1955, in Medford, Oreg. The federation passed a number of resolutions on issues of nationwide interest. Voicing as they do the thinking of thousands of laboring people in the State of Oregon, I believe, Mr. President, that it is important that we know their position on these issues; with that in mind I ask unanimous consent to have the resolutions inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION NO. 8

Whereas the 20 percent Federal amusement tax was imposed upon the entertainment industry as a wartime emergency measure; and

Whereas the reasons for its continuance no longer obtain; and

Whereas tens of thousands of workers in this industry are jobless because of this ruinous tax, among them musicians, waiters, cooks, bartenders, and other service employees; and

Whereas all comparable excise taxes imposed as wartime and emergency levies have either been repealed or substantially reduced while the amusement tax continues at its discriminatory level of 20 percent: Therefore be it

Resolved, That the Oregon State Federation of Labor in session assembled go on record as protesting the continuance of this ruinous amusement tax and urging its repeal by the Congress; and that the secretary be instructed to send copies of this resolution to the personal attention of our Senators, WAYNE MORSE, DICK NEUBERGER, and Representatives EDITH GREEN, NORBLAD, COON, and ELLSWORTH in Congress.

RESOLUTION NO. 12

Whereas one of the most important sections of the Lloyd-La Follette antigag law guarantees the right of postal and Federal employees to join unions of their own choice, provided such unions do not impose an obligation to strike; but does not guarantee that the executive branch of the Government shall recognize and deal with such unions; and

Whereas collective bargaining and proper machinery to settle grievances are considered proper and essential in private industry, and certainly the same rule should apply equally to all employers and employees whether public or private; and

Whereas H. R. 697, a personnel management relations bill has been introduced in the Congress by the Honorable GEORGE M. RHODES of Pennsylvania, which would require by law that the executive branch of the Federal Government recognize and deal with employee unions: Therefore be it

Resolved, That the 1955 convention of the Oregon State Federation of Labor go on record as favoring H. R. 687, a personnel management relations bill by Congressman RHODES, which requires the executive branch of the Federal Government to recognize and deal with unions of postal and Federal employees; and be it further

Resolved, That the executive secretary-treasurer of the Oregon State Federation of Labor notify the members of the Oregon delegation in Congress of this action and request their active support of this legislation.

RESOLUTION NO. 13

Whereas working people who are nearing retirement age are prone to infirmities and often lose much time due to sickness in the last few years of their employment; and

Whereas unemployment is a more likely hazard in later earning years; and

Whereas the consequent lost time under the act as now written, causes the person who falls within the above conditions to have their social-security retirement benefits cut down; and

Whereas this does not show a true picture of the contribution made by the individual over his earning years: Therefore be it.

Resolved, That the Oregon State Federation of Labor in convention assembled at Medford, Oreg., this July 25 to 29, 1955, go on record favoring amendment of the Social Security Act for the purpose of basing social-security payments upon a worker's most productive years; and be it further

Resolved, That the Oregon Members of Congress be petitioned to initiate a bill effecting such an amendment of the Social Security Act; and be it still further

Resolved, That copies of this resolution be sent to the American Federation of Labor.

RESOLUTION NO. 14

Whereas workers today are having difficulty finding employment after reaching age 50; and

Whereas most union workers at age 60 have already worked 40 years or over: Therefore be it

Resolved, That the Oregon State Federation of Labor in convention assembled at Medford, Oreg., this July 25 to 29, 1955, go on record favoring amendment of the Social Security Act and the Railroad Retirement Act for the purpose of lowering the age limit for old-age benefits from 65 to 60 years; and be it still further

Resolved, That the Oregon Members of Congress be petitioned to initiate a bill effecting such an amendment of the Social Security Act and the Railroad Retirement Act; and be it still further

Resolved, That copies of this resolution be sent to the American Federation of Labor.

RESOLUTION NO. 15

Whereas disabled workers are finding it impossible to keep up with the American standard of living during disability: Therefore be it

Resolved, That the Oregon State Federation of Labor in convention assembled at Medford, Oreg., this July 25 to 29, 1955, go on record favoring amendment of the Social Security Act, so that benefits may be paid to workers who have been disabled; and be it further

Resolved, That the Oregon Members of Congress be petitioned to initiate a bill effecting such an amendment of the Social Security Act; and be it still further

Resolved, That copies of this resolution be sent to the American Federation of Labor.

RESOLUTION NO. 16

Whereas Japanese-made plywood is being imported into this country with little, if any, duty and due to the low wages paid Japanese labor, the product is being offered on the American market for much less than what American manufacturers would have to charge; and

Whereas the manufacture of plywood is a major industry in the State of Oregon with the livelihood of a great number of our workmen depending on the industry; and

Whereas this practice is a great threat to our American standard of living and working conditions and our national economy: Therefore be it

Resolved, That our legislators in the United States Congress be asked to work for amendments to the existing trade agreements which will protect our American workmen and American industries; and be it further

Resolved, That copies of this resolution be sent to neighboring State federations of labor for concurrence.

RESOLUTION NO. 18

Whereas the social-security laws, as presently enacted, tend to work an economic hardship on women over the age of 60 years; and

Whereas women over the age of 60 years are offered only limited opportunities of employment; and

Whereas the retirement of women from employment at the age of 60 years would, if they were then entitled to social-security

benefits, afford a suitable income to their household; and

Whereas such retirement of women at the age of 60 would increase job opportunities for men of advanced years; and

Whereas the members of organized labor are aware of the hardships created by the present social-security law with regard to women 60 years of age and older; Therefore be it

Resolved, That the existing social-security law is partially inadequate and that the following changes and amendments are recommended and endorsed by the Oregon State Federation of Labor as essential to the economic well-being of our Nation:

1. That the social-security laws of the United States be changed to offer benefits to women retiring from work at the age of 60 years, instead of the present 65 years of age.

2. That the aforesaid benefits be made available by appropriate changes in the social-security laws at the earliest available opportunity: Therefore be it further

Resolved, That copies of this resolution be sent to our Senators and Representatives from Oregon, with the request that they give it their urgent consideration.

RESOLUTION NO. 20

Whereas Senator JAMES E. MURRAY, Democrat, of Montana, and Congressman JOHN DINGELL, Democrat, of Michigan, and Congressman RHODES, Democrat, of Pennsylvania, have introduced amendments to the National Labor Relations Act that would restore to employers and employees in industry their right to bargain, without fear of interference, on any lawful matter mutually affecting them in normal labor-management relations; and

Whereas these new bills are identical to the Murray-Dingell-Rhodes bill introduced in 1952 which was endorsed by the board of governors of the International Allied Printing Trades Association and cleared by the executive committee of the American Federation of Labor; and

Whereas the proposed amendments would eliminate to a considerable degree four evils in the Taft-Hartley Act which have been most damaging to trade unions; namely, abolition of the closed shop, outlawing all forms of secondary action, interference with collective bargaining as traditionally practiced in industry, and the injunction: Therefore be it

Resolved, That the Oregon State Federation of Labor at its annual convention at Medford, Oreg., go on record as endorsing the Murray-Dingell-Rhodes bill and urge our Senators and Congressmen to vote for its passage: Therefore be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States and to the Oregon Senators and Representatives in Congress with the request that they give this resolution their most favorable consideration.

RESOLUTION NO. 21 FOR OBSERVANCE OF THE BIRTHDAY OF FRANKLIN DELANO ROOSEVELT AS A LEGAL HOLIDAY IN THE STATE OF OREGON

Whereas the Nation's Government at that time seemed unable to cope with the many urgent needs of the people; and

Whereas, on taking office, Franklin Delano Roosevelt by his own show of courage and faith reawakened the hope of a despairing American citizenry as evidenced by the 99-day session of the 73d Congress that witnessed the most daring Presidential leadership in American history; and

Whereas his program of social-economic legislation gave the common people of America the chance for security and self-respect; and

Whereas in the words of Hugo Ernst, recently deceased general president of the Hotel, Restaurant, and Bartender's International Union, "Franklin Delano Roosevelt was the symbol and patron of the most hopeful ideas that ordinary citizens in a democratic society could build together a productive peaceful way of life, marked by the four freedoms: freedom of speech, freedom from fear, freedom from want, and freedom of worship"; and

Whereas, when America was plunged into the worst war in her history, Franklin Delano Roosevelt led this country to victory and the world to peace; and

Whereas, on March 7, 1955, the Portland Central Labor Council concurred in Local 664's resolution for observance of Franklin Delano Roosevelt's birthday as a legal holiday; and

Whereas Congresswoman EDITH GREEN and Senator DICK NEUBERGER have indicated their support of proposals asking the President of the United States to proclaim Franklin Delano Roosevelt's birthday a legal national holiday; and

Whereas there have already been introduced into the United States Senate and into the House of Representatives, joint resolutions asking the President of the United States to proclaim Franklin Delano Roosevelt's birthday a legal national holiday: Therefore, be it

Resolved, That the Oregon State Federation of Labor petition the Governor of the State of Oregon to proclaim January 30 of each year a legal holiday in Oregon in commemoration of Franklin Delano Roosevelt's birthday; and be it further

Resolved, That we petition the Oregon delegation in Congress to support this recommendation with suitable legislation.

RESOLUTION NO. 34

Whereas the forces opposed to public ownership of power are endeavoring to foist upon the people a partnership plan where the Government will pay the major portion of the cost of building the dam but the private power people will receive the revenue accruing from the sale of power; and

Whereas this is another sample of the give-away program which has been inaugurated by the present administration in Washington; and

Whereas publicly owned power is the greatest asset that the Northwest has and is the best method of procuring jobs for the workers and prosperity for the region; and

Whereas the private power advocates have put their greatest effort on the construction of low-head dams on the Hells Canyon site for the benefit of the private power monopoly; and

Whereas the fight in Oregon for the Hells Canyon project has been led by Senators WAYNE MORSE, RICHARD NEUBERGER, and Congresswoman EDITH GREEN: Therefore be it

Resolved, That the Oregon State Building and Construction Trades Council, at its 35th semiannual convention, again reiterate its stand in favor of an all-purpose Government constructed high dam at Hells Canyon; and be it further

Resolved, That we commend Senators MORSE and NEUBERGER and Representative EDITH GREEN for their efforts on behalf of an all-purpose dam at Hells Canyon and publicly owned power generally; and be it further

Resolved, That a copy of this resolution be sent to Senators MORSE and NEUBERGER and Representative EDITH GREEN.

Adopted by the State building trades convention July 24, 1955, and referred to the Oregon State Federation of Labor convention July 25–29.

RESOLUTION NO. 38

Whereas the retirement pay of most Federal employees is inadequate to the point where only the bare necessities for existence can be acquired by such pay; and

Whereas large numbers of retired employees are forced into the labor market at part or full-time work in order to maintain a decent standard of living, and

Whereas Federal employees contribute 6 percent of their salary during their productive years toward retirement pay which amount is several times the amount contributed by donors to social security with no appreciable increase in benefits; and

Whereas there are hundreds of millions of dollars that have piled up in reserve over the past years due to the parsimonious hoarding of the Federal employees own moneys by the Government; and

Whereas the proposed liberalization of the retired employees' annuities would not cost the Government any additional money beyond its present obligations; Therefore be it

Resolved, That the Oregon State Federation of Labor convening in Medford, Oreg., July 25, 1955, go on record as favoring the Morrison bill, H. R. 3791, which provides for the liberalization of the Federal employee's annuity by basing the annuity on 2½ percent of the average wage multiplied by years of service with optional retirement at the age of 60; and be it further

Resolved, That the executive secretary be directed to notify the Oregon delegation in Congress of this action with a request to work for the enactment of this legislation into law.

RESOLUTION NO. 60

Whereas the National Government is now planning a $10 billion or more Federal highway improvement construction program; and

Whereas the coast Highway 101 has not been designated to receive Federal aid in this projected program; and

Whereas Highway 101 being an important north and south link in the coast highway system; and

Whereas the Northwest area of the United States is classed as a critical military area: Now, therefore, be it

Resolved, The Oregon State Federation of Labor do go on record as urging the United States Bureau of Public Roads to designate Highway 101 to be included in the projected Federal aid highway improvement program; and be it further

Resolved, That copies of this resolution be forwarded to the United States Bureau of Public Roads and to the congressional delegations of the States of Oregon, Washington, and California.

RESOLUTION NO. 61

Whereas the Columbia River at Astoria, Oreg., and Megler, Wash., being the last link on Highway 101 not connected by a bridge and much delay resulting in the use of a ferry system, etc.: Now, therefore, be it

Resolved, That the Oregon State Federation of Labor do go on record as urging the United States Bureau of Federal Roads to construct the trans-Columbia bridge at Astoria, Oreg., and Megler, Wash., with the use of Federal funds thus completing the last link in this much-traveled north and south highway; and be it further

Resolved, That copies of this resolution be forwarded to the United States Bureau of Public Roads system and the congressional delegations of the States of Oregon, Washington, and California and the Governors of Oregon, Washington, and California.

Remarks by Hon. Denis Healey of the United Kingdom Delegation at the NATO Parliamentary Conference

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1955

Mr. UDALL. Mr. Speaker, I was a member of the six-man delegation which represented this body at the NATO Parliamentary Conference at Paris in mid-July. It was a valuable experience to sit in conference with members of the parliaments of the Western democracies and to learn their regard for NATO and hear their hopes for its future.

It seems to me that we in this country do not fully appreciate the growing success of both the military and nonmilitary work of NATO. This is perhaps inevitable as of necessity the principle activities and accomplishments of NATO have taken place in Western Europe.

On the thought that some of my colleagues would like to have a wider understanding of the present and future role of NATO as our fellow parliamentarians saw it at the conference, I am presenting below a penetrating speech made at one of the plenary sessions of the conference by Mr. Denis Healey, Member of Parliament, a member of the United Kingdom delegation. This was perhaps the most discerning presentation of the entire conference and summarizes very well, I think, the best thinking of our friends in the north Atlantic area as they contemplate the future of NATO, and, to use Mr. Healey's words, "the supreme value of maintaining the unity and strength on which negotiations with Russia have become possible."

The address follows:

I have been struck very often discussing NATO, Mr. President, with people in England and also at this conference, by the complaint that NATO is just a military organization, and I think it is worth emphasizing the importance of having a military organization. The word "just" does not do justification to its importance, because, after all, the job of NATO in the military field is to see that we and our children stay alive, and that surely is not a task whose importance should be underestimated. In the second place, the success of NATO in preventing war is one of the things which, as General Billotte said, has produced a readiness in the Soviet Union to enter into what we all hope will be a new phase of relations with the West in the cold war, and what I want to offer a few views about is this military side of NATO's work as it affects us as parliamentarians. The military aim of NATO is to prevent war by deterring aggression, and we hope to deter aggression by showing the potential aggressor that aggression would not pay, and, as was explained to us in a briefing recently, the deterrent takes two forms.

In the first place, we have to show the aggressor that if he launches the Red Army against us in Europe, we can halt the Red Army in its tracks, and, in the second place, we must show the potential aggressor that if he begins a war he will be defeated.

If we are honest with ourselves, we must admit that, after 6 years' work and tremendous financial sacrifices, and sacrifices in manpower by all our 15 nations, we are still uncertain of achieving the first part of our deterrent, because it is not certain now that we could halt the Red army if it launched a full-scale attack on Western Europe, and therefore the effectiveness of the deterrent depends on our ability to defeat the potential aggressor by other means. In other words, to defeat the Soviet Union should it engage in war, by long-range atomic bombardment of its homeland. Now what I want to suggest is that the present situation in which the military value of NATO depends on the power to destroy Soviet cities by long-range atomic bombardment, is an extremely unsatisfactory situation for two reasons. In the first place, the power to bombard the Soviet Union with atomic weapons does not lie in the hands of NATO. The only Western power which at the moment has the ability to mount a major attack on the Soviet Union with nuclear weapons, is the United States through its Strategic Air Command, and the Strategic Air Command is not under NATO control. And though we in Britain have decided to try to produce our own nuclear striking force, that too will not be under the control of NATO, and I may say that it is a very long way at the moment from existing in Britain. The fact that NATO's whole military strategy depends on the use of an arm which is not under NATO control is, I suggest, an extremely dangerous fact. In the first place it tends to corrode the alliance in Europe, because the European members of NATO have no control over their main means of defense, and in the second place they cannot now be sure that, if there is a war, whether or not the Soviet cities are destroyed, their own territory will not be occupied by the Red army. The reliance on a deterrent which is the monopoly of a single country is dangerous to the political existence of the alliance.

And the second danger in the present strategic situation, I suggest, is that America's readiness to use her thermonuclear striking power against the Soviet Union, is bound to decline as Russia's power to retaliate in kind increases, especially when neither America nor any other member of the NATO alliance have so far, as has been explained to us, any plans to defend their own population in case of thermonuclear war.

I was very impressed by reports of a study which a previous supreme commander of NATO, General Ridgway, submitted to Mr. Wilson in the United States shortly before his retirement as United States Chief of Staff, because General Ridgway himself suggested that, as Russia's power to retaliate with atomic bombardment of the United States increased, a situation might well develop in which the use of nuclear weapons might be excluded, either by gentlemen's agreement between both sides, or even by a formal convention. I believe that we should take General Ridgway's warning very seriously. Even in the period when America was the only country in the world with atomic weapons, she did not use those weapons in order to avoid the possibility of defeat in Korea or to prevent the certainty of a Communist victory in Indochina. I believe she was right in that case.

It is already accepted that the atomic weapon is not going to be used by the West in cases of aggression in what some American writers now call the "gray" areas, the areas in which American strategic interests are not directly involved in a major way. What I want to suggest, Mr. President, is that the gray area to which the thermonuclear deterrent will not apply, is likely to extend westward as Russia's power to bombard America with H-bombs increases and, according to recent reports in the American press, many informed persons believe that Russia is already outproducing the United States in heavy jet bombers and is producing as many medium jet bombers as the United States, and of course we know that the Soviet Union has the power to produce the H-bomb and therefore to turn all her existing A-bombs into H-bombs.

In other words, the military factor on which the whole of NATO's defense concept now relies, may lose its importance as time develops. If its use in war involves the certain annihilation of American cities and, even more, if the eight scientists who signed the declaration recently published by Lord Russell in London, are right the use of H-bombs by both sides in a major war might lead to the annihilation of mankind as a whole.

I believe it is very dangerous indeed that NATO should continue to rely on a strategy which it does not itself control and which may not become available to it in a crisis in the future. The present situation is one in which the price of resisting aggression by use of thermonuclear weapons is out of all proportion to the value of territory which might be lost by surrendering to aggression.

This situation fortunately does not yet exist; no one knows when the so-called atomic stalemate will be complete. It may be in a year's time; it may not be for 5 years, and we have, therefore, some time left in which to build a less suicidal form of defense in NATO, and a form of defense which does not involve suicide, perhaps, for humanity as a whole. And this I think is where our own responsibility as politicians is directly involved. It has been made clear by NATO spokesmen, not only to us in the briefing period the last 2 days, but also in speeches on public occasions, that the effective defense of Western Europe against a major attack by the Red army is impossible without a German contribution, as Herr Kiesineer said, which may be available to us, and we all hope will be available to us, in a few years' time as a result of the ratification of the Paris treaties, and even with the German divisions, the halting of the Red army will require the use tactically of atomic weapons against enemy forces in Europe. And I believe that Senator FLANDERS was right when he suggested in the American Senate just over a week ago, that if the use of tactical atomic weapons against the Red army is not to lead to full-scale thermonuclear war and the end of the human race, it is very important that we should try to establish a distinction between military targets and civil populations, which it will be the advantage of both sides, in case of war, to maintain.

If we can, in the next few years before the atomic stalemate becomes absolute, achieve what is the main present aim of the NATO military staffs, a force on the Continent of Europe which is capable of halting the Red army in Europe and protecting the European members of NATO from Communist occupation, then I think the danger of any deliberate large-scale attack on the West will be eliminated. If we fail to do this, then I believe that the collapse of the thermonuclear deterrent will put us in a terribly dangerous position.

There is one other point I would like to make. There is a great deal of talk nowadays, particularly at the Geneva Conference, about the possibility of creating between West and East, some sort of mutual bloc, of which Germany should be a member. Now, if I am right, and General Ridgway is right, in saying that the thermonuclear deterrent is going to lose its value, the situation in which its value will disappear first is one in which the aggressor might hope, by a rapid blitzkreig, to make a limited gain before the other side could make up its mind whether or not to invoke the extreme sanction. And I believe that it is therefore essential that NATO should remain a united political organization covering the frontier of the Soviet empire. Because if we create a new vacuum between East and West the danger

of war will be immensely increased. You will then have the danger that the Communist side will try to nibble us to death, in the belief that no single advance it makes is worth the terrible price of thermonuclear annihilation for humanity. Now, if this general argument is correct, then the importance of NATO as a military organization is going to increase tremendously in the last few years, and we as parliamentarians will have the duty to explain to our own peoples that if they want peace—not under the shadow of the H-bomb, not as an alternative to total annihilation, but a peace whose price is a reasonable one to pay—they are going to have to build up still further the unity and the strength which it has been the main purpose of NATO to provide. I think as General Gruenther has often said, it is going to be very difficult to convince public opinion of this point so long as the Russians are smiling instead of scowling, and it is mainly the function of parliamentary leaders to take the initiative in this field, and I believe that if our visit as parliamentarians to NATO in the last few days has done something to convince us of the supreme value of maintaining the unity and strength on which negotiations with Russia have become possible, then not only will it have been worthwhile, but it will be very worthwhile repeating this experiment in future years. Thank you.

The Privileges and Duties of a Citizen

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks, I am inserting an essay written by Miss Mary Louise Conway, of Baltimore, Md.

Miss Conway's essay on The Privileges and Duties of a Citizen won first prize in the Baltimore Civitan Club's contest, the Chesapeake district award, and the top Civitan International award. It was the first time a high-school senior from Maryland has won the top prize.

Miss Conway is the daughter of Dr. and Mrs. William M. Conway, of 5511 Purdue Avenue, Baltimore. She was graduated from the high-school department of the College of Notre Dame of Maryland last June.

At a luncheon held in Miss Conway's honor by the Civitan Club of Baltimore and the Women of Civitan, David H. Wallace, of Annapolis, governor of the Chesapeake district of Civitan International, presented her with a citation and a $600 scholarship. Miss Conway plans to use the scholarship at Northwestern University in the study of journalism this fall.

The winning essay follows:

THE PRIVILEGES AND DUTIES OF A CITIZEN

(By Mary Louise Conway, 1955)

"The American Republic was born to assure you the dignity and rights of a human individual. If the dignity and rights of your fellow men guide your daily conduct of life, you will be a good American," maintained President Eisenhower recently in an open letter to American students.

The world citizen of our modern civilization faces problems of such decisive importance, that upon his shoulders rests the burden of tomorrow—and what of tomorrow? Will it hold the dream of peace and brotherhood toward which good citizens everywhere are striving, or are we verging upon an era of chaotic destruction at the hands of tyrants? The answer, of course, is in the hands and hearts of the people, for ours is a people's government, and the outlook is a bright one, for the American citizen is armed with the most splended weapon of all—a hope that is stronger than hate and more timeless than death and the evils of war. It is that same magnificent hope that claimed victory for the citizen-colonists in the dark days of the Revolution, the same hope that uplifted the American heart and the lone Stars and Stripes over the battle-scarred Iwo Jima.

But the pride and hopefulness of the American citizen is not enough. Good citizenship is a way of life, rather than a privilege to be taken for granted. To begin with, a citizen is a person, subject to the authority of a country, who enjoys certain rights and privileges by reason of that fact. However, there is a two-sided nature of citizenship; it has been said that every right carries with it a duty. Reason tells us then, that because of the privileges a citizen enjoys, he has also the corresponding responsibility of doing his share to keep his Nation great and strong.

Our rights here in the United States are many and varied, but these rights, as listed in our Constitution, are included under three general categories—private property, personal liberty, and personal security.

Our Government guarantees any citizen the right to own and use property of any type, as long as this use does not intrude upon the rights of others or upon the community.

As citizens of the United States, we are guaranteed personal liberty, or the opportunity to develop to the fullest degree one's talents and sometimes latent abilities.

A third guarantee which we expect from our Government concern personal security; that is, the right of every citizen to enjoy life, health, and a good reputation. If any unjust infringement on his rights is attempted, a citizen may demand the protection of the state. This right especially includes protection for those accused of crimes.

The corresponding duties of a good citizen are fundamental; generally speaking, they include obedience to lawful authority and service to the Government and fellow citizens. In this respect, a really good citizen is one who not only keeps the laws of his country, but does his best to help make those laws good ones.

With reference to voting, it can be said that it is both a duty and a privilege, for the state does not extend this right to everyone. Graft and corruption can be stamped out of our Government if an interested and well-informed host of citizens perform their duties at the polls. As Winston Churchill once jokingly commented, "The only thing worse than having elections is not having them."

A responsibility which we often abhor is jury duty. In many States men and women are chosen from the voting lists for service on a jury. Because we are proud to boast of the fact that every accused person has the privilege of an impartial trial by jury, we should be just as proud to serve on a jury if we should be asked to do so. Since juries must be composed of citizens of highest integrity and honesty, no one should refuse his services for jury duty unless there is an excellent reason for doing so.

Here in America, where we put into practice the democratic principles cherished by our forefathers, a citizen must learn to cooperate for the common good; for democracy, whether in government, in industry, or in school, works only as well as the people work together. Just as citizenship implies cooperation, it likewise demands leadership and service. Unless we understand and discharge these duties, we become parasites, enjoying all the benefits of our American democracy but doing nothing to deserve these privileges.

To consummate all that has been said or implied on the subject of truly good citizenship, one should scrutinize himself carefully and rate himself personally as to how he is measuring up to our practical and unselfish American ideals, for the first step toward improvement is clear understanding. If we, as citizens, can glean a knowledge of the truth with regard to our rights and duties, we can build a better world for the citizens of tomorrow.

Facts on Federal Subsidies to Commercial Airlines

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BEAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statements I received from Mr. J. Carroll Cone, assistant vice president of Pan American Airways, in reply to two columns written by Mr. Ray Tucker:

PAN AMERICAN
WORLD AIRWAYS SYSTEM,
Washington, D. C., August 2, 1955.

Hon. JOHN V. BEAMER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BEAMER: One of your colleagues caused to be inserted in the CONGRESSIONAL RECORD Appendix two items by a newspaper columnist purporting to deal with Federal subsidies to commercial airlines. We know that the sponsor of the insertions in the RECORD had no desire to be unfair to anyone but, unfortunately, it appears that his source of information took an unfair advantage by failing to make known the sequence of events which followed the remarks of Senator DOUGLAS which was the basis for the columnist's misleading attacks on this important subject.

In order to present the true factual situation for the RECORD, I would like you, Congressman BEAMER, to have copies of the following material:

1. Relevant portions of a letter addressed to Senator DOUGLAS on June 24, 1955.

2. The letter addressed to Mrs. Eleanor Roosevelt on July 1, 1955.

3. Pan American's memorandum analysis, and reply to the Ray Tucker column of June 30, 1955.

4. Pan American's letter to the McClure newspaper syndicate, together with pages 14 and 15 of the enclosure mentioned therein.

With respect to item 1 above, note should be taken of the fact that Senator DOUGLAS' charges, which were based upon erroneous information, have not been publicly repeated by him following his subsequent opportunity to check with official sources. Concerning item 2, Pan American thereafter received a courteous note from Mrs. Roosevelt to the effect that since Pan American had undertaken to inform Senator Douglas, that is all that is necessary.

From past events it appears reasonable to assume that the insertions in the RECORD have resulted from the activities of a single individual who, following an established pattern, has attempted to mislead others on this serious subject.

We appreciate your tremendous interest as a member of the Interstate and Foreign

Commerce Committee of the House in the affairs of transportation, both domestic and international, and we have turned to you because of your known fairness in dealing with the problems of the transportation industry.

In the absence of the author of the insertions from this country, we humbly request that a copy of this letter be placed in the CONGRESSIONAL RECORD, together with as many of the enclosures as you may see fit to insert, so that the public may be accurately informed and anyone interested may easily ascertain and undertake an independent evaluation of the actual facts.

Thanking you in advance for your earnest and fair consideration of this matter, I remain,

Respectfully yours,

J. CARROLL CONE,
Assistant Vice President.

PAN AMERICAN WORLD AIRWAYS SYSTEM,
Washington, D. C., June 24, 1955.

Hon. PAUL DOUGLAS,
Member of Congress,
United States Senate,
Washington, D. C.

DEAR SENATOR DOUGLAS: * * * The subject that I wish to discuss with you is in reference to your recent interest in the problem of airline subsidies.

* * * We most sincerely regret that you have seen fit to level attack (particularly against the Pan American Airways) without first having afforded us the opportunity to demonstrate the inaccuracies of information upon which you have relied. I respectfully beg to suggest that you have been misled, most unfortunately, into reliance upon the same grossly incorrect and misleading information which has previously been given credence and public circulation by a few others and which, also, has been thoroughly discredited.

It is with great disappointment and concern that I have recognized a familiar pattern which seeks to rely upon your good name, as it has upon a few others until they have undertaken an independent appraisal of the actual facts, to create governmental and public distrust of some of the essential principles of the Civil Aeronautics Act and the world leadership in international aviation which has been developed and achieved for the United States thereunder.

* * * I am sure that you do not wish to become identified with or rely upon sources whose interests and motives appear to be entirely of an intentionally destructive nature. It is for this reason that I respectfully suggest that a careful analysis of the material upon which your recent positions have been based, compared with available facts and official and public records, will demonstrate that you have been prevailed upon to give credence to obsolete, demonstrably incorrect and repeatedly disproven allegations concerning subsidies for international airline operations. Many of the matters reflected in your public statements first arose in the hearings on the Department of State, Justice, and Commerce appropriation bill for fiscal 1955. Some of them were repeated, despite showings and readily available evidence to the contrary, in connection with the second supplemental appropriation bill for fiscal 1955. Some are now continuing to be repeated in your name despite voluminous and convincing evidence to the contrary from the previous hearings, the records of the Civil Aeronautics Board and of the General Accounting Office.

In addition, certain of the allegations or statements advanced have been directly disproven by reference to the annual reports of air carriers and certified public audits of their transactions and affairs.

It is for the foregoing reasons that I suggest to you that you reexamine your position by ascertaining that the following are correct facts:

1. The CAB request of $63 million for fiscal 1956, cut by the House to $40 million, was restored in the Senate to $55 million. The Senate hearings before the Appropriations Subcommittee at page 294 fully disclose that the CAB still had sought the full $63 million in the Senate. When pressed for a reasonable reduction, the CAB suggested that $55 million would be a figure still requiring a supplemental appropriation, but would approximate the total subsidy bill much more closely than would the $40 million. There is no lawful or record or other basis from which to assume that the lion's share of the proposed increase, or any other precisely determinable ratio, would be received by any particular airline.

2. Your attacks on Pan American's nonaviation subsidiaries and the alleged effect upon subsidy claims are diametrically at variance with the policies firmly employed by the CAB, with respect to such matters and further reflect a lack of appreciation of the advantages which the American taxpayer stands to gain, without risk, from airline investments in such companies. No subsidy appropriated by the Congress or administered by the CAB to maintain our international air-transport system, goes to support affiliated companies of Pan American, whether foreign-flag airline or domestic or foreign nonairline concerns in any way whatsoever. Pan American's investment in such companies, their expenses, and any losses which they may sustain or which Pan American may suffer from its interests in such companies all are totally excluded by the CAB for mail-rate purposes. In contrast, however, the mail-rate policy of the CAB claims, in full, any net income realized by Pan American from investment in any affiliated company—with consequent reduction in subsidy requirements. The entire effect is that Pan American and its stockholders (which number some 40,000 located throughout the country in every State of the Union) assume all the risk and burdens of loss from investments in these companies—while the American taxpayer receives all the benefits of profits by reduction in subsidy.

3. Official reports of Pan American, as well as the CAB disclose that from the beginning of its interest in the Intercontinental Hotels Corp., that company has been a wholly owned subsidiary of Pan American and that no part of the financing and development of that company's activities has been provided for in the form of airline subsidies. The development phase of that company, which owns only one hotel but operates and manages others, was concluded as of December 31, 1953, and the company is currently operating at a profit.

4. The Intercontinental Hotels Corp. was formed some years ago by Pan American to meet the need for adequate hotel accommodations abroad and for the purpose of assisting local groups in arranging, financing, and providing technical assistance in connection with the planning, construction, and management of new hotels where needed. It is my understanding that the Export-Import Bank has been interested in these projects and can attest to the soundness of the investment. Perhaps you do not recall the Government interest in encouraging international air transportation through such means, and particularly, House Report No. 1527 of the 82d Congress, 2d session, in which the Committee on Interstate and Foreign Commerce, following a more comprehensive investigation into Latin American matters, stated at page 23:

"While travel by aircraft may mean more dollars to the countries involved in the supply of food, lodging, and ancillary services, it also means that before any substantial volume of air traffic may be maintained there must be adequate and acceptable accommodations to support it. In the past in most of Latin America, the aggregate hotel accommodations provided have been limited, as geographical location and lack of internal communication discouraged travel and water transportation, especially cruise ships, largely satisfied existing requirements. With the stimulus to air travel already manifest, let alone what may develop from the inducements now planned by coach service and reduced fare, it would appear the provision of sufficient hotel space presents an important problem in most of those countries which may seek to protect and increase their revenue from this traffic."

5. Perhaps you are not aware, also, that your statements concerning the payments of income taxes has been thoroughly controverted by testimony in previous Appropriations Committee hearings. The policies followed by the CAB in this matter are in accord with general public-utility practice. To simplify, in absence of subsidy a public utility which suffers a net loss from its commercial operations obviously would have no income tax to pay. However, the Bureau of Internal Revenue treats Government subsidies as a part of gross income in the same manner as income from commercial sources. When the total of commercial revenues and subsidy support therefore produces a net profit for the company's operations, income taxes are incurred. Statutory mandates to provide public utilities or other business enterprises, subsidy payments sufficient to provide a reasonable return on the company's investment, must therefore give full consideration to income taxes actually incurred in determining whatever amount is necessary to provide the fair return required by the statute. Upon full examination into this, I am confident you will find no mystery or impropriety in this and I am equally sure that the General Accounting Office would confirm to you that such are the facts.

6. Pan American receives no Government subsidy under existing CAB mail rate orders for the operation of any routes which are comparable to any unsubsidized routes operated by other United States flag carriers. In the recent past, it has received subsidy attributable to and identified with maintaining air service over certain thin-traffic national-interest routes, such as those to South Africa, to the door of the Iron Curtain at Finland, to Australasia and westwardly from Hong Kong. However, under new temporary mail rates now proposed by the CAB, even some of these would receive no subsidy support.

7. Your contentions regarding the effect of the Supreme Court decision in the so-called "Offset" case, according to readily available official information, has no relevancy to the CAB's subsidy appropriations request for fiscal 1956. However, the CAB is currently processing the offset question in relation to Pan American. The net result of this, together with final adjudications in the mail-rate cases, will serve to determine whether for past periods there is a balance owing from the Government to Pan American or from Pan American to the Government. If it were assumed that the minimum admitted by the Government to be owed to Pan American for past periods and the maximum claimed by the Government for offset purposes were to be sustained, the difference would be an obligation in favor of the Government in the sum of $198,000. Accordingly, it would appear most likely that the effect of the offset decision when compared with amounts owed to Pan American for past periods, can be expected even to result in a balance in favor of Pan American owed by the Government. But whatever the final outcome, all or virtually all of any balance due the Government would be for the account of the Post Office Department and all or virtually all of any balance due Pan American would be paid by the Post Office Department. The offset

question, therefore, is of relatively little significance even in connection with subsidy appropriations for periods prior to fiscal 1956. As record explanation of this subject I refer you to hearings before the Senate committee on the second supplemental appropriation bill, particularly the testimony at page 238.

8. The frequently repeated concern with the extent to which Pan American's books and records have been audited in recent years was promptly disproven when made in hearings before the House subcommittee on the second supplemental appropriation bill for 1955. At that time, the CAB supplied its auditing statistics showing that over 10,000 man-hours had been spent during the previous year completing audits of Pan American, including the system general offices and all operating divisions. An additional 597 man-hours were devoted to the International Hotels Corp. The CAB has requested additional appropriations to cover the employment of additional auditors so that the frequency of such audits can be made an annual activity. Pan American will welcome this procedure. Moreover, foreign corporations in which Pan American has an investment, as you know, are not subject to the jurisdiction of United States Government auditors, but every transaction between any of those companies and Pan American is under the complete scrutiny of the CAB and is ascertainable and reviewed in the audits of Pan American's own books and records. This has been explained upon at least four occasions in recent months in the hearings before committees of both the Senate and the House.

In view of the foregoing, I am sure that you may find that the positions which you have been advocating on these subjects justify careful reexamination. We trust, therefore, that your subsequent conclusions, in fairness and equity to Pan American and consistent with the national interest in American-flag international air transportation, will provide occasion for your undertaking in an appropriate manner to correct the public record. In the meantime, may we respectfully request of you that this letter be inserted in the CONGRESSIONAL RECORD as relevant to the subjects to which your previous remarks have been addressed.

If there should be any additional information that we can provide, or if you would like to question in your office any of our officials, comptroller, treasurer, employees of our bookkeeping department, I assure you that they will be glad to answer any and all questions that might be troubling you.

With kindest personal regards, I am,

Respectfully yours,

J. CARROLL CONE,
Assistant Vice President.

PAN AMERICAN WORLD AIRWAYS SYSTEM,
Washington, D. C., July 1, 1955.

Mrs. ELEANOR ROOSEVELT,
Hyde Park, Dutchess County, N. Y.

DEAR MRS. ROOSEVELT: Senator BRIDGES has asked for our comments on a letter addressed to him in your name under date of June 25, 1955. Your letter refers to a letter received by you from Senator PAUL DOUGLAS and apparently accepts certain premises which we beg to assure you are based upon entirely misleading and incorrect information.

Since we do not have the benefit of whatever letter you may have received, it is somewhat difficult to ascertain precisely what information is needed. We are aware, however, of certain public comments and other correspondence recently attributed to Senator DOUGLAS and trust that the enclosed extracts from our letter directed to him on June 24, 1955, may be of assistance. I am confident that in your extensive public life you are aware of the manner in which destructive objectives are often sought to be accomplished at the instance of individuals, who may have become obsessed with either a self-appointed or sponsored cause. Their supplying incorrect, obsolete, and otherwise misleading information in a manner designed to cause its uninformed circulation by high personages is a familiar tactic. I know, of course, that you would never knowingly permit the use of your name or influence in a manner unfair to any person or company.

Please be assured that voluminous official and public records are readily available to demonstrate beyond question that:

1. All financial transactions between Pan American and other companies, affiliated or not, are subject to and under the continuing scrutiny and review of the Civil Aeronautics Board. The Board has testified fully on such matters, and the records are clear.

2. The entire operations of Pan American are being treated as an entity in accord with the Supreme Court decision having to do with the offset of earnings from one operating division against possible losses of other divisions. Pan American has and does fully agree with and supports the above decision.

Pan American enjoys no more favorable subsidy treatment than that afforded to any other United States air carrier. In several respects, quite the contrary is true, details concerning which we shall be pleased to supply and fully document if you so desire.

In order that you may continue your expressed interest in Pan American's mission of carrying the United States flag to most countries and colonies of the free world, we are pleased to enclose a company memorandum containing recent facts and figures which we believe you will find valuably informative. Should you have any further questions concerning Pan American's status and operations, we shall be pleased to serve your further request.

With kindest personal regards, I am

Sincerely yours,

J. CARROLL CONE,
Assistant Vice President.

PAN AMERICAN WORLD AIRWAYS SYSTEM,
New York, N. Y., July 11, 1955.

As the attached analysis of Mr. Tucker's June 30 column shows, it is obvious that Mr. Tucker made no effort either to check or to accurately report the record.

His statements are utterly disproven by the official debate, CAB records, and testimony before the Appropriations Committees and from the records of the General Accounting Office.

MEMORANDUM

Tucker column

1. "It will decide whether Pan American World Airways shall continue to receive Federal subsidies which have totaled more than $1 billion since World War II."

Comment

No such decision was before the Appropriations Committees. Who gets how much subsidy is determined by a judicial proceeding before the Civil Aeronautics Board laid down by the Civil Aeronautics Act of 1938. Whether Pan Am should or should not get subsidy in 1956 was not an issue before the committee. The $1 billion figure is wildly exaggerated. A check with the proper Government office would have revealed the proper total as less than a fifth of this amount. The Government pays Pan American a subsidy for maintaining deficit air services essential to the foreign commerce, the post office, and the national defense.

Tucker column

2. "The White House and a House Appropriations Subcommittee, headed by Representative JOHN J. ROONEY, from Brooklyn, cut the 1956 subsidy figure proposed by the CAB from $55 million to $40 million."

Comment

The White House had nothing to do with the proceeding. Not Representative ROONEY, of Brooklyn, but Representative PRESTON, of Georgia, is head of the subcommittee. CAB asked for $63 million. This was cut to $40 million in the House. Fifty-five million dollars was not mentioned by the House committee, but was the figure subsequently recommended by the Senate committee and which the CAB said was likely to require a supplemental appropriation later.

Tucker column

3. "The reduction is not so important as the purpose behind it, which was to force Pan Am to adopt economies that would make it self-sustaining."

Comment

Not a single line of the record of the proceedings supports this.

Tucker column

4. "Pan Am gets the lion's share of taxpayers' money allotted to airlines subsidies."

Comment

Not true. Local-service airlines and helicopter companies get lion's share.

Tucker column

5. "Its great overseas rival, Trans World Airlines, has just received a special citation from Postmaster General Arthur Summerfield, congratulating it for operating without subsidies. Most other lines, foreign and domestic, pay their own way."

Comment

Pan American is also off subsidy for operations comparable to those of TWA. In the recent past, PAA has received subsidy to maintain air services over certain thin-traffic national-interest routes, such as those to South Africa, to the door of the Iron Curtain at Finland to Australasia and westwardly from Hong Kong. Incidentally, the Senate Appropriations Committee requested the CAB to clarify this distinction in the future. Foreign-flag airlines are heavily subsidized—many are government owned.

Tucker column

6. "In Senate debate on this question, Senator PAUL H. DOUGLAS, of Illinois, developed these facts about Pan Am's finances and its relationship with the CAB, the Treasury and the General Accounting Office:"

Comment

Unsubstantiated charges were made by Senator DOUGLAS. The other side of the debate which fully answered Senator DOUGLAS with the record facts is completely ignored by Tucker.

Tucker column

7. "Pan Am receives between $8 million and $9 million a year from the Federal Treasury in order to pay its taxes to Uncle Sam. In some years, Pan American has received more than it owed in taxes, but it has simply pocketed the 'windfall'."

Comment

All of an airline's revenues, including Government subsidy and everything else, go into its bank accounts. It draws on these accounts to pay all of its expenses—wages of personnel, cost of fuel, and other supplies, rentals of facilities, interest on its debt, and income tax. It is no more accurate to say that the Government subsidy pays an airline's income tax than to say, for instance, that cargo shippers alone pay it.

Tucker's reference to a "windfall" refers to a CAB policy, changed many years ago, which applied to all airlines.

Tucker column

8. "Pan Am operates a chain of luxury hotels in Latin America, with fancy bars, golf courses, and swimming pools, on which it loses between $2 million and $3 million."

Comment

Pan Am's wholly owned subsidiary, Intercontinental Hotels Corp., operates a chain of hotels all but one of which are owned by others. They are an essential tool in the development of the tourist industry in Latin America. Tourist dollars spent at these hotels help provide Latin American countries with foreign exchange to buy goods produced by American workers. IHC operated at a profit last year and continues to do so this year.

Tucker column

9. "According to Senator DOUGLAS, this loss is financed by many taxpayers who cannot afford an air voyage to the luxurious hostelries."

Comment

Wrong. No subsidy money goes into the hotel company or ever has. On the other hand, under present subsidy policy, the CAB claims in full any net income realized by Pan American from investment in any affiliated company—with consequent reduction in subsidy requirements.

Tucker column

10. "According to Postmaster General Summerfield, Pan Am owes millions to the Government for past overpayments it has received for carrying the mail, which is another form of subsidy. But, despite Mr. Summerfield's urging, no suit to recover has been brought by the CAB or the Department of Justice."

Comment

This couldn't be more wrong. CAB judicial proceedings have been heard to determine whether Pan Am owes the Government or the Government owes Pan Am. Final decisions are not yet in, but upon the record, the CAB staff admits that the Government owes Pan Am, not vice versa. As in the past, the judicial proceedings protect the Government from overpayment and substantial amounts due have been withheld from PAA in the interim. Money received for carrying the mail is simple compensation for services rendered. Subsidy is separate. The Government made $7 million profit last year on the mail Pan American carried. This is the difference between the money it received from the sale of stamps less costs of handling the mail and the money it paid Pan American for the work of carrying the mail.

Tucker column

11. "Most amazingly, as several congressional investigations disclose, neither the CAB nor the Comptroller General have complied with legal requirements that they audit Pan Am's finances and operations."

Comment

This statement is plain astonishing. The CAB has testified that over 10,000 man-hours were spent in 1954 auditing PAA's books. An additional 597 man-hours were devoted to Pan Am's hotel subsidiary.

Tucker column

12. "Both agencies have failed to comply with a Supreme Court decision to that effect, a decision which revealed the jurists' annoyance over this untidy state of affairs."

Comment

This is a confused reference to a Supreme Court decision of February 1, 1954, in a test case against Chicago & Southern, not Pan American, which had nothing to do with auditing. In brief, the decision required that any excess earnings from one division of a company be applied to reduce subsidy in another division. Pan American has always believed that this makes sense and is on record as opposed to attempts by other airlines to change the Civil Aeronautics Act to upset the Supreme Court decision.

Tucker column

13. "Despite Senator DOUGLAS' scorching analysis, a Senate Commerce subcommittee headed by Senator SPESSARD HOLLAND, of Florida, increased the subsidy total from the House allowance of $40 million to $55 million. Although HOLLAND failed to answer the Douglas indictment, the Senate voted for the larger amount by 51 to 25."

Comment

This just isn't true. Senator HOLLAND made a very full answer to the Douglas charges. See the CONGRESSIONAL RECORD for June 16, 1955, page 7220 and following.

Mr. JOSEPH B. AGNELLI,
McClure Newspaper Syndicate,
New York, N. Y.

DEAR MR. AGNELLI: This is in reply to your letter concerning Ray Tucker's column released June 30, 1955.

While we have regretted the necessity for preparing memorandum analyses replying to Ray Tucker's columns, we cannot believe that fairminded editors would presume to deny anyone opportunity to invite their attention to biased and prejudicial statements based upon inaccurate information supplied to a reporter or columnist by outside sources. We must again assure you that Pan American's memorandum covering Tucker's June 30 release not only sets forth the accurate situation, but is fully documented. Merely as examples:

1. The decision of the Civil Aeronautics Board of December 20, 1954, in the Trans-Atlantic Final Mail Rate case, Docket No. 1706, fully confirms that:

(a) Pan American is off subsidy for transatlantic operations comparable to those of TWA (p. 73).

(b) No investments in, advances to, or expenses of affiliated companies are in any way underwritten by Government subsidy for airline operations, but conversely, earnings realized by Pan American from any such investments are claimed by the CAB in reduction of subsidy (pp. 59–70).

(c) Pan American is being treated as an entity whereby any excessive earnings from one operating division are being offset against losses of another division as required by the Supreme Court decision in the Chicago and Southern case (p. 120). (See also the transcript of hearings in the Offset case, CAB, Docket No. 1706.)

2. As for the question concerning audits of Pan American's affairs and activities, the CAB supplied in Appropriations Committee hearings, when such questions were first raised, complete tabulations showing over 10,000 man-hours spent in 1954 completing audits of all Pan American divisions for the previous year, and 597 man-hours on the hotel subsidiary covering April 1946 to September 1954 (House hearings, second supplemental appropriations bill, 1955, p. 213, February 21, 1955), and a total of 41,990 man-hours commencing with the year 1946 (Senate hearings, second supplemental appropriations bill, 1955, p. 248, March 24, 1955).

3. As for Tucker's reporting only one side of a congressional debate, we respectfully refer you to the CONGRESSIONAL RECORD of June 16, 1955, at page 7220 and following, particularly pages 7222–7223 and 7226, wherein the chairman of the Senate Appropriations Subcommittee, in exercise of his responsibilities as such, and after personally obtaining accurate information from official sources, answered, fully and effectively, Senator DOUGLAS' misinformed charges.

Please note that the citations referred to above are only a few of the sources among official Government records, CAB, GAO, and congressional, from which correct facts and figures were readily available long before June 30, 1955. In fact, reference alone to the information supplied by the CAB to the Appropriations Committees of the Senate and the House, respectively, in hearings on the second supplemental appropriations bill for 1955 and the appropriations for fiscal 1956, will disclose the accurate facts with respect to most of the subject raised in the column in question.

As stated, the above are only a few of the examples of inaccuracies in the June 30 release. We assume that they will suffice for your purposes, and have no desire to burden you or your editors with further details. However, should you desire to make a further independent and complete evaluation of the points raised in Pan American's memorandum, we shall be pleased to provide documentation for whatever additional items you may wish.

We trust that you will recognize inherent in this matter a much broader perspective than that represented by a mere attack, or series of attacks, upon a single company by one who appears to have chosen to champion a cause against it. Our basic concern is not an argument between Tucker and Pan American, but one of essential relation to the national interest in assuring and maintaining a sound international air transport system, under private enterprise, carrying the United States flag to countries around the world in an intensely competitive international community. As an informative item for general reference, we commend to your careful consideration the enclosed booklet entitled "Uncle Sam's Best Buy," recently published by the Air Transport Association. You may find of particular interest the material contained on pages 14 and 15, including the nature and amounts of subsidies paid to various foreign-flag airlines by their governments.

Yours very truly,

GEORGE LYON,
Acting Public Relations Director
(In absence of John A. Creedy).

HOW FOREIGN GOVERNMENTS SUPPORT THEIR AIRLINES

The airlines of other countries are called foreign-flag airlines. Frequently, these foreign-flag lines are owned in whole or in part by foreign governments. Always, the foreign-flag airlines are heavily supported by their governments, because air service is essential to their commerce and defense.

There are many ways in which foreign governments aid their airlines. Sometimes, currency restrictions almost force people of other countries to fly under their own flag. Sometimes special travel regulations have the same effect. Tax laws may be used to help a foreign nation's airline.

Then, of course, payment of subsidy is a method of assistance used by all foreign countries. The accompanying table shows how representative countries, large and small, have assisted their airlines financially. The airlines of all the countries listed in the table compete with the airlines of the United States.

It should be remembered that a subsidy dollar spent for a foreign-flag airline goes much farther than the same dollar invested in American-flag air service, because foreign wages are so much lower than American wages.

Foreign flag subsidies, 1946–53

[In millions of dollars]

	Direct cash	Government stock ownership	Government loans	Provision of equipment, and so forth	Total
Great Britain	177	111	36.5	42	366.5

Address by William Podewitz, President of Fritz Reuter Altenheim

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am happy to record a beautiful and patriotic event. Annually the Plattdeutsche Volksfest-Verein honor the old folks who live in the Fritz Reuter Altenheim in Hudson County, which institution is supported by these worthy people. The occasion was a happy one, replete with kindness, music, song, family reunion, and a sense of dedication to America. This year, I had the pleasure of presenting Old Glory to the home in honor of the devotion to America displayed by these good citizens. In the presence of His Excellency, Robert B. Meyner, Governor of New Jersey, I presented the flag to William Podewitz, president of Fritz Reuter Altenheim. Mr. Podewitz made an eloquent reply and to the singing of the National Anthem, the flag was raised, unfurling proudly as it arrived at the top of the flagpole. Thereafter, all present pledged anew our allegiance to Old Glory and our country. Mr. Podewitz's eloquent address on this memorable occasion follows:

Honorable Representative TUMULTY, your excellency Governor Meyner, honored guests, fellow members of the Plattdeutsche Volksfest-Verein and the Fritz Reuter Altenheim, ladies, and gentlemen: fate seems to decree that at least once in each of our lives, there is a very special momentous occasion which arises and surpasses all previous high points in our career. I feel that today is that very special occasion for me, in that I am privileged to be president of our Fritz Reuter Altenheim, and as such, be the recipient of the honor of having our very dear friend Representative TUMULTY, present to me this flag of the United States of America. When I say "the flag," this is not all, it is a very special flag, since it is a flag which flew over the Capitol of our great country at Washington, D. C. Our flag is without doubt the most beautiful flag in the world, and flies in glory and honor, unsullied and unscorned. I know I speak for all of you club members and friends here today, when I say we, who were born abroad, are proud of our German birth and are sincerely happy in the choice we have made to become citizens of a country we call our own, and that country is the United States of America. We are proud of its beautiful flag and all that it stands for. We are grateful to the land of our adoption for all the good things it affords us and we feel that we, the people of German descent and birth, have also with the other citizens of this great land of ours, contributed in full measure toward that greatness.

Thousands of Americans of German ancestry have fought side by side with other Americans in upholding our flag and have died for it.

I would be remiss if I did not mention such names as Schurz, Von Steuben, Weiser, Konrad, and in later years such names as Senator Wagner and General Krueger. Today we Americans of German origin are proud of our Governor of the State of New Jersey the Honorable Robert B. Meyner, and the Honorable Robert F. Wagner, mayor of the city of New York, and last but not least the President of this great land of ours Dwight D. Eisenhower.

If only the peoples of the earth would take a lesson from the happy people of this great land of ours and see that it is possible for all men to live together in peace, harmony, and happiness, with respect for each others rights and feelings, then truly we would have peace on earth. Representative TUMULTY, today it is my very special privilege to accept this flag on behalf of the Fritz Reuter Altenheim and to express our thanks to you, honorable sir, for considering the Fritz Reuter Altenheim for this signal honor.

We pledge that this flag, which graced the Capitol at Washington, will fly at our home in dignity and honor, with no acts on our part to mar its fair stars and stripes.

As president of the Fritz Reuter Altenheim, I now order this flag to be raised during the 3 days of festivities in the park and thereafter shall go to our home next door. We hope that this flag will fly there for many years to come and that Old Glory will wave on forever. Thank you.

Relationship Between Industry Groups and Administrative Agencies of Our Government

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. MCNAMARA. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the following remarks regarding the relationship between some industry groups and some of the administrative agencies of our Government.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

I should like to bring to the attention of the Senate the relationship between some industry groups and some of the administrative agencies of our Government which may yet require investigation by Congress.

In the case of the National Labor Relations Board this relationship finds expression in recent decisions by the Board narrowing the scope of collective bargaining by placing arbitrary limits on the size of companies whose employees may seek relief before the NLRB, and by narrowing the scope of existing and proposed collective-bargaining units.

Evidence of at least a friendly understanding between the Board and employers in the telephone industry, for example, is found in an NLRB decision only 8 months old which withdrew protection of the National Labor Relations Act from all employees of telephone companies doing less than $200,000 business annually. Apparently the Board felt it necessary to protect smaller employers from harassment by unions. This, however, left the employers free to harass their employees, which didn't seem to impress the NLRB at all.

The Board went so far as to hold that such companies are not covered by the act, even if they are subsidiaries of larger companies which are subject to the act, and even if the company doing less than $200,000 annual business is wholly owned by one of the companies which make up the Bell System.

The Board and these telephone companies have an additional approach to undercutting what is still held by the law of the land to be the legitimate right of workers to form labor organizations of their own choosing.

According to this by now well-developed technique, a telephone company, faced with a union representation demand, classifies as confidential, professional, or quasi-supervisory as many jobs as possible, thus removing them from the collective bargaining unit.

As a result of this chopping away at the collective bargaining units, the telephone industry has—with the help of the NLRB—steadily increased the proportion of its supervisory employees to its total employees.

A case in point is the Southern Bell Telephone & Telegraph Co. In October 1946, 12.2 percent of the total number of employees were supervisory. Today, in that same company, 20.2 percent of the employees are called supervisory.

In the Pennsylvania Bell Telephone Co., there are 35,150 employees, of whom 4,433 (or 13 percent) are supervisors. Right now, the company is seeking to have an additional 1,100 workers—service assistants—excluded from the bargaining unit. This would raise to 16 percent the number of workers in this unit to whom union representation would be denied.

Judging by recent decisions of the National Labor Relations Board involving large independent telephone companies, the Board is likely to agree to the Pennsylvania company's request, and remove these 1,100 service assistants from the bargaining unit.

Since all these Bell companies are owned by the giant A. T. & T., success for the company in Pennsylvania would encourage identical action in other A. T. & T. units across the country. The union operating in this field, the Communications Workers of America, estimates that more than 30,000 Bell System workers across the country may in this way lose their right to be represented by a union.

It is often charged by the union that the Bell System companies have a well-devei-

oped program of strikebreaking, using employees exempted from bargaining units. During the recent 72-day strike of the communications workers union against Southern Bell, supervisory employees were brought into the area from other places; the union charges that the company imported as many as 9,000 strikebreakers and that these people came from as far away as Cleveland, Ohio.

This mammoth, overloaded supervisory force being created with the help of the NLRB may enable the Bell System to pursue antiunion policies, but it means added costs to the public for telephone service, the cost of which has already jumped in recent years.

A thoroughgoing investigation into the relations between the National Labor Relations Board and the giant corporations of the country may yet be necessary.

The relationship of the Board with the telephone system may well be the place to start.

Today's Opportunities, Tomorrow's Achievements

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. KUCHEL. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a statement prepared by me entitled "Today's Opportunities, Tomorrow's Achievement."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, the cause of peace has been advanced these past several months. Overwhelming Senate—and congressional—cooperation with President Eisenhower in the advance of that cause in history will be forcefully marked as a noble achievement of American Government in 1955.

As an American, I take pride in my support of the President in the overwhelmingly important field of peace and foreign relations. The Eisenhower policies are aimed at the Eisenhower goal: security of the American people in a just and honorable peace. The great majority of our people—Democrats, Republicans, and Independents—enthusiastically support those policies.

I am reassured, Mr. President, that during this session both Chambers have given repeated proof that in America politics stops at the water's edge. The capacity of Congress to subordinate political differences in order to inspire mankind and to demonstrate our devotion to democratic principles is obvious in the overwhelming passage of the resolution granting President Eisenhower's request for authority to prevent communism from subjugating Free China, Senate ratification of the Paris accords restoring West Germany to the family of peace-loving nations, the approval of the SEATO and China defense treaties, and the affirmation of this Nation's willingness to confer and consult with other great powers of the world in our quest for peace.

The actions of this Senate and of this Congress in dealing with matters affecting foreign relations and international affairs show that day in and day out the undeniable motive of the Members is to move forthrightly and uncompromisingly toward the goal set out by the President. Therefore, it is decidedly heartening to look back over the last several months and recall the cooperation that has been extended our President and the solidarity that has affirmed our Nation's leadership in the constant striving for peace and security.

In no spirit of rancor, I wish to suggest that our legislative record on the domestic scene is far from satisfactory. I shall not attempt here to assess the blame, but I do desire to say that politics—unfortunately—contributed to this unhappy record on our home front.

I am distressed, Mr. President, by the failure of this Congress to take constructive action on—indeed, even to consider President Eisenhower's recommendations for—legislation bolstering our educational facilities, providing health reinsurance to bring medical and hospital care within the reach of all, and revising the immigration and refugee relief laws. The Senate, regrettably, did not even face the questions of statehood for Hawaii and Alaska. And our failure to enact sound legislation providing for modern American highways is tragic.

As a Senate Public Works Committee member, I have listened firsthand to irrefutable testimony on the appalling condition of America's roads and highways. We need, urgently and without further delay, an up-to-date system of interstate highways, 40,000 miles in length. No one can deny that need. America's defense requirements dictate it and our economy demands it. Beyond that, our frightful toll of highway casualties is, in great part, attributable to antiquated and delapidated highways.

The Federal Government has an unmistakable responsibility in this field. Politics must not interfere with our discharge of it. There ought not to be a dime's worth of partisanship in our consideration of Federal highway legislation. While I sincerely believe in President Eisenhower's recommendations—and voted for them earlier this year—I am ready to discuss any reasonable alternative recommendations. But I will decline to discuss any unreasonable alternative or any political one.

While politics stopped at the water's edge, it is a source of great regret that partisanship was the chief reason for inaction on many urgent matters of domestic importance. If we are to convince the remainder of the world that self-government is the soundest and most effective way of recognizing the dignity of mankind, there must be a greater spirit of give and take and a less selfish approach toward proposed solutions of problems which affect the health, economic security, safety, and general well-being of our people. Our record on the domestic front was not good.

As a Californian, I must say that the 84th Congress in its first session has been sympathetic and understanding toward the State which I have the honor in part to represent. The Senate in particular has responded generously to appeals from the 13 million people of California for aid and assistance in solving some of their intricate and perplexing problems. For this, I am deeply grateful and proud.

By and large, the 84th Congress enacted a number and variety of measures which will benefit the people of my State. That was due in many instances to the circumstance that the California delegation, the second largest in the Congress, recognized the fact that ours is a State with wide ranges of economic, social, and political interests, and that cooperation and mutual assistance are essential in advancing the welfare of our fellow citizens.

In reciting some of the more noteworthy legislative accomplishments of benefit to California, I wish to remark that one measure with which I was most intimately concerned has national significance. The Air Pollution Research and Technical Assistance Act, which now is Public Law 159, will bring into play the resources of the Federal Government in a concerted campaign to overcome a menace that is spreading over our Nation and becoming more serious to the health, happiness, and safety of a growing number of people.

I am deeply grateful this Congress thus climaxed my 2-year fight to obtain Federal assistance for the local and State governments, public and private scientific groups, civic bodies, and educational institutions which have been trying to isolate the sources and causes of smog and other atmospheric contaminants and to devise remedial and preventive measures for purifying the air that people, plants, and animals all require for their very existence.

The antismog law, authorizing a 5-year $25 million course of investigation and experimentation, should pay tremendous dividends to the entire Nation. I am intensely pleased that this Congress saw fit to make an initial $1,190,000 appropriation toward setting the program in motion. Added to the $412,500 item in the regular Public Health Service budget for air pollution studies by the Division of Sanitary Engineering, the first allotment under the $25 million authorization will finance a series of projects that should yield valuable knowledge toward cleansing the atmosphere in metropolitan and industrial areas.

For more than a quarter of a century, Congress has been told again and again that water—due to maldistribution and the breathtaking growth of our population—is California's most complex and urgent problem. The people of our State have endeavored for generations to remedy the deficiencies of nature. They have displayed ingenuity and resourcefulnes in utilizing the surplus supplies found in some sections for the benefit of other regions where serious deficits must be overcome. The assistance of the Federal Government has been an invaluable ingredient of the progress made toward solving California's water problem and in enjoying our wealth of precious natural resources.

Again this year Congress has shown appreciation for the seriousness and complexity of our California water problem. I feel certain that the law authorizing the Trinity division of the Central Valley project—the largest single multipurpose water-resource development enacted under the Eisenhower administration—will contribute to the ultimate benefit of the Nation, as well as help immeasurably in the orderly growth and development of my native State. I am proud to have been associated with my colleague, Senator KNOWLAND, and our distinguished fellow citizen, Representative CLAIR ENGLE in the House, in sponsoring this law which makes possible immediate commencement of work on this $225 million undertaking.

Let me thank the Senate for approving the other reclamation project bill which I sponsored this year. I refer to the $27 million authorization of the Ventura project, so necessary for the people of Ventura County in their earnest endeavor to obtain an adequate and dependable supply of water. My bill now awaits action in the House, which I very much hope will be both speedy and favorable.

I repeat that water remains the basic problem of California. We now are the second largest State in the Union, in population as well as in size. We need to conserve the water we have to insure an adequate supply, and to distribute it equitably. In the Senate, approval this year of both the Trinity project and the Ventura project, Members on both sides of the aisle, in great majority, have assented to necessary Federal assistance. For those actions, they have the unbounded thanks of California.

Two other pieces of water legislation that should materialy aid California also were enacted during the current session. These are the so-called distribution systems law,

which will extend Federal financial help to local irrigation districts and other bodies desiring to build works that will spplement Federal reclamation projects, and the statute expanding the program of research into methods of reclaiming ocean and other saline waters for industrial, municipal, and agricultural uses and for human consumption.

While the unwillingness of Congress to authorize a new highway program is an undeniable black mark on the record of this session, the needs of our transportation system in this atomic era received partial recognition which is gratifying to me. I refer to the new Federal Airport Act which, I believe, will prove a sound and far-sighted investment and I know will give particular impetus to my State which is so air-minded and dependent on time-saving air transportation.

The importance of the 4-year program envisioned by this law is obvious when it is noted that only 2 cities in California and 5 in other States have airports presently capable of handling fully loaded jet transports.

With jet-powered passenger and cargo aircraft expected to be available for transcontinental schedules in 3 to 5 years, the need for such Federal assistance is clear beyond question. This new Federal aid law should be particularly valuable to California, with so many widely separated centers of population, such a large number of privately-owned aircraft, and the terminus of many transcontinental and transpacific routes. The Federal allotment to California, approximately $10 million over the 4-year period, will enabe a number of communities to tackle their back-log of urgently required improvements, which early this year were estimated to involve outlays of more than $50 million.

Because of the geographical expanse of our State, together with its exposed location, California is the site of an immense number and variety of national defense installations. The protection of the western half of the Nation, and at the same time the welfare of armed services personnel, will be advanced by the public works program this Congress authorized for the Armed Forces. I am pleased that in the $108,600,000 worth of construction scheduled in 21 counties of our State under the defense public works law a number of critically needed housing units are contemplated. These, supplemented by new construction which should be encouraged by the Housing Act amendments, will raise morale of officers, men, and their families, many of whom are stationed at isolated points or near heavily populated centers where quarters are inadequate and difficult to locate.

As usual, this Congress faced the unenviable responsibility of reconciling requests for appropriations from the National Treasury with the monetary resources of our Government. Although the budget still is out of balance, progress has been made toward sound fiscal policy.

The people of California, who bear a weighty tax load, appreciate the consideration shown by the 84th Congress in enacting appropriation bills. The numerous money items which will be available for activities and projects particularly in our State are invariably of the wealth-producing and prosperity-promoting variety.

I share the gratitude of people in a large area of California and of my colleagues in the congressional delegation for the $1 million appropriation to complete advance planning for and start construction of the vital Trinity division of the Central Valley project. This initial installment on such an economically feasible multipurpose water development is a notable example of wise fiscal management.

The miscellaneous appropriation bills contained several unique sums for California which deserve mention. The 84th Congress agreed to provide funds for some projects which I earnestly advocated and helped push to enactment in the 83d Congress. Conspicuous in this category is the Cherry Valley Reservoir, for which $785,000 was approved. The legislation under which this expenditure is authorized was the first measure adopted by the Senate after I entered this body which bore my name as a sponsor, so naturally I have a paternal concern about carrying this development to completion, so necessary to the people of San Francisco in connection with their domestic water needs.

The session now closing made available the following amounts to finance planning or initiate construction on public works projects which I favored in the 83d Congress and were authorized in the 1954 omnibus law: Richmond Harbor, $500,000; the Santa Maria project, $1 million; Playa del Rey Harbor, $25,000; Port Hueneme Harbor, $70,000; and San Lorenzo Creek project, $25,000.

An initial $70,000 was voted to carry out the program of saving the grasslands which are nesting and feeding grounds for migratory game birds along the Pacific flyway. This effort, authorized by the bill I sponsored in the 1953 and 1954 sessions, should prove a boon to farmers and sportsmen and the expenditure represents far-sighted use of Federal resources for general public benefit.

The 1st session of the 84th Congress wisely, in my judgment, recognized the value of intensifying efforts to protect the Nation's natural resources in different directions. For these purposes, the Senate added $1 million and the Congress finally voted this amount to the fund for plant and animal disease and pest control, chiefly to help curb the menacing Mexican fruitfly and the khapra beetle. Increased funds for stepped-up fire protection in the national forests, for which $300,000 was specifically earmarked for southern California, will safeguard our treasured timber, widely enjoyed recreation areas, and vital watersheds. A similar commendable objective was recognized when the present session added to the budget $1,250,000 to initiate the building of flood-control works to protect strategic and thickly settled parts of San Bernardino and Riverside Counties.

On behalf of the people of the thriving section of California for which our State capital is the hub of commerce and trade, this Congress agreed to revive the Sacramento deep-water channel project. The $500,000 allowed for this development will permit resumption of dredging which was well underway when the Korean war forced a halt to all public works. This is one more California port facility now accorded Federal recognition.

California traditionally has deep concern in maritime and merchant marine matters. Because the sea for so many generations was a principal artery of communication and transportation, our people understandably have a continuing dependence upon shipping. Water-borne commerce still is a leading line of economic activity. Therefore, California is thankful the 1st session of the 84th Congress decided to continue Federal financial support for the 4 State nautical schools, 1 of which is California's Maritime Academy. Our far-flung trade interests likewise were reassured when this Senate preserved the 50–50 Cargo Preference Act which is essential to the continued existence of the Nation's overseas commerce and shipping industry.

Another great economic enterprise in California is agriculture. Cotton is our State's most valuable crop. Accordingly, I wish to thank the Senate for refusing to disturb the acreage allocation formula which is vital to the continued cultivation of cotton. I regret that the sugar bill was left hanging in the Senate and trust that next year this legislation—which recognizes the right of American farmers in California and other States to a just and fair share of the domestic market—will receive the approval of this body and become law.

Substantial progress was made toward translating into reality other ideas and suggestions which would further promote the prosperity of California.

Unfortunately, a variety of factors made it impossible to proceed this year as rapidly and as far as I had hoped with one piece of legislation that has national application, is universally acknowledged to be sorely needed, and would relieve literally scores of local governments in California and hundreds across the Nation from the squeezing pressures of rising costs and declining revenues occasioned by expanded property holdings by the Federal Government. I was gratified when in the closing days of this session committee consideration was given to several bills, including one of which I am cosponsor, to authorize the Federal Government to make payments in lieu of taxes to municipalities, school districts, counties, and other agencies dependent upon tax revenues to finance functions of local government. Enactment of general legislation for this purpose is entitled to high priority on the agenda for the 1956 session.

The legislative accomplishments of this first session did include approval of an assortment of bills primarily of local significance. Many California communities and citizens benefited by the passage of measures such as those authorizing California and Nevada to work out a compact for utilizing the waters of the Truckee, Carson, and Walker Rivers and Lake Tahoe, carrying out the Federal obligation to reimburse the city of Los Angeles for expenditures to improve facilities of that municipality's great harbor, giving the city of Richmond jurisdiction over public utilities which are an integral part of the muncipally administered housing project, and equalizing burdens of the people of Merced County in the building and operation of protective levees on the San Joaquin River.

Mr. President, America has been summoned to a high responsibility never envisioned by the authors of the Declaration of Independence and the framers of the Constitution. Similarly, each year supplies new reminders that our frontiers of pioneer days have long been gone and western America is on its way toward overtaking the rest of the Nation both in people and production.

What an imposing panorama of opportunities stands before us. The initiative of our people has brought us to the highest level of productive employment in our history. People of good will all around the globe are knit more strongly together in their defenses against aggression and in the cause of peace. God grant that the United States, our people, and their Government may have the courage and the vision and the leadership to take today's opportunities and fashion them into the achievements of tomorrow.

American Taxpayers and Their Nation's Capital

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. O'HARA of Illinois. Mr. Speaker, the countless thousands who annually visit Washington, as pilgrims coming to the shrine of their country, are impressed by the marvelous beauty of the Capital City of their Government. I think they

would be interested in knowing something of the contribution that they as taxpayers make to maintaining the District of Columbia, hence I am extending my remarks to include a summary of Public Law 131, the Appropriations Act for the District of Columbia, as follows:

Public Law 131, 84th Cong.

(District of Columbia Appropriation Act, 1956)

OPERATING EXPENSES

Executive Office	$308,000
Department of General Administration	3,081,850
Office of Corporation Counsel	442,900
Compensation and retirement fund expenses	10,036,000
Regulatory agencies	967,000
Department of Occupations and Professions	248,500
Public schools	28,130,000
Public library	1,639,300
Recreation Department	1,688,500
Metropolitan Police	12,808,000
Fire Department	6,257,900
Veterans' Service Center	92,200
Office of Civil Defense	75,000
Department of Vocational Rehabilitation	140,000
Courts	3,369,674
Department of Public Health	23,592,000
Department of Corrections	4,526,820
Department of Public Welfare	9,600,000
Department of Buildings and Grounds	1,687,000
Office of Surveyor	153,920
Department of Licenses and Inspections	1,546,276
Department of Highways	5,967,000
Department of Vehicles and Traffic	1,107,000
Motor Vehicle Parking Agency	350,000
Department of Sanitary Engineering	10,285,000
Washington aqueduct	2,120,000
National Guard	119,800
National Capital Parks	2,389,000
National Zoological Park	669,300
Total operating expenses	133,397,940

CAPITAL OUTLAY

District debt service	443,800
Public building construction	7,544,400
Miscellaneous capital outlay	1,260,300
Department of Highways	13,535,000
Department of Sanitary Engineering	9,662,000
Washington aqueduct	3,000,000
Total, capital outlay	35,445,500
Grand total	168,843,440

GENERAL PROVISIONS

First. Continues antistrike provisions.

Second. Authorizes use of funds for automobile allowances.

Third. Authorizes use of funds for attendance at meetings.

Fourth. Authorizes investment in United States securities of funds not needed to meet current expenses.

Fifth. Authorizes the employment of experts.

Sixth. Authorizes advances of money to officials herein specified.

Seventh. Prohibits the use of appropriations for certain activities of the Public Utilities Commission pertaining to taxicabs.

Eighth. Restricts amount to be paid for electric street lighting.

Ninth. Places motor-propelled passenger-carrying vehicles under the direction and control of the District of Columbia Commissioners.

Tenth. Authorizes use of appropriations for snow- and ice-control work.

Eleventh. Authorizes the District of Columbia Commissioners to establish a working fund without fiscal-year limitation for the purpose of printing, duplicating, and photographing.

My Voting Record

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DAVIDSON. Mr. Speaker, the record of the 1st session of the 84th Congress is now history. In some respects we have accomplished much, in others we have been derelict.

I regard it incumbent upon each Member to review his actions here and to recapitulate his voting record.

Representing as I do a great district, the 20th Congressional District of New York, I want my constituents and all the people of our blessed United States to know in what manner I have attempted to carry out their mandate to me.

The following is my voting record on each and every major legislative issue which came before the House of Representatives for its consideration:

Roll No. 3. Voted "yea." House Joint Resolution 159, a joint resolution authorizing the President to employ the Armed Forces of the United States for protecting the security of Formosa, the Pescadores, and related positions and territories of that area. On passage, January 25, 1955, yeas 410, nays 3.

Roll No. 4. Voted "yea." H. R. 587, a bill to provide that persons in the Armed Forces on January 31, 1955, may continue to earn educational and other benefits under the GI bill until discharged. This bill was necessary to reverse the unfair action of the President which would have terminated educational and other benefits as of January 31, 1955, for all GI's. On passage, January 27, 1955, yeas 366, nays 0.

Roll No. 6. Voted "yea." H. R. 3828, a bill to adjust the salaries of judges of United States courts, United States attorneys, Members of Congress, and for other purposes. On passage, February 16, 1955, yeas 283, nays 118.

Roll No. 12. Voted "yea." H. R. 1, a bill to extend the President's authority to enter into reciprocal trade agreements under the Tariff Act for 3 years. On passage, February 18, 1955, yeas 295, nays 110.

Roll No. 16. Voted "yea." H. R. 4259, a bill to provide a 1-year extension of the existing corporate normal-tax rate and of certain existing excise-tax rates, and to provide a $20 credit against the individual income tax for each personal exemption. On passage, February 25, 1955, yeas 242, nays 175. The $20 tax credit, of principal benefit for the small taxpayer was, unfortunately, eliminated in the conference between the Senate and House, primarily because of the President's opposition.

Roll No. 19. Voted "yea." H. R. 4720, a bill to provide incentives for members of the uniformed services by increasing certain pays and allowances. On passage, March 10, 1955, yeas 399, nays 1.

Roll No. 27. Voted "yea." House Resolution 170, a resolution to declare that the House of Representatives does not favor sale of the facilities as recommended in the report of the Rubber Producing Facilities Disposal Commission submitted to the Congress on January 24, 1955. On agreeing to resolution, March 22, 1955, failed, yeas 132, nays 283. This resolution, had it been adopted, would have prevented another giveaway advocated by the Republican leadership.

Roll No. 29. Voted "yea." House Resolution 171, a resolution to disapprove proposed sale to Shell Oil Co. of certain synthetic rubber facilities as recommended by the Rubber Producing Facilities Disposal Commission report. On agreeing to the resolution, March 23, 1955, failed, yeas 137, nays 276. This is another giveaway advocated by the Republican leaders for big business which could not be prevented after this resolution was defeated.

Roll No. 37. Voted "yea." H. R. 4644, a bill to increase the rates of basic salary of postmasters, officers, supervisors, and employees in the postal field service, to eliminate certain salary inequities, and for other purposes. On Moss amendment No. 2 (8.2 percent increase), April 20, 1955, yeas 224, nays 189.

Roll No. 39. Voted "yea." H. R. 4644, a bill to increase the rates of basic salary of postmasters, officers, supervisors, and employees in the postal field service, to eliminate certain salary inequities, and for other purposes. On passage, April 20, 1955, yeas 324, nays 85. This was the 8.2 percent increase bill which the President vetoed.

Roll No. 57. Voted "nay." H. R. 2535, a bill to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States. On motion to recommit, May 10, 1955, yeas 218, nays 170, "present" 3. This bill would have granted statehood to Hawaii and Alaska. They deserve it, but the Republican leadership succeeded in obtaining sufficient reactionary support to recommit the bill to the committee and thus killed it. My vote was against recommittal. If we had been successful, then a vote on passage would have been necessary, and I would, of course, have voted for it.

Roll No. 72. Voted "yea." H. R. 2851, a bill to make agricultural commodities owned by the Commodity Credit Corporation available to persons in need in areas of acute distress. On passage, May 25, 1955, yeas 344, nays 1, "present" 3. This bill allows the disposal of some of our surplus agricultural products to American distress areas.

Roll No. 79. Voted "yea." S. 2061. This was the bill to increase the pay of the postal employees after the veto. It provided an increase of from 6 to 8 percent. June 7, 1955, yeas 410, nays 1.

Roll No. 80. Voted "yea." H. R. 5923, a bill to authorize certain sums to be appropriated immediately for the completion of the construction of the Inter-American Highway. On passage, June 8, 1955, yeas 353, nays 13.

Roll No. 83. Voted "yea." H. R. 1. Final passage of the bill to extend the President's authority to enter into reciprocal trade agreements under the Tariff Act. June 14, 1955, yeas 347, nays 54.

Roll No. 84. Voted "yea." H. R. 6227, a bill to provide for the control and regulation of bank holding companies, and for other purposes. On passage, June 14, 1955, yeas 371, nays 24, "present" 2. This was an important bill on which we spent a great deal of time in the Committee on Banking and Currency. It reduces the power of certain giant monopolistic banking firms.

Roll No. 94. Voted "yea." House Concurrent Resolution 149, a concurrent resolution expressing the sense of the Congress that the United States in its international relations should maintain its traditional policy in opposition to colonialism and Communist imperialism. On passage, June 23, 1955, yeas 367, nays 0. This important resolution is the one which the President said he had not heard of when asked about it at his press conference. He said he was probably out fishing.

Roll No. 100. Voted "yea." H. R. 3005, a bill to further amend the Universal Military Training and Service Act by extending the authority to induct certain individuals, and to extend the benefits under the Dependents Assistance Act to July 1, 1959. Conference report, on adoption, June 28, 1955, yeas 389, nays 5, "present" 1. This bill extended the draft.

Roll No. 105. Voted "yea." S. 2090, an act to amend the Mutual Security Act of 1954, and for other purposes. On passage, June 30, 1955, yeas 273, nays 128. This bill provided for further United States defense and technical development assistance to our foreign friends and allies.

Roll No. 110. Voted "yea." This is another vote on the mutual security bill and approves the bill reported by the Senate and House conferees.

Roll No. 119. Voted "yea." H. R. 7225, a bill to amend title II of the Social Security Act to provide disability insurance benefits for certain disabled individuals who have attained age 50, to reduce to age 62 the age on the basis of which benefits are payable to certain women, to provide for continuation of child's insurance benefits for children who are disabled before age 18, to extend coverage, and for other purposes. On motion to suspend rules and pass—two-thirds required—July 18, 1955, yeas 372, nays 31, "present" 2. This bill provides for some much needed improvements in the social security law. I would have liked some additional improvements but this measure is a good step in the right direction. Perhaps we will be able to improve upon it at the next session after the Senate acts upon it.

Roll No. 125. Voted "yea." H. R. 7214, a bill to amend the Fair Labor Standards Act to make the minimum wage $1 an hour effective March 1, 1956. On passage, July 20, 1955, yeas 362, nays 54, "present" 2. My own bill provided for an increase in the minimum wage to $1.25 an hour and established a minimum of 75 cents in Puerto Rico and the Virgin Islands.

Roll No. 129. Voted "yea." H. R. 7000, a bill to provide for strengthening of the Reserve forces, and for other purposes. Conference report, on adoption, July 25, 1955, yeas 315, nays 78, "present" 1.

Roll No. 133. Voted "yea." H. R. 7474, a bill to amend and supplement the Federal Aid Road Act approved July 11, 1916 (39 Stat. 355), as amended and supplemented, to authorize appropriations for continuing the construction of highways, and for other purposes. On passage, July 27, 1955, failed, yeas 123, nays 292. This bill would have provided Federal assistance in construction of the Nation's highways. The trucking industry combined with the oil, gas, and rubber companies to lobby against it and defeat this much-needed legislation. I hope we will have better success at the next session.

Roll No. 135. Voted "nay." House Resolution 317, a resolution providing for the consideration of H. R. 6645, a bill to amend the Natural Gas Act, as amended. On agreeing to resolution, July 28, 1955, yeas 273, nays 135. I voted against this resolution in an attempt to prevent House consideration of the bill to gouge the consumers and eliminate Federal control of the producers of natural gas. As the next two votes indicate, we were not able to defeat the bill in the House, but the Senate refused to consider the bill at all, so control remains in force.

Roll No. 137. Voted "yea." H. R. 6645, a bill to amend the Natural Gas Act, as amended. On motion to recommit, July 28, 1955, failed, yeas 203, nays 210, "present" 1.

Roll No. 138. Voted "nay." H. R. 6645, a bill to amend the Natural Gas Act, as amended. On passage, July 28, 1955, yeas 209, nays 203, "present" 2.

Roll No. 140. Voted "nay." S. 2126, an act to extend and clarify laws relating to the provision and improvement of housing, the elimination and prevention of slums, the conservation and development of urban communities, the financing of vitally needed public works, and for other purposes. On the amendment—Wolcott substitute—July 29, 1955, yeas 217, nays 188, "present" 2. This was the vote to substitute the Wolcott bill which contained no public housing. I voted against it.

Roll No. 141. Voted "yea." S. 2126. Having failed to obtain House approval of our committee bill, I voted for the Wolcott substitute only so that we could hold a conference with the Senate which had previously approved 135,000 units of public housing. In the conference, we hoped to obtain some assistance for our slum dwellers. My own bill, part of which was adopted, provided for 150,000 units of public housing. The final rollcall was on the conference housing bill and as we had hoped provided for public housing, although for only 45,000 units. This is 10,000 more than the President's meager request and 45,000 more than the Republican leadership wanted. On passage, July 29, 1955, yeas 396, nays 3, "present" 4.

Roll No. 147. Voted "yea." S. 2126. Passage of the conference housing bill. Contains 45,000 units of public housing and provision for educational housing. July 29, 1955, yeas 396, nays 3.

Hobgoblins and Realities

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. MULTER. Mr. Speaker, before the start of our legislative session, the President had great misgivings about the coming months. He reprimanded the voters of the Nation because they chose to send Democrats to Congress, while the administration was of the opposing political faith. He forecast that a Republican administration would not have the support of a Democratic Congress. During the 1954 congressional campaign, he even foresaw the possibility of a cold war within Government which could destroy the Nation's unity at this crucial time.

The same kind of talk from a Democratic President would have been labeled in the one-party press either as intended to scare our people or as an insult to our intelligence. Coming from the leader of the Republican Party, that same part of our American press repeated the reckless charge as though it were unimpeachable gospel.

How disappointing it must be to them to find that the hobgoblins and the gremlins disappeared into thin air even before the 84th Congress opened.

Now that the first session of this Congress has closed, the American people are entitled to the full story.

Even though an ardent Democrat, I will not pretend that none of my Democratic colleagues made any mistakes, nor that there was no occasion when some of my Republican colleagues did vote right. I do proclaim, however, as loudly as I can, that my Democratic colleagues voted right more frequently than my Republican colleagues and conversely, that the Republicans voted wrong more frequently than the Democrats—too frequently for the good of our country.

Let us now proceed to analyze the record.

The President greatly underestimated the caliber and character of the Democratic majority. He now admits that the political responsibility of the Democratic-controlled Congress made the successes of this session possible. The proof of Democratic leadership and sup-

port—the willingness to lay aside political antagonism and jealousies—is a part of the record.

It is with great pleasure that I review these accomplishments. In doing so, we must have in mind that what is right or wrong is not determined by who sponsors a proposal, nor by which party supports it. The determination must be based on the sole test of what is best for the greatest number of our people.

INTERNATIONAL AFFAIRS: UNITY AND STRENGTH

Nowhere is the story of cooperation and responsibility better illustrated than in the areas of foreign policy and national defense. The world situation threatens to remain a precarious one for many years to come. Although the great ideological conflicts between East and West show some indication of being eased, few are shortsighted enough to believe that the aims of international communism have changed so completely in so short a time. If these differences between East and West cannot be settled or at least compromised, the alternative is a global atomic war from which no side could emerge victorious. While urging thorough exploration of every path that might lead to world peace, the Democratic Party stood as one man in favor of keeping our guard up and our defenses strong enough to withstand a sneak attack. In our system of Government the President and his State Department must assume the leadership in the realm of international affairs. Congress responded by supporting them completely on every major issue. The President was authorized to use United States military forces in defending Formosa and the nearby Pescadores Islands. Executive agreements were ratified establishing a mutual-defense treaty with Nationalist China and a NATO-type defense alliance for southeast Asia.

Despite overwhelming sentiment in the Congress for it, the executive branch of our Government took no firm or realistic step toward establishing permanent peace in the Near East.

The occupation of Germany was ended so that she could be armed and brought into the European defense system. Austria was reestablished as an independent and democratic state.

To carry out our foreign policy aims, Congress authorized $3.2 billion for economic and military aid to foreign countries.

To encourage the benefits of international trade, the Reciprocal Trade Agreements Act was extended for 3 years so that the President has the full authority to continue his efforts to promote our foreign affairs. A bill simplifying our complicated and outmoded system of customs definition, classification, and rate structure was passed by the House of Representatives and awaits Senate approval in the next session of Congress.

A manpower reserve program was put into effect which provides for a trained military reserve of 3,900,000 men by 1959. Such a program, the President told us, will avoid the cost and inconvenience of a large standing army, while at the same time providing for the national defense. It was necessary, nevertheless, to extend the selective service law for 4 more years, including the draft of doctors and dentists for 2 more years. I am far from satisfied with either of these laws, but believe they are the best compromise we could get at this time.

Atomic energy projects were authorized to the extent of $237 million for research facilities and actual production of atomic peacetime projects, as well as atomic weapons. Funds were also authorized for the expansion of existing aeronautical research, for construction of foreign military bases and housing, and for a billion-dollar Navy ship-building program.

The only issue on which Congress and the administration clashed was the relatively minor one involving Marine Corps manpower. Congress refused to bow to the Republican demand for a 22,000-man cut in this important military unit.

All in all, the Democratic Congress was happy to follow a foreign-policy program whose principles were enunciated by President Truman and Secretary of State Acheson, several years ago. The result has been a satisfying one. American prestige has grown abroad, the cold war tensions have lessened, if only temporarily, and a period of diplomatic negotiation has been vigorously begun. Democratic support, far from being absent, has been consistently greater than the support of the President's own party. Because of this support, the United States has been able to demonstrate its strength and unity.

SOCIAL LEGISLATION: FOR THE MANY AND NOT THE FEW

In domestic matters, of course, there was no comparable need for unanimity of thinking. The Democratic majority acted according to its political and economic principles and clashed with the administration where there was substantial difference. Once again, however, Mr. Eisenhower's forecast of a cold war was completely unfounded. The Democratic opposition to administration policies was as intelligent and high-minded as it was determined. There was no opposition merely for opposition's sake.

In the area of social legislation, several of the administration's proposals were extensions of earlier New Deal and Fair Deal ideas. These found enthusiastic Democratic support as far as they went—but often they did not go nearly far enough. Increased railroad retirement benefits, better FHA mortgage insurance coverage, and improved surplus property disposal to schools and hospitals were implementations of the Democratic program. Other parts of the administration program, however, proved quite inadequate.

A minimum wage proposal of $0.90 per hour, unreal at a time of high prices and general prosperity, was changed to a $1 minimum. This increase over the old $0.75 minimum will help keep industries from "running away" to the South and West where labor is so much cheaper, as well as preserve a decent wage for all American workers. More important, it raises the standard of living of all our citizens, nationally and not sectionally.

The administration's housing bill asked for only 35,000 public-housing units and made them well-nigh impossible of construction by improper restrictions. Congress increased the low-rent provisions by 10,000 additional units and eased the requirements to enable more extensive and better-balanced housing projects. Such liberalization of the law is necessitated by the acute housing shortage and the slum clearance needs of our urban centers.

To cure the unfortunate polio vaccine mixup, Congress authorized $2 million more than was asked by the President. In addition, all necessary funds are to be made available to the States to purchase enough vaccine for one-third of all the unvaccinated children, plus all expectant mothers. A more extensive and a better program was opposed by the administration as unnecessary and a step toward socialized medicine. The threat of a veto of the entire program effectually prevented the enactment of control legislation. Obviously, this administration is willing to risk black markets which may destroy the health of our people.

In appropriations for general matters of health, education, and social welfare, the Congress added more than $17 million to the Eisenhower program. The Congress felt that these were matters in which false economy was extremely dangerous. We were not willing to bear the responsibility of holding back research programs on cancer, heart disease, arthritis, and mental health so that the Federal budget might be a fraction of 1 percent lower. This, too, points up a basic difference of philosophy. The Democrats believe in being liberal with money to conserve the health of our people.

So too, an attempt to liberalize the social security laws and make the program more adequate to meet today's problems was stoutly opposed by the Republican administration. The Democratic majority in the House of Representatives overwhelmingly passed a bill to lower retirement age for women from 65 to 62, to allow disability benefits to 250,000 workers aged 50 or more, to continue disability benefits for children after age 18, and to extend coverage to the professions. Administration opposition in the Senate defeated this program there, although the need for such legislation has become more and more apparent in recent years.

Throughout the consideration of these matters, the Republicans consistently showed themselves for what they are—a party dedicated to the few rather than the many; a party which is more interested in budgetary figures than human needs; a party seeking to carry out a minimal social program at a minimal expense. Plenty of lip service, but no votes.

BUSINESS AND TAXATION: THE LITTLE FISH IN A BIG POND

The Eisenhower administration has time and again denied that it is an administration of, by, and for big business. And yet the record clearly shows that almost all of the major economic policies which seek to help the small-business man have originated among the Democratic Members of Congress

and have been opposed by the Republican administration.

The Small Business Administration, an agency dedicated to the plight of small business, was extended for 2 years. The administration opposed any increase in its authorized funds. The amount of any individual loan was increased to $250,000. These loans are intended for those deserving small-business men who cannot get help from regular bank sources. The disaster loan program and the small business participation in Government procurement were strengthened. The lending function together with the help given to small business in getting a fair share of Government procurement contracts makes SBA one of the most important agencies to have been started in recent years.

This is one of the few domestic policies, which in principle, has been consistently supported by both parties.

Bills were passed to halt the growing monopolistic practices in business. The antitrust penalty for violation of the Sherman Act was raised from $5,000 to $50,000. It was evident that $5,000 to a large corporation is merely a petty-cash transaction which was no deterrent to such a potential violator. In addition, the House passed a bill to curb the influence of bank holding companies by requiring Federal approval of new bank acquisitions by holding companies and requiring those companies to divest themselves of their nonbanking interests. This bill is designed to preserve the small independent bank as the banking unit best able to serve the interests of the small-business men. In the area of taxes, most of the existing income, corporate and excess-profits taxes were extended for another year. The only important proposal for tax relief came from the Democratic side of the Senate and the House of Representatives. Although this concerned a mere $20 cut in personal income taxes for each taxpayer and each dependent—relief aimed at the lowest-income bracket, yet equally fair to all income brackets—the Republican administration forecfully rejected the idea and caused its defeat in the Senate after the House had given its approval.

ARMED SERVICES AND VETERANS: SOMETHING FOR SOMETHING

Thanks to Democratic support, the serviceman and veteran were not forgotten during the past few months. Those who were in the service as of January 31, 1955, were allowed to go on building up GI schooling benefits until discharged from the service. The Veterans' Administration direct-loan program was extended for another 2 years and was broadened to include home improvements as well as home purchases. Disabled veterans, including those who fought in Korea, were given the privilege of starting purchase of a special automobile before October 1956.

To help the buildup of a strong backbone of career servicemen—an essential supplement to the new military Reserve program—Congress raised the pay and created greater benefits for servicemen as an incentive to a military career. Finally, Congress decided to continue regular pay to the dependents and relatives of missing or captured men who had fought in Korea.

The feeling was strong in the Congress that our Government should do as much as it could for the men who defend our country and are called upon to make great sacrifices. This program was both an expression of gratitude of the American citizen and a means of compensation for their sacrifices.

TRANSPORTATION: BUT NOT AT ANY COST

The pressing need to bring the Nation's transportation system up to date was apparent to the leaders of both parties. Airport construction was encouraged to the extent of $252 million in grants-in-aid to the States for 4 years.

In advocating a nationwide highway-construction program, the Eisenhower administration asked that the 10-year program be financed with special high-rate bonds. This would have involved at least $2.7 billion in unnecessary interest payments to bankers and other bondholders. The administration proposal was another unfortunate example of special-interest legislation which the Democratic majority has refused to stomach. The Democratic majority almost unanimously rejected this. They proposed in its place a system of user taxes on gasoline and tires, a plan by which those who benefited by the construction of the highways would pay their cost. Opposition to this proposal arose from many sources and the House defeated the bill even though the Senate had given its approval. The Republican opposition was almost unanimous.

FEDERAL EMPLOYEES: MORE OF THE SAME

With regard to the pay of Federal employees, the administration insisted it would approve only a straight 5 percent increase, while conceding the employees were entitled to more. The Democrats once again felt this to be bad business and false economy, having in mind how much Government workers' pay had lagged behind the cost-of-living increases and comparable wage increases among other workers throughout the country. We prevailed, though not to the full extent. Increased pay bills for more than the administration recommended were passed and approved.

THE GIVEAWAYS: BIGGER AND MORE

The minks are now sables. The 5-percenters are 10-percenters. Teapot Dome was a drop in a bucket compared to Dixon-Yates. First they gave away our oil lands. Now they are trying to give away all the rest of our natural resources.

The projects in which big business would not risk its stockholders' money are now beginning to pay back the taxpayer his investment. So the administration will now get the Government out of business by giving to big business the taxpayers' property.

To help do this our Government now uses w. o. c.'s That is the old dollar-a-year man. He now works for us "without compensation." Big business pays him and lends him to the Government for nothing. For nothing to the taxpayer, but not for nothing to his private employer. He merely steers the Government business to his employer. He sits in on all the high-level policymaking conferences, either as the head of the department or as his consultant. Maybe he does not give his private employer any advance information. Maybe he does not write the specifications that only his private employer can bid on. Maybe I am speculating. Then why did Secretary of Commerce Weeks refuse to tell a congressional committee what his big business advisers do? Why was it necessary to employ as a top executive in the Container Division of that Department, the Washington "special representative," on the payroll as such, of the country's largest container corporation? The testimony showed this man knew nothing about the business.

The full story is being developed now and promises to be the biggest scandal of our history.

THE FARMER AND THE CONSUMER: THEY NEED EACH OTHER

I have supported the Democratic farm program because I am convinced that neither farmer nor consumer can prosper alone. They live and prosper together, or not at all.

The Eisenhower farm program will destroy our country.

Our warehouses are bursting at the seams. Some because they are overloaded. Others because this administration bought and paid for defective storage facilities.

In various parts of the country there is unemployment so serious that our people are starving while surplus commodities in Government warehouses are rotting away.

Under 20 years of Democratic administration, the farm program sustained losses of $1 billion. In less than 2½ years of Republican administration the farm program lost $2½ billion.

In 20 years under the Democrats, the maximum authorization for the program was $6¾ billion. In 2½ years under the Republicans, the Eisenhower administration increased it to $12 billion.

If you do not think cheese smells, ask Secretary Benson to explain about the millions of dollars he just handed to—no not the farmers—to the big cheese processors.

FISCAL POLICY: I HOPE YOU CAN ADD

Candidate Eisenhower promised to balance the budget. Of course, you know he was fooling. President Eisenhower, thinking you took Candidate Eisenhower seriously, has hastened to explain that he did not say when.

But he did promise as President, that if we increased the national debt limit in 1954 to $281 billion, he would cut back the increase in 1955. In the last days of this session, he sent word to your Congress that he could not keep his promise and that we must give him another year in which to do what he said needed only 1 year to do.

Let us not be too hard on him. I think that you, too, would have trouble with that much money. I know that I would.

MY OWN PROJECTS: SOMETHING FOR THE FUTURE

Every Congressman has his own particular interests that he hopes to see

enacted. Throughout the years I have been able to gain the approval of many proposals while others still await congressional approval. Without attempting to set them forth in the order of their importance, some of the proposals I hope to see enacted in the near future are: low-income housing for the aged; a complete civil-rights program; revision of the refugee relief and immigration laws; no discrimination or segregation in National Guard units; measures to keep racist and defamatory literature out of the mail; power to the President to act in health matters in case of a national emergency; strengthening of our antitrust laws to help keep the small-business man as the backbone of our free-enterprise system; income-tax deductions for all educational expenses of dependents and exemptions for servicemen serving overseas; prevention of the giveaway programs of Government rights and property; free postage to and from members of the Armed Forces; a review of all disapproved veterans' claims by the United States Court of Claims; a sound and just security program that will weed out the disloyal, without destroying the loyal; a system of standby economic controls for the prevention of inflation; a system of allocations and priorities of fuel for emergencies; a Department of Civil Defense within the Department of Defense, with strengthened authority; greater consideration of consumer problems by establishing a congressional committee therefor, as well as an executive department to protect the consumer; better pay for Federal employees; equal pay for equal work by women; and a code of ethics in Government for Government officials which, among other things, will prevent big business from acquiring our birthright.

CONCLUSION: RESPONSIBILITY AND INTELLIGENCE

The record of the Congress this year has been a mixed one. And this is far from a complete record. It is merely a brief summary. Some of the more important legislation that might have been carried out this year has been left until next year.

The accomplishments, nevertheless, have been solid ones—the very opposite of what the Republican leaders told the American people to expect.

The moral of this story may be simply stated; the opposition to the administration by the Democratic majority has been intelligent and responsible. Where differences have existed between administration and Congress, there has been a give-and-take and compromise worthy of democratic institutions. The people of this country were not neglected by their Government in favor of partisan politics and petty jealousies. The Democrats of this country have a right to be proud of that record.

RECESS BUT NOT RESPITE

Although Congress is about to recess until Janauary 1956, your Congressman will continue to serve you. His office—your office—is room 1305, New House Office Building, Washington 25, D. C. It will remain open and fully staffed throughout the year. If visiting Washington, feel free to come in. If you have a problem that you think your Congressman can help you solve, write him a note to that address. He may not be able to help you, but you may be sure he will try.

CAB Ruling on Airlines Stuns Country

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I am taking this occasion to call to the attention of this body a series of articles published recently in the Bakersfield Californian, a daily newspaper which is published in Kern County, Calif., in my congressional district. The stories relate to a recent decision by the Civil Aeronautics Board denying applications by Southwest Airways Co. and Bonanza Airlines, Inc., for a temporary exemption which would have permitted new daily passenger flights into Bakersfield. In my opinion, the articles very ably point out the justice of the case as far as the needs for additional passenger air service for Bakersfield are concerned.

I also am taking the liberty of inserting immediately after the newspaper articles a copy of a letter from one of my constituents directed to the Civil Aeronautics Administration with respect to the same matter.

[From the Bakersfield Californian of July 7, 1955]

CAB RULING ON AIRLINES STUNS COUNTY—FEEDER LINE PROPONENTS REPORT UNITED GIVES KERN POOR SERVICE

The long fight of Southwest Airways Co. and Bonanza Air Lines to improve air travel in Kern County has been dealt another stunning blow by the Civil Aeronautics Board.

United Air Lines, critics say, has a virtual monopoly on commercial use of the air in Kern County. United, they go on, has been so absorbed in its fight to prevent feeder lines from getting a toehold, that it has failed to improve its own service as much as the public would like.

The county has grown and improved tremendously in recent years, but United has jogged along in its same old way. United began running air service into Bakersfield in September 1926. That's nearly 29 years ago. Today it runs 10 planes through Bakersfield—5 each way.

EARLY FLIGHT

One of the Los Angeles-bound planes stops at the Bakersfield Airport at 3 in the morning. It carries very few passengers and critics of United say that's a heck of a time to fly a plane on the valley route. United spokesmen have countered with the excuse that the plane is kept on that schedule because it carries mail.

Nobody knows for certain whether announcements by United of greatly improved service to Bakersfield are timed to coincide with efforts of Southwest and Bonanza to win approval of their feeder line proposals, but it is considered odd that United has obtained much favorable publicity on each occasion.

PLANES WITHDRAWN

It is known only that upon several occasions United has announced that Bakersfield would receive greatly improved service. The new planes would begin flying on schedule and then—very quietly, and without a single drumbeat—would be withdrawn.

Bakersfield and other Kern County communities are growing at a great rate. It is shown by statistics that America's airlines are doing more business, dollarwise, than any other transportation medium, but these facts appear to have been unnoticed—and United's legion of attorneys continues to appear before the CAB to block any effort by a feeder line not only to improve air passenger service but actually to help United by funneling hordes of new air travelers into its planes.

While fighting doggedly to keep others from entering the field, United has consistently refused major improvements in its service between Bakersfield and Los Angeles. One sore point, particularly with folks of Pasadena, Burbank, and a large part of the Los Angeles area is that United refuses to land at the Lockheed air terminal at Burbank. This means that residents of some of these areas must travel as much as 25 miles by car in order to board or meet a United plane at International Airport at Inglewood.

A frequently voiced complaint is that United schedules make for "poor connections" in Los Angeles with other planes.

HOURS OF WAITING

Commenting on United's 3 a. m. plane, one air traveler said: "That plane is a dead duck so far as passenger service is concerned. If I want to go to Phoenix and take that plane out of Bakersfield, I have to wait 4 hours at Los Angeles before I can board the Phoenix plane."

Another resident who likes to fly had this comment:

"It pays to fly, if the service is good. But, we can't sell Bakersfield to other communities because of the poor service we get from United." This seems to be a common complaint.

Cecil Meadows, county airports superintendent, who has made frequent trips to Washington and other cities in the interest of improved air service, said:

There is no question in my mind that the companies now seeking permission to come into Bakersfield would provide better connections with planes to eastern points—and I believe that either of these lines, by giving better service, would get more passenger business out of Bakersfield than United is now getting."

CAR FASTER

Another critic of United said: "You can get from here to Sacramento quicker by car than by commercial airline. That is one reason the board of supervisors bought its own plane—so county officials can get to and from the State capital within a few hours."

Fresno, one man pointed out has better service than Bakersfield because it is served by two commercial lines—TWA and United.

Latest setback received by Southwest and Bonanza in their 10-year battle to establish feeder service was the denial yesterday by the CAB of their applications to establish temporary service between Las Vegas, Bakersfield, Inyokern, Lancaster-Palmdale, and coastal points.

The companies had sought to establish service while the CAB completes its studies—studies that were started about 10 years ago. It is understood that permission, if granted, will be given to only 1 of the 2 applicants.

Fight of the feeder-line companies has been supported for many years by the Bakersfield Chamber of Commerce, the board of supervisors, the Bakersfield city council, and the Kern County board of trade.

[From the Bakersfield Californian of July 11, 1955]

AIRLINE SERVICE IS BAD

The successful opposition effected by United Air Lines to the addition of air transportation here is not accompanied by the prospect of any improvement in the service being provided here by the company itself and as articles now appearing in the Californian show, and air travelers know well, this service can hardly be described as satisfactory.

In fact, it would require a considerable amount of ingenuity to contrive schedules that would be more inconvenient than the ones that United offers out of Bakersfield at present. Yet the company consistently blocks any effort by the community to better itself.

The service that it offers the community is undependable and irregular, and it is difficult to understand how the Civil Aeronautics Board allows such irresponsibility to proceed unnoticed and unpunished, and to allow it to have weight against the proposal to permit Bakersfield to be provided with additional service.

Schedules are dropped without notice, types of equipment are altered and substituted contrary to advertisement, station conveniences and accommodations for passengers at the local terminal correspond only to those provided in the earliest period of stagecoach travel, and the entire air service situation reminds experienced travelers not of that enjoyed by a modern American city but that with which a remote Latin-American village is favored by accident.

Many times the citizens of Kern County, through their delegated representatives, have called in a united demand, for better air service, either through the improvement of the present facility or through the addition of a competitive line. Other cities have reported very satisfactory service when the field is shared by two or more lines. Each time, Bakersfield has been denied this, and United has been allowed to proceed without taking into consideration any of the defects that render the service so unpalatable.

The community is directed, by implication, to regard the air service here in the light of the famous aphorism of Dr. Samuel Johnson concerning a dog walking on its hind legs: It is not done well but you are surprised to find it done at all.

The novelty of airliners sailing majestically overhead has long since worn thin, and the fact that Bakersfield is included among the stops made by an airline has been tarnished by the regrettable result that these stops are made at times that could scarcely be less useful.

The patience of the citizens here is growing thin, and they are determined to have better air service here or turn entirely to other methods of transportation which offer better schedules and more accessibility to transfer points. The present facility can provide it, or in all fairness, step aside and allow others to do it. The present service borders on the intolerable, and enters completely into the category of the impractical.

We are informed that there are at least two companies which have offered substantial proof of their ability to provide additional air service, better and more opportune service than is being presently provided. The lines that seek to serve Bakesfield have established excellent records of dependability and safety, with the assurance of additional schedules of greater convenience and opportunity.

The Civil Aeronautics Board should consider these applications and allow at least one of them to establish the much-needed service here, taking into consideration the wishes of the community and the traveling public instead of the intricate arguments of attorneys representing the concern that has so long spurned the needs and wishes of the people it professes to serve.

It is hoped that Bakesfield and Kern County will in the near future have a fresh opportunity to demand better service and above all to get it.

[From the Bakersfield Californian of July 11, 1955]

FEEDER AIRLINE COULD SPUR UNITED TO IMPROVE SERVICE

All profit and loss considerations aside—if approval by the Civil Aeronautics Board of a feeder airline service did nothing more than spur United Air Lines into providing better service it would accomplish a worthwhile objective in the opinion of dissatisfied Kern air travelers.

Criticized service given here by United was brought into the spotlight a few days ago when the CAB denied applications filed by Southwest Airways and Bonanza Air Lines to establish temporary feeder service between Bakersfield, Lancaster-Palmdale, Las Vegas, and other points which do not now have direct air service to this city.

People who like to travel by air are not particularly concerned with the problems of profit or loss. They do want better service, and an air link with towns that do not now have such connections. Taft, to cite but one town now without airline service, has many potential airline travelers. Inyokern, Mojave, Lancaster—are others. Yet, the CAB says they can't have connecting air service with United—because United doesn't like the idea.

Southwest Airways and Bonanza have tried for the past 8 or 10 years to get CAB approval of feeder service in the county and direct connections with Las Vegas, Reno, and coastal points. And for 8 or 10 years the CAB has said "No."

While the CAB has turned a deaf ear to applications of Southwest and Bonanza, service offered out of Bakersfield by United has been under frequent criticism.

A few days ago the Californian was told that United Air Lines serves Bakersfield with 10 flights daily. That was incorrect. One flight has been quietly dropped, and now there are nine.

Much of the criticism leveled at United concerns the poor connections made by valley planes with trunkline planes at Los Angeles. Let's have a look at the schedules:

If you like to stay up all night or just happen to be a real early bird, you might catch the 3:30 a. m. plane out of here. You would arrive at International Airport at 4:25 a. m. Then, if you want to catch a first-class United plane for the East, you'll have to doze at the airport until 8 a. m.

That one too early? Well, there's another plane leaving Bakersfield Airport at 9:25 a. m.—one of only two daylight flights from Bakersfield to Los Angeles. The next southbound plane leaves here about 8 hours later—at 5:55 p. m.

There's one more Los Angeles-bound plane out of Bakersfield. That one leaves at 8:50 p. m.

People who travel by air say there's a connection layover of 1 to 3 hours at the Los Angeles International Airport if you take either of the two daylight flights out of Bakersfield.

CANCELLATION IN APRIL

There you have it—only 4 southbound flights out of Bakersfield every 24 hours. There was a fifth but it was dropped April 24.

United schedules from Bakersfield to Los Angeles International Airport are so unsatisfactory that, according to one regular air traveler, about 60 percent of Kern County air travelers drive to Los Angeles and catch a plane there. Many sleep at a nearby motel until plane time, and park or store their car until their return to Los Angeles.

The schedule situation from Los Angeles to Bakersfield isn't much better, according to people who do much of their traveling by air.

"If you come from the East on a night flight, you usually have to stay over in Los Angeles for about 6 hours," one traveler said. If an air passenger gets into Los Angeles from the East later than 5:30 a. m., he must wait until 1:05 p. m. to catch a plane for Bakersfield.

Northbound flights stop at the Kern County Airport at 2:15 a. m., 7 a. m., 1:55 p. m., 5:50 p. m., and 7:30 p. m.

United has 16 flights in and out of the Fresno Airport, compared to 9 at Bakersfield. At Fresno, it was pointed out, United must compete with TWA.

Establishment of a feeder line to serve Bakersfield would not only give this city closer connections with communities which do not now have air service, but might inspire United to improve its schedules between the valley and Los Angeles, it was said.

Air travel by Southwestern to Las Vegas via Inyokern would be cheaper than the present United schedule which compels travelers to go first to Los Angeles, it has been pointed out.

[From the Bakersfield Californian of July 25, 1955]

ATTORNEY DENIES UNITED'S CLAIM OF ADEQUATE BAKERSFIELD AIR SERVICE

(The following letter by Bakersfield attorney Henry C. Mack, an extensive air traveler, is reprinted in its entirety. It is a detailed analysis of the service provided Bakersfield by United Air Lines.—EDITOR'S NOTE.)

EDITOR, THE CALIFORNIAN:

Many people in Bakersfield, including the writer, have been following the arguments pro and con as to the efficiency and adequacy of the air service provided by United Air Lines to and from Bakersfield. As a fairly consistent user of air transportation, I have felt that a thorough analysis of United's timetable would help to solve the question. After all, the purpose of using air transportation, which, at least for local hops, is far more expensive than any other form, is to arrive at one's destination in a reasonable time, without undue delay at transfer points, and at a time convenient to the purpose of the journey. For businessmen this means arrival early in the morning before business houses, courts, and so on, have commenced the day's activities.

The writer has scanned United's timetables for some years for trips in and out of Bakersfield. Until April 24, 1955, service to Sacramento was practically impossible; since then, a flight from here leaving at 7 a. m. gets there at 10:15 a. m. Still no good for lawyers making a court appearance at 10 a. m. (judges are sometimes stuffy about 15 or 20 minutes), but better than it was. This change was pointed out in United's recent comment on the question carried by your paper.

The excellent connections to Albuquerque were also cited, together with a plaintive comment that practically nobody ever went to Albuquerque from Bakersfield. Exactly. Bakersfieldians want to go to San Francisco, Seattle, Los Angeles, San Diego, or New York and points on the east coast. It is submitted that an analysis of the service to those points will quickly show that bald assertions that the service out of Bakersfield is good are just that, and entirely unsupported by the timetables themselves.

Let's scan the United's timetable effective April 24, 1955. There is a later one (they do something to the timetable every 2 or 3 months, but nothing much to change the connections I want to discuss. Besides, the April timetable was in effect during the time the application of another airline was being considered).

Suppose we want to go to Seattle. We can take flight 191 to San Francisco, leaving Bakersfield at 7 a. m., arriving in San Francisco at 9:25 a. m. By sitting around the airport there for 2 hours and 20 minutes, we can get an aircoach flight (No. 465) which finally rumbles into Seattle at 3:50 p. m. Pacific standard time, or 4:50 p. m. daylight time, or practically 10 hours after leaving home.

By sitting around San Francisco airport until 12:05 p. m., we can get a first-class flight and arrive at 1:55 p. m. Pacific standard time, or 8 hours after leaving Bakersfield. (Cost, first class one way, $59.40 plus tax.) If we lived in Los Angeles, we could take flight 671 at 7 a. m. and be in Seattle at 10:55 a. m. Pacific standard time. (Cost, first class, $64.55 plus tax.)

Similar connections are made with flight 369, leaving Bakersfield at 1:55 p. m., arriving in San Francisco at 4:05 p. m. First Seattle connection, flight 683 at 7:30 p. m. There is one fair connection, flight 365, from Bakersfield at 4:50 p. m. with only a 50-minute wait in San Francisco for flight 683 to Seattle. Of course, if your business requires you to be in Seattle anywhere before 2 p. m., you can either go up the day before and stay in a hotel (not at United's expense), or you can get up at midnight in Bakersfield, catch the 2:15 a. m. flight 177, arrive at San Francisco at 4:45 a. m. and catch flight 671 at 9:05 a. m., which will get you in Seattle at 10:55 a. m.

If you are going to Seattle on any deal where you want to be sure and make no foolish concession to your adversary, this is the flight I recommend. After you've made it, you wouldn't be a soft touch for your own mother.

We often have to go to San Diego for a court appearance at 10 o'clock a. m. For years this schedule has been a nightmare of frustration. Every Bakersfield flight, except one, arrives in Los Angeles just in time to miss the San Diego connection. Flight 352, which leaves here at 5:55 p. m., arrives Los Angeles 6:45 p. m., leaves there as flight 650 at 8:10 p. m. and lands in San Diego at 8:55 p. m. You can always get a hotel room in San Diego if you know a few days in advance that you will be there.

Look at the rest of the schedule: Flight 356 leaves here at 9:25 a. m., arrives Los Angeles at 10:15 a. m. (Flight 670 left Los Angeles for San Diego at 9:10 a. m., so you can wait in Los Angeles until 11:05 a. m. and be in San Diego at 12:10 p. m.) If you take flight 152 out of here at 11:25 a. m., you will get to Los Angeles at 12:20 p. m. (Yep, flight 380 left for San Diego just 35 minutes ago.) Then comes flight 352, which gets you down there in pretty good time just as everything is closing up for the night.

Flight 164 leaves here at 8:50 p. m., arrives Los Angeles at 9:45 p. m. If it isn't Sunday, you can get flight 364 to San Diego at midnight; Sundays at 12:20, arrive 1:05 a. m.

Now comes United's answer to the businessman who wants to be in San Diego bright and early—or at least early. You can catch old 162 out of here at 3:30 a. m. and, after waiting in the airport at Los Angeles from 4:25 until 7:05 a. m., you can get on 652 for San Diego. Your appearance before the three judges of the appellate court at 10 a. m., after this flight is bound to attract their attention.

Now, let's take off for New York. Remember that we land in Los Angeles on the first morning flight (except the 3:30 a. m. one) at 10:15 a. m. Well, we've missed flight 708, nonstop to New York, which left at 9 a. m.; 732, which left earlier; 540 (aircoach), which left at 7:30 a. m.; 518 (aircoach) which left at 8:30 a. m.; 718, a DC7, which left at 10 a. m. (boy, that was a close one, just 15 minutes too soon for us to get aboard).

If we want an aircoach, though, flight 516 leaves at 11 a. m., and there is a first-class flight (No. 616, the first one since we arrived in Los Angeles at 10:15 a. m.) which leaves for New York at 7:25 p. m. Of course, you have to change planes in Denver and you don't get to New York until 8:30 the next morning if you take this one. Might as well wait for 724, which is the first first-class flight to leave for New York since we arrived at 10:15 a. m. This leaves at 9 p. m. and gets us to New York at 8:30 a. m. next day.

There is no use multiplying these examples. Just for fun, take United's schedule and figure out how long you'll have to wait in Los Angeles coming home from San Diego, or from New York, for that matter.

The total number of seats furnished per capita of population doesn't mean a thing when one stops to think that at least 44 of these seats go through Bakersfield at an hour no one wants to start out on any kind of a journey, and many of the rest will take you to some place where you have to wait and wait for connections that never seem to arrive.

As much as I am sold on air transportation, I have long since decided to drive my car to Los Angeles on most trips. There, there are available several airlines, and I have my choice of lines running all over the United States.

Yours truly,

HENRY C. MACK.

[From the Bakersfield Californian of July 26, 1955]

TRAVELER COMPLAINS—AIR PASSENGER HITS UA FLIGHT SCHEDULE

(The following, unsolicited letter by Miss Pauline M. Colahan, regional director for the Association of Desk & Derrick Clubs of North America and an employee of a local oil company, to S. P. Martin, assistant to the president of United Air Lines, is reprinted here in its entirety. It is her report on travel service provided Bakersfield by United Air Lines.—EDITOR'S NOTE.)

"I have been following with great hope the efforts of the Bakersfield Californian to improve airline service out of Bakersfield because I have had occasion to make several trips by air within the last year and have found your service far from adequate.

"Last September, I needed to be in Vancouver, British Columbia, to leave there at 8:30 p. m. In order to do so, I had to leave Bakersfield on your flight around 2 a. m., arriving in Vancouver about 2 p. m. There was no later flight leaving Bakersfield which arrived in time.

"In February I had to go to Tulsa. There was not one single daytime flight that I could make. I took the train.

"In May I had to go to Sacramento to arrive there for an evening meeting. There was one flight—the one you mentioned in the Californian that would have arrived in time—leaving Bakersfield at 7 a. m. and arriving around 10:30 in the morning. Slightly early for an evening meeting. I drove my car.

"Later that same month I went to Portland and Seattle. I had to leave Bakersfield at 7 a. m., arriving in Portland at 11:30 a. m. Again slightly early for an evening meeting that I went to attend.

"Now I need to go to New York City. There is not one single blessed first class daytime flight available. (Either via Los-Angeles or San Francisco.) Not one. There is one—just one—tourist flight which I can take.

"May I suggest that you reevaluate your schedule out of Bakersfield and see if better service wouldn't result; in better patronage.

"Very truly yours,

"PAULINE M. COLAHAN.

"P. S.—I must mention that you do have a very convenient schedule and return from San Diego. That trip I truly enjoyed."

BAKERSFIELD, CALIF., *July 14, 1955.*

ADMINISTRATOR, CIVIL AERONAUTICS ADMINISTRATION,
Washington, D. C.

DEAR SIR: It is with dismay that residents of the city of Bakersfield have read of the Civil Aeronautics Administration's decision not to allow Southwest Airlines and Bonanza Airlines to establish franchises into Bakersfield; thereby giving Bakersfield much-needed and improved air service than it has today. It is amazing to me the extent to which United Airlines can prohibit competition in an area. At present, United Airlines has 4 flights a day to Los Angeles and 4 flights to the north. None of these flights connect either at San Francisco or Los Angeles with any of the eastbound flights. An example of United's poor service is United flight No. 356 which arrives in Bakersfield at 9:25 in the morning to Los Angeles and the next flight south out of Bakersfield is United flight No. 352 at 5:55 p. m., which means a gap of approximately 8 hours during the working day. We who work in the oil industry have continuously asked United for service to and from Sacramento. Fresno has such service, and actually for people going from Bakersfield to Sacramento this means a trip to San Francisco and a change which normally takes longer than driving or rail.

People who know the excellent service that Southwest and Bonanza Airlines give the coastal cities have wished for some time that such similar service could be afforded Bakersfield. As a growing community, Bakersfield can certainly use airline service of more than one line. We certainly need United, but we feel that the inclusion of Southwest and Bonanza Airlines would give competition, which would result in better all-around air service. It would be, I believe, a benefit to the Civil Aeronautics Administration if they would listen to the demands of the taxpayers and not the prerequisite of major airlines such as United.

Very truly yours,

T. W. CAMERON.

(Copies to Hon. HARLAN HAGEN, United States House of Representatives, Washington, D. C.)

The Limits of Law in Housing and Social Action

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LEHMAN. Mr. President, on June 29, the Honorable Charles Abrams, rent administrator of the State of New York, delivered a very thoughtful and thought-provoking speech at the 12th annual institute of Race Relations, held at Fisk University, Nashville, Tenn. The title of Mr. Abrams' speech was "The Limits of Law in Housing and Social Action."

Mr. Abrams is widely acknowledged as one of the foremost thinkers, writers, and administrators in the field of housing in the United States. He is adviser on housing to the United Nations, and has written a number of authoritative books on the subject. And, of course, he is rent administrator of New York State.

I ask unanimous consent that this most cogent speech on the subject of housing and its relationship to minority

group rights and action be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE LIMITS OF LAW IN HOUSING AND SOCIAL ACTION

(By Charles Abrams, New York State Rent Administrator, at 12th Annual Institute of Race Relations, Fisk University, Nashville, Tenn., June 29, 1955)

The cases before the United States Supreme Court directing equal educational facilities and the recent dispute over civil-rights riders have renewed discussion on the long unsettled issue of whether law can create the moral climate in which racial and social equality can be achieved. On one side stand those who say that law cannot and they cite the prohibition amendment as an example of how a law defying the public consensus must be unenforceable. On the other side stand those who cite fair employment statutes as examples of how laws have succeeded in winning greater equality. Among these are also the extreme optimists who look to law as the main weapon which cannot only eliminate group discrimination but modify human behavior, codify ideals, and put the States' influence on the side of the minority. "Laws," they say, "can be enacted in response to the demands of a small minority or without the knowledge of the majority."[1] The nonsegregation order in the American Army is cited as proof of how civil rights can be won by edict, irrespective of how the majority felt in the first place.

In between those groups is a third which says sometimes it can and sometimes it can't. Two authorities, for example, in a recent article in the New York Times[2] say that if only 15 percent of the people in a community oppose a civil-rights regulation, public acceptance is easy except where the 15 percent is the dominant group politically. They conclude that, "* * * the majesty of the law, when supported by the collective conscience of a people and the healing power of the social situation, in the long run will not only enforce morality but create it." All of whcih begs the question for if the collective conscience of the people is for it and the healing power is actually healing, other devices than law might be just as effective.

The wide range between theories reflects the almost complete lack of any authentic analysis of the issue. Conclusions have been drawn on the most inadequate evidence and major policies have been adopted in the most critical areas of civil rights with nothing more to base them on than pronouncements ex-cathedra.

The cities where the Supreme Court decisions will be put into effect will provide a partial laboratory for studying the effects of law upon public opinion. Research projects should be set up in these areas to chart the movement of such opinion. Simultaneously, public action groups should be functioning in as many areas as possible to help reinforce the Supreme Court's mandate and thereby help veer public opinion in the right direction. But entirely too much reliance has been placed upon the courts and too little on the collateral forces essential to ease their task.

As little thought has been given to the effect of civil-rights riders, though here, too, the stakes are large and the risks critical. In March of 1949 the issue of civil-rights riders was presented in sharp focus when Senators Cain and BRICKER, who were notoriously opposed to public housing, introduced a rider to the public-housing bill which would have outlawed racial segregation in public-housing projects. The rider threatened to end the tenuous southern support for public housing, a program which has made dramatic demonstrations in racial integration, often in face of local opposition and even violence. In June 1953, 268 projects containing more than 33,000 dwellings were occupied by Negroes in projects where neighbors usually dwelt next door or across the hall. Considering the novelty of the approach and the complexities inherent in any effort to reshape a living pattern founded upon long-existing and stubborn prejudices the public-housing experience has been one of the most revealing and constructive in the history of the race-relations enigma.

Yet the National Association for the Advancement of Colored People favored the rider and liberal legislators, like Senators DOUGLAS and HUMPHREY, who viewed the amendment as designed to defeat the public-housing appropriation, were faced with political reprisals. I opposed the rider at the time in articles in the New York Post and, indeed, a number of Negro organizations and leaders took the same position, including the National Council of Negro Women. Curiously, the hearings before the House Select Committee on Lobbying Activities now reveal that the antidiscrimination rider was conceived as a ruse by the real-estate lobby deliberately designed to alienate the support of southern Congressmen.

Today, the National Association for the Advancement of Colored People has again resolved to attach a similar civil rights rider to the public-housing bill as well as to other measures. I don't for a moment disagree with the intent or good motives of the association or of Congressman POWELL and others supporting this amendment.

But will not such a rider again play directly into the hands of the real-estate lobby and make the civil-rights fight the tool of reaction instead of the bannerhead of liberalism? It is still hard to say for no one yet knows how or when the rider will be attached. If it is attached to the first title of the bill and will apply to all housing, the public-housing appropriation may escape all trouble. But if the opponents of public housing succeed in having the present bill withdrawn and substitute a separate measure, then the public-housing bill with a rider might fail.

I plead, therefore, for a more thorough analysis of the strategy in the use of riders as well as in civil-rights legislation.

The fight for civil rights in a democracy is not confined to a particular weapon. It may be public education, the ballot box, courts, the administrative agencies or all of these. It may also be civil-rights legislation and civil-rights riders, but none of these alone are panaceas. Neither the first 10 amendments to the Constitution, nor the 14th amendment, nor the constitutions of the States, nor the civil-rights laws of 1866 won equal rights for Negroes when other forces were simultaneously lacking to reinforce them. They became forceful when the climate of opinion after World War II had changed to favor the transition from equivalence to equality.

The Russian constitution grants few of the civil liberties it espouses on paper. The United Nations professions of equality hardly apply to South Africa. Our own 14th amendment failed until recently, to protect the Negro. Civil-rights laws are important and often indispensable, but they must be supported by demonstrations of their validity, by implementation and above all by a sympathetic public opinion. A civil-rights statute may state a principle and thereby pave the way for educational processes to operate. The mere statement of principle, however, does not itself assure the libertarian gain. The fight must be made on many fronts if it is to prove effective. Yet, in choosing the front in which the battle is to be waged, there is no compulsion to accept that front which suits the enemy of social legislation or which plays into its hands.

To lose the public-housing measure means the end of a great experiment and the acceleration of the Jim Crow pattern in most of the housing in the country. There is no rule which says that the fight for equality must be fought with a flagrant disregard of consequences. It calls instead for a concentration of efforts and forces where they can be deployed most effectively. The battle should be fought at a time and place at which the gains already made by minorities will not be threatened and when the factors and forces which bring us closer to equality will not be endangered.

In such a context, civil rights riders and civil rights legislation may have a place—not by their indiscriminate introduction but by their careful use at particular times and places. For example, public housing funds are dispensed by public agencies. Since the rulings in the education cases, it should be clear that segregation in neighborhoods by a public agency would be struck down by the courts as a violation of the 14th amendment. No statute or rider is needed to guarantee this, for the salvation of civil and political rights when threatened by public agencies emanates not from the will of the majority or from statute but from the basic charter whether it be called the Bill of Rights, the inalienable rights, or the public policy. To abandon the position that the basic rights are supreme and that the right to equality must be reestablished through the painful and laborious if not impossible process of antidiscriminatory statutes would amount to fatal surrender of the principal supports that fortify the American scheme.

I do not say that the court test on public housing should be made immediately, for considerable headway has already been made through the administrative agency in advancing nondiscriminatory policy. If this policy changes for the worse, then the test should, of course, be made. If resort to the courts fails and if resort to administrative pressures likewise fails, then resort to the Congress is indicated. But why test in the Congress a principle already working administratively?

I am not opposed unconditionally to riders and there may be strategic considerations favoring a rider attached to the military Reserve program. Such a rider may perhaps serve to dramatize the civil rights issue and force a more positive attitude and policy from the executive and administrative agencies than they have shown to date.

Such a rider to the education bill should awaken the Executive to a long overdue assumption of the responsibility to implement the Supreme Court decision through his administrative agencies. For the enforcement of the Court's decision through the courts alone must be a difficult and arduous task. The district courts cannot take independent action to enforce the High Court's decree, but may enforce it only on complaint of a litigant. The litigant, in turn, must provide proof of discrimination which is often a costly if not impossible task. When the Executive has shown no disposition to back up the Court and, in fact, completely ignores his responsibility to support its decree, the National Association for the Advancement of Colored People can hardly be blamed for resorting to statute as a means of stimulating and dramatizing such implementation.

A similar situation governs the FHA authorization. FHA today can influence the flow of private housing where needed as well as the racial patterns of American neighborhoods, and the agency has a duty to do

[1] Morroe Berger, Equality by Statute, Columbia University Press, 1952, p. 3.

[2] John P. Roche and Milton M. Gordon, Can Morality Be Legislated?, the New York Times Magazine, Sunday, May 22, 1955, p. 47.

precisely that. It is more than a private company concerned only with its stockholders or a working tool for private builders. FHA's duty to regulate methods of operation implies that such methods of operation should not be permitted to extend to racial discrimination. The FHA Administrator may take shares of stock as part of transactions, and its plain duty as a stockholder with a public trust is to see that its benefits are dispensed without bias. Its statutory obligation to protect families with children applies with no less force to Negro children than to white. FHA is indeed a creature of the public with an affirmative duty to protect the public interest. The full faith and credit of the United States remain behind every mortgage insurance contract. FHA has been accorded the same priorities in bankruptcy proceedings as are given to the United States, its administrator is appointed by the President and it is answerable to the people—all the people, not merely a preferred class of citizens.

The same logic applies to the Veterans' Administration in the insurance of its mortgages, to the Home Loan Bank System and to the Federal National Mortgage Association, all of which are Federal agencies operating under formulas which place the primary risk on the Federal Government.

Yet these agencies have openly discriminated in the dispensation of their benefits from the time of their formation. The discriminatory policies of FHA were actually written into manuals and read like paragraphs culled from the Nuremberg Laws. In 1950, the objectionable paragraphs were withdrawn, but there is still no indication that FHA or its sister agencies in the private housing complex intend to condition their aid upon nondiscrimination by their beneficiaries. While a court proceeding has been commenced by the National Association for the Advancement of Colored People to enjoin exclusion of Negroes from Levittown, Pa., it is impossible to judge at this time whether the Supreme Court will hold that insurance of mortgages to a private developer bars the lender and builder beneficiaries from discriminating.

Irrespective of how the Court rules, however, the Executive and the administrative agencies can themselves set a nondiscriminatory policy without having to wait upon the Court's decision. The protection of civil rights is tripartite and not peculiar to any one of the governmental arms. Since the vast majority of the Congress are for FHA authorizations, though not for nondiscrimination, the rider may serve to dramatize an issue which should long ago have been dramatized, i. e., the open and arbitrary discrimination by Federal housing agencies aiding private enterprise.

It is significant that New York State recently enacted the Metcalf-Baker bill which barred racial discrimination or segregation in FHA-aided projects. This represents the first occasion where a State has enjoined discrimination against the Federal Government. Up to now, it has been the Federal Government which has enjoined the States from discriminating. It indicates how far the Federal Government has strayed from the purpose sought to be achieved by the 14th amendment and justifies the use of riders in these areas.

We now come to the question of urban redevelopment. This program ostensibly devised to clear slums and provide housing on slum sites or vacant land has been perverted largely into a device for ousting minorities from their homes. In July 1952 there were 70 urban redevelopment projects, not a single one of which was on open land. Of 45,450 families to be displaced, more than two-thirds were listed as nonwhite.

No corrective action has been taken administratively or by legislation and no court action has succeeded in remedying these oppressions. In fact, the Stuyvesant Town case (*Dorsey* v. *Stuyvesant Town Corp.*, 229 N. Y. 512, cert. denied, 339 U. S. 98) holds that discrimination may be freely practiced. A law has been passed in New York and other States barring such discrimination, but the rule is not applicable nationally. Here, therefore, the need for a national civil-rights statute is indicated.

But the careful selection of legislation to which civil-rights riders should be attached is a far cry from the reckless use of such riders. The former serves to highlight the grievance and seeks its correction; the latter only serves to confuse the civil-rights issue. It tends to reduce the battle for civil rights to a game, loses support for the issue in quarters from which support might have been won, gives opponents of civil rights an opportunity to divert the issue to one of riders instead of rights. Simultaneously it enables opponents of social legislation to vote for such riders where such support might help defeat the legislation while voting against such riders where the interests of lobbies can best be served. Since the issue of riders was raised, the gains won by the Supreme Courts recent decisions have been sought to be diluted by insinuation of the old claim that only education will solve the problem of equality.

There is room, therefore, for a new look at the tactics and strategy of race relations not only by the minority groups, but by the Executive. The minority groups must effect a strategy which can weigh the desirability of court tests, Executive pressures, local statutes, and congressional riders. The Executive, instead of directing the issue to the propriety of riders, should assume his responsibility to bind all the Federal agencies to comply with Supreme Court decisions and with the Constitution. The President should be rising above the tactical battle of riders by exploring ways and means for implementing the Supreme Court's decisions and carrying its edict into education and other fields. Simultaneously research and education should be organized on a series of fronts. There should be:

1. Expansion of research in the causes of neighborhood discrimination and prejudices.

2. Education of builders in the need for building homes for minorities in integrated neighborhoods.

3. Education of experts and public officials in the various aspects of race and group frictions.

4. Education of the press and other media of communication in their role and responsibilities.

5. Education of employers who employ minority labor and labor unions.

6. Education of minorities in their rights and responsibilities and greater encouragement of local leadership among them.

7. Education of citizen groups in the nature and causes of tensions and in the creation of democratic environments.

8. Education of public agencies, local, State, and national, in the problems of discrimination and segregation.

Such education must be simultaneously reinforced by the organization of groups of citizens alerted to the moral principles laid down by the Supreme Court's decisions. This is the most effective medium, yet one of the most neglected. Advances will not come from local and State office holders who have been traditionally chary of taking a stand on civil rights unless pressed and unless assured that policy has the backing of influential groups. Although the whole movement for public education in the United States stemmed from the feeling that loyalty to republican ideas and democratic equality could be advanced only through the general system of education at public expense, that responsibility will not be assumed unless such citizen associations insist upon it. Here are the frontiers—before us lie the devices for piercing them. The principles which we seek will not be won by reckless resort to one device to the exclusion of another or by the indiscriminate use of devices to achieve nondiscrimination. Strategy is part of the fight for principle and the fight will not be won without assessing it at every point and directing the battle toward the most strategic areas and with the most effective devices.

Keenotes

EXTENSION OF REMARKS
OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column entitled "Keenotes," which follows:

KEENOTES

(By Representative ELIZABETH KEE)

What is the "ideal" retirement age? Is it the same for all?

In many Government and teaching positions, retirement is compulsory at 70. The accumulated years of wisdom and of experience which make some individuals so outstanding in their jobs suddenly become not assets any longer but liabilities when the "must" retirement age is reached.

Since the advent of social security just 20 years ago this month, 65 has become a common retirement age for workers covered by this program. Under a bill which the House passed this year and which is now pending before the Senate Finance Committee, women would be eligible for social-security benefits at 62 instead of 65.

Many people will tell you that they look forward with great anticipation to retirement, when they can drop the daily cares of earning a living and concentrate on the relaxed enjoyment of life. But how often does that anticipation give way to disillusionment? Some people find they have to keep on working in order to enjoy a full life and escape boredom.

The reason doctors have never been brought under social security is that their spokesmen insist doctors never do get a chance to retire, hence would not really benefit from coverage. (But so many doctors die young—literally working themselves to death in service to the community.)

In any event, this problem of retirement and the ideal age for it is one that each person faces individually. One eminent American—a great public servant who died last week—faced that problem and solved it in a novel way. "Retired" as Librarian of the Library of Congress 16 years ago, Herbert Putnam was named by Congress to a specially created post of Librarian Emeritus. He worked at the job every day, except during the summer when he went to New England for his favorite sport of sailing small boats up and down the Maine coast.

He was 77 when he "retired." When he died last week—still in harness—he was 93.

Appointed as Librarian of the Library of Congress by President McKinley in 1899, Herbert Putnam served for 40 years as the active director of that remarkable institution, singlehandedly, almost, raising it in stature to the greatest storehouse of knowledge in the world. The Library had about 1 million poorly cataloged books when he took over; when he "retired" in 1939, it had five and a half times as many books and a cataloging system which has become standard throughout the country. Just about

every library in the Nation depends upon the Library of Congress for its cataloging.

Dr. Putnam, whose name has been synonymous with scholarship, culture, knowledge in the field of books, considered himself an administrator rather than a scholar. He once told a reporter:

"I am not a profuse reader. I read romantic stuff, travel tales, westerns, and detective stories and stirring romances with a happy ending."

Whether he was pulling the reporter's leg or not, putting himself on the lowbrow level in his reading habits, he certainly did more for scholarship than almost any other American. And, fortunately, he never did retire. Some people just aren't meant to retire.

Patronage Politics or Racial Discrimination in Public Housing Agency

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, at various times during this session of Congress I have had occasion to call attention to the fact that the Eisenhower administration was engaged in the worst kind of patronage politics. In recent days, one more example of this type of maneuver has come to the attention of the Nation. On July 25, 1955, the Administrator of Housing and Home Finance Agency, Albert M. Cole, advised Dr. Frank S. Horne that he was being dropped from his position in that Agency because of what he called a necessary reduction in force. According to Cole, this was brought about because of budgetary considerations.

Never have I seen a more flagrant example of patronage politics in action. What possible budgetary considerations could be involved when actually the budget for this agency had been increased from $2,868,500 to $5 million? Furthermore, Dr. Horne is a status employee within the civil-service ranks and he is entitled to veterans' preference. He, therefore, according to civil-service rules and regulations, is entitled to bump any other employee of equal or lesser status who does not have veterans' preference. Now, as it happens, Dr. Horne is qualified and, under the civil-service rules, is eligible for at least seven other jobs within the Agency. In spite of this fact, Mr. Cole, in his letter to Dr. Horne, says that Dr. Horne has been "considered for all possible reduction-in-force placements but no other continuous position in the Office of the Administrator for which you are qualified was found to be held by an employee with lower subgroup standing."

Nor is this the end of the story. Upon receipt of the letter from Mr. Cole. Dr. Horne objected to his abrupt dismissal and pointed out that he was well qualified to fill other positions within the agency. He then received a letter from Douglas Chaffin, the Director of Personnel within the Housing Agency, which stated that his case had been reconsidered and he was offered a new job at the same salary but with quite different duties. This was most certainly a new job, for none like it had ever existed up to that time. It was a job for which Dr. Horne was not nearly so well trained as he is for his old position and it quite obviously overlaps the duties of other members of the staff of the Agency. What happened to the budgetary considerations when they offered Dr. Horne this job? Where was this position when Mr. Cole first informed Dr. Horne of his dismissal?

Dr. Horne refused this new job and said he would appeal his case directly to the Civil Service Commission. I wish him luck with his appeal but I seriously doubt that it will do him much good for his case is but one in a pattern. There is a difference, however; Dr. Horne is today recognized as a leading expert in the field of interracial housing. During his 17 years service with the Government he has done much to make possible the success of such programs and the prestige of the United States has grown accordingly. This is the second time he has had great trouble with his agency head since the Eisenhower administration took office. He was given the position from which he has just been fired in 1953 in order to make room for a political appointee in the Housing Agency. He protested that action at the time, but finally took what was an entirely new position because he felt he would still be able to do his job and aid the interracial housing program. He now sees that he was mistaken. The new job was not nearly so satisfactory because he was removed from the mainstream of agency activity in the field of his specialty and relegated to the sidelines. Now even this job has been taken from him. And this at a time when President Eisenhower has been urging increased activity in the public-housing field. Is this another case of the right hand not knowing what the left is doing? I felt deep concern for the public-housing program when Mr. Cole was originally appointed for he was known to have been an outspoken opponent of the whole idea of public housing. This idea has been newly reenforced because of this decision to drop Dr. Horne from the staff of the Agency.

There is one other aspect of this whole matter which disturbs me greatly. That is the possibility that racial discrimination may be involved. The United States Government has gradually been building an excellent record in the field of interracial public housing. It is a record of which all Americans may well be proud. But—and it is a very large but—this may not continue to be the case for long. As Mrs. Eleanor Roosevelt pointed out in a recent newspaper column, "Mr. Cole advised the Judiciary Committee of the House to go slow in considering racial segregation bans involving Government housing and in Government housing insurance." That advice, taken in conjunction with the attempt to remove Dr. Horne, a specialist in interracial housing, from his position, seems to indicate that the Administrator of the Housing Agency really does not believe in such ideas or projects.

Thus, whether Dr. Horne's dismissal results from patronage politics, from a general disbelief in public housing, or antagonism to the idea of interracial housing, it is a miserable situation and one that well merits the attention of the Congress. It is my hope that when Congress reconvenes or perhaps even before that time, the appropriate committee or committees will make a full investigation of this whole affair. Only in this way can we be sure that justice will be maintained.

For the information of my colleagues I would like to include as a part of my remarks, the text of the letter from Albert M. Cole to Dr. Horne, a letter from Dr. Horne to Douglas Chaffin, an editorial from the Washington Post and Times Herald, and some letters to the editor which were carried in that newspaper.

The matters follow:

HOUSING AND HOME FINANCE AGENCY,
Washington, D. C., July 25, 1955.

Mr. FRANK S. HORNE,
Assistant to the Administrator, Immediate Office of the Administrator, Washington, D. C.

DEAR MR. HORNE: Budgetary considerations have made a reduction in force in the Office of the Administrator necessary. As a result the position which you occupy will be eliminated.

In accordance with the regulations prescribed by the Civil Service Commission, you have been considered for all possible reduction-in-force placements, but no other continuous position in the Office of the Administrator for which you are qualified was found to be held by an employee with lower subgroup standing.

Accordingly, I regret to inform you that you will be separated effective midnight August 25, 1955.

The procedure followed in effecting this reduction is in accord with the civil-service rules and regulations. If you believe that the regulations have not been carried out in your case, you should make a specific written appeal to the Director of Personnel within 10 days of the receipt of this notice. If, within 10 days after receipt of an answer by the Director of Personnel or the receipt of a supplementary notice, you so desire, you may further appeal the action to the appropriate office of the Civil Service Commission. Your written appeal to the Commission must also give specific reasons for your appeal.

There is a supplemental sheet attached which indicates where you may inspect the retention register, the Commission's regulations, and other pertinent records and which contains additional information of importance to you at this time.

You are eligible for listing on the reemployment priority list.

The Agency is appreciative of the contribution you have made to its programs.

Sincerely yours,

ALBERT M. COLE,
Administrator.

REDUCTION-IN-FORCE NOTICE, ISSUED JULY 25, 1955

DOUGLAS E. CHAFFIN,
Director of Personnel, Office of Administrator:

On July 25, 1955, I received reduction-in-force notice from Albert M. Cole, Administrator, Housing and Home Finance Agency, eliminating the position I now occupy (Assistant to the Administrator—GS–101–15) as the result of budgetary considerations. I

hereby appeal this action on the ground that the procedure followed in effecting this reduction is not in accord with the Civil Service Rules and Regulations applicable to a classified civil service employee with veteran's status.

There is no evidence, to my knowledge, that a general reduction in force has been ordered that would achieve any significant budget savings. I am informed by the personnel office that as of today only two separation notices have been issued for alleged budgetary consideration, one to me and one to my assistant. The only conclusion that I can reach is that such summary action, in violation of statutory employment rights, was deemed necessary to dispense with my services.

The Agency has made no placement offer based on retention registers and individual qualifications, although I am a status employee with 17 years of varied experience in Government housing agencies and veterans' preference. Although my RIF notice states that I "have been considered for all possible reduction-in-force placements but no other continuous position in the Office of the Administrator for which you are qualified was found to be held by an employee with lower subgroup standing." I have examined a list of grade GS–15 and GS–14 positions in the Office of the Administrator and find that a number of continuous positions for which I am clearly qualified are now held by nonveterans. These positions include the following as examples:

NONVETERANS—GS–15

301. Director, Operations Analysis Staff.
301. Director, Urban Renewal Services Branch.
301. Chief, Project Procedure and Review.

NONVETERANS—GS–14

101. Racial Relations Adviser.
301. Relocation Rehousing Adviser.
301. Assistant Area Supervisor.
301. Assistant Director, Demonstration Program Branch.

I claim that there can be little question that I have the basic education and experience, and such special skills and aptitudes as are necessary to take over any of the above positions, as well as others at grades GS–15 and GS–14 in the Office of the Administrator, in a reduction in force and render satisfactory service without undue interruption to the work program. Further, in any instances in which there could be a shadow of doubt as to my qualification, that doubt would supposedly be resolved in favor of a veteran.

Second, under section 14 of the Veterans Preference Act of 1944, as amended, and part 22 of the Civil Service Regulations, I challenge the validity of the reduction in force action and claim it to be a device to preclude the proper recognition and exercise of my statutory rights as a classified civil-service employee with veteran's status and thus to displace me from the Agency as part of the original improper process involved in my removal in October 1953 from my original position (Assistant to the Administrator (Racial Relations)—GS–101–15) and reassignment under pressure to a newly created position (Assistant to the Administrator—GS–101–15). The alternatives indicated as open to me by the Agency in October 1953 at the time of my reassignment were either to resign or accept the newly created position, with no indication or recognition of my rights actually due me as a classified civil service employee with veteran's status either in my original job or to any other. In fact, the job sheet created for the new job evolved out of a series of discussions between the Assistant Administrator for Administration and me after I had indicated that I would not resign but would resist displacement from the Agency as the result of clearly identifiable political action. I introduced the word "rank" into the discussions and, while it was never acknowledged as a job right, concessions were made in obvious efforts to parallel the rank of the job from which I was being displaced (Assistant to the Administrator (Racial Relations)—GS–101–15). Finally, I accepted the job in good faith at the request of the Administrator as indicated in his public announcement of October 1, 1953.

At the time of the reassignment action, I had and was given no information regarding my retention rights in my original position. The Roth case had not been decided and, even now, there are doubts as to the implications of this case and Civil Service Commission Departmental Circular No. 789. It appeared to me, however, that the moment I was reassigned to the newly created position, I suffered loss of rank.

As evidence of this fact, there was a diminishing of my prestige within the Agency and among professional organizations in the field of housing and racial relations who had come to regard me as one of the outstanding authorities in these fields. Although listed as an Assistant to the Administrator, I was excluded from the Administrator's primary staff meetings which I had previously attended; specific assignments were not made to me by the Administrator nor by other members of his immediate staff; my studies and recommendations were almost completely ignored; I ceased to have any primary effect upon policy or procedure; I ceased to be able to speak for the Administrator or the Agency in any effective way; while formerly it was my responsibility to write and sign correspondence related to policy questions, I was confined to routine responses in a restricted area; in my original position, delegations and individuals seeking consultation regarding policy and procedural questions involving the public impact of Agency policies and operations, such contacts were now precluded; while previously, on behalf of the Administrator, I gave general supervision and direction to extensive operations throughout OA and the constituents, and had come to be regarded as a keystone in an area recognized to be of considerable significance both within and outside the Agency, my position, rank, and prestige all suffered from restriction to narrower concerns.

When I recognized this loss of rank and in an effort to bolster the position to which I had been reassigned, I presented, during November and December of 1954 and in January 1955, a redefinition of my function for consideration by the Administrator which would have enhanced the role of my office in such matters as review of workable programs and relocation plans in order to be placed in the stream of Agency operations and to place at the disposal of the Agency and the Administrator my accumulated experience and skills. While originally considered sound by the Administrator, it was never accepted nor put into operation. Finally, it had become evident that there was clearly no intention to maintain the rank of my position as Assistant to the Administrator nor to allow me to preserve the high prestige formerly recognized by professional groups and organizations.

After discovering, by accident, in April 1955, the existence of Civil Service Commission Departmental Circular No. 789, originally issued January 24, 1955, I filed a written request with the Assistant Administrator for Administration on April 15, 1955 (within the 90-day period indicated in the circular), as to the implications of CSC Departmental Circular No. 789 "for my own present and former position." Three months elapsed during which I received no response whatsoever. Finally, on July 28, 1955, after I had received the reduction-in-force notice, I filed another formal memorandum requesting response to my original request of April 15, 1955. You will note that the response to my second request, finally received on July 29, 1955, is not pertinent to my original request regarding the possibility of improper action in my removal in October 1953 from my original position as Assistant to the Administrator (Racial Relations)—GS–101–15.

I now, therefore, claim that the removal and reassignment action of 1953, made under pressure, was improper, that the position offered was not of the same rank and that the current reduction-in-force action is a device to absolve the Agency from meeting my legitimate and statutory rights as a classified employee with veteran's preference in and to my original position (Assistant to the Administrator (Racial Relations)—GS–101–15). My appeal to you, therefore, is for withdrawal of the reduction-in-force notice and restoration to my original position (Assistant to the Administrator (Racial Relations)—GS–101–15) from which I was improperly moved.

FRANK S. HORNE,
Assistant to the Administrator.

[From the Washington Post and Times Herald]

PATRONAGE HANGOVER

Repercussions from a patronage move nearly 2 years ago are causing a stir in the Housing and Home Finance Agency. At that time the HHFA ousted Dr. Frank S. Horne, the able and experienced director of its Racial Relations Service, and named Joseph R. Ray, Sr., a Republican leader of Louisville, as his successor. When the ousting of Dr. Horne, a Democrat, provoked a series of protests because of his good work in the delicate field of racial relations in housing, HHFA Administrator Cole decided to keep Dr. Horne on as a special assistant to the administrator. In reviewing his budget situation recently, however, Mr. Cole decided that he could not afford the luxury of two units working on racial relations and decided to abolish the jobs held by Dr. Horne and an assistant.

Apparently there was no dissatisfaction with Dr. Horne's work. Recognizing Dr. Horne's civil-service rights, Mr. Cole said that efforts would be made to find another job for him. It is to be hoped that some means will be found for continuation of the good work he has done in housing, but there seems to be little chance of finding the kind of job—other than the one he previously held—that will utilize his special talents. The public has an interest, of course, in not maintaining duplicate services in the HHFA or any other governmental agencies. The real mischief was done 2 years ago when Dr. Horne was displaced from the post for which he had been specially trained, merely to meet the demands for patronage.

[From the Washington Post and Times Herald]

"PATRONAGE HANGOVER"

May we congratulate the Washington Post and Times Herald for its splendid editorial entitled "Patronage Hangover"? You have placed the issue of the dismissal of Dr. Frank Horne as assistant to the administrator of the Housing and Home Finance Agency in its proper framework—politics.

For more than 19 years, Dr. Horne has been an outstanding public servant in the field of race relations and 17 of those years have been in the field of housing. We who sign this letter have had occasion throughout the years to consult frequently with Dr. Horne. We have watched him grow with his job. He built his staff as director of the racial relations service with consideration only as to the skill of the persons recruited for Government service.

Never have we detected a partisan approach in his operations or his policy recommendations. Much of the credit for improved racial relationships in housing within this country throughout the last two decades

rightfully belongs to the skill of the operations directed by Dr. Horne.

When Dr. Horne was removed as head of the racial relations service 2 years ago to make room for a political appointee, we protested. When a compromise was reached establishing a new position as assistant to the administrator to advise on broad racial policies, some of us urged Dr. Horne to accept it. We believed that the position was established in good faith, although some who have signed this letter warned then that it could be a delaying action. Those who held that reservation were apparently correct.

Throughout the last 22 months, Dr. Horne's vast experience and tested judgment were seldom drawn upon. Racial policies have not progressed with the times and strong leadership has been lost.

The fact that Dr. Horne's dismissal was based on a reduction in force for alleged budgetary reasons which cannot be defended is incidental to the issue. The fact that proper consideration was not initially given to his rights as a civil servant with veterans' preference, while indicative of a breakdown in the whole structure of public service, is not the basic cause for the expression of alarm that has been raised by this action throughout the Nation.

We protest this effort to destroy the foundation on which sound racial relations in the housing field have been built. We assert that the abandonment of forward-looking policies executed by highly skilled technicians and the substitution of political determinations in one of the most critical phases of American life, weakens our country both at home and abroad.

We are grateful for your public service in pointing up this issue.

Kenneth M. Birkhead, Wallace J. Campbell, Lee F. Johnson, Mrs. Winthrop D. Lane, John D. Lange, Mrs. W. T. Mason, Mrs. Olya Margolin, Clarence Mitchell, Philip Schiff, Bert Seidman, George L. P. Weaver, Bernard Weitzer.

WASHINGTON.

As a practicing attorney and one interested and active in civic affairs, I wish to congratulate you on your splendid editorial relating to the ouster of Dr. Frank S. Horne. I think your point is very well taken that the demands for patronage should not cause the dismissal of highly qualified, trained, and skilled employees, and you are to be commended on bringing it to the attention of the public.

There are many capable public servants who now hold and should be permitted to continue to hold top-level Government jobs without regard to the fact that they are not members of the party which now happens to be in power.

I realize that patronage is an integral part of the American political process; it is equally true, however, that the experience accumulated by many men like Dr. Horne through long years of Government service should not be discarded lightly. Appointive authorities at all levels of Government service should remain alert to the balance which must be struck between rewarding party loyalty and giving the best government possible to the American people.

CHARLES T. DUNCAN.

WASHINGTON.

[From the Washington Post and Times Herald]

LETTERS TO THE EDITOR

"PATRONAGE HANGOVER"

Your editorial entitled "Patronage Hangover" relating to the dismissal of Dr. Frank S. Horne and his assistant, Mrs. Corienne Morrow, is a commentary which calls for high praise. To those who recognize that making democracy work is a difficult problem it is also a challenge to express themselves in support of two exceptionally devoted and competent public servants.

Working in a field requiring unusual talent, both Dr. Horne and Mrs. Morrow have made a record worth examining thoroughly. In playing a leading part in opening a much needed supply of modern housing to minority groups throughout the Nation, and in stimulating initiative on the part of private enterprise in doing this, Dr. Horne has become an outstanding person.

I have known Mrs. Morrow for more years than Dr. Horne. In those years I have seen her display unusual sagacity in handling some extremely difficult problems in human relations. She has revealed an uncanny understanding of Negro psychology, and used that knowledge in the public interest. As a well-integrated personality her efforts in handling tough assignments have been outstanding.

It is people of such caliber to whom public service should be made especially attractive, no matter of what race. When, through carelessness or prejudice life is made difficult for them a blow against democratic institutions is being delivered.

I believe we are entering a period in which we must employ all of the ingenuity and inventiveness which Americans boast, and which has brought enormous progress in science and technology, in the field of human relations. It is in this area that progress has lagged dangerously. If we are to be successful in this field, especially in bringing into public service the ablest and most self-effacing men and women, those who see this need must come to the support of the kind of folk who care more about serving others than themselves.

You have done this editorially in bringing to public attention the cases of Dr. Horne and Mrs. Morrow.

BARROW LYONS.

WASHINGTON.

Activity of the Committee on the District of Columbia During the 84th Congress, 1st Session

---

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. McMILLAN. Mr. Speaker, as chairman of the House Committee on the District of Columbia, I wish to take this opportunity to make a statement as to the activity of our committee in the first session of this Congress. As you know, under the Federal Constitution the Congress of the United States is charged with the responsibility of exercising exclusive jurisdiction in all matters whatsoever concerning the District of Columbia. Under the rules of the House of Representatives the House District Committee has jurisdiction of all measures relating to the municipal affairs of the District of Columbia in general, other than appropriations therefore, including adulteration of foods and drugs, incorporation and organization of societies, insurance, executors, administrators, wills and divorce, municipal code and amendments to the criminal and corporation laws, municipal and juvenile courts, public health and safety, sanitation, and quarantine regulations, regulation of sale of intoxicating liquors, and taxes and tax sales.

During the 1st session of the 84th Congress the members of the House District Committee have worked diligently on measures before this committee and have spent many hours of their time in hearing bills before this committee affecting matters in the District of Columbia. I would like at this time to take the opportunity to thank each of the members of this committee, both on the majority and on the minority side, for the fine cooperation which they have given to me during this 1st session of the 84th Congress, and to thank each of these members for their time spent considering measures pertaining to the District of Columbia. Without the assistance of these members the record of this committee could not have been achieved.

During the 1st session of the 84th Congress a total of 127 bills were introduced in the House of Representatives and referred to the Committee on the District of Columbia. Of the House bills introduced, 29 were referred to either a subcommittee or the full committee and separate hearings held on these measures. Of the 29 bills considered, 20 bills were reported by the full committee. Seventeen bills passed the House either as reported by the committee or in an amended form. Six of the original House bills passed the Senate. Also during the 1st session of the 84th Congress 19 bills which passed the Senate were referred to the Committee on the District of Columbia. Of the 19 bills, 9 were acted on either by a subcommittee or the full committee and reported in the House of Representatives. Twelve bills which were acted on by the Senate were also passed by the House of Representatives. Of the total bills passed by the House and Senate, 17 bills became public law and 1 private bill became private law. None of the bills were vetoed by the President.

I believe that the record of this committee speaks for itself, and I take great pride in making it available to the Members of this body.

A Report to the People of My District

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. ANFUSO. Mr. Speaker, the conclusion of the 1st session of the 84th Congress is a good time to pause and reflect upon the legislative record accomplished, and particularly my own efforts in serving the needs of the people of my district. In this way I hope to keep my constituents better informed as to my record and my views on major issues.

I represent the Eighth Congressional District of New York, which is located in Brooklyn and includes the sections

known as Greenpoint, parts of Williamsburgh, Bushwick, the Navy Yard area, and so forth. It is strictly an urban district of working-class, low-income families, people of various national origins and religious faiths, but all devoted and loyal American citizens. I am proud to represent them in the Congress of the United States and am grateful to them for choosing me as their Representative.

THE SEARCH FOR WORLD PEACE

The quest for world peace is today uppermost in the minds of people everywhere. Of late there has been somewhat of a relaxation of international tensions, but it is still a long way from mankind's cherished goal of attaining a real and lasting peace. There is great doubt in the minds of many people whether the Communists are earnest in their current policies or whether they are stalling for time; consequently, we must at all times be on the alert.

When I came to Congress in January of this year I had pledged to myself to do all in my power to further the cause of peace and the abolition of war. I have given this matter a great deal of thought and have taken several noteworthy steps to fulfill my pledge. In April I delivered a major address in Congress on "The Search for Peace," in which I developed the thought for a people-to-people approach to the problem of international peace and I suggested three proposals to Congress: First, adoption of a resolution expressing the will of the American people to abolish war as a means of settling international disputes; second, revision of the United Nations Charter by extending the authority of the U. N. to halt aggressions, facilitate universal disarmament, enforce international law, et cetera; third, set up a "Mission for Peace" to be comprised of elder statesmen who would conduct discussions leading toward peace. A few weeks later I introduced three resolutions incorporating these proposals, which were then referred to the Committee on Foreign Affairs for consideration.

In July I was honored by Speaker SAM RAYBURN by being appointed a member of the United States congressional delegation to the NATO parliamentary conference, which took place in Paris July 18–22. This was a meeting of representatives of the 15 countries which are associated in the North Atlantic Treaty Organization to plan the maintenance of peace and security of these nations, as well as to obtain closer economic, social and cultural relations between the peoples of the Atlantic community.

Shortly before leaving for the conference I had prepared a lengthy study on the international situation in which I proposed the idea that the United States should invite the principal powers of the world to join with us in a declaration establishing a moratorium on war for a period of 10 years. I indicated the benefits which mankind would derive and I stressed the need for certain safeguards. At the NATO conference I discussed the plan with many statesmen from other countries, who responded very favorably to the idea. I also submitted a copy of my plan to Secretary of State Dulles, who was then at the summit conference in Geneva.

In other matters of international affairs, I supported the extension of our trade agreements program for 3 years and simplification of our customs procedure to increase our international trade with the rest of the world. I voted for the resolution expressing United States opposition to colonialism and imperialism. I also supported continuation of our mutual security program to provide military, economic, and technical assistance to our allies.

I want to emphasize at this point that in our search for peace we must never, while there still remains tension in the world, let down our guard for one single moment. Gen. Alfred M. Gruenther, a successor to General Eisenhower as Supreme Allied Commander of Europe, told me while the summit conference was going on in Geneva that what inspired that conference more than anything else was the existence of NATO. Without NATO, Russia would have already moved over all of Europe and she would have had no desire for talks. Now more than ever, we must keep in mind that the dissolution of NATO still remains the No. 1 objective of the Soviet Union. The moment we let down our guard, the moment we weaken our defenses in Europe or anywhere else in the world, Russia will not have to talk to us.

Following my experience in World War II as an intelligence officer with OSS, I was against scrapping of our huge war surpluses and other means of defense. I warned then—1945—that our friends today might be our enemies tomorrow. The political information I had on Russia convinced me then that she was only a convenient ally. I am now firmly of the opinion that had we had a NATO organization in 1914 and also in 1939 in Europe, World War I and World War II would have been averted. We cannot afford to gamble on the future again.

IMMIGRATION AND REFUGEE PROGRAM

The problem of immigration is of vital interest to me. Immediately after my election to Congress I began to work on a bill to revise the discriminatory McCarran-Walter Immigration Act. My very first deed after the oath as Congressman on January 5 was to introduce my bill, H. R. 501, a document of over 200 pages, calling for a complete revision and liberalization of our present immigration laws. In it I advocate the elimination of the national origins quota system, the establishment of an annual quota of 220,000 immigrants based on the 1940 census, the distribution of unused quotas among countries with small quota allotments, no discrimination against immigrants because of race, religion, or national origin, the elimination of all distinctions between native-born and naturalized United States citizens, and many other liberal features.

Several months passed and nothing was done. The House Judiciary Committee, to whom the bill was referred, did not schedule hearings on this measure. Finally, I decided to intiate a discharge petition on my bill in an effort to bring it out on the floor of Congress for debate and a vote. In order to accomplish this the petition must be signed by a majority of the Members of the House—218. Although a large number have already signed the petition we are still far from the necessary 218. During the first weeks of the 1956 session I plan to undertake an intensive campaign to obtain the required number of signatures in the hope of giving Congress a chance to vote on the measure.

Meanwhile, I also introduced a bill suggesting five amendments to the Refugee Relief Act of 1953. This is the act which provides for the admission of 214,000 refugees over a 3-year period ending December 31, 1956. Less than a year and a half remains of this time limit, but until now only about 30,000 people were admitted under the program. In order to save the program from being a failure and to step up the flow of immigration, I proposed as follows: to raise the age limit of orphans from 10 to 14 so that 4,000 orphans can be admitted; to eliminate the need for housing and employment assurances; to abolish the requirement for readmission guaranties; to take the program out of the hands of the State Department and administer it under a special commission; and to extend the act for another year until the end of 1957. Also in this respect nothing was done and I shall, therefore, continue my efforts to obtain action early in the new session.

SOCIAL SECURITY

The House approved a bill to extend social-security benefits in several ways: by including self-employed professionals except doctors, reducing the retirement age for women to 62, and providing certain disability benefits. The bill was sent to the Senate but final action was delayed until the next session. I was in favor of these improvements but I felt that they do not go far enough. Back in March I introduced a bill which I consider more adequate and which would provide greater security for our older people.

My bill contains four major proposals: to raise the monthly minimum benefits from $30 to $40; to allow outside earnings up to $125 per month instead of the present $100; to lower the retirement age from 65 to 60 for both men and women; and to extend coverage to professional groups, including doctors. I regard my amendments as more practical and will continue to work for their adoption in the future.

I also introduced a special bill known as Insurance Against Blindness Act, which provides that those who become blind shall be entitled to receive social-security benefits from the time they are afflicted with blindness, instead of waiting until they reach 65. This proposal has been endorsed by organizations working for the blind.

LABOR AND MINIMUM WAGE

Unfortunately, very little was done by Congress this year in the field of labor legislation, with the sole exception of increasing the minimum wage from 75 cents to $1 per hour. I had hoped that the minimum wage would be set at $1.25, but President Eisenhower proposed only 90 cents, so we compromised at $1. I

felt that these were substandard wages which we should not tolerate in the United States and I so told my colleagues in Congress. The higher minimum wage will benefit about 10 million low-paid workers and their families.

Nothing was done to repeal or amend the Taft-Hartley labor law, and I frankly doubt whether it will ever be repealed under a Republican administration. Every other attempt to aid labor was frustrated. I made at least two attempts but they were both defeated. When the Sugar Act came up I introduced an amendment which provided that sugar workers, who are among the most exploited in this country, should receive the minimum wage as prescribed by law and that they be permitted to join unions. In another instance, when the Mexican farm-labor bill came up in the House, I submitted an amendment which required that American employers who are bringing in Mexican contract labor should offer the same terms and conditions to domestic farmworkers as those given to Mexicans, including transportation, housing, guaranties of wages, and so forth. This is necessary for the protection of American labor. Both of my amendments had the support of the big labor organizations in the United States, but both were defeated in Congress.

FARM PRICES AND THE COST OF LIVING

When I came to Congress in January, the leadership suggested that I become a member of the Committee on Agriculture. Although I do not have a single farmer in my district in Brooklyn, the idea appealed to me for this reason: As a member of the committee I would represent the standpoint of the consumer in the big city who is struggling with the high cost of living and I would be in a position to plead the cause of the city people. This I have been doing since then at every opportunity.

Unfortunately, the cost of living which has such a telling effect on our pocketbooks continues to remain high. The present administration is making no attempt to bring it down a little. In my own way I have tried to do everything possible. I introduced a bill for the improvement and construction of modern marketing facilities for handling perishable food products in urban areas, which would not only be more sanitary but more economical. It would result in lower prices for fruits, vegetables, meats, eggs, dairy products, and so forth. Just before the session ended, the Agriculture Committee approved the bill and it will come up in the House early next year.

In view of the huge surpluses of food in this country, such as wheat, butter, and other commodities, which are rotting and spoiling in warehouses, I introduced a bill to authorize the sale of some of these surpluses to foreign nations on credit. This is to be done particularly in areas where there is hunger. In this way we shall be able to help relieve starvation and also dispose of some of our surplus foods in this country. Of course, I also voted for the bill authorizing the Government to donate substantial quantities of food for use by institutions for the poor and the aged and for other needy people.

CIVIL RIGHTS AND CIVIL LIBERTIES

I have always taken the position that our country should take the lead in practicing toleration toward minority groups and that discrimination against any group on grounds of race, creed, color, or national origin should be eliminated. For this reason, I am a strong believer in civil rights and the protection of our civil liberties to which all American citizens are entitled under the Constitution.

I regret to report that in its 1st session the 84th Congress has done nothing in this field. Although many civil rights bills were introduced, not a single one was brought to the floor of either House for consideration and approval. In April, I introduced a bill calling for the observance of civil rights in the United States. In it, I proposed four steps: First, the President should set up a Civil Rights Commission to conduct a study of the policies, practices, and the enforcement program of the Government with respect to civil rights, and the progress made throughout the Nation in observance of these rights; second, abolish the poll tax as a prerequisite to voting; third, outlaw lynching and mob violence; fourth, set up a fair employment practices commission—FEPC—to eliminate discrimination in employment.

CRIME AND JUVENILE DELINQUENCY

The sharp increase in crime and juvenile delinquency in recent years is most deplorable. It is my view that in order to check its growth Congress should lead a crusade against crime on a national scale, instead of leaving it to the local communities. As a former judge and voluntary social worker, I have always been deeply interested in this problem, particularly the great menace it constitutes for our youth.

Since coming to Congress, I have spoken on the subject several times in the House of Representatives. I introduced several bills to deal with this problem. One bill calls for the creation of a congressional committee of five to study the causes of crime and to seek methods for preventing crime. Another bill recommends that a Bureau of Crime Prevention be created in the Department of Justice to deal with crime and juvenile delinquency, and to cooperate with State and local authorities in crime-prevention programs. In a third bill, I suggested that the United States establish a port patrol and border patrol in the Customs Bureau of the Treasury Department to deal more effectively with the smuggling of narcotics into this country.

In February the large New York newspaper Daily Mirror asked me to write a special article on teen-age crime and how to deal with it. My article was published in the Mirror on Sunday, February 13. In my own district I organized a group of public-spirited citizens to help me fight crime. We purchased an old police station which we are planning to remodel and to open it in the near future as a youth center to provide a variety of wholesome activities for young people.

POSTAL AND FEDERAL EMPLOYEES

During my first term in Congress in 1951–52, I served on the House Post Office and Civil Service Committee. There I became fully acquainted with the problems of our postal workers and Federal employees, their struggles and their plight in maintaining a decent standard of living on a limited income. Their salaries had not been raised for several years. One of my first acts when I returned to Congress was to introduce a bill to increase the salaries of all postal and Federal workers by $1,000 per annum. I feel that they have worked for many years on inadequate salaries and deserve this compensation.

In 1954 President Eisenhower had vetoed a 5-percent increase for these people. It was therefore clear that a $1,000 increase would never be approved by the administration, so I began to work very actively for the adoption of a bill which would provide at least a 10-percent increase. After many months, when at times it looked like a forlorn cause, we succeeded in compromising on an 8.1-percent raise for postal workers and 7.5 percent for Federal employees. While I am happy over the results, I still feel that it is not sufficient.

VETERANS LEGISLATION

Another group which always finds a warm response in my heart are the veterans of this country who have sacrificed so much for the defense of the United States in two world wars and the Korean war. In the first session of the 84th Congress we passed several measures to benefit war veterans which I was glad to support.

Among these measures are the following: A bill which provides that all those serving in our Armed Forces on January 31, 1955, may continue to earn educational benefits until their discharge up to 36 months of entitlement. This would give them a chance to continue their education, just as other servicemen had done after World War II. Other bills extended an increase in military salaries, continuation of assistance to dependents of those in the service, improvement of survivors' benefits, special privileges to disabled veterans, and extension of the Veterans' Administration program for home loans to veterans.

MISCELLANEOUS LEGISLATION

Many other bills and issues came up during the course of the session on which I expressed my views. Following are some of the more important issues:

Prior to the 10th anniversary meeting of the United Nations in San Francisco in June, I delivered an address in Congress on the need for early admission of Italy to the United Nations. I pointed out that Italy is a major nation on the European Continent, it is peaceful and democratic, it is an ally of the United States and a member of NATO. I cited how on five different occasions the U. N. was ready to admit Italy as a member, but in each instance Soviet Russia vetoed her application. I pleaded with the United States to take the lead in bringing Italy into the U. N.

When religious persecution spread in Argentina against Catholics and the Catholic church, I protested in Congress against the Peron regime and I urged our Government to stop its financial assistance to that regime which seeks to destroy religion and religious freedom. I also wrote to President Eisenhower and

suggested that the United States protest to Argentina against this persecution.

In the case of the Arab-Israel conflict in the Middle East, I protested to our Government for sending arms to the Arab countries. I proposed that either we extend the same or proportionate military assistance to Israel as to the Arab States, or else that we cease giving such aid to the Arabs. I also proposed that the United States conclude a mutual defense pact with Israel whereby the security of that country and its people would be guaranteed and the integrity of its borders respected by the Arab countries. I am convinced that if the United States would pursue a policy along the lines I proposed, tension in the Middle East would be ended quickly and peace between Israel and the Arab States would be attained. Needless to add, I was happy to support the economic aid program under which Israel will receive about $30 million during the coming year, although I felt she should have received as much as in previous years.

On several occasions during the session I took the floor in the House to extend greetings to various nationality groups whose homelands are now under the yoke of Communist imperialism. I refer to Poland, the Ukraine, Lithuania and the other Baltic States, Czechoslovakia, and others. In each such instance I assured these people that we, as Americans realize their great plight, that we support their aspirations for national independence and freedom, and that we shall at all times be ready to help them in every way possible. Theirs is a just and righteous cause which deserves our support.

I have also introduced a bill to designate December 15 of each year as Bill of Rights Day, in honor of the first 10 amendments to the United States Constitution establishing the basic freedoms and fundamental rights of the American people. Another one of my bills recommends that deputy United States marshal jobs be placed under the civil-service classified system.

At the beginning of the session, the Democrats proposed that the exemption for income tax be increased so that low-income families be aided. Later a compromise was reached whereby a $20-per-person tax reduction was recommended. I was glad to vote for this reduction, but unfortunately the Republican administration forces killed it in the Senate. I hope that tax relief for low-income groups can be attained in the next session.

Other measures which I supported are an adequate public-housing program, increased penalties for violation of antimonopoly laws, a highway program financed on a practical basis, Federal aid for school construction, elimination of excess profits on Government contracts, aid for mental-health research, and many others. Some of these are not yet enacted.

CONCLUSION

This is by no means the full story of my activities in Congress. Due to limitations of space I am stressing only those matters which are of greater and more general interest. A chapter in itself is the service performed for many constituents who seek my help and advice in personal matters. Some require intervention in immigration matters, others need help in housing problems, servicemen's hardship cases, veterans' pensions, social-security payments, postal-service matters, information and literature about the Government, and numerous other inquiries. These are handled both in my Washington and New York offices courteously and efficinetly. I regard it a privilege to be helpful to all those who seek my help, and nothing pleases me more than when my efforts in behalf of my constituents prove successful.

I am proud to present this record of my achievements during the current session. It is an account of my stewardship of office which, I trust, will be read carefully by the constituent. I leave it to his good judgment to evaluate this record. Even if we may not see eye to eye on all issues, I have no fear that the intelligent and informed citizen will realize that the welfare of the American people as a whole stands uppermost in my mind and my actions. The whole world looks to the American people for guidance and leadership. We must stand united in our efforts toward human freedom, peace, and the dignity of man.

May I take this occasion to wish to all my constituents and my friends in and out of Congress a peaceful and a prosperous 1956.

Senate Committee Version of Bank Holding Company Bill Would Give Go-Ahead To Chain Bankers

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MCNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial reprinted from the July 28, 1955, issue of the American Banker, which expresses a position with which I am in general accord.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EMASCULATED—SENATE COMMITTEE VERSION OF BANK HOLDING COMPANY BILL WOULD GIVE GO-AHEAD TO CHAIN BANKERS

Rather worse than nothing at all is the Senate Banking Committee's version of the bank holding company bill which drops the House-passed provisions against further acquisition of banks in other States.

This takes the guts out of the Spence bill as approved by the House of Repreesntatives. It flies into the face of all those banking interests in the United States which believe that since branch banking across State lines is unlawful, its equivalent extension through the holding company device should be equally taboo. The Spence bill was drawn to bring group banking operations definitely into the same legal restrictions that apply to branch banking. Why has the Senate Committee spayed this provision?

The Senate version would be grasped by the active holding company interests as a go-ahead signal for attempting to spread their form of branch banking into every State in which they can get a foothold.

The Senate version would still require Federal Reserve Board approval for acquisitions of additional banks by holding companies. In other words, the law would authorize holding-company expansion, legalize it, and State lines would be no barrier, if the Reserve Board favored crossing them. Congress, having considered and rejected the proposed ban against crossing State lines, could be interpreted as having recognized and legalized interstate branch banking as admissible by the back door.

The one purported safeguard, a requirement for hearings by the Reserve Board if anyone protests a proposed acquisition, would work out only as the Reserve Board desired it to work. Hearings might be held. But by that time options, or agreements virtually sealing the fate of the bank in question would be in their final stages, and whether opposition by State banking department authorities, or local banking groups could upset well-laid plans of a local bank to sell out to the holding company is extremely doubtful.

We are sure a lot of Senators and Congressmen will hear from their banker constituents in both big and small towns.

Do the bankers and legislatures of non-branch-banking States want to see the door left open for chain banking systems in other States to own and operate satellite banks within their borders?

Do independent bankers who have worked so hard to obtain passage of a real bank holding company control bill relish the prospect that the Senate version would be a holding company expansion authorizing measure?

Do the Members of the Senate, and its committee which emasculated the State-rights powers from the Spence bill text, realize that they are opening their States to out-of-State controlled branch banking?

Do Members of Congress want to have put over on them interstate branch banking by indirection in the guise of group and chain banking when they most certainly would not accept any bill to authorize interstate branch banking?

Do the people in Denver, in St. Louis, in Kansas—in almost any city or State that you might name—look benignly upon the probability that ambitious men in the group banking field, with access to vast and powerful city capital funds, would be invited to engage in a competition for chain-bank expansion—an expansion that can only end when their local banking systems succumb to regional chains, and regional chains are absorbed into national systems?

Do the big New York City and Chicago banks contemplate with pleasure the probability that they will have to engage in this competition for branch operations within and beyond their States' lines?

All this, while branch banking is strictly limited to State control by State and Federal law.

It is a simple and accepted provision of law that if something is illegal and against public policy, it is equally illegal and against public policy to do it by subterfuge or indirection.

We have no assurance that the Federal Reserve Board (which at times historically has had little sympathy for the small-town bank and its community needs and also at times has been strongly in favor of branch banking) will stand between the Nation and the sort of chain-branch banking which we envision in the questions above. If there is to be a real bar, the ban must be written into the Federal statutes at their source, in the Halls of the House and the Senate.

Group bankers are too shrewd to be in open jubilation over the emasculation of the bank holding company bill in the Senate. They have won a great battle in the Senate committee's revision of the Spence bill text.

Whether they will be able to consolidate that achievement into a victory that will give them the sort of bank holding company bill that they want, or kill it altogether, depends upon the solidity of the proponents of real holding-company control in the House of Representatives and among the Senate membership.

If ever there was a time for loyal action by the Independent Bankers of America—the American Bankers Association has been no help in this struggle to restrict holding companies to the same limits as branch banks—that time is now.

Echo Park

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. SAYLOR. Mr. Speaker, under leave to extend my remarks I wish to include in the CONGRESSIONAL RECORD the following letter dated July 29, 1955, in which Mr. Howard Zahniser, Washington representative for the Council of Conservationists, comments on the significance of our resistance, in this 1st session of the 84th Congress, to the threatened invasion of the National Park System at Echo Park. I am particularly pleased to be able to place this letter in the RECORD, not because it refers to what I have personally done to help insure protection of this natural area but more because I am happy to have taken part in a forthright stand protecting this American heritage. The conservationists have won their battle thus far. Through their efforts they have convinced many of my contemporaries how unwise an invasion of Echo Park would be. The conservationists have had nothing to gain but the satisfaction of knowing that their efforts will be lauded by future generations. They are a vigilant and influential group. They are also reasonable, and I am sure that when a reasonable solution to the upper Colorado problem is presented they will be among the first to welcome it.

The letter follows:

COUNCIL OF CONSERVATIONISTS,
New York, N. Y., July 29, 1955.

Hon. JOHN P. SAYLOR,
United States House of Representatives, Washington, D. C.

DEAR MR. SAYLOR: In the national public interest it is certainly a most fortunate thing that the 84th Congress's first session has refused to tolerate the threat to the national park system that has been posed by the Colorado River storage project, and you are to be congratulated for your leadership in national park protection.

This conservation achievement in resisting the authorization of the Echo Park Dam in the Dinosaur National Monument is deeply significant.

Objections to the Echo Park Dam arise, primarily, from the fact that it would be built in one of the superbly beautiful and wondrous natural areas of our earth—in an area that it would be a shame to use for a dam site. But the objections go beyond this because they involve the protection of all such areas of beauty and wildness.

OUR NATIONAL PARK SYSTEM

Because this area is of such an outstanding character, it has become a part of our national park system. By a firm policy arising from the genius of the American people and their regard for the unspoiled America that they love and find so inspiring—a policy established in law by Congress nearly 40 years ago and since reaffirmed—this national park system has become a world-famous means for preserivng some of our American wilderness, a few of its best, pristine areas. We have placed the Dinosaur National Monument wtihin this system in order to apply the preservation principles of the system to the scenic wild canyons of the Green and Yampa Rivers.

To permit the construction of this proposed Echo Park Dam would thus not only destroy the natural scenic splendor which we seek to preserve there. It would also, in this instance, render ineffective the national park system as a means for safeguarding such splendors.

Never since the establishment of the national park system by Congress in 1916 has there been such a dam authorized in any unit of this national park system—though there have been, and are, many such structures proposed by their would-be builders, in more than a dozen national parks and monuments.

Thus broad national policy has been deeply involved in this controversy, because the Echo Park Dam is a threat to the national park system.

PRESERVING NATURAL AREAS

But our concern is even greater than this, because a threat to the national park system is a threat to any hope we have of preserving any of our land in its natural, unspoiled beauty. It is a threat to our wildlife refuges, a threat to all our State and city parks, a threat to our wilderness areas, our national forests, and to all the areas that we have sought to set aside for special preservation purposes by the device of land classification. It is a threat to all these because it endangers what has been deemed to be the safest of all such systems of land classification, the national park system.

If the national parks and monuments scarcely be saved, how can we hope to protect these other areas?

It would be a tragic thing, indeed, to weaken our public policy for preserving some of our land in its natural condition.

THE NEED FOR WILDERNESS

We deeply need our areas of wildness.

We need our unspoiled parks for recreation, for the kind of recreation that can be found only in natural areas. As Henry Thoreau said in his famous book Walden, "We need the tonic of wildness." It is not only for enjoyment but also for much-needed relief from the stress and strain of our civilized living that we go to the areas that are protected and assured of preservation only because they are dedicated to this purpose.

We civilized people have tended to remove ourselves from contact with the rest of the natural world of which we really are a part. Our mechanized civilization threatens to change for human exploitation every last area on the earth. Were these tendencies to continue, were these threats to prevail, future generations would be entirely deprived of access to natural areas. They would even gradually lose the sense of the importance of such natural areas. We who know the value to us of these unspoiled national parks know that it would be fundamentally tragic to lose them and to lose our sense of values that preserve them.

OUR ONLY HOPE

Our only hope, however, for preserving any such areas, in the face of our increasing population and our growing civilization, is through our governmental policy of setting aside areas specifically for preservation. That policy is what has been at stake here. That is why it is so important that this Colorado project be redesigned by its makers so that it does not, in their own opinion, depend on any proposed dam in our national park system .

Our American policy for preserving some of our wilderness which we are here defending, is based on two understandings.

1. We are confident that our land and water resources are great and varied enough that we can have a system of national parks without sacrificing other advantages.

2. On the other hand, our preservation program is based on the understanding that our civilization is such that no lands will persist unexploited except those that are deliberately set aside and faithfully protected.

For this policy to succeed we must respect our dedications. Otherwise those areas will disappear 1 by 1, whenever it is profitable to exploit them. We cannot merely set aside an area until we get to it with some kind of exploitation project without defrauding both our own and future generations.

ECHO PARK'S SIGNIFICANCE

To tolerate the possibility of building the Echo Park Dam would certainly jeopardize this public policy of national park preservation.

So, turning back this threatened invasion has been a reaffirmation of the sanctity of all the areas which the Nation has dedicated for preservation. It has helped to make sure that our whole system of parks, monuments, wildlife refuges, wilderness, wild, primitive, and roadless areas will be safeguarded more firmly than ever.

All who have shared in this reaffirmation can well have a deep sense of satisfaction.

Sincerely yours,

HOWARD ZAHNISER,
Washington Representative.

The Stakes Are High—The Fight Over Western Rights Is Underway

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. BARRETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me on the control, appropriation, use, and distribution of water.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I take this opportunity to call attention to a problem of tremendous importance to the people of the West. For nearly a century it has been the settled rule that western water rights are dependent on and determined by State law. That's precisely what the Congress intended down through the years, yet a small but determined group continue to carry on the fight for the control of our western waters. It is true that we have lost a legal skirmish or two but the stakes are high and now the people of the West are alarmed and they are ready to fight. Let no one be so fooled as to

believe that the people of the western empire will under any circumstances surrender their water rights to the Federal Government. We are prepared to battle to the bitter end to preserve and protect our western water rights.

The economy of thriving communities all over the West depend almost entirely on the crops produced from the 27 million acres under irrigation. Water has been applied to 75 percent of that acreage as a result of substantial local investments over a period of many years. The stability and security of western water law provided the incentive for these large investments of private capital. These unwarranted attacks on our water rights strike directly at the foundation of the economy of the Western States. Freedom to divert water and apply it to beneficial uses long distances from the point of diversion is essential to the growth, development and prosperity of our public land States.

To my way of thinking the time has come for the Congress to reaffirm, restate, and reinforce that long list of Federal laws enacted for the express purpose of preserving the integrity of State water law. If we fail to do so I am very fearful there will be a continuing trend toward Federal encroachment on this traditional field of State jurisdiction. Strange as it may seem, this movement could constitute a serious threat to water rights long since acquired and put to beneficial use in the Western States.

Many Members of the Senate and the House from the Western States have been greatly concerned with this problem and appropriate bills have been introduced seeking a solution of this problem. In the last session of Congress I introduced S. 863 for myself and for Senators MALONE, BIBLE, DWORSHAK, ALLOTT, GOLDWATER, WELKER, and CURTIS. Many other Senators indicated their desire to be associated with legislation along the lines of my bill. Earlier this year H. R. 741, H. R. 3404, and H. R. 6147, all being similar in purpose and effect, were introduced in the House. The position of the National Reclamation Association on the objectives of legislation of this general character is plain and evident from resolution No. 2, adopted at its 1954 annual convention, which reads as follows:

"Whereas the authority to regulate and control the appropriation, distribution, and use of the waters of streams arising in States lying wholly or partly west of the 98th meridian is properly the exclusive sovereign function of the States; and

"Whereas existing laws have not resulted in clear and uniform practice in accordance with said principles by all Federal agencies and officers having to do with use or development of water resources: Now, therefore, be it

"*Resolved by the National Reclamation Association, reaffirming and amplifying its policy developed during past years by appropriate resolutions,* That the association urges the enactment of a Federal law clearly and unequivocally recognizing the title of the States to waters therein, and requiring all Federal agencies and officers to proceed in conformity with State water laws in all matters having to do with appropriation, adjudication, use, ownership, and distribution of water and water rights in such States; be it further

"*Resolved,* That the association strongly urges the cooperation of the executive branch of the Government in the attainment of the above objectives."

In my judgment the decision of the Supreme Court rendered on June 6 last in the case of the *Federal Power Commission* v. *The State of Oregon* has made the need for this type of legislation more urgent than ever. In a sincere effort to find proper and adequate language to clearly define and restate the Federal law in this field, I have sought the aid and assistance of a number of highly qualified and interested persons in revising the language of S. 863 and also in preparing this statement. It seems to me that some of the safeguards afforded Federal interests in the revised bill are unnecessary, but we have incorporated them in the new draft to meet some of the objections which have been raised to S. 863 at various times.

I have forwarded the redraft to the staff of our Senate Committee on Interior and Insular Affairs and I have been assured that a committee print of the new draft will be made available in the nature of a proposed amendment to my bill S. 863. The revised language submitted is as follows:

"*Be it enacted, etc.,* That this act may be cited as the 'Water Rights Settlement Act of 1956.'

"DECLARATION OF POLICY

"SEC. 2. In the arid and semiarid regions west of the 98th meridian rights to the use of water are property rights which are fundamental to the economic life and well-being of the American people. In view of the fact that the needs for water do not coincide with the location or the natural flow of the available sources of supply, it is recognized that rights to impound and divert water and to apply it to beneficial purposes, frequently at places substantial distances from the points of diversion or storage, are matters of paramount importance. To promote the beneficial application of the available water supplies in these regions it is and has been necessary that public and nonpublic entities be encouraged to make investments in water resource developments. Security of right to the use of water for beneficial purposes is essential to such encouragement, and regulating the acquisition of water rights must be orderly and with full regard to the need for stability of such rights if public and private investments in water-resource development are to continue on a sound basis. Neither the proprietorship functions of the United States derived from the ownership of the public lands nor the exercise of its powers relating to interstate commerce and the general welfare should be permitted unduly to interfere with prior rights to the use of water or the orderly acquisition of such rights in the future. For more than 90 years this policy has been recognized by the Congress and the acquisition of such rights under State law has been encouraged and repeatedly protected by Federal legislation. Under this policy these States have been able to make their proper contribution to the strength of the Union, and 27 million acres of arid and semiarid land have been brought under irrigation, of which only one-fourth are a result of federally assisted projects. It has not been and is not the intention of the Congress that Federal agencies, in pursuing their programs for water resources development in these arid and semiarid areas, shall have any prerogative to preempt the field or to cast clouds on the security of prior rights under State law acquired for beneficial purposes. Because of the fact that previous acts of Congress have been and may be interpreted with respect to these States so as to cast clouds on such prior rights and to interfere with the future orderly development of water resources in accordance with the foregoing declaration, it is the purpose of this act: (1) to remove any such clouds; (2) to provide for the future acquisition of unappropriated waters, navigable and nonnavigable, in compliance with State laws; and (3) to provide adequate protections of the Federal interests to the end that the Federal Government may perform its functions in a manner consistent with the foregoing purposes.

"DEFINITIONS

"SEC. 3. For the purposes of this act—

"(a) 'Federal agency' means the executive departments and independent establishments of the United States, and corporations primarily acting as instrumentalities or agencies of the United States;

"(b) 'Employee of the Government' includes officers or employees of any Federal agency, members of the military or naval forces of the United States, and persons acting on behalf of any Federal agency in an official capacity, whether temporarily or otherwise.

"APPLICABILITY

"SEC. 4. This act shall apply only to States lying wholly or in part west of the 98th meridian.

"FEDERAL INTERFERENCE WITH WATER RIGHTS PREVIOUSLY ACQUIRED UNDER STATE LAW

"SEC. 5. In the use of water for any purpose in connection with Federal programs, projects, or activities no Federal agency or employee of the Government shall interfere with the exercise of any right to the use of water for beneficial purposes heretofore acquired under and recognized by State custom or law except when expressly authorized by law and upon payment of just compensation therefor: *Provided,* That the provisions of this act shall not be construed to preclude, when authorized by Federal law, the acquisition by the United States of such rights by purchase, exchange, gift, or condemnation.

"FUTURE ACQUISITION OF WATER RIGHTS

"SEC. 6. Subject to existing rights under State law, all navigable and nonnavigable waters are hereby reserved for appropriation and use of the public pursuant to State law, and rights to the use of such waters for beneficial purposes shall be acquired under State laws relating to the appropriation, control, use, and distribution of such waters. Federal agencies and permittees, licensees, and employees of the Government, in the use of water for any purpose in connection with Federal programs, projects, activities, licenses, or permits, shall, as a condition precedent to the use of any such water, acquire rights to the use thereof in conformity with State laws and procedures relating to the control, appropriation, use, or distribution of such water: *Provided,* That nothing in this act shall be construed to preclude the storage and release of water by the United States solely for the prevention of floods: *Provided further,* That the United States may acquire such rights, when authorized under Federal law, by purchase, exchange, gift, or condemnation: *Provided further,* That no right acquired under State law shall be enforceable against the United States if such right would be enforceable against the United States only because of a State law or custom which discriminates against the United States or denies the United States the opportunity to acquire such rights on terms and conditions at least as favorable as those under which any other entity or person may acquire such rights: *And provided further,* That nothing in this act shall be construed to permit any person or entity to acquire the right to store or divert waters in any national park or monument unless otherwise authorized by act of Congress.

"WAIVER OF IMMUNITY TO SUIT

"SEC. 7. (a) Consent is hereby given to join the United States as a defendant in any suit relating to the control, appropriation, use, or distribution of water which is to be used for beneficial purposes when (1) the United States is or claims to be the owner of any right to the use of such water or is in the process of acquiring any right to the use thereof by appropriation under State law or otherwise, and (2) the United States is a necessary party to such suit. The United States, when a party to any such suit, (1) shall be deemed to have waived any right to plead that said State laws are inapplicable or that the United States is not amenable thereto by reason of its sovereignty, and (2) shall be subject to the judgments, orders,

and decrees of the court having jurisdiction of any such suit in the same manner and to the same extent as a private individual under like circumstances: *Provided*, That judgment for costs shall not be entered against the United States in any such suit.

"(b) Summons or other process in any such suit may be served on the Attorney General of the United States or his designated representative, or on the United States attorney for the district in which the court having jurisdiction of any such suit is situated.

"(c) In the absence of the service of summons or other process in any such suit, the Attorney General of the United States or his designated representative is authorized, either in person or by writing, to make an appearance or file pleadings in any such suit on behalf of the United States and thereby to subject the United States to the jurisdiction of any such court.

"(d) On petition of the United States any such suit may be removed pursuant to title 28 of the United States Code from a State court to the district court of the United States for the district and division within which such action is pending.

"INTERSTATE LITIGATION

"SEC. 8. Nothing in this act shall be construed as authorizing the joinder of the United States in any suit or controversy in the Supreme Court of the United States relating to the rights of States to the use of the water of any interstate stream.

"EQUITABLE APPORTIONMENT AND TREATY OBLIGATIONS

"SEC. 9. Nothing in this act shall be construed to interfere with the rights of any State to waters apportioned under any interstate compact or judicial decree, or to permit appropriations of water under State law which interfere with the fulfillment of treaty obligations of the United States."

Congress has repeatedly endeavored to express its intention that Federal programs should not interfere with State law relating to the ownership, control, appropriation, distribution, and use of water. The Congress defined its policy as early as 1866 when it encouraged State control by permitting the acquisition of water rights first on nonnavigable streams and bodies of water, on the public lands of the 3 Western States and 8 Territories and later when it subordinated navigation west of the 98th meridian to appropriative rights and by subjecting flood-control projects to the policy of protecting present and future beneficial consumptive uses and recently by providing for adjudication of water rights, other than on interstate streams, in State courts. Down through the years the Congress has reaffirmed its position time and again that Western water laws are to be observed and followed by the Federal Government. Let me cite these provisions of law:

1. The act of July 26, 1866 (14 Stat. 253);
2. The act of July 9, 1870 (16 Stat. 218);
3. The Desert Land Act of March 3, 1877 (19 Stat. 377);
4. Section 8 of the Reclamation Act of 1902 (32 Stat. 390);
5. Sections 9 (b) and 27 of the Federal Power Act of 1920 (41 Stat. 1077);
6. Section 3 of the Taylor Grazing Act of 1934 (48 Stat. 1269);
7. The Great Plains Water Conservation and Utilization Projects Act of October 14, 1920 (54 Stat. 1119);
8. The Water Conservation Act of 1939 (53 Stat. 1419);
9. Section 1 of the Flood Control Act of February 22, 1944 (58 Stat. 887);
10. The National Parks Act of 1946 (60 Stat. 885);
11. Section 208 of the act of July 10, 1952, authorizing suits against the United States in State courts for the adjudication of water rights;
12. Subsection 3 (e) of the Submerged Lands Act of May 22, 1953 (67 Stat. 31); and finally,
13. The act of July 23, 1955 (being section 4 (b) of Public Law 167—84th Cong.), the act providing for multiple use of the surface of tracts of public land.

Until very recently it was generally believed that the Desert Land Act of 1877 effectively severed the usufructuary rights to water from the Federal ownership of all public lands so as to render the water subject to appropriation under State law. *California Oregon Power Co.* v. *Beaver Portland Cement Co.* (295 U. S. 142): see *Nebraska* v. *Wyoming* (325 U. S. 589, 611 et seq). The sweeping opinion in the former case seemed to provide ample justification for such a belief. The Supreme Court said in the case *California Oregon Power Co.* v. *Beaver Portland Cement Co.* (295 U. S., at 162–163):

"As the owner of the public domain, the Government possessed the power to dispose of land and water thereon together, or to dispose of them separately * * *. The fair construction of the provision now under review is that Congress intended to establish the rule that for the future the land should be patented separately; and all nonnavigable waters thereon should be reserved for the use of the public under the laws of the States and Territories named. The words that the water of all sources of water supply upon the public lands and not navigable 'shall remain and be held free for the appropriation and use of the public' are not susceptible of any other construction. The only exception made is that in favor of existing rights; and the only rule spoken of is that of appropriation. * * *. What we hold is that following the act of 1877, if not before, all nonnavigable waters then a part of the public domain became publici juris, subject to the plenary control of the designated States."

In the case of *Federal Power Commission* v. *Oregon* (Docket 367), decided on June 6 last, the Supreme Court injected great doubt and uncertainty into the validity of many water law principles accepted generally in the public land States. The applicant in that case did not acquire water rights for power generation under the laws of Oregon, notwithstanding the provisions of section 9 (b) and 27 of the Federal Water Power Act of 1920, as amended. The proposed dam would abut an Indian reservation created in 1855 on one side and a power site reserve, established in 1909, on the other. The Court sustained the granting of the license, notwithstanding the failure to comply with State law, on the ground, among others, that the Desert Land Act of 1877 does not apply "to the use of waters on reservations of the United States." It appears clear that the court used the term "reservations" to include all public lands withdrawn or reserved from sale or disposition under the public land laws, such as national forests.

Justice Douglas, in a dissenting opinion filed on June 6, 1955, in the case of *F. P. C.* v. *Oregon* above referred to, said:

"The argument pressed on us by the United States is akin to the one urged in *Nebraska* v. *Wyoming* (325 U. S. 589, 611 et seq.). In that case, the United States struggled to be rid of the rule of law that made its water rights on nonnavigable streams of the West dependent on State law. It claimed that it owned all the unappropriated water in the basin of the North Platte River. The argument was made not only under the Reclamation Act of 1902 (32 Stat. 388), but also under the Desert Land Act of 1877 (19 Stat. 377), the act involved here. We reserved decision as to whether under some circumstances the United States might be the owner of unappropriated water rights. But we held that under those acts the United States took its water rights like other landowners, viz, pursuant to State law governing appropriation.

"Unless we are to depart from that ruling, we must accept Oregon's claim here."

Justice Douglas cited two cases supporting his position, *Power Company* v. *Cement Company* above mentioned and also the case of *Ickes* v. *Fox* (300 U. S. 82), arising in the State of Washington, in which case the Secretary of the Interior contended that because the Government diverted, stored, and distributed the water it thereby acquired ownership of that water. The Supreme Court rejected this contention. Appropriations, under the Reclamation Act, it said, were made not for the Government but for the use of the landowners, and by the terms of that law, as well as Washington law and of the contract, the water rights became the property of the landowners, wholly distinct from the property of the Government in the irrigation works.

Justice Douglas concluded his opinion with this powerful and impelling statement:

"The Desert Land Act applies to 'public land'; and the Federal Power Act (41 Stat. 1063, as amended, 16 U. S. C. 791a et seq.), grants the Commission authority to issue licenses for power development 'upon any part of the public lands and reservations of the United States.' * * * The definition of those terms in the act says nothing about water rights. And, as I have pointed out, it has been the long-term policy of Congress to separate western land from water rights.

"The final resort of the Commission is to the act of June 25, 1910 (36 Stat. 847), providing:

" 'That the President may, at any time in his discretion, temporarily withdraw from settlement, location, sale, or entry any of the public lands of the United States, including the district of Alaska and reserve the same for water-power sites, irrigation, classification of lands, or other public purposes to be specified in the orders of withdrawals, and such withdrawals or reservations shall remain in force until revoked by him or by an act of Congress.'

"It was under this act that some of the lands here involved were reserved for a power site. But the act of June 25, 1910, by its very terms, did no more than withdraw these public lands 'from settlement, location, sale, or entry.' The act did not purport to touch or change in any way the provision of the Desert Land Act that pertains to water rights. If the words of the 1910 act are to control, water rights remained undisturbed. The lands remained 'public lands,' save only that settlers could not locate on them. I assume that the United States could have recalled its grant of jurisdiction over water rights, saving, of course, all vested rights. But the United States has not expressly done so; and we should not construe any law as achieving that result unless the purpose of Congress is clear.

"The reason is that the rule adopted by the Court profoundly affects the economy of many States, 10 of whom are here in protest. In the West, the United States owns a vast amount of land, in some States over 50 percent of all the land. If by mere Executive action the Federal lands may be reserved and all the water rights appurtenant to them returned to the United States, vast dislocations in the economies of the Western States may follow. For the right of withdrawal of public lands granted by the 1910 act is not only for 'waterpower sites' but for a host of public projects—'irrigation, classifications of lands, or other public purposes.' Federal officials have long sought that authority. It has been consistently denied them. We should deny it again. Certainly the United States could not appropriate the water rights in defiance of Oregon law, if it built the dam. It should have no greater authority when it makes a grant to a private power group."

The possible ramifications of this new decision are practically unlimited. Millions

of acres of public lands have been withdrawn or reserved since 1877. Many of these are prime watershed areas. A good many questions arise as a result of the confusion created by the recent Supreme Court decision in the Oregon case.

(a) Are State law appropriations made on such lands since their withdrawal totally invalid? Or only invalid against Federal uses on such lands?

(b) Are the Federal rights riparian in character and limited to the watershed of the stream? Or are they applicable to any beneficial use on Federal lands? Cf. *Winters* v. *U. S.* (207 U. S. 564).

(c) Are such Federal rights subject to the doctrine of equitable apportionment among States? Or are they a first charge against the stream capable of destroying appropriative rights acquired under State law? Cf. *Hinderlider* v. *La Plata* (304 U. S. 92). See *Petition of Intervention of the United States, Arizona* v. *California*, pending in the Supreme Court.

(d) Are rights of the United States to use water for irrigation on reclamation projects carved from Federal reservations or withdrawals superior to those for use on privately owned lands? Or does section 8 of the 1902 Reclamation Act constitute a specific modification of the Supreme Court's interpretation of the Desert Land Act?

(e) Are Federal rights to use water for the generation of power on Federal reservations as a part of the reclamation project valid without reference to the doctrine of priority?

(f) Are nonirrigation uses on reclamation projects carved from Federal withdrawals superior to irrigation uses since section 8 of the 1902 act refers specifically to State laws relating to "water used in irrigation"?

These questions are not intended to exhaust the possibilities. They merely illustrate the confusion and uncertainty which could result if Congress does not act to clarify the appropriability of water under State law.

It could take 30 years of litigation to know the full import of this decision. Only Congress can prevent such a cloud on the future development of the West.

Back of this bitter struggle over western water rights, as I have pointed out, is a long history of efforts by Congress to protect western water laws and prevent administrative supersedures of those laws. This history commences with the discovery of gold in California. The public lands on which it was found were unsurveyed and not open by Federal law to occupation and settlement. Miners and settlers nevertheless rushed into these areas and, lacking regulatory Federal laws, they framed in every district rules of government whereby peace and order were reasonably well maintained. These rules, customs or laws of the miners as they have been variously called, recognized that discovery and appropriation should be the foundation of a possessor's mineral and water rights. They secured to all persons, with practicable limitations, an absolute equality of right and privilege.

Gold mining, in most cases, could not be undertaken without water, so it was necessary to bring water from streams and lakes to the mining localities. Under the rules of the miners, the first appropriator of water, to be conveyed to these localities for mining or other beneficial purposes, was recognized as having, to the extent of actual beneficial use, a prior or better right. So-called common-law doctrines respecting the rights of riparian owners could not be applied. Nature and necessity dictated otherwise.

For 18 years, from 1848 to 1866, these local regulations and customs as enforced and molded by the State courts and implemented by State legislation, constituted the law governing all property in minerals and water on the public lands. The system was basically good and Congress recognized that fact. Its recognition in legislative form became the act of July 26, 1866, declaring that mineral lands of the public domain were free and open to exploration and occupation, and providing that water rights which had vested and accrued by priority of possession under local customs, laws and decisions should be federally recognized and protected. Mr. Justice Field correctly construed the intention of Congress in enacting this law, holding that it was to secure existing and future possessory rights by a patent from the Federal Government. *Jennison* v. *Kirk* (98 U. S. 453, 459).

The possessory rights vested by the 1866 act were further extended and protected by Congress in the act of July 9, 1870. Mr. Justice Sutherland stated that the effect of these two acts was not limited to rights acquired before 1866. "They reach into the future as well," he said, "and approve and confirm the policy of appropriation for a beneficial use, as recognized by local rules and customs, and the legislation and judicial decisions of the arid-land States, as the test and measure of private rights in and to the nonnavigable waters of the public domain." (See sec. 17, 16 Stat. 217.) *California Oregon Power Co.* v. *Beaver Portland Cement Co.* (295 U. S. 142).

In the Desert Land Act of March 3, 1877, which was applicable to 11 States and potential States, Congress specified that all surplus nonnavigable waters, over and above bona fide prior appropriations, should remain free for the appropriation and use of the public for irrigation, mining, and manufacturing purposes. Mr. Justice Sutherland said that if the language of this act was to be given its natural meaning, and the Supreme Court at that time saw no reason why it should not be given that meaning, it effected a severance of all nonnavigable waters upon the public domain, not theretofore appropriated, from the land itself, and made such waters available for appropriation under State laws. *California Oregon Power Co.* v. *Beaver Portland Cement Co.* (supra, p. 158).

Do not get the impression, however, that the Supreme Court went along willingly in all instances with congressional intent. Navigability in law does not always mean navigability in fact. This presents a problem which can send the Court off on unforeseen tangents. Some of these excursions continue to be matters of great concern to the reclamation States. The first such excursion, of importance here, was the result of a complaint filed by the Attorney General in 1897 against the Rio Grande Irrigation Co. to restrain it from constructing a dam across the Rio Grande River at Elephant Butte, New Mex. The Attorney General persuaded the Supreme Court that the contemplated construction would seriously impair the navigable capacity of the river. The Rio Grande, within the boundaries of New Mexico, obviously was not a river which in its ordinary condition carried trade and travel, and the Supreme Court acknowledged that fact. Nevertheless, on the theory that depletion of flow might affect navigable capacity elsewhere, it said the 1866 law, as amended, formed no basis for inferring that Congress intended to release its control over the upper Rio Grande River. Further, it said that section 10 of the act of September 19, 1890, prohibited obstructions to navigable capacity "not affirmatively authorized by law." This decision impelled Justice Sutherland to say at a later date that, subject to the technicality noted, the Supreme Court still recognized and assented to the appropriation of water, under the congressional acts of 1866 and 1877, in contravention of the riparian law rule. If these acts of Congress did not constitute an entire abandonment of the common law rule of running waters insofar as the public lands, and subsequent grantees thereof, were concerned, they foreshadowed, according to Justice Sutherland, the more positive declarations of the Desert Land Act of 1877. I have already noted his statement that he saw no reason why that act did not effect a severance of all nonnavigable waters upon the public domain, not theretofore appropriated, from the land itself. However, the act did not, according to Justice Sutherland, bind or purport to bind the States to any particular policy. "It simply recognizes and gives sanction," he said, "insofar as the United States and its future grantees are concerned, to the State and local doctrine of appropriation, and seeks to remove what otherwise might be an impediment to its full and successful operation." *Power Co.* v. *Cement Co.*, (supra, pp. 158–159); *U. S.* v. *Rio Grande Irrigation Co.* (174 U. S. 690, 703).

As I have pointed out, when a Secretary of the Interior wrongfully sought to diminish water rights which had vested under a doctrine of prior appropriation, Justice Sutherland said that mere ownership of the irrigation works and diversion, storage and distribution of water did not divest prior acquired water rights. Indeed, even appropriations under the Federal reclamation acts are not made for the United States Government but for the landowners and by that law, as well as applicable State law, the later water rights also become the property of the landowners, wholly distinct from the property of the United States in the irrigation works (*Ickes* v. *Fox* (300 U. S. 82)). A similar attempt to claim water rights, by reason of ownership of the project works, was brushed aside by the Supreme Court in *Nebraska* v. *Wyoming* in line with the earlier pronouncements of Justice Sutherland. However, while the line was held there against administrative attrition, it has been seriously weakened by other decisions involving questions of navigability and Federal Power Commission licenses for hydroelectric power developments.

The Federal Power Act is another, but related, story which need not be recounted here. Of importance to the reclamation States are the provisions of section 27 of that act in which Congress specifically stated that nothing therein should be construed as affecting or intending to affect or in any way interfere with State laws relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein. As a result of the decisions of the Supreme Court in the First Iowa Co-op case and *Oregon* v. *Federal Power Commission*, this provision should be strengthened to effectuate the original intent of Congress that the issuance of licenses must be consonant with State laws on water rights.

Congress continuously has sought since 1866 to protect western water laws and water rights. The 1944 Flood Control Act had the effect of releasing navigable waters for appropriation. The Submerged Lands Act specifically provided that the control, appropriation, use and distribution of ground and surface waters in States lying wholly or in part westward of the 98th meridian "shall continue to be in accordance with the laws of such States."

Congress should continue to give special attention to water problems in the West. The customs and laws which it has sought since 1866 to protect and strengthen are vital to the economy and the welfare of the Western States. The early landmark principles enunciated by the Supreme Court in decisions written by westerners, such as Justice Field and Justice Sutherland, which are in the process of being nullified by decisions such as the New River case, the Red River case, the First Iowa Co-op case and the Oregon case, must be restated and strengthened. This attrition must be stopped by Federal legislation if recognized and ac-

cepted principles of western water law are to survive.

The problem outlined in this statement constitutes a serious threat to the people of my section of the country. The issue is one of paramount importance to the Nation. I have discussed the issue in great detail and I have printed the proposed revision of my bill in the hope that Western lawyers and other interested citizens will take the time to study the problem and to give me their candid views and suggestions on the proposed legislation before the Congress convenes next January. I am confident that the Congress will follow its long and consistent policy of protecting State water laws, once the issue is clearly and forcefully presented. In this fight the sovereign States of the West can enlist the support of all those people who believe that water rights should be administered under State law.

A Target for the Future—Tribute to Senate Democratic Leader Lyndon B. Johnson

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. ROBERTSON. Mr. President, we were all saddened during the closing days of the session by the absence of our respected leader, LYNDON B. JOHNSON. Fortunately all of the reports on his condition have been encouraging and we have every reason to hope and expect that he will be back with us in January in the leadership role.

During the early days of his illness, the CBS commentator Charles S. von Fremd delivered a tribute to LYNDON B. JOHNSON which is deeply moving. I ask unanimous consent that Mr. von Fremd's broadcast be inserted in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

Many questions were asked of President Eisenhower at his news conference today, but not a single one concerned the recent heart attack of the Senate's majority leader, LYNDON JOHNSON, of Texas. This surprised both the Chief Executive and his White House staff, who were prepared for such a question, not only as it dealt with Senator JOHNSON in particular, but also as this taxing of health affects all public servants holding high office.

Mr. Eisenhower intended to pay lavish praise to Senator JOHNSON'S efforts up on Capitol Hill. Despite the fact these two men represent different parties with varying political beliefs, each holds high admiration for the other. They clashed openly last week, just before JOHNSON was stricken, over the accomplishments of the 84th Congress, but the President today intended to give the ailing Senator his just credit for the tremendous leadership he demonstrated during recent months.

Mr. Eisenhower was also expecting an allied question: Did he believe that candidates for the Presidency, or other high offices, should have complete medical checkups prior to the campaign and election day, so that the voters would know the physical fitness of the men for whom they voted? This matter is almost an obsession with Mr. Eisenhower. He feels the American people should know full well the condition of their high public officials.

As a matter of fact, President Eisenhower insists that his own top aids receive complete physical examinations every 6 months. The so-called White House palace guard must visit Walter Reed or Bethesda Naval Hospital semiannually for such checkups; Mr. Eisenhower himself, of course, is examined with far greater regularity and frequency.

The White House family, and high officials in the executive branch of this administration, are given physical examinations often, at the personal direction of the President, and it would seem that this practice might be well applied to all arms of the Federal Government, with the leaders in the executive, legislative, and judicial fields receiving such medical exams, for their own good and for the good of the country.

It's within the realm of possibility that Senator JOHNSON'S attack last Friday may eventually cost him the Nation's highest office. A fairly substantial presidential boom was building up about him recently, and at the age of 46, he could have missed next year's nomination and election and still be young enough for the 1960 or even 1964 presidential years. But it would require the strongest assurances from the leading heart specialists now to convince the majority of voters that he could stand up under the strain of the White House.

But even if the voters, nationwide, might not accept the talented and respected Democratic Senator from Texas as top man on his party's ticket because of his ailment, his colleagues on both sides of the aisle pray for his return to the upper House.

For Senator JOHNSON in his short period as majority leader exhibited abilities seldom found and greatly needed in this critical age in which we live. In his quiet, unspectacular way JOHNSON compiled a record that will stand as a target for other majority leaders to aim at in the future. It's too bad that it took his affliction to dramatize for the people of the country the great contributions he has made.

Is There a Paper Curtain in Washington?

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MOSS. Mr. Speaker, in government of the people, the full flow of information gives the electorate, as the American Society of Newspaper Editors put it, the "foundation of truth upon which to judge their government." Do the people have that solid foundation to formulate their opinions and intelligently exercise their franchise? Do Government agencies clearly and frankly tell the people what is being done by Government servants, giving them the essential background? Or have the agencies become citadels of silence, manipulating information to give the people only facts that are favorable to those who, as Mark Twain said, "are clothed in a little brief authority?"

As the Government has grown larger in recent years, there have been charges that less and less reliable information is being released about activities of the Federal Government. These charges have come from the American Society of Newspaper Editors, the American Newspaper Publishers Association, Sigma Delta Chi journalistic fraternity, various news organizations, independent newspapers, Washington correspondents, and reporters all over the country who have the difficult job of digging out the day-to-day facts on Government activities.

This warning that a paper curtain is cloaking the operation of our Government is not a new development. The paper curtain may be an end-product of an increasing trend toward secrecy in government. It results from the bureaucratic theory that it is up to each agency to decide what information the people should have.

During the 80th Congress, the House Committee on Expenditures in the Executive Departments looked into the information policies of the previous administration. The committee was concerned because Congress, itself, was finding it more and more difficult to ferret out information which the public is entitled to know and which is necessary in legislating and appropriating. In a report on their investigation, Hon. CLARE E. HOFFMAN, of Michigan, as committee chairman, stated:

> Action on the part of the Executive or the head of some department, challenging the right of the Congress to specified information has never been confined to the representative or representatives of either political party. It has been a policy followed by the Executive who at the moment was in power.
>
> Nor is the propose legislation aimed at the acts of the present Executive and his subordinates, for he and they are but following in a greater or a lesser degree a position taken by the Executive of all parties. It is aimed at a practice or policy.
>
> The issue is one between the executive and the legislative branches of the Government, regardless of political affiliations.

We are pleased to have Mr. HOFFMAN as a member of the House Government Operations Committee's Subcommittee on Government Information, of which I am the chairman. Hon. DANTE FASCELL, of Florida, is the other member of the Government Information Subcommittee which was directed to look into this most important problem by Hon. WILLIAM L. DAWSON, of Illinois, chairman of the House Government Operations Committee.

The Government Information Subcommittee in this Congress will not be conducting an investigation but, rather, will be studying a vital problem. The job will be done in a nonpartisan spirit, since the protection of our American democracy and the development of good government know no party lines. As Congressman DAWSON stated in chartering the Government Information Subcommittee:

> An informed public makes the difference between mob rule and democratic government. If the pertinent and necessary information on governmental activities is denied the public, the result is a weakening of the democratic process and the ultimate atrophy of our form of government.

An American public, told that there is no major danger from atomic fall-out, for instance, may be complacent about the need for a civil defense program

based on immediate evacuation of metropolitan areas. The people, inadequately informed, could support any demagogue who sells them the idea of complacency or cheap victory. Given the full information on what can be expected to happen in atomic or hydrogen bomb warfare, the American public will not be stampeded but will prepare intelligently for the worst while continuing to work for the best.

The American people—call them taxpayers, voters or what you will—hold the final authority in our democratic system. They are the ones to decide, for instance, whether our civilian defense program and our military offensive strength are adequate to protect the free world in these times of tension and potential disaster. As taxpayers, the American people have the right to know what their tax dollars are being spent for; as voters, the American people will cast their ballots for those representatives who will spend the tax dollars to support the program the people want.

But can the American people vote for representatives advocating the wisest use of their tax dollars if they do not have enough information to make intelligent decisions? Of course not. And it is with full realization of this fact that the dictatorial bureaucrat refuses to expose governmental activities to the light of public opinion. An uninformed public acts from fear, or ignorance, not good judgment based on fact.

When Government agencies arrogate unto themselves the unrestricted power to decide what information the American people should have, the agencies sometimes reach conclusions that are absurd and laughable. One agency, for instance, refused to tell how much peanut butter the armed services were buying. The agency decided, in all seriousness, that putting out such vital information would allow a clever enemy agent to deduce the number of men in our Armed Forces. Yet another agency, located not far away in Washington—unworried about the connection between guns and peanut butter—reported regularly on the number of men supported by tax dollars in the armed services. If this kind of thinking is carried to a logical conclusion, we may some day find a slap-happy bureaucrat has classified the weather report on the grounds that it might give vital information to a potential enemy.

Not only do some Government agencies refuse to tell the public how they are handling the public's business, but they also refuse to tell the Congress of their activities. The American taxpayers and voters hold the power of government; their chosen representatives in Congress have the duty, under oath, of legislating the wishes of the American electorate. It is just as absurd to expect an uninformed Congress to carry out its duties wisely as it is to expect uninformed voters to cast their ballots intelligently. Big government, as we know it today, need not be secret government.

Speaking to this general point, James S. Pope, of the Louisville Courier-Journal—for 3 years chairman of the freedom of information committee of the American Society of Newspaper Editors, observed in a letter:

> The fact is that all of us—Congress and the press alike—need to reexamine our approach to information about government, and consider whether our tools and our manpower have not become dangerously inefficient. There is such a vast quantity of news. If you look at the increase in Federal business and employees in the past 100 years, it becomes obvious that even good will on the part of all concerned leaves enormous areas of ignorance, both in Congress and in the country. We hardly see as much of it as a big iceberg shows above the surface.

It has been said that government has become distant and removed from the people. The Federal Government used to be at least a kissing cousin. But it has become so large and so aloof that it is now only a distant relative.

There have been an increasing number of comments about the remoteness of government and the brown-out of information from the Government.

In a Senate speech, Senator HUBERT HUMPHREY criticized Secretary of Defense Charles E. Wilson for having slapped a "confidential" stamp on the parting report of the former Army Chief of Staff, Gen. Matthew Ridgway. It so happened that the report eventually was published in the press. As Senator HUMPHREY pointed out, Secretary Wilson said he had stamped the report "confidential" because he did not wish to add in any way to the problems of President Eisenhower and Secretary of State Dulles at the Geneva conference.

> It is a most extraordinarily frank example of this administration—and especially the Department of Defense—classifying matters which are neither secret nor should they be—

Said Senator HUMPHREY.

> It is a use of secrecy to keep from the American people information which they have every right to know and which they must have if they are to be the informed electorate that is necessary for the proper functioning of a democracy.

Senator HUMPHREY and our House Government Information Subcommittee have been receiving mounting complaints, as the Senator phrased it, "from responsible members of the working press here in Washington that they are finding it increasingly difficult to get the facts from this administration—that the public relations, Madison Avenue treatment is more and more standing between them and the information—in no way secret—that should be public knowledge."

The repression of information seems to take various forms. According to complaints which this subcommittee is studying, the information may be withheld by misusing the security stamp in order to avoid embarrassment or unpleasantness. In other instances, agencies apparently have discontinued publishing information of a nonsecret nature on the pretext of economy. Much of this information is of a scientific or technical nature and is information which the Government should disseminate to interested citizens or organizations. In other instances, there have been complaints that officials have been instructed not to talk with, or even associate socially with, responsible writers. In at least one case, the subcommittee has received a complaint that indicates intimidation and investigation of reporters who publish stories not considered favorable to the agency.

The Government Information Subcommittee, with the cooperation of the executive agencies, the press, public affairs organizations, and interested individuals, will take a long, hard look at this entire problem. As a first step, the subcommittee has sent to every executive department and independent agency of the Federal Government a questionnaire to try to find out what are the information policies of these agencies and how they are construed in actual practice. The subcommittee not only wants to find out how the Government agencies are carrying out their duty of informing the public and the Congress, but also hopes to recommend any improvements necessary to build a foundation of truth.

Editor and Publisher describes the questionnaire as a "blunt approach." We have framed the questions frankly and forthrightly, and we expect to receive frank and forthright replies. The replies will be duly published and will provide a rich mine of information for further inquiry, if necessary. The subcommittee has tried to make the questions simple and direct. It is hoped that the replies will be equally simple and direct.

The subcommittee's study has aroused a great deal of interest. The consensus is that such a study is long overdue. The Kinston (N. C.) Daily Free Press calls the subcommittee's work "one of the most worthwhile inquiries which has been initiated in Congress in recent years." The New York Daily News editorialized:

> We hope Representative Moss' committee can smoke out numerous bureaucrats who cover their mistakes by classifying them as secret, and can do something toward making them open up.

The Topeka State Journal editorialized as follows:

> A NEW HARD EYE ON NEWS SMOTHERING
>
> The tables have turned, and the worm, too. The people may get to listen in on their own affairs yet.
>
> Or at least if they aren't told all, they may soon have a better idea of how much they aren't being told.
>
> Just the other day we referred in this space to the wallops laid by Mr. Hoover and his Commission upon the back of the bureaucracy. We learned how much money and time he found could be saved by pruning drastically in the "wilderness" of Government forms and questionnaires, some 4,700 of them.
>
> Now there is one more questionnaire but it is one that everybody should cheer. The Government is sending the Government a questionnaire. Or rather, we should say a committee of Congress is sending a questionnaire to every department, agency and nest of bureaucracy within the wide-flung borders of big government. Congress is really not a part of the bureaucracy, which is an executive growth. But Congress did spawn, and does tolerate bureaucracy.
>
> Anyway this questionnaire, of which we have received a copy, is 5½ pages of blunt queries and calls for full information. The questioner is a House information subcommittee headed by California's JOHN MOSS. The information demanded of the Government is how available to the people, who

own the Government, is Government information?

Completing the satisfaction of citizen questionnaire answerers in this table-turning is the timing. The questionnaire was sent to all Government bureaus on Wednesday of this week with instructions to file complete answers to the 80 questions by September 15. In other words, no fooling around about it. (And while we hate ourself when we think things like this, we hope the requirement is laid on for every question to be answered in octuplicate.)

Secrecy is regarded by Washington's top newsmen as the No. 1 headache of the newsgathering profession. It has grown like cancer in some agencies, where the hushup technique has been perfected to a fine degree, with newsmen being sent from pillar to post to get the simplest fact. One Washington newsman related not long ago that he has to wait 3 days for a mimeographed biographical sketch of a Marine colonel to go through channels and receive the proper stamp approving it as what Defense Secretary Wilson calls "constructive."

The great trouble, the great threat to free minds is that the defense need of security in a few military matters is played into a huge, sacrosanct closet where officials may hide their failures and misdeeds.

And by the way, while we're rooting for the new House probe of information channels, who's going to investigate the fact that 41 percent of the 3,002 congressional committee sessions in the last Congress were "executive," a three-bit word for keep out, scram, and this means you?

As a further step, aside from the questionnaire, the subcommittee is assembling and checking reports of specific instances of refusal by executive agencies to make available their public papers to both the public and the Congress. The subcommittee has specifically asked each agency to justify its authority for withholding information. These replies will be analyzed carefully. The first series of hearings will be held this fall.

It is not the temper of the public to be left in the dark about decisions of the Government. As of now, one gets the impression that the public is being treated as if it could not be trusted with certain information to which it is rightfully entitled. The theory in some quarters within the Federal Government seems to be: What the people do not know will not hurt them.

It is not the temper of the press to be kept at arm's length when it makes legitimate inquiries of Federal agencies. Newspapermen are impatient with double talk, soft soap, the run-around, and the bum steer.

Nor is it the temper of the Congress to be denied information vital to legislating, appropriating and even orating. Congress has the right to know, under its mandate spelled out in the Constitution. I am sure the Congress has no intention to abdicate in this field.

Hoover Commission

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BROWN of Ohio. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I include therein the following column written by Philip W. Porter, which appeared in the Cleveland Plain Dealer titled "Porter on Hoover Unit":

PORTER ON HOOVER UNIT—COMMISSION IS BIPARTISAN—STATURE OF MEMBERS REQUIRES REPORTS BE TAKEN SERIOUSLY

(By Philip W. Porter)

If you're a normal citizen, you probably are bored with the details of government (and don't even read pieces like this). But since you won't hear as much about government in the next few months, now that Congress and the Legislature have both folded, I'm going to toss out a few more observations about the Hoover Commission.

Chances are you don't have the slightest idea who constitutes the Hoover Commission on Organization of the Executive Branch of the Government; probably you think it consisted only of old Herb and some research men. Not so. The Commission is a bipartisan one, with both branches of Congress, the administration and the public all represented. It consists of 5 Democrats and 7 Republicans: Attorney General Herbert Brownell, Jr., and Director of Defense Mobilization Arthur S. Flemming; Senators Styles Bridges, of New Hampshire, and John L. McClellan, of Arkansas; Representatives Clarence J. Brown, of Ohio, and Chet Holifield, California; former Postmaster General (and Democratic national chairman) James A. Farley; former Ambassador to Great Britain Joseph P. Kennedy; Sidney A. Mitchell, executive director of the first Hoover Commission; Robert G. Storey, dean of the Southern Methodist Law School; and Solomon C. Hollister, dean of the Cornell College of Engineering.

CAN'T BE BRUSHED OFF

That's a sharp list of people, well-balanced and imaginative. But no higher in caliber, actually, than the men who were chairmen of the various task forces, such big wheels as Gen. Mark W. Clark, President Harold W. Dodds of Princeton University, Gen. Robert E. Wood, a top official of Sears Roebuck & Co.; Charles R. Hook of Middletown, Ohio, chairman of the board of the Armco Steel Corp., and Adm. Ben Moreell, chairman of the board of the Jones & Laughlin Steel Corp.

The stature and unquestioned public spirit of these guys is one reason why the administration and Congress will have to take the report seriously and try to put into effect the recommendations (implement them, as the eggheads, say). They can't be brushed off, despite pressure groups. Nor should they be, for if adopted, Herbert Hoover says, they can eliminate the budget deficit next year and recapture for the Government in the long run about $15 billion which could be used to reduce the national debt.

COMPETITION TARGET

One of the principal recommendations of the Hoover Commission was that the Government should get out of enterprises it is running in competition to private business.

The Government has been manufacturing fertilizer, chain, sleeping bags, false teeth, spectacles, ice cream, maps, flags, paint, ammunition, clothing, magnesium, furniture, and ships. It provides rail, air, and marine transportation, trucking, blueprinting, insurance, and warehouses. It operates hotels, and moving picture studios, processes scrap, retreads tires, roasts coffee, washes windows, and repairs furniture and typewriters.

That's utterly absurd, you may say; there are plenty of industries doing all this already, and they should take the risk, not the taxpayers. How right you are. That's the point of the Hoover reports: get the Government out of activities it has no business in.

NEWS HEARTENING

Most of these unnecessary activities are in the Defense Department, so it was heartening last week to read that a half dozen businesses it has been running are going to be discontinued.

Such items are often unnoticed unless you search for them, for they don't warrant the bigger headlines. Among them was one 2 months ago about how the Government had finally sold almost all its wartime synthetic rubber plants to private industry and—believe it or not—had sold them for $10 million more than they cost originally.

There was also the recent announcement that the Goodrich-Gulf Co. which was organized to buy synthetic rubber plants, is considering putting up a $12 to $15 million facility somewhere around Avon Lake. This will be easy to understand: private industry buys factory, wants to expand, decides to locate new one near Cleveland, obviously will provide new employment for several thousand workers.

Hon. Michael A. Feighan, of Ohio, Awarded Honorary Degree of Doctor of Laws in Political Sciences by the Free Ukrainian University, Munich, Germany

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, on May 29 one of our distinguished colleagues, the Honorable MICHAEL A. FEIGHAN, of Ohio, was awarded an honorary degree of doctor of laws in political sciences from the Free Ukrainian University located in Munich, Germany. The Members of this House are keenly aware of the tireless efforts of our colleague in behalf of the cause of peace and human freedom and the many contributions he has made to a better understanding of the real menace of communism and its threat to the very existence of our entire civilization.

It is significant to note that the Free Ukrainian University was founded in Prague, Czechoslovakia, in 1921, by the invitation of Thomas G. Masaryk, the first President of Czechoslovakia. Under the protection of Thomas G. Masaryk this university served as a rallying point for Ukrainian intellectuals who fled their homeland after the Communists destroyed the independent government and up until World War II it was known as an intellectual center advocating those political principles essential to any democratic form of government. When Czechoslovakia was occupied by the Communists, this free university was transferred to Munich, Germany, and there received the support of the American occupation forces and later the official approval of the Federal Republic of Germany.

A significant tribute was paid to our colleague, Congressman FEIGHAN, on the occasion of his receiving this honorary degree of doctor of laws. Under leave to extend my remarks, I herewith include that well-deserved tribute made by the

board of governors of the Free Ukrainian University:

The Honorable MICHAEL A. FEIGHAN, distinguished American lawyer and legislator, has been warning the free world against the danger of imperialist Russian Communist aggression, a process pursued by the same group of ruthless enslavers for a period of 37 years. His great devotion to the task undertaken, uncompromising adherence to principle, and keenly penetrating mind, have brought him to the foreground of western civilization's fighters against the forces of darkness.

Often daring to tread upon untrodden ground, he finally broke many prejudices theretofore existing among those who were loath to even admit that neither Russia as such, nor the Soviet Union in particular, was not a political and national monolith.

A true leader in the cause of liberation of nations and peoples forcibly kept in bondage by Russian communism, he has gained the undying gratitude of all the non-Russian nations of the Soviet Union as a protagonist of American democratic ideals in all sectors of life: the religious, political, cultural, and academic. Thereby MICHAEL A. FEIGHAN fully merits the degree of doctor of laws in political sciences, honoris causa.

Where's the Discrimination?

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Where's the Discrimination?" which appeared in the July 29, 1955, issue of the Denton Journal, Denton, Md. This excellent editorial deals with the matter of cargo preference for American-flag vessels, and it reflects the growing conviction that the American merchant marine is "vital both to the national security and to the economy."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE'S THE DISCRIMINATION?

Some of our friends in foreign maritime nations have been critical of what they term "United States flag discrimination." Their principal target is a measure passed last year by Congress, known as the 50–50 law.

This law provides that half of the overseas cargo which is paid for or guaranteed as to payment by the United States Government, such as surplus commodities sold abroad, must travel in American-flag vessels. It is limited by a provision that these vessels must be available, and must offer the service at reasonable rates.

It's pretty hard to find any discrimination there. While foreign-flag vessels have been given the right to half of the cargo, in actual practice they have been doing much better, during 1954 over 80 percent of our tramp-borne cargoes moved in foreign bottoms, for the reason that there weren't enough American tramp ships available to do the job. In the overall picture we have been going downhill. According to an article in the New York Journal of Commerce, in 1946 American ships handled 60.9 percent of our dry cargo export and 56.3 percent of the imports. In a recent month the figures were 24.4 and 29.1 percent, respectively.

Other maritime nations have in effect legal restrictions far more sweeping than ours, in order to protect their merchant fleets. By comparison, American policy is truly liberal.

Basically, of course, the 50–50 law is designed to help keep the American merchant flag on the high seas. That is vital both to the national security and to the economy. The criticisms coming from abroad should be given small notice here.

The Record of the 84th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. ROBERT H. MOLLOHAN
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MOLLOHAN. Mr. Speaker, the first Democratic-controlled Congress to face a Republican President in 75 years has completed its first session. Inevitably, its record will be compared with that of the Republican 83d Congress—the first in 20 years to work with a representative of its own party in the White House.

According to the Congressional Quarterly, the 83d Congress, in its first session, met on 117 legislative days, approved 288 public laws, acted favorably on 32 of the administration's 44 proposals, rejected 3, took partial action on 3 and no action on 6.

By the same standard, the 84th Congress met on 112 legislative days, passed 390 public laws, approved 96 of the administration's 207 specific requests, finally rejected 14, had 16 passed by one House and pending in the other; gave committee consideration to 35; and left 44 for possible action in the second session.

But it is not by such statistical comparisons that the American people will sit in judgment upon the records of these two Congresses. The ultimate verdict will rest, not upon the quantity, but with the quality of the performance which each has rendered in the public interest. The 84th Congress will not suffer by such comparison.

In retrospect, the first session of the 83d Congress seems almost wholly barren of fruitful or constructive action. But with the turning over of the reins of government to a Republican administration after 20 years of Democratic control, this is to a large extent understandable.

Nevertheless, it seems unfortunate that the 83d Congress, in its first session seemed chiefly interested in initiating changes and that, for the most part, it was preoccupied with reorganizing government departments and agencies; with creating innumerable high-salaried positions for political appointees outside the Federal civil-service system; and with setting up study groups, commissions and committees for additional overhaulings of existing government services. Ten percent of all legislative action was directed toward these ends, while almost 20 percent was limited merely to extending existing laws.

Indeed its principal claim to fame would appear to depend upon the dubious distinction of having given away one of the Nation's richest national resources—its offshore oil reserves.

Further development of our natural resources for the common benefit of all the people was brought to a standstill; social-security legislation gained the questionable advantage of an especially appointed, but none to sympathetic study group; the shaky position of the Nation's farmers was bolstered only to the extent of emergency loans restricted to drought-disaster areas. Neither the veteran nor the Federal employee acquired any benefits of substantial nature. The small-business man received a sop in the form of a renamed Small Defense Plants Administration—the Small Business Administration—which was hemmed in with restricting limitations. Even big business suffered a surprising rebuff with the prolongation of the excess-profits tax beyond the date of its scheduled expiration. The national defense was weakened by curtailment of the Air Force buildup program; and our international relations were boosted principally by expressions of sympathy for minority groups and satellites behind the Iron Curtain and a Refugee Relief Act that kept out more freedom-seeking immigrants than it admitted.

In contrast to this negative record, the accomplishments in the 1st session of the 84th Congress are genuinely outstanding.

The defense and security of the Nation have been strengthened by insistence upon an increased air wing goal; by the authorization of an additional $356 million for the increased production of B–52 jet bombers; by a 4-year extension of the regular draft, a 2-year extension of the doctors and dentists draft, and passage of legislation to achieve a Ready Reserve of 2,900,000 trained men by 1960.

The natural resources of the country are assured of continued development by the addition of 107 projects, not requested by the administration, for which funds have been included in the public works appropriations bill. The farmer has been aided by a law lowering the interest rate on disaster loans—which the administration had increased to 5 percent—to a maximum of not more than 3 percent; by providing special help in low-income areas; by a new modernized system for dividing up REA loan funds among the States; and by repealing a restriction of ACP payments enacted by the last Congress and which committed such payments to be made only to farmers who had fully complied with all of the acreage restrictions and marketing quotas in effect on basic farm commodities.

For low-income families the 84th Congress reversed its predecessor to assure continuation of slum clearance and the construction of 45,000 public-housing units in the current fiscal year. Small business has been helped by a law providing permanent, instead of temporary,

permits for the small "feeder" airlines serving smaller communities; by increased penalties for violation of the antitrust laws; by increases in the Small Business Administration's revolving funds for making loans; and by the closing of loopholes in the tax laws which permitted a billion-dollar-windfall principally to the advantage of big corporations.

For veterans, benefits under the GI on-farm training program have been increased; the same VA home-loan program has been extended to include farm homes as well as city dwellings; and home improvements as well as home purchases have been included in the direct loan program. Veterans in service as of January 31, 1955, can go on building up GI school benefits as long as they are in service; and survivors' benefit improvements have already passed the House and will, without doubt, pass the Senate in the next session.

The average citizen has been benefited by an increase in the minimum wage; by the appropriation of $30 million, plus additional sums as may be necessary, to provide grants to States for free polio vaccine. Unemployed workers have been assured of wheat flour and corn in the distribution of surplus food to needy families. Employees of the Federal Government, both postal and classified workers, have received long-overdue cost of living pay increases; and last, but not least, a social-security bill has already passed the House which will extend coverage and provide additional benefits for women and disabled workers.

This is only a partial listing of the major legislative action of the 84th Congress. It represents a sound record of achievement in the interests of all the American people and a return to that atmosphere of dignity and sanity in Government which the American people have a right to expect in the conduct of their Nation's affairs.

The Coal Industry and Its Importance to America's Economy and Progress

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. JENKINS. Mr. Speaker, the commercial application of atomic energy is destined to occupy an increasingly predominant position in America's fuel picture. Because of the enthusiasm for the development of this new source of power, there may be a tendency to overemphasize the possibilities of nuclear fission to the neglect of our traditionally basic fuels. I am thinking particularly of coal, which has been used most prominently as a source of camparison—pricewise at least—in news stories about the theoretical economies of atomic energy.

The most heralded projects at the present time are electric powerplants that will be fueled by the atom. Scientists and engineers foresee universal construction of electric generating plants in which reactors will provide power both for domestic and industrial consumption. But regardless of the increasing application of atomic energy to electric utilities, there will still be a need for more and more coal throughout our vast utilities systems. Fuel experts predict that, no matter how much power is to be generated by the new method, the electric utilities industry will by 1975 require at least three times more coal than is currently being consumed. This is strong argument that our coal industry will continue to be the fundamental source of energy for a long time.

From 1800 through the first half of the present century, coal was responsible for 46.1 percent of the heat and mechanical energy produced in the United States. To heat our homes and power our industries in peace and war—and to fill the fuel deficits in friendly nations—more than 28 billion tons of anthracite and bituminous coal have come from our mines.

Ohio, which through the years has been America's fifth leading coal producer, mined more than 1 billion tons of bituminous coal in the last 100 years. Records show that in 1806, the first mining in the State took place at Coalport, now in Pomeroy, Meigs County, which is in the congressional district I have the honor to represent. In the northern part of the State, the first mine was opened in 1810 in Summit County. In those days, besides being used for heating purposes, coal served in forges and in salt furnaces. As consumption increased and further utility value was discovered, production gradually moved upward. Shortly after the middle of the last century, Ohio's mines were producing more than a million tons a year; by 1900, the figure was in the vicinity of 20 million tons. In 1920, a record output of 45,878,000 tons was reached; in 1948 the output was nearly 39 million tons. There has been a steady decline in the past several years. In 1954, the production was 22 percent below the 1948 figure.

Federal and State Governments owe it to the general public, as well as to the mine owners and mine workers, to rectify any unfair competitive conditions that have come about. The Federal administration took the first such steps on February 26 of this year with the issuance of the report by the Cabinet Committee on Energy Supplies and Resources Policy. One of the recommendations is the provision stating in effect that oil imports should be prevented from continuing their wholesale raids on United States domestic fuel markets. I have, for years past, supported legislative proposals to prevent excessive quantities of foreign goods from taking over the markets that are the rightful customers of American products. The principle of protecting American industry and labor from goods made in countries whose wage scales and standards of living are far below ours has been disputed by the so-called free trade group over the years. In no case, however, can anyone justify the disemployment of large numbers of American workers, particularly in industries which are vital to the national security.

Foreign oil has been coming into the United States at sharply increased rates since shortly after the end of World War II. In April 1955 R. L. Ireland, chairman of the executive commtitee, Pittsburgh Consolidation Coal Co., with headquarters in Cleveland, appeared before a Senate subcommittee and stated:

> In many cases, loss of markets for Ohio-produced coal can be attributed directly to the chain reaction that has resulted from the displacement of coal, in east coast markets, by imported residual fuel oil. Some of the coal displaced in the eastern markets has successfully sought other outlets among customers who ordinarily would burn Ohio-produced coal. The result is that because of certain market conditions, restrictive transportation rates and other factors, Ohio coal is stymied in many instances in its efforts to recoup these lost sales.

Much of Ohio's coal is used in generation of electricity. A number of Ohio's public utility companies are expanding their present capacity. When these expansion programs are completed, considerably more coal will be required for the generation of electricity. The Federal Government is constantly increasing its fuel consumption. The Tennessee Valley Authority, for instance, will soon be generating as much electricity from coal as from water power, with consumption by this agency scheduled to exceed 13 million tons annually beginning in 1956. It is estimated that the Government's atomic energy plants now under construction will use about 23 million tons of coal per year when they are completed. As you know, one of these facilities is located in southern Ohio and will depend upon our State's mines for much of the fuel to generate the vast amounts of electricity which will be required.

The coal mining industry is going to have to expand to meet these and the many other demands that will be made upon it. For some time, many mining companies have been forced to sell their product at a price below actual cost—a condition that could imperil the entire industry structure. Our coal industry must be ready for the great undertaking that lies ahead, and it cannot be prepared for this job if it is forced to operate at a loss in the interim period. The President's Material Policy Commission, which 3 years ago completed a study of the Nation's future energy requirements, estimated that within a quarter of a century coal consumption will rise from its present level to more than 800 million tons a year, with a far greater amount needed in the event of world hostilities. As I have mentioned, electric utilities will be using increased tonnage as will also the coke and steel industries. Those markets alone will then be consuming much more than the entire Nation is using at the present time. To these must be added the estimated demands of manufacturing industries, the railroads, the chemicals industries, and the retail and export markets.

The industry's job is cut out for it. I have confidence in mine management and in the great laboring force in our coal communities. I am disturbed because of the fact that depressed conditions in the coal industry have brought

vast unemployment to our people. In some cases the family breadwinner has been laid off for months at a time. In other cases, he must struggle on an income that comes with 1 or 2 or 3 days work per week. Unless greater opportunities are open to him, it is only natural that he will think about leaving his native locality to seek employment elsewhere. In this event, there could very well be a shortage of miners at a time when America needs them most.

Whatever unnecessary obstacles that are burdening this vital industry should be removed. Coal has always been an essential element in America's progress. It will continue to be so for many generations to come.

New Jersey Strongly Supports Plan for Observing the Golden Anniversary of the Conservation Movement

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, New Jersey this year is observing the 50th anniversary of the conservation movement. New Jersey passed its act for the establishment of State forest-park reservations in 1905 and acquired two tracts within the year. One of these in Bass River Township, Burlington County, became the nucleus of our present Bass River State Forest.

It was our good fortune, shortly before 1900, to have Gifford Pinchot, our country's greatest pioneer conservationist, as the consulting botanist for a survey and study of the forests of southern New Jersey. An administrative report of the period called Mr. Pinchot's study "refreshing as well as forceful in suggestion." Many of his recommendations were promptly adopted.

It is with this background in mind that I joined with Senator JAMES E. MURRAY, chairman of the Interior and Insular Affairs Committee of the United States Senate, in developing a joint resolution providing for the observance and commemoration of the 50th anniversary of the founding and launching in the United States of the conservation movement for the wise and efficient use and preservation of our country's priceless resources.

The year 1957 marks the golden anniversary of the first conference of State governors ever held in the history of the United States. The conference, called by President Theodore Roosevelt to consider the problem of conservation was addressed by the President who said among other things that—

> So vital is this question of conservation, that for the first time in our history the chief executive officers of the States separately, and of the States together forming the Nation, have met to consider it. It is the chief material question that confronts us, second only—and second always—to the great fundamental question of morality.

A bipartisan group of 28 House Members and 29 Senators joined in introducing the joint resolution.

The House Members introducing the measure were the gentlewoman from New York, KATHARINE ST. GEORGE; the gentleman from California, B. F. SISK; the gentleman from Delaware, HARRIS B. MCDOWELL, JR.; the gentleman from Michigan, THADDEUS M. MACHROWICZ; the gentleman from California, CECIL R. KING; the gentleman from New Jersey, T. JAMES TUMULTY; the gentleman from Ohio, THOMAS LUDLOW ASHLEY; the gentleman from New Jersey; WILLIAM B. WIDNALL; the gentleman from New Jersey, HUGH J. ADDONIZIO; the gentleman from New Jersey, PETER W. RODINO, JR.; the gentleman from Arizona, STEWART L. UDALL; the gentleman from Montana, LEE METCALF; the gentleman from New Jersey, HARRISON A. WILLIAMS, JR.; the gentleman from Colorado, WAYNE N. ASPINALL; the gentleman from California, CHET HOLIFIELD; the gentleman from California, JAMES ROOSEVELT; the gentleman from Minnesota, JOHN A. BLATNIK; the gentleman from New York, EMANUEL CELLER; the gentleman from Pennsylvania, FRANK M. CLARK; the gentleman from Oklahoma, ED EDMONDSON; the gentleman from Wisconsin, LESTER R. JOHNSON; the gentleman from Pennsylvania, JOHN P. SAYLOR; the gentleman from Pennsylvania, HUGH SCOTT; the gentleman from Minnesota, ROY W. WIER; the gentleman from Pennsylvania, LEON H. GAVIN; the gentleman from Michigan, CHARLES C. DIGGS, JR.; the gentleman from Wisconsin, HENRY S. REUSS; and myself.

The text of the joint resolution follows:

> Joint resolution to provide for the observance and commemoration of the 50th anniversary of the founding and launching of the conservation movement for the protection in the public interest, of the natural resources of the United States
>
> Whereas the year 1957 marks the 50th anniversary of the first conference of State governors ever held in the history of the United States; and
>
> Whereas President Theodore Roosevelt, who called the conference in his opening address on May 14, 1907, said in part:
>
> "So vital is this question of conservation, that for the first time in our history the chief executive officers of the States separately, and of the States together forming the Nation, have met to consider it. It is the chief material question that confronts us, second only—and second always—to the great fundamental question of morality.
>
> "The occasion for the meeting lies in the fact that the natural resources of our country are in danger of exhaustion if we permit the old wasteful methods of exploiting them longer to continue. In the development, the use, and therefore the exhaustion of certain of the natural resources, the progress has been more rapid in the past century and a quarter than during all preceding time of history since the days of primitive man.
>
> "All these various uses of our natural resources are so closely connected that they should be coordinated, and should be treated as part of one coherent plan and not in haphazard and piecemeal fashion"; and
>
> Whereas this first conference of governors, in complete agreement with the thinking of President Theodore Roosevelt, adopted unanimously a series of resolutions calling for a national policy and programs that would preserve and protect the forests, the water and streams, the soil and the range, the minerals, fuels, and all other natural resources; and
>
> Whereas this action by the State governors, assembled together for the first time in history, gave formal birth to the conservation movement in the United States; and
>
> Whereas the problems involving the protection of our natural resources are as great today, if not greater than ever before, as pointed out by President Dwight D. Eisenhower at the Mid-Century Conference on Resources for the Future held in Washington, D. C., in December 1953; and
>
> Whereas it has been emphasized repeatedly by both Democratic and Republican Presidents of the United States since Theodore Roosevelt that conservation of our natural resources is a bipartisan, continuing, and never-ending struggle that should have the interest and support of all citizens; and
>
> Whereas the conservation of natural resources is the key to the future because the very existence of our Nation depends on conserving the resources which are the foundations of its life; and
>
> Whereas it is vital for the continued welfare and prosperity of our citizens that conservation policies be followed in the future for the protection of our natural resources which will make certain that the purpose of "conservation is the greatest good of the greatest number for the longest time"; and
>
> Whereas the most effective way of maintaining such conservation policies is for the greatest possible number of citizens to maintain a continuing interest in the problem of conserving our natural resources; and
>
> Whereas this interest of all citizens will be aroused, renewed, and stimulated through the proper observance of the golden anniversary of the birth of the conservation movement in the United States: Therefore, be it
>
> *Resolved, etc.*, That (a) there is hereby established a commission to be known as the National Conservation Memorial Commission (hereinafter referred to in this joint resolution as the "Commission").
>
> (b) The Commission shall be composed of the following members: The President of the United States, who shall be honorary chairman; the President of the Senate and four Members of the Senate appointed by him; the Speaker of the House of Representatives and 4 Members of the House of Representatives appointed by him. The Commission members shall serve without compensation and shall select a chairman from among their number. The Chairman may, with the advice of the Commission, expand its membership to include 15 representatives of national nonprofit organizations dedicated to conservation of various natural resources and 10 citizens at large from private life.
>
> SEC. 2. It shall be the duty of the Commission to prepare and carry out a comprehensive plan for the observance and commemoration of the 50th anniversary of the birth of the conservation movement in the United States and generally promote among all citizens a realization of the importance of protecting the natural resources of the United States. In the preparation of such plan, the Commission shall have the cooperation and assistance of all departments and agencies of the Federal Government. It shall also cooperate with the governors of the individual States in order that there may be proper coordination and correlation of plans for such observance.
>
> SEC. 3. (a) The Commission is authorized to appoint and prescribe the duties and fix the compensation of such employees as are necessary in the execution of its duties and functions.
>
> (b) There is hereby authorized the appropriation of $100,000 to carry out the purposes of this joint resolution, including all necessary traveling and subsistence expenses incurred by the members and employees

of the Commission. All expenditures of the Commission shall be allowed and paid upon presentation of itemized vouchers therefor, approved by the Chairman of the Commission.

(c) The Commission shall cease to exist not later than 1 year after the date of the observance of the golden anniversary of the birth of the conservation movement in the United States.

I include here some of the letters which I have received regarding this joint resolution:

STATE OF NEW JERSEY,
DEPARTMENT OF CONSERVATION
AND ECONOMIC DEVELOPMENT,
Trenton, N. J.

Hon. FRANK THOMPSON, JR.
House of Representatives,
Washington, D. C.

DEAR FRANK: I am very much interested in your plan to provide for the observance and commemoration of the 50th anniversary of the founding and launching of the national conservation movement. I shall be pleased to serve as one of the cosponsors.

Perhaps you know that here in New Jersey we are having such a 50th anniversary this year. Our State passed its act for the establishment of State forest-park reservations in 1905 and acquired two tracts within the year. One of these in Bass River Township, Burlington County, became the nucleus of our present Bass River State Forest.

It was also our good fortune, shortly before 1900, to have Gifford Pinchot the consulting botanist for a survey and study of the forests of southern New Jetrsey. An administrative report of the period called Mr. Pinchot's information "refreshing as well as forceful in suggestion." It appears that some of his recommendations promptly took root and grew.

Although the prevention of forest fires seems to have been a primary consideration in much of our early conservation work, there was also a recognition of the need for outdoor recreation areas, demonstration woodlots, and other practices leading toward our present emphasis on multiple land use of all public properties.

If our department can be of help to you in carrying out your plans for the observance of the national conservation anniversary, we hope you will call upon us.

Sincerely yours,
JOSEPH E. MCLEAN,
Commissioner.

COLUMBIA BROADCASTING SYSTEM, INC.,
New York, N. Y., July 28, 1955.

The Honorable FRANK THOMPSON, JR.,
House Office Building,
Washington, D. C.

DEAR MR. THOMPSON: Thank you very much for your letter of July 23 regarding your plan to commemorate the 50th anniversary of the founding and launching of the conservation movement in the United States.

I think the effort you and Senator MURRAY are planning is a very worthy one and that it can be especially effective in focusing public attention on the problems and possible courses of action if its general scope is as clearly fixed as possible at the outset. This would be desirable, I think, because of the differing definitions there may be of conservation, itself; and also because of possible differing views as to the relation of overseas sources to our domestic resource policy.

If, as I hope, the effort you and Senator MURRAY are proposing would be of the broadest possible scope (and would therefore embrace the wise or efficient use concept of conservation as well as the idea of preservation, and would also embrace a consideration of our materials position in terms of overseas as well as domestic sources), I would view your your undertaking most favorably.

Perhaps you would permit me to defer a definite reply until your plans have developed to the point that you are assured of the bipartisan support you are trying to achieve in the Congress and of the broadest possible approach to the subject of conservation.

I look forward to hearing further from you on this.

The only suggestions I would offer on the proposed joint resolution have to do with expanding the idea of preservation to include the wise or efficient use of natural resources. Also, in the third paragraph from the bottom of the first page, the date of the Mid-Century Conference should be 1953.

With appreciation of your writing to me, and with all good wishes, I am,

Sincerely yours,
WILLIAM S. PALEY.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

Mr. WILLIAM S. PALEY,
Chairman of the Board,
Columbia Broadcasting System, Inc.,
New York, N. Y.

DEAR MR. PALEY: I appreciate very much having your comments on the joint resolution Senator JAMES E. MURRAY and I have been working on to provide for the observance and commemoration of the 50th anniversary of the founding and launching of the conservation movement for the preservation of the natural resources of the United States. You will be interested in the fact that though the resolution was developed in the closing days of the first session still 21 Democrats and 7 Republican Senators were able to join with Senator MURRAY in sponsoring his measure; and 23 Democrats and 4 Republican Members of the House joined me in introducing the resolution in the House.

You are, of course, completely correct when you say that the commemoration of the golden anniversary of the conservation movement can be especially effective in focusing public attention on the problems and possible courses of action before us in this field. The wise and efficient use of natural resources, I feel, is inherent in the concept of conservation but it would undoubtedly improve the resolution to have language spelling this out included in the text. I only wish that your letter containing this suggestion had been received in time to have done this before the joint resolution was presented. This can be done, however, early in the next session of the Congress or at the time the resolution is being considered.

Copies of the resolutions presented in the Senate by Senator MURRAY and by me in the House are enclosed for your consideration.

I hope that you will be able to arrange your schedule so that you can appear and testify when hearings are held next year. In the meantime, it is my hope that there will be wide public discussion of the plan to commemorate the 50th anniversary. I have been informed by C. R. Gutermuth, secretary of the Natural Resources Council of America, that this will be one of the subjects to be on the agenda of the forthcoming annual meeting of the council. The wise and efficient use of our natural resources and their conservation and preservation for the future is of the broadest public concern. I know this was made evident to everyone who participated in the Midcentury Conference on Resources for the Future which you chaired so brilliantly and effectively in Washington in December 1953. Any assistance which you can give in publicizing the plan for commemorating the anniversary will be most helpful and will be greatly appreciated by the congressional sponsors of this joint resolution.

With kindest regards.

Cordially,
FRANK THOMPSON, Jr.,
Member of Congress.

WASHINGTON, D. C., *July 31, 1955.*

Representative FRANK THOMPSON, JR.,
House of Representatives,
Washington, D. C.

DEAR MR. CONGRESSMAN: Very many thanks for your letter telling me of the joint resolution re conservation sponsored by yourself and Senator MURRAY. I am certainly interested in this—and pleased that 13 Members have joined you in sponsoring the measure.

Since bipartisan sponsorship in both the Senate and House is sought, have you thought of asking GAVIN and SAYLOR, both Congressmen from Pennsylvania, who have expressed to me their strong interest in conservation policies?

I think the resolution is excellent—but I have one suggestion to make if possible. Would it not help to strengthen the position of the resolution if something were said from the antimonopoly angle, which as you know was so much a factor in the thinking of both Gifford Pinchot and T. R. Roosevelt and is quite if not even more important today. You remember the former said:

"The conservation policy has three great purposes:

"First, wisely to use, protect, preserve, and renew the natural resources of the earth.

"Second, to control the use of the natural resources and their products in the common interest, and to secure their distribution to the people at fair and reasonable charges for goods and services.

"Third, to see to it that the rights of the people to govern themselves shall not be controlled by great monopolies through their power over natural resources.

"Conservation is the application of commonsense to the common problems for the common good. Since its objective is the ownership, control, development, processing, distribution, and use of the natural resources for the benefit of the people, it is by its very nature the antithesis of monopoly."

Sincerely yours,
CORNELIA BRYCE PINCHOT.

That the preservation and protection of our natural resources today is an even greater problem than it was 50 years ago is pointed up by the report of the President's Materials Policy Commission. This Commission, headed by William S. Paley, chairman of the board of the Columbia Broadcasting System, made an exhaustive study of every phase of the Nation's resources and materials. The report, entitled "Resources for Freedom," was submitted to the President and the Congress in 1952. At one place the report says:

The full report of the President's Materials Policy Commission, Resources for Freedom, has as its central task an examination of the adequacy of materials to meet the needs of the free world in the years ahead. Even a casual assessment of these years shows many causes for concern. In area after area we encounter soaring demands, shrinking resources, the consequent pressure toward rising real costs, the risk of wartime shortages, the strong possibility of an arrest or decline in the standard of living we cherish and hope to share. As a Nation, we are threatened, but not alert. The materials problem now demands that we give new and deep consideration to the fundamental upon which all employment, all daily activity, eventually rests: The contents of the earth and its physical environment.

None of us in the United States, whether in civilian or military life, is easily accustomed to the idea that raw materials can be a problem. Indeed, America's problem today is precisely the reverse of the problem to which all our tradition has accustomed us. A hundred years ago resources seemed limitless and the struggle upward from meager

conditions of life was the struggle to create the means and methods of getting these materials into use. In this struggle we have by now succeeded all too well. So efficiently have we built our high-output factories and opened the lines of distribution to our remotest consumers that our sources are faltering under the constantly increasing strain of demand. As a nation, we have always been more interested in sawmills than seedlings; we have put much more engineering thought into the layout of factories to cut up metals than into mining processes to produce them. We think about raw materials last, not first.

THE CONVERGING FORCES

Today, throughout the industrial world, but centering inevitably in the heavily industrialized United States, the resulting materials problem bears down with considerable severity. The nature of the problem can perhaps be successfully oversimplified by saying that the consumption of almost all materials is expanding at compound rates and is thus pressing harder and harder against resources which, whatever else they may be doing, are not similarly expanding. This materials problem is thus not the sort of "shortage" problem, local and transient, which in the past has found its solution in price changes which have brought supply and demand back into balance. The terms of the materials problem we face today are larger and more pervasive.

Powerful historical streams have converged to make the problem uniquely intense today.

Mr. Speaker, the President's Materials Policy Commission submitted many excellent recommendations for preserving our resources and materials and for their wise and efficient use. One of the greatest services that the proposed National Conservation Memorial Commission could render the Nation would be to arouse a continuing interest on the part of our citizens in the problems of protecting our natural resources. Whatever can be done to encourage the people to familiarize themselves with these problems and thus arouse public sentiment toward a program of action will benefit our country and its citizens for generations to come.

The Cheese Case

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. ARENDS. Mr. Speaker, much ado has been made about the Department of Agriculture's purchase and sale of cheese in connection with its administration of the Agricultural Act of 1949 and its efforts to assist the dairy farmer under the price-support program.

I have had occasion to look into this whole matter. There has been a great deal of both misunderstanding and misrepresentation with respect to it. I think that we should try to keep the record straight as to just what is involved.

The Comptroller General recently concluded that transactions in supporting cheese prices by the Department of Agriculture pursuant to announcement of DA-112 did not constitute a purchase within the meaning of the Agricultural Act of 1949. He also stated that he does not in any way question the sincerity of purpose or infer that there was intentional wrongdoing on the part of any officer concerned. What are the facts and the implications inherent in this decision?

The Agricultural Act of 1949 directs that the price of milk, butterfat, and the products thereof be supported through loans on or purchases of the products of milk and butterfat. This necessarily requires that the price support be provided by transactions with manufacturers, processors, cooperatives, and other handlers of dairy products, particularly butter, Cheddar cheese, and nonfat dry milk solids.

The Department, since 1947, has consistently under the law extended this price support to producers by offering to purchase dairy products meeting required specifications at announced purchase prices from all manufacturers, processors, cooperatives, and other handlers without discrimination. Thus, farmers are able to market their milk production at price-support levels through their regular trade outlets, since such outlets have the assurance of this Department that the products of such production can be sold to the Department at the guaranteed purchase price for the product.

The effective operation of the dairy price-support program depends upon the full play of competition which exists between handlers and manufacturers and their willingness to pay support prices in a competitive market for milk in reliance upon the assurance which this Department gives of a market for the dairy products at guaranteed prices.

This Department has also consistently, since 1950, offered to sell to any person dairy products which the Commodity Credit Corporation acquired under the price-support program at a specified markup—2 cents per pound in the case of cheese—above the price-support level prevailing at the time it sold such products.

The transactions under announcement DA-112 in which the Commodity Credit Corporation contracted for the purchase of dairy products in March at regular purchase prices under the support level of 90 percent of parity then in effect and simultaneously contracted for the sale thereof in April at regular sales prices based on the new support level of 75 percent of parity, beginning April 1, 1954, plus markup, were in keeping with these long-established policies.

At least three successive solicitors and general counsels of the United States Department of Agriculture, along with the legal staff of the Department have construed such transactions as authorized under the law.

The action taken by the Department was an integral part of the overall price-support efforts to bring stability to the dairy industry and was instituted solely in the interest of the American dairy farmers.

The transactions stabilized the price for American dairymen during the period of price-support adjustment by halting a downward trend in the farm price of milk in March 1954.

The procedure by which such purchase and sales were consummated, as set forth in Announcement DA-112, effected an efficient, businesslike operation, saved the Government the cost of at least 1 month's storage plus the cost of moving into and out of storage on all of the commodities involved.

It assured consumers a continuing supply during the time when the market was undergoing a transition between the old and new price-support levels.

It should be noted that every action taken by the Department represented a transaction to provide farmers with the announced support price throughout the entire period and maintain a movement of cheese through the established outlets. Some of the basic questions which should be considered in appraising the effect of the Fountain committee report are—will this report be detrimental to farmers and future farm programs? Newspaper headlines and cartoonists have used this report as a vehicle for attacking the entire farm program. The costs and difficulties involved in dairy price-support programs have been spotlighted to the disadvantage of the dairy producers. Will this report make future administrators less aggressive in trying to protect the interests of farmers? I am sure that Congressman FOUNTAIN did not intend these unfortunate effects on agriculture.

A further effect of these hearings and the unfortunate publicity may be less aggressive efforts on the part of future governmental administrators to try to save money for taxpayers. In the past there has been too much attitude in Government of "take the most protected courses of action—why risk a congressional investigation."

The Department of Agriculture should not be deterred from trying to protect the interests of farmers, taxpayers, and the public generally. I am sure that the approach of the Department, in checking with its General Counsel to determine the legal aspect of any proposed action and then moving forward to administer the law in accordance with the overall objective of protecting the interest of producers, will meet with the approval of the dairy farmer and those Members of Congress serving dairy districts.

Retirement of Orme Lewis

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. ENGLE. Mr. Speaker, according to a news release from the Department of the Interior, Assistant Secretary Orme Lewis will leave the Department on September 15, 1955, to return to his law practice in Phoenix, Ariz.

Mr. Lewis in the past 30 months has served as Assistant Secretary for Public Land Management, and in this capacity

has directed the activities of five agencies within the Department having responsibilities of vital importance to the West and to the Nation—the Bureau of Land Management, the Bureau of Indian Affairs, the National Park Service, the Fish and Wildlife Service, and the Office of Territories.

During his period of service as Assistant Secretary, I served in the 83d Republican Congress as ranking minority member of the House Committee on Interior and Insular Affairs, and during the present Democratic Congress have served as chairman of that committee, whose functions deal almost exclusively with matters involving the Interior Department.

In my committee role—and as a Member of Congress representing a district where natural resources development and utilization forms a principal economic base—I have had frequent contact with public land management matters and with Orme Lewis.

While I have on occasion disagreed with him in political philosophy, I have greatly respected his ability to master comprehension of the varied and frequently technical subjects upon which he has testified before the committee. I have differed in several instances with the policy recommendations of the Department in matters under his jurisdiction, but at the same time have found him outstandingly qualified to articulate that policy and to defend his reasons for supporting it.

As a westerner, Mr. Lewis used an open mind and broad-view approach to problems; as a trained and practicing lawyer he has demonstrated that he has equipped himself to logically and precisely define the issues involved and then state his case. He was unusually conscientious and dedicated in purpose.

Mr. Lewis was able to bring to Washington in his work with the Department a broad knowledge of the natural and human resource problems of the West, and his experience here should serve him well when he returns to Arizona.

I join with his many good friends in Washington and the Congress in wishing him every good success for the future in the knowledge that he has made a lasting public service contribution to the cause he served.

Backstage in Rubber Plants Case

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. POLK. Mr. Speaker, under the title "Backstage in Rubber Plants Case" in his column the Washington Merry-Go-Round, in the Washington Post and Times Herald of March 22, 1955, Mr. Drew Pearson reported on the inside story behind the sale of the Government-owned synthetic rubber factories.

This question was voted on, on two occasions, in the House of Representatives during this session of Congress; first, on March 22 on House Resolution 170 and again on March 23, on House Resolution 171. In both instances I voted to disapprove the sale of the Government-owned rubber factories. It was pointed out during the debate on these bills that rubber prices would rise after the sales were completed. This has proved true for only a few weeks ago a substantial increase in the price of automobile tires was announced. A further objectionable feature of the sale was that the Government rubber properties, having a potential value of $584,651,170, were authorized to be sold for about $289 million.

Under leave to extend my remarks, I include Mr. Pearson's column, as follows:

THE WASHINGTON MERRY-GO-ROUND—BACKSTAGE IN RUBBER PLANTS CASE

(By Drew Pearson)

Here is more of the inside story showing why some Congressmen are worried over the monopolistic sale of the Government-owned synthetic rubber factories. Their disposal comes up for a vote in the House of Representatives today.

Toward the end of the Truman administration the Federal Trade Commission started probing a monopolistic scheme by which the Big Four rubber companies purchased synthetic rubber from the big oil companies, then turned around and sold their tires through the filling stations of those same oil companies.

Thus Shell Oil had a contract with Firestone and Goodyear to sell their tires through Shell filling stations and not sell the tires of any other manufacturer. Any Shell filling station operator who sold an independent brand of tires lost his Shell agency. In return, Shell got an overriding commission or rebate of 10 percent from Firestone and Goodyear.

This practice, of course, made it extremely tough for a manufacturer outside the big four to sell tires; so the Federal Trade Commission started to investigate. At that time briefs were filed on behalf of Firestone by its attorneys, Edward Howrey and S. Chesterfield Oppenheim.

PROBE HUSHED UP

Months passed. The Eisenhower administration came into office. The son-in-law of Harvey Firestone, Charley Willis, joined the White House staff, became right-hand man to Assistant President Sherman Adams. Harvey, himself a big Ike booster, was a visitor at the White House, attended Ike's famous stag dinners.

Simultaneously, the following interesting things happened: Firestone was appointed Chairman of the Federal Trade Commission.

2. S. Chesterfield Oppenheim, other attorney for Firestone before the FTC, was appointed cochairman of the Justice Department committee to rewrite the antitrust laws.

3. The FTC investigation of Firestone and the other big rubber manufacturers got lost in the FTC shuffle. It just evaporated, disappeared; nobody heard any more about it. It is now dead.

Ed Howrey, FTC Chairman, promised the Senate he would keep hands off matters pertaining to his old client, Firestone, and doubtless he has. But Charley Willis has been reaching into the FTC, putting in new staff personnel, easing out old trustbusters, just as he has reached into the Federal Communications Commission, the Interstate Commerce Commission, and the Civil Aeronautics Board.

So with the FTC probe of the big four rubber companies and their oil company hookups dropped, let's see how the sale of the Government rubber factories affects their hookups.

"NAKED" MONOPOLY

Congressman YATES, of Illinois, testified eloquently on this. He showed how the sale nails down the monopoly tighter than ever—how the independent rubber companies now won't be able to buy synthetic rubber for there is frequently a shortage of synthetic rubber, and production will now be controlled by the Big Four and their oil company partners, not rationed by the Government as is the case today.

"The most naked combination between the oil distribution and the tire manufacturers," testified Yates, "is found in the proposed purchases of the Government plant at Port Neches, Tex., by Goodrich-Gulf Chemicals and Texas-United States Chemicals. Goodrich and Gulf Oil together will manufacture synthetic rubber. The synthetic rubber will then be 'sold' to Goodrich to manufacture tires.

"Gulf will then distribute the tires for Goodrich at Gulf's service stations. Gulf will, of course, allow its dealers to handle only tires approved by Gulf. The vicious price squeeze and discriminatory practices which have already been mentioned in connection with the integration of Shell through Firestone and Goodyear are already apparent.

"The Commission's disposal program," continued Yates, referring to President Eisenhower's commission to sell the rubber factories, "also allows United States Rubber and the Texas Oil Co. to combine as purchaser of the copolymer plant at Port Neches, Tex.

"United States Rubber is owned and controlled, together with General Motors, by the du Pont Corp.," testified the Congressman from Illinois. "The du Pont Corp. owns the Ethyl Corp. in equal shares with Standard Oil of New Jersey. In the past, Standard and Du Pont, through the Ethyl Corp., maintained a nationwide system of price fixing of retail gasoline until stopped by the United States Government.

"But the United States Rubber Co. also sells its tires to all Standard companies and filling stations through Atlas. When you go to a Standard Oil filling station you can only buy Atlas tires.

"Finally and almost unbelievably," concluded Yates, "the Eisenhower plan allows Goodrich, Gulf, the Texas Co., and United States Rubber to combine together to purchase and operate the largest and most efficient Government butadiene plant.

"With these sales the Government is turning over an entire industry to a few select companies. With such interlocking and integrated patterns, it is silly to taly about free competition.

Cooperation of Many Individuals Results in House Interior Committee Accomplishments

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. ENGLE. Mr. Speaker, the House Comittee on Interior and Insular Affairs, during the session of the 84th Congress just ended, has again established what I

believe to be an outstanding record of performance of its legislative responsibilities.

There is published elsewhere in the Appendix for the information of Members a summary of the major measures acted upon by this standing committee which I serve as chairman. Here, I wish to comment briefly on a few of the aspects of our committee's functions which made that performance possible.

Notwithstanding the large number of bills reported from the committee, we have received prompt attention and fair consideration by the Speaker, Mr. RAYBURN, of Texas; by the majority leader, Mr. MCCORMACK, of Massachusetts; and by the chairman of the Rules Committee, Mr. SMITH of Virginia, in the scheduling of bills for floor action. In this matter, the majority has fully consulted with, and has received the cooperation of the minority leader, Mr. MARTIN, of Massachusetts. The patience and persistence of the majority whip, Mr. ALBERT, of Oklahoma, and the minority whip, Mr. ARENDS, of Indiana, has assured advance notice of the legislative program in a manner which has resulted in full attendance of Members.

COMMITTEE MEMBERS AND STAFF

The committee has broad responsibilities in the field of natural resources and the public domain, including administration and development of our national parks system, and with respect to the administration and welfare of our Indians, Indian tribes, and our other fellow citizens in the Territories and possessions of the United States.

Reflecting recognition of the breadth of our assignment, the committee roster of 32 members shows representation from 19 States, Hawaii, Alaska, and Puerto Rico. A substantial portion of our legislation deals with matters directly affecting the development and economy of the West and our offshore areas, which perhaps accounts for representation from 14 of the States west of the Mississippi River—Arizona, California, Colorado, Idaho, Missouri, Montana, Nebraska, Nevada, Oklahoma, Oregon, South Dakota, Texas, Utah, and Washington—and 5 east of the Mississippi—Florida, Michigan, New York, North Carolina, and Pennsylvania.

This geographic distribution of the membership results, I believe, in a balanced legislative approach in the national interest, and at the same time retain the regional know-how which permits full understanding of the matters considered. For example, this distribution means that—

Members come from States, Territories, or possessions embracing approximately three-fourths of the land areas—continental and offshore—of the United States.

Of the 17 States of the reclamation West, 13 have Members serving on the committee.

Of the 11 mining States of the West, 9 have representatives on the committee.

More than 320,000 of the approximately 405,000 Indians of the United States and Alaska have a direct voice by reason of the areas represented.

The achievements of the session just ended—and I wish particularly to emphasize this—were made possible only through the cooperation and diligence of all of the 32 members of our committee.

Members on both sides have worked closely together and have given freely of their time to subcommittee and committee sessions averaging well over one per working day throughout the 1st session, a total of 191 meetings. To help advance measures reported, committee members have given many hours from their crowded schedules in appearances before the Committee on Rules, in debate on the floor, and in our several conference committees on the disagreeing votes of the two Houses.

But for the energy and leadership of our subcommittee chairman—Mr. ASPINALL, of Colorado, Irrigation and Reclamation; Mr. O'BRIEN, of New York, Territories and Insular Affairs; Mr. ROGERS, of Texas, Mines and Mining; Mrs. PFOST, of Idaho, Public Lands; and Mr. HALEY, of Florida, Indian Affairs—and the continuing cooperation and work output of the ranking minority Member, Dr. MILLER, of Nebraska, and his colleagues, we would have been unable to perform our mission.

I am particularly pleased, too, with the work of the committee staff: our committee clerk, clerical and stenographic staff of four, and professional staff—reclamation engineer-consultant, mining engineer-consultant, Territories and ethnic consultant, and legal counsel—have met a high standard of performance in committee activities and in their service to Members.

LEGISLATIVE WORKLOAD AND PERFORMANCE

With 486 House and Senate bills, resolutions, and concurrent resolutions referred to the committee, a total of 279 were disposed of through reporting out, tabling, or as duplicates.

Of 103 bills reported to the House, 56 became public law, 13 private law, 10 were pending in the House, and 21 in the Senate at adjournment, and there were single bills in each of 3 other classifications—1 in Senate-House conference committee, 1 recommitted, 1 disapproved by the President.

The fact that 56 of the 390 public laws of the 1st session of the 84th Congress—better than 1 of every 7—came from the House Committee on Interior and Insular Affairs helps to support the assertion that committee members and staff were kept busy.

Congress convened on January 5, 1955, and adjourned sine die on August 2, 1955, a total of 210 calendar days. If Members of Congress are entitled and obligated to take notice of the 5-day workweek enjoyed by most employees throughout the Nation, this means that, there were 150 working days during the first session, that is, Mondays through Fridays. The committee performance, statistically, means this:

During those 210 calendar days, 150 working days, or 112 legislative days, the Committee on Interior and Insular Affairs of the House convened a total of 191 separate meetings—157 subcommittee meetings, and 34 sessions of the full committee. I believe these figures speak for themselves.

Finally, a word of praise of some people sometimes overlooked in discussions of the activities of the Congress.

DEPARTMENTAL, LEGISLATIVE REFERENCE, AND COORDINATOR'S CONTRIBUTION

As a natural result of our committee legislative responsibility, the bulk of our initial requests for reports on pending legislation are directed to the Department of the Interior. Interior received from our committee alone in the session just ended request for reports on 236 pending bills, a number of them after July 1. As of adjournment, we had received 163 reports, a performance record representing a substantial improvement over the comparable period, the 1st session of the 83d Congress. Then, our committee requested reports on 233 bills, and Interior submitted reports on 90 of them as of adjournment.

The Department is to be commended for this improvement, and particular credit is due the personnel of the Legislative Division, responsible for preparing and expediting reports.

Again this session, the Legislative Reference Service of the Library of Congress has produced on numerous occasions—and frequently on short notice—statistics, information, legal briefs, legislative history reports, general reference, and related materials so essential to full and orderly development of a base for consideration of matters within the committee jurisdiction. I believe that its staff of experts and research specialists make available to the Congress an indispensable service.

Similarly, the Office of the Coordinator of Information of the House in the past session has proven the depository of factual and statistical material and information regarding the legislative, executive, and administrative functions in our Federal system—all on a current basis.

Committee output, Mr. Speaker, does not just happen. It takes the energy, leadership, initiative, and cooperation of many individuals to fulfill the congressional mission; the session of Congress just ended has demonstrated how successfully that mission can be fulfilled.

One Hundred Thousand Dollars of Taxpayers' Money Wasted

EXTENSION OF REMARKS

OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. POLK. Mr. Speaker, the Farmers' Home Administration has done an outstanding job in helping to establish and maintain the family-size farm. The following article from the Washington Merry-Go-Round shows what has been happening to this fine agency of the Department of Agriculture under the Eisenhower administration:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

BENSON'S BOYS REHIRED

Agriculture Secretary Benson has been been keeping it very hush-hush but he's been forced to rehire six top Agriculture Department executives previously fired, and pay them back salaries of about $100,000.

Benson's reversal came as a result of his purge of the Farmers' Home Administration, which has the job of aiding small farmers.

Among others, he downgraded, transferred or fired most of the State directors of the Farmers' Home Administration. He did this by first changing their status to non-civil-service schedule A, which the Supreme Court later ruled was illegal. So Benson has had to make new jobs for the State directors whom he fired.

After the Supreme Court decision forced Benson's hand, Departmental Order 75 was published in the Federal Register stating that if employees terminated under rule 6 did not appeal in 90 days they could not get their jobs back.

THE PURGE ROLLCALL

The Federal Register is an official Government publication magazine read by a very small fraction of the 160 million people in the United States. And some former employees of the Agriculture Department, now scattered all over the United States, did not see this notice, therefore did not appeal until it was too late. Even so, Benson will have to pay around $100,000 in back salaries to the following men who have either been reinstated or offered reinstatement:

Clarence Gehrig, former State director for Ohio, fired April 1954, reinstated this year, but later resigned to work with National Council of Cooperatives in Ohio.

Julian Brown, Alabama, fired June 1954, reinstated this summer, but refused to accept new job under Benson.

Carson Mertz, Pennsylvania, fired April 1954, restored last month, but resigned to become director of farm safety for Pennsylvania State.

Odum Stewart, Tennessee, fired April 1954, restored June 1955, given post in Washington. His place was taken in Tennessee by Allen T. Murray, whose lifelong experience had been with an insurance company, a construction company, and a retail grocery firm.

E. M. Newton, Maryland-Delaware, fired June 1954, reinstated this spring, now special assistant to Farmers Loan Administration in Washington.

Floyd Higbee, Colorado, fired January 1954, restored June 1955, now special assistant in St. Louis office. His place in Colorado was taken by Homer Cogdell, long-time employee of International Harvester.

FREEZING FARM LOANS

Tragedy of the Farmers' Home Administration, however, is not so much the upsetting of people's jobs and the extra $100,000 to be paid by the taxpayer, but the complete demoralization of an agency set up to help small farmers. Benson, a friend of the big farmer and the big co-op, who has even indicated that small farms might have to fall by the wayside, would just as soon abolish the Farmers' Home Administration. But whenever he tries to cut its budget, Congress rebuffs him.

So Benson has put the Farmers' Home Administration in the hands of men not particularly sympathetic to small farmers. Robert McLeaish, its head, is a McAllen, Tex., citrus waste plant operator, who acts as if small farmers were enemies, not friends. One of the first things McLeaish did was to recommend a 1-percent hike in interest to farmers, though local banks whom he consulted were opposed.

The New Small Business Act

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. MULTER. Mr. Speaker, the following is a statement I issued recently regarding the newly amended Small Business Act:

STATEMENT OF HON. ABRAHAM J. MULTER, CHAIRMAN, SUBCOMMITTEE NO. 2 ON GOVERNMENT PROCUREMENT, DISPOSAL, AND LOAN ACTIVITIES, SELECT COMMITTEE ON SMALL BUSINESS, HOUSE OF REPRESENTATIVES

Hon. ABRAHAM J. MULTER, Democrat, of New York, today stated that "the newly amended Small Business Act will enable the Small Business Administration to play a far more dynamic and effective role than ever before in encouraging the growth of small business in this country."

Congressman MULTER, a member of the House Banking and Currency Committee, which had legislative jurisdiction over the bill, is chairman of the Subcommittee on Government Procurement, Disposal, and Loan Activities of the House Select Committee on Small Business, of which Hon. JOE L. EVINS, Democrat, of Tennessee, and Hon. R. WALTER RIEHLMAN, Republican, of New York, are members.

The Small Business Act recently signed by the President and enacted into law extends the life of the Small Business Administration to June 30, 1957, and considerably increases the scope of its activities. Under the original 1953 law, the Small Business Administration had three major functions:

1. The granting of loans to deserving small-business concerns who could not obtain loans through regular banking channels.

2. The rendering of expert technical advice on business matters whenever small business seeks such advice.

3. The securing for small business of a fair and equitable share of Government defense contracts.

"The new law," Mr. MULTER stated, "increases the effectiveness of these major functions." The amount of any individual loan by the Small Business Administration has been increased to $250,000. The interest rate for such business loans shall be the prevailing rate in the area where the loan is to be used but shall not exceed 6 percent per annum.

The disaster loans were extended to be applicable to drought areas, and all disaster loans are limited to an interest rate of 3 percent per annum.

Mr. MULTER stated that another new feature of the law will permit loans to small-business concerns who pool their assets in order to establish a corporation producing and securing raw materials or supplies. The limit of any loan extended under this pooling provision shall be $250,000 multiplied by the number of small-business concerns participating in the formation and capitalization of such corporations.

The act now provides for the issuance of a certificate, when requested to do so, which will certify an individual concern as a "small-business concern." Such certification by the Small Business Administration shall be conclusive proof that a firm is a small business. The act provides that "officers of the Government having procurement or lending powers, or engaging in the disposal of Federal property or allocating materials or supplies, or promulgating regulations affecting the distribution of materials or supplies shall accept as conclusive the administration's determinations as to which enterprises are to be designated 'small-business concerns'."

New provisions have clarified the definition of small business, and the old arbitrary formula of 500 employees or less, may not be used as the sole standard. The criteria for defining a small business is set forth in the act as follows:

"A small-business concern shall be deemed to be small business when it is independently owned and operated, not dominant in its field of operation. In addition to the foregoing criteria the number of employees and dollar volume of business may be used by the Small Business Administration to determine whether a firm is or is not small business."

This definition binds all governmental agencies and particularly requires the Defense Department to abandon its arbitrary numerical definition in all procurements.

The act, as amended, indicates congressional intent to eliminate duplication of work pertaining to small business among Government agencies. The new law states that "the Administration shall not duplicate the work or activity of any other department or agency of the Federal Government and nothing contained in this act shall be construed to authorize any such duplication unless such work or activity is expressly provided for in this act."

In the executive branch of the Federal Government it is now the exclusive jurisdiction of the Small Business Administration to protect and encourage the growth of small-business concerns. The duty of the Small Business Administration is to aid, counsel, assist and protect insofar as possible the interest of small-business concerns in order to preserve free competitive enterprise, to insure that a fair proportion of the total Government purchases and contracts for supplies and services be placed with small business, and to maintain and strengthen the overall economy of the Nation.

Accomplishments of the House Committee on Interior and Insular Affairs During the 1st Session, 84th Congress

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. ENGLE. Mr. Speaker, I take this opportunity to summarize for Members the major accomplishments of the standing committee which I have been honored to serve as chairman during the 84th Congress, the House Committee on Interior and Insular Affairs.

I am elsewhere commenting briefly on the statistical aspects of our committee's functions during the session just ended and here comment on the legislative activity of the committee so as to assemble in one place a ready reference to the legislation processed.

For our committee the session just ended has seen several landmark accomplishments in carrying out the prime responsibility of the Committee on Interior and Insular Affairs. That respon-

sibility involves considering, reporting, and helping to secure enactment of legislative measures providing for the maximum development, utilization, management, and conservation of the natural resources of the United States, its Territories, and possessions; legislative matters involving the Government and administration of our Territories and possessions; and all legislation, except appropriations, affecting the Indians, Indian tribes, trust lands, and claims of Indians of the United States and Alaska.

The summary is presented under five major headings, reflecting the basic jurisdiction of our standing subcommittees: Irrigation and Reclamation, Chairman WAYNE N. ASPINALL, Colorado; Mines and Mining, Chairman WALTER ROGERS, Texas; Public Lands, Chairman GRACIE PFOST, Idaho; Territories and Insular Affairs, Chairman LEO W. O'BRIEN, New York; and Indian Affairs, Chairman JAMES A. HALEY, Florida.

After designation of the public law and/or bill numbers the author—or authors—is indicated, with the first name shown that of the author of the bill reported, considered by the House, or enacted into law, those which follow the authors of bills having the same or a similar purpose.

The summary follows:

I. WATER RESOURCE UTILIZATION AND DEVELOPMENT

TRINITY RECLAMATION PROJECT

In reporting and securing enactment of Public Law 386 (H. R. 4463, ENGLE), authorizing construction of the Trinity division, Central Valley project, California, the committee was responsible for having approved the largest single reclamation project unit authorized by Congress in history.

This $225 million project will make available nearly 1.2 million acre-feet of vitally needed additional water for lands in the Sacramento and San Joaquin Valleys, in addition to assuring more than 1 billion kilowatt-hours of electric energy annually to meet the ever-increasing needs in central and northern California. Time did not permit disposition of several other irrigation and reclamation measures providing for project construction.

COLORADO RIVER STORAGE PROJECT

H. R. 3383 (ASPINALL, DAWSON of Utah, FERNANDEZ, and ROGERS of Colorado), upon which a rule was granted in the closing days of the session, would authorize the Colorado River storage project in the States of Colorado, Utah, Wyoming, and New Mexico. Anticipating a $760 million development, the 3 storage reservoirs and 11 participating projects would effectively harness the water and hydropower resources of one of our great remaining undeveloped areas, would provide irrigation water for approximately 133,000 acres of new land and supplemental water for an additional 234,000 acres, and assure billions of kilowatt-hours of electric energy annually from facilities having an installed capacity of 933,000 kilowatts. The Echo Park Dam and Reservoir proposed for construction in the Dinosaur National Monument was deleted from the bill.

WASHITA BASIN PROJECT

Favorably reported, but with a rule denied for this session on the eve of adjournment, S. 180 (H. R. 310, WICKERSHAM) would authorize construction of the Washita River Basin project, Oklahoma. This $40.6 million project would provide irrigation, flood control, municipal water supply, recreation, and fish and wildlife benefits in an area plagued with serious adverse affects on agricultural production brought on by drought, floods, and erratic distribution of annual rainfall.

HELLS CANYON, AINSWORTH

Two additional project measures were pending in full committee at adjournment—H. R. 4719 (PFOST, GREEN of Oregon, METCALF, MAGNUSON), the authorizing legislation for the Hells Canyon Dam on the Snake River, Idaho-Oreg., and H. R. 5749 (MILLER of Nebraska), providing for construction of the Ainsworth unit of the Missouri River Basin project, Nebraska.

FRYINGPAN, VENTURA, TUOLUMNE

Considered and still pending in subcommittee was legislation proposing authorization of three other projects: H. R. 412 (CHENOWETH), the Fryingpan-Arkansas project in southeastern Colorado; H. R. 3427 (ENGLE; TEAGUE of California), the Ventura project, California; and H. R. 2388 (ENGLE), to authorize certain additional power development on the Tuolumne River, Calif.

Other committee-sponsored measures acted on reflect congressional recognition of the absolute need for insurance of full water resource utilization throughout the Nation to meet our present and future needs.

RECLAMATION DISTRIBUTION SYSTEMS

Public Law 130 (H. R. 103, ENGLE), authorizes Federal loans to local districts for construction of distribution systems on reclamation projects authorized for Federal construction, and through this substitution of local for Federal construction, will make possible substantial reduction of costs to water users.

SMALL PROJECTS BILL

Premised on the same Federal-local cooperation approach as Public Law 130, H. R. 5881 (ENGLE; MILLER of Nebraska; YOUNG), the small projects bill, providing loans for construction locally of small reclamation projects in the West, was reported by the committee and passed by the House. It was amended in the House to include the 31 nonreclamation States, Alaska, and Hawaii.

The House-passed version differed from that of the Senate; the latter expanded the scope of the legislation to include for the nonreclamation States—in addition to traditional reclamation purposes—drainage, water storage, and saline water intrusion control projects. On those differences a House-Senate conference committee was unable to agree prior to adjournment. It was agreed that during the adjournment, the administration's views on these varying approaches would be requested to assist the conference committee in its deliberations when Congress convenes.

TOSTON (MONTANA) AND ARCH HURLEY (NEW MEXICO) IRRIGATION DISTRICTS

Two measures enacted into law affect individual irrigation districts. Senate Joint Resolution 82 (H. J. Res. 353, METCALF), which became Public Law 374, authorizes the Secretary of the Interior to enter into a contract with the Toston Irrigation District, Montana, to furnish water on a temporary basis for not more than 10 years, provides for repayment of costs, and anticipates ultimate negotiation of a long-term contract. Public Law 277 (S. 1965; H. R. 5169, DEMPSEY), pertains to the Arch Hurley Irrigation District, New Mexico, and repeals a provision included in a 1938 act as an antispeculation measure which had served its purpose and had since acted only to work hardships on parties involved in normal land transactions.

YUMA MESA DISTRICT, ARIZONA

H. R. 5806 (UDALL), pending in the House at adjournment, authorizes execution of a repayment contract by Interior with the Yuma Mesa Irrigation and Drainage District of the Gila project, Arizona, paving the way for businesslike and orderly operation of this district serving nearly 20,000 acres.

SALINE WATER RESEARCH PROGRAM

Public Law 111 (H. R. 2126, ENGLE, BOW) extended the saline water research program through fiscal 1963, and increased the amount authorized to be appropriated from $2 million to $10 million. The program involved may well serve to trigger scientific solution to the problem of making available to our coastal cities—and some inland areas—virtually inexhaustible quantities of saline water converted to a quality usable for domestic and industrial purposes. Accomplishments to date are encouraging and may well result in revising our present concept of available supplies of this one indispensable natural resource.

INTERSTATE WATER COMPACTS

Finally, in the field of major water-resource legislation, the committee reported and Congress aproved Public Law 346 (S. 2260; House bills, BROOKS of Louisiana, ALBERT, HARRIS, PATMAN), granting the consent of Congress to the States of Arkansas, Louisiana, Oklahoma, and Texas, to negotiate and enter into a compact relating to the waters of the Red River and its tributaries.

Public Law 353 (S. 1391) paves the way for compact negotiations between the States of California and Nevada with respect to the distribution and use of the waters of the Truckee, Carson, and Walker Rivers, Lake Tahoe, and their tributaries.

Public Law 316 (H. R. 3587, ENGLE, COON) provides for negotiation of a compact between the States of Oregon and California relating to the waters of the Klamath River.

Pending in the Irrigation and Reclamation Subcommittee, after a counterpart bill passed the Senate, H. R. 5804 (THOMPSON of Wyoming, HOPE) would authorize negotiation of a Missouri River Basin compact between the States of Montana, Wyoming, Colorado, North Dakota, South Dakota, Nebraska, Kansas, Minnesota, Iowa, and Missouri.

II. MINERAL RESOURCES LEGISLATION

The session of Congress just ended saw enacted into law several landmark measures in the field of Federal legislation governing the development, utilization, management, and conservation of the minerals and materials resources of the United States.

MATERIALS ACT AMENDMENT; MINING LAW AMENDMENT TO PROVIDE FOR MULTIPLE SURFACE USE

Public Law 167 (H. R. 5891, ROGERS of Texas; DAWSON of Utah, FJARÉ, YOUNG, ELLSWORTH, COOLEY, HOPE, UDALL, BUDGE, ENGLE), known as the Multiple Surface Use Act, represents the most significant change in the mining laws of the United States in more than 80 years—since 1872—and is the end-product of almost continual study and debate by industry associations, by advisory groups to Federal agencies and commissions, and by Members of Congress over the past 15 years.

H. R. 5891 was considered and passed by the Congress in recognition of the needs and demands of a fast-growing population and an expanding economy for greater and more effective utilization and management of the surface and surface resources of the public lands of the United States.

Public Law 167, without limiting or interfering with bona fide mining or prospecting, achieves the following objectives:

1. Amends the Materials Act of 1947—by barring future locations under the mining laws for certain materials commonly occurring throughout the United States; by extending the act's operations to national forest lands; and by giving to the Secretary of Agriculture responsibility for administering the act with respect to lands under his jurisdiction.

2. Amends the general mining laws—by limiting and defining the rights of locators to surface resources prior to patent for locations hereafter made; by providing for

the utilization and management of the surface and surface resources (which would include but not be limited to forestry products, forage crops, grazing, water, fish and wildlife, recreational areas, camping grounds, scenic values, and access to adjacent lands) on mining locations hereafter made, or on existing claims placed in the status of locations hereafter made in accordance with well-defined procedures; and by permitting quieting of title to surface resources on locations made prior to the effective date of the act through procedures established in the act.

MINERAL ENTRY ON POWER WITHDRAWALS

Public Law 359 (H. R. 100, ENGLE), called the Mining Claims Restoration Act of 1955, is another measure aimed at making compatible competing surface and subsurface resource development on a large area of the public domain closed to general mineral entry for many years. This bill was passed by the 84th Congress after expiring in four previous Congresses at some stage of the legislative process.

Approximately 7 million acres of public lands withdrawn or reserved for power development—95 percent of them closed to mineral entry since about 1910—are open by Public Law 359 to entry under the mining laws, subject to carefully drawn provisions preserving existing and future power development rights, and establishing procedures for permitting placer mining operations in such manner as to minimize interference with other land values.

SOURCE MATERIAL ENTRY ON COAL LANDS

Public Law 357 (H. R. 6994, BERRY) was designed by the committee to provide statutory authority required for the mining and removal of uranium-bearing lignite coal found in the public lands of the United States classified as or known to be valuable for coal. Found necessary to clear title complications inherent in a large number of mining claim located in good faith on public lands in the States of South Dakota, North Dakota, and Montana, Public Law 357 will also further exploration and development of uranium-bearing lignite coal deposits considered by the Atomic Energy Commission as an important potential source of uranium.

DOMESTIC MINERALS PROGRAM EXTENSION

Passed by the Congress but disapproved by the President, H. R. 6373 (ENGLE, MILLS, HARRISON of Virginia, ABBITT, HARRIS, METCALF, BLATNIK, YOUNG, PFOST, RHODES of Arizona) had as its purpose amending the Domestic Minerals Program Extension Act of 1953 to increase the quantities of domestically producted tungsten, manganese, chromite, asbestos, mica, beryl, and columbium-tantalum to be purchased by the United States.

Principal aim of the committee in urging its enactment was to prevent disintegration of important segments of the domestic mining industry and thereby to maintain a newly won mobilization base composed of hundreds of producing mines until a comprehensive, long-range domestic minerals program might be formulated through promised recommendations of the recently established Office of Minerals Mobilization.

I interpret the memorandum of disapproval accompanying H. R. 6373, unsigned, to the House, as containing implicit assurance that such a long-range program will shortly be recommended to the Congress, and that in the meantime the going domestic industry in these essential minerals and materials will not be permitted to wither and die. I believe with many of my colleagues that the President—as his memorandum of disapproval makes clear—has a right to expect early performance in this respect by the responsible executive and administrative agencies.

CONSERVATION OF ANTHRACITE COAL RESOURCES

In recognition of the ever-increasing danger of loss of the vast reserves of anthracite coal by flooding of coal formations and underground workings, the committee secured enactment of Public Law 162 (H. R. 7066, FLOOD, FENTON, CARRIGG, WALTER, SAYLOR).

This measure will provide $8.5 million of Federal funds—to be matched in an equal amount by the Commonwealth of Pennsylvania—for the purpose of establishing a program for the control and drainage of water in anthracite-coal formations so as to conserve vital national resources, promote national security, prevent injuries and loss of life, and to protect and preserve public and private property. The saving of our valuable anthracite-fuel reserves, amounting to approximately 5 billion tons and comprising an area of 480 square miles in the anthracite region of northeastern Pennsylvania, is a matter of national concern. Public Law 162 will also serve to a degree to stabilize the economy of that area, dependent to an appreciable extent on the anthracite industry.

TIMBER AND STONE LAW REPEAL

Public Law 206 (H. R. 4894, ROGERS of Texas) repeals the outmoded timber and stone law of 1878, which is inconsistent with more recent statutes permitting the sale of timber alone without including the land, and laws which facilitate sustained-yield management of timbered public lands.

III. PUBLIC LANDS, NATIONAL PARK SYSTEM

Looking to the future, and guided by past experiences, the committee considered and acted on several important measures relating to the regulation, utilization, and development of our public lands and our national park system. Without exception, this legislation has one common aim: fuller development and utilization of the timber, forage, recreational, scenic, historic, and related values of our public domain.

TIMBER ACCESS ROADS

In obtaining enactment of Public Law 171 (H. R. 4664, ENGLE; S. 1464), the committee and Congress authorized the Secretary of the Interior to acquire rights-of-way and existing connecting roads adjacent to public lands when needed to provide access to timber on public lands under his jurisdiction.

This act will facilitate the perpetual, sustained yield forest management program of Interior on 2 million acres of highly valuable forest lands in western Oregon, and a similar but less intensive forestry program on approximately 4.5 million acres of scattered public domain lands elsewhere in the 11 Western States.

DESERT LAND ENTRY

More than 10 million acres of arid and semiarid public lands have been entered and settled under privately managed irrigation development since Congress passed the Desert Land Entry Act of 1877. As amended, the 1877 Act established a maximum allowable acreage of 320 acres to any one person, and was limited to entry on nonmineral lands. Subsequent legislation provided for entry on mineral lands but limited the acreage allowable on such lands to 160 acres.

Public Law 76 (H. R. 1844, THOMSON of Wyoming; S. 265) is designed to bring uniformity into the laws governing desert land entry by permitting maximum mineral land entry of up to 320 acres, the maximum allowable on nonmineral lands. It recognizes the necessity of making available a true economic base in consonance with the historic policy of Congress of encouraging agricultural homestead entry, thus fuller development and use of land, water, and human resources.

FEDERAL IN-LIEU PAYMENTS

With 11 bills pending on the subject of Federal reimbursement to States and local government by reason of Federal ownership of tax-exempt real property, the committee initiated hearings on this major public lands policy legislation.

Concurrent with the report to the President by the Commission on Intergovernmental Relations of recommendations with respect to this matter, the Subcommittee on Public Lands held preliminary hearings on H. R. 4884 (ENGLE) and related bills by Representatives MCDONOUGH, LANE, KEATING, LIPSCOMB, WHITTEN, MULTER, HYDE, PHILBIN, WILSON of California, directed the launching of a recess research program, and laid the base for a determination of the position of the administration and executive agencies so that this far-reaching legislation might be advanced during the second session.

"MISSION 66" AND THE NATIONAL PARK SYSTEM

During the first session the committee heard, and discussed with, the Director and staff members of the National Park Service the subject of a legislative approach which would effect a comprehensive, long-range program for full development of the 180 units of the park system under the Department of the Interior.

For some months, the Park Service has devoted many man-hours to what is labeled "Mission 66," which calls for legislative initiation of a program for funding and administration, concentrating on such matters as campground development; employee housing; bringing of existing roads and trails up to standard and construction of badly needed new ones; reexamination of the concessions program within the system; park facilities construction and development; and installation and improvement of water, sewage, and sanitation facilities.

In addition, it is hoped that plans for "mission 66" will include recommendations for land acquisition to provide for acquiring title to non-Federal lands within the exterior boundaries of units of the existing system, and for accompany boundary adjustments.

Anticipating an approximately 10-year program, this ambitious project is aimed at completion in time for the 50th anniversary of the National Park Service in 1966. It recognizes these basic facts:

1. Park system visitations have increased 129 percent since 1946;

2. More than 48 million people visited the park system areas in 1954;

3. Present development of land, water, and facilities within the 22 million acres of the system are such as to properly accommodate about 21 million day-visitors; and

4. Current usage-rate increases indicate that by 1966 the park system will have to accommodate annually 75 million day-visitors.

"Mission 66" legislation, when developed and enacted, may well represent revitalizing of the entire national park system program, minimize the piecemeal "emergency" approach of the past, and constitute a base for full utilization of the priceless recreational, scenic, and historic resources of our public domain.

PARK MUSEUM PROPERTIES

By its enactment of Public Law 127 (H. R. 5597, ENGLE; S. 1747), Congress has provided authority in Interior for increasing the benefits from the national park system by facilitating the management of various museum properties within the system.

Public Law 127 is designed to provide additional authority in the operation of museums and the acquisition and disposition of museum properties within the park system by permitting the Secretary to—accept donations of money and personal property; purchase, exchange, make and accept loans of museum objects and collections. With little if any, additional cost to the Government, this bill serves a desirable public purpose, and will enable more efficient public service.

BOSTON, NEW YORK HISTORIC PROPERTIES

In its continuing effort to establish coordinated programs for the preservation of the Nation's historic properties, the committee reported, and Congress enacted, two measures in this legislative area.

Public Law 75 (H. J. Res. 207, McCORMACK; S. J. Res. 6) establishes a commission to investigate the feasibility of a coordinated local, State, and Federal program in Boston and vicinity for the purpose of preserving the historic properties, objects, and buildings of that area. Their existence is inextricably associated with the colonial and revolutionary periods of American history; a program for their preservation will be of incalculable value to the Nation as an inspirational and cultural resource.

Similarly, Public Law 341 (H. R. 3120, KLEIN; S. 732) authorizes establishment of a commission for the purpose of advising the Secretary, and furthering public participation in the rehabilitation and preservation of three of the Nation's most important and significant historic shrines in the New York City area: Federal Hall National Memorial, Castle Clinton National Monument, and the Statue of Liberty National Monument.

Recommendations of both the Boston and New York Commissions would, upon completion, be forwarded to the Congress for appropriate action.

BROOKLYN MONUMENT

Public Law 214 (H. R. 473, ROONEY; MILLER of Maryland) authorizes an investigation and report to Congress regarding the advisability of establishing a national monument in Brooklyn, N. Y., in honor of 256 Maryland soldiers killed in the Battle of Brooklyn on August 27, 1776.

DEVILS TOWER, WYOMING

Public Law 287 (S. 2049; House bill, THOMSON of Wyoming) provides recognition of the 50th anniversary of the Devils Tower Monument, Wyoming, the first national monument—established in 1906—and authorizes the addition of certain lands to the monument for use as additional campgrounds, parking areas, and other facilities.

SITTING BULL, NORTH DAKOTA

Enactment of Public Law 261 (H. R. 7284, KRUEGER; S. 535) conveying certain land of the United States and the Standing Rock Tribe of Indians, North and South Dakota, to the State of North Dakota, will make possible establishment of a State historic site. The land conveyed contains the original burial site of the legendary Chief Sitting Bull; creation of the proposed historic site will serve to commemorate one of the principal figures of the Sioux Nation, the most numerous and powerful of the Plains Indians.

COLONIAL PARK, VIRGINIA

Having passed the House, H. R. 5280 (ROBESON, Virginia), if enacted, would authorize the Secretary of the Interior to exchange on a land-for-land basis certain Federal lands for other non-Federal lands within the exterior boundaries of Colonial Historical Park, Virginia, thus permitting more orderly administration and development of this outstanding area.

GENERAL GRANT TREE, CRAZY HORSE MEMORIAL

Two other measures were reported from committee, and were pending in the House at adjournment: House Joint Resolution 194 (SISK), which would designate the General Grant Tree in Kings Canyon National Park, Calif., as a national shrine; and House Joint Resolution 303 (BERRY), which would establish the Crazy Horse Memorial Commission to provide for the construction of a permanent national memorial to the North American Indians.

OKLAHOMA LAND CONVEYANCE

Public Law 215 (H. R. 4001, ENGLE), provides legislative authority, now lacking, for the management and disposition by the Secretary of the Interior of the interest of the United States in the surface rights to approximately 20,000 acres of reconveyed Choctaw and Chickasaw Indian lands in the State of Oklahoma. Its enactment quiets title to numerous small tracts scattered throughout an area 100 miles long and 60 miles wide in eastern Oklahoma, will permit proper management and maximum utilization of the lands, and will also make possible a higher dollar return to the United States for the amount spent in purchasing these lands from the Indians.

MILES CITY, MONT., LANDS

Public Law 191 (H. R. 6296, FJARE; S. 1878) extends for a 5-year period the provisions of a 1950 act which authorized conveyance by the Secretary of certain public lands in Miles City, Mont., to the city on a term-purchase project. Its enactment will make possible the development of further proposals by the city's industrial planning board for industrial uses of the land.

CHANDLER, OKLA., LANDS

H. R. 4747 (STEED), which became Public Law 241, permits the Secretary to quitclaim to the city of Chandler, Okla., the interest of the Federal Government in approximately 154 acres of land given to the city in 1923. The provisions of the original conveyance, limiting city use to public park, military, and aviation purposes, have proven unduly restrictive, and this conveyance will permit the city to obtain a clear title to the lands and to proceed with plans for civic benefit.

RECORDATION OF SCRIP

After predecessor legislation having the same purpose passed the House in both the 82d and 83d Congresses, but expired each time before final action by both bodies, H. R. 2972 (ENGLE) became Public Law 247, to provide authority for determining how much Federal "paper" in the form of scrip, lieu selection and similar rights is outstanding. Issued under more than 40 acts of Congress between 1815 and 1922, this "paper" constitutes an outstanding claim by the holders of lands of the United States. Enactment of Public Law 247, with its recording requirements, will enable the Department of the Interior to determine the amounts outstanding under formulated procedure for satisfying them.

INDIAN RIVER LANDS, FLORIDA

Public Law 258 (H. R. 6101, HERLONG; S. 464) is another measure made necessary by reason of erroneous private surveys of Federal lands under congressional policy in effect prior to 1910. In this instance, the act constitutes authority for issuance of patents to some 586 acres of land bordering on the Indian River in Florida; patentees would be individuals who have for many years occupied and used these lands with accompanying indicia of real-property ownership, including, in most instances, payment of taxes thereon. Its enactment will effectively settle substantial title uncertainties presently existing in the area.

ARIZONA FOREST LANDS

Public Law 39 (H. R. 2679, UDALL) amends existing law providing for supervision of mining locations in certain Arizona national forest lands by extending present statutory authority to include approximately 80,000 acres of national forest land in the Sedona-Oak Creek area within the Coconino National Forest. Its enactment will assure bona fide mineral development and will help to preserve public recreation and timber values, without blocking development of mineral resources.

IV. TERRITORIES AND INSULAR AFFAIRS

The 1st session of the 84th Congress recorded substantial progress in disposing of legislation referred to the committee dealing with the Territories and insular possessions of the United States.

HAWAII-ALASKA STATEHOOD

While perhaps the most important single piece of legislation involving our Territories and possessions, H. R. 2535 (ENGLE; SAYLOR), the joint Hawaii-Alaska statehood bill, was not approved during the first session, the record made in committee and on the floor will prove valuable, I believe, in future consideration of this key legislation.

In addition to extensive deliberation in committee, and more than 12 hours of presentation before the Committee on Rules in support of a rule, H. R. 2535 was ordered recommitted by the House only after 7 hours of floor debate.

Bills for Alaska statehood only were introduced by Delegate BARTLETT, Congressmen SAYLOR, and MACK of Washington; and for Hawaii statehood by Delegate FARRINGTON, Congressmen SAYLOR, ENGLE, and MACK of Washington.

ALASKA MENTAL HEALTH

Ordered reported by the committee, and ready for early consideration in the second session in the House is H. R. 6376 (GREEN of Oregon; O'BRIEN of New York, BARTLETT), the Alaska mental health bill.

This measure, if enacted, will remedy an historic deficiency in Alaska's ability to perform one of its basic governmental responsibilities, will completely write off the statute books the archaic commitment procedures presently in effect, and will make possible initiation of a long-range comprehensive program for construction of adequate mental health facilities in the Territory.

GENERAL TERRITORIES LEGISLATION

In recognition of its responsibility for legislation aimed at securing orderly administration, securing full development of resources, and encouraging establishment of sound economic bases in the Territories, the committee acted on several important measures.

ALASKA, HAWAII WATER RESOURCES

Two measures acted on will complement H. R. 5881, the small reclamation projects bill referred to above, in promoting water-resource development in the Territories. Public Law 322 (H. R. 3990, BARTLETT) authorizes the Secretary of the Interior to further utilize Bureau of Reclamation facilities in Alaska to investigate and report to the Congress on projects for the conservation, development, and utilization of water resources in Alaska. H. R. 6461 (FARRINGTON) passed the House and delegates authority to the Territory of Hawaii which will promote sound economic development of irrigation projects by the Hawaii Irrigation Authority.

CITY OF REFUGE, HAWAII

H. R. 5300 (FARRINGTON), which became Public Law 177, provides for establishment of the City Refuge National Historical Park on the Island of Hawaii and assures preservation of an area both unique and of great historic significance.

WAIKIKI BEACH DEVELOPMENT

Another measure is tailored to meet the ever-increasing demands for recreational facilities, and will make for fuller utilization of the Waikiki Beach area. Public Law 199 (H. R. 6331, FARRINGTON) authorizes officials to acquire from abutting property owners littoral rights to certain tidelands adjacent to Waikiki, which acquisition will make possible transactions assuring construction of a new public recreational area and tourist attraction to be known as Crescent Beach.

HAWAII LAND CLAIMS

H. R. 7186 (FARRINGTON) passed the House, and if enacted, will establish a procedure permitting a number of eleemosynary organizations of Hawaii composed of persons of Japanese ancestry to file claims for lands conveyed by them to the Territory during World War II.

HAWAII LAND USE

Three measures which passed the House prior to adjournment reflect a continuing congressional willingness to delegate authority to territorial officials with a common objective of broadening the land-utilization base.

H. R. 6463 (FARRINGTON), ratifies and confirms an act of the territorial legislature providing, among other things, a practical method of disposition of small remnants of public lands resulting from eminent domain proceedings and from the abandonment of all or portions of existing but unused public roads, streets, or other rights of way.

H. R. 6807 (FARRINGTON) would vest authority in the Territory to amend certain patents by removing restrictive covenants on their use for residents for eleemosynary purposes whenever changes in surrounding land use justify restriction removal.

H. R. 6808 (FARRINGTON) deals with existing provisions of law governing the sale of public lands for residential purposes in Hawaii and, if enacted, would modify the present procedure so as to eliminate a requirement for readvertisement of sale where lands had been once offered for sale and not sold.

ALASKA DEVELOPMENT MEASURES

Consonant with its desire to accelerate resource and economic development of Alaska, the committee secured enactment of several measures designed to achieve that purpose:

Public Law 158 (H. R. 245, BARTLETT), authorizing road-building activities on through highways within the boundaries of Alaska municipal corporations; Private Law 163 (H. R. 4853, BARTLETT), authorizing the sale of a tract of public land in Alaska to permit construction of a $3 million sawmill and plywood plant; Public Law 232 (H. R. 3338, BARTLETT), to promote industrial development on trackside property of the Alaska railroad by permitting term leases designed to encourage national bank loans; Public Law 56 (S. 1650; H. R. 5462, BARTLETT), correcting a technical situation so that Alaska will be able to obtain full benefits of the Employment Security Administration Financing Act of 1954; Public Law 213 (H. H. 605, BARTLETT), opening to sale and entry—subject to certain limitations protecting the Federal interest—reserved spaces between claims on shore water areas of Alaska; and Public Law 154 (S. 1633; H. R. 5166, BARTLETT), relating to a constitutional convention in Alaska.

HOUSE PASSED MEASURES

Three additional measures involving Alaska development passed the House: H. R. 4047 (BARTLETT), authorizing Federal construction and maintenance of public recreational facilities in Alaska for a 5-year period; H. R. 603 (BARTLETT), granting additional land for the support and maintenance of the University of Alaska, by amending existing law to permit the selection of both mineralized and unsurveyed lands (presently prohibited) and to give meaning to a 1929 act granting 100,000 acres to Alaska for use of its university but limiting selections to vacant non-mineral, surveyed, reserved public lands; H. R. 607 (BARTLETT), promoting fuller development of Alaska school lands by lessees through permitting leases of sufficient length to attract mortgage investment loans; and H. R. 4096 (O'BRIEN), permitting supervised disposal by the Secretary of the Interior of lands closed to entry and sales because withdrawn for highways, telephone, and pipeline purposes.

H. R. 604 (BARTLETT), to provide port of entry and related facilities on the Alaska Highway at the Alaska-Canadian border, was favorably reported and pending in the House at adjournment.

V. LEGISLATION RELATING TO INDIANS

Another of the prime areas of legislative responsibility of the committee is that involving relations of the United States with the Indians and Indian tribes of the United States and Alaska. With more than 100 measures proposing Indian legislation referred, the committee made considerable progress in its continuing effort to effectively aid in management and conservation of Indian resources and funds, to assist in bettering individual and tribal economic conditions, and to help resolve difficulties arising from claims against the United States.

INDIAN CLAIMS COMMISSION LEGISLATION

H. R. 5566 (HALEY, METCALF), which passed the House, and S. 1746, which passed the Senate, have as their common purpose amending the Indian Claims Commission Act of 1946 so as to extend the Commission termination date only to such time as will permit complete, but expeditious, disposition of a backlog of 750 pending claims. Since only 102 of 852 claims filed under the act have been disposed of, the committee concluded an extension beyond the present April 10, 1957, termination date is necessary to assure proper hearings on the remaining claims.

LAND UTILIZATION MEASURES

Public Law 255 (H. R. 7157, UDALL, METCALF; S. 34), permitting Indian owners of restricted lands to lease all or part of their holdings for a period of up to 25 years for specified purposes will, it is believed, add substantially to income received from use of these lands. It will also encourage investment in permanent improvements on them, attract improvement, livestock, and agricultural loans because of the longer lease period permitted, and make possible more effective management, utilization and conservation as full development goes forward.

MOHAVE-CHIMEHUEVI LANDS

Public Law 390 (H. R. 6418, UDALL; S. 2039) has long-term lease provisions identical to those of Public Law 255, but applies only to unassigned lands on the Colorado River Indian Reservation, Arizona, authorizes leases by the Secretary of the Interior for the benefit of the Mohave and Chimehuevi Indians, and permits exercise of such authority only during a 2-year period following enactment.

INDIAN LAND LOANS

In the same general purpose area, the committee secured House passage of H. R. 4802 (HALEY, BERRY), authorizing—subject to Secretarial approval—execution of mortgages and deeds of trust on individual Indian trust or restricted land, thus permitting competent individual Indians to use their real property resources for obtaining capital necessary to development of true economic units. No final Senate action was taken on this measure prior to adjournment.

PAPAGO MINERALS BILL

Public Law 47 (H. R. 2682, UDALL), withdraws from all forms of exploration, location, and entry under the mining laws some 2.7 million acres of lands within the Papago Indian Reservation, Ariz., and provides that minerals underlying the reservation are made a part of it, to be held in trust by the United States for the Papago Indian Tribe. Existing mineral rights of non-Indians are safeguarded, with this act blocking further loss of surface utilization brought on by accelerated uranium prospecting and location. Existing provisions make possible continued mining operations through tribal leasing, thus providing increased income to the Papagos and retention of surface title, without locking up needed mineral resources.

FIVE CIVILIZED TRIBES RESTRICTIONS

Public Law 348 (H. R. 7218, STEED, ALBERT, EDMONDSON; S. 2198) extends the period of restrictions against alienation or encumbrance of lands belonging to the Indians of the Five Civilized Tribes in Oklahoma, in order to guard against injudicious business transactions leading to complete loss of such lands. The act does provide authority, however, for the Secretary of the Interior to issue an order removing restrictions under the act's carefully drawn provisions, and provides appeal procedure in the State courts.

INDIVIDUAL TRIBAL LAND MEASURES

Other measures acted on involving Indian lands include these: Public Law 188 (H. R. 1801, HOLMES) authorizes the Yakima tribe to purchase and sell trust lands now in heirship status on the Yakima Indian Reservation, Washington, and to make exchanges of lands, thus providing for blocking-up and consolidation of lands for greater economic utilization and improved management.

Public Law 263 (H. R. 7248, DAWSON of Utah; S. 878) authorizes the State of Utah to exchange State-owned mineral lands lying within the exterior boundaries of the Uintah and Ouray Indian Reservation for mineral-bearing public domain lands outside the reservation boundaries, to the mutual advantage of both the Indians and the State, through resulting consolidation.

Public Law 252 (H. R. 727, SCUDDER) authorizes conveyance of certain land in the Hoopa Valley Indian Reservation, California, from the United States and the Hoopa Indians for use as a school site.

Public Law 276 (S. 1906) authorizes the Pueblo Indians of San Lorenzo and Pojoaque in New Mexico to sell certain lands to the Navajo Indians, making available funds to the former for improving their economic status, permitting the latter to consolidate lands for more efficient administration; and Public Law 187 (H. R. 1802, HOLMES) authorizes the Yakima (Washington) tribe to lease the State some 200 acres of tribal land for development, maintenance, and preservation of historic Fort Simcoe.

UTILIZATION OF CREEK, KAW, AND SHOSHONE-ARAPAHO TRIBAL FUNDS

Three measures involving Indian tribal funds will permit direct individual financial assistance by providing for fund distribution. Public Law 202 (H. R. 4367, EDMONDSON) provides for distribution of all funds held by the United States in trust for the Creek Nation of Indians and certain members thereof. Public Law 281 (H. R. 6804, BELCHER; S. 2197) authorizes equal distribution of approximately $2.1 million to members, heirs, or devisees of the Kaw Tribe of Indians of moneys held in trust by the United States, and as is the case in Public Law 202 reflects current congressional policy of making Indian moneys available to those Indians regarded as competent to wisely utilize it.

Similarly, Public Law 278 (H. R. 6945, THOMSON of Wyoming; S. 2087), amends a law providing for semiannual per capita payments from tribal funds to members of the Shoshone and the Arapaho Tribe, of Wyoming, so as to permit quarterly payments, thus encouraging more judicious expenditure of payments received as periodic needs arise.

MONTANA LANDLESS INDIANS

H. R. 7433 (METCALF), directing the Secretary of the Interior to provide immediate relief and welfare services to Indians residing on Hill 57, at Great Falls, Mont., was reported by the committee and was pending before the House at the time of adjournment. Its counterpart, S. 2556, passed the Senate.

SIOUX REHABILITATION LEGISLATION

Initial hearings were held on three measures authorizing Federal appropriations for damage resulting from, and rehabilitation partially necessitated by, construction of two mainstem dams on the Missouri River, Fort Randall Dam, and Oahe Dam.

Proposing substantial fund expenditures for comprehensive rehabilitation measures and as additional reimbursement by reason of damages, H. R. 3544 (BERRY), Lower Brule

Sioux, South Dakota; H. R. 3602 (LOVRE), Crow Creek Sioux, South Dakota; and H. R. 5608 (BERRY), Standing Rock Sioux of North Dakota and South Dakota, if enacted, may well be the keys to substantial strides forward in Sioux Indian Nation progress. Field hearings are planned at each reservation during the present recess.

COLVILLE INDIAN LANDS

Initial hearings were also held on H. R. 6154 (HORAN) and H. R. 7190 (MAGNUSON), providing for restoration to tribal ownership of more than 800,000 acres of land within the exterior boundaries of the Colville Indian Reservation, Wash. If enacted, this legislation would constitute a keystone in the economic base of the reservation.

Judicial Review of Veterans' Claims

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. MULTER. Mr. Speaker, I wish to speak briefly of the United States war veteran and simple justice. The problems of our citizens who have given of their time and ability in the armed services are well known to all. The veteran has rightfully been allowed a variety of pensions, benefits, loans, and services under our laws that date back many years, including special enactments following both World Wars and the Korean conflict. The Congress has tried to provide young men and women who were called upon to protect the rest of us, a fair, if not always adequate substitute for all they gave up.

Nevertheless, we have somehow erred in proceeding toward this goal. The present laws under which veterans' benefits are administered give complete and decisive authority to the Administrator of Veterans' Affairs. Once a proceeding has been considered and decided by this office, the matter is settled—fully, finally, and without appeal. Is this the type of justice with which we should confront our veterans?

The Veterans' Administration had not made a record as a liberal Government agency. Yet, even if this were not so, commonsense and fairness would require a resort to a higher authority than the Board of Veterans' Appeals, an agency, wholly within and part of the Veterans' Administration. No man is infallible, and in the course of thousands of administrative proceedings a small number will inevitably be denied their just rewards. No matter how small the number, each statistic represents a man or a woman who has not been dealt with equitably by his Government. We should try to prevent such situations from arising and where they arise, they should be speedily remedied.

The remedy is encompassed in H. R. 2023, a bill which I introduced on January 11 of this year, and which was referred to the House Judiciary Committee.

The purpose of the bill is to confer upon the Court of Claims jurisdiction to render judgment upon any claim for a benefit or payment under any law administered by the Veterans' Administration, if such claim has been disallowed, in whole or in part, by a decision of the Administrator of Veterans' Affairs.

All the judicial safeguards of a civil proceeding will be assured. In addition, such a resort to the Court of Claims will act as a spur to greater care within the Veterans' Administration. It also will be of considerable psychological value to the veteran. He will then know that the Veterans' Administration is not the sole agency to hear his case. All this will make for more efficiency and more certain justice.

The Veterans' Administration has issued an advisory report to the Committee on the Judiciary disapproving H. R. 2023. The opposition falls neatly into three categories: First, That making all denied claims eligible for judicial review would impose an unbearable burden on the Court of Claims; second, that the administrative expense of defending the Veterans' Administration's position in court would be excessive; third, that past legislation of the Congress and court opinions based on that legislation are in opposition to the proposed bill.

These objections arise from and are based on an underlying policy feeling that looks upon veterans' benefits and compensation as gifts of the Government, given, so to speak, out of the goodness of its—the Veterans' Administration's—heart. This is precisely what H. R. 2023 seeks to change.

I do not feel that the Government is guilty of giving handouts when it authorizes compensation for service-connected disabilities, pensions for nonservice-connected disabilities, vocational rehabilitation, education and training, subsistence allowance, readjustment allowance, guaranties or insurance of loans, out-patient medical treatment, artificial limbs, hospitalization, seeing-eye dogs, electronic and mechanical equipment for the blind, specially adapted housing for disabled veterans, reimbursement of burial expenses, and so on. On the contrary, these are not handouts given in exchange for nothing. They are payments only in part for what has been given up in its defense.

Whatever the present legislative policy in these matters, it is about time that we readjust our thinking in veterans' matters. These men and women should not be placed in the position of begging for compensation and benefits. The Government, as the agency of the people, is morally obligated to treat its veterans with the greatest possible care. All that H. R. 2023 attempts to do is to make this moral obligation a legal obligation as well.

Society, unfortunately, finds it difficult to enforce moral obligations, no matter how great they may be. We are lucky, however, to have an institutionalized procedure, in the form of our court system, to attempt to make justice keep pace with moral duty.

The strict legal argument that the United States Government is a sovereign and, therefore, may not be sued without its permission is a cold argumentative device that is persuasive only in the realm of political theory. It has nothing whatever to do with human affairs. Should we run our Government on the basis of past procedure and prevailing theory when individual sacrifices are being evaluated and compensated? Should we look upon the veteran's obligation to defend his country as a privilege, and his right to be compensated for his losses as an act of kindness?

H. R. 2023 answers "No." To do otherwise is to impose a double standard. If a citizen is obligated to fight for his country, the country must certainly be considered obligated to compensate him for all his losses. Surely there is no lack of justice or logic in that. As for the arguments as to the judicial burden and the expense of litigation, the former involves time and the latter involves money. Neither should be excessive and neither is comparable to the other values involved—human dignity and simple justice.

I urge the Committee on the Judiciary to consider this bill and report it as quickly as possible.

1957 World's Conservation Exposition and Plowing Contests To Be Held in Adams County, Ohio

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. POLK. Mr. Speaker, as a result of the untiring efforts of a small group of farmers and business and professional men of Adams County, Ohio, the 1957 world's exposition and plowing contests will be held in Adams County, Ohio.

Mr. Earl K. DeVore, a prominent farmer and businessman of Winchester, Ohio, has been the leader in bringing this outstanding international event to Adams County, Ohio.

The officials of the 1957 World's Conservation Exposition and Plowing Contests, Inc., are Mr. Earl K. DeVore, Winchester, Ohio, general chairman; Mr. Robert C. Miller, farm program director, Radio–TV Station WLW, Cincinnati, Ohio, cochairman; Mr. Ellis Dorton, Peebles, Ohio, vice chairman; Mr. Carey W. Richey, Peebles, Ohio, secretary-treasurer; and Mr. Paul Wilson, Peebles, Ohio, assistant secretary-treasurer.

THE AIMS OF THE WORLD PLOWING ORGANIZATION

The purpose that inspires the World Plowing Organization is twofold and may be defined as the material and moral betterment of society as a whole. Unquestionably the fundamental problem that faces the world today is that of growing enough food for all, and anything and everything that tends to the betterment of agriculture adds to the betterment of mankind. The plow, now as always, is the basic instrument of food production and improved plowing meth-

ods mean more food. The World Plowing Organization believes that by stimulating world interest in the most ancient of all human crafts and by raising the standard and dignity of the plowman, the world contests organized by it will, by their influence, increase the fertility and yield of the soil of every continent.

Every entrant for the world championship contest has won his place as a result of a series of elimination contests in his own country—local, provincial, and national—in which hundreds of plowmen have taken part and every single one of these contests has aroused considerable local interest in the plowman's craft. When the competitors for the championship enter the field their progress is followed with interest by many thousands of enthusiasts from all over the world.

As regards the moral betterment for which the World Plowing Organization strives, this must necessarily be brought about by the friendly association in a common and basic endeavor of so many men and women from so many different countries. Better living and happiness for mankind are to be found in the discovery of the innumerable ties that unite us rather than in emphasizing the relatively few and, for the most part, artificial barriers that separate us. Men of good will of all nations cannot but find community of interest and understanding in the development and improvement of an art that is as old as history and as widespread as the human race itself.

The World Plowing Organization has a governing board which at the present time consists of John A. Carroll, honorary president, Canada; J. D. Thomas, president, chairman, Canada; J. J. Bergin, vice president, Ireland; G. T. Weir, treasurer, England; Vaino K. Neuvonen, Finland; Arie C. Stehouwer, Holland; Alf. Larsen, United States of America; Bengt Svensson, Sweden; Tore Wiig, Norway; Paul-Bildsoe Hansen, Denmark; Walter Feuerlein, Germany; Stanley G. Powell, Great Britain.

This organization has as its objectives:

First. To foster and preserve the art and improve the skill of plowing the land.

Second. To promote world championship contests.

Third. To provide facilities for demonstration work and trade displays.

Fourth. To urge the development and adoption of improved techniques and aids to man in all branches of agriculture.

Fifth. To foster a vigorous spirit of cooperation and enterprise in producing food for an increasing world population.

Sixth. By these means to encourage fellowship and understanding amongst the peoples of all nations.

Seventh. To support and cooperate with other bodies or associations in the furtherance of these objectives.

The first world event was held at Toronto, Canada, in 1953.

The schedule of other world events is as follows:

1954: Ireland.

1955: Sweden, University College Farm Uppsala, October 8 and 9.

1956: England, Cambridge.

1957: United States, Peebles, Ohio, September 19 and 20.

1958: Germany.

The statement of Mr. J. D. Thomas, of Canada, president of the World Plowing Organization, follows:

This year over 1 million plowmen are getting ready to compete in organized plowing contests. Their ultimate goal is to be crowned the champion plowman of the world at the third annual world plowing matches to be held at Uppsala, Sweden, on October 8th and 9th.

Mr. Thomas said that 14 countries will be represented by contestants which include Belgium, Canada, Denmark, Finland, France, Germany, Great Britain, Holland, Northern Ireland, Norway, Pakistan, Sweden, and the United States; also observers will be present from Australia, Austria, India, and South America.

He added:

In order that as many people as possible from the United States and Canada may attend this year's matches in Sweden, Thomas Cook & Son, travel agency, have been appointed to handle all travel arrangements. The first world champion was J. Eccles of Canada, last year in Ireland. Hugh Barr of Northern Ireland was proclaimed world champion.

The world match is scheduled to be held in England at Cambridge in 1956, and at Peebles, Ohio, in the United States in 1957.

INVITATION OF YOUR HOSTS IN 1957

The statement of invitation from the farmers providing the land for the event follows:

Inviting the world to our humble community to participate in and to view the 1957 World's Conservation Exposition and Plowing Contests, we, the citizens of Adams County, Ohio, offer you this statement of our belief.

We believe that the fathers and mothers of every nation in this world desire in their hearts world peace that their children might enjoy freedom from the hell of wars. Yet world peace is too great a price for them to pay if their children are to face starvation, disease, and complete poverty. If war and conquering can offer any relief of these three destroyers of the desire to live, then parents are willing to use it and sacrifice peace in their day.

Wars are built upon starvation, disease, and poverty. The soil is the provider of the answer to these three wants. Ordinary citizens of America, people of the land, recognize the need for meeting the peoples of other lands on a common level, through the presentation of an event which fosters a frontal attack upon poverty, disease, and malnutrition. Here in America, Government is responsive to the will and the needs of the people. The governmental agencies of a Government springing directly from the people are tools designed and built for use by ordinary citizens. In preparing this gift of "get acquaintance" and of "know how" for the world, we will put to use as the tools they are these governmental servants. Extension specialists, soil conservationists, foresters, members of the United States State Department, and others are used just as a plow is used for the job for which it was designed—tilling the soil.

In America industry is of, by, and for the people; and thus it, too, knows that it must serve people to survive. Here in this great land the people have built industry by learning to till the soil properly. Agricultural advancements have destroyed hunger and the racking diseases of malnutrition, and they have released men's minds and bodies to build industries for the creation of higher standards of living.

Working the soils of the world will build the industries of the world. Working the soils of the world will build the peace fathers and mothers of every land so desperately want.

The fathers and mothers, grandfathers and grandmothers, of Adams County, Ohio, United States of America, offer this humble contribution of illustration (the 1957 World's Conservation Exposition and Plowing Contests) to the peoples of the world in our mutual struggle against poverty, disease, and malnutrition.

To assist in financing the 1957 World's Conservation Exposition and Plowing Contests, I have introduced a bill H. R. 7815 authorizing an appropriation of $300,000, as follows:

A bill to authorize the appropriation of funds to assist in financing the 1957 World's Conservation Exposition and Plowing Contests to be held in Adams County, Ohio, in September 1957, and for other purposes

Be it enacted, etc., That the sum of $300,000 is hereby authorized to be appropriated to the Secretary of Agriculture, to remain available until expended, for the purpose of aiding in the defraying of certain expenses of the World's Conservation Exposition and Plowing Contests of 1956, 1957, and 1958.

SEC. 2. The Secretary of Agriculture may utilize the funds appropriated pursuant to the authorization contained in this act to make grants to private nonprofit organizations to assist them in providing necessary facilities for the 1957 World's Conservation Exposition and Plowing Contests to be held in Adams County, Ohio, in 1957, including water lines for fire protection, sanitary facilities, temporary power and light systems, temporary sewage disposal units including necessary plumbing fixtures, and the construction of roads, and such other facilities as may be considered necessary by the Adams County Soil Conservation District.

SEC. 3. The Secretary of Agriculture shall reimburse the 1957 World's Conservation Exposition and Plowing Contests, Inc., a nonprofit organization of Peebles, Ohio, and the Adams County Soil Conservation District for necessary expenses incurred by them prior to the date the appropriation authorized by this act is made.

SEC. 4. Funds appropriated pursuant to the authorization contained in this act which are not needed for the purposes of section 2 may be used by the Secretary of Agriculture to defray the expenses of the United States participants in the 1956 world's championship plowing contests in England in 1956 and the 1958 world's championship plowing contests in Germany in 1958.

I shall request a hearing on H. R. 7815 when Congress reconvenes in January. The subject is very meritorious and I believe merits favorable consideration by the Congress.

Gen. Peyton C. March

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. SHORT. Mr. Speaker, last April when one of our greatest Americans died

I paid him a feeble tribute, which appears in the Appendix of the CONGRESSIONAL RECORD of April 19, 1955.

Since then I have come into possession of a letter from the President of the United States, Dwight D. Eisenhower, addressed to Mrs. Peyton C. March, and also a telegram of April 14, 1955, addressed to Mrs. March from one of the most successful businessmen of our time, Thomas J. Watson.

Under leave to extend my remarks, I include the following letter from President Eisenhower and the telegram from Mr. Watson in the RECORD:

THE WHITE HOUSE,
Washington, April 14, 1955.

Mrs. PEYTON C. MARCH,
Washington, D. C.

DEAR MRS. MARCH: It was with great regret that I learned yesterday evening of the death of your distinguished husband. To all Americans and to the military personnel in particular, his outstanding accomplishments during World War I have become almost legendary. Considering the difficulties we in World War II had in transporting men and material to Europe, what he did some 25 years earlier always stood out in my mind as a triumph of brilliance and ingenuity.

Mrs. Eisenhower joins me in deep sympathy to you and to the members of your family.

Sincerely,

DWIGHT D. EISENHOWER.

NEW YORK, N. Y.,
April 14, 1955.

Mrs. PEYTON C. MARCH.

Mrs. Watson and I extend to you and your daughters deep sympathy in the passing of your distinguished husband. The contributions which General March made to his country and to the world, as a general, as a statesman, and particularly as Chief of Staff and head military adviser to President Wilson during World War I will forever remain as a lasting monument to his memory. To him the people of the world owe a great debt for his indefatigable service in helping to preserve for his fellowmen the democratic principles of freedom and justice. We know that you are receiving comfort from the one great Comforter who never fails us in our hour of need.

THOS. J. WATSON.

An Expression of Appreciation to the Honorable Jere Cooper, of Tennessee

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DINGELL. Mr. Speaker, in the closing days of the 1st session of the 84th Congress I would like to pay tribute to the beloved and esteemed chairman of the Committee on Ways and Means, the Honorable JERE COOPER, of Tennessee. His leadership, wisdom, and counsel have made an important contribution to the outstanding accomplishments of our committee in this 1st session of the 84th Congress and to the impressive record of accomplishments of the House of Representatives.

Early in January of this year it was my privilege to nominate my friend and colleague from Tennessee to be chairman of the Committee on Ways and Means. At that time I reviewed my long friendship with him and his record of distinguished service to his country as a lawyer, soldier, and statesman. It is significant to note that virtually every member of the committee joined in my expression of congratulations to Mr. COOPER and offered his own laudatory remarks.

Since that day in January, Chairman COOPER has not only proved that the plaudits of his committee colleagues were fully warranted but also that those remarks were perhaps inadequate to greet a man who has proved himself to be a great chairman of what I regard as the most important committee in the Congress of the United States. He has placed the national interest above every other consideration in his wise guidance of the committee in its work. Under his leadership the committee has prepared major legislation improving and strengthening our trade-agreements program, simplifying our customs laws, liberalizing our social-security program, and making our tax laws more equitable. To my recollection the only time that the committee has given consideration to every bill referred to the committee on which a Member has requested consideration was under the chairmanship of the Honorable JERE COOPER in this 1st session of the 84th Congress.

Mr. Speaker, it is by no accident that the gentleman from Tennessee has already achieved this distinguished record as chairman of the Committee on Ways and Means. At each step in his illustrious career, JERE COOPER has capably and conscientiously performed his responsibilities in preparation for the greater responsibilities that inevitably came to him. As a lawyer, city official, and as an officer in the American Expeditionary Forces in World War I, JERE COOPER has done his job well.

Based on that record of accomplishment, it is not surprising that his neighbors in the community in which he was born should send the gentleman from Tennessee to Congress as their elected Representative in 1929 and that they should continue to do so ever since. JERE COOPER has rendered over 25 years of distinguished and outstanding service as a legislator to the people of his congressional district and to the citizens of the United States.

In the intervening years my beloved friend, JERE COOPER, has become dean of the Tennessee delegation; he has served longer on the Committee on Ways and Means than any living American; he has become a deserved leader in National and State affairs as well as a leader of his party.

Mr. Speaker, it was appropriate, therefore, that JERE COOPER, of Tennessee, should follow in the footsteps of those illustrious Tennesseans, the Honorable George W. Campbell and the Honorable James K. Polk, in becoming chairman of the Committee on Ways and Means. It was inevitable that with his attributes of wisdom, experience, and integrity that JERE COOPER should do the job well.

His experience and ability have resulted in JERE COOPER being given a large number of positions of responsibility and influence. He is chairman of the Joint Committee on Internal Revenue Taxation and a ranking member of the Joint Committee on Reduction of Nonessential Federal Expenditures. In addition, the gentleman from Tennessee is chairman of the Democratic committee on committees which has the important responsibility of designating the Democratic Members for membership on the other 18 standing committees of the House. As a veteran with a distinguished war record, JERE COOPER has found time to be active in veterans' affairs and to maintain a constant and beneficial interest in the welfare of our Nation's veterans.

I would like to commend my committee colleague and beloved chairman for the outstanding record he achieved in the 1st session of the 84th Congress. I know that I speak for everyone on the committee when I express appreciation for Chairman COOPER'S understanding leadership and his wise counsel. I am confident that his future years of service as chairman of the Committee on Ways and Means will be years of selfless service to the Nation with an unsurpassed record of achievement.

Developing Cultural Understanding Through Foreign Language Study: A Report of the Modern Language Association of America Interdisciplinary Seminar in Language and Culture

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I take this opportunity to call to the attention of the House the very excellent report of the Modern Language Association of America concerning the increasing need to develop linguists through our schools and colleges.

The failure of American education to encourage greater study of foreign tongues is a real handicap to the development of intercultural understanding in today's world. The Modern Language Association is to be commended for its thorough report on this matter which it is my pleasure to insert in the CONGRESSIONAL RECORD.

The report follows:

DEVELOPING CULTURAL UNDERSTANDING THROUGH FOREIGN LANGUAGE STUDY: A REPORT OF THE MODERN LANGUAGE ASSOCIATION OF AMERICA INTERDISCIPLINARY SEMINAR IN LANGUAGE AND CULTURE

The study of foreign languages in the schools and colleges has in the past been justified in many different ways, and without question many reasons can be adduced to support their place in modern education. One argument in their favor which has been advanced more and more frequently is the assertion that foreign languages are not only useful but necessary for an understanding of other peoples and other cultures. This point of view is by no means limited to professional teachers of foreign languages but

is to be found among men in public life and in organizations deeply concerned with contemporary educational problems. Despite their variety of source, the statements which have been cited demonstrate a surprising unanimity of attitude in their insistence that a fundamental aim of foreign language instruction is the transmission of what, for lack of a better name, we may call cultural insights.

This immediately raises the question: At what point in our foreign language instruction may cultural insights best be developed? It seems clear that on the average no more than 10 percent of the students who begin the study of a language in college pursue it beyond the second year. Certainly considerably fewer high school students continue their studies through the fourth year, which is generally comparable to second-year proficiency in college. There are many reasons for this situation, but the fact remains that, to the extent that the educational aims which have been expressed are valid for a considerable portion of the high school and college population, they must be realized prior to the conclusion of the second college year of foreign language instruction, or its equivalent at other levels of education.

Although it is true that certain cultural insights are transmitted almost at the very outset of the student's contact with a foreign language, very often the first year of instruction is heavily preoccupied with giving him some degree of control of a modicum of vocabulary and a minimal set of language patterns. The second year, then, offers a somewhat greater opportunity for emphasis upon content and attitude rather than the sheer acquisition of a set of skills. Therefore, if the cultural objective is to be realized at all through foreign language instruction, we must think of it as especially pertinent to this intermediate stage of the student's foreign language experience.

There is some reason for believing that, as foreign languages are generally taught today, this cultural objective is not always obtained. In 1953, Dean Hollis Caswell, of Teachers College, Columbia University, though expressing himself as being firmly in favor of "greatly extending and deepening our understanding of other cultures and people," and convinced that the "study of foreign languages may be made to contribute to the understanding of other cultures," nevertheless felt compelled to conclude, "but in few schools is this achieved." The same doubt is echoed by others who have been in an equally favorable position to survey the language teaching situation.

To sum up, there is an impressive array of opinion to the effect that foreign language study should contribute to an understanding of other nations and that the present world situation makes this an urgent need. We are not wholly certain how effectively this is being accomplished. We are reasonably sure, however, that this aim must be achieved to a considerable extent before the advanced level of instruction.

The Modern Language Association is currently engaged in a study of the place of foreign languages in American life. Consequently, in view of the expressed purposes of the MLA foreign language program, it seemed that this whole matter demanded further exploration. A memorandum prepared by Albert H. Marckwardt of the University of Michigan and addressed to the executive council of the association on December 27, 1952, proposed that an interdisciplinary seminar be established, to study the ways in which these broader cultural purposes of foreign language study might more fully be accomplished. The general tenor of the proposal is indicated by the following excerpts from the memorandum:

"As one senses the present attitude of the Modern Language Association, a large share of its justification of the place of modern language study at all levels of the curriculum is based upon the value of such study in contributing to international understanding by giving the American student an insight into the content, the intellectual framework, and the behavior patterns characteristic of one or more foreign cultures.

"Nor are the teachers of modern languages in the United States alone in encountering difficulty with this problem. It is an equally serious one for those agencies of our Government who are preparing English-teaching materials for use abroad in our cultural centers and elsewhere, nor have they achieved any singular measure of successs in coping with it. It will also arise in connection with the preparation of reading materials in the program for oriental languages, which has recently been undertaken by the American Council of Learned Societies. We are brought face to face with it whenever, in the course of language instruction, we seek to use a newly acquired language as a tool in trying to acquire an insight into the lives and minds of the people who speak it. It is a problem which would seem to require a frontal attack. This leads us to the pertinent question of what the nature of this attack should be.

"In the elementary stages of language instruction, the most fruitful procedure has been to compare the language to be learned with the native language of the learner, in order to determine the points of difference and the areas of similarity.

"It is reasonable to assume that our approach to the construction of materials designed to produce a cultural orientation must proceed upon precisely the same basis, namely, a comparison of the two national cultures involved, a determination of the principal points of difference between them, and the selection of materials, literary or expository, which will set forth, illustrate, and perhaps account for, the cultural attitudes involved in those points of difference.

"At any rate, this matter is so basic to our whole program that we cannot escape making some direct attempt to solve it. * * * Moreover, since the systematic analysis of cultures lies within the province of the social sciences, it would seem eminently reasonable that literary and linguistic scholars look to the cultural anthropologist, the social psychologist, the historian, and the political scientist for collaboration and aid in such a project.

"In such a seminar, then, a number of leaders in various areas of modern language instruction and a number of social scientists would jointly address themselves to the problem of how to plan for and effect this insight into the culture of another people through the medium of language instruction."

The proposal was approved on January 31, 1953, by the steering committee for the foreign-language program of the Modern Language Association, and Professor Marckwardt was directed to organize such a seminar to be held at the University of Michigan during the summer of 1953. The present document constitutes the report of the group which was brought together pursuant to these instructions. The seminar began its sessions on June 29, 1953, and concluded them on July 24.

French, German, and Spanish, in addition to English, were selected as the languages to be represented in the seminar primarily because they reflect the greatest proportion of student enrollment in foreign languages; hence the problem of successfully effecting the transmission of cultural insights to students in our Nation's schools is more urgent in them than in some of the less frequently taught languages. There is no reason to suppose that the conclusions reached with respect to these would be greatly modified for Russian, Japanese, Portuguese, Norwegian, or any other modern language.

The group met regularly 3 hours a day, 5 days a week, during tthe period of the seminar, and supplementary meetings were held for committee work and special purposes. The first week was devoted to an examination of current textbooks, not only in French, German, and Spanish but for English as a foreign language as well, supplemented by further information concerning language instruction in the elementary and secondary schools. This constituted the introductory phase of the work.

The second and third weeks were primarily cross-educational. During this period the representatives of the social sciences discussed a number of concepts basic to a consideration of cultures and national characteristics, indicating the possibilities and methods of comparing two cultures for points of similarity and difference. The final week of the seminar was integrative and directed toward the practical applications of the principles which had previously been discussed.

This report stresses particularly the matters under discussion during the initial and final phases of the seminar. The concepts and attitudes resulting from the cross-educational or interdisciplinary feature of the sessions are implicit, however, in virtually every aspect of the presentation.

EXISTING TEXT MATERIALS

The widespread opinion that foreign language study should result in the modification of culture-bound attitudes toward foreign peoples and their ways of life, and the equally prevalent view that these changes in attitude do not now regularly occur as an outcome of such study combine to raise the following question: Do available text materials give evidence of having been planned to achieve this end? If they do give evidence of this kind of planning, any general failure to attain the desired goal must therefore spring largely from faulty classroom presentation. If they do not, a reasonable next step would be to consider the possibility of outlining a procedure whereby a set of aims designed to attain such a cultural orientation might be systematically reached.

Accordingly, the initial phase of the seminar was devoted to examining and analyzing the cultural content of a considerable number of textbooks. The collection thus examined, while in no sense complete, gave a comprehensive view of the types of books having a cultural aim, whether direct or incidental, in all the languages under consideration: French, German, Spanish, and English as a foreign language. Particular attention was given to the books designed for the second-year college courses, although the more advanced college texts as well as some of the most widely used high-school texts were also included. The seminar felt that the coverage was sufficiently broad to lend validity to the generalizations presented here in consequence of this analysis.

On the whole, the existing materials maintain a fairly uniform pattern throughout the various languages. From the point of view of subject matter and approach, there seems to be no appreciable difference between materials designed for use in high school or college. Although there appears to be no dearth either of informative or colorful material intended to illustrate the different foreign cultures, none of the existing texts attempts to present cultural insights in terms of linguistic structure. Very occasionally textbook writers do seek clues to cultural traits in certain language features or patterns, but in the absence of a generally accepted body of knowledge in this area, any such considerations must remain largely speculative.

Texts with some cultural emphasis may be classified according to four principal categories: (1) elementary texts containing auxiliary cultural materials; (2) cultural miscellanies; (3) comprehensive presentations of a total civilization; and (4) selections of literary material illustrating culture.

1. Auxiliary material in elementary texts and grammars: The primary aim of this type of selection is to provide practice in reading, composition, and conversation to reinforce the development of linguistic skills. While individual readings here and there throughout the books may be sound and attractive, they seldom reveal in their total effect a clear principle of organization with respect to cultural content. Particularly on the high school level, readings of this type tend to predominate, often overwhelming the student by a multiplicity of unrelated cultural facts.

2. Cultural miscellanies: General cultural readers, frequently of a descriptive nature, exist on various levels of language difficulty and serve as basic text material for a more or less concentrated treatment of the foreign culture, although in many cases they are actually keyed to linguistic skills rather than cultural objectives. In recent years the pictorial material in these works has assumed an ever-increasing importance. Many such texts are exceedingly attractive in format, lively in approach, and modern in their language, but they tend to draw in a hit-and-miss fashion upon history, literature, art, folklore, music, customs, politics, etc. Thus they appear to be altogether haphazard in their choice of subject matter and fail, beyond certain considerations of linguistic difficulty, to offer a clear-cut principle of selection. Use of the travelogue form is common, and inevitably this type of text concentrates upon the picturesque or upon insignificant oddities. Although the authors may often be sensitive to cultural differences, they do not attempt to present or develop these differences or contrasts in a systematic or relevant fashion.

3. Comprehensive presentations of a civilization: With few exceptions, texts of the "cours de civilisation" type have as their primary aim a panoramic and encyclopedic representation of the factual data of a given culture. Useful though this comprehensive array of facts may be, it can be doubted whether such texts provide sufficient motivation and develop in the student an awareness of significant features and values in the foreign culture. Moreover, these texts frequently reveal a tendency on the part of the compiler to present the data of the foreign culture in as attractive a light as possible and to display a certain evangelistic fervor which sometimes amounts to transparent propaganda. This type of text serves best as a supplementary reference work. Conceivably such material might be presented as effectively in English.

4. Culture through literature: The purpose of the literary text of this type is to illustrate the manifestations of a given culture through the writings of distinguished men of letters. The material may, of course, be used as well to enlarge the student's literary and artistic sensibilities, to cultivate his stylistic perception, and to acquaint him, incidentally, with the great figures of foreign literature. Yet purely literary works, selected essentially for their excellence as literature, need not necessarily be concerned with a significant factor of the contemporary culture. Moreover, as these texts confront teacher and student alike with complicated matters of literacy taste and criticism, they may lose some of their effectiveness for the immediate purpose of cultural elucidation. The selection in these readers naturally tends to be undertaken from a literary point of view and, as in the general cultural readers, a clearly reasoned definition of purpose seems to be lacking.

The various sorts of cultural text materials differ somewhat in their distribution in the languages represented in our examination. The comprehensive presentation of the civilization, for example, is perhaps more prevalent in the French textbooks. The travelog has been frequently adapted to the Spanish-speaking Latin American countries. German texts tend to dwell upon the established phases of the political and intellectual history of the country, to which literary specimens are subjoined. A few textbooks in English for foreigners attempt a synthesis of the American way of life, but seem inadequate as cultural carriers. Thus each language area may represent a peculiar and individual situation. But in general, whatever advantages the texts discussed above may have, they appear on the whole to lack a sufficiently clear focus upon the relevant aspects of the foreign culture as contrasted with the student's own experience and value systems.

GENERAL PERSPECTIVE

Up to the present the attempt to provide cultural insights in foreign language classes has been concentrated upon a single broad objective: an understanding of the culture of the foreign country or countries in which the language is spoken. The seminar focused its attention not only on this but on related types of insight.

Even beyond the immediate familiarity with the foreign culture, a heightened comprehension of American life and values should appear as an important derivative of the new perspectives gained about another people. Some teachers occasionally relate American characteristics to the foreign culture, but the acquisition of such an understanding is rarely an overt objective of foreign language courses. Moreover, it is doubtful that existing teaching materials are adequate for this purpose.

It may be questioned, likewise, whether an appreciation either of the foreign or of American culture can be achieved satisfactorily without an understanding of the nature of culture itself—in the general sense. This does not mean that "culture" as such need serve as a topic for classroom discussion. If methods for transmitting the particular insights are adequate, then a comprehension of culture generally should automatically follow.

No longer is the word "culture" limited in its meaning to that which is admirable, superior, or desirable. More often the term is now employed to indicate the whole range of customary activities of the members of a society. There is, indeed, no appreciable difference between this general application of the word and its somewhat more technical use by the social scientists, who may define it as "the learned (not inherited) and shared aspects of the behavior of members of a society." In either case, the material to be dealt with in a cultural description or analysis will not be limited to that which is felt to be great and timeless.

Anyone growing up in a society acquires habits which are shared by those around him. He also learns to avoid modes of behavior not approved by others. The applied set of preferences, of judgments as to what is good or bad, that an individual learns can be called the "values" of a culture. Not only are these learned, but a set of moral convictions about some of them is also acquired.

A person whose entire view of the world is determined by the value-perspectives he has gained through a single cultural environment—who thus cannot understand or accept the point of view of another individual whose values have been determined by a different culture—such a person may be considered culture-bound in his attitudes. He makes premature and inappropriate value judgments. He is limited in his understanding of the world. Consequently, the reduction of a culture-bound attitude becomes an important objective of our educational process.

The understanding of the culture of a specific country is not, in and by itself, all that the cultural aspect of language study should contribute to a general and a liberal education. To achieve the fullest possible contribution, three important ends must be borne in mind in selecting and presenting cultural material: (1) The student must gain an understanding of the nature of culture; (2) his culture-bondage must be reduced; (3) he must achieve a fuller understanding of his own cultural background.

Our collaborative effort has concentrated upon finding the best techniques for reaching these goals. It must be realized that there are no readymade materials, or even criteria for the selection of materials, that are specifically designed to accomplish the foregoing aims. To attain them will require considerable ingenuity in combining and devising techniques from various fields and disciplines.

POPULAR CONCEPTIONS OF NATIONALITY

Social psychology and sociology provide excellent methods for investigating the conceptions that the people of a nation have of themselves and of one another. A large literature indicates that, except in earliest childhood, the citizens of modern states always have such conceptions. The American, for instance, may describe the German as scientific-minded, industrious, and stolid. The German, in turn, will think of American as intelligent and materialistic. These conceptions change as we are forced, from time to time, to reevaluate our enemies and allies, but they always exist and with a considerable amount of agreement as to their content within a given society at a given time. They are often derived from hearsay, resting either upon pure imagination or loosely interpreted fact rather than from a direct contact, properly evaluated, with the nationality concerned. It is quite obvious from the study by Katz and Braly that many Americans who have never made the acquaintance of a Turk are certain that the Turk is cruel, dirty, and sensual.

In general, conceptions of nationality are couched in evaluative, culture-bound terms which would not be used by an objective student of society. To call the Chinese superstitious, for example, is to say that he holds a set of beliefs concerning the supernatural which we do not share. When we begin to recognize that the practicing Christian may in turn appear superstitious to the Chinese, we have acquired a certain degree, at least, of what may be called cultural sophistication.

Sources other than the researches and writings of social scientists may be employed as evidence of nationality conceptions. Popular dramatic presentations, particularly the moving pictures, caricatures, and current jokes, the treatment of foreigners in newspapers and other periodicals all constitute important information; they are also very difficult to interpret. With such materials, however, one must bear in mind the regional variations within a country and also the tendency of the public taste to demand that the mass mediums concentrate on the strange and adventurous. These mediums will not always convey accurately the overall nationality conception.

Other available sources would be quantitative data on book sales and public-library circulations representing the literature of the foreign country or books from whatever source dealing with the foreign country, the former category presumably to be limited to material translated into the language of the home country. In evaluating such information as an indication of the nationality conception, we should be aware, however, that selection for translation appears to be determined by a complex of factors not always fully understood and does not,

for that reason, represent an altogether free choice according to an independent public taste.

Descriptions of national characteristics are also to be found in the impressions of travelers and the epitomizations of untrained observers. Authors in this category will often profess to present the truth about a nationality. In many instances it will be apparent from the vocabulary used that the notions thus presented are provincial, sometimes even chauvinistic. The inadequacy of such impressionistic studies can be shown by comparing them with methodologically more advanced work. Nevertheless, they may, in turn, be reinterpreted as representing culture-bound impressions of foreign nationalities.

Using existing cultural conceptions as a starting point is not the only way of selecting from the unlimited storehouse of cultural materials those which are significant. Another approach, which can be used in conjunction with the first, is that of stressing those aspects of the foreign culture which the residents of that country feel to be important. For example, if the particular foreign people believe themselves to be romantic, or generous, or moral, or practical, and feel that this trait is commonly misunderstood, then possibly this self-conception should be taken into consideration.

Contemporary events suggest that popular nationality stereotypes, including national self-conceptions, are inadequate cognitive tools for meeting international responsibilities. The language teacher who undertakes to develop soundly based cultural sensitivity cannot be content merely to perpetuate the stereotypes. Some cross-cultural perspective is essential to the communication of cultural insights that are not simply nationalistic projections. Aware of the German's view of the American as well as the American's view of the German, we are compelled to look for ways of conceptualizing national differences which will be free from cultural bias. For this we must naturally turn to the more objective studies of culture. Nevertheless, it can be helpful to begin with existent nationality stereotypes because they spot areas of misunderstanding and possible contention, thus providing a principle of choice among cultural items that could be presented, even though they fail to supply acceptable terms for the interpretation of such items.

OBJECTIVE CRITERIA—METHODS AND RESULTS

An objective comparative analysis of the cultures of the two countries concerned gives us a reliable basis for arriving at similarities and differences. Such a comparison should reveal significant facts about the cultures beyond those discovered by other methods. Covert aspects of the cultures, for example, may be discoverable only through the use of carefully and subtly devised objective techniques.

Existing studies of American culture will naturally be of value in making comparisons with any foreign country. These studies are diverse but often most suitable for our purposes. A brief summary of the types of sources follows; this will also suggest the nature of the material to be used or created for any foreign country.

The best materials are those based upon explicit research carefully controlled as to method. Periodicals such as the American Journal of Sociology and the American Sociological Review contain many excellent studies, usually of specific aspects of American life. There are also more extended works on such specific features, as well as a few studies which aim at a comprehensive coverage of America.

Community studies have a long history in American social science, some of them having attained the substantial position of classics in the field. New problems and the development of new methods to deal with them have extended the use of this approach.

The technique known as content analysis, which is represented in a growing literature, promises to be one of the most useful methods for the verification of hypotheses relevant to the problem of cultural comparisons. It is, for example, adapted to the comparative study of themes as patterns. Today a distinction is usually made between the culture of a people and the shared or modal aspects of their personalities. Studies of the personality or national character of literate peoples have proved highly controversial, but they exist for America as well as for many other countries.

To be used with caution is a wide range of writings by enlightened observers who have no explicit methodology for analyzing contemporary cultures. Literary critics, certain historians, journalists, and men in public life often produce stimulating and valuable studies which should not be overlooked. Indeed, much of the data for modern European countries will be found in just such sources. In general the observations of these writers may be accepted provisionally as a series of hypotheses, to be subjected to careful analysis and verification.

The source materials which have been mentioned and the experiences of those familiar with the country supply data for the understanding of the areas of culture chosen as significant. To make certain that no important aspect is overlooked, there are various research aids that can be employed. Murdock's Outline of Cultural Materials consists of an elaborate series of cultural categories which is used as the basis of the Cross-Cultural Index. Techniques and categories are discussed in a handbook published by the Royal Anthropological Institute which is designed to aid those with little experience in studying a particular facet of a culture to ask properly detailed and comprehensive questions concerning it. A very different sort of work is that of Hall and Trager, which applies the viewpoint and certain methods of structural linguistics to the study of culture. The authors' conceptual scheme provides a number of analytic tools which, although yet untested, appear promising. This work can be used to construct checklists to assure the adequacy of the understanding of an aspect of culture.

In the analysis of selected facets of a culture, certain obvious structures such as institutions, associations, and cultural complexes will be encountered. Beyond these, however, are patterns or configurations, which are structural regularities of even greater importance for our purposes. Patterns cut across more than one aspect of a culture and serve to integrate diverse materials. The term "value orientation" has been used for one type of pattern related to values. A very similar concept is that of cultural "themes," an old idea which has recently been given an exact definition. Opler uses the term "theme" in a technical sense to denote a postulate or position, declared or implied, and usually controlling behavior or stimulating activity, which is tacitly approved or openly promoted in a society.

Although Opler formulates his themes as postulates, they can also be given short headings such as "success," "competition," "ritual cleanliness," etc. Any culture has a limited number of themes, and these can be identified at almost any stage of the analysis. Once a theme is assumed to exist, special efforts can be made to establish its existence and importance by such methods as noting how many diverse kinds of cultural materials are patterned by it.

These broad, integrative concepts have certain advantages. We need not bewilder the student by the presentation of a large number of individual traits. A few well-chosen items can make him aware of the existence of the pattern. There are generally not many patterns of the theme type in a given culture. Consequently, all those that can be identified are worth considering as points of primary importance about which teaching materials may well be organized. Very often they will fall in the very areas that the examination of national sterotypes has already suggested as highly significant.

IMPLEMENTATION

With the above techniques of analysis and tools for research, it should be possible to determine significant and relevant patterns and traits of a given culture—French, German, Spanish, American, etc. The next essential step is to employ such a body of cultural data in arriving at a reasoned determination of cultural objectives (appropriate types of cultural insights) for the different levels of language instruction and a clear direction of effort toward the attainment of those objectives.

The important cultural differences, as these are popularly conceived, will not usually involve the geographical detail or the piquant customs in dining and clothing which fill so many textbooks. Any misunderstanding between America and a foreign nation is more likely to center in a disagreement on values—a kind of disagreement that is often only skirted by the reading materials we now have. The bland travelogue that avoids such ticklish matters provides a conception of the foreign culture which the student may reject because of its obvious bias, or which he may accept until more extended experience disillusions him. By avoiding such controversial matters, the language teacher or textbook author not only fails to do justice to the culture, but in addition he deprives students of a subject matter which they might find of deep personal interest.

This leads us to the determination of the illustrative material that should go into the composition of a given text. Obviously no single textbook can attempt to illustrate the entire body of patterns and traits representative of a culture. In the selection of content and method, the writers of textbooks and other instructional materials, including the audiovisual, will need to bear in mind such questions as the following:

1. Does the material focus upon characteristic and significant aspects of the foreign culture?

2. Can the material be so organized that the student will leave the course with a fairly clear idea of some salient aspects of the foreign culture?

3. In using this material, can important traits or themes be compared or contrasted with typically American behavior? And can this be done in a manner leading to a better understanding of American life?

4. Is the student stimulated to search for historical or other explanations for values which differ from his own?

5. Do the materials foster an awareness of the validity of the mode of life in any given society?

6. Is the material free from dubious or undesirable value judgments?

7. Does the material lead by implication to a clearer understanding of the nature of culture in a general sense?

Illustrative materials may be drawn from (1) the literature of a given culture; (2) accounts by native or foreign observers, either trained or untrained; (3) periodical writing of an expository or argumentative nature; (4) historical writings; and (5) travel literature. If appropriate materials are not available in any of the above or other types of sources, recourse to the essay written for the special purpose will be inevitable.

The presentation of these materials need not be entirely in contemporary terms. Whenever it is possible to find suitable selections which will account for the trait or be-

havior pattern on historical grounds, these will lend variety and depth in approach.

Brief introductory comments in English should suggest to the student the relevancy of a given American trait and should point up the nature and the significance of the passage that follows. Purely factual information that may be considered necessary for a fuller understanding of the text should be relegated to the notes. To achieve a greater involvement of the student, study questions, preferably in the foreign language, should call for reflection in the attempt to heighten his appreciation and understanding of our own as well as of the foreign way of life. Illustrations, supplementary exercises, outside readings in English and in the foreign language, and in general the treatment and presentation of the material will vary considerably from text to text, depending on level and type.

EVALUATION

This seminar has been concerned with the development and clarification of general principles relating to the development of cultural insights through foreign language study, which we hope will have practical application. In addition, we have attempted to indicate how these general principles should be translated into textbooks and teaching methods. Whoever undertakes to do this will necessarily be concerned also with evaluating the effectiveness of the changes thus introduced. We hope that changes in materials and methods will give our students some valid insights into the life and thought of another people and act as a corrective to cultural bias. How, then, will their behavior differ from that of present-day students? What will be the consequences of these new attitudes and modes of understanding?

The experimental evaluation of teaching methods and materials is a familiar practice in educational psychology. Like an arrowsmith conducting a controlled experiment with a new serum, the teacher with his new materials and devices must exempt some subjects from treatment if the usefulness of the innovations is to be determined. He must, in fact, maintain a control group matched with his experimental group in all relevant dimensions except that one—in this case the proposed teaching materials—whose effects are to be charted.

It is generally easier to test for the attainment of the more familiar goals of language teaching than for attitude changes. Language teachers have traditionally been concerned with three kinds of objectives:

1. The acquisition of language skills: reading, translation, composition, oral expression, aural comprehension. These are the skills which are commonly tested.

2. The acquisition of cultural facts. We test less regularly for factual knowledge of cultural materials, which may help explain why students often pay little attention to the content of cultural readers. We do know, however, how to test for this kind of subject matter.

3. The appreciation of a foreign literature. Here we are likely to have in mind something more subtle than we can easily test. Knowledge of the names of authors, the plots of plays, the opening lines of poems are imperfect indices of that literary sensitivity which we hope to develop; critical essays, though more pentrating and subtle, are difficult to evaluate objectively.

The language course which aims directly at developing cultural insights of the type envisaged in this report moves beyond mere cultural fact into the realm of cultural understanding. We expect this to result in changed attitudes and sympathies on the part of our students—psychological subtleties that will require great experimental ingenuity if they are to be adequately appraised. Several techniques might be used in assessing these changes:

1. On the level of language skills, we may eventually be less interested in the student's ability to translate than in his ability to recognize what is not translated or translatable. Instead of asking him to render French into English, we may ask him to point out what is lost as the French passes over into English. A perceptive reading in the light of a broadened cultural understanding may reveal aspects of the French mind that do not always come across in translation. In this way we can illustrate the imperfect translatability of languages instead of promoting notions of simple equivalence that make some aspects of the study of language seem trivial.

2. The direct verbal test. Questionnaires and rating scales for measuring nationalistic attitudes and cultural bondage are already in existence. They may be of some value. It seems likely, however, that the intent of such material is too obvious for many college students. After a very few class hours, the astute student can easily assume the attitudes that will please his teacher.

3. The indirect verbal test. One possibility here is the employment of creative materials in which the student composes stories or essays, and his writings are evaluated for the cultural understanding they reveal. Materials for such tests can be selected in such a way that it will be impossible to guess the purpose of the measuse. It would be best to administer these tests somewhere other than in the language class, so that the student will not be motivated to simulate the attitudes of the teacher. Thus, for example, students in a class in social studies or in English might be asked to write a composition discussing the frequent changes in the French Government. The performances of the control and experimental groups could then be compared for the cultural understanding displayed. The techniques of content analysis make it possible to do the job reliably and to determine the statistical significance of the results. The tester will have to depend upon the help of the language teacher in the creative task of devising situations and asking questions to serve as the basis for the content analysis. It will be important here to examine not only the understanding of the particular foreign culture, but in addition the attitudes held toward America itself and toward alien cultures in general.

4. The action level. This is perhaps the most important level to be examined, but it is also difficult to control experimentally. How does the proposed course in Spanish, for example, affect the students' reading of Spanish novels, their attendance at Spanish movies, and, very significantly, their dealings with Spanish-speaking people? The election of additional courses in Spanish and in cognate areas, expanded travel plans, choice of vocation, etc., might be indications of a growing understanding of Hispanic culture.

The detailed problems of experimental design—the selection of a sample and the experimental controls—have not been discussed here because these questions have already been encountered many times and have been dealt with satisfactorily. Our principal concern has been with the creative aspects of the evaluation process, in which the collaboration of the social scientist and the language teacher is necessary.

LANGUAGE STUDY AS A MEANS OF DEVELOPING CULTURAL INSIGHTS

While the importance of achieving cultural insights within any program of American education cannot be denied, the question remains whether such insights can be effectively transmitted in the foreign language class, and if so, whether this can be done in a language class any more effectively than elsewhere. There seems little doubt that language is an important tool in the understanding of culture, but as we pointed out earlier, foreign language study is itself being increasingly advocated as the appropriate means by which cultural insights can be established and sharpened in the students.

The question may be considered on both a theoretical and a practical basis. In dealing with the problem theoretically, we may begin by recognizing the existence of a popular or naive view that reality presents itself to all men in the same form, and that all languages are sets of codes for expressing this single reality. From such a concept arises the assumption of complete or nearly complete translatability; all that is necessary is to substitute the relevant parts of one code for another, let us say English for Italian, and precisely the same message will be conveyed.

A study of non-Indo-European languages casts considerable doubt upon this assumption. The Navaho, for example, have one word for the colors that we call gray and brown. Totonac, a Mayan language, has distinct forms of the verb to be for subjects that are sitting, standing, or lying. Hupa, a language of northern California, has tenses for its nouns, and can thus distinguish by means of inflectional endings alone between a house now existing, one in ruins, and one not yet built. Hopi, by virtue of its verb forms, is better equipped to deal with vibratory phenomena than is English or any other Western European language. In short, a linguistic system is an expression, though not a complete one, of the system of perception which a social group has of its surroundings and of itself.

It is true, of course, that the linguistic structures of the principal European cultures are to a great extent similar and that an attempt to establish discriminating insights based upon purely structural features is not likely to yield tangible results, but the lexical differences are considerable and can be more easily interpreted.

The lexicon of a language is a remarkably revealing inventory of the culture of the people who natively speak the language. There certainly is a relationship of approximate translatability between many lexical items in the various modern European languages. Students are likely to mistake this for a relationship of perfect translatability—a view that is reinforced by the presentation, in standard textbooks, of long lists of supposedly equivalent items of vocabulary. It is quite true, of course, that the French word "mère" is a translation of the English word "mother." If, however, meaning is broadened beyond simple denotation to include the emotional and cognitive associations which are not purely personal but common to all the participants in a culture, then it is clear that the translation is only approximate. For such abstractions as "truth" and "goodness" the untranslated residue is likely to be greater. To comprehend a language fully, one must share in the culture of the people who speak it. Foreign languages are not alternative codes for the familiar American reality. The language teacher who wants to convey not only the code but also its meaning cannot avoid interpreting the foreign culture, and in doing this effectively, he will illuminate the general nature of culture itself.

The importance of language for the real understanding of culture is being more and more felt by students of civilization. No civilization can be fully understood by one who ignores its linguistic means of expression. Modern anthropologists cannot work any more through interpreters if they want to collect reliable material. In general, language mastery has come to be a necessary prerequisite for participation in an area study program. Finally, there can be little doubt that in the areas of greatest intellectual and artistic subtlety, in the works of the poets and philosophers, knowledge of

the language in which they are written is an absolute essential for a full comprehension.

Turning to more practical considerations, it seems that there is at the present time no place in the high-school or college curriculum where a systematic attempt is regularly made to give the student a well-directed insight into a particular culture other than his own. Basic courses in the social sciences are generally concerned with presenting analytic tools and comparative data rather than an acquaintance with a particular culture. History, though it contains some of the materials for the interpretation of a particular culture and provides indispensable perspectives, is by definition not primarily concerned with providing a comparative insight into contemporary cultural values.

As a rule the language teacher is, by his familiarity with materials of the foreign culture, in a position of decided advantage. Given an awareness of the comprehensive cultural purposes described above and an acquaintance with the methods by which these insights can be attained, he can make a most effective contribution to an understanding of the major problems of human relationships that confront us today.

RECOMMENDATIONS

Our meetings this summer constituted an initial attack, in terms of general principle, upon an educational problem which seemed to us of primary importance. This concern with a broad overall point of view, since it was conducted on an interdisciplinary basis, led us into a number of hitherto unexplored or at best very casually explored areas, and by the very nature of the situation, we were forced to ask many questions which we could not hope to answer definitively. This method of operation places upon us the responsibility of suggesting subsequent projects and further avenues of investigation. They may be considered under three headings: Workshops, teacher training, and problems for future research.

1. Workshops and seminars: The obvious next step is to suggest ways of achieving, in terms of one or more specific languages, the educational aims which have been presented here. This will undoubtedly be more effectively accomplished through a series of seminars and workshops, each composed principally of teachers concerned with one particular language, than through so broadly diffused a group as constituted the present seminar. Ideally, three workshops should be arranged for the summer of 1954, in French, German, and Spanish, the primary purpose of each to be the creation of second-level teaching materials for that language, which would be designed to achieve an insight into the culture of the foreign country.

As an initial phase of activity, the essential elements of the culture of the speakers of that language should be analyzed and compared with the corresponding elements in our native culture. Such a cultural analysis and the subsequent evaluation of the various points of difference would have to be undertaken with the assistance of area specialists; thus the first stage of the workshop would be interdisciplinary in its operational scheme. These activities should result in the formulation of objectives (in terms of cultural insights) for the three languages.

The second stage of the workshop will be bibliographical, with the language teachers assuming the principal responsibility for the activities of the group and the social scientists serving principally as resource personnel. Various types of reading selections containing the key attitudes which have been selected as teaching objectives should be sought out, and in each instance the particular selection must also be judged in terms of its level of reading difficulty. Those selections which are too difficult and which will lend themselves to simplification must be rewritten. For each course also the various objectives must be organized into the sequence which will lend itself to most effective presentation. Further stages in the workshop will deal with the formulation of study questions, conversational materials based upon the reading selections, and tests of the material to be presented.

These workshops could be organized according to any one of several possible patterns. They could be sponsored by a language teachers' association or a State educational agency. Probably the most feasible arrangement would be to establish them as a part of the regular summer instructional program of a college or university, carrying academic credit for those students who desire it. Each workshop should be under the direction of a well-qualified representative of the language-teaching profession, preferably one who has had some contact with the present seminar. Another possibility would be to include in the personnel of a single workshop both teachers of a particular foreign language and teachers of English to native speakers of that language, with the idea of creating cultural materials for the teaching of both the foreign language and of English.

Ideally each workshop would be provided with approximately 10 summer fellowships, carrying stipends sufficiently attractive to encourage the best high-school and college teachers to apply for them. Moreover, in order to assure actual field trials of the materials devised in connection with the workshops, the institutions employing the teachers who are given fellowships should guarantee the use of such materials in their classes for a 2-year period.

It would be well to divide each workshop into two parts. The first, in which the general principles of intermediate language teaching for the purpose of cultural orientation are set forth, should be open to any qualified student. The second, more directly concerned with the construction of teaching materials and tests, should be limited to students receiving fellowships. Any workshop organization should provide teacher training for a qualified group, result in a set of materials, and assure their being put into use.

2. Teacher training: No matter how deftly or ingeniously text materials may be constructed, they will not achieve their aim without teachers who can employ them intelligently and sympathetically. And even if we must get along for some time without the materials which we have envisaged, the training of foreign-language teachers in the direction of a greater cultural understanding would still be a desirable end in itself.

Considering that language exists only in a society, that in fact it constitutes the unifying force which holds a society together, we believe that those disciplines which have as their chief function the study of man as a social being have much to contribute toward our understanding of language. All too frequently the humanist views language as the vehicle for a highly restricted kind of communication, important and exalted though it may be, and concentrates upon the employment of that language by a small minority of gifted individuals, overlooking its potentialities as a reflection of the total culture of those who speak it.

Moreover, if a primary aim of the study of a foreign language is to overcome the misunderstandings and tensions which exist between or within nations, we cannot neglect those aspects of the study of man which are concerned with the whole social structure. The conclusion seems obvious; the teachers of foreign languages will find certain concepts, attitudes, procedures, and factual information drawn from the social sciences useful to them in their work.

The practical question is where, in an already crowded curriculum, such training can be included. Certain solutions may be suggested. Students preparing to teach foreign languages might well be encouraged to elect social science courses as cognates, or a suitably constructed interdepartmental social studies program as a teaching minor. The courses in teaching methods or other parts of the required professional training could be revamped to include those concepts and attitudes drawn from the social sciences which we believe will make for more effective teaching. The social science departments might well be asked to prepare a collaborative service course designed for teachers of language. On the graduate level, and also for those engaged in college teaching, collaborative or interdisciplinary seminars could be established. The Modern Language Association could perform a useful service by preparing a pamphlet which would explain the bearing of the social sciences upon the teaching of foreign languages. It would be distinctly helpful, also, for the association to insist upon the need for group planning and close cooperation with educators who are confronted with the broad problems of educational objectives, integration of subject matter, and student guidance.

3. Research: Much of our discussion throughout the seminar was less definitive than we should have liked simply because certain kinds of information are not available. This suggests the desirability of further research in a number of areas. Certain basic or fundamental matters have not yet been dealt with adequately, and in addition many practical questions remain unanswered.

The following have occurred to the seminar as presenting opportunities for further study. As problems for basic research we suggest:

1. Exploration of the relationship between language and thought, with particular reference to European languages (to be carried out by a linguistic scientist and a psychologist in collaboration).

2. Problems of translatability. What can be satisfactorily translated from one language to another and what is incapable of translation?

3. Inquiries into the nature of foreign cultures, particularly those which are within the orbit of the Indo-European languages, employing the techniques which have been used in analyses of American life. This would envisage the extension to other countries of such compilations as Gardner Murphy's In the Minds of Men, which presents a well-founded picture of India as it now exists.

4. Comparisons of values and culture patterns between various national states.

5. Inquiring, country by country, into the value reorientations resulting from foreign experience. Exchange students and teachers would be excellent subjects for this kind of research.

6. Extension of content analyses to more foreign literatures.

No strict line can be drawn between the so-called basic and applied research, but the following questions seem to have immediate applicability to the foreign-language program we propose:

1. Why has not a knowledge of a foreign language and contact with a foreign people heretofore resulted in attitudes which are less culture-bound?

2. What ways can we devise to test the kinds of teaching materials we seek to develop?

3. What kinds of materials are chosen for translation from one language to another, and what are the factors determining this choice?

4. What further bibliographical resources would be most useful to the teacher of foreign languages, and how can they be made available?

This is not an exhaustive list, but it will serve to indicate the directions of activity that would make for more effective teaching of foreign languages if they are to perform the educational function that our position in world affairs clearly demands.

Respectfully submitted.

Report to Constituents by Hon. Thomas M. Pelly, of Washington

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PELLY. Mr. Speaker, the story is told of a certain underworld character suddenly blossoming out as a deacon of the church and when this man was asked about it, he justified his selection to this position of leadership on the grounds that even the unrighteous are entitled to representation. Unlike that church deacon, and in all seriousness, I have never considered in my own case any special group obtained representation out of proportion to the entire population as far as the First Congressional District of Washington State was concerned. I may add, too, that during the 1st session of the 84th Congress my constituents have been unusually kind in recognizing my desire to put the public interest first and support what would promote the greatest good for the greatest number. Perhaps this understanding attitude was due to my activity during important debates on the floor of the House and, therefore, my position and reasoning on these public issues became a matter of public record and, of course, the members of the press do a very excellent job of keeping the public well informed.

The record, in my case, will show consistent support of President Eisenhower's program. In foreign policy matters and the administration waging its peace campaign I am listed as a 100 percenter; on domestic issues, while I have never put partisanship above conscience, it has been a great privilege to be able to support our great Republican leadership in practically every major measure.

There is no political party that has a monopoly on wisdom but to me, a Republican, it is a source of great pride that mine is a party of fiscal responsibility. For example, during the past 100 years, if you take all the years when the Republicans were in control of Congress, you find there has been an accumulated Federal Government financial surplus of receipts over expenditures of more than $5 billion as against the record of the years with Congress controlled by the Democrats when there was accumulated an aggregate deficit of nearly $269 billion.

Now I am taking great satisfaction from the prosperity which has come under the policies of my party and which might result in a balanced budget even this fiscal year. Quiet now are the dire, dismal and dour Democratic prophets of doom and gloom. Silent are those who actually seemed to wish public confidence shaken in order to discredit the administration. Right now more American wage earners are receiving more disposable income and producing more goods than in any peacetime year in our history. Yes, peace and prosperity are being waged successfully by the Republican administration and by our great President. It is certainly pleasing to be able to return to my home district and my neighbors and friends under these circumstances and in the light of the Nation's progress.

Legislativewise much in the way of important legislation remains for consideration at the next session. This is in part because a Democratic Congress, such as this one, will never be able to enact any civil-rights legislation, and partly because this Democratic Congress is fearful that the Eisenhower Republican label will be attached to measures prior to the 1956 election.

Fortunately, two projects of great interest to my district were nonpartisan in character. Certainly the million dollars to commence construction of the Eagle Gorge flood control dam will be greatly appreciated by my constituents.

Also my district benefits from planning funds given the United States engineers for the Shilshole breakwater off the Ballard Locks in Puget Sound. For 27 years the people of Seattle have sought this project, and after having it authorized last year, I am hopeful of its critical need being recognized and construction funds appropriated next year.

One of the congressional duties I greatly enjoy is appearing before various House committees to explain the projects before the Congress of particular interest to my constituents. For example, I like to think my personal effort in behalf of such projects as Eagle Gorge Dam and Shilshole breakwater has been an influencing factor. But nothing can diminish the credit due to local citizens' groups and individuals who labor long and hard to get the merits of such improvements recognized. In this connection, I am asking congressional approval of the name "Howard Hanson Dam" after the chairman of the local committee which for years worked for a program to stop the periodic floods in the Kent-Auburn Valley south of Seattle. In Bremerton, in my district, is the Puget Sound Naval Base Association. I wish it were possible to name some naval vessels for some members of this organization who have worked with me in civic matters. I am very fortunate to have such friends on the homefront.

And now, Mr. Speaker, I will conclude these brief remarks. In doing so, I want to express to friends and colleagues on both sides of the aisle my appreciation of being associated with them. We have often personal differences of viewpoint, but we all recognize, I know, that it is our very conflict of opinion and our public debate which makes America a great country and ours a great Government. I have increasingly enjoyed being the Representative in Congress from the First District of Washington State and I look forward to future service with keen satisfaction and pleasure.

What Congress Did

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the CONGRESSIONAL RECORD the following article which appeared in the August issue of the Farm Journal entitled "What Congress Did," which I believe will be of special interest to our farmers:

WHAT CONGRESS DID

1. It forbade draft officials to railroad farm boys into the draft because we have farm surpluses.
2. Boosted considerably the school lunch, agricultural research, extension budgets, and ACP payments for 1956.
3. Let the REA lend up to 75 percent of its telephone and electric money instead of having to hold 50 percent of it back.
4. Reserved $300 million of foreign aid funds for sale of United States surpluses to "soft currency" countries.
5. Repealed the 1954 Holland amendment that made compliance with acreage allotments a condition for getting ACP payments. This relieves corn growers who want to raise corn for feed.
6. Encouraged cotton exports by relieving exporters from having to replenish their stocks from CCC purchases.
7. Exempted durum wheat States from restrictive quotas.
8. Cut the minimum burley acreage allotment from 0.7 to 0.5 acre and authorized USDA to study putting burley allotments on a poundage basis, to reduce overproduction.
9. Extended the disaster loan program and provided a uniform 3 percent interest rate instead of 3 to 5 percent.
10. Authorized the Interior Department to keep up through 1963 its research program aimed at cheaply converting sea water into sweet water for irrigation and other uses—a great boon, if accomplished, to all coastal areas.

Producers With Largest Quantity of Products Under Loan on the 1954 Crop

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BROWNSON. Mr. Speaker, during the debate on the Agricultural Act of 1954, which provided for continued price supports for agricultural products, I included in my speech—page 8997-8998, July 1, 1954—the breakdown by States of producers with the five largest quantities of corn, wheat, and cotton under loan for the 1953 crop.

At this time I would like to include in the RECORD the following list, just prepared for me by the Department of Agriculture at my request, of recipients of such loans on the 1954 crop:

Producers with largest quantity of products under loan on the 1954 crop

Name of producer and address	Quantity	Amount
ALABAMA		
COTTON		
J. B. Hain, Jr., Sardis, Ala	746 bales	$131,425.95

George Meany

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. RABAUT. Mr. Speaker, it is with pleasure I insert in the RECORD an article from the August issue of Sign magazine, from the pen of Victor Riesel, captioned "One-Man Task Force." This article forcibly treats with the fearless Christian leadership of the president of the American Federation of Labor, George Meany.

The article follows:

ONE-MAN TASK FORCE—AT THE WORLD CONGRESS OF LABOR AMERICAN DELEGATES STOOD UP TO SOCIALIST SNOBS OF FOREIGN LABOR—MR. MEANY LED THE ATTACK

(By Victor Riesel)

For several hours in the early morning of May 19 the Soviet secret police had its chance to put its hands on a one-man American task force who has done the enemies of our land as much harm as anyone since Sergeant York and Dwight D. Eisenhower were soldiers in the ranks.

That one-man task force was George Meany, president of the AFL, soon to lead America's 15 million unionized working people when the AFL and the CIO merge next December 5.

In the early hours of May 19, Meany and six others in his party were driving through the Russian zone of Austria as swiftly as the night and fatigue would permit them to get from the German border to Vienna. They had been driving since 3:30 p. m. the day before. At that time they had left the

Zurich Airport by the only transportation available—a crowded, rented car. Their transatlantic ship had been delayed. They had missed their reserved airline connections. A chartered plane would have been extraordinarily costly for the AFL, which does not have the money of some of its ebullient affiliates.

The only scheduled plane for Vienna was solidly booked. Several Americans on it offered Meany their seats. But, as he put it, he had come with his people all the way from the States. He would not leave them now. He would not ride in comfort and leave the others stranded. He rented a car, disregarding the fact that he had no "gray card" required by the Soviets for passage through their zone.

For almost 17 hours they drove, through Switzerland, Germany, and finally the Soviet check points. And George Meany and his people got to Vienna for the early preconference parleys which preceded the Fourth World Congress of the International Confederation of Free Trade Unions.

In the days that followed that grueling ride, Meany slowly, diplomatically, but tenaciously shifted the leadership of world labor from the pipe-smoking, knighted, British union chiefs to the cigar-chewing Americans.

Never again will the Socialists of Britain, the Social Democrats of Germany, the hyperthyroid left wing neo-Communist Socialists of Japan, or the down-the-nose-looking, successful Scandinavian labor chiefs view American labor leaders as just money bags with hair grown over.

It would not be fair—and George Meany would be the first to say so—to infer that Meany accomplished all this by himself. That could not be done. There were 20 other American labor chiefs hammering out policy and lobbying with foreign delegates. But there was no doubt Meany was their leader and symbolized their weariness with the endless verbiage and outmoded slogans of Europe's not overly successful, Socialist unionists.

Regardless of differences you've had with this bloc of American labor chiefs, or with Meany himself, your heart would be a dead one indeed if you were not excited by the Americans' pragmatism, their utter refusal to stand for nonsense, the disdain for the class struggle sloganeering, the unwillingness to compromise with neutralism, the Russians, or any other dictatorship.

They saw this world congress of labor for what it really was. True, it represented 54 million unionists in 79 free nations. But, like the Emperor in the ancient fable, it lacked clothing. Seen stark naked, it was a good show in the big hall of the Viennese Konzerthaus, just up the street from Stalinplatz and the four-power Commandatura. It was colorful with its knighted Englishmen; its fiery Latin Americans (especially the Cuban who wanted to drop the big bomb anywhere, soon); its Nemro delegate from Sierre Leonoe, replete in sari, and its Indians in leggings.

But it was heavy with that old Socialist hangover of anticlericalism. It was freighted with intellectual snobbery and snide laughter for Americans. It was loaded with free loaders who had tied themselves to sinecures in the ICFTU. It was veering dangerously toward an appeasing neutralism. The Germans were and still are opposed to rearmament. It was filled with friends of Dictator Tito.

And it was moribund.

It was fighting a powder puff cold war against a powerful Soviet espionage and propaganda network in the rival World Federation of Trade Unions, which is headquartered just a short taxi ride from the Americanized Hotel Bristol in Vienna.

The American delegation, with Meany in the lead, was not going to play the Patsy for the Socialist snobs of foreign labor. That's a harsh phrase, but accurate reporting demands that it be so described.

The anticlericalism, which found its way into several speeches, was directed against the Christian Trade Unions of Germany. This was soon handled quietly, behind the scenes.

The intellectual snobbery was handled by Meany—both subtly and bluntly. The subtle touch came when I found the musicians' Jimmie Petrillo thumbing through a manuscript in his front-row seat. I asked him what secret document he had that I could steal. He laughed and retorted:

"Meany wants me to make a speech, so I dug into my trunk. Lucky I had this one around for such an emergency."

It was my turn to snicker. But nobody laughed after Jimmy had swung into his talk to the delegates from around the globe. Jimmy clowed a bit. But then Jimmie quit clowning, as he can.

"My visit to Vienna is, in a sense, a pilgrimage to a shrine," he said.

"To me and to the 252,000 members of the American Federation of Musicians of the United States and Canada, this city has a very special meaning. Much of the finest music the world has ever known was born here of the genius of Hayden, Mozart, Beethoven, and the tragic Schubert."

And so on went Jimmie, leaving most of his listeners away out in the cultural bleachers. America is rebuilding the Viennese Opera, he pointed out. And this they understood, for they could see the scaffolding outside the Hotel Bristol.

"For us there is a deep satisfaction that the United States—the richest and most generous of nations—was the first to help restore music and the cultural arts in Europe," Petrillo said. "We of the Western World have long been the target of Communist propaganda which describes us as money grubbers, a materialistic nation with no interest in the arts. Our ready assistance to other nations in building their cultural outlets goes far to disprove their charge."

There were those among the Americans who were a little embarrassed by the thought of a speech on music at this august gathering. But the delegates listened and they applauded well.

Petrillo spoke at the request of George Meany. It may not have convinced the British or the German laborites that we can hum anything more than Rock and Roll and Davy Crockett, but it had its impact on many a delegate.

Later I walked back to the headquarters hotel with Jimmie Petrillo, resplendent in a big white and black checked cap.

"I hated to face that crowd, but I'd read that speech to those Russian soldiers, if Meany wanted it."

I have never heard a tough labor leader talk that way of an AFL chief in all my years on this beat.

But there were blunter moments.

By the time Meany got up to make his first speech, the British had said over and over again in private talks that this was not the moment to rock the boat or annoy those who would soon be meeting at the summit. The Russians might take umbrage. They might not come to the summit if nasty things were said in Vienna. Meany and the rest of the American labor delegation listened.

Then early on the opening day of the world congress Meany arose—and laid it on the line.

"Remember—and this applies to all countries—without first defeating Communist infiltration and subversion at home you can never stop Communist invasion and slavery from abroad. * * * Yes, it is only from positions of strength that the forces of peace and freedom can advance their cause. Never can the cause of human liberty and world peace be served by appeasing aggression or retreating before imperialism—whether it be the new, the Soviet, brand which in reality is not new but as old as tyranny itself—or any other type of colonial exploitation and oppression.

"When we of American labor say we are for freedom, it is not a matter of speaking for the record. The only record we know, the only record that counts, is the record of action, the record of deeds and not demagogy. To us freedom is the most serious matter of all. Without freedom, there can be no free trade unions in any country. We talk and work for freedom because we believe in it and are ready to fight for it."

A few days later, the pussyfooters in the World Labor Congress were still not ready to whip the organization into a fighting outfit. Meany was at his seat in the front row. He had his translating earphones on. Suddenly they came off. The cigar tilted at an angry angle.

He asked for the floor. Meany put it on the line. No accord between the Western Powers and the Soviet Union would soften labor's hostility toward the Soviet slave regime, he warned.

He lashed out at the heads of the western states. He wanted no world half slave and half free. The Communist and the democratic system could not coexist, he warned, no matter what arrangements the heads of states might feel it necessary to make to prevent war.

The men of Moscow are determined to destroy free labor, he charged.

The neutralist delegations from European, Indian, Japanese, and African unions listened hard. Later some of them changed their positions. The British shifted, too. At first they had contended that Meany and the other Americans wanted to change the structure of the ICFTU leadership so that American money would be required—and that would give the Americans control of the world congress of labor.

But they changed their minds and left only the German Socialists of the powerful delegations muttering that the Americans wanted to take over.

Meany demanded that the ICFTU get off its swivel chairs and crusade against communism. He left little doubt that the organization's secretary, J. H. Oldenbroek of the Netherlands, was a bureaucrat who couldn't provide any more inspiration than a sewing circle discussion of silk gauze curtain fashions on the modern window.

Meany wanted action. The American delegation wanted action. The Communist world has crept over one-third of the earth's land mass. Its bayonets encircle more than 1 billion of the world's 2,500,000,000 people. Its money is subverting unions everywhere. Here is the congress of free labor and nothing is being done.

There were secret meetings all over the place. When they were over, the ICFTU high command had decided that it will have a director of organization from now on. He will have three assistants. Their assignment will be to beat the Communist global apparatus to the punch wherever there are no unions.

Furthermore, the director of organization and his aides are to survey the world and discover where the Communists are digging in and might take over by default.

Once the trouble spot is located—be it Indonesia or Latin America, the new task force is under orders to get there and coordinate the fight against Communist infiltration and subversion. For such work the American delegation is willing to contribute $100,000 above its regular dues.

Amazingly enough, the other key delegations agreed to increase their contributions sharply, too.

This was a great victory for American labor. Evidence that it was a victory for the mainstreets of America, from which have poured forth so many young soldiers, can be seen in the fact that the Daily Worker

was really upset by the revitalizing of the ICFTU.

And well it might be. The Communist world appears to have taken a holiday from violence. It must depend entirely on subversion of unions in critical areas—especially in the Orient. To succeed without Soviet bayonets, the Russians' Communist parties across the world must infiltrate unions and use them as a base not only for sabotage, but to capture government power as they did in Guatemala.

They must provoke riots such as the one which killed 400 textile workers in Pakistan last year. Or the riot in Singapore some months ago.

They must control the transportation and electric-power workers in such critical areas as Hong Kong, Macao, and Indonesia. They must get to the African workers first to stir violence and hatred as they did in Kenya.

Only that way can they now turn nations and people against us and stack the odds against the Western World so steep that they would again be tempted to turn the cold war in for a hot one.

Now, because of one man's leadership of the American labor team at Vienna, the world congress of labor is more than just a spinning mimeograph machine turning out stentorian statements, unmatched by even mouselike actions.

Now it will have the money and the manpower to fight back and keep the Soviets from occupying positions we would need many divisions to recover. This fight in Vienna was far from being an esoteric, philosophical exercise. In the strange, new world of fast political footwork, infiltration, and subversion, new types of counteroffensives are needed. Not all battles are won by the military. In fact, fewer and fewer are won by the force of arms, old-fashioned or nuclear.

Meany's victory and American labor's victory saved the lives of many a future GI.

These victories also marked the coming to maturity of a powerful force in American life. It showed that the musicians, the plumbers, the men's-pants pressers, the ladies'-garment workers, the sheetmetal workers, and the people of the American slums, the ghettos, and Hell's Kitchen have given the world an intellectuality, a courage, and a political and diplomatic dexterity of which all can be mighty proud.

First Session, 84th Congress Record in Behalf of Farmers

EXTENSION OF REMARKS
OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. COOLEY. Mr. Speaker, when the 84th Congress convened in January the Nation was confronted by a growing recession in agriculture. The average of farm prices had dropped 22 percent below the level of February 1951. Net farm income in 1954 had dipped about 30 percent under the income of 1947. The parity ratio was at the lowest since 1941. Farm operating costs remained near record highs, and farm debt was increasing. Farmers' purchasing power had declined to the lowest level since 1940.

Moreover, our farmers awaited a further deterioration of their income in 1955, under the lower price supports enacted by the preceding Congress at the behest of Secretary of Agriculture Ezra T. Benson.

This was the situation in agriculture at a time when all other major segments of our economy enjoyed unparalleled prosperity.

The House Committee on Agriculture, which it is my honor and privilege to serve as chairman, immediately set to work to stem this recession in agriculture, and again to put our farmers on the road toward income equality with our nonfarm population.

My purpose in addressing the House at this time is to report on our work.

The most apparent and the most effective action open to us was to undo the damage of the Agricultural Act of 1954 which required that, beginning in 1955, flexible—lower—price supports should be applied to the basic crops.

Our work was opposed by the Secretary of Agriculture, who made it plain to our committee that a Presidential veto was likely for any bill that sought to return to a system of firm price supports for agriculture.

Notwithstanding, the committee on March 10, 1955, reported H. R. 12 to the House.

This bill called for a restoration for 1955, 1956, and 1957 of 90 percent of parity price supports for wheat, corn, cotton, rice, and peanuts—along with tobacco which has a continuing program of 90 percent of parity supports. This legislation proposed repeal of that part of the 1954 act which allows the supports on all these crops, except tobacco, to go as low as 82½ percent of parity in 1955 and down to 75 percent in 1956, and subsequent years. The bill also placed the minimum level for support of dairy products at 80 percent of parity, instead of 75 percent under present law. It enlarged the school milk program; it extended the program for eradication of brucellosis in dairy herds. The bill, as approved by the committee, proposed a two-price system for wheat, authorizing producers to hold a referendum on whether to accept the existing price support program for wheat or a new program under which wheat consumed domestically as human food would be supported at 100 percent of parity and that going into other domestic uses and into export would sell at world prices. The two-price provision for wheat later was taken out of the bill, to be considered in separate legislation.

The House passed H. R. 12 on May 5 by a vote of 206 to 201. The bill now is pending in the Senate Committee on Agriculture and Forestry which is conducting extended hearings on the general farm program.

Mr. Speaker, although H. R. 12 won approval by the House, the debate was to agriculture a dark foreboding of the troubles that lie ahead. It disclosed that those who seek to destroy or weaken the farm program, built up through so many trying years, have succeeded to an alarming degree in dividing farmers, to set one group or one region against another, so that their common interests are confused. We saw the damaging effect of the effort to beat down farm prices, even at this time when the per capita income of farm people is only half the income of that 87 percent of our population that lives in our cities and towns.

I shall not use this occasion to single out those responsible or to place blame. But I do want to refer the Members of the House to the CONGRESSIONAL RECORD of June 15, 1955, page A4249, and of June 27, page A4651, in which I emphasize the need to get across to the people of this country the truth about agriculture. I hope that each of you, before the 2d session of the 84th Congress convenes next January, will make it your business to learn and preach the truth about agriculture, so that we shall come back here ready to act promptly and positively to reverse the recession in agriculture that not only is causing widespread hardships among our farm people but also holds a threat over the prosperity of our total economy.

In this it is my hope we may return to a nonpartisan consideration of the farmers' problems and the legislative remedies necessary to restoration of a sound agricultural economy. Through some 20 years, while we were building the farm program, our Committee on Agriculture considered farm legislation from a purely nonpartisan standpoint, and in the debates on this floor we saw the Members discussing the bills on their merits, devoid of political reference. Recently we have seen farm legislation in danger again of becoming a political football. We must know the truth about agriculture, and we must understand that the farm problems are of such tremendous economic importance to this country that they must be kept entirely out of partisan politics.

Mr. Speaker, while H. R. 12 represented our major effort to stop the recession in agriculture, the Committee on Agriculture was busy throughout this session on other legislation, dealing with the problems of small farmers, with foreign markets for our farm products, with farm credit, program improvements, distribution of food to needy persons, and other matters of importance to farmers and to our people generally.

Four hundred and fifty bills were referred to the committee in the first session of this Congress. On the same date in the first session of the four previous Congresses the total number of bills referred were: 80th Congress, 120; 81st Congress, 250; 82d Congress, 96; 83d Congress, 184. Hearings were held on every bill for which hearings were requested by its author, and the committee took official action with respect to more than half of the bills referred to it. The committee reported favorably to the House on 53 bills, and 39 bills within the jurisdiction of this committee were enacted and signed by the President.

The Congress provided funds through appropriations to finance the various programs in behalf of agriculture.

Among the major subjects handled by our committee were:

LOW-INCOME FARMERS

The Congress, through Public Law 132—S. 1755 and H. R. 6092—put a ceil-

ing of 3 percent per annum on the interest rates for emergency loans made by the Farmers' Home Administration. This legislation, of special benefit to small farmers, was prompted by the action of the Department of Agriculture, effective January 3, 1955, which raised the interest rate on emergency loans made by the Farmers' Home Administration from 3 to 5 percent. In this legislation the Congress took the position that a farmer in distress, who must go to the FHA because he is unable to get a loan from a private commercial banking institution, should not be forced to pay a higher rate of interest than 3 percent.

Through Public Law 360—S. 2098—the Congress authorized additional appropriations to the extension service for special programs to aid low-income farmers.

Our committee and the Congress recognize the necessity of improving the income and living standards in the low-income rural areas. Congress in the past has provided special credit facilities and other services for this purpose, including the program that has aided tenant farmers to become farm owners.

However, in recent years the number of farms in the United States has decreased and the tendency now is toward larger and larger farms. Meanwhile, many small-farm operators receive inadequate incomes for a satisfactory standard of living.

The fading out of the family owned and operated farm is of great concern to the Nation. The steady lessening of the number of family farms in recent years has resulted in the deterioration of many prosperous farm communities, and many rural churches have been closed as the farm population dwindled away.

This is a development warranting the attention of the Congress.

Moreover, there is a need for consideration of the part-time farmer who supplements his meager income from agriculture by working part time in town.

Therefore, Mr. Speaker, I have appointed a special subcommittee of the House Committee on Agriculture, under the chairmanship of Representative CLARK W. THOMPSON of Texas to make a thorough study of the ways and means to protect, foster and promote the family farm as the continuing dominant unit in American agriculture, and to improve the income and living standards of low income farm areas. This will include special attention to the manner in which we can adjust our farm programs to accommodate the convenience, productivity, and prosperity of the family farm unit.

This study will be entirely devoid of partisanship. Both major political parties are pledged in their platforms to safeguard the family farm.

FOREIGN TRADE

Through Public Law 387—S. 2253—Congress provided for a vast expansion of operations under the Agricultural Trade Development and Assistance Act of 1954—Public Law 480 of 83d Congress. The original act established a principle that America's abundance of food and fiber should be managed to expand international trade and to promote the economic stability of agriculture in the United States and the national welfare. To expand foreign trade outlets for farmers and to develop new markets, this act authorized sales of our food and fiber for local currencies of other countries. The 83d Congress provided $700 million to reimburse the Commodity Credit Corporation for commodities taken out of its stocks, to convert to dollars the local currencies of other countries received by private American exporters for goods delivered abroad under this program. Public Law 387 just enacted more than doubles this amount, making available $1,500 million for this reimbursement purpose. Several improvements were made in the language of the original act, to facilitate movement of this commerce.

Public Law 25—S. 752—enacted by this Congress, also improves operations under the Agricultural Trade Development and Assistance Act, by removing the requirement that private stocks exported under title I be replaced by CCC stocks.

FOOD FOR THE NEEDY

The Congress took an important step to open wider the doors to storehouses of abundant foods for the relief of our needy people at home.

Through Public Law 311—H. R. 2851—it authorized, until June 30, 1957, distribution of wheat flour and cornmeal to needy individuals and families upon the request of the governor of a State. The distribution to a central location or locations in each State will be made by the Secretary of Agriculture, using up to $15 million a year for this purpose. This makes bread available to the needy, who previously have been receiving principally perishable commodities, such as butter, cheese, and dried milk, from the Government food holdings.

This legislation helps meet an immediate need among unemployed coal miners and others.

Moreover, the committee is conducting thorough studies of the food-stamp plan and the various other proposals for the most beneficial use of the abundance of our agriculture.

AGRICULTURAL CREDIT

A major enactment in the agricultural credit field was Public Law 347—H. R. 5168—which opens the way for greater farmer ownership and control of the cooperative farm-credit agencies. The farm-credit system is an entirely separate operation from the Farmers' Home Administration, which makes direct loans from appropriated funds for many farm purposes where private funds are not available, and FHA insures private loans in several fields. The lending institutions of the farm-credit system are the Federal land banks which make long-term farm-mortgage loans, the Federal intermediate credit banks, production credit associations, and the banks for cooperatives which finance the operations of farmers' cooperative associations.

Other enactments related to agricultural credit included:

Public Law 55—S. 941—authorizes the Federal land banks to purchase in bulk the remaining assets of the Federal Farm Mortgage Corporation in their respective districts.

Public Law 117—S. 1582 and H. R. 5822—to extend for 2 years the period of making emergency loans under Public Law 727, 83d Congress, which provided $15 million of economic disaster loan authority.

Public Law 166—H. R. 4915—to extend the period for making special livestock loans for 2 years.

Public Law 273—S. 1758 and H. R. 6914—to simplify administration of the insured-mortgage provisions of the Bankhead-Jones Farm Tenant Act.

Public Law 270—S. 1621—authorizing the Secretary of Agriculture to adjust or compromise debts of settlers on the Angostura project at Hot Springs, S. Dak.

Public Law 132, putting a 3-percent ceiling on the interest rates of FHA emergency loans, already has been mentioned in the discussion of legislation relating to low-income farmers.

SOIL CONSERVATION

Public Law 42—H. R. 1573—repeals that portion of the Agricultural Act of 1954 that denied agricultural conservation program payments to any farmer who knowingly harvests any basic commodity in excess of his acreage allotment.

Our committee found that this provision in the 1954 act would seriously retard the agricultural conservation progam and that, in fact, it was in direct conflict with the spirit of several provisions of the acreage allotment and marketing-quota laws.

The committee said that programs designed to stabilize the price and the supply of specific agricultural commodities are and should be kept entirely separate from those programs having as their objective the preservation and improvement of our soil and water resources.

The marketing quota penalties and the loss of price supports in the case of acreage allotments have proved sufficient deterrents to overproduction of those commodities which are accorded price support in return for this measure of production control by farmers. Conservation programs are designed for the long-range benefit of the Nation as a whole. The carrying out of proper conservation measures, in many instances, may actually be unprofitable to the farmer who is working the land. The objectives of this program are entirely separate and different from the objectives of our price-support programs and should be kept so.

Public Law 264—S. 1167—provides that persons carrying out conservation practices on federally owned noncropland be eligible to receive ACP cost-sharing assistance if such practices directly conserve or benefit nearby or adjoining privately owned lands and such persons who use and maintain such Federal land, under agreement with the Federal agency having jurisdiction.

RESEARCH

Public Law 352—S. 1759—consolidates into 1 act the provisions of 12 acts authorizing expenditures for agricultural experiment stations. The new act is intended to improve the efficiency and effectiveness of the experiment stations by simplifying their procedures.

TOBACCO

Public Law 21—H. R. 4951—directs the Secretary to redetermine the national marketing quota for burley tobacco for the 1955–56 marketing year. Authorizes reductions in redetermining this quota, by an amount not exceeding one-tenth of an acre the existing burley allotments which are seven-tenths of an acre or less but more than five-tenths of an acre. Makes a permanent change in the minimum acreage allotment by establishing the new minimum as the smallest of the allotment established for the farm for the immediately preceding year, five-tenths of an acre, or 10 percent of the cropland. Provides that excess tobacco acreage for 1955 and thereafter shall not be considered as part of the farm history in establishing future acreage allotments. Penalizes tobacco producers who file, or aid in the filing of, false reports on tobacco acreage grown on their farms. Increases the excess-marketing penalty from 50 percent to 75 percent of the average market price for such tobacco for the preceding marketing year.

Public Law 96—Senate Joint Resolution 60—directs the Secretary to conduct a study of the burley tobacco program and report to Congress not later than November 1, 1955.

Public Law 279—S. 2297—provides that if marketing quotas on any kind of tobacco are disapproved in three consecutive referenda subsequent to 1952, a referendum on each kind of tobacco would be held only once every 3 years thereafter unless at least one-fourth of the growers of such kind of tobacco petition the Secretary prior to November 10 for a referendum before the end of the 3-year period.

Public Law 351—S. 2295 and H. R. 6847—provides that for the 3 years 1956 to 1958 the acreage allotment for any farm which has not been retired from agricultural production shall not be reduced below the acreage allotment which otherwise would be established because the harvested acreage was less than the allotted acreage unless the acreage harvested was less than 50 percent of the allotted acreage in each of the preceding 5 years, in which case it shall not be reduced for such reason to less than the largest acreage harvested in any year in such 5-year period.

Public Law 361—S. 2296 and H. R. 6846—provides that the production of tobacco on a farm for which no farm acreage allotment has been established shall not make the farm eligible for an allotment as an "old" farm, provided that by reason of such production the farm need not be considered as ineligible for a "new" farm allotment but such production shall not be deemed past tobacco experience for any producer on the farm.

RICE

Public Law 29—H. R. 4647—increases each 1955 State rice acreage allotment by 2 percent. Provides each State with a 1955 rice allotment at least equal to its 1950 allotment. Provides each county whose base acreage for 1955 exceeded by at least 2 percent its base acreage for 1950 with a 1955 rice allotment at least equal to its 1950 allotment. Increases each State reserve for new producers and new farms to a minimum of 500 acres.

Public Law 28—H. R. 4356—provides that joint acreage allotments of rice shall be divided on the basis of acreage planted by each participant instead of on the basis of each participant's share of the crop.

Public Law 27—H. R. 2839—authorizes the reapportionment of land which will not be planted in rice, and is voluntarily surrendered to the county committee, to other farms in the same county.

Public Law 228—S. 2511—provides that for 1956 no national rice acreage allotment be established which is less than 85 percent of the final allotment established for the immediately preceding year.

Public Law 292—S. 2573—provides that in States where farm rice acreage allotments are established on a producer basis only the past plantings of rice by the producer within the State and acreage allotments previously established in the State for the producers shall be used in determining such allotments.

WHEAT

Public Law 8—S. 145—amends the Agricultural Adjustment Act of 1938, as amended, so as to provide for increased durum wheat acreage allotments and marketing quotas for the 1955 crop for farms located in Minnesota, Montana, North Dakota, and South Dakota. Provides that this increase in allotments shall be in addition to the national, State and county wheat acreage allotments, and that acreage of class II durum wheat thereon shall not be considered in establishing future State, county, and farm acreage allotments.

RURAL ELECTRIFICATION

Public Law 70—H. R. 5376 and S. 1531—modifies the State allotment formula by making 25 percent, instead of the present 50 percent, of the annual loan fund appropriations subject to State allotment on the basis of unelectrified farms during the first 6 months of the fiscal year. Thereafter the unexpended or unobligated funds will be merged with the remaining 75 percent of the annual loan funds which will be available without allotment, with not more than 25 percent of the unallotted loan funds to be employed in any one State, or in all the Territories. Loan funds which are not loaned or obligated may be carried over to the following years.

FARM LABOR

Public Law 319—H. R. 3822—extends until June 30, 1959 the Mexican farm-labor program. Relieves employers of double liability for the cost of returning a worker to Mexico where the employer has paid once for such movement but the Mexican does not return and is later apprehended. Specifies that the Secretary of Labor is to obtain information on the availability of domestic workers, prevailing wage rates, and labor shortages in the area, and then post publicly the number of workers to be imported.

COMMODITY EXCHANGE AUTHORITY

Public Law 82—S. 1398 and H. R. 4514—to strengthen the investigation provisions of the Commodity Exchange Act, by extending the subpena power to investigations as well as proceedings under the act.

Public Law 174—H. R. 122—includes onions in the commodities subject to regulation under the Commodity Exchange Act.

Public Law 248—S. 1051—authorizes the Secretary to adjust the fees and charges for registrations and renewals under the Commodity Exchange Act.

MARKETING PENALTIES

Public Law 272—S.1757—provides that anyone who knowingly falsely marks or causes to be marked an agricultural commodity as being officially inspected or graded, when it has not in fact been so marked or graded, shall be liable to a fine of not more than $1,000 or 1 year imprisonment, or both.

OTHER ENACTMENTS

Public Law 30—House Joint Resolution 107—authorizes the Secretary, upon consent of California Department of Agriculture, to release reversionary rights to the Vineland School District, Kern County, Calif.

Public Law 43—H. R. 1831—protects from claims and suits innocent purchasers of fungible goods converted by warehousemen.

Public Law 54—S. 1133 and H. R. 4576—authorizes payment equal to 50 percent of losses incurred, but not exceeding any State indemnity, in Iowa for swine destruction due to vesicular exanthema.

Public Law 81—S. 998 and H. R. 1762—provides for conveyance of certain lands by the United States to the city of Woodward, Okla.

Public Law 116—H. R. 2973—conveys all right, title, and interest of the United States in a certain tract of land in Macon County, Ga., to the Georgia State Board of Education.

Public Law 237—H. R. 4280—directs the Secretary to release on behalf of the United States conditions in 2 deeds conveying certain submarginal lands to Clemson Agricultural College of South Carolina.

Public Law 257—S. 72—provides that certain lands acquired by the United States shall be administered by the Secretary as national forest lands.

Other legislation of importance to agriculture was passed by the Congress, including Public Law 86—H. R. 1—extending the authority of the President to enter into reciprocal trade agreements; and Public Law 84—H. R. 5106—amending the Servicemen's Readjustment Act of 1944 to authorize loans for farm housing to be guaranteed or insured under the same terms and conditions as apply to residential housing.

Public Law 344—S. 2604 and H. R. 7541—increased the borrowing power of the Commodity Credit Corporation from $10 billion to $12 billion. Public Law 14 repealed the law providing a revolving fund for the purchase of agricultural commodities and raw materials to be processed in occupied areas and sold.

The House Committee on Agriculture developed legislation in several fields where final action awaits the deliberations of the 2d session of the 84th Congress. These included:

SUGAR

The committee reported and the House approved H. R. 7030 to reenact and extend for 4 years, to December 31, 1960, the Sugar Act of 1948, as amended, with further amendments dealing primarily with adjustments of quotas intended to give domestic producers a fair share in the growth of the United States sugar market and to bring about an equitable participation by foreign suppliers in this market.

The legislation now is pending in the Senate. The Sugar Act, in the absence of any action by the Congress, would expire December 31, 1956.

Participation by the United States sugar producers in the future market growth in this country, as provided in H. R. 7030, does no more than restore to them the status they had under sugar-quota legislation prior to World War II.

In the Sugar Act of 1948, quotas for the domestic areas were limited to fixed quantities in order to assist Cuba in making the transition from wartime to peacetime conditions by assigning to her virtually all of the increases in the United States sugar market. It was recognized at the time that the change was of temporary nature and that at the appropriate time the domestic areas should resume participation in market growth.

Cuba, under H. R. 7030, retains its status as our largest foreign supplier. The actual tonnage which Cuba will market in the United States is expected to increase from year to year because of her participation in our market growth. Additional quotas granted to other foreign suppliers, as provided in the bill, are in line with our national policy of broadening our trade relations.

MARKETING FACILITIES FOR PERISHABLE AGRICULTURAL COMMODITIES

H. R. 4054 seeks to reduce the cost of food to consumers and to improve the income of farmers through more efficient marketing of perishable agricultural commodities.

The bill authorizes the Secretary of Agriculture to insure loans by private lending institutions for the improvement and development of wholesale marketing facilities, designed to lessen the uneconomic practices in antiquated facilities that now cause greatly increased costs, undue losses, excessive waste, spoilage, and deterioration in the handling of these perishable foods.

Our Committee on Agriculture approved this bill for action in the House and Senate in the second session of this Congress.

Mr. Speaker, our committee and this House made a proud record in behalf of the farm families of America during the 1st session of the 84th Congress, although we confronted hard and sometimes bitter opposition in our efforts to stop the growing recession in agriculture.

In closing, I want to stress that the farmers' problem is everybody's problem; that we cannot have a continuing prosperity in America without prosperity in agriculture; and I again appeal to each of you that, in these intervening months until we meet again, you acquaint yourselves with the plight of our farmers and their families, and that we return here ready to act promptly and decisively to remedy this blight of economic injustice on our farms.

More Facts on Small Tracts

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. YOUNG. Mr. Speaker, in the past few years America has experienced a rebirth of the homesteading spirit. The popular phrase of the 1860's—"doing a land-office business"—has taken on new meaning as thousands upon thousands of pioneering Americans have discovered that our land frontiers have yet to be reached and have acted to take advantage of that fact.

The American dream of some land to call my own has been given a healthy new channel in the Small Tract Act of 1938, and once again families are moving out onto the dormant public domain and through perseverance and hard work are making this once-wasted territory a contributing part of our expanding western economy.

Nevada, the State with the largest amount of federally owned land, has become the focal point of small-tract activity but the modern homesteader is dreaming, planning, and working in every State in the West.

While the 19th-century homesteader found his greatest challenge in the elements, his 20th-century counterpart is most beset by the tangled complexity of our 5,000 public-land laws. In applying these laws to local conditions, many valuable suggestions have been received from numerous individuals and organizations in the State. One of the most helpful groups in this respect has been the Southern Nevada Home-Siters, Inc. We are to some extent still pioneering in the small-tract field, trying to work out sound rules to enable the best use of our land resources to be effected.

The most frequent questions asked by the people I serve are with regard to regulations surrounding the Small Tract Act. Last year I was able to assist hundreds of land applicants in this respect by compiling a series of questions and answers entitled "Clear Facts on Small Tracts."

Since publication of that data, there have been numerous new developments in the small tract field. Accordingly, I have again endeavored to obtain authoritative and up-to-date information on this vital subject, More Facts on Small Tracts.

It is my hope that this material will serve to clarify the rights of the small-tract applicant and the procedures under which he is presently required to proceed.

First. How much land is available for small-tract entry in the State of Nevada?

Public lands become available for small tract entry only when they are classified as chiefly valuable for residential, recreation, business, or community sites by the authority of the Secretary of the Interior—43 CFR 257.1. The lands may not be leased or sold until classified for small-tract purposes and may not be occupied until the lands are leased or sold.

As of May 1, 1955, a total of 89,000 acres of public lands has been clasified as chiefly valuable for small-tract purposes in Nevada. Of this area, approximately 28,000 acres had been leased or sold. Approximately 50,000 acres of the unleased land has been applied for. The number of lease applications pending on June 1 was 14,010.

Small tract lease or lease and sale applications may be filed by any qualified person or any vacant and certain reserved public domain tracts of 5 acres or less whether they have been classified or not under the Small Tract Act.

Theoretically, small-tract applications could be filed on any of the vacant public lands and certain reserved public lands in Nevada, totaling 47 million acres.

Second. How can one find out which land in Nevada is classified for small tract entry?

Each classification order by which lands are classified as chiefly valuable for small tract purposes is published in the Federal Register and is posted on a bulletin board in the Land Office of the Bureau of Land Management at Reno, Nev. The order contains a detailed list of lands affected. A notation that such order has been signed is placed in the official plats and tract books in the Land Office at Reno in the section of such records pertaining to each legal subdivision that is affected. The official plats and tract books and other public land records are open to public inspection during regular office hours.

Third. How do I go about filing for a small tract in Nevada? Must I appear in person?

A qualified applicant may file an application on form 4–776 in conformity with the instructions therein except for lands which have been classified for direct sale at public auction. Copies of the form may be obtained from the Land Office at Reno, the Office of the Bureau of Land Mangement at Las Vegas, or the Bureau of Land Management, Washington 25, D. C. Applications should be filed by mailing or appearing in person at the land office in Reno. The duplicate forms must be signed by the applicant.

It is not necessary that the applicant appear in person to file the application but the applicant must certify that he has examined the land sought or lands within a mile thereof. Any person desiring to purchase a tract classified for sale at public auction may submit a bid in accordance with the provisions of the classification order.

Fourth. Once my application is filed, how long will be it before a lease is issued to me?

There is no single answer to this question. The amount of time required for

the processing of an application for a lease is extremely varied, depending upon, first, whether the lands have already been classified for small tract purposes; second, whether there are previously filed conflicting applications; third, whether there are conflicting mining claims; and, fourth, other variables including the status of workload in the local Bureau office.

A large work backlog has delayed the handling of all applications up to a year or more in addition to the working time required on each case. Cases are taken in the order in which they are received or become available for processing unless grouped for economy of processing.

Fifth. Can I buy a small tract directly from the Government without first securing a lease?

Yes, under two separate situations. First, where the land has been classified for direct sale by public auction. This is stated in the classification order. Second, where the law has been subject to a small tract lease which has been terminated, relinquished, or cancelled, and where the land is offered for sale at public auction.

Sixth. After I get a lease, can I then buy the land from the Government?

Leases for lands classified for lease and sale will contain an option-to-purchase clause. This clause will afford the lessee or his duly qualified successor in interest an opportunity to purchase the tract at any time within the term of the lease, provided all conditions of the lease have been met.

Seventh. Is it possible to buy a small tract at public auction?

Yes, under the two situations mentioned in the answer to question 5 above.

Eighth. It has been said that there are four options in buying a small tract which is under lease. What does this mean?

All of the so-called four options are available only to lessees who hold lands under lease that were classified as suitable for small tracts prior to August 9, 1954. Only options 1 and 2 may be applied to lands classified on or after that date. The use of option 2 is discretionary with the officer of the Bureau of Land Management who has authority to classify the lands. The four options, briefly, are:

Option 1: Construction of a home or other improvements of the minimum type and character specified in the lease, possibly including but not consisting of only a satisfactory domestic well.

Option 2: Construction of improvements for the minimum type and character specified in the lease, consisting of only a satisfactory domestic well.

Option 3: Tender of an offer to purchase the land at a reappraised price representing present fair market value.

Option 4: Tender of an offer to purchase the land at a reappraised price representing a so-called convenience factor, computed under the following formula: Estimated cost of improvements under the standards of the lease, less salvage value of materials, plus the price of the tract specified in the lease.

Ninth. (a) There has been mention also of a fifth option arising from paragraph 257.13 (d) (1) appearing in Circular No. 1899, published in the Federal Register January 15, 1955, which states that "groups of lessees of small tracts in any area may enter into binding agreements among themselves to observe, in the development of their leased tracts, standards of building, sanitation, and health requirements consistent with the terms of their leases. Lessees who participate in this agreement may exercise at the discretion of the Bureau of Land Management their option to purchase without prior compliance with the improvement requirements of their leases." With regard to this quoted paragraph, what is meant by "groups of lessees of small tracts in an area"? Can this be only 2 or must it be a larger number, such as 10 or 20 lessees?

The number may be two or more. Any group of small-tract lessees may avail themselves of this so-called option regardless of the date of their lease, providing they can meet the requirements of the option.

(b) What is meant by "binding agreements among themselves"? Would this contract be recorded and would it be binding on successors in interest?

A binding agreement among lessees is an irrevocable contract which is enforceable under State laws. The regulations are purposely silent as to the details of such agreements in order to permit applicants to work out that type of agreement that under State laws would most adequately fit their particular situation. All agreements, however, must have certain basic features. They must be enforceable, that is, they must contain provisions to insure compliance with their terms. They must also be irrevocable, and the terms of the contract must be consistent with the small tract leases of the contracting parties. Since acceptance of the agreements is at the discretion of the Bureau of Land Management, the agreements must also be consistent with the proper development of the area involved.

Several possibilities are available. Agreements making certain conditions covenants running with the land will work well in certain situations. Escrow agreements whereby title will be held by a trustee until compliance with their terms may prove satisfactory under many conditions. Officials of the Bureau will assist interested groups in working up acceptable agreements.

As to recording of these agreements, State law governs. Generally, State law requires recording of transactions affecting land titles.

The agreement must be so drafted that a successor in interest to the lessee would be bound to its terms.

(c) What is meant by "standards of building, sanitation, and health requirements consistent with the terms of their leases," and who would determine these?

The standards provided for in the classification order or the leases or both, as established by the officer of the Bureau of Land Management who has authority to classify the lands, are the minimum standards the agreements must call for. Lessees desiring by agreement to establish higher standards for their area are, of course, free to do so.

Tenth. Does paragraph 257.13 (d) (1) referred to above mean that merely by signing a binding agreement I can secure a patent to my small tract without putting any improvements thereon?

Yes, providing you hold a lease with an option-to-purchase contract. However, an acceptance of the agreement is discretionary with the Bureau of Land Management. This discretion is retained by the Bureau so that assurance can be had that minimum standards will be observed and so that compliance is had with the basic provisions of the Small Tract Act. The Bureau will have the responsibility of determining the methods used to insure the binding nature of the agreement and the terms to which the lessees bind themselves.

Eleventh. How do I know where the boundaries of my small tract are and what, if any, right-of-way is reserved for roads or other uses?

Small tracts are sometimes surveyed and marked or staked on the ground by the Bureau of Land Management. If such is the case, each tract may be located on the ground by reference to the corner stakes.

Small tracts which are not individually surveyed and staked by the Bureau of Land Management may be located on the ground by reference to the monuments of the regular rectangular public survey in the vicinity. The location of the corners of the small tract, in such event, may be determined by ordinary methods used in private land surveys. The services of a private land surveyor may be necessary.

The rights-of-way, if any, reserved in a small tract lease or patent are specified in the classification order and will be specified also in the patent.

Twelfth. If I obtain my tract, how can I can get water, roads, and sewage facilities?

These are matters in which the Federal Government can offer no direct help. The responsibility to obtain these utilities rests with each individual lessee or patentee in accordance with the local conditions in the area and the availability of local community or public utility services. However, the Government helps by reserving rights-of-way for streets and roads, ordinarily along the boundaries of the tract.

Thirteenth. Can I get a FHA or VA loan on my small tract?

This is a matter to be taken up with the FHA and VA authorities. It is understood, however, that FHA or VA loans are not available on small tracts while in lease status. Small tracts which have been patented are subject to application for FHA and VA loans on the same basis as any other privately owned lands.

Fourteenth. What is a reasonable fee to pay somebody for filing a small tract application for me?

There is no single answer to this question. The reasonable amount of the fee, if the services of a person are hired, depends upon the utility of the services rendered to the person who hires them and the amount of labor or other costs involved to the person who furnishes them. In some instances, filing services have caused a disservice to applicants by misleading them as to the quality of

the land or the lease and sale requirements or filing for them on lands that are under prior application by other persons.

The services offered by persons who prepare applications for a fee are varied depending upon the circumstances. None of the services is licensed or regulated by the Federal Government. Such services afford the applicant no preference over other applicants who file the applications themselves.

The services of land locators are not necessary so far as the Government is concerned. All that is necessary is that an application be filed in accordance with the law and the regulations. Whether a filing service is used is strictly a matter for individual choice.

Fifteenth. What is the conflict between mining claimants and small-tract applicants that is discussed so frequently in the newspapers?

After small-tract applications are filed for public lands that have not been classified by the Bureau of Land Management for small-tract purposes, it is necessary that the Bureau examine the status and character of the lands applied for in order to determine their availability and suitability for small-tract classification. It is sometimes discovered that such lands are embraced within mineral locations filed under the United States mining laws and the mining laws of the States in which the lands are located. Such locations, recorded in the county records, constitute prior claims against the land. Such lands are not available for small-tract lease or sale unless and until the claims are abandoned, relinquished, or canceled.

If upon examination it is determined that charges should be brought against the claims by the Government, a contest is initiated. In the meantime, the pending small-tract applications may be either rejected or suspended, as the officer in charge may determine, subject to a right of appeal.

If after due process in accordance with law the conflicting mining claims are declared to be null and void, the lands may be classified and opened to small tracts.

Sixteenth. How many acres are in conflict between mining claimants and small-tract applications in Nevada?

This figure has been estimated at 39,000 acres.

Seventeenth. Several hearings were held in Nevada during December 1954, between some of those who had filed mining claims and certain small-tract applicants. What was the decision on these cases, and is it being appealed?

The hearings, held in November and December 1954 involved contests brought by the Government against certain sand and gravel mining claims in Clark County, Nev. The decision of the hearings officers was that the Crocus No. 1, Crocus No. 2, a portion of Bradford No. 1, and Bradford No. 2 placer claims are valid; and that a portion of Bradford No. 1 and all of Bradford No. 3 placer claims were void from their inception.

The mining claimants have appealed to the Director of the Bureau of Land Management from the adverse decision pertaining to Bradford No. 1 and Bradford No. 3.

The intervenors in the hearings representing small tract applicants have requested a new trial to present additional evidence concerning all of the claims.

Eighteenth. How many steps are there in an appeal from such a decision and how long will this take?

Any party aggrieved by a decision of a hearings officer in a mineral contest may appeal first to the Director of the Bureau of Land Management, who issues a decision either affirming or reversing the decision. Any party aggrieved by the Director's decision may appeal to the Secretary of the Interior.

Appeals are ordinarily time consuming because of complicated issues involved. Decisions on appeals are additionally delayed because of a backlog of appeals work.

It is impracticable to forecast how long the various steps will require in any individual case.

Nineteenth. Are more hearings on these conflicts being planned for the State of Nevada in the future?

Additional hearings have been tentatively planned for August 1955. Definite dates have not been set.

Twentieth. Can the Bureau of Land Management withdraw land from mining claim location when it has been classified for small tracts?

Lands classified for small tract lease, lease and sale, or sale are segregated from all appropriations, including locations under the mining laws, except as provided in the order of classification or in any modification or revision thereof.

Twenty-first. Is it possible for nonprofit clubs and organizations to secure small tracts of public land?

An application under the Small Tract Act may be made by an association, each of the members of which is a citizen of the United States or has filed declaration of intention to become a citizen. An application may be filed by a corporation, including nonprofit corporations, authorized to do business in the State or Territory in which the land is located.

Twenty-second. Can political subdivisions of government, such as municipalities, obtain federally owned lands for public purposes?

A State or any political subdivision thereof, including a municipality, may make an application for a tract of 5 acres or less under the Small Tract Act. States and Territorial governments, including instrumentalities and subdivisions, may also apply for the lease or sale of larger tracts of public lands for recreational and public purposes under the act of June 14, 1926 (44 Stat. 741), as amended by the act of June 4, 1954 (68 Stat. 173; 43 U. S. C. 869). Information concerning the sale or lease of public lands for recreation and public purposes is contained in 43 CFR, part 254—Circular 1880.

Twenty-third. What is being done to speed up the rate of issuing leases and patents in the State of Nevada.

The Bureau of Land Management has increased its staff in Nevada insofar as possible under the available appropriated funds. Additional office space is being made available to relieve crowded conditions in the land office at Reno.

Under the recent Bureau reorganization, all cases may be completely handled within the Bureau offices in Nevada. The steps required to process cases have been streamlined.

If additional appropriations are made available for the fiscal year beginning July 1, 1955, additional staff and facilities will be assigned to Nevada. Other developments, including the completion of mineral examinations, will permit the expedited issuance of leases and patents in the fiscal year beginning July 1, 1955.

Twenty-fourth. Does the Bureau of Land Management have any long-range plans for Nevada to prevent being swamped by applicants in the future?

The long-range objective is to carry out the intent and purposes of the Small Tract Act and related public-land laws as effectively and efficiently as possible. The operating plans to make this possible are under continuous scrutiny.

No fixed long-range plans have been adopted, but a number of alternatives are under consideration. Valuable suggestions and advice have been received from members of the Nevada congressional delegation, State and local officials, associations of "home siters," and others. Adjustments in operating plans will be made wherever appropriate under the circumstances.

Twenty-fifth. What facilities does the Bureau of Land Management have to help me in locating a small-tract homesite?

All of the public-land records in the land office are available for public inspection. These include the public survey plats and field notes, the land-status plats and tract books, and the land-classification orders. In addition, land status for Clark County is maintained in the Bureau office in Las Vegas within 24 hours of the notations made at Reno.

Upon request, the Reno Land Office will supply without charge the status of any particular tract of public land which has been described by reference to the public survey. A copy of any official map or record maintained in the Land Office may be obtained upon payment of a fee. Copies of classification orders and lists of public lands, when available, for free distribution may be obtained upon request.

Application blanks and circulars containing the applicable provisions of the laws and regulations may be obtained from the Land Office. Local offices of the Bureau will assist applicants in preparing aplication blanks upon request.

Twenty-sixth. What fees must be remitted with my application?

No fees or payments are required with veterans' drawing entry cards.

Each bid by mail for a tract being sold at direct public auction must be accompanied by a certified or cashier's check, post office money order, or bank draft for the amount of the bid. These are returned if the bid is not successful.

Any application for a lease must be accompanied by the following amounts: $10 filing fee plus 3 years' advance rental at the rate indicated in the classification

order or, if no classification order has been issued, advance rental of $15. The $10 filing fee submitted with lease applications is nonreturnable and will not be refunded even though the lease application is rejected; however, if the lease application is fatally defective, the entire payment will be returned. By "fatally defective" is meant that the application is improperly prepared and, therefore, returned to the applicant without being considered.

The John Marshall Bicentennial Celebration

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. GARY. Mr. Speaker, my colleagues in the Congress are all aware, I am sure, that September 1955 has been designated by joint congressional resolution and Presidential proclamation as "John Marshall Bicentennial Month."

Since I have the honor and privilege to be a member of the United States John Marshall Bicentennial Commission and chairman of the executive committee of the Commission, I consider it appropriate to insert in the CONGRESSIONAL RECORD a summary of the reasons for the designation of John Marshall Bicentennial Month, and of the objectives and operations of the Commission.

Known as the Great Chief Justice, John Marshall, born in Virginia September 24, 1755, served as the fourth Chief Justice of the United States from 1801 to his death in 1835, and has been universally credited as chiefly responsible for establishing and fostering the broad principles which made the Supreme Court of this Nation the most outstanding appellate body in the history of jurisprudence.

His home was in Richmond, in my district, where many of his great accomplishments took place. The celebrated trial of Aaron Burr was held in Richmond, in our Virginia State Capitol. It was on this occasion, of course, that John Marshall established one of the greatest principles of American law.

Chief Justice Earl Warren recently said of Marshall, in an address which inaugurated the bicentennial ceremonies:

> Stone by stone, he built the foundation of our constitutional structure, and he constructed it sufficiently strong to support everything we have since built upon it.

The significance and purposes of the John Marshall bicentennial celebration are summed up in an Appeal to All Americans, written by Mr. Edgar N. Eisenhower, as vice chairman of the United States John Marshall Bicentennial Commission, in which he said:

> It is the American way, and in the best tradition of our great Republic, to pay tribute in this country to the heroes of peace, as well as to the heroes of war. John Marshall, of Virginia, may justly be described as a hero of both war and peace, but it is for his great effort in building up the constitutional safeguards of our present Government and manner of living for which all Americans should honor the memory of John Marshall during the bicentennial of his birth on September 24, 1955.
>
> John Marshall was a true product of the frontier—a resourceful and well-rounded American. He is remembered for his military services as a Revolutionary soldier, for his important work as a minister to France, for his statesmanship as Secretary of State, for his service in the Congress, and for his lasting contribution as the first great supporter and expositor of the principles of constitutional government in this country as Chief Justice of the United States, 1801–35. His precedent-setting decisions established the framework for those great principles of American constitutional law which are paramount today in protecting the rights of our people and in defining the separation of powers among the executive, legislative, and judicial branches of our Government.
>
> John Marshall was a very human man—he had the common touch, being very informal in dress, in speech, and in his associations with his fellow men during his lifetime. He was fond of good fellowship, good sportsmanship, and a good life, in the best meaning of the word, to Americans of his time and of today. He was noted for his devotion to his wife and family.
>
> In my capacity as vice chairman of the United States Commission for the Celebration of the 200th Anniversary of the Birth of John Marshall, I call upon all interested Americans, both individuals and groups, in all walks of life, to unite in many types of celebrations in recognition of the life and achievements of John Marshall, great American.

With regard to the establishment of the John Marshall Bicentennial Commission, I have received a report from Mr. Conrad L. Wirth, Director of the National Park Service of the United States Department of the Interior, who is serving as executive officer of the John Marshall Bicentennial Commission. I quote pertinent excerpts as follows:

REPORT OF MR. WIRTH

On August 13, 1954, the 2d session of the 83d Congress of the United States adopted a joint resolution designating the month of September 1955 as John Marshall Bicentennial Month, and creating a commission to supervise and direct the observance of such month.

On July 13, 1955, the President of the United States, acceding to the request contained in the congressional joint resolution, issued a proclamation on John Marshall Bicentennial Month.

After my designation as executive officer of the Commission, offices were set up for the Commission in room 2023 of the Interior Department Building and Mr. Rogers W. Young, of the historical branch of the National Park Service of the Interior Department, was named as administrative officer of the Commission.

Subsequently, appropriate facilities for carrying out the work of the committee, as outlined by Congress and the President, were provided and there was established an Office of Public Coordination under the direction of Edward K. Moss, to carry out the activities of the Commission concerned with gaining a wider public knowledge and appreciation of the achievements of Chief Justice Marshall; to help arrange and coordinate the public observance and celebration of John Marshall Bicentennial Month, and to serve as a center of information for all participating groups through the country.

One of the first activities of the Commission staff was the preparation, by Edmund C. Gass, historian, of a handbook of information and suggestions for John Marshall bicentennial celebration.

As stated in the introduction, this handbook is designed to help those who want to plan programs commemorating John Marshall. It does not prescribe any particular type of program and is not a manual of procedures, for every group and locality is urged to use its own resources and ingenuity to develop whatever type of program it wants. Nor is the handbook a complete work on John Marshall. Instead it is a booklet of information and suggestions.

In addition to the introduction, the 63-page handbook contains sections on purposes and uses of this handbook; organizing programs honoring John Marshall; what you should know about John Marshall bicentennial celebrations; texts of the congressional resolution and the Presidential proclamation; suggestions for planning any type of program and several sample plans for specific types of programs; information about John Marshall, his times, and the Supreme Court; a short, condensed biographical sketch of John Marshall's life; a bibliography of books and articles on John Marshall; the Supreme Court in John Marshall's day; descriptions of the Supreme Court when Marshall was Chief Justice; leading cases on John Marshall's constitutional views; quotations from John Marshall; what some noted Americans have said about John Marshall; and the Edgar Eisenhower appeal to all Americans.

The handbook is already proving of great usefulness to many individuals and organizations planning various types of celebration programs and observances of the bicentennial month. Copies have been distributed to each State governor and to some 2,500 mayors of cities and towns of over 10,000 population. The mayors have been asked to establish local committees to initiate and carry out programs and special observances during the John Marshall bicentennial month.

The American Bar Association has extended the Commission invaluable assistance and cooperation in many ways. It has distributed copies of the handbook to its 3,000 branches throughout the country and requested local bar association presidents to cooperate with mayors and local committees in planning and programing local celebrations and special events. In each case the local bar association has been asked to appoint a representative to act in liaison capacity to help coordinate the activities of the local committee.

To date the response has been heartening indeed. Commemorative programs and special events have already been scheduled in Washington, Philadelphia, Chicago, Boston, Richmond, and Williamsburg, Va., the Panama Canal Zone, and in many other leading cities and towns throughout the country.

The speeches of President Eisenhower and Chief Justice Warren at the ceremonies in Philadelphia on August 24, jointly sponsored by the Commission and the American Bar Association, will inaugurate the general public observance of John Marshall Bicentennial Month.

Among other organizations already extending their cooperation to the Commission are the National Education Association and 15 of its affiliated organizations, and the American Municipal Association. Both of these groups have offered their active support to the Commission and given practical assistance in gaining its objectives.

The United States Post Office Department has announced the issuance of a 40-cent John Marshall stamp of the new ordinary series. This stamp, the ninth of the new series to be released, will be first placed on sale in Richmond on September 24.

The Commission is sponsoring an illustrated brochure on John Marshall with text written by Prof. Edward S. Corwin, professor emeritus of jurisprudence of Princeton University, a noted historian and authority on the Supreme Court.

The Library of Congress is devoting the month of September to an exhibit of the John Marshall books and papers. The American Library Association is arranging for the cooperation of local libraries all over the United States in staging similar exhibits.

Numerous schools and colleges throughout the country have indicated their intention of observing in various ways the John Marshall Bicentennial Month. The College of William and Mary at Williamsburg, Va., will conclude a year-long series of Marshall programs with ceremonies on September 22. The college has gotten together a collection of the unpublished letters and papers of John Marshall which are on exhibit at the college library.

Harvard Law School will honor John Marshall on September 24 when Chief Justice Warren will be principal speaker. Rollins College, Winter Park, Fla., is organizing a celebration to honor John Marshall throughout a substantial region of the State.

The Political Executive and the Senior Civil Service—I

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, the National Civil Service League, a leader in public efforts for better public service since 1881, has called upon the public to become acquainted with the tremendous executive problems of government. Writing in Good Government, the nonpartisan league's bimonthly magazine, the executive director, James R. Watson, declares that "too few people in too many walks of life realize the degree of leadership, inspiration, and responsible guidance required of the public executive."

I have long been interested in the problems involved in improving and strengthening the merit system as developed in the civil service, and I am confident that this is the abiding concern of the 50,000 Federal employees in the Fourth District of New Jersey which I have the honor and privilege of representing, as well as of the 2½ million civilians employed by the Federal Government in every conceivable type of occupation. It is because of this abiding interest that I have introduced a number of bills providing personnel improvements and have, in addition, spoken on this subject on the floor of this House in condemnation of the so-called Willis directive which invited political recommendations for Federal positions.

With this in mind, I am including in my remarks a letter from Mr. Watson as well as his article in the May–June 1955 issue of Good Government entitled "The Political Executive and the Senior Civil Service":

NATIONAL CIVIL SERVICE LEAGUE,
New York, N. Y., June 24, 1955.

HON. FRANK THOMPSON, JR.,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN THOMPSON: I was pleased to have the opportunity of meeting you on Wednesday.

Let me take this occasion to again commend you for the fine leadership which you are showing in the field of civil service.

I am hopeful that during the coming year, we can work on some aggressive programs which will mean much to the career people as well as the general public.

Should you have any suggestions about our work, please send them.

Sincerely,

JAMES R. WATSON,
Executive Director.

[From Good Government magazine of May–June 1955]

THE POLITICAL EXECUTIVE AND THE SENIOR CIVIL SERVICE

(By James R. Watson)

A STRONG CAREER SERVICE IS NEEDED TO IMPROVE PUBLIC MANAGEMENT

Efficiency has become a byword of American life. We have efficiency studies, efficiency experts—even efficiency kitchens. In industry one of the major objectives is efficient production based primarily on a dollars-and-cents profit motive. In government the measure of efficiency is based on a broader concept: The best possible service for the largest number of people at the least cost—achieved through our democratic process.

While many techniques for better management are interchangeable between industry and government, there are important differences in incentives and pressures that must be recognized. For example:

1. The necessity in industry for dealing with organized labor and complying with the NLRB are pressures for good personnel management which government does not have. Although government has an increasing number of workers in employee associations, the full-fledged collective-bargaining process is not applicable.

2. No company anticipates the possibility of a complete change of policy every 4 years.

3. Government is not subject to pressures from competition or the profit motive. There is not the same compelling reasons for it to use its manpower on a basis of dollars-and-cents efficiency. The businessman either utilizes his labor force effectively or he suffers in the most sensitive area—the profit column.

These factors take on a particular significance when we recognize that the quest for efficiency in all phases of activity depends upon people—the men and women who perform the jobs. Successful, progressive industry has made great advances in the field of personnel and improved management. But we must bear in mind some of the differences when we attempt to adapt the same business techniques to improve the personnel management of government.

New era in personnel

Personnel management in the Federal service is at the threshold of a new era.

Today the Federal Government employs almost 2½ million civilians in every conceivable type of occupation. The total annual payroll is approximately $9 billion. The Federal Government is looked upon as one tremendous unit. The executive direction, the marshaling of the talents, facilities, and energies represented is probably the biggest and most important management problem in the world. The evolution of new and changing governmental activities, the constantly increasing burden upon the Chief Executive and his aids, the extension of the career civil service to levels never before reached throw into new focus a problem which has become overwhelming and which can no longer be avoided—the need for competent, stable management of Government affairs. Without such management, the burden of those in the top ranks becomes an impossible one.

The President has accepted full responsibility for Government personnel policies. For the first time a clear line of responsibility from the Executive Office to the lowest Government clerk exists. The merit system is accepted. Patronage is no longer seriously defended. The deficiencies of our personnel system are great, but they are being recognized, and serious efforts are being made to bring about improvements. The members of the civil service are on the whole competent and loyal. Many have achieved distinction.

One of the major barriers to Government efficiency remaining is the lack of a plan for securing expert and continuous managerial direction. Successful functioning of Government in the future will depend even more than ever before on our success in training and utilizing a supply of highly qualified public managers at all levels.

Task force on personnel and civil service

It was with full consciousness of the overwhelming urgency of this problem that the Task Force on Personnel and Civil Service of the Second Hoover Commission began its assignment to examine the system of civilian employment in the executive branch of the Government and to suggest changes that would lead to a more effective service. The task force believes that the path to efficint Government lies in strengthening the top management. It has done more than any previous study—there have been five major ones in the last 20 years—to emphasize the importance of the executive function. Too few people in too many walks of life realize the degree of leadership, inspiration, and responsible guidance required of the public executive.

The problem: All those responsible for charting Government management have faced the problem of attempting to distinguish between political levels of responsibility and those responsibilities which can be fulfilled only through a career system. Through the task force, we have for the first time a measure by which this distinction can be made. According to the task force, political executives properly comprise the principal subordinates of the President, responsible agency heads and the aids and assistants—whatever their titles—who should share the task of responsible political leadership. "The role of this entire group of political party executives," states the task force, "is at the heart of representative government."

The complementary group of career administrators, the task force suggests, should be carefully chosen from all parts of the civil service solely on the basis of "demonstrated competence." They should be employed flexibly in many positions calling for high administrative talents: For example, administrative assistant secretaries, bureau chiefs, heads of regional offices, heads of budget, personnel, and other staff offices.

Interpretation and defense of administration policy should lie within the province of the political executive. The career man should never be required to undertake such duties. Recognizing the mutual dependability between these groups, the task force reviewed some mistakes that have developed by allowing career people to assume political responsibility. It is felt that the career man must be removed quickly from certain political functions. Once he moves into the realm of politics, it is difficult if not impossible to return to the nonpolitical role.

"Political neutrality once gone can hardly be recaptured."

Political executives: Noncareer executives in Government are usually thrust unprepared and untrained into the unfamiliar world of political struggle and they seldom stay long enough to become entirely familiar with their complex duties. Average service is from 2 to 4 years as contrasted with over 18 years for top career officials. Yet this is "the key group in making representative government work within the executive branch * * * the necessary expendables who give flexibility to the machinery of government and who make it possible for the Chief Executive to adapt his management team to changing circumstances. Constantly criticized, frequently attacked, and seldom praised, they are an essential element of responsible government in an age of big administration."

The task force outlines why it is so difficult to find and hold the men and women needed for these 600 to 800 vital positions:

"The traditional patronage system does not today produce political executive talent for top jobs." [1]

State and city executives can sometimes be drawn into Federal service, but in insufficient numbers. The only source large enough to supply the talent needed is private life—business, the professions, education, labor unions, farm and civic organizations.

Finding the talent: The task force sums up the problem of finding this talent:

1. The topmost political level requires men with well-developed executive ability and well-developed qualities of political leadership; with toughness, intelligence, and devotion to the public interest. Such a combination of abilities is relatively rare.

2. American life has not been geared to developing political executives. Few people have felt the inclination or responsibility for administering public affairs.

3. Practically, it has been difficult to shuttle back and forth between public office and private life. A man who leaves his business or profession normally loses out in the process.

4. The psychological and financial barriers to interchange are real. The political executive is neither well paid by American standards nor has he a very high or secure place in American society.

Clarence Randall, chairman of the board of Inland Steel Co., touched on some of the differences between Government and business administration which make difficulties for the businessman turned public administrator: his failure to understand the "why" of Government restrictions on hiring, firing, and spending, the vastness of the problems, the slowness of progress toward decision and action, the "overpowering sensation of the incredible complexity of the problems and the magnitude of the responsibility which must be faced." [2]

Task force prescription

The task force suggests steps for increasing the supply of political executives:

The administration in power should establish an advisory group with an executive secretary on the White House staff, to give advice and sustained support to the recruiting effort. It should recruit young people with legislative experience; use junior political executives of previous administrations of the same party; encourage younger political executives to establish themselves in the political life of their own States and cities; earmark some political executive positions as training positions.

Political executives should keep active in State and local civic and political affairs and help develop young political talent at home.

Party organizations should "devote at least as much effort to supplying talent as they do to locating jobs"; see that political executives who leave Government are absorbed into party affairs when they return home.

Private employers should make it attractive for men to serve in political posts.

Salaries should be raised. Assistant secretaries should get $25,000 a year, and other political executives should be compensated in proportion.

The senior civil service

To provide the highly competent career administrators upon whom the political executive necessarily must and will depend, the task force has proposed a senior civil service.

The task force proposal confirms what is already a political reality: the fact that a comparatively small group of top career people carry the heaviest burden of the Federal Government's business. By strengthening this top group all aspects of Government administration will be improved. The primary objective is "to have always at hand in the Government a designated group of highly qualified administrators * * * who will make it easier for political executives to discharge their responsibilities; and who will add to the smoothness, the effectiveness and the economy of governmental operations."

The plan contemplates establishment of a system by which government can identify those within its service who have capacity for assuming important managerial posts. The task force strikes sharply at some of the weaknesses of the civil-service system. "It has no means of officially recognizing competence after it is demonstrated. * * * The civil-service system emphasizes positions, not people. Jobs are classified, ranked, rated, and paid on the bland assumption that they can always be filled like so many jugs, by merely turning the tap. New concepts, policies, and procedures are needed which are designed specifically to supply career administrators at the higher levels."

British parallel: The task force proposal suggests a parallel with the British administrative service, where the strong tradition of a politically neutral, technically competent and experienced career service has given the government continuity and able performance, unaffected by but politically responsive to political change.

Authority for establishing the senior civil service would be given a full-time, bipartisan, 5-member board composed of the Chairman of the Civil Service Commission, the Director of the Budget, and three citizens appointed by the President. The board would evaluate and chooose senior civil servants from among career employees nominated by their employing agencies. The basis of selection would be qualities of leadership, judgment, adaptability, skill in working with people and capacity for growth. Political endorsements of any sort would be rigidly excluded.

Rank would be vested in the individual, not the job. Members could move from one assignment or location to another without loss of rank or drop in salary or could be put in inactive status for a time. Pay would range upward from $10,800 possibly to $25,000—the latter being the salary proposed for the political Assistant Secretary. The President would fix the strength of the service within broad limits. An initial 1,500 and an ultimate 3,000 is suggested.

Political neutrality: The concept of a senior civil service can exist and flourish only in a climate of strict political neutrality. Clement Attlee in a recent article [3] paid tribute to this aspect of the British Administrative Service as "one of the strongest bulwarks of democracy." "The first thing a minister finds on entering office," he wrote, "is that he can depend absolutely on the loyalty of his staff, and on leaving office he will seldom be able to say what the private political views are even of those with whom he has worked closely."

The place of the senior civil service must be understood and honestly accepted by the public, by both political parties, by political executives and by Government employees themselves. Like their British counterparts, members must be fully prepared to serve faithfully each administration that takes office. "They must avoid such emotional attachment to the policies of any administration that they cannot accept change." They must forego not only the political activities enjoined by the Hatch Act, but anything that would tend to identify them with a party policy.

The role of patronage: In our Government patronage has played a historical and unique role. If we are to have a senior civil service this role must be changed. We shall continue to have political appointments, but they will be in the areas where political responsibility lies. They will not encroach on the career service.

A classic document

The task-force report [4] evidences concentrated study and expert analysis. It will undoubtedly remain for years to come a classic document in the field of public personnel administration. It is a rich source of information about the actual working of the Federal civil-service system as well as a guide to how it could and should work. Its recommendations are realistic as well as idealistic. It is interesting to discover that the Hoover Commission—perhaps because it is more politically oriented than the task force—ignores some of the latter's recommendations and modifies others which would involve tangling with powerful vested interests. To its credit, however, it referred to Congress the full task-force report, along with its own report.

Action?

What has been done toward putting the report's recommendations into effect? What are the chances that these vital, even revolutionary, improvements will ever be adopted? That the report will ever be more than a reference for students of public administration? The proposal for a senior civil service was opposed even by two members of the Hoover Commission itself and met with skepticism from a third. It has been attacked in influential public employee circles as being a caste system and a means of playing favorites. A Washington Star political reporter suggested that the Hoover Commission will have to educate a lot of politicians before the senior civil-service program can become a reality.

Some changes would have to be accomplished through legislation, but others would need only administrative action. Neither the White House nor any congressional committee has yet revealed a plan for implementing the recommendations.[5] The Civil Service Commission is said to have asked its staff to study the report and suggest action to

---

[1] The administration's schedule C allows a certain freedom of appointment. Despite this, the demand for talent has overcome the demand for patronage. Seventy percent of the positions in schedule C are filled by people who were in Government before January 1953.

[5] Representative FRANK THOMPSON, JR., of New Jersey, has introduced a series of bills embodying some of the Hoover Commission recommendations.

be taken. Is all the impetus to come from citizen groups like the Citizens' Committee for the Hoover Report, the League of Women Voters, and the National Civil Service League? If this is the prospect, then citizens must start their own campaign immediately. They must talk up the need and the goals. They must stimulate enthusiasm for business efficiency in Government. Will citizens accept the challenge? The stakes are enormous. As the Hoover Commission concludes its report, "Every segment of our society would benefit from better direction of governmental affairs."

The Political Executive and the Senior Civil Service—II

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I have received a letter from the National Association of Federal Career Employees in which the point is made that this organization believes that greater protection should be given those disabled veterans with an occupational handicap in reduction-in-force programs. The author of the letter, Mr. Isadore Rosenthal, legislative director of the association, says that—

We believe the disabled veteran with an occupational handicap is justly entitled to this superseniority in view of the sacrifice he has made in the defense of our country.

In order to clear up any misunderstanding that may have arisen as to the actual position of this organization on this important question I am including this letter as part of my remarks.

The letter follows:

THE NATIONAL ASSOCIATION
OF FEDERAL CAREER EMPLOYEES,
August 1, 1955.

The Honorable FRANK THOMPSON, JR.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN THOMPSON: As legislative director of the National Association of Federal Career Employees, I have followed with great interest the introduction of the following bills in the House of Representatives: H. R. 6546, 6547, 6548, and 6549 on May 27, 1955. Our association greatly appreciates your efforts in strengthening the merit system.

We have as our primary goal the establishment, maintenance, and safeguarding of a true merit system in Government. Our organization is represented by chapters in various Government agencies throughout the United States. As pointed out by the sixth American assembly, one of the major obstacles to a true merit system is section 12 of the Veterans' Preference Act of 1944. This viewpoint is also supported by the National Federation of Federal Employees, National Customs Service Association, the National Civil Service League, as well as the Hoover Commission. Recent editorials, copies of which are enclosed, also point up the need for modification of section 12.

Being a veteran you are thoroughly familiar with section 12 of the Veterans' Preference Act of 1944, and its many ramifications. When the law was enacted there was only 13 percent veterans than employed by the Federal Government. Due to section 12 and the many reduction-in-force programs which have been effected, today veterans constitute over 50 percent and are still increasing. In the male group this percentage is even greater—63 percent.

Much of the work now being done in the Federal Government in the Department of Defense is in the process of being contracted out to private industry. This policy is decreasing the nonveteran Federal population at a terrific rate. We have an impressive file of affidavits of recent date from highly skilled long-term career employees who have been displaced by veterans of considerably lesser tenure. The service of these displaced nonveterans range from 10 to 28 years. Our files also contain letters from veterans who are much opposed to the practice of displacing long-term nonveteran career employees with ablebodied veterans of lesser tenure. These files are available for your review upon request.

When it is realized that the law was enacted to protect a minority group, it is obvious that it has accomplished its objective. This was aptly pointed out by Mr. Philip Young, Chairman, Civil Service Commission, in his testimony before the Subcommittee of the Committee on Appropriations, House of Representatives, 84th Congress, 1st session. In response to a question by a member of the subcommittee as to the need for greater protection to the nonveteran employee, Mr. Young replied:

"We have given some thought to that problem, because yours veterans' situation is one which becomes increasingly serious. After all, the Veterans' Preference Act was passed at a time when veterans were a small minority of the total Federal population. It was to protect the interests of the minority. Today it is discriminating against the minority, because the veterans are in the majority, which was something it was never designed for in the first place. That is the basic trouble."

However, the National Association of Federal Career Employees believes that greater protection should be given those disabled veterans with an occupational handicap in reduction-in-force programs. We believe the disabled veteran with an occupational handicap is justly entitled to this superseniority in view of the sacrifice he has made in the defense of our country. We believe the able-bodied veteran should be in group two for consideration in reduction-in-force programs with preference over nonveterans limited to a fixed period after employment by the Federal Government. As you are aware, the head of an agency can promote or assign a Federal employee providing he meets the civil-service requirements. However, in a reduction in force when section 12 of the Veterans' Preference Act is applied, that administrator cannot retain that qualified employee regardless of the employee's outstanding performance and length of service, if that employee does not have veterans' preference. This mandatory practice does not promote efficiency or economy in the operation of the Federal Government.

You, no doubt, are also familiar with the findings of the Sixth American Assembly, held at Arden House, Harriman, N. Y., October 7–10, 1954. Their findings are in detail in "the Federal Government Service: Its character, prestige, and problems." It is our understanding that a large percentage of the participants were veterans. For your convenience, article VI, page 6 of their October 10 release is quoted below:

"Existing veterans' preference provisions constitute a major obstacle to effective personnel administration. These provisions violate the principle that competence should be the primary qualification for selection and retention of personnel.

"Preference in employment of veterans is established national policy but should be modified for the good of the service as follows:

"(1) Veterans' preference should not apply in the higher ranks of the civil service.

"(2) Preference for nondisabled veterans should be limited to a fixed period following completion of military service.

"(3) Preference for nondisabled veterans should be usable only once.

"(4) Special appeals procedures for veterans should be eliminated.

"(5) Disabled veterans should be granted certain preferences, but the definition of disability should be based on an occupational handicap and the preference should be such as to facilitate their employment and retention in positions for which their disabilities do not unduly limit their effectiveness."

Our organization supports these findings.

The effect of section 12 on nonveterans has been discussed with the three major veterans' organizations, although the official action which will be taken by them is unknown at the moment.

So that you can be fully informed as to our great interest in obtaining a true merit system in the Federal Government, enclosed are our informational booklet which gives the history of our organization, seven reasons why we believe section 12 of the Veterans' Preference Act should be modified, and a flyer which tells what we are, why we are, and for whom. We are also enclosing copies of recent editorials emphasizing the need for modification of this law.

We are indeed grateful for the legislation introduced on May 27 to strengthen the merit system and hope that you can give support to improving reduction-in-force practices which can be obtained only by remedial legislation.

Sincerely yours,

ISADORE ROSENTHAL,
Legislative Director.

The Political Executive and the Senior Civil Service—III

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, much of the work now being done in the Federal Government is in the process of being contracted out to private industry, a step that is decreasing the nonveteran Federal employees at a terrific rate, as the National Association of Federal Career Employees points out.

In his message delivered to the Congress on July 13, 1955, the President said, in approving H. R. 6042, that—

I do not, by my approval of H. R. 6042, acquiesce in the provisions of section 638, and to the extent that this section seeks to give to the Appropriations Committees of the Senate and House of Representatives authority to veto or prevent executive action, such section will be regarded as invalid by the executive branch of the Government in the administration of H. R. 6042, unless otherwise determined by a court of competent jurisdiction.

Earlier in his message the President says that—

The Constitution of the United States divides the functions of the Government

into three departments—the legislative, the executive, and the judicial, and establishes the principle that they shall be kept separate.

Now, while the President speaks of the separation of powers in his message he must surely know that line or section veto of legislation enacted by the Congress is unconstitutional. He must also recognize that the determination of whether legislation is constitutional or unconstitutional is a function expressly reserved to the judicial branch of the Federal Government.

The President's position is clearly in direct conflict with the position taken by Abraham Lincoln in his First Inaugural Address in which he said:

I take the official oath today with no mental reservations and with no purpose to construe the Constitution or laws by any hypercritical rules; and while I do not choose now to specify particular acts of Congress as proper to be enforced, I do suggest that it will be much safer for all, both in official and private stations, to conform to and abide by all those acts which stand unrepealed than to violate any of them trusting to find impunity in having them to be held to be unconstitutional.

On the fundamental basis that it is for the Congress to say how and on what conditions public moneys shall be spent, the position of the General Accounting Office has always been to accord full effect to the clear meaning of any enactment by the Congress so long as it remains unchanged by legislative action and unimpaired by judicial determination. The General Accounting Office is responsible for seeing that the appropriations made by the Congress to carry out the provisions of law are disbursed and accounted for in accordance with the laws relating thereto. I am confident that the Congress has made itself unmistakably clear as to its intent by the plain and positive provision of section 638 of H. R. 6042.

The establishment of a senior civil service, as provided in my bill, H. R. 6549, would, I believe, be of assistance to the President in avoiding the kind of egregious errors he seems to have made in his message regarding H. R. 6042.

I include as part of my remarks the letter by my distinguished friend and colleague, the gentleman from Virginia, PORTER HARDY, JR., in which he seeks an official determination by the Comptroller General of the issues involved in the President's message. Also included is the text of the President's message.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

Hon. JOSEPH CAMPBELL,
The Comptroller General,
General Accounting Office,
Washington, D. C.

DEAR MR. CAMPBELL: Section 638 of the Department of Defense Appropriation Act of 1956 provides that funds appropriated in that act cannot be used for the performance under contract with private industry of functions theretofore carried on by civilian Government personnel if the Appropriations Committee of the Senate or the Appropriations Committee of the House of Representatives disapproves.

Under date of July 13, 1955, the President of the United States sent to the Congress a statement setting forth his position in connection with section 638. He stated, in substance, that he had approved the bill, but that were it not for the urgent need of the funds by the Department of Defense he would have withheld his approval of the bill, since he had been advised by the Attorney General that section 638 constitutes an unconstitutional invasion of the province of the Executive; that he believed it to be his duty to oppose such a violation; and that while Congress has the right to deny an appropriation, it has not the right to confer upon its committees the power to veto executive action in the administration of an appropriation. A particularly pertinent part of the statement reads as follows:

"Since the organization of our Government, the President has felt bound to insist that executive functions be maintained unimpaired by legislative encroachment, just as the legislative branch has felt bound to resist interference with its power by the Executive. To acquiesce in a provision that seeks to encroach upon the proper authority of the Executive establishes a dangerous precedent. I do not, by my approval of H. R. 6042, acquiesce in the provisions of section 638, and to the extent that this section seeks to give to the Appropriations Committees of the Senate and House of Representatives authority to veto or prevent executive action, such section will be regarded as invalid by the executive branch of the Government in the administration of H. R. 6042, unless otherwise determined by a court of competent jurisdiction."

The question upon which I should like to have your advice concerns the authority and the responsibility of the General Accounting Office in the audit of appropriated funds to disallow credit for payments which contravene the provisions either of the act which makes the appropriation, or of any other applicable statute.

I am in full accord with the President when he refers to the fact that three separate and independent branches of government were established by the Constitution of the United States; when he refers to the duty and responsibility of each of these branches to refrain from exercising functions which properly have been conferred upon another branch; and when he refers to the duty of public officials to resist encroachments upon their constituted responsibilities. However, I must part company with the President when he takes to himself the right to declare unconstitutional the provisions of any law prior to a binding decision by the Supreme Court of the United States.

If I interpret the President's statement correctly, he takes the position that since he believes section 638 to be unconstitutional, upon advice by his legal adviser, the Attorney General, he does not intend to comply with that section unless it be declared valid by a court of competent jurisdiction. I had always thought that once a bill is passed by both Houses of the Congress and signed by the President of the United States, the provisions of that law were binding on all of us. I had always thought that personal views with respect to constitutionality, no matter by whom those views might be entertained, could not detract one iota from the conclusive effect of the law so long as it remained on the books unrepealed, or until its provisions were declared to be unconstitutional by a court of last resort. In this I am reminded—and I might say supported—by a portion of Abraham Lincoln's first inaugural address, in which he said:

"I take the official oath today with no mental reservations and with no purpose to construe the Constitution or laws by any hypercritical rules; and while I do not choose now to specify particular acts of Congress as proper to be enforced, I do suggest that it will be much safer for all, both in official and private stations, to conform to and abide by all those acts which stand unrepealed than to violate any of them trusting to find impunity in having them to be held to be unconstitutional."

Unless I am greatly mistaken, former Comptroller Generals have taken the position that it is not a proper function of that office to determine constitutionality of laws duly enacted by the Congress. I believe, too, that in the past when there have come to the attention of the Comptroller General facts which indicate an intention not to conform to duly enacted provisions of law, firm steps were taken by the General Accounting Office to obviate such intended violations of law, even to the extent of withholding funds from the agency involved. Specifically, I should like to know what the General Accounting Office intends to do in the situation at hand.

Sincerely yours,

PORTER HARDY, JR.,
Member of Congress.

To the Congress of the United States:

I have today approved H. R. 6042 making appropriations for the Department of Defense for the fiscal year ending June 30, 1956, and for other purposes. I have done so because the funds which the bill makes available are urgently needed by the Department of Defense. Except for this imperative need, I would have withheld my approval of the bill, for I am advised by the Attorney General that one of its provisions, section 638, constitutes an unconstitutional invasion of the province of the Executive.

Section 638 deals with the authority of the Department of Defense to rid itself of many of the manifold activities that it has been performing with its civilian personnel, and that can be adequately and economically performed by private industry without danger to the national security. That section states that funds appropriated in the bill cannot be used to enable the Secretary of Defense to exercise this authority if, in the case of any activity of the Department proposed to be terminated, the Appropriations Committee of the Senate or the Appropriations Committee of the House of Representatives disapproves such proposed termination.

The Constitution of the United States divides the functions of the Government into three departments—the legislative, the executive, and the judicial—and establishes the principle that they shall be kept separate. Neither may exercise functions belonging to the others. Section 638 violates this constitutional principle.

I believe it to be my duty to oppose such a violation. The Congress has the power and the right to grant or to deny an appropriation. But once an appropriation is made the appropriation must, under the Constitution, be administered by the executive branch of the Government alone, and the Congress has no right to confer upon its committees the power to veto executive action or to prevent executive action from becoming effective.

Since the organization of our Government, the President has felt bound to insist that executive functions be maintained unimpaired by legislative encroachment, just as the legislative branch has felt bound to resist interference with its power by the Executive. To acquiesce in a provision that seeks to encroach upon the proper authority of the Executive establishes a dangerous precedent. I do not, by my approval of H. R. 6042, acquiesce in the provisions of section 638, and to the extent that this section seeks to give to the Appropriations Committee of the Senate and House of Representatives authority to veto or prevent executive action, such section will be regarded as invalid by the executive branch of the Government in the administration of H. R. 6042, unless otherwise determined by a court of competent jurisdiction.

One other rider added to the bill is most unfortunate. This rider—contained in section 630—virtually precludes the Services

from considering the purchase of foreign made spun silk yarn for cartridge cloth.

This rider—attached to the bill without adequate opportunity for reasons against it to be presented—runs directly counter to the steps which have been taken by the administration in the field of Government procurement policy. No reason appears why foreign made spun silk yarn, or indeed any other article or commodity of foreign origin, should be singled out for special exemption from the general provisions of the buy-American legislation. By making it virtually impossible for our friends abroad to sell us goods when such goods are materially less expensive to our taxpayers than those that can be procured domestically, such provisions could effect a deadly attrition of our whole international trade policy and bring about impairment of our relations with other nations.

It is my earnest hope that as soon as possible the Congress will repeal section 630 of the bill in its entirety.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *July 13, 1955.*

Annual Report of Hon. Stuyvesant Wainwright, Member of Congress, First District of New York

EXTENSION OF REMARKS
OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. WAINWRIGHT. Mr. Speaker, this is my annual report to you, the citizen, the taxpayer. As your Congressman, I am your employee; consequently, you are entitled to know what has transpired in the Congress of the United States this year.

To properly present the picture to you, we must start with the President's state of the Union message in January. At that time President Eisenhower asked the Congress for specific legislation for the benefit of all of the people. He set the guideposts for Congress to follow. Rather than say whether this was a good or bad Congress, let me present a basic score chart. Then you can determine whether we were useful or whether we were "do-nothing." Remember one thing: This Congress was controlled by the Democratic Party. They had enough votes alone to carry out the President's program had they been so inclined.

THE EISENHOWER REQUESTS

First. A badly needed national highway program was offered. This was killed by a straight Democratic Party vote.

Second. A strong resolution on the defense of Formosa was requested. This was passed with only three dissenting votes.

Third. Extension of flexible farm supports to help all farmers was part of the Eisenhower Republican program. This was defeated by a coalition of midwestern Republicans and the Democrats.

Fourth. Extension of the draft was recommended. This measure was passed by a bipartisan vote.

Fifth. A military Reserve program was proposed. The Congress, on a split-party vote, gave the President a very weak manpower law.

Sixth. Federal aid to school building was called for. The Democratic leadership refused to let the measure be debated.

Seventh. Better health and welfare requirements were urged. The Democratic leadership refused to let this measure be debated.

Eighth. A reasonable increase—from 75 cents to 90 cents—in the minimum-wage law was suggested. Big union pressure forced the Democrats to pass a $1 minimum. By this action they killed all chance of widening coverage. The 90-cent figure would have offered the opportunity to give coverage to those unfortunate people who do not have the benefit of big union representation.

Ninth. The President's atom-powered merchant ship proposal would have done much to advance our practical application policy for the peaceful use of atomic energy. The Democratic-controlled committes of Congress turned down this reasonable request on straight party-line votes.

Tenth. Statehood for Hawaii was defeated by the Democratic leadership forcing Alaska into the vote.

Eleventh. Pay increases for the military and for the Federal employees were passed by a large bipartisan vote.

Twelfth. Foreign military assistance was passed by a moderate bipartisan vote.

These 12 major items are symbolic of the treatment the President received. As you can see six measures were defeated outright. The balance, except the noncontroversial, were reduced in potentiality.

It is difficult to understand why, for example, the Democratic leadership turned a deaf ear to the President's request for juvenile delinquency studies. In the field of foreign affairs, tariff and trade, the Democratic Congress has supported the President rather well. But this impression has tended to mislead the public into believing that this has also been true with respect to domestic matters. While I have mentioned a number of key items in the President's program which the Congress killed or pigeonholed, additional mention must be made on one issue: Roads. What better way of expressing my own opinion than to quote the President's statement:

> I am deeply disappointed by the rejection by the House of Representatives of legislation to authorize a nationwide system of highways.
>
> The Nation badly needs new highways. The good of our people, of our economy and of our defense, requires that construction of these highways be undertaken at once.
>
> There is difference of conviction, I realize, over means of financing this construction.
>
> I have proposed one plan of financing which I consider to be sound. Others have proposed other methods. Adequate financing there must be, but contention over the method should not be permitted to deny our people these critically needed roads.
>
> I would devoutly hope that the Congress would reconsider this entire matter before terminating this session.

Congress did not reconsider; 214 Democrats joined 7 Republicans in voting down the President's proposal. But they went even further; 128 Democrats voted against their own road bill. This is another example proving the difficulties a Republican President must endure with a Democratic Congress. Newspaper accounts tend to overplay what has been done; they skip lightly over the failures.

Yet the President on his own initiative carried out two more Republican pledges. He obtained the release of our fliers, unjustly imprisoned by the Chinese Communists. But possibly more important, he also put forward the key to peace at the Geneva summit conference. There is now a cautious hope for world harmony.

A report to the people that neglected to present these facts to you would be worthless. Now you can be the judge of this 1st session of the 84th Congress.

CONTINUED LOCAL PROSPERITY

In my annual report of 1954 I predicted for Long Island—for 1955—abundance and prosperity. I predicted a continuance of our population increase; of our building boom; of continued industrial expansion. My political opponents cried, "Politics." Yet every bureau of Government shows that, for once, people in a peacetime economy "never did have it so good." The population figures obtained from unofficial sources—we do not have a census until 1960—shows that this congressional district is probably well over 600,000, or double the size at the time of my election in 1952.

For the next 12 months, I predict a continuation of this expansion and prosperity for Long Island in nearly all manner or means with the principal exception of the potato farmer. And why is he suffering? Overproduction is the simple and correct answer. California, for example, has planted thousands upon thousands of new acres in potatoes. But what is worse is to be found with the sometimes termed free-ride farmer. He is being paid by your Government not to plant wheat and corn. So what does he do? Why, of course, he plants potatoes; and, this activity has greatly added to this year's overlarge crop. The farmers' price has been cut to a diminutive figure. The Congress opposed my proposals to restrict the so-called free-ride farmer from planting potatoes in diverted acres.

However, your Congressman has attacked this problem by recommending to the Department of Agriculture a 7-point program. We have held a series of meetings with the Department leaders and with the potato industry in an effort to define an effective policy. It is not quite as easy as it sounds: 400 million bushels will be grown this year; the country can absorb only 340 million by home consumption and through export. What does one do with the 60 million bushels? Dump them in the ocean? This even goes against the grain of the socialist types. Crop price support? Maybe. It is certainly better than starvation. The ultimate answer is less production; but, how do you tell a free American farmer not to plant this or that? By this potato

example you see but one of the major problems a Congressman must face.

POSTAL MATTERS

On the positive side of our efforts in the postal field, I am pleased to point up some of the present achievements:

A. Obtained new postoffice facilities for Bayport, Centereach, North Massapequa, and Rocky Point.

B. Obtained an extension of R. F. D. services from the Central Islip office.

C. Obtained city delivery for the Parkdale area from the Farmingdale Post Office.

D. Awaiting an appropriation of up to $725,000 for a new post office in Babylon.

E. Approved city delivery in the village of East Hampton on a permanent basis.

F. Obtained the continuance of operation of the Shinnecock Hills Post Office—the Department had closed this facility.

G. Obtained city delivery for West Sayville.

MILITARY AND FOREIGN ACTIVITIES

Our military appointments have been most successful. Two young men from Suffolk were among the 21 sent by New York to the new Air Force Academy. As you can see, this county can well be proud to send 10 percent of New York's representation when we have less than 2 percent of the population. The periodic grades of the young men in all of the service academies are sent to me. I have written them letters of encouragement, and sometimes, of warning. Next year I will fill additional vacancies based, as usual, on a comprehensive examination.

One great field of service by our office involves foreign travel. Our office expedited the issuance of over 50 passports. From the date of application a passport takes nearly 6 weeks before it is issued. We are averaging slightly better than 10 days.

People say the Refugee Relief Act has not been working. This is fallacious. This year we have assisted more than 40 people in obtaining admission to this country, and over half of these were admitted under this act. Of seven private immigration bills introduced in this past session of Congress, favorable action was taken by the House of Representatives on all but one. Two have already received final action by the President. The other four bills will be acted upon by the Senate early in the next session. It is anticipated that final action by the President would be taken no later than March 1.

We have serviced over 50 veterans' cases, clarifying such matters as national service life insurance dividends and disability compensation. We have gone to the Veterans' Administration in 10 instances of reported abuses by builders in veterans' housing matters. For all but one instance the complaints have been successfully resolved; and, in this one, we believe a settlement wil be obtained.

We have received over 80 requests from servicemen for compassionate transfers and emergency leaves or discharges. The policy for our Government must be observed, yet in certain very desperate situations we have been able to bring a boy home in time to visit with a dying parent. We are able to obtain special discharges in cases of extreme hardship. In one instance we were able to arrange, on 8 hours' notice for a mother to fly to England to visit her GI son, badly injured in an auto accident.

EROSION AND PUBLIC WORKS

In the field of public works for Long Island, we believe that more has been achieved, with one major exception, than in any single year. For example, Fire Island Inlet was accepted as a permanent maintenance project. The United States Army engineers have allocated funds for studies of both the Moriches and Shinnecock Inlets. This will require an expenditure of $16,400. Based on these studies, permanent programs will be instituted. In addition to these achievements, for the two inlets in question, the Coast Guard has made sizable commitments with regard to their receiving new channel markings

For years the users of Mattituck and Montauk Harbors have been demanding a better channel. This year we succeeded, and dredging work has just been completed. More must be done. For example, in the Montauk Harbor case we will make an all-out effort to obtain funds for repair and maintenance of the southeast jetty. Maintenance funds were obtained for the dredging of the Great South Bay inland waterway channel. This, too, must be kept open or else the advantage of this natural waterway is lost.

One unfortunate story must be related. Due to a refusal on the part of the Governor of the State of New York to permit the contribution of $12,500, a $50,000 cooperative study has been willfully delayed. No progress on erosion can be realized until the United States Army engineers make the survey in question. Fifty percent of the funds must come from State and local sources and 50 percent from the Federal Government. Late last year the county of Suffolk put up its share—$12,500. This was to be added to last year's token amount provided by the Federal Government. Congress completed the balance of the Federal funds this year. However, even after a visit to Suffolk County, and, recognizing our plight, the Governor of New York—Averell Harriman—withheld State moneys from this project until recently. It is utterly incomprehensible why politics should be injected into beach erosion. In Washington, Republicans and Democrats work in harmony where the public welfare requires. Why should this not be true in New York State?

HURRICANE WARNINGS

You may remember that directly after hurricane Carol, in September 1954, I visited with the Chief of the Weather Bureau and his staff. At that time I recommended vast changes in the hurricane advisory services. The results will be seen this year in the excellent warning systems provided when and if a hurricane is sighted.

The Weather Bureau is only one phase of hurricane work. A disaster plan on the local level is essential.

MISCELLANEOUS

In addition to these major projects, a number of local and miscellaneous items should be called to your attention:

First. A special column has been written for your weekly newspaper. In this manner you can be constantly aware of current problems. For the balance of this year my column will be written by members of the President's Cabinet and other executive heads.

Second. A regular radio broadcast report has been made over all local radio stations each Sunday from January through August. These will be resumed in January 1956.

Third. Office hours are held periodically in Huntington and Wainscott. In addition, the Washington office will provide daily service 52 weeks a year and members of my staff will be available on Long Island at all times.

Fourth. Consultations have been held with the Director of Fish and Wildlife and the Secretary of the Interior in an effort to have the special Long Island wildfowl hunting season continued.

Fifth. Prohibited the closing of the Shinnecock Canal bridge by the United States Army Antiaircraft Command. Had this action taken place, Southport would have been cut off during the crucial weekend traffic periods.

Sixth. Have advocated and am pursuing the possibility of erecting a new bridge across the Shinnecock Canal to accommodate present traffic demands.

Seventh. Have interceded in behalf of local residents with the United States Army to see that no community harm occurred in the selection and operation of Nike sites. This often proved difficult, due to the personal interests involved. However, location of the existing sites are in the best interests of the national defense.

Eighth. Polled, at my own expense, a cross section of the citizens of the district on the issues of the day. Only by sampling your opinion can I be kept constantly aware of your views.

Ninth. Conducted an Americanism essay contest for youngsters with the prize—a framed parchment of the oath of allegiance—being presented to the winner by President Dwight Eisenhower in his office in the White House. Not only were the winner and his family present, but also the leaders of Suffolk County's veterans' organizations participated.

Tenth. Established and presented a political-science prize at the United States Merchant Marine Academy at Kings Point. While this institution is not in the district, we on Long Island are all proud of its record.

Eleventh. Assisted First District small-business firms in obtaining their fair share of defense contracts.

Twelfth. Introduced legislation for the reimbursement of federally impacted school districts which had already gone ahead with their school-building programs. This legislation passed the House of Representatives, the Senate, and was signed by the President of the United States. Many Long Island school districts have benefited from this, as well

as other school districts throughout the United States.

As usual, it has been a pleasure to serve you for another year. Your patience, where we have tried and have not been successful, is especially appreciated. Your comments, advice, and suggestions are always welcome.

Activities of the Select Committee on Small Business of the House of Representatives—The Chairman's Report

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. PATMAN. Mr. Speaker, the Select Committee on Small Business was created in the 84th Congress by House Resolution 114, agreed to on January 27, 1955. Creation of the present committee marked the seventh consecutive Congress in which a Small Business Committee has been appointed since the first such committee was created in 1941, by a resolution which I introduced.

During the first session of the 84th Congress, as in past years, a large part of the committee's time and staff assistance has been taken up with the handling of a large volume of day-to-day requests from small businesses. These requests were referred to the committee, for the most part, by Members of the House. They cover, it would seem, almost every topic under the sun. The bulk of these, however, have been from small-business men who have become enmeshed in a procedural snarl while attempting to conclude some business transaction with the Government, who wish to transact some business with the Government, or who find that some Government procedure or regulation is working a hardship. Not a few of the complaints reaching the committee concern alleged violations of law, or alleged malfeasance or misfeasance on the part of Government personnel, and the complainant wishes to preserve a degree of confidentiality from the executive branch, or is not sure of the proper place to make his complaint.

Altogether there have been many hundreds of requests for individual assistance or information, and these have required a large volume of correspondence and a large number of meetings. The committee has given attention to each request made of it, and has tried in each instance to render useful assistance or advice. The committee has given particular attention, however, to those requests which indicate that in helping an individual firm, we will also help small business generally. In short, the committee has paid particular attention to requests which indicate that some Government practice or procedure is adversely affecting small business, or that some other condition exists which may adversely affect numbers of small-business firms.

PROSPERITY OF SMALL BUSINESS

The large volume of requests for assistance in transacting business with the Government may reflect in part the not-too-prosperous state of the small-business segments of business. The unprecedented earnings and dividend payments enjoyed by many of the big corporations during recent months reflect a business prosperity in which smaller firms have not fully shared. Reports of the Federal Trade Commission and the Securities and Exchange Commission for the first quarter of this year show that profit rates of manufacturing corporations were graduated in accordance with the corporate-size class. Furthermore, while profit rates of the largest manufacturing corporations have gone up in recent years, profit rates of smaller corporations have drastically fallen. Annual rates of profits—after taxes—for four selected size groups of manufacturing corporations may be compared for the last several years, as follows:

[In percent]

Asset size of corporations	1952	1953	1954	1st quarter 1955
Less than $250,000	9.3	6.8	3.2	3.6
$1,000,000 to $5,000,000	8.0	7.5	5.6	7.9
$10,000,000 to $50,000,000	9.7	9.9	8.7	9.3
Over $100,000,000	11.8	12.1	12.1	13.8

(Profits as percent of stockholders' equity.)

While there are no official figures for profits in the trade and service fields, Dun & Bradstreet's reports of business failures suggest that small firms in these fields have likewise failed to keep pace in the big business prosperity. Although there were slightly fewer failures in retail trade and commercial service during the first 6 months of the year than there were in the business downturn of the first half of 1954, failures in both of these fields have been considerably greater than in the 2 previous years. The number of retail-trade failures in the first half of 1955 were 36 percent and 31 percent greater, respectively, than in the first half of 1952 and 1953. Similarly, failures in commercial service firms were 33 and 28 percent greater than in 1952 and 1953. Failures in wholesale trade have increased steadily since 1952, and the number of such failures in the first 6 months of 1955 were 47 percent greater than in the first half of 1952. Substantially all of the failures in these three fields—retail, wholesale, and service trades—have been failures of small firms, where liabilities of less than $100,000 were involved.

FORMAL INVESTIGATIONS

In addition to its day-to-day operations, the committee has organized five subcommittees to carry on planned programs of study and investigation. On February 23, 1955, the committee met in open session and announced work programs which encompass a wide variety of subject matter. On introducing the committee's work program at this meeting I pointed out that—

It has been principally for the reason that so many subjects impinge upon the welfare of small business that the House of Representatives has maintained a Small Business Committee during the last 14 years. This committee's job is to study these subjects from the standpoint of small business, and to keep the House advised. For the same reason, however, our committee can hope only to investigate those subjects which are of the more pressing importance to small business. Yet, even so, our agenda is an ambitious one.

I should like to take up now, a brief review of each of the subcommittees' programs and the progress of each during the session of Congress recently closed.

SUBCOMMITTEE NO. 1 ON FEDERAL REGULATORY COMMISSIONS

Subcommittee No. 1 is composed of the Honorable JOE L. EVINS, of Tennessee, chairman; Hon. ABRAHAM J. MULTER, of New York; and Hon. WILLIAM M. MCCULLOCH, of Ohio.

The subcommittee has as its goal a careful study and investigation of the organization and procedures of some 6 or 8 independent Federal regulatory agencies. The duties of these agencies include enforcement of trade and anti-monopoly laws, and the regulation of several major segments of business. Several of these so-called regulatory agencies, such as the Federal Power Commission, the Federal Communications Commission, and the Civil Aeronautics Board, exercise powers to decide which private firms shall be licensed to operate the quasi-monopolistic business under the jurisdiction of these agencies, and under which terms and conditions these business franchises shall be enjoyed. Manifestly, the manner in which these agencies exercise their powers determines competitive relationships in which small business has a vital concern. The Federal Trade Commission, while it has no duties for regulating commerce, in the strict sense of the phrase, is no less of vital importance to small business. Its function is to try to maintain competition so that competition will be an effective regulator of those segments of business which are not regulated by the other regulatory agencies. It has the duty of enforcing certain of the anti-trust laws, including the Robinson-Patman Act, which have been designed to protect small business and the public generally from monopolistic practices.

One frequently made allegation which the subcommittee is looking into is that these regulatory agencies have lost their independence, through reorganization, and have in practical effect become a part of the executive branch. In announcing the program of the subcommittee, the chairman [Mr. EVINS] said:

We shall pay particular attention to those commissions which have been reorganized under a Hoover Commission reorganization plan. These regulatory commissions were originally conceived to be nonpartisan, or at least bipartisan, and they were intended to be of a judicial character. Most certainly, they were set up to be independent of the executive branch of the Government. The Hoover Commission plans made a radical change from this original conception. These plans made the chairman of each commission responsible to the President, to serve at the pleasure of the President, and they gave the chairman complete control and direction over the commissions' staff. It is now time to find out how these reorganizations have worked out.

The subcommittee has collected and analyzed a considerable body of information bearing upon the organization and enforcement procedures of the FTC and the FPC. In addition, public hearings were held at which officials and former officials of the FTC and the FPC testified on July 18 through 22 and on July 27 and 28.

Conceptually, the independent regulatory agencies operate under delegations of Congress' powers to regulate commerce. They were originally intended to be arms of the Congress and were charged with the enforcement of no policy but the policy of the law. Hence, if through reorganization, or otherwise, these agencies have come under big-business domination, control or even influence, then the Federal agencies and laws which were intended to give impartial treatment to small business have been subverted.

Investigations to date have revealed that if the top managements of the Federal Trade Commission and the Federal Power Commission have not demonstrated injudicious leanings in favor of big business, these officials have demonstrated at least a lack of candor in accounting to congressional committees, and to the public generally, for their stewardships of these public agencies.

FACTS AND CLAIMS ABOUT FTC AND FPC

With reference to the Federal Trade Commission, the record reveals several items of too serious a nature to be lightly dismissed.

First. The present Chairman of the Federal Trade Commission—Mr. Howrey—while holding this judicial office, became a member of a group known as the Attorney General's National Committee to Study Antitrust Laws, and assisted that group in preparing a major lobbying effort against the antitrust laws. Among other things, the FTC Chairman assigned staff members of the FTC to assist this group in writing its report, thus diverting funds which had been appropriated by Congress for enforcement of the antitrust laws to the benefit of a private lobbying group whose efforts are directed at wrecking the antitrust laws. The membership of this group was well known when the FTC Chairman joined it; and the group was well known to be made up almost exclusively of lawyers who specialize in defending big business clients in antitrust suits. Another fact which Mr. Howrey could easily have learned before joining this group, if he did not know, was that half of the lawyers in this group were representing defendants in antitrust suits which were actually pending at the very time these lawyers set out to write their report. Subsequently Mr. Howrey signed the report of this group, thus lending the prestige of his high office to a long list of recommendations for weakening the antitrust laws, including both recommendations for tricky changes in the interpretation of these laws by the FTC and the courts and recommendations for weakening these laws by new legislation. Several of the antitrust laws which would be wrecked or substantially weakened by these recommendations, including the Robinson-Patman Act, are among the laws which this official took an oath to uphold and enforce.

Second. During the 2 years of Mr. Howrey's chairmanship of the FTC, he and his General Counsel—Mr. Kintner—have made numerous public references to the Chairman's alleged purity of judicial conduct in disqualifying himself from participating in cases in which he had represented big business clients before the FTC as a private lawyer. Moreover, FTC's General Counsel testified under oath before the subcommittee that the Chairman had never discussed with him the FTC's quantity limit case against the rubber-tire manufacturers, a case in which Mr. Howrey had been counsel for the Firestone Tire & Rubber Co. Yet 2 minutes later, the Chairman of the FTC was forced to admit that he had accompanied the FTC's General Counsel on a secret visit to the Solicitor General of the United States and that together they discussed this case with the Solicitor General. In explanation for their conduct, both FTC Chairman Howrey and Mr. Kintner told the subcommittee that the purpose of their visit to the Solicitor General was to urge him to comply with a formal request of the Federal Trade Commission that he petition the Supreme Court of the United States to review this case. The facts show that after the informal visit from the FTC Chairman and his General Counsel, the Solicitor General rejected the FTC's formal request. An inevitable result of this was that the case was remanded to a United States district court; and a probable further result will be that another 10 years will elapse before this case reaches the Supreme Court, during which time the FTC's cease-and-desist order will be held in abeyance, and the tire companies involved in this case will be free to continue the monopolistic practices which the FTC's order was intended to stop.

Third. Both the FTC Chairman and his General Counsel have made a number of speeches during the past 12 months giving the impression that the FTC had mobilized to combat the wave of business mergers which has been receiving a great deal of public attention, and that this agency was going vigorously about the enforcement of the new antimerger law. For example, on January 27, 1955, FTC's General Counsel made a speech which was headlined in the press as "Mergers Jam FTC Work, Official Says."

A subcommittee questionnaire answered by the FTC in March shows, however, that through mid-February 1955 only 6 percent of FTC's expenses had been made for antimerger work, including a substantial sum spent in making a study of mergers. A further answer to the subcomittee's questionnaire revealed that the FTC had not issued a single antimerger complaint in the 9½ months since Chairman Howrey's much-ballyhooed reorganization of the Federal Trade Commission, which was to mobilize the FTC to cope with mergers and other monopoly problems.

In mid-May 1955, the Federal Trade Commission released a 230-page report on mergers. Data in this report showed that 522 corporate mergers had been made by combines having in excess of $50 million of assets, and the report shows such other facts as these: 22 big corporations had acquired and merged 244 other corporations; 1 huge corporation had acquired and merged 48 other corporations in the dairy-food field, and another huge corporation had acquired and merged 17 corporations in the same field. FTC still had issued no antimerger complaint during the fiscal year 1955. In June 1955 a hearing before a subcommittee of the House Committee on the Judiciary revealed that FTC had still issued no antimerger complaint during the fiscal year 1955, and that it had made only 4 field investigations of mergers.

Fourth. Over the past 18 months the FTC Chairman and his General Counsel—Mr. Kintner—have made numerous speeches describing a new and vigorous program for prosecuting violations of the FTC cease-and-desist orders which have accumulated over the years. In testimony before the subcommittee on July 18, 1955, FTC's General Counsel was forced to admit that under Mr. Howrey's chairmanship the FTC has not brought a single suit seeking penalties for a violation of FTC's cease-and-desist orders in antimonopoly cases. The vigorous new program, which is under the General Counsel's direction, has, however, resulted in civil penalty suits against small-business firms for alleged violations of orders against allegedly misleading advertising.

The factual basis for FTC's recent claims that its work during the past fiscal year has set an all-time record for vigorous enforcement of the antimonopoly laws are yet to be examined. The FTC publicity handouts make much of the point that 30 cease-and-desist orders were issued in antimonopoly cases during the year, as compared to an average of 24 per year in the 4 previous years. These handouts neglect to mention, however, that 18, or nearly two-thirds, of the 30 antimonopoly orders issued during the past fiscal year were worked out in agreement with the alleged law violators, and were consented to by them without contest. The quality of the orders issued even without the violator's consent, moreover, is a matter which can be appraised only after the contents of these orders are carefully compared with the exact charges previously made against the alleged violators in the FTC complaints. A former FTC Commissioner told the subcommittee, with reference to these statistics, that "it is very easy to make out a case of great activity if you do not differentiate the elephants from the rabbits."

The other basis on which the FTC lays its claims to record-sitting antimonopoly activity is the fact that it issued 36 new complaints in the past year, as compared to an average of 29 new complaints in the 4 previous fiscal years. An often-made allegation is that FTC has recently directed its antimonopoly complaints at small-business firms and has thus shifted its fire from the monopoly "elephants" to the monopoly "rabbits." This allegation could be quickly and definitely set-

tled by comparing the asset sizes of the firms against which complaints have been issued during the past several years. On July 19, 1955, the subcommittee requested FTC Chairman Howrey to submit such comparisons, but to date this information has not been received by the subcommittee.

With reference to the Federal Power Commission, the investigation to date likewise indicates that if the top management of this agency has not shown injudicious leanings in favor of big business, it, too, has been less than candid in discussing with congressional committees certain of its actions which have favored big business.

First. The subcommittee's investigation revealed that the FPC and certain of its staff members advised on and assisted in the drafting of the proposed Dixon-Yates contract. Evidence adduced at the hearings on July 28, 1955, reveals that the General Counsel and two assistant general counsels of the FPC's Bureau of Laws had been asked for legal opinions on the Dixon-Yates contract at the time this contract was being negotiated and that these three officials had rendered opinions strongly condemning the proposed contract. Two legal memoranda on this subject prepared by the Acting General Counsel and the Assistant General Counsel of the FPC were submitted to the FPC in late August of 1954, and the FPC formally heard the opinion of its General Counsel on the same subject in mid-September of 1954. Yet in November 1954, when the Joint Committee on Atomic Energy sought to obtain from the FPC Chairman—Mr. Kuykendall—any opinions which FPC's Bureau of Laws might have rendered on the Dixon-Yates contract, the FPC Chairman told that committee that the Bureau of Laws had not been asked to render an opinion.

Second. While the Small Business Committee has not and will not attempt to appraise the question whether the public interest would have been better served by the construction of Federal high dam in Hells Canyon than by turning this power site over to a private utility for the erection of low dams, the committee has noted that in its announcement of August 3, 1955, the Federal Power Commission states that it formally decided this question on July 27, 1955. In testifying before the subcommittee on July 28 the FPC Chairman refused to answer questions pertaining to the Hells Canyon matter on the ground that this matter was pending before the Federal Power Commission for decision.

QUESTIONS OF INDEPENDENCE

The subcommittee's studies to date indicate that a number of the regulatory agencies were reorganized not only as a result of the Hoover Commission reorganization plans, but that they have subsequently been reorganized to meet recommendations of private firms of management consultants, or consultants employed for this purpose. Information obtained from the Civil Aeronautics Board, the Securities and Exchange Commission, the Federal Trade Commission, and the Federal Power Commission indicate that all of these agencies have been twice reorganized since 1950.

The investigations and hearings to date have raised a number of important issues about which the subcommittee has not yet reached conclusions. It may be noted, however, that a diversity of views has been expressed concerning the system whereby the Chairmen of these Commissions are named by the President.

With reference to the FTC, the Chairman—Mr. Howrey—testified that he approves the present system. Commissioner Gwynne indicated that he likewise favors the system of a permanent Chairman and believes this system contributes to more prompt handling of the Commission's work. Commissioner Secrest indicated that because of his limited experience on the FTC he had no recommendation on the question whether the system of Commission selection of its Chairman, or Presidential selection, is better, but Commissioner Secrest did recommend taking away the power of the President to change the Chairman. Commissioner Mead, who will retire from the FTC on September 26, strongly recommended a return to the system whereby the FTC selects its own Chairman, with the creation of a strong executive officer to be responsible to the whole Commission. Former Commissioners Carson, Spingarn, and Caretta—who likewise served on the FTC both before and after the Hoover Commission reorganization plan went into effect—made similar recommendations. Former Commissioner Freer, who is now a practicing attorney before the ICC and the FPC, gave the subcommittee a history of the various organization plans which have been tried in those Commissions, and strongly urged a return to the system whereby the regulatory Commissions select their own Chairmen.

Testimony of officials of the FPC was unanimous on the point that this Commission is intended, and must be in fact, an arm of Congress, free from executive influence. Hearings brought out that the Chairman—Mr. Kuykendall—had sought and received from the White House an opinion concerning the scope of his power and duties as Chairman.

The Chairman—Mr. Kuykendall—expressed agreement with the reorganization plan under which the FPC now operates, although he pointed out that he had not been a Commissioner prior to the adoption of this plan. Commissioner Draper, who has been a member of the FPC for 22 years, told the subcommittee that he preferred the old system and that he had dissented on the reorganization plan.

Commissioner Steuck told the subcommittee that he was appointed to the Commission since the adoption of the reorganization plan, but that he thinks under the plan the FPC is pretty efficient.

Former Commissioner Leland Olds indicated that he has had no firsthand experience with the reorganization plan, but he strongly advised against any plan of organization which tends to isolate the Commission's staff from the Commission or which tends to inhibit the free exchange of policymaking considerations and technical information between the Commission and its staff.

Investigation and study of the independent regulatory agencies will continue throughout the fall and winter.

SUBCOMMITTEE NO. 2 ON GOVERNMENT PROCUREMENT, DISPOSAL, AND LOAN ACTIVITIES

This subcommittee is composed of Hon. ABRAHAM J. MULTER, of New York, chairman; Hon. JOE L. EVINS, of Tennessee; and Hon. R. WALTER RIEHLMAN, of New York.

For several years now we have had laws which declare our public policy to be that small business shall have a fair share of the Federal business transacted with private firms. These declarations of policy have been especially clear with reference to Government purchases and Government disposals of surplus property, and they have also applied at times to Government-provided inducements for expansion of business capacity. One of the primary functions of the Small Business Committee has been—likewise for several years—to determine to what extent this policy is being carried out and to recommend steps for seeing that the policy is carried out.

In announcing the program of the subcommittee on February 23 the chairman [Mr. MULTER] said:

> Of course, we already know many of the answers; the problem is in many respects not new to us. The solution of the problem requires constant attention and hard work. Perhaps our public policy can never be carried out completely, but we think that improvements can be made. Great improvements already have been made in past years, largely as a result of the work of this committee.
>
> • • • • •
>
> The procedures and practices surrounding the Government's transactions with private firms are vastly complex. It was largely for this reason that the programs of the Small Business Administration were established. In instituting these programs, Congress created an agent to stay on the job constantly, to work continuously at finding ways to carry out our public policy on safeguarding small business in these procurement and disposal matters, and to provide certain technical and informational assistance to small business of all kinds so as to build up the Nation's economic strength.

As the Small Business Act of 1953 was to expire on June 30, 1955, the first order of business of the subcommittee was to appraise the operations of the Small Business Administration and to determine whether there was a substantial need for continuing this agency. Consequently, during the past session of Congress the subcommittee devoted a major portion of its time to these problems. Since the SBA was created as a planning agency, with quasi-supervisory duties over the operations of certain programs of tht other Federal agencies, it was necessary to review the operations of these programs in order to obtain a comprehensive review of SBA's operations, and to appraise the success of its mission.

Public hearings were held on 8 days during March. Officials of the Department of Defense, the General Services Administration, and the Atomic Energy Commission testified concerning their procurement and disposal programs, and

concerning SBA's part in these programs. In addition, SBA officials testified on its activities in these fields, as well as on its loan, technical assistance, and other programs. Several small-business men, officials of small-business trade associations, and several Members of Congress testified concerning their experiences with SBA and made thoughtful recommendations for improving the agency's operations. The subcommittee's report—House Report No. 1045—was filed with the Clerk of the House on July 1, 1955. Since that date investigations and study have continued, particularly for the purpose of devising recommendations for a new law. Several of the recommendations thus made were adopted by Congress and appear in the new law—Public Law 268—which was signed by the President on August 9, 1955.

The subcommittee found almost unanimous agreement that there is a substantial need for continuing a Federal small business agency to carry out the functions which SBA has been authorized to perform. The committee also found, however, the SBA's performance of these functions has fallen considerably short of the success that could be hoped for.

SMALL HELP TO SMALL BUSINESS

One of the principal functions of the SBA is to carry out the financial assistance programs authorized by the Small Business Act. It has long been recognized that there is a serious gap between the legitimate needs of small firms for business capital and the amount of such capital which can be supplied under the present organization of private financing institutions. Generally speaking the central equity markets do not provide a practical means whereby small business can raise funds. Moreover, the local commercial banks upon which small business must generally depend for loan funds cannot supply such funds adequately or on the terms which loan funds are available to big business. In view of the ever-increasing need for business loan funds, the deficiency in such funds available to small business is an especially serious matter. With the abolition of the RFC in mid-1953, the SBA was given the job of helping to increase the flow of loan funds to small business.

Information made available by the subcommittee indicates that although SBA has operated its loan program under rather narrow definitions of "small business," there are at least 3½ million firms falling within these definitions, and they account for somewhere between one-third and one-half of the total volume of nonagricultural business done in the Nation. Yet, the maximum amount of business loans which can be credited to SBA's activities over the past 2 years has amounted to only $1 out of every $1,700 of business investment in new plant and equipment during these years. Similarly, the maximum amount of business lending which can be attributed to SBA—including lending from private funds—has amounted to less than one-half of 1 percent of the total expansion in business debt during these years.

SBA has received inquiries from small-business men concerning loans at an average of better than 11,000 per month. In its entire 21 months of operations, however, only 5,085 of these inquiries successfully passed SBA's screening tests and became formal applications for loans. And of these few which SBA did allow to become formal applications, it approved only about one-fifth, or a net of 1,141. Only 395 of these approved applications were for direct loans, which involve no bank participation, and SBA had actually made disbursements of only 276 of these.

Although $80 million had been appropriated for SBA's loan fund, as of April 30, 1955, it had actually disbursed only $19.1 million on business loans, of which $2.5 million of principal had been repaid. SBA had, however, charged its loan fund with $4.1 million for the administrative expense of its financial-assistance program.

The second major function of the SBA is to carry out its statutory obligation to assist small business in obtaining a fair share for Government purchases and production contracts. The volume of such purchases and contracts continues to account for an important part of the total sales of manufactured goods. The Department of Defense alone is awarding contracts at the rate of approximately $16 billion a year, and is, in addition, distributing between $1 billion and $1.5 billion a year to encourage research and development. Manifestly, the way in which these production contracts and these funds for research and development are distributed will have a continuing effect upon private competitive relationships for many years to come.

SBA has handled its all-important obligation for seeing that small business obtains a fair share of defense contracts by its joint determination program. This program is one by which SBA reviews proposed procurements and recommends to the military procurement officers that certain of these procurements be earmarked for distribution among firms having less than 500 employees. From August 1953, through March 1955, the contracts so earmarked amounted to 1 percent of the total value of all the military contracts awarded in that period, and the contracts so earmarked that were actually awarded to firms with less than 500 employees amounted to less than three-fourths of 1 percent of the value of all the military contracts awarded in the period. In the same period, military contracts awarded to firms with less than 500 employees, whether or not earmarked, amounted to 15 percent of the value of all the contracts awarded. In contrast to the 15 percent of the defense business which firms with less than 500 employees actually obtained, and to the three-fourths of 1 percent of the contracts which such firms obtained as a result of SBA's efforts, firms with less than 500 employees normally account for about 42 percent of all the manufacturing in the United States.

SBA's failure to achieve more than microscopic results from its two major programs has inevitably raised a grave question whether the expense and trouble which this agency has caused small-business firms have not, on the whole, been greater than its positive contributions to small business; and this does not take account of the intangible effects of holding out false hopes to small-business men that assistance can be had where, according to the record, the overwelming odds are that assistance cannot be had. It is strongly hoped, however, that SBA's performance will rapidly and markedly improve.

Your Small Business Committee will watch and work for improvements in the SBA and in this effort the committee will need and welcome the observations and suggestions of every Member of the House. The new small business bill which was recently passed into law gives the SBA additional and broader authorities for assisting small business, but only public opinion and the continuing attention of Congress can compel that these authorities be used. It should be plain by now that without the continuous support and help of the peoples' elected representatives, who are in a unique position to know about and understand the complex ways by which the Government can be organized and run for the special benefit of a few giant corporations, our Nation would soon be paying the price of a totalitarian control over our economic lives.

Several programs and activities of the SBA are urgently in need of immediate review and decision. The new SBA law prohibits the SBA from engaging in activities which duplicate the activities of other Federal agencies. This does not mean that where there is now a forbidden duplication the SBA will necessarily be the agency to withdraw from the activity; but it does mean that a number of so-called technical assistance programs for small business must be either centered in the SBA or another agency, such as the Department of Commerce. The committee will appreciate any suggestions from Members of the House concerning any of these specific activities.

Without question it is proper and necessary that small-business men who apply to SBA for a loan be investigated as to their credit standing, their general character, and their business reputation, as is common in commercial practice. Small-business men naturally expect to be so investigated. It has recently been revealed, however, that in addition to investigations of the type which are normal in commercial practice, SBA has secretly been subjecting small-business men who apply for loans to security or suitability investigations similar to those required for Federal employees. This too, to my mind, raises questions for reappraisal, both as to the necessity and propriety of Federal prying into personal histories beyond the requirements of prudent commercial safeguards.

SUBCOMMITTEE NO. 3 ON MINERALS AND PRODUCTION MATERIALS

This subcommittee is composed of the Honorable SIDNEY R. YATES, of Illinois, chairman; Hon. TOM STEED, of Oklahoma; and Hon. TIMOTHY P. SHEEHAN, of Illinois.

The subcommittee has as its work program investigations of certain minerals and other basic production materials which have been in recurring short supply. In announcing the program of the subcommittee on February 23, 1955, the chairman [Mr. YATES] said:

This whole matter of recurring shortages of certain raw materials needs a searching investigation. The small businesses that depend upon these essential production materials cannot survive unless steps are taken to see that they get a fair share of whatever supplies are available.

Shortly after this announcement was made the subcommittee received a number of requests for help from the nonintegrated aluminum fabricators. Shortages of aluminum became more acute, and a number of small fabricators reported they were able to obtain only a fraction of the amount of aluminum they normally use and need. Such reduced supplies appeared to be considerably less than were required to maintain their plants at normal operating levels. Businesses which had expanded in anticipation of adequate supplies of primary aluminum found themselves unable to obtain the amounts needed, making it necessary for them to curtail production.

The subcommittee undertook hearings in an effort to help alleviate the shortage. Hearings were held on 6 days during May 1955, at which members of the industry and officials of the Government testified. In addition, on June 21, 1955, the subcommittee had hearings in the nature of a roundtable discussion among all segments of the industry, hoping to establish standards which would assure equitable distribution of the aluminum released from stockpile requirements. Both the primary producers and the nonintegrated users indicated that they felt that the hearing had been constructive. For example, the executive secretary of one of the fabricator trade associations wrote the subcommittee, in part, as follows:

In conclusion, we wish to compliment the committee for the attention given to this serious problem in the aluminum industry and also commend the members for holding a special hearing on June 21, in Washington, in which all segments of the aluminum industry were present. This indeed was an accomplishment, since it was the first time that all segments of the aluminum industry were afforded the opportunity to sit down at a roundtable and present the facts and discuss them in the open. A continuance of this type of hearings would be in order so that problems of the aluminum industry, and particularly those affecting the independents, could be voiced and solutions offered.

The investigation indicated that the acute shortage stemmed, in part, from a serious miscalculation of the increasing industrial demand for aluminum. It was indicated, too, that operations of the Government stockpiling program has aggravated the situation, by taking the entire surplus aluminum production over and above the estimated demand for industrial uses. Inasmuch as the stockpile proposed to take all aluminum produced in excess of industrial demand, when estimates of industrial demand were drastically in error, the quantities of aluminum allocated for delivery to the stockpile materially added to the pinch on small aluminum businesses.

With an inadequate supply to go around to all aluminum users, and in the face of competition in fabrication by the three primary producers, small fabricators had to press constantly to obtain enough raw materials to stay in business. A further complication was the continued purchasing by the primary producers of aluminum scrap, which resulted in some measure in raising the price of aluminum scrap.

The subcommittee is continuing to make a careful and detailed study of the aluminum problem, in order to arrive at recommendations which will safeguard both the interest of national defense and the small fabricators. One of the underlying considerations is that the producers of primary aluminum have reached their present stage of output with considerable Government assistance. Since the outbreak of hostilities in Korea, productive capacity for primary aluminum has been more than doubled, largely as a result of Government-provided incentives. These incentives include Government contracts to purchase surplus output under specified terms and conditions. Conversely, however, these contracts also call for the producers to make specified quantities of primary aluminum available to the nonintegrated users. One of the questions which the subcommittee has under study, therefore, is whether there should be more vigorous enforcement of the Government's contractual rights on behalf of the small fabricators. Similarly, the subcommittee has under study questions whether the executive departments, such as Office of Defense Mobilization, the Office of Export Supply, and the Business and Defense Services Administration of the Department of Commerce, are following policies and procedures which properly protect the interests of small business. Finally, the subcommittee also has under study the question whether a new expansion program should be encouraged.

Considerable staff work has been done on copper and nickel. In addition, careful study was given to the plan for disposing of the Government-owned synthetic rubber plants which was submitted to Congress early in the session, and the chairman [Mr. YATES] testified before the House Armed Services Committee, pointing out several respects in which the plan drawn up by the Rubber Facilities Disposal Commission could be improved from the standpoint of safeguarding the interest of small rubber fabricators.

SUBCOMMITTEE NO. 4 ON THE AIRCRAFT INDUSTRY

This subcommittee is composed of Hon. TOM STEED of Oklahoma, chairman; Hon. JAMES ROOSEVELT, of California; and Hon. HORACE SEELY-BROWN, JR., of Connecticut.

The mission of the subcommittee is to complete an investigation which was begun during the last term of Congress. Its primary concern is with the aircraft parts industry, which is largely a small-business industry. This industry is comprised of firms which make a countless variety of parts, pieces, components, instruments, and so forth, which go into the assembled aircraft.

The problems in this industry arise from two conditions, as were explained by the chairman [Mr. STEED] on February 23, as follows:

First, the prime contractors are negotiating the subcontracts on private deals instead of placing them on competitive bids. This means that the smaller parts makers are getting a smaller share of the subcontracts in the first place.

* * * * *

In the second place, the small parts maker who does get subcontract work can never be sure that he can keep it. Whenever production schedules are curtailed, or the prime contractor has idle capacity for other reasons, he is likely to pull the parts work into his own plants. Thus, the prime contractor stabilizes his workload while the subcontractor may be in production one day and out the next.

Because of recent high levels of aircraft production and limited staff assistance needed for more pressing problems, active investigation of the aircraft industry has been held in abeyance. The subcommittee is maintaining a watchful eye for new developments, however, and plans to complete its investigation at an early date.

SUBCOMMITTEE NO. 5 ON DISTRIBUTION PROBLEMS

This subcommittee is composed of Hon. JAMES ROOSEVELT, of California; Chairman Hon. TOM STEED, of Oklahoma; and Hon. TIMOTHY P. SHEEHAN, of Illinois.

The subcommittee has a planned program of investigations of the problems of small business in the distribution fields. The chairman [Mr. ROOSEVELT] explained the nature of these problems on February 23, as follows:

Our subcommittee is concerned with what—to my mind—are some very serious sore spots in our business system. These arise in the trade relations between numerous small and highly competitive firms on the one hand, and a few big monopolistic or quasi-monopolistic suppliers on the other hand. In the typical distribution pattern today, you find these small companies dependent upon such monopolistic suppliers—either for the products they distribute or for essential production materials—and there is a constant struggle to try to get fair and equitable treatment. If these monopolistic sore spots are not cleared up, not only will the small-business man suffer, but the consumer will be paying higher prices.

Even prior to the organization of the subcommittee, a great number of complaints had been received from retail gasoline dealers and their trade associations concerning alleged coercive and discriminatory practices on the part of the large oil company suppliers. More specifically, these complaints are to the effect that while there are approximately 200,000 retail gasoline dealers in the United States which are said to be independent dealers, these dealers are, in fact, independent to operate their businesses only on the terms and conditions dictated by their oil company suppliers.

The subcommittee held hearings on 11 days in March through June and heard 68 witnesses, including retail dealers from all sections of the country, officers of their trade associations,

representatives of the major oil companies, and officials of the Federal Trade Commission. Representatives of the retail dealer's trade associations estimated that of the 200,000 retail gasoline dealers in the United States, as many as one-third go out of business each year. Considerable evidence was presented, moreover, to show that the turnover of retail gasoline dealers involves an overall loss to the individual dealer running to several thousands of dollars, which losses frequently represent an individual's life savings and exhaustion of credit and veterans benefits.

Much of the testimony centered upon the arbitrary control which the oil companies exercise over the retail dealers by virtue of the short terms of the leases which the oil companies enter into with their lessee dealers, and the clauses characteristically contained in these leases affording conveniences by which the oil companies may cancel their leases.

The subcommittee also heard testimony concerning oil company practices of discriminating in the prices charged for gasoline, as between competing dealers, which practices are allegedly for such purposes as disciplining price cutters, eliminating outlets for off-brand gasoline, or for moving surplus stocks of gasoline which may occur in a particular market area. Vigorous complaints were also heard concerning the practice of some of the oil companies of requiring their retail dealers to handle and sell exclusively certain designated lines of tires, batteries, and other auto accessories. Several of the major oil companies in question admitted to arrangements whereby they received an override or kick-back from the manufacturers of tires and auto accessories on sales made by their gasoline dealers.

The subcommittee's interim report—House Report No. 1423—makes a number of recommendations for vitally needed steps which must be taken to correct the unfair practices found in this industry. This report recommends, among other things, several amendments to the antitrust laws to better protect small and independent businesses, and it recommends that the Department of Justice and the Federal Trade Commission review several other problems set out in the committee's report in the light of present antitrust laws, and make reports and recommendations to Congress as to the adequacy of these laws for meeting these problems.

The subcommittee's unanimous report subscribes to the purposes and principles of H. R. 11, a bill for strengthening the Robinson-Patman Act, and H. R. 7096, a bill for freedom of choice in trade, the latter of which was introduced by the chairman [Mr. ROOSEVELT] as a result of the subcommittee's study and findings.

Pursuant to the subcommittee's plans for investigating small-business problems in the distribution of automotive parts and accessories, electrical equipment and appliances, and many food items, considerable staff work has been done on these topics.

ACTIVITIES OF THE FULL COMMITTEE

One of the more serious problems which has occupied the committee and its staff has arisen from the numerous proposals which have recently been made for amending the antitrust laws. Not a few of these proposals, while perhaps well-meaning, misconceive the purpose and effect of those sections of the antitrust laws which were especially designed to protect small-business men from monopolistic practices; and there has been considerable momentum in the drive to amend these sections of the law in ways which would substantially weaken them.

On March 31, 1955, the chairman [Mr. PATMAN] issued a report analyzing the proposals contained in the report of the Attorney General's National Committee To Study the Antitrust Laws; and on May 10, 1955, testified before the Antimonopoly Subcommittee of the House Committee on the Judiciary, explaining, among other things, the legal aspects of the Robinson-Patman Act and the practical trade problems which led to the passage of this antitrust law. It was pointed out that the experiences of substantially all of the members of the Attorney General's committee had been with legal and theoretical matters, rather than practical trade matters, and that more than half of the lawyers on this committee were representing defendants in pending antitrust suits.

On July 13, 1955, the chairman [Mr. PATMAN] testified before the same subcommittee in opposition to H. R. 6875, a bill which the Department of Justice had recommended for removing the provision of section 4 of the Clayton Act which makes it mandatory a violator of the antitrust laws be assessed threefold damages, where a plaintiff in a private suit proves that he has been damaged through a violation of these laws.

During March, the chairman [Mr. PATMAN] testified before the House Armed Services Committee on the plan of the Rubber Facilities Disposal Commission for disposing of the Government-owned synthetic rubber plants, calling attention to certain monopolistic aspects of the plan and recommending certain alternative provisions for better safeguarding small business.

LEGISLATIVE RECOMMENDATIONS

The Select Committee on Small Business is not a legislative committee and therefore does not report bills. The committee has, however, adopted formal resolutions of recommendation on legislative proposals, as follows:

A series of resolutions recommending extension of the Small Business Act of 1953, and recommending several amendments to that act to broaden the authority of the SBA for assisting small business.

A resolution in support of the principles and purposes of H. R. 11—introduced by Mr. PATMAN—a bill for strengthening the Robinson-Patman Act.

A resolution in support of the principles and purposes of H. R. 7096—introduced by Mr. ROOSEVELT—a bill for freedom of choice in trade.

A resolution in opposition to changing the mandatory triple-damage feature of the provisions for private damage suits contained in the antitrust laws.

Moral Rearmament Statesmen's Mission

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. SHEPPARD. Mr. Speaker, under general permission to extend remarks, I am submitting additional material completing my speech on the Moral Rearmament statesmen's mission which was inserted in the CONGRESSIONAL RECORD of August 1, 1955:

Mr. Speaker, national leaders who were hosts to or received the statesmen's mission were Ichiro Hatoyama, Prime Minister of Japan; the Foreign Minister and Acting Prime Minister of the Republic of Korea; President and Madame Chiang Kai-shek, and O. K. Yui, Prime Minister of the Republic of China; Ramon Magsaysay, President of the Republic of the Philippines; Ngo Dinh Diem, President and Prime Minister of Vietnam; Field Marshal Pibulsonggram, Prime Minister of Thailand; Dr. Ba U, President, and U Nu, Prime Minister of the Union of Burma; Sir John Kotelawala, Prime Minister of Ceylon; Dr. Rajendra Prasad, President of India; Mohammed Ali, Prime Minister of Pakistan; His Imperial Majesty the Shah of Iran and Prime Minister Hussein Ala; Burhanuddin Bashayan, Foreign Minister of Iraq; Col. Gamel Abdel Nasser, Prime Minister of Egypt; Members of the Council of Ministers of Kenya and the Mayor of Nairobi; and the Prime Minister and Foreign Minister of Turkey.

REPUBLIC OF KOREA

The Government of the Republic of Korea arranged for a delegation from the mission to visit Seoul. The delegation was received by members of the cabinet, chiefs of armed forces, and leaders of education and social welfare.

The first positive turn to the vexed problem of Korean-Japanese relations was given by a message of apology from leading members of the Japanese Parliament conveyed on their behalf by former NATO Chairman Ole Bjorn Kraft to the Foreign Minister and other members of the Korean Cabinet.

The Foreign Minister, who was also Acting Prime Minister under President Syngman Rhee, said:

I am convinced that unless the world catches this spirit of moral rearmament, another world disaster will be inevitable.

Members of the mission were honor guests at the ceremonies on June 25 marking the fifth anniversary of the invasion of South Korea in 1950.

MALAYA

Under a headline, "Way To End the Emergency," the influential Straits Times welcomed a delegation from the mission to Singapore and Malaya. Conferences and meetings were held with the rival Malay and Chinese political parties, with heads of the chamber of commerce and trade-union leadership, and with educational and student lead-

ers of the country's Communist-infiltrated school system.

A farewell reception, tendered by the Chinese chamber of commerce, many of whose members have close family ties with Communist China, was attended by Singapore's chief minister, David Marshall, and other notables from the Malaya, Chinese, British, and Indian communities.

Dr. Thio Chan Bee, noted educationalist and legislative council member, who was responsible through MRA for bringing the rival Malay and Chinese communities together after the war, joined the special plane as Singapore's representative on the world mission.

VIETNAM

With the people of South Vietnam only 12 months away from the fateful July 1956 deadline when they must vote for or against the Communist North, President Ngo Dinh Diem on July 5 welcomed as Government guests a delegation from the MRA world mission.

An hour after the special plane landed at Saigon Airport, the President and his Cabinet formally received the mission in the same Palace of Independence where recently he had turned the tide in his civil war against the sects. He said:

You are carriers of a noble ideal and powerful advocates for this idea—I would even say of a vast movement for the unity of men and nations. You have straightaway won the active sympathy of the Vietnam people. * * * For myself I understand the immense repercussions that will come from this mobilization of spiritual forces in the world which you have undertaken in effective cooperation with all men of good will. You have confronted an ideology that supposes to unite the world on the basis of hatred, fear, and strife with an idea which proclaims love and understanding and which proposes to bring about unity to the world by way of the heart and spirit.

In sharing your idea I have the firm conviction that a worldwide renaissance of moral and spiritual forces which we are all aiming for in the depths of our hearts, will be accomplished in the coming days, for the greatest benefit of us all. This will be the dawn of a new age which will see the transformation of the world.

Next morning, first anniversary of Diem's taking office after the Geneva armistice, he invited the mission to address the crowds from the palace steps. In his introduction he referred to MRA as "the great ideology that is sweeping the world."

That evening he gave a state banquet in honor of the MRA mission to which the diplomatic corps and chief Government leaders were invited.

Before leaving Saigon, members of the mission spent an afternoon with the Minister of War and 50 picked officers responsible for indoctrinating the country for next year's critical vote. The Chief of Psychological Warfare, Dr. Phuoc, said:

We were grateful for American military and economic aid, but lacked an ideology. Now you have given us the idea which can win.

Foreign Minister Vu Van Mau, who used his official reception to the mission to announce Vietnam's long-deferred acceptance of the principle of free elections, stated concurrently that a Vietnamese delegation would attend the MRA world assembly in Switzerland.

THAILAND

In Thailand, keystone of SEATO, the MRA world mission were official guests of the Prime Minister, Field Marshal Pibulsonggram, who opened the Bangkok premiere of the Vanishing Island and welcomed his visitors on behalf of my Government and the Thai people.

At a reception and dinner for the members of the mission, including the United States Air Force plane crews, the Prime Minister referred to his visit to the MRA World Assembly at Caux, Switzerland, the month before. He declared that "peace-loving peoples will sooner or later yield to the ideology of MRA," which he described as "a strong force that answers world materialism." He continued:

Our honored guests are from all walks of life and are sacrificing themselves for the sake of the peace of mankind. The MRA mission aims to build up unity between nations and to bridge East and West. Its ideology is pure and sincere. Since its inception MRA has been growing larger and larger and will continue to grow with great force. The doors of Thailand will be gladly opened to MRA at all times.

Gen. Phao Sriyaon, Bangkok's powerful chief of police, and members of the Cabinet and Diplomatic Corps, attended the reception.

Commenting on the Prime Minister's welcome, American Ambassador Peurifoy told members of the Mission that the field marshal, when asked by the press what had most impressed him on his recent visit to the United States and Europe, had replied: "The advance and influence of Moral Rearmament."

In introducing the play at the theater of the Ministry of Culture, the Prime Minister declared:

The Vanishing Island is a remarkable play and teaches us a unique lesson. It will be a most potent weapon for casting away doubt and fear and so healing the differences between nations.

For the first time breaking a firm rule against attending theatrical productions, 15 members of the supreme Buddhist council, including the president of the council and other high priests of the Buddhist faith, attended the second performance of The Vanishing Island as the Prime Minister's personal guests. The president of the council said:

MRA has the same purpose for righteousness as the Lord Buddha. The ability of MRA to change men is proof that MRA has the power to unite the world.

Concluding their visit in this heart of the Buddhist world, which numbers some 400 of Asia's millions, the mission was received for 2 hours by the Lord Abbot of Wat Mahatat, one of the largest monasteries in the land, who said:

As a Buddhist, I take the greatest pleasure in receiving this mission. Our Buddhist faith teaches us to keep company with what is good, and from MRA I find in the four absolute standards something which is good. You can be assured that I shall be only too glad to serve you in any capacity. And I say this in front of the Lord Buddha. I am less lucky than you, because I am not able to accompany you. But I am happy you are accompanied by some who will be traveling on my behalf. It is a great tribute to Dr. Frank Buchman that a force like this can travel around the world—and such a strong force. This should be regarded as one of the great and important events in the history of humanity. Dr. Buchman is one of the great men of the world.

Among those present at the play were delegates to the current SEATO military talks.

IRAN

The MRA world mission, including the United States Air Force crews who flew the special planes, were personal guests of the Shah and Government of Iran.

In the official reception line at Teheran Airport were representatives of the court, the Prime Minister, the Foreign Minister, the services, the universities, and industrial, labor, and women's organizations.

A 2-hour national broadcast, directed by the Vice Premier and the Minister of Education, and keynoted by the President of the Supreme Court, inaugurated a visit described by Foreign Minister Entezam as "a world move to bring international relations into a new dimension."

Prime Minister Hussein Ala spent a morning with representatives of the mission. He said:

My Sovereign and Government are wholeheartedly with you in support of moral rearmament. We consider it a fundamental step toward uniting nations for the creation of peace which the common people of every land need and long for. What you are doing is perhaps the only hope of the world if we are to create understanding and prosperity for all peoples. The Koran and Islam sponsor and favor moral rearmament. You are showing the world how to put aside the old ideas of 19th century imperialism from which we have suffered in the Middle East and replace them with moral standards which are universal. You are giving a superior idea to communism and that is why you will succeed in winning the world.

The Minister of Education, Dr. Mohmoud Mehran, took first steps toward the ideological training of Iranian youth. He said:

Moral rearmament has a vital role to play in giving to our youth an ethical ideology which is the only answer to materialist ideas and propaganda.

Special lunches, dinners, and receptions were given in honor of the mission by the heads of every principal national organization and an extensive series of industrial visits brought them into touch with workers and managers on a factory level.

The Iranian premiere of the Vanishing Island was a command performance for the Shah and Queen Soraya given by royal order on a specially constructed stage in the grounds of the summer palace. The impact of the play was such that by imperial command the palace grounds were, for the first time in history, thrown open to the public to witness the last two performances of the play.

An Iranian Goverment delegation is being formed to attend the Caux Assembly in September.

Before leaving for Baghdad the mission were honored guests at the 50th anniversary celebrations of the Iranian Parliament, the Majlis.

IRAQ

Members of the MRA mission were guests of Burhanuddin Basbayan, Foreign Minister of Iraq, during a 4-day visit to this heart of the ancient world.

The Vanishing Island had its Baghdad premiere in the King Feisal II Theater before a cross-section of the governmental, diplomatic, industrial, and labor life of the capital.

Dr. Fadhil Jamali, former Premier and chief of his country's United Nations delegation, and who as Chairman of the Iraqi delegation at the Bandung conference had appealed for Asian-African unity on the basis of moral rearmament, gave a thought-provoking evaluation of the play to the press of Baghdad. The following is a translation from an interview by Dr. Jamali in Al Akhbar, leading Arabic daily of Baghdad:

Without doubt the theater is one of the most effective of the fine arts in propagating good character, the social virtues, and a lofty example to mankind. This is the task to which moral rearmament is actually applying itself. It portrays in its stage presentations a picture of human society, whether it be in the home, in the factory, in business, or in international relations, stating the problem and making clear the answer. It was my privilege to witness a number of these plays in America.

The day before yesterday I saw The Vanishing Island. Without doubt this play produces an amazing artistic effect and evokes real appreciation. The most important point about this play is its human, social, and political implications. The play presents two islands. One of them stands for democratic freedom, but materialism and selfishness have so led it astray that its people pay no attention to an imminent threat to their way of life. They do not believe that destruction peers at them from behind the door.

In the portrayal of this kingdom is a telling lesson for the anti-Communist countries which believe that they are right—completely right—forgetting that they themselves are rules by materialism, selfishness, and exploitation.

The second act portrays a land under Communist government where dictatorship, slavery, and cruelty reign, where with the death of individual liberty human feelings are forgotten. Thus all of mankind is led along in slavery by chains of materialism.

These two regimes which are equally engulfed in materialism have no one to guide them aright. It is the good king of the first country who foretells the imminent danger to his island which is complacent in its freedom. When finally they refuse to accept the advice of their king, their island disappears and does not return until after they have repented and returned to their senses.

This good king is mankind's apostle and rescuer, the one who unites the social order, divided into leftist and rightist elements, by presenting a superior plan—a program of absolute purity, absolute love, and unselfishness among all the peoples of the world. Here the play ends by asking that the principles which MRA stands for be applied among all men. These principles are part of all the inspired religions. Together they are the essence of Islam, as they are of Christianity, Buddhism, and Hinduism. These principles are not the special property of any one religion or nation or geographical area, but are common to all mankind.

These principles are not new. What is new is that the world stands in greater need of them than ever before in history. In this atomic age mankind has before it the choice either to change human nature and thus to change human destiny by establishing these principles, or to continue to a war of extinction. Moral rearmament believes that the first thing to be effected is a change of character, and that this change is the effective way for individuals and societies. On this basis MRA is spreading in all parts of the world through a change of heart based on the light of God's guidance. This light of faith is the way which will save mankind from final destruction.

We absolutely cannot hold back from accepting this ideology presented by Moral Rearmament. I urge that we all work together to purify and dedicate ourselves to absolute honesty, unselfishness, and love in all our work and in our family, social, economic, political, and international life. What this ideology calls for is a faithful confirmation of the verse from the holy Koran which says, "God does not change the condition of a nation until the men of that nation change themselves."

EGYPT

The Vanishing Island opened in Egypt with a gala performance in Cairo's famous opera house. Top diplomats from all over the world, including the Ambassadors from Afghanistan, China, Ethiopia, Japan, Libya, and Pakistan; as well as diplomatic representatives from Canada, Germany, Greece, Romania, Russia, Saudi Arabia, and Switzerland were present in the historic theater built 80 years ago for a performance of the world premiere of Verdi's "Aida" on the occasion of the opening of the Suez Canal.

Among other distinguished guests were His Excellency the Governor of Cairo, Abdul El Latif Salem; the chief of police of Cairo, Abdel Aziz Mifreh; Secretary General of the Arab League, Abdel Khalek Hassouna; and Deputy Minister of Sudan Affairs, Abdel Fettah Hassan; and five generals and the Under Secretary for War.

Earlier Hassouna was host at a reception for the entire mission. Official from every department of the Arab League were present. The Secretary General, who is a former Foreign Minister of Egypt, in welcoming the mission on behalf of the Arab League, paid tribute to what had been accomplished in the last 2 months. He specially referred to Dr. Frank N. D. Buchman, initiator of Moral Rearmament and said:

We will be working with them through the four absolute standards of MRA for the salvation of humanity and the well-being of the whole of human kind.

One of the key figures in Egyptian public life, Brigadier Abdel Fettah Hassan, Deputy Minister of Sudan Affairs, came to the play for the second night in succession and told members of the cast, "I have been thinking of this play ever since last night and I couldn't keep away."

Chinese Ambassador Ho Feng-shan, dean of the diplomatic corps, gave a dinner for some of the delegates. He said:

We have been talking about honesty and unselfishness for thousands of years, but these standards have not come into a concrete force as we see now in MRA. We have been talking too much and philosophizing without an effort to practice. Here is a force to inundate the world for generations to come.

The whole mission are guests of Col. Gamel Abdel Nasser, president of the Revolutionary Council of Egypt, and the Government. They came to Cairo in response to the president's cable which read:

I wish to welcome to Egypt the delegation of the Moral Rearmament Organization which is intending to visit our country. The principles and objectives of your organization are highly appreciated in Egypt where all efforts are mobilized to restore moral values, social justice, human dignity, and freedom.

Colonel Nasser received the whole Moral Rearmament world mission in his office in the presidency. He told them that he much appreciated their coming to Egypt.

In an exclusive interview given the following day to the Cairo weekly newspaper, Rose El Youssef, when he was asked the question, "What is your impression of MRA?" Colonel Nasser replied:

This ideology could be a solution to save the world from the conflict between the so-called West and East. We should all believe in it. It is a solution.

Labor members of the mission were given a tremendous reception by 100 trade-union leaders who were from the liberation rally. Those present included 7 heads of federations and 12 heads of trade unions and many officials and workers. At the end of the meeting Maj. N. Noor, the chief provisional officer of the Egyptian trade unions, declared:

As a trade unionist I am absolutely dumbfounded by 4 words—the 4 words of the absolute standards. I want to help to give these to our whole country and the whole world.

At the close of the meeting the speakers were inundated with requests for literature and entire stocks were emptied.

Ten members of the mission were given a warm reception by Minister of Education Kemal Edin Hussein—youngest member of the Council of Revolution. The Minister assured the mission of the warmest interest and support and told them, "It is a tremendous and worthwhile task you have undertaken." When the delegation left he asked them for a supply of MRA literature which he proposed to have translated into Arabic for use in the schools and universities. He expressed the keenest appreciation at the presence of the 32 Egyptian students at Caux.

KENYA

Nineteen hours after closing at Cairo, the cast of The Vanishing Island opened before a packed multiracial audience in the Kenya National Theater in Nairobi, 2,500 miles south of Cairo, where the Governor of Kenya, Sir Evelyn Baring, received members of the Moral Rearmament mission.

Kenya officials greeted the entire mission of 192 on their arrival. Mayor I. Somen welcomed the party on behalf of the city of Nairobi. A. B. Patel, Minister for Asian Affairs in the Kenya Cabinet, and Alan Knight, commandant of the Athi River Mau Mau detention camp, were also at the airport.

At the Athi River camp, 500 hard core Mau Mau leaders had earlier renounced their Mau Mau oaths as a result of ap-

plying Moral Rearmament principles, and Knight brought 24 pounds starling which had been contributed in shillings and pence by 150 detainees to help finance the mission. The men earn only 1 shilling a day.

Hon. Michael Blundell, minister without portfolio and member of the Emergency War Council, came to the theater to express the warmth of his welcome to Kenya, while Cabinet Minister Patel told a gathering of the Asian community.

Under the inspiring leadership of Dr. Frank Buchman, MRA has made great strides in the last years. It is an ideology essential to the progress of the human race if we are to establish peace.

At the premiere, former Communists, Africans, Asians, Europeans, and Maoris from New Zealand all spoke from the stage. The first members of the mission to be introduced were Mary Waruhiu, daughter of a senior Kikuyu chief, and Mrs. Agnes Hofmeyr, daughter of a famous English settler. The fathers of both had been murdered by the Mau Mau.

At the camp a group from the mission, including Congressman CHARLES B. DEANE of North Carolina and Basil Okwu, Member of the Eastern Nigeria Parliament spoke to 500 detainees gathered in the camp theater, giving their own experience of MRA and of its uniting impact across the world.

Among those present at performances of the Vanishing Island were African chieftains, members of the legislative council, leading trade unionists and businessmen. In the audience also were Lady Mary Balfour, daughter of the late Lord Balfour, diplomats and other leading Europeans, Africans and Asians.

The Japanese Consul, K. Kaneoko, held a reception for 100 of the mission to which many of the diplomatic corps came including representatives of Ethiopia, India, Pakistan, Germany, Holland, the United States, Denmark, Sweden; and the Swedish Minister to Ethiopia, the administrator of the East Africa High Commission and the president of the Indian Chamber of Commerce.

The Facts Regarding Echo Park

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. ALLOTT. Mr. President, it will be recalled that S. 500, the Colorado River storage project, passed the Senate on April 20. It is now under consideration by the Committee on Interior and Insular Affairs of the House of Representatives, along with companion bills that have been introduced by Members of the other body.

During Senate consideration of the upper Colorado storage project, an amendment was offered which would have deleted the Echo Park feature of the measure. The amendment was defeated and Echo Park remained in the bill that was passed by the Senate.

The principal objection to the inclusion of Echo Park, as expressed on the floor of the Senate, was that irreparable damage would be done to the natural beauty of Echo Park and to the wildlife of the area. Conservationists opposed Echo Park and did their utmost to have it taken out of the bill.

While I am certain that they were absolutely sincere in their opposition to the inclusion of Echo Park, I am equally certain that they are mistaken. Rather than damage the cause of the conservationists, the Echo Park feature of the project, if carried through to completion, would prove beneficial to the preservation of the scenic beauty and the conservation of the wildlife of the region.

One of my constituents, Mr. John A. Cron, on May 24 wrote an informative letter to Mr. Charles H. Callison, the conservation director of the National Wildlife Federation, whose headquarters are here in Washington. The letter which was written on behalf of the Loveland Wildlife Association, of Loveland, Colo., so effectively demolishes the arguments of the opponents of Echo Park that I would like to have it included in my remarks. Mr. President, I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LOVELAND WILDLIFE ASSOCIATION,
Loveland, Colo., May 24, 1955.

Mr. CHARLES H. CALLISON,
Conservation Director,
National Wildlife Federation,
Washington, D. C.

DEAR SIR: Your circular letter sent out May 1 to member clubs of the federation has been referred to me by Loveland Wildlife Association, a member of the Colorado Federation, with the request that I give you some firsthand information about Echo Park and the views of the Loveland Association thereon. I have seen Echo Park on a trip specifically made for the inspection of that area as a site for the proposed dam, as it might affect the water interests of the State of Colorado and the interests of sportsmen.

At the time of making the trip I was a member of the Colorado Water Conservation Board.

The Green River and the Yampa River, which join at Pats Hole not far from Echo Park, are muddy alkaline streams flowing at the bottom of steep canyons, and although those canyons are spectacular they are very arid and sustain very little wildlife, consisting chiefly of gophers, rabbits, and rattlesnakes, and a very sparse population of these. A small area of wild goose nesting habitat, where not more than a dozen pair of Canadian geese have nested in the past, will be inundated at Lily Park.

The Colorado game and fish department has made studies from which it reported that there would be no interference of any deer migration by the creation of the reservoir.

It is the opinion of the residents of the area, technicians of the Colorado game and fish department, and other people who have seen the area firsthand and have experience in the ultimate effect upon an area of the storing of a body of water of this kind that the habitat will be vastly improved for wildlife generally, particularly for waterfowl, including both ducks and geese, and fish.

The only fish which the area supports at present, other than catfish, are rough fish and a rather small population of even these, but the reservoir, when created, will be a deep water reservoir suitable for almost all species of game fish.

Access to Echo Park, Pat's Hole and other points of interest in the canyons will be tremendously improved in two ways, one by the construction of a good access road to the dam itself, and second, by water transportation.

A handful of people make the not too hazardous trip from somewhere near Craig, Colo., down into Utah following the Yampa River, or the more hazardous trip from Wyoming through Colorado into Pat's Hole, the confluence of the Green River and the Yampa River, and on through Colorado into Utah.

A few more make the trip into Pat's Hole over dusty, rough and winding roads over the long distance from the nearest point on a good highway.

It is true that the view in Pat's Hole will be changed and Steamboat Rock will be about half inundated, but whether the view will be improved or damaged by the additional water is a question of viewpoint.

The construction of Echo Park will add tremendously to the recreational value of the area and will distinctly be in the interests of conservation, both of wildlife and of our precious water.

Why the National Wildlife Federation, under the guise of conservation, should oppose this dam is something of an anomaly, and the manner in which this had been done, even going to the extent of overriding the agreed position of the Colorado Wildlife Federation not to take a position opposing this dam. When the representative of that Federation went to your national meeting he was not authorized to oppose Echo Park Dam on behalf of the Colorado Wildlife Federation, and neither I know, are you entitled to represent that you are speaking for the membership of the entire National Wildlife Federation when you oppose this measure.

We of the Loveland Wildlife Association are very much antagonized by your boasting about your opposition to Echo Park Dam which seems to us not only to be against the real interests of conservation, but just about as stupid as boasting of having killed the last of the passenger pigeons.

Very truly yours,

JOHN A. CRON.

Social Security Coverage for Members of the Dental Profession

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have written to Dr. Garrett Reilly, president of the Congress of American Dentists for Old Age and Survivors Insurance. This is an organization that has been recently formed to work for the inclusion of all self-employed members of the dental profession under the coverage of social security benefits. I support the efforts of this organization and welcome the assistance of the dentists in extending old-age and survivors insurance to

the members of this distinguished and worthy profession.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 2, 1955.

J. GARRETT REILLY, D. D. S.,
President, Congress of American Dentists for OASI, Washington, D. C.

DEAR DOCTOR REILLY: Allow me to say how pleased I am that the Congress of American Dentists for OASI is working to bring about social security coverage for members of the dental profession. I am sure that the support of your organization will help immeasurably in getting the legislation through the Congress.

You may know that I have been the sponsor of bills both during this session and in the last session of Congress that would make Federal old age and survivors insurance available to members of your profession.

The amendment I first introduced to extend social security benefits to dentists during the 83d Congress was prompted by the result of a poll taken in my own State of Minnesota. At that time Minnesota dentists gave overwhelming support to the extension of the old age and survivors insurance program to cover their own profession.

Quite recently I have received further proof that the dentists of Minnesota wish to receive the benefits of the social security system. The Minnesota Dental Society completed a poll on June 10, 1955, in which 1,423 voted approval of old age and survivors insurance for dentists and only 232 were opposed. This means that 85.9 percent of the dentists in my State favor being included under social security coverage.

I understand that this unusually high percentage of support has also been reflected in other polls carried on recently, indicating that 87.8 percent of the dentists in New York and 86.5 percent of the dentists in Illinois likewise support extending OASI to members of your important profession. Other evidence that has come to my attention, both as a result of the mail I have received and on the basis of conversations I have had, convinces me that a large part of the dental profession in the United States favors being covered by old age and survivors insurance. I think they would demonstrate this in numbers in proportion to those revealed in the polls I have cited, if they were given a chance to do so in all parts of the country.

This indicates a wise choice on the part of dentists of America, for they will benefit greatly from having social-security coverage extended to them. As they undoubtedly know, being included under the old-age and survivors' insurance system will assure them that they and their families will be protected beyond the age of 65, or in the unfortunate event that the head of the family should die before he has been able to provide adequately for the family.

I believe that Representative KEAN, of New Jersey, has already given you in some detail the benefits social-security coverage would bring to your fine profession. His letter, which you called to my attention, did point out, however, that it is important that the program be extended to dentists as soon as possible. I would like to reiterate that point. As the 4 years of lowest earnings can be dropped from the calculation upon which retirement benefits are determined from the beginning date of January 1, 1951, unless the dentists are brought under social-security coverage soon, the years during which they are not covered will be counted as zero earnings and so will pull down the total upon which their average wage is based. But if legislation is passed in time to include the dental profession under old-age and survivors' insurance before April 15, 1956, they will not have to include any zero earning years when figuring their average and so will receive the maximum in benefits.

I feel that the evidence that has come to my attention indicates that the vast majority of dentists want to receive the benefits of old-age and survivors' insurance, and I surely welcome the efforts of your organization in seeking to help bring about this worthy objective. I hope that you will do everything possible to bring to the attention of the dentists of our country the importance of commencing the program during the coming year if they are to enjoy the maximum of benefits. I assure you that I intend to do everything possible in the coming session of Congress to assure that we are successful in passing legislation that will provide social security to the dentists of America and their families.

Sincerely,

HUBERT H. HUMPHREY.

Sheepmen Hard Hit by Drought

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. ALLOTT. Mr. President, I hope that my colleagues will not tire of my speaking on the subject of drought relief in Colorado. I assure them that the people of Colorado and the Great Plains States are very appreciative for the quick action which has been taken by both the 83d and 84th Congresses to expedite drought-relief and wind-erosion money.

As an example of the situation and the way it affects the farmers and ranchers, I would like to read into the Appendix of the RECORD at this time an article by Cal Queal, Denver Post staff writer, which was written at Glenwood Springs on July 21, and appears in the Denver Post. It is entitled: "Sheepmen Hard Hit by Drought." It quotes Mr. Brett Gray, who is secretary of the Colorado Wool Growers Association. Those of us who have had an opportunity to work with Mr. Gray appreciate his great ability and knowledge of the wool industry. We believe that a statement of his is certainly worthy of passing on to the Members of this Congress.

Accordingly, Mr. President, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHEEPMEN HARD HIT BY DROUGHT

(By Cal Queal)

GLENWOOD SPRINGS, July 21.—Colorado's wool clip next summer will drop 10 percent and growers will lose more than $500,000 unless the State receives general rain soon.

Brett Gray, Denver, secretary of the Colorado Wool Growers' Association, made the statement Wednesday, after woolgrowers from all over the State, in convention here, reported dangerous dryness on the ranges. In some areas the loss will be irreparable within 2 weeks and in others in about 30 days, Gray said.

TWO THOUSAND PRODUCERS

The last general rainfall came in most State areas in late May or early June, and some areas have had no moisture since March. Dangerous dryness exists in areas affecting some 2,000 producers with 800,000 sheep, Gray said.

He added that the only place in the State with adequate moisture has been a small area near Norwood.

"Winter range has been hardest hit," Gray said, "but even in the high country, parks and hillsides are turning brown."

CRAIG GRASS GONE

Around Craig, the State's biggest wool-producing area, Gray said, there is no grass whatsoever. There are an estimated 250 producers in Moffat County, with herds totaling over 100,000 sheep.

Dryness causes excessive dirt and grease in wool, Gray said. He believes the normal 50-50 wool-to-grease-and-dirt ratio may well be around 42-58 next year because of current dryness.

Hon. Lyndon Johnson, of Texas

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. BIBLE. Mr. President, I ask unanimous consent that the following editorials about our great leader be printed in the Appendix of the CONGRESSIONAL RECORD.

Also, Tris Coffin, noted Washington commentator, recently broadcast a moving tribute to Senator LYNDON B. JOHNSON, majority leader of the Senate. I ask unanimous consent that the text of this broadcast be inserted in the Appendix of the RECORD.

There being no objection, the editorials and broadcast were ordered to be printed in the RECORD, as follows:

[From the Cheyenne (Wyo.) Eagle of July 21, 1955]

BACK-BREAKING JOB

The heart attack which struck down Senator LYNDON JOHNSON, Texas Democrat, earlier this month has focused attention on what has become one of the toughest jobs in Government—that of Senate majority leader.

Outside the Presidency itself, the Senate floor leadership is perhaps the most taxing and vexing post in Washington. It is said that the job either maims men physically or kills them politically. It has done one or the other to many who have held it.

Senator JOHNSON, in the 6 months he has been majority leader, has demonstrated the rare combination of abilities needed for the job. He has made the Senate run on the track, and on time.

He has had the extremely difficult task of leading a party which had only a two-vote margin as opposition to a popular Republican President and an often uncooperative Republican minority. He reunited the members of his own party to a high degree, and he has pushed through much of the Eisenhower legislative program.

The chief ingredient to Senator JOHNSON'S success formula has been sheer hard work—12 to 15 hours a day, week in and week out.

He has not been a flashy floor leader; he has made few speeches indulged in almost no tirades. But he gets things done. He has prodded chairmen constantly to get key bills out of their committees; he has worked for days with leaders of both parties to iron out differences before they reach the floor.

The results show in the statistics of this session, compared with the 1st session of the 83d Congress in 1953.

As of June 30, the Senate Calendar—which lists all bills reported by committees but not yet acted on—contained only 19 measures. On June 30, 1953, the Senate calendar listed 135 bills for consideration.

On June 30, committees had reported 445 bills and acted on 408. At the same time a year ago, only 366 bills had been reported and 296 disposed of.

Senator JOHNSON's work has been taken over by other capable Democratic leaders, but men of good will of both political parties will hope for the speedy and complete recovery of Texas' Senator JOHNSON.

[From the Barnesville (Ohio) Enterprise of July 14, 1955]

EISENHOWER LOSES TWO GREAT CAPTAINS

In the White House only 2½ years, President Eisenhower, in this short time, has twice suffered the loss of outstanding majority leaders in the United States Senate.

First came the death of Senator Robert A. Taft on July 31, 1953, when the Eisenhower administration was only 7 months old. Last week, a heart attack removed Senator LYNDON JOHNSON, just short of 2 years after Taft's death.

The Ohio Republican lived long enough to guide the brand-new administration and set it on a course that may make an inexperienced President one of the great Presidents of all times.

The Texas Democrat maintained what Taft started despite the fact that he was the leader of the opposition party. It is fortunate that he remained at the helm until the closing days of the present session of Congress. Republicans and Democrats alike hope for his eventual recovery from the heart attack which laid him low.

No President has ever had more helpful Senate leaders than Mr. Eisenhower has had in the man he defeated for the nomination and also in the man who conceivably might have been his opponent in the next election. To each must go much of the credit for the success of the Eisenhower administration, for the President's popularity, and for the era of good feeling that has finally spread over the country.

[From the St. Louis Post-Dispatch of July 26, 1955]

ABOUT SENATOR JOHNSON

To the EDITOR OF THE POST-DISPATCH:

During this period of LYNDON'S illness, there is very little he can do other than to read some of his mail and look over a few editorials and newspaper stories. One editorial that he particularly treasures I clipped from the St. Louis Post-Dispatch shortly after it appeared on July 5.

This is difficult for a man of his vigorous temperament and it means much to have something cheerful and encouraging that I can show him. The editorial from the Post-Dispatch is one of the best things I have for that purpose—just as it is one of the finest that has ever been written about him—and I shall always be grateful to you and your wonderful newspaper.

Mrs. LYNDON B. JOHNSON.

WASHINGTON.

[From the Reno (Nev.) State Journal]

LYNDON JOHNSON, OF TEXAS

Political writers are now assessing the domestic and foreign accomplishments of the Congress which has just packed up and gone home. One aspect stands out above all others in that scene. Veteran, nonpartisan observers are unanimous in their opinion that this session was one of the most harmonious and businesslike in many years.

The facts did not bear out White House prelection predictions last fall that a Democratic-controlled Congress with a Republican President would mean a cold war between the executive and legislative departments. Instead, it was the Democrats who helped out the President's program—in many ways more than his own party, especially in foreign affairs.

One man in Congress stood head and shoulders above all others in keeping partisanship to a minimum and the country's welfare at a maximum. He was Senate Majority Leader LYNDON B. JOHNSON, of Texas, whose prodigiousness and long hours of work brought on a heart attack 1 month before the recess.

The announcement this week that Senator JOHNSON will be back as Senate majority leader in January is good news for the entire country. His stature as a legislative tactician was revealed in a quiet, efficient yet amiable manner this year as he faithfully followed what he has referred to as the role of "responsible opposition"—guiding much of President Eisenhower's program through the Senate.

Three days before he was hospitalized, it was Nevada's Senator ALAN BIBLE who paid tribute to his majority leader. He called the Senate's attention to an article praising the lanky Texan's legislative dexterity and booming him as a Democratic presidential candidate at least by 1960.

For Senator JOHNSON last January the job of trying to weld together all divergent factions of the Democratic Party into a smooth-working team appeared herculean. There were the thoughtful conservatives from the Deep South, the sprinkling of cloud-riding liberals and Oregon's unpredictable WAYNE MORSE who tipped the Senate's balance of power to the Democrats by a slim 49–47 margin.

A man with little time for windbaggery and lost causes, Senator JOHNSON put hardheaded partisanship in the back seat in comparison to the larger call of duty to his country.

The illness that removed Senator JOHNSON from the Senate for a brief period may well be a blessing in disguise. For this man, young at 46 in legislative circles, it will mean that he must delegate more responsibility to his helpers rather than burden himself with backbreaking detail. With that faculty, he may well be a force to build the Democratic Party and our two-party system of government to greater accomplishments. The country will see and hear more of JOHNSON, of Texas, in the years ahead and profit thereby.

[From the Lynchburg (Va.) News]

SENATOR JOHNSON

There will be no party lines among those who hail with gratification the news that Senator LYNDON JOHNSON, of Texas, has left the hospital and is now on the road to recovery from the illness with which he was stricken weeks ago.

Senator JOHNSON was liked and respected by his colleagues in the Senate. He has made a favorable impression upon the people of the country. As an able leader of the majority in the Senate he has served his party in a way that means service to the country. That he will probably be back in the Senate and again serving as leader is good news.

[From the Greenville (S. C.) News]

JOHNSON IS BETTER

In his first news conference since he was stricken by a heart attack some weeks ago, Senator LYNDON B. JOHNSON, of Texas, Senate majority leader, vows he will return to his key position when the Congress reconvenes in January.

We sincerely hope so, because Senator JOHNSON is an able legislative leader and one of the brightest stars in the United States senatorial firmament.

The Senator says his doctors say he will be good as new by sometime this fall, and that, too, is good news, for the Democratic Party and the country sorely need him.

It is regrettable, however, that the mere fact he has had one heart attack, however complete the doctors consider his recovery, probably has ruined forever his chances of becoming a presidential candidate.

(This editorial is composed of excerpts from an editorial by John S. Knight)

CONGRESS' RECORD GOOD DESPITE SPLIT IN RULE

Immediately after last fall's election, some prophets of despair were predicting that a stalemate Congress would result from the election of a slim majority of the party opposed to the President.

In his Editor's Notebook of November 13, John S. Knight reassured Daily News readers that split-party Government would not ruin the country.

The 84th Congress did not adopt all of President Eisenhower's recommendations, by any means, but it certainly did not, through action or inaction, seriously damage the Nation.

On the contrary, the session was, on the whole, constructive. The good feeling between the President and Congress, Democrats and Republicans alike, was remarkably high.

This was particularly true in the field of foreign affairs, where the chances of war and peace in a critical period give the subject matter overwhelming importance.

At the moment, the prospect of peace is increasingly hopeful. But this shift in affairs is due to the firmness of the Government when firmness was called for.

Congress was almost unanimous in supporting the President's request for authority to defend Formosa and the Pescadores. The Senate unhesitatingly ratified a mutual-defense treaty with the Chinese Nationalist Government.

Without this demonstration of national strength and unity, the progress recently reported from Geneva at the Big Four meeting, and dimly hoped for from the "Little Geneva" Conference now going on, would probably not have taken place.

Congress gave the President almost exactly the defense appropriations that he asked for; only slightly less than he wanted in foreign aid; and a military Reserve program much weaker than he desired to make up in part the reductions in active military manpower. Other appropriations went through about as the administration planned.

The President was able to hold the line against a strong Democratic drive for an unjustified tax cut of $20 for every personal income-tax payer.

Congress raised his proposal for a 90-cent minimum wage to $1.

It defeated his proposal for a greatly expanded Federal highway program, sure to be one of the hottest issues in the next session beginning in January.

Federal aid for school construction was shelved because southern Members feared an antisegregation rider.

A housing bill, in part unsatisfactory to the President, was enacted in the last hours of the session.

Partisanship was by no means asleep during the session. It flared up notably in the Dixon-Yates controversy, from which the city of Memphis helped Eisenhower to escape.

It was evident in the investigation of Air Secretary Talbott's private business interests. This inquiry had wholesome results and ended by increasing, rather than diminishing, the President's own stature.

Senator KEFAUVER and others count heavily on Dixon-Yates and the Talbott affairs as campaign issues next year. It would be reasonable to expect the Democratic leadership to push investigations into every ques-

tionable aspect of the administration during the next session.

That is all to the good. It is the function of an opposition party to search out the records of its opponents; the better job they do, the better for the country.

The aging Senator GEORGE, of Georgia, emerged from the session with greatly increased prestige.

So did the new Senate leader, LYNDON JOHNSON, of Texas. Neither is available to the Democratic Party as a presidential candidate, GEORGE because of his age and JOHNSON because of the illness that struck him late in the session.

Aside from these men, no Democrat or Republican in Congress achieved any notable growth in stature during the session. Senator MCCARTHY came out greatly diminished.

No Republican came up capable of taking Ike's place if he should retire. No Democrat arose who, at this writing, seems able to challenge him successfully if he runs again.

[From the Greenville (Tex.) Banner]

THE DOMINANT THREE

The AP's Washington news analyst, James Marlow, notes that while each session of Congress usually produces 1 dominant figure, in the sense of being effective or being in the spotlight, the session just concluded produced 3—count them, 3.

Two were Texans, 1 by birth, 1 by adoption. LYNDON JOHNSON is the native who by virtue of unexampled leadership—oldtimers say nothing like it had ever been seen in the Senate before—astonished the Senate itself, to quote Marlow, "with the amount of work it got done with a minimum of argument." There was no sign of a filibuster in the 84th.

SAM RAYBURN, Speaker of the House, was born in Tennessee but came to Texas as a child and became as much of a Texan as if he had helped dig the rivers and set out the mesquites. "Mr. SAM" could be called "Mr. Democrat" without doing violence to the facts, but that does not complicate the esteem and respect in which he is held by both parties.

The third dominant figure in the 84th was Georgia's 77-year-old WALTER GEORGE, a Democrat whose voice to all intents and purposes became the voice of the Republican White House in foreign affairs.

"Mr. SAM" is a bounding 73, while LYNDON JOHNSON at 47 is the youngest leader of the Senate, either minority or majority, in history. So well had he done his job that when he suffered a heart attack and had to immobilize himself, the work of the Senate went right on without a bobble.

Nobody will quarrel with Marlow's assessment of this trio's dominant role in the 84th Congress.

[From the Longview (Tex.) News-Journal]

GOOD NEWS FOR TEXANS

An unusually fine tribute was paid to an unusually able Texan in the closing hours of the Senate session when Senator STUART SYMINGTON, of Missouri, spoke in tribute to Texas' senior Senator LYNDON B. JOHNSON, who is recuperating following a heart attack.

The Senate, as well as the Nation, greatly missed the leadership of Senator JOHNSON during the closing days of the session, said Senator SYMINGTON—himself well known to the people of Longview and in other parts of Texas where he has visited a number of times in past years.

Senator SYMINGTON, a good friend of Texas and one of the most able and alert men in the United States Senate, in his address before the Senate put Texas' beloved LYNDON JOHNSON in the role of a continuing national leader. It has been many years, SYMINGTON said, since the illness of a public figure has brought such a spontaneous outpouring of anxiety from every corner of the country.

Texans everywhere, and Senator LYNDON JOHNSON himself, know our feelings, our respect and admiration for this great Texas statesman. For that reason, we want to let Senator SYMINGTON's tribute to JOHNSON get through to our people in the distinguished Missourian's own words:

"People in every walk of life and in every region have prayed for his speedy—and complete—recovery," SYMINGTON told the Senate. "Protestants, Catholics, and Jews have invoked Divine intervention in his behalf. Hard rock miners in the West and seamen on the Great Lakes, cattle ranchers and cotton pickers, steelworkers, and businessmen—all have expressed their deep concern.

"Fully as significant has been the editorial comment. Newspapers in every part of the United States and representing every shade of opinion have expressed their appreciation of his leadership and their hopes for his speedy and complete recovery.

"There appears to be one subject upon which the Dallas News and the New York Herald Tribune, the Portland Oregonian and the St. Louis Post-Dispatch, the New York Mirror, and the Washington Star, can agree. It is that LYNDON JOHNSON is one of the great statesmen of our times—a man that the country needs.

"This editorial comment speaks the heart of America. I ask unanimous consent that a compilation of editorial excerpts be included in the body of the RECORD at the conclusion of my remarks."

"Had JOHNSON been able to be up and about, attending to his duties in the Senate, these tributes in the RECORD at this season would have been voiced by Senators. Similar tributes have been voiced on several occasions before.

"The people of Texas have just cause to be proud of this great leader—this Texan who has captured the imagination of the whole Nation," said SYMINGTON. "Everbody who voted for him and everybody who voted against him—every citizen of the State—can be proud of the spontaneous tributes that have appeared from every direction.

"These are tributes to a man but they are also tributes to a policy—to a policy of responsibility which has struck a responsive chord in the breasts of all Americans.

"LYNDON JOHNSON has placed patriotism above partisanship, country above party. He has sought to reconcile differences and the objective of his reconciliation has always been to preserve the security and the prosperity of these United States.

"In this objective, he has succeeded consistently. But he has succeeded at a high price in terms of physical exhaustion.

"I think it is highly significant that LYNDON JOHNSON opposed night sessions during the last Congress but we had them anyway—and lost nine Senators. He opposed night sessions during this Congress and we did not have them—and we did not lose a single Senator.

"Every Senator who has stayed to work during the evenings this year did so knowing that he could call the office of the majority leader—no matter how late—and the majority leader would be there to answer the call.

"I was with him myself until late in the night on the Friday before he suffered his heart attack on late Saturday afternoon. I happen to know that on the preceding Thursday, he was discussing atomic energy problems with the senior Senator from Louisiana and the senior Senator from Alabama as late as 11:30 p. m.

These were not unusual nights for LYNDON JOHNSON. In fact, it was a very rare evening which found his office doors locked before 10 or 11 p. m. He applied the policy of shorter working hours to everyone except himself."

SYMINGTON added that with encouraging medical reports on JOHNSON's condition, it now appears if nothing goes wrong that JOHNSON "will be as good as new" by January. "This is good news for Texas and for the country."

"I know that all of us—on both sides of the aisle—will welcome him back as a personal friend who is close to our hearts and as one of the great leaders of our times."

[From the Eldorado (Ark.) News]

SENATOR JOHNSON'S ILLNESS

News that Senator LYNDON JOHNSON, of Texas, the Democratic majority leader, has been stricken with a heart attack and will be incapcitated for the remainder of the congressional session will be received with grave concern not only by his constituents in Texas but by the Nation as a whole.

Senator JOHNSON has demonstrated that he is a power in the Senate and the key to much constructive legislation that must or should be enacted at this session of Congress.

His illness points up the fact that men in his position are under almost unbearable pressure. In our infrequent visits to his office in Washington, we have seen him talking over two telephones at the same time while conferring with constituents and receiving reports from the Senate floor. We are not surprised that he has overdone himself.

Senator JOHNSON is a man of tremendous energy and great legislative skill. We have been impressed with his middle-of-the-road tactics and his apparent determination to keep the welfare of the Nation above partisan politics.

We wish him a speedy recovery for he will be sorely missed in the Senate.

[From the Nashville (Tenn.) Banner]

BEST WISHES, SENATOR JOHNSON

Senator LYNDON JOHNSON's serious illness is a matter of deep concern to all who know him personally, or who know him simply by name as the Senate majority leader.

An important responsibility passed to him when congressional control shifted last year to his party's hands. For the most part, he has exercised that role as a balance wheel—neither unresponsive to the dictates of conservatism as embodied by respected Southern Senators, nor amenable to the legislative demands of wild-eyed "liberals" in their partisan handiwork.

Quite a calendar of unfinished business remains at this time, with hurdles to be cleared without undue delay if Congress is to adjourn on the indicated date, July 31. The Nation is concerned about that. It looks to Senator EARLE CLEMENTS, as majority leader pro tempore, to skillfully use the reins of that driver's seat.

America's best wishes go to Senator JOHNSON for a speedy and complete recovery.

[From the Anderson (S. C.) Mail]

SENATOR JOHNSON'S ILLNESS

There have been few instances in which the illness of a United States Senator has caused so much general concern in both parties as that of Senator LYNDON JOHNSON of Texas, who is currently suffering from a severe heart attack.

As Senate Democratic leader, Mr. JOHNSON had the respect of members of both parties, although at times, of course, not all members of the opposing party saw eye to eye with him on issues.

The heart attack is listed as "moderately severe," and Mr. JOHNSON's condition as "serious." While it will prevent him from returning to the present session of Congress, it will not, we hope, terminate his legislative career.

Mr. JOHNSON is known as one of the hardest workers in Congress, and if the current session of the Legislature is operating according to schedule, it is largely due to his efforts and his example. Perhaps, too, his

strenuous activities contributed to the attack he has just suffered.

Certainly the messages of regret and encouragement now reaching him from Congressmen on both sides of the aisle tell of the widespread affection and regard in which he is held.

[From the Birmingham (Ala.) News]

PRAYER FOR LYNDON B. JOHNSON

LYNDON B. JOHNSON, of Texas, the Democratic leader in the Senate, is a popular, respected, and effective leader. While an enthusiastic Democrat, he has frequently demonstrated his capacity and will to rise above narrow partisanship. His sudden illness, resulting from a heart attack Saturday, came as a shock to his colleagues. He will be sorely missed in any absence from active Senate duty.

Yesterday Senators, Senate attachés, and gallery guests observed a minute of silent prayer for the stricken leader, after tributes had been made to him. It was an unusual, if not unprecedented, Senate scene. President Eisenhower wrote to the Senator expressing his wishes for a speedy recovery. The country joins in this sentiment.

Our people are proud to honor a leader of high caliber and anxiously hope that he will before long be restored to health and full activity.

[From the Charleston (W. Va.) Mail]

DON'T LOOK NOW, BUT THIS MIGHT BE THE SECOND ERA OF GOOD FEELING

The illness of Senator LYNDON JOHNSON and the apprehension over his absence from the Government underline a curious fact: Almost without knowing it, the United States is nearer an era of good feeling than it has been since the administration of President Monroe. And to make this even more curious, the political ingredients of this happy state are almost totally unlike those which insured Monroe his placid tenure.

In 1817, Monroe had the good fortune to preside over a nation which was almost completely united in the Republican Party of his day. In sharp contrast, President Eisenhower has the luck to inherit a two-party system which is almost evenly divided and a Congress of the opposite political faith. And yet the plain fact is that the Republican Eisenhower gets along considerably better with a Democratic Congress than Harry Truman did, and most of the efforts to engage them in a pitched battle have failed dismally.

There is dissension, of course, and strangely enough it has a consistent pattern. A Democratic minority which clusters under the banner of Americans for Democratic Action complains bitterly that the congressional majority has gone too far to the right in accommodating itself to the President's popularity. Similarly, a Republican minority can be heard objecting that the President has gone too far to the left to win Democratic support.

It is all very confusing and to the highly partisan, who like their issues drawn sharply, downright nerve-wracking. But through it all there runs a clarifying and stabilizing purpose. This is what the President means by the "middle of the road," a course so carefully and considerately mapped that all but the most rabid and discontented can travel it in reasonable comfort and convenience.

This seems to be a matter of temperament with President Eisenhower. He is the least partisan of Presidents and, despite his military background and perhaps because of it, the least belligerent. But it should not be discounted that it may be also an act of the shrewdest political insight. Perhaps when historians are as far removed from Eisenhower as we are from Monroe, it will be clear that he was the first to sense that his generation was mortally tired of war, of perpetual crisis, of the endless political wrangling and the extravagance of disagreeing simply for the sake of appearances and the most successful in making a political career out of the attempt to mediate, harmonize and compromise differences where all of his predecessors had sought to inflame them.

Certainly, and whatever the final judgment on his role in these proceedings, events have combined to bear out his trust in the power of intelligence and good faith. The Nation is prosperous. Even organized labor has admitted that it "never had it so good." The world is nearer to peace than it has been since World War II. Even the Russians feel compelled to put a new and pleasanter face on their part in world affairs. The forecasts of dark days ahead are as plentiful as ever, of course, but the remarkable thing about them is that they do not come true. And paradoxically, while there is an audible dissension, it has for its theme the fact that the politicians are not dissenting enough to satisfy the extremists.

It sums itself up in the reaction to Senator JOHNSON's heart attack. Never before, we believe, have so many people agreed that the worst thing that could happen to the President's program would be the permanent retirement of the leader of his opposition in the Senate. It is a mute and oblique testimonial to the underlying appeal of the President's search for a middle way—a way between boom and bust, between war and appeasement.

[From the Roanoke (Va.) Times]

A DOUBLE LOSS

The incapacity of Senator LYNDON JOHNSON is a grave blow to the Democratic Party in Congress and almost as serious a loss to the Eisenhower administration.

The smooth, hardworking gentleman from Texas has served both with near brilliance, and has done it without compromising himself or his party. His has been the leadership that has put the normally verbose Senate so far ahead of its usual schedule that his illness now probably will not delay adjournment beyond the early days of August. His has been the dealership that has welded the Democrats in the Senate into a presentable unity and at the same time has advanced much of the administration's vital legislation.

To accomplish all this, Mr. JOHNSON has driven himself to the point where his vigorous and youthful (he is not yet 47) physique broke under the strain. He will, with good fortune, prudence, and the approval of his constituents, live to serve more years in the Senate. But he will have to turn over the reins of his party to other hands. For the country's sake, we hope they are as able as his.

[From the Wichita Falls (Tex.) Times]

SENATOR JOHNSON'S RECOVERY

Wirephoto pictures of Senator LYNDON B. JOHNSON transmitted from Washington last weekend show Texas' senior Senator and majority leader to be slimmed down and relaxed. If it were not for the knowledge that he had suffered a severe heart attack a month ago, it would be difficult to believe anything had happened to his health.

Edward Jamieson, correspondent for the Times, wrote after visiting Senator JOHNSON in Bethesda Naval Hospital that "the Senator looks physically better today than he has for several years."

There is every assurance that JOHNSON will be able to resume his senatorial duties next January and retain the high party office he has held in the first session with such distinction.

The rapid recovery he has made is not only heartening to his fellow Senators on both sides of the aisle, but to the thousands of well-wishers all over the country from whom he has heard during his illness.

Qualifying his opinion as that of a layman, Vice President NIXON expressed the viewpoint that "there was a time when an attack like that suffered by JOHNSON would have killed a man's future career but with all of the new medical knowledge about this problem I do not believe that LYNDON need worry about his future."

It is a remarkably discerning statement and one that sums up the situation adequately.

[From the Plainview (Tex.) Herald]

NATIONAL FIGURE

Senator LYNDON JOHNSON's illness, from which he is showing a remarkable recovery, brought many minds throughout the Nation to concentrate on the Texan and his station.

Never have we seen such an outpouring of candid expression of esteem and regard for any man in politics, as those which came from many sources, even those who are in opposite political camps.

After his apparent health comeback, and his announced intention of reducing his work to normal load for a man in his station, there has been a continuation of these expressions of esteem and of gratitude on his recovery to date.

For example, the New York Times, August 10, under the heading "Senator JOHNSON's Recovery," said:

"A heartfelt sigh of relief must have gone up in many parts of the country when the word went out that Senator LYNDON B. JOHNSON, majority floor leader, had been released from the hospital and was on the road to recovery from his severe illness. We join in the hope that the recovery will be rapid and permanent.

"Senator JOHNSON was in the midst of a first-class job of legislative leadership when he was stricken on July 2. The good wishes that go out to him now are therefore more than expressions of personal sympathy. They are tied up with the desire to see our country served by men who can serve it well. Senator JOHNSON certainly belongs in that category. We are delighted that he is so much better, for his sake and for ours."

[From the Peoria (Ill.) Journal]

CONGRESS GOES HOME

The 1st session of the 84th Congress has officially concluded its meetings, and its Members are streaming away from Washington. Some have gone to their homes; others have set forth on the various missions that take Congressmen to all parts of the world during recess time.

This first session has been a peculiar sort of one. There haven't been very many like it. In the first place, it has been controlled by a party different from the one represented by the President, and that hasn't happened too frequently in the life of the country, although it is by no means unusual.

The thing which has made this session different is the amount of cooperation which has existed between the administration and the Democratic Party, which has controlled both Houses. Often very little is accomplished when the majority of Congress comes from one party and the President from another. This has not been true so far in the 84th Congress, although things may be different when it comes back in January for the second session. Then an election will be drawing nigh, and elections sometimes change things.

A contributing factor to the unanimity which has prevailed throughout the first session has been the seriousness of the world situation. It has been imperative that the United States present a united front in world affairs, and it is to the credit of the Democratic majority, as well as to President

Eisenhower, that there usually has been close unity on foreign policy.

A great deal of the credit for this must go to the leadership provided by Senator JOHNSON in the Senate and Speaker RAYBURN in the House. JOHNSON especially emerged as an outstanding leader until a heart attack incapacitated him the last few weeks of the session. If he is unable to assume direct charge of the majority next year, the effect of cooperation may be shattered.

The chief accomplishment of this Congress seems to have been in foreign affairs, just as that has been the principal forte of the Eisenhower administration. Not nearly as much progress has been made on the domestic front as in the foreign field. There has been as a matter of fact, a minimum of important domestic legislation passed.

The administration has been successful in getting some legislation passed it desired but suffered defeats on such measures as its big highway-improvement bill, housing legislation, and public-school construction.

Efforts by Congress to draft its own legislation in these fields also was less than satisfactory.

This Congress has been characterized by a paucity of investigations. One reason, of course, has been that there hasn't been as much to investigate as was the case when the Truman administration held sway.

What investigations have been held have devoted themselves to efforts to unearth campaign issues. Such matters as the Talbott case, the Dixon-Yates project, and the fiasco of the handling of polio vaccine fall in this category. It is unlikely any of them will meet the Democratic need for an election issue. More efforts along this line may be expected in the second session.

All in all, this session has been a generally satisfactory one. By its very lack of spectacularity it has been able to keep the Nation operating on an even keel. It hasn't done a great deal, but at least it hasn't done any great harm. And that is an accomplishment not to be sniffed at.

[From the Dallas (Tex.) Times Herald]

GEORGE, RAYBURN, AND JOHNSON DOMINANT IN CONGRESS

(By James Marlow)

WASHINGTON.—Every session of Congress produces at least one dominant figure, dominant in the sense of being effective or being in the spotlight. This year's session produced three dominant men who were outstandingly effective.

All three were Democrats: 77-year-old Senator WALTER GEORGE, of Georgia; 73-year-old SAM RAYBURN, of Texas, Speaker of the House; and Senator LYNDON B. JOHNSON, of Texas, 47-year-old Democratic majority leader of the Senate.

Democrat GEORGE was Republican President Eisenhower's chief reliance in Congress on foreign affairs. GEORGE is chairman of the Senate's Foreign Relations Committee.

RAN CONGRESS

JOHNSON and RAYBURN, as bosses of their respective Houses, ran Congress. They got less public attention than GEORGE but were highly effective in a far wider field than GEORGE's specialty.

They, more than anyone else in Congress, steered through to passage the year's bundle of legislation of all kinds with a minimum of fuss and feathers. This was one of the least talkative sessions of Congress.

That these three men—all quiet, undramatic, unsensational—should be the outstanding men in the Capitol in 1955 is the best evidence that this was a peaceful and businesslike year in Congress.

All three were creative in the sense that they were for something: They backed programs.

CASE OF M'CARTHY

Very often it's the men who make a record for being against something—like Senator MCCARTHY, Republican, of Wisconsin, who cheerfully attacked both the Truman and Eisenhower administrations—who can dominate in the sense that they monopolize the spotlight.

The spotlight's full glow was on MCCARTHY last year as it was ever since 1950 when he began making his charges of Communists in Government. Last year, however, he had to share the center of the stage with the two men who put the skids under him: FLANDERS, of Vermont, and WATKINS, of Utah, both Republicans.

This year MCCARTHY, FLANDERS, and WATKINS all disappeared back into the comparative obscurity from which they had emerged.

GEORGE'S INFLUENCE

GEORGE's influence and prestige on the side of Eisenhower came at a handy time for the President whose own Republican Senate leader, KNOWLAND, of California, was frequently critical of his ideas on foreign affairs.

As GEORGE, without bluster, took full control in the foreign field in the Senate, KNOWLAND had less to say and disappeared further into the background.

GEORGE went down the line for Eisenhower and at least once seemed to provide the nudge that pushed Eisenhower into action. It was GEORGE who first suggested the President meet with the Russians a few weeks before Eisenhower agreed to it.

TWO PROFESSIONALS

JOHNSON and RAYBURN are as fine a pair of professionals—in getting legislation passed or blocked—as Congress has seen in at least a generation. Both work quietly behind the scenes lining up votes and agreements.

Under JOHNSON's guidance the Senate astonished itself with the amount of work it got done with a minimum of argument.

[From the Memphis (Tenn.) Commercial Appeal]

THE RECORD OF CONGRESS

The session of Congress just ended was the first in 25 years or so in which a Republican President had to deal with a Democratic Congress. Fears of a cold war, however, did not turn out to be justified. On the contrary, there was a good deal of cooperation, especially in the field of foreign affairs.

By and large, the Eisenhower wing of the Republican Party moved into control. The prestige of the Old Guard group diminished notably. The openly professed anti-Eisenhower faction had a rough time, as witness the 77-to-4 defeat of Senator JOSEPH R. MCCARTHY's resolution to limit the President's freedom of action at Geneva.

Another noteworthy development was the skill with which the Texans, Speaker SAM RAYBURN in the House, and Majority Leader LYNDON JOHNSON in the Senate, got the Democrats to bury the hatchet and vote pretty much as a unit so often. The Democrats hail this development as a fortunate omen for 1956.

Conservative Democrats for the most part held the chairmanships of committees, and so the business of investigating dwindled somewhat and lost its sensational characteristics. Comparatively little was heard of the Red menace, though Congress did remain alert. It was a change of manner that was noticeable.

The Senate displayed strong bipartisanship in such matters as the Austrian Treaty, the Formosa resolution, the Paris pacts, and foreign aid. The Reciprocal Trade Act was extended for 3 years. Both parties strongly supported the President in what he did and said at Geneva. Outstanding in the session and as a promise for the future was the dominance of Senator WALTER GEORGE, of Georgia, in backing the administration's foreign policy.

The draft was extended and a peacetime military Reserve bill was enacted, though not just what the President wanted by any means. Congress acted in accordance with Eisenhower's request to extend corporate and excise taxes, and then went along with him in killing Democratic efforts to reduce income taxes.

The Democrats went over the President's head to increase minimum wages to a dollar an hour, as compared with his request for a boost from 75 to 90 cents. Congress hiked its own pay and that of Federal judges from $15,000 to $22,500 a year, or 50 percent. Members of the Armed Forces and a lot of other Government employees got raises.

Democrats managed to get through the House a measure to do away with flexible farm-price supports in favor of rigid 90 percent parity, but the Senate paid that no mind. The Senate also failed to act on a measure to extend social security benefits.

Congress swept under the rug for 1956 consideration what the President wanted on highways, statehood for Hawaii, postal rate increases, amendment of the Refugee Act, and a plan for health reinsurance. School construction proposals were bypassed, as were Taft-Hartley amendments and numerous other administration desires. A compromise housing bill was enacted right at the last.

On the whole, the President fared very well on foreign affairs and ran into far more difficulty in domestic matters. For all that, however, Congress did not find it expedient to be sharp with the President as an individual. In the long view, it seems fair to say that the Democrats were saving some matters that might make good issues in an election year.

The atmosphere of the session was certainly more salubrious and the people generally welcomed relative lack of name-calling and lurid political fireworks. There was a sound measure of unity and achievement, and there is a fair presumption that any lack of excitement will be made up for next year.

The thing which has made this session different is the amount of cooperation which has existed between the administration and the Democratic Party, which has controlled both Houses. Often very little is accomplished when the majority of Congress comes from one party and the President from another. This has not been true so far in the 84th Congress although things may be different when it comes back in January for the second session. Then an election will be drawing nigh and elections sometimes change things.

A contributing factor to the unanimity which has prevailed throughout the first session has been the seriousness of the world situation. It has been imperative that the United States present a united front in world affairs and it is to the credit of the Democratic majority, as well as to President Eisenhower, that their usually has been close unity on foreign policy.

A great deal of the credit for this must go to the leadership provided by Senator JOHNSON in the Senate and Speaker RAYBURN in the House. JOHNSON especially emerged as an outstanding leader until a heart attack incapacitated him the last few weeks of the session. If he is unable to assume direct charge of the majority next year the effect of cooperation may be shattered.

The chief accomplishment of this Congress seems to have been in foreign affairs, just as that has been the principal forte of the Eisenhower administration. Not nearly as much progress has been made on the domestic front as in the foreign field. There has been, as a matter of fact, a minimum of important domestic legislation passed.

The administration has been successful in getting some legislation passed it desired but suffered defeats on such measures as its big highway improvement bill, housing legislation, and public school construction.

Efforts by Congress to draft its own legislation in these fields also was less than satisfactory.

This Congress has been characterized by a paucity of investigations. One reason, of course, has been that there hasn't been as much to investigate as was the case when the Truman administration held sway.

What investigations have been held have devoted themselves to efforts to unearth campaign issues. Such matters as the Talbott case, the Dixon-Yates project, and the fiasco of the handling of polio vaccine fall in this category. It is unlikely any of them will meet the Democratic need for an election issue. More efforts along this line may be expected in the second session.

All in all, this session has been a generally satisfactory one. By its very lack of spectacularity it has been able to keep the Nation operating on an even keel. It hasn't done a great deal but at least it hasn't done any great harm. And that is an accomplishment not to be sniffed at.

[From the Fort Wayne (Ind.) Journal-Gazette]

IT WAS NO COLD WAR

The 1st session of the 84th Congress was not a stormy one.

It flowed more placidly than most.

President Eisenhower's once-expressed fear that it would be something like a cold war if the Democrats controlled it, while he, a Republican President, was in the White House, proved unfounded.

Of course, the Democrats were not rubber stamps for Ike.

They supported him when they thought he was right and opposed him when they thought he was wrong.

Some of the laws which he proposed were in line with legislation which the Democrats had supported during the administrations of Roosevelt and Truman. Other bills were not to their liking and they followed their own ideas.

Nothing vital was lost to the country as the result of the difference in political affiliations between the White House and the majority in the House and Senate.

On foreign policy, the Democrats on the whole gave the President better support than his own party. None of the Democrats took such marked issue with him as did the Knowland faction of the GOP.

The Democrats are to be commended for their refusal to play politics with foreign policy. They have tried to go along with Eisenhower in a bipartisan foreign policy.

They have recognized the constitutional authority of the President to take the initiative in matters of foreign policy. They have not obstructed for the sake of obstruction.

The Republican Party still continues to be weaker at the polls than Ike is personally.

It is now generally expected that the Democrats will win the Congress again in 1956 even if Eisenhower should run again and be elected for a second term.

One of the tragedies of the 1st session of the 84th Congress was the heart attack suffered by Senator LYNDON JOHNSON, of Texas, the Democratic leader of the Senate.

JOHNSON is an able leader and enjoys the respect of his colleagues on both sides of the aisle. He seems to be recovering as well as could be expected, but whether he will care to assume again the heavy burdens of Senate leadership is not known at this time.

JOHNSON'S job was competently filled during the last weeks of the session by Senator EARLE C. CLEMENTS, of Kentucky, Democratic whip of the Senate.

In the House, leadership was in the expert hands of Speaker SAM RAYBURN, of Texas, and majority floor leader JOHN W. MCCORMACK, of Massachusetts.

[From the Lubbock (Tex.) Avalanche]

SOME GOOD NEWS

It's good news that Senator LYNDON JOHNSON has been able to leave the hospital and return to his Washington home, following a serious heart attack on July 2. It is reassuring to the Senator's many friends and supporters in Texas to know that his next-door neighbor, Dr. O. E. Reed, describes the Senate Democratic leader as looking "better than before he had his attack."

If Senator JOHNSON carries out physician's orders to take it easy the next few months the chances are good that he'll be able not only to return to his senatorial duties in January, but, also, to resume command of the upper House majority.

Both of these probabilities are pleasant to contemplate.

RADIO BROADCAST BY TRIS COFFIN

In that greatest of all forums, the United States Senate, he stood like the captain of a good ship—calm, confident, sure of his men and his sails.

This was LYNDON JOHNSON, who—his admirers say—is the greatest Texan of them all. Young—he is but 46, tall and straight, with raven black hair turning grey, and a pleasant smile and drawl—Senator JOHNSON is a fallen warrior. He fell making democracy work, and lies like a bird with torn wings, recovering from a heart attack.

LYNDON JOHNSON was the Senate majority leader this last session. His small mahogany desk, looking absurdly like a school child's, was the focus of the Senate. Here came men of all beliefs—round-faced HARRY BYRD, as conservative as the Virginia squires he springs from; sharp-tongued WAYNE MORSE, the independent liberal from the West; solid and stubborn BILL KNOWLAND, the political heir of Robert Taft; LEVERETT SALTONSTALL, the lean Yankee aristocrat from Massachusetts.

LYNDON JOHNSON brought these men and their ideas together. That was his work and pride. He hated the noisy public fights on the Senate floor, the splitting of tempers, the ugly words spoken in anger, the endless nerve-wracking wrangling between Congress and the flat valley below. He believed democracy, as we know it, was born in compromise and works best in the easy give-and-take of friendly men. He said in his quiet drawl, "As I see it, the American people don't want anyone to rock the boat. They went to see how quietly and effectively their Government can work."

LYNDON JOHNSON broke into politics in 1937 with national headlines and interest.

This was the time the conservative wing of Congress came out of the cloakrooms, where they had grumbled in private, to do battle with Franklin Roosevelt on the floor. No one in Congress was sure where the public stood in this fight, and waited for an omen. LYNDON JOHNSON was the omen.

He won a special election for Congress in Texas over die-hard conservatives. He was the young NYA State director, an all-out Roosevelt supporter. JOHNSON rode back in triumph to Washington with President Roosevelt, who by one of those contrived chances, happened to be in the neighborhood. Mr. Roosevelt said, "LYNDON, I think you would be a good man to help out on naval affairs. Here's a telephone number. When you get to Washington, call it and ask for Tom. Tell him what we've talked about."

This "Tom" was the famed Tom Corcoran.

A few days later, freshman LYNDON JOHNSON stood in the rear of the House. One of the great elders, CARL VINSON, of Georgia, who has done more for America's armed services than any general or Secretary, came to him.

"Young man," Georgia's VINSON drawled, "I'm most indebted to you for a good dinner and an excellent conversation." The freshman looked at him in surprise. Mr. VINSON went on, "I was invited to the White House for dinner, and the President was a most delightful host. I was wondering just what he wanted from me, when he said most casually, 'CARL, there's a fine young man just come to the House, and I think he would be a real help to you on naval affairs.'"

As the two stood there, the Clerk of the House in his toneless voice announced JOHNSON'S appointment to the Naval Affairs Committee. There, the young Texan became the prize pupil of CARL VINSON. He pushed the investigations into mismanagement and corruption.

I remember LYNDON JOHNSON then. He had his office way up on the attic floor of the old House Office Building. I've climbed the stairs many a time looking for a story from LYNDON JOHNSON, the two-fisted crusader.

He held that role when he came to the Senate in 1949, to take the place of Pappy O'Daniel. LYNDON JOHNSON ran a heads-up investigation of raids on our synthetic rubber factories.

Then, a new and more mature phase began. Senator JOHNSON began to slough off the skin of a crusader, and take on the wings of a statesman. It was a metamorphosis, beginning with his election as assistant Democratic floor leader. There, he found his greatest skill was in handling men and ideas. It was the discovery of the artist in his real talent.

There was joy and satisfaction in this work, and you saw it in LYNDON JOHNSON'S face and manner, as he stood so calmly by his desk, or walked down the hall arm in arm with a fellow Senator.

At first, some of the liberals grumbled privately that he had deserted them. But he talked to them quietly, "The way to win your aims is not to divide the Senate into hard lines, and make enemies. It is by making new friends."

One of the first converts was HUBERT HUMPHREY, brilliant and a shrewd strategist; then thoughtful PAUL DOUGLAS, and even that irrepressible battler for human rights, WAYNE MORSE.

The United States Senate, under LYNDON JOHNSON'S calming hand, lacked the fire and brimstone that brought reporters pushing through the swinging doors to the gallery. But it had a new dignity and friendship and swift pace. Bills were rarely lost in committees, hidden there by the spite or bias of a tyrannical chairman. Long, ranting filibusters did not fill the midnight air with stale words. It was a house of moderation and compromise.

For that, we can thank Senator LYNDON JOHNSON, who fell—victim of a serious heart attack—from the hard discipline of leadership. The prayers of all who believe that freemen can progress without quarrels go with LYNDON JOHNSON.

This is Tris Coffin reporting from Washington.

Resolutions of the American Legion, Department of Oregon

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MORSE. Mr. President, on July 28–30, the American Legion, Department of Oregon, held its annual convention in Redmond. At that meeting the following two resolutions were adopted unanimously. Because of their general interest I submit them for the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Whereas the American Legion, Department of Oregon, has sought for some time a means for Veterans' Administration care of the chronically geriatrically ill wartime veterans; and

Whereas through Veterans' Administration usage these cases have become known to us as nursing home cases; and

Whereas central office of the Veterans' Administration has recently released 100 beds at the Veterans' Administration hospital, Vancouver, Wash., for patients needing nursing care; and

Whereas by order of central office of the Veterans' Administration, 70 percent of those beds were filled by men sent here from the State of California, leaving Oregon and Washington with a completely unsolved problem; and

Whereas the patients assigned to nursing care beds are ambulant to the extent that they take meals in the mess hall and do not require constant bed care, but actually fall in the category of domiciliary patients: now therefore, be it

Resolved by the American Legion, in national convention assembled in Miami, Fla., October 9–13, 1955, That central office of the Veterans' Administration be advised of our displeasure in their handling of the nursing care problem in the Oregon-Washington area; and our renewed plea for nursing care beds to be assigned those veterans who require constant, on-the-ward bed care, because of chronic geriatric disabilities; be it further

Resolved, That the need for domiciliary beds now appears to warrant the full use of the facilities at Camp White, Oreg., and we urge the use of those facilities for that purpose.

JOSEPH MCDONALD,
Department Adjutant.

Whereas the American Legion has always considered the disabled veteran, his care, and comfort a necessary and legitimate cost of war; and

Whereas the American Legion has always insisted that the United States of America owes its very life and existence to its veterans; and

Whereas the American Legion has always believed that part of the Nation's debt to its veterans must be paid through adequate hospitalization and domiciliary care: Now, therefore, be it

Resolved by the American Legion, in national convention assembled in Miami, Fla., October 9–13, 1955, That the policy of the American Legion as regards hospitalization and domiciliary care for American veterans be reiterated and reemphasized; be it further

Resolved, That Veterans' Administration at National and State levels be reinformed of said policy and requested to act accordingly in furnishing hospitalization and domiciliary care for the wartime veteran whose disabilities require hospital care and treatment and/or domiciliary care, and that special attention be given the problem of providing hospitalization via intermediate-type beds for those wartime veterans whose chronic or geriatric disabilities make him subject for such care.

JOSEPH MCDONALD,
Department Adjutant.

Waterline Finished by Springs

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. ALLOTT. Mr. President, I would like to call the attention of the Senate and have inserted in the Appendix of the RECORD a release which appeared in the Denver Post headlined "Waterline Finished by Springs." In the last month, we have heard and read much which I would describe as conjecture about the availability of water in the Colorado Springs' area. It is pleasing to me, therefore, to be able to insert this clipping which states that the final section of the 54-mile pipeline has been completed and that this line, which has a capacity of 18 million gallons daily, will carry that amount of additional water to Colorado Springs storage facilities on Pikes Peak.

This new line is part of the Blue River diversion project costing the city of Colorado Springs nearly $5 million, and water will be flowing through it about August 1. This is a good example of Colorado Springs' ability and determination to furnish the necessary water for continued growth and development.

I can only hope that this actual accomplishment in providing water can be as reassuring to my colleagues in the Congress as it is to me, and will allay some of the doubts and misconception which have been common on this subject recently.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WATERLINE FINISHED BY SPRINGS

COLORADO SPRINGS, July 22.—Final sections of Colorado Springs' $4.6 million 54-mile Montgomery pipeline will be completed Friday according to Chief Engineer Ray Nixon.

The line, which has a capacity of 18 million gallons daily, extends from the city's Montgomery Dam near the Continental Divide to Lake George. The line connects with a 20-mile pipeline laid last year from Lake George to Pikes Peak. The line will carry water by gravity from near the divide directly to Colorado Springs storage facilities on Pikes Peak.

First water is expected to start flowing through the line about August 1, Nixon said.

The new line is a part of the city's Blue River diversion project.

Nixon said that during the heavy runoff period diversion will exceed the line's capacity and excess will be stored in the city's $2½ million Montgomery Dam, now under construction.

Do Not Recognize Red China

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial entitled "Do Not Recognize Red China," written by Mr. Ralph E. Heinzen, editor and publisher of the Nutley Sun, Nutley, N. J.:

DO NOT RECOGNIZE RED CHINA

I was a political prisoner of Hitler's Nazis. In midwar I spent a year and a half, guarded by Himmler's Gestapo, in internment in Germany's Black Forest. I know the moral depravity of prison guards; I know the sufferings of hunger and confinement.

I, for one, will be opposed, ever, to rewarding torture and treachery with honor and decency. I refer specifically to Red China, which is trying to buy its way into the United Nations and to gain United States recognition by liberating a handful of fliers whom it held in its prisons against all of the fundamental clauses of the Geneva Convention, and whom it subjected to all of its degenerate brutalities of an inferior mind—brainwashing, torture, solitary confinement, and starvation.

It is inconsistent, to say the least, to read a front-page dispatch from Geneva reporting progress in the talks between the ambassadors of Red China and the United States and then to read in the next column a dispatch from Tokyo reciting the tortures through which our 11 captive airmen passed in two and a half years of imprisonment.

Let Col. John Knox Arnold, Jr., United States Air Force, tell you of his torture:

"I was subjected to types of torture and persuasion that civilized people do not subject other people to. I was kept in solitary confinement for two and a half years, never speaking a word to anyone. My hands were manacled so that circulation of my blood was shut off. My fingers then would be jerked by the guards, causing great pain clear up to my shoulders. My ankles and feet were tightly bound, and, so bound, I was forced once to stand for 30 hours. I was struck in the face, spat on, kicked, and beaten over the head and back with sticks."

The shame of such infamous torture must hang forever over the heads of the Chinese Communists and their regime. No American can defend inhumanities in his own heart. Only a perverted regime could build its strength on such depravity.

The story in Washington is that the United States was ready to announce bilateral talks with Communist China before Geneva, but hit a snag over terms, and so the news had to wait.

It also is reported that the Soviet officials, after the Geneva summit talks, rushed off a wire to Peking urging it to make hay with the United States while the Eisenhower sun still was shining—that the American President was in the mood for reaching terms with Communists both in Europe and in Asia, and that Peking should hurry up and free the fliers and the United States civilians.

Peking has freed 11 American fliers and is expected shortly to free the civilians, but has to have a quid pro quo for the latter in some kind of "release" of Chinese students in the United States. These are not the principal issues dividing the United States and Communist China. The ones Peking wants settled—in its favor, of course—are United States recognition, a seat in the U. N., more trade. Currently, at least, it has no chance of getting these—that is, not until

it publicly and positively renounces the use of force to achieve its goals.

I, for one, would be ashamed if my country was to extend the hand of diplomatic recognition to such an uncivilized regime. I would be ashamed if my country abandoned the Chinese Nationalists on Formosa and agreed to seat Red China among the civilized nations of this world in the United Nations. If there are Chinese students here who want to return to Communist China willingly, let them go free. I would be ashamed if my country bargained with the lives of men.

R. E. H.

Resolutions of Minnesota Federation of Post Office Clerks

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted at the 1955 convention of the Minnesota Federation of Post Office Clerks.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS ADOPTED AT THE MINNESOTA FEDERATION OF POST OFFICE CLERKS 1955 ANNUAL CONVENTION

STUDY TIME FOR POST OFFICE CLERKS

Whereas clerks in post offices must spend much of their free time studying complex distribution schemes; and

Whereas scheme study is an essential part of the work performed by distribution clerks and has been so recognized by the Government in allowing other employees credit for study time as part of their working hours; and

Whereas it is of utmost importance that a new clerk, assigned his first scheme, be taught methods of study which will enable him to attain proficiency in mail distribution; and

Whereas under the present system each new clerk must attempt to discover a method of learning complex schemes entirely on his own, which makes it very difficult for a new clerk to evolve a study plan which will expedite his learning and increase his retentiveness; and

Whereas a method designed to teach a new clerk how best to learn his first scheme will increase his confidence and add to his interest resulting in a more efficient clerk: Therefore be it

Resolved, That a program of supervised study in a study room on the premises be initiated where a new clerk can be taught for 30 minutes a day, as part of his working tour, how best to study his scheme; and be it further

Resolved, That any clerk, when studying subsequent schemes, be granted study periods of 30 consecutive minutes daily as part of his working tour; and be it further

Resolved, That a copy of this resolution be forwarded to the Postmaster General, regional and district personnel officers; and be it further

Resolved, That a copy of this resolution be sent to each member of the House and Senate Post Office Committee and to each Member of Congress from Minnesota.

POSTAL CONGRESSIONAL POLICY—CONTINUATION OF SERVICE AND PRINCIPLE

Whereas prior to 1851 the view adopted by both Congress and Postmaster Generals was that the objective of the Post Office was to balance receipts exactly with expenditures; and

Whereas this view of the Post Office as a business led to exorbitant rates and ineffectual service to our young Republic; and

Whereas in 1851 Congress adopted a new postal policy that reversed the view of self-sustainment and invoked the principle that the Post Office was a service institution just the same as other departments of the Government designed to promote the general welfare; and

Whereas the adoption of such a new policy that the paramount duty of the Post Office is to furnish the most useful facilities which can be provided at charges which lead to the widest possible use, through workers who are assured fair play and working conditions, has led to the building of one of the greatest service organizations in the world; and

Whereas because of the tremendous inflation since 1940 and the increase in costs to the Post Office of about double the cost in 1940, with little appreciable raise in postal rates, has made an increasing postal deficit; and

Whereas this increased deficit has motivated an increasing number to advocate the old view that the Post Office is a business and should be self-sustaining, which the present Postmaster General appears to champion; and

Whereas such a view has proven to be unsuccessful by prior experience, and as lacking in fundamental faith in the principles, growth, and development of this great Republic: Therefore be it

Resolved, That the MFPOC in convention assembled at Mankato, Minn., June 16–18, 1955, reassert its belief in the Post Office as a service institution, and urge the Minnesota delegation in Congress and members of the Senate and House Civil Service and Post Office Committees, that in any consideration of adjustment of postal rates and consideration of salary increase that they adhere firmly to the service principle, and oppose vigorously the policy of a self-supporting institution and the principle that the Post Office is a business.

Legislative Division, Department of the Interior

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MILLER of Nebraska. Mr. Speaker, I take this opportunity to commend the Department of the Interior and its Legislative Division for their outstanding and improved legislative service to the committee and the Congress during the session of Congress just ended.

The Department has made an invaluable contribution to our House Committee on Interior and Insular Affairs and the Congress with respect to timely submission of requested reports on legislation, making available departmental witnesses when requested, and in their continuing service in supplying needed informational background material.

A comparison of the activities of the Department in submitting reports during the 83d and 84th Congresses reveals that experience gained early in the Eisenhower administration has resulted in streamlining of this important liaison function. In the session just ended we had reecived 163 reports on pending bills against 236 requests. For the same period during the 1st session of the 83d Congress, Interior submitted reports on 90 bills against 233 requests.

I am advised that of a total of 732 such requests from all committees during the first session of the 84th Congress, Interior had submitted 489 reports, and that with cancellations deducted only 210 requests were pending at adjournment. This compares with 571 requests for the comparable period in the 82d Congress, when 235 reports were submitted and 351 were pending at adjournment. For a like period—the 1st session of the 83d Congress—630 reports were requested by all committees, 234 submitted, and 273 pending at adjournment.

An inquiry directed to the Department has revealed how these beneficial procedural changes were made possible.

I am advised that Interior, based on experience gained during the last Congress, completely revamped reporting procedures in 1954 by establishing a Legislative Division reporting directly to the Department solicitor. Prior to that, I understand, final draft reports were prepared by the several bureaus and agencies under Interior, in addition to their other day-to-day duties, and that presently reports are actually written in the Legislative Division, based on memorandum opinions from the bureaus and agencies.

This centralizing of reporting procedures, in addition to markedly speeding up elapsed time between report request and report submission, has substantially reduced the total personnel assigned to this function in the Department and has freed bureau and agency personnel to concentrate on their principal duties. Further, it has placed in the Office of the Legislative Counsel of the Legislative Division a single desk responsible for the legislative liaison function with Congress; this permits direct inquiries to one source when it is necessary to determine the status of pending requests.

In light of the foregoing, I wish to commend the Secretary and the office of the Legislative counsel and his aides in the Legislative Division of Interior for their work which has made possible improved assistance to the Congress and the committee in their functions.

Why Hells Canyon Must Be Protected

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MORSE. Mr. President, in May 1953 the St. Louis Post-Dispatch ran a

series on Hells Canyon Dam. The third article, which appeared on May 26, 1953, was practically prophetic. It therefore seems particularly pertinent to have it reproduced in the Appendix of the RECORD at this time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY HELLS CANYON MUST BE PROTECTED

Today the Post-Dispatch prints the third in a series of news articles about the controversy which has boiled up out of Hells Canyon, on the Snake River, where that deep and narrow gorge separates western Idaho from eastern Oregon.

Why so much attention to a wild, almost unpopulated region, some 1,600 miles from here?

Because every resident of the United States has a stake in what happens at Hells Canyon.

Because people in Missouri and Illinois should be no less concerned with what goes on there than the people of Idaho and Oregon.

The Hells Canyon issue could hardly be any plainer or simpler than it is:

Shall this great natural dam site be turned over to a private power company for a limited development for power production only as the Eisenhower administration now in effect proposes?

SECRETARY M'KAY'S REVERSAL

Or shall it be reserved for future maximum development by public authority, in which flood control, irrigation, and navigation possibilities are coordinated with electric power in a multiple-purpose project?

The official position of the United States Government in the Truman administration was for the maximum power, comprehensive-purpose project. Thus, in recent years, the Department of the Interior, under Oscar L. Chapman, steadfastly opposed the application of the Idaho Power Co., for authorization to build a relatively small power dam at Hells Canyon.

This official attitude has now been reversed. The Interior Department, under GOP Secretary Douglas McKay, has withdrawn its opposition to the application of the Idaho Power Co. When the hearing before the Federal Power Commission starts July 7, the conviction that Hells Canyon is a valuable spot in the Federal domain which should be protected for maximum public use will no longer be public policy.

AREA'S ALL-OVER NEEDS

There is no need to repeat all the pros and cons here. The Post-Dispatch correspondent, Richard G. Baumhoff, has assembled the arguments on the two sides with a wealth of detail.

A presentation with a thousand times as many facts would not alter the fundamentals of the case as stated in the alternatives above.

The Idaho Power Co.—which notwithstanding its name is a Maine corporation that meets in Maine annually—doubtless can begin work on its project sooner than the Federal Government could start. The private company could begin the flow of power quicker since there is no prospect that this Congress will authorize a public project at Hells Canyon. But to see Hells Canyon in terms of an immediate but restricted output of electricity and without integration with the area's over-all needs is to see the issue primarily as a private profit venture—or not to see it at all.

Muscle Shoals could have been ruined 30 years ago. Limited projects could have been installed at Grand Coulee and Bonneville. But in each instance the national interest stood out paramount and received needed and merited protection by the Federal Government.

Hells Canyon can now be spoiled for all time for maximum development. President Eisenhower's appointment of Jerome K. Kuykendall, public power opponent, to the Federal Power Commission, soon followed by Secretary McKay's withdrawal of opposition to the essentially selfish aspirations of the Idaho Power Co., suggests what is fast shaping up. The warning signals are out for all to see.

GUARDIANS OF PUBLIC INTEREST

Fortunately there are Senators today like Hill, Anderson, Magnuson, Jackson, Morse, Douglas, Fulbright, and Kefauver, and Representatives like Mrs. Pfost, of Idaho, who can be expected to fight for the protection of this great site just as the late Senators Norris, Borah, La Follette, and Walsh guarded the great power sites a generation ago. The new guardians need public interest and support in the battle over Hells Canyon, if they are to win it.

Thus far President Eisenhower has said little that is specific other than that local sentiments should be a main factor in deciding what happens in such situations. Secretary McKay publicly has done no more than withdraw opposition to the private application and to say that he favors private power over public power when it does not conflict with orderly development.

But the Secretary's own words should stir him to protect the people's heritage. Allow the Idaho Power Co. to build a limited-capacity, single-purpose project and Hells Canyon is taken out of the orderly development of the great natural resources of the Pacific Northwest, taken out for all time.

It taxes credulity to believe that Dwight D. Eisenhower, after the offshore oil giveaway, will be no more vigilant in guarding the possession of all the people at Hells Canyon.

Somewhere, sometime, the President surely must turn back on the course. He could have no better inspiration than at the wild, rolling, but fabulously beneficial and potentially productive waters of the Snake River.

Protect Hells Canyon for the future.

Parity on Farm Products

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Farmers Grain Co., of Golden Valley, N. Dak.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

FARMERS GRAIN CO.,
Golden Valley, N. Dak., July 2, 1955.
Senator WILLIAM LANGER,
Washington, D. C.:

At the annual stockholders meeting of the Farmers Grain Co., of Golden Valley, N. Dak., held on July 2, 1955, the following resolution was unanimously adopted by 167 stockholders:

"We, the stockholders of the Farmers Grain Co., of Golden Valley, N. Dak., hereby go on record that we are in favor of 100 percent parity as long as we have curtailed acreage."

LESLIE JACOBSEN,
JOHN LINDERNAUR,
Resolutions Committee.

Mr. Orme Lewis, an Outstanding Public Servant

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MILLER of Nebraska. Mr. Speaker, on July 27, 1955, I learned officially that Mr. Orme Lewis has announced his retirement as Assistant Secretary of the Interior, effective September 15, 1955.

As chairman of the House Committee on Interior and Insular Affairs during the 83d Congress, and as ranking minority member of that committee in the present Congress, it has been my honor and privilege to work closely with Orme Lewis since he was appointed Assistant Secretary for Public Land Management of the Department of the Interior by President Eisenhower on February 10, 1953.

To understand the responsibilities accompanying that office is to realize that the primary mission in public land management is the conservation of human and natural resources. The broad scope of the responsibilities is best understood by specific reference to the functions of Interior through its Assistant Secretary of Public Land Management.

Five important bureaus come under the jurisdiction of the office headed by Mr. Lewis. He has, during the past 30 months, directed the activities of those 5 key offices and, in a sense, has thus headed up a corporation employing more than 27,000 persons.

PUBLIC LANDS MANAGEMENT

As a lifetime resident of Arizona and one of the State's outstanding lawyers, Mr. Lewis was able to bring to Washington a broad understanding of some of the problems raised by reason of Federal land ownership, which in his own State of Arizona amounts to more than 30 percent of the total land area.

The Bureau of Land Management has under its exclusive jurisdiction nearly 470 million acres in the continental United States and Alaska. In the conservation of natural resources, Mr. Lewis has encouraged and directed actions which will result in lasting benefit to our Nation.

A program of multiple use and protection of the public lands initiated by the Congress during his tenure will end many of the legalized abuses which marked the past administration of public lands and national forests.

A revised Federal range code containing regulations for administration of Taylor grazing districts has been developed and is now awaiting approval of the Secretary of the Interior.

A 20-year program of soil and moisture conservation was instituted last year and will provide the Department, for the first time, with the weapons to make headway against the forces of erosion and forage depletion which have been wasting vast areas of the public range, Indian reser-

vations, and other lands administered by Interior.

Under his direction, the Department has had under continuing study, with resulting modification of regulations, a program to assure compliance with the intent of Congress in amending the legislation providing for small tracts entry on the public domain and, similarly, regulations have been developed to end abuses under Federal statutes providing for issuance of prospecting oil and gas permits and leases.

INDIAN AFFAIRS

As a resident of a State containing nearly one-fifth of the Indian population of the United States, and intimately acquainted with the Federal-State-local Indian relationship, Mr. Lewis brought to the Department a perspective which assured a sound, sensible, and humane approach in the field of Indian affairs administration.

During his tenure, legislation has been enacted, appropriations obtained, and regulations put into effect to provide, through an emergency program for Navaho education, an educational opportunity for each Navaho boy and girl by September 1955. Programs were initiated for improving the health of the Indian people under administration by the United States Public Health Service and to provide machinery under which enlightened and self-sufficient Indian tribes and individuals will have the opportunity to terminate their dependency upon the Federal Government.

Through his contribution, a substantial portion of the more than 56 million acres of Indian tribal and trust land holdings will receive the benefits of improved intensive long-range resource management, development, and utilization measures.

NATIONAL PARK SERVICE

The fact that his native State of Arizonia is second in the Nation in total land area set aside to provide the recreational, scenic, and historic values made available through the National Park Service, particularly qualified Orme Lewis for this administrative responsibility.

His administrative direction of the National Park Service has resulted in expansion of the physical boundaries within the park system and the integrity of that system has been protected and strengthened by numerous actions rejecting proposals not in keeping with the system's high purpose. That the long cycle of neglect of the parks has been turned into one of improvement is best indicated by the 40-percent increase in Park Service appropriations for the current year and the expansion of the ranger force to its greatest strength in park history.

While his retirement precedes the finalizing of the program, much of the impetus behind the "mission 66" legislative program proposed to be transmitted to the Congress during this adjournment comes as a result of his energetic and active role in its development. "Mission 66," anticipating accomplishment by 1966—the 50th anniversary of the establishment of the National Park Service—if enacted into law, would assure a 10-year intensified program of development of facilities for areas within the national park system, provide for employee housing, roads and trails development, campground expansion, acquisition of non-Federal lands within the exterior boundaries of the system, improvement of such utilities as water and sewerage and related matters.

FISH AND WILDLIFE SERVICE

Under his direction, the Fish and Wildlife Service has carried out vigorous programs designed to expand and improve wildlife refuges which, with other steps taken, has resulted in placing the Fish and Wildlife Service in its strongest position in history to carry out the important program entrusted to it. The Service has been greatly strengthened for meeting its responsibilities in the field of commercial fishing by the enactment of the Saltonstall-Kennedy Act and appointment of an American Fisheries Advisory Committee.

OFFICE OF TERRITORIES

The Department has under its jurisdiction American Samoa, the Virgin Islands, Puerto Rico, Guam, and the trust territory of the Pacific, in addition to Hawaii and Alaska. Exclusive of Alaska, this means that there are under Interior's jurisdiction—if the atolls and separate islands constituting the trust territory are broken down into single units—2,161 islands in the Pacific and Caribbean. One hundred and seventeen of these are inhabited, with a total population in excess of 3.3 million.

In the field of Territorial affairs, a notable achievement was the revision of the Organic Act of the Virgin Islands. This act conferred a greater degree of self-government on the local inhabitants and will place the island government on a sound and economical footing. In Puerto Rico, a long-overdue liquidation of the Puerto Rico reconstruction administration was successfully accomplished to the mutual satisfaction of the commonwealth government and the citizens most closely involved in its operations. In Alaska, the Alaska Railroad, historically a deficit operation of the Federal Government, through injection of leadership from private industry, found itself operating in the black for the first time. Numerous administrative actions and individual legislative measures providing for industrial, commercial, and agricultural development of Alaska have received favorable action during the tenure of Mr. Lewis.

Hawaii, by securing congressional approval of several measures involving territorial land use, has been assured fuller development of its agricultural industry and one of its major commercial attractions—tourism.

Finally, with respect to the Trust Territory of the Pacific, the Office of Territories, under the direction of Secretary Lewis, has made substantial progress in continuing the development of proposed legislation which would create an organic act for this vast land and water area in the Pacific, and in the implementation of the obligations of the United Nations Trusteeship Council. Matters affecting the government and administration of American Samoa and Guam, key outposts of the United States in the Pacific, have assured more orderly development and administration of the human and natural resources of those areas.

The foregoing is devoted almost exclusively to the ability of Mr. Lewis in matters of administration and leadership in one of the most complex functions of our Federal system.

DEVOTION TO DUTY

There is another aspect deserving comment, involving his intense and continued devotion to duty.

Through frequent personal contacts with Mr. Lewis in his official capacity, I, with my fellow committee members, have found him an outstanding example of a highly qualified and dedicated public servant.

In his appearances before our committee, his frankness, candor, his obvious interest in, and full comprehension of, the matters under discussion have been notable. In his presentation and under direct detailed examination by committee members, he demonstrated a knowledge of the subjects under discussion which could only have resulted from a precise, logical, and workmanlike advance study. Perhaps the true mark of his stature as a lawyer and in his official capacity is his ability to say, "I do not know," or "That is one of the aspects of this problem with which I am not familiar," when a question is put to him. As rarely as this happened, his immediate willingness to candidly and honestly so reply was a refreshing departure from a different approach too often employed by our public servants.

He will return to Arizona to resume his law practice, and in so doing I trust that he carries with him a conviction that his has been an outstanding contribution to the welfare of the Nation. I cannot believe that it will mark the end of his public-service contribution. Demands will always be made for the type of leadership and service in the public interest which Orme Lewis has so ably demonstrated his ability to contribute. I wish for him and his fine family continued successes and happiness for the future and congratulate the State of Arizona on recapturing one of its most outstanding citizens.

Peterson Chosen as Morrow Conservationist for 1955

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. NEUBERGER. Mr. President, Oregon farmers are very serious about this business of conservation. Conservation becomes more and more a way of life on Oregon farms; 4–H Clubs, juvenile granges, and scout troops, put into practice the principles of sound conservation as part of their excellent programs. As adults they compete now for honors as

practicing exponents of conservation, and in nearly every county annually a farmer is celebrated as the "conservation man of the year."

The following selection, Mr. President, was recounted in the Pendleton East Oregonian and describes the splendid accomplishments of Donald E. Peterson, of Ione, Oreg., award winner in Morrow County for 1955.

I ask unanimous consent, Mr. President, to have it included in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PETERSON CHOSEN AS MORROW CONSERVATIONIST FOR 1955

HEPPNER.—Farm operations packed with a variety of conservation practices have won Donald E. Peterson, Ione, the Morrow County Conservation Man of the Year award for 1955 on his 1,073-acre ranch located in the Eightmile section.

A successful stubble mulch program not common in his area, deep furrow seeding and farming on the contour are among the major conservation practices followed by Peterson who is applying more conservation methods to solve his problems than any other rancher considered in the contest, committee members pointed out.

Other practices followed by Peterson on 873 acres of wheat land, divided almost equally in wheat and summer fallow, and 200 acres of range land include sodded waterways to carry water safely from the fields and seeding of steep land and diverted wheat acres to grass and alfalfa on a rotation basis to develop organic material in a long range wheat-summer fallow program.

In his stubble mulch program a stubble cutter, a subsurface tillage plow, rod weeder, and deep furrow drills complete his equipment. Timeliness of operation have been his key to success in eliminating the cheatgrass problem.

Two ponds have been constructed in a canyon on a corner of his place for livestock water and irrigation.

Credit was given Peterson for participation in new experiments including one of the county's five grazing alfalfa demonstrations sponsored by the Morrow County Livestock Growers Association. Fifty acres are divided equally to Nomad, Rhizoma, Ladak, and Sevelra alfalfas seeded in alternate rows with crested wheatgrass. An additional 25 acres of grass and alfalfa are seeded on steep ground.

For protection and beauty a windbreak planting extending about 1,800 feet from the highway to Peterson's home, a 150- by 200-foot wheat fertilizer trial plot and grass nursery are State extension service demonstrations incorporated on the ranch.

Also new in the area, Peterson has sown Stewart and Carleton oats, from which he sold seed last year, and 20 acres of safflower, new to Morrow County, on diverted land. In cooperation with the State game commission he has three-fourths of a mile of border shrub and tree plantings covering about 5 acres for game protection.

Peterson pointed out that stubble mulching was pioneered in the Eightmile area and practiced about 15 years by his father, Oscar Peterson, from whom he is buying his ranch on a sales agreement. Peterson harvested his first crop in 1950.

With his father and brother, Gerald, Peterson has a partnership in a commercial Hereford herd of about 100 cows, which they winter on their ranches and summer on a 2,000-acre mountain ranch in the south of the county. Grass and alfalfa plantings on diverted acres and steep land are utilized with the cattle operation.

Peterson, who is married and has a son, Kerry, 5, and daughter, Kris, 3, studied agricultural engineering at Oregon State College following service in the Seabees in the South Pacific from 1943 to 1946.

Active in county and community affairs, Peterson is vice chairman of the Heppner Soil Conservation District, vice chairman of the production land use committee of the Wheat League, past commander of the Ione American Legion and is a member of the Ione Willows Grange, Morrow County Cattle Growers Association, the Valby Lutheran Church, and the Elks.

For assistance with his conservation program, Peterson gave recognition to his father, the county agent and the Heppner Soil Conservation District.

Competing with Fred Mankin, Heppner, and Norman and Fred Nelson, Lexington, local winners picked by granges, Peterson's selection was made by Frank Anderson, chairman of the conservation committee of the Morrow County Wheat Growers Association and Charles Carlson, advisory member of the Heppner Conservation District. N. C. Anderson, county agent, was an advisory member.

Lessons for the President

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the St. Louis Post-Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LESSONS FOR THE PRESIDENT

Dixon-Yates and Talbott cases raise question of what Mr. Eisenhower is learning about public office, writer says; states that administration's "cloud of moral superiority" screens doctored records and manipulations behind President's back.

T. R. B. IN THE NEW REPUBLIC

Anyone who will compare what Ike was telling the press about Dixon-Yates and what was actually happening will conclude that this is the first clear-cut example in this administration of what everybody feared—an amiable, attractive President being kept ignorant on a big matter by those around him. The Dixon-Yates story is important, really, from that aspect.

Last year on August 17, for example, Ike told the press with weary patience that they could get the "complete record" from the Budget Bureau and Atomic Energy Commission. "It is all yours," he said.

Instead, these agencies are now seen to have held back crucial facts—facts which make it appear more and more as though this were a grandiose Wall Street scheme to wreck not merely TVA but the whole public-resource-development program. On June 29 of this year Ike again told the press that the banker-business man Adolphe Wenzell "was never called in or asked a single thing about the Dixon-Yates contract." This was untrue: Ike didn't know it, but the manipulation was going on behind his back.

In a third instance Ike told the press, with restrained irritation, that it would get "every single document that was pertinent to this thing." But now it is disclosed Ike's subordinates put out a fatally incomplete and doctored record.

At a later press conference, July 27, Ike, his face furiously pink, flared up. Pressed by reporters on inconsistencies he angrily declared, "I don't intend to comment on any more at all. * * * I don't know exactly such details as that. How can I be expected to know? I never heard of it."

So there it is. Ike "never heard of it."

In summary the President—a high-minded, well-meaning ex-soldier heartily dislikes public ownership and has surrounded himself with wealthy businessmen-bankers who share his views. They know he will approve their general, idealized objectives, and they keep details of their little tricks to themselves. They operate in a cloud of moral superiority.

This is a situation made to order for skulduggery. The Dixon-Yates contract is now canceled, but Senator KEFAUVER is only just bringing out the bigger story of what really happened and what was involved. The observer keeps asking himself: Can Ike learn from this experience?

Can Ike learn from the Talbott affair? What startled Washington politicians, Democrats and Republicans alike, was the delay in Talbott's resignation. But is not that only natural in an administration which regards its every act as automatically virtuous?

Politicians know what can, and cannot, be done in public life. Businessmen like Talbott take a long time catching on. Talbott is the bridge-playing friend of Ike, who helped run GOP fund-raising drives for Dewey and then Eisenhower. Again one asks, Can Ike learn? What went through his mind as he read the Talbott record on his Gettysburg farm?

There was another great general who became President once; he is buried on Riverside Drive and his motives, too, were honorable.

Responsible and Constructive Opposition

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. REUSS. Mr. Speaker, the record of this Congress has given America good government, and the prediction of a "cold war of partisanship" between Congress and the White House has failed to materialize. There is still much important work remaining for the next session—aid for highways and school construction are two big musts for 1956—but the accomplishments so far are impressive. Below are listed my stand on key issues before this Congress:

Voted for extension of selective service and strengthening Reserves; stepped up production of jet bombers and fighter planes; special funds to prevent 22,000-man cut in Marine Corps; mutual-security program to strengthen free world defenses; resolution calling for United States aid to defense of Formosa; resolution opposing admission of Red China into U. N.; 3-year extension of reciprocal trade agreements program; Government Reorganization Act of 1955; salary revisions for Federal employees, judges, and officials; code of fair practices for congressional committees; improvements in Federal employees' retirement system; aids to absentee voting for GI's and Government workers; railroad re-

tirement system improvements; plugging loopholes in 1954 tax law; increase in minimum wage from 75 cents to $1 per hour; increased penalties for violations of antimonopoly laws; continued renegotiation of Government contracts to eliminate excess profits; bill to provide United States currency with inscription "In God We Trust"; continued accumulation of GI school benefits by servicemen; incentive pay increases and allowances for the Armed Forces; extension of VA direct-loan program; greater control over commodity speculation and manipulation; assistance to States for Salk polio-vaccine program; increased authority for FHA home mortgages; surplus Government material for schools and civil defense; increased penalties for narcotic violations; prohibition on use of mails to transport obscene literature; aid to States for airport construction; and life of Small Business Administration extension.

Voted against exemption of natural gas producers from regulations and the Chicago "water steal" from Lake Michigan.

Unfinished business: The Senate has still to pass legislation, which I voted for in the House, to broaden social security and to provide income tax reductions for low- and middle-income families. The urgently needed highway bill, for which I voted, needs action at the next session. So does other legislation which I favor, but which never reached the floor, such as a liberalized immigration law, aid for school construction, statehood for Hawaii and Alaska, home rule for the District of Columbia, and a new veterans' hospital at Wood.

It Would Be Tragic if the Geneva Conference Caused Us To Slacken Our Information and Cultural Offensive—A Federal Advisory Committee on Cultural Interchange Needed

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, the president of the Advertising Council, a nonprofit organization representing all phases of advertising and dedicated to the uses of advertising in the public service, recently returned to this country after a 6-month study of United States information and propaganda methods in the Orient, the Near East, and Europe under the auspices of the Eisenhower exchange fellowships. The head of this great organization, Mr. Theodore S. Repplier, is the first nongovernment American to study our information activities abroad.

Mr. Repplier has written me in part as follows:

I can testify from firsthand experience that sending samples of American culture abroad, from art shows to symphony orchestras to trade fairs, is a tested way to explode the damaging myth that Americans are cultureless dollar chasers. Often one American exhibit or performance can create a favorable impression that has lasting weight.

I heartily concur also with your view that an advisory committee could be helpful in counseling on this cultural offensive, although I am sure there are people better qualified to serve than I.

It seems to me important that there be wider recognition of the all-important fact that the more the danger of atomic warfare recedes, the more certainty there is that the ultimate outcome of the struggle between the Communist and free worlds will be decided by ideas and ideas alone.

It seems to me that victory is increasingly likely to go to the side which most successfully projects its ideas and ideals to the rest of the world. It would be tragic if the Geneva Conference caused us to slacken our information and cultural offensive just when it is beginning to hit its stride.

Thank you so very much for your attention to my earlier remarks. And congratulations on your grasp of a subject the importance of which is so often underrated.

In a brilliant speech at the Hotel Pierre, New York City, on June 30, 1955, at a meeting of the Advertising Council's board of directors and guests, Mr. Repplier reported on his study of our information methods abroad. He said our propaganda offensive needs to sharpen its ideas. Also, we need to draw into our propaganda program more of the skills and talents of America. Mr. Repplier is convinced that no group of professional propagandists, however able, can project a true image of the country, at an art exhibit, a trade fair, or anywhere else. "In America we have private organizations—from the Philadelphia Symphony to the Advertising Council—whose weight must be added to the idea war," he declared.

We can win the cold war but we cannot win it in a walk. It is time we started running. Mr. Repplier pointed out in his speech that—

The idea war needs more firepower. We are terribly outgunned. We now spend less than two-tenths of 1 percent of our military budget on propaganda. How can we possibly expect that truth can triumph over falsehood with that sort of niggardliness? The propaganda appropriation should be greatly increased.

Mr. Repplier is not alone in making these recommendations. A firm and open decision "to win the cold war," as the "surest way to prevent a hot war," was urged upon our Government by Brig. Gen. David Sarnoff, chairman of the board of the Radio Corporation of America, in a memorandum presented to the White House on April 5, 1955. Pointing out that the Kremlin's fixed goal is world dominion by means short of an all-out war, General Sarnoff declared:

Logically we have no alternative but to acknowledge the reality of the cold war and proceed to turn Moscow's favorite weapons against world communism. Our political counterstrategy has to be as massive, as intensive, as flexible as the enemy's.

The question, in truth, is no longer whether we should engage in the cold war. The Soviet drive is forcing us to take countermeasures in any case. The question, rather, is whether we should undertake it with a clear-headed determination to use all means deemed essential, by governments and by private groups, to win the contest.

General Sarnoff's memorandum entitled "Program for a Political Offensive Against World Communism," grew out of his discussion of the subject with President Eisenhower in Washington on the morning of March 15, and announced at the time by James Hagerty, White House press secretary.

The same afternoon, at the President's request, General Sarnoff conferred with Nelson Rockefeller, Special Assistant to the President on psychological warfare, and officials from the United States Information Agency and the Central Intelligence Agency. At the end of the meeting he undertook to submit his views on the subject and a suggested program of action.

The result was his memorandum, in which he emphasized that—

We must go from defense to attack in meeting the political, ideological, subversive challenge. The problem—

He said—

is one of attaining the requisite magnitude, financing, coordination, and continuity of action. The expanded offensive with nonmilitary means must be imbued with a new awareness of the great goal and a robust will to reach it.

General Sarnoff urged the establishment of a Strategy Board for Political Defense, the cold war equivalent of the Joint Chiefs of Staff on the military side. As to financing such a strategy board, the general recalled that appropriations over the past 4 years for our military defense averaged approximately $45 billion annually. In contrast, he noted, it is significant to note that for the fiscal year 1955 the total appropriation for the United States Information Agency was $79 million, of which $17 million is available for the worldwide activities of the Voice of America.

As a working hypothesis General Sarnoff suggested that a specific and more realistic ration between military and nonmilitary appropriations be worked out: say an amount equivalent to 5 or 7½ percent of military-defense appropriations to be granted to the Strategy Board for Political Defense—this, of course, without reducing the military budget and not counting foreign military aid and point 4 types of expenditure. General Sarnoff made this further point:

I am convinced that if the American people and their Congress are made fully aware of the menace we face, of the urgent need for meeting it, and the possibility of doing so by means short of war, they will respond willingly as they have always done in times of national crisis. They will realize that no investment to win the cold war is exorbitant when measured against the costs of the bombing war we seek to head off.

In a historic speech at the National Press Club here in Washington, D. C., on February 26, 1955, William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, said that our reliance upon armed strength is permitting communism to take long strides forward in those fields which we have largely neglected. He pointed out that in Russia and the satellite countries "sports, ballet, the theater, literature—all are shaped toward aiding communism's long-range scheme of world domination. Top artists know they are not only expected

to perform, but to give their services at clinics where the plastic minds of youthful visitors can be influenced."

Like General Sarnoff and Theodore S. Repplier, Mr. Hearst advocated the establishment of a permanent planning board commissioned to formulate a strategy on all fronts for meeting the challenge of competitive coexistence. This board should be, he said, scrupulously nonpartisan. It should be culled from the finest minds and talents available, both in public and private life. He said on this that—

It should survey the whole global scene and develop plans for getting the peoples of the world on our side. Sports, the theater, educational exchanges—no field should be neglected in this competition of the two conflicting systems.

Who can doubt that America would emerge on top in any such competition?

My suggestion is not blueprinted. It may even be a little vague. But formulating and implementing it would be the job of the planning group of men and women, each devoting time and energy to developing an overall American strategy in those nonmilitary fields for 1955—and for the next generation.

We have a National Security Council. I would like to see a national competitive coexistence council to combat communism.

One side or the other is going to win the battle of competitive coexistence.

It had better be our side.

Everyone and everything we love and cherish is at stake.

There is, of course, deep and profound concern in the Congress with cold war strategy. Senator LYNDON B. JOHNSON of Texas has called for the "greatest political offensive in history to win the cold war" and Senator ALEXANDER WILEY, ranking minority member of the Senate Foreign Relations Committee, speaking at the Wayne University student forum, has called for all-out support of the proposals before the 84th Congress for the establishment of a program of cultural interchange with foreign countries to meet the challenge of competitive coexistence with communism. Hearings have been held on H. R. 6874 and a number of related bills which would make such a program a permanent part of the armament of our country in this cold war period and action is expected on them early in the second session of this Congress.

The Congress recently appropriated $5 million to continue the President's emergency fund for participation in international affairs. With funds supplied by this fund the United States is fighting the cold war on two new fronts. Both are important and on both the Communists have a head start on us. Under the program the United States has participated in 15 trade fairs during the current year, and more than 23 cultural projects have been undertaken. Among the most successful of the cultural programs sent abroad under the fund are Porgy and Bess, which toured Europe, and the symphony of the air which was a smash hit in Asia. In the sports field, the program includes tours by star athletes who have been sent abroad by the State Department in cooperation with the Amateur Athletic Union. Trade fairs and cultural activities are areas of the cold war which the United States cannot neglect any longer.

Communist goods exhibited at trade fairs have often been of inferior quality—but how are other peoples to know that if there are no United States exhibits to make the contrast clear? In the absence of first-rate American participation, the Communists have been winning by default.

In the cultural field it is, again, only a question of giving other peoples an opportunity to see, listen, and judge. Here, again, we have the goods. The best rebuttal of Communist charges that Americans are uncultured, crass, material-minded barbarians, a favorite Communist propaganda line, is to present our country's cultural programs abroad. For years the Communists have tried to present themselves as devoted to the arts, to the better things of life. For years troupes of artists from the U. S. S. R., and more recently from Communist China, have been sent abroad by their governments to make friends and influence people for communism. That the Russian ballet, admittedly among the best in the world, has its roots in Czarist Russia is ignored. The ballet is Communist, they say. It is a potent argument for the Marxian line. Music, art, sports—all are grist for the Communist mills. They exploit their artists and sportsmen as they exploit everything else, and they have been doing it effectively, make no mistake about that.

In his testimony before the Subcommittee on State, Justice, Judiciary, and related agencies of the Committee on Appropriations of the House of Representatives Frank Coniff of the Hearst newspapers had this to say in support of the activities being carried on under the President's emergency fund for participation in international affairs:

Mr. ROONEY. Now, Mr. Coniff, we shall be very glad to hear from you.

STATEMENT OF FRANK CONIFF

Mr. CONIFF. Thank you, Congressman ROONEY, for the opportunity to be here. I am sorry Mr. Hearst himself is not here. I talked to him yesterday. He is on a business trip through Europe, and he said he would certainly be here if his schedule had permitted.

I have here a report on Russia which I would like to have inserted in the RECORD. These are a series of articles which appeared in our newspapers several months ago.

Mr. ROONEY. If you have sufficient copies and will leave them here, we shall see that each member of the committee gets one. It costs a lot of money to print these, but each member will have an opportunity to read it.

Mr. CONIFF. This booklet is interesting in view of the fact it was written mostly in the week of February 13, which was 5 days after the Malenkov upheaval in Russia, and I think it accurately forecasts the shift in Russian tactics we have encountered in recent months. We were there at the time the new shift was heralded, when Malenkov stepped down, and Mr. Khrushchev became the chief power in Russia.

While we were there we gained the impression that our policy of building armed strength had proven a detriment to Russia in any thoughts Russia might have of precipitating a third world war as a means of gaining its end. Anything I say is predicated on the belief we should continue to build our strength and continue to build our technical proficiency to the extent they will exceed anything Russia can bring against us.

However, as Mr. Hearst says in this booklet—and again I say this was written at a time when alarmist reports filled most of the air and the press in the wake of the disturbance in Russia so that even at the time we were writing this we wondered if we were right, and we are gratified we did not give anyone a wrong steer—Mr. Hearst says on page 46:

"The Soviet Union can't stand a war with the West within the foreseeable future, and therefore won't start one. I have further predicted that Russia's realistic rulers will exert a cooling influence to keep the Chinese teapot from boiling over."

This was at the time of the Tachen evacuation, when it looked like war would break out at any moment. [Continuing reading:]

" 'We're glad the fire in Korea was put out,' Khrushchev told us. 'We don't want to see another one start up.' "

Mr. Hearst writes:

"The democracies won't start a war with the Soviet Union because it is against the very nature of democracy to launch an aggressive war.

"The only spark that might touch off an atomic showdown, as I have repeatedly stated, would be the failure of the West to keep up its guard and encourage the Kremlin to think we were weak and defenseless."

Then Mr. Hearst writes—and I think it gets to the core of what you gentlemen are considering here:

"If I am right in thinking that war is no solution to the current struggle, and that Russia will not pull the trigger for varying reasons, then we pass into the much more difficult battleground of peace.

"The West is well equipped in any trial at arms. But are we prepared practically and philosophically to surpass communism in the thornier problems of peace?"

It was a strange impression to gather in Russia that these leaders who were talking so belligerently on the floor of the Supreme Soviet were so anxious to convey the impression back here that they were not going to start a war, but we did gain the impression that they had the idea that in the coming years they could so manipulate events that they would gain an edge on us in this cold war, which I think is now more a soft war. A cold war is a form of a hot war, and this soft war will be another form of a hard war, a hard war by another means, so to speak.

In accordance to their own theory, the Russians seem to feel that every form of endeavor is subject to the ideological struggle, and a thing like sports and the theater and an avenue like literature are weapons to the Russians in this struggle with us.

If there was any one frightening thing to us in talking to these Russian leaders, it was their belief that in coming years communism would gain the upper hand. Khrushchev said to us in so many words that communism would gain the upper hand in the long run. That is quite jarring to Americans and leads to the conclusion that it is up to us to devise a strategy to help in preparing America for this conflict that the Russians do not think we have a chance of winning. They think we are going to ignore most of these fields and leave them open to the Russians and to Communist infiltration and Communist propaganda, and that in our concentration on material things we will ignore these things of the spirit.

They have taken such a subject as sports and they are taking dead aim on the Olympics next year as a source of great prestige for the Communist idea. We have enjoyed the fact that America has dominated the Olympic games for some time. They hope to appeal to the youth of the world with their athletes who, in 1956, and certainly in 1960, will pose a serious threat to our superiority.

In the other fields, in the theater and in literature, they are also using their own artists and their own performers as agents of Communist imperialism. They do it very subtly. The artists know they are subject to the State and must carry out their dictates.

It is the impression of Mr. Hearst and Mr. Kingsbury Smith and myself that our American artists can help also in winning opinion among our allies, among the uncommitted nations, and even back of the Iron Curtain we can do a lot to dispel the thought that America is concerned only with material things. Some headway has already been made in that.

It is our belief, after seeing and talking to the Russians and seeing what they have in the limited scope of our trip, that America has so much to offer, so many fine things to be seen, and so many more decent and good things to show, that we must bring them to bear in whatever way we can in this struggle, which, of course, we think will continue within our time and certainly within the foreseeable future.

I hesitate to inflict an opinion on the committee because the operations of Congress are not exactly my purview, but I do think that some start has to be made, and in saying this I echo the opinion of Mr. Hearst. Some start has to be made first in comprehending the phase of communism we are now entering, and secondly, in fashioning the weapons that will aid us in winning this struggle.

Mr. Hearst said at the National Press Club, and has repeated in numerous statements, the belief that one side or the other one will prevail. We are in agreement with Mr. Khrushchev on that, that the second half of this century will determine which way of life will gain the upperhand, and our observations—Mr. Hearst's, Mr. Smith's, and my own—have seen our country emerge into world leadership whether it asked for it or not, and we have seen it acquit itself of this responsibility in a way which I believe no previous recorded history presents any example quite as fine or as magnificent.

If I may use Mr. Hearst's words in approaching this subject, he said we of this generation can see very clearly that perhaps we are not in immediate danger, for strategic reasons we feel our generation will survive any attempt to overthrow it, but he says we have to think of the future years, of our children and the kind of world they will live in, and therefore it becomes necessary to organize the planning and the thinking that will enable us to emerge victorious in this struggle.

It is fundamental with Mr. Hearst and with our appreciation of what is going on in the world that the struggle with communism will last a long time, that these complacent interludes are more difficult to understand and to win than the sheer showdown of a shooting war or of a tense period in international relations. He wrote in February that the cold war—and we were using the term at the time—that the cold war is going to be much more subtle than it was under Stalin. Of course at that time we had no means of knowing that the moves of the Russians were then in progress, the Austrian settlement and the overtures to West Germany and things like that. So it will be more subtle and more difficult to understand, and in passing I might say that the Communists by their own theory will make any move and condone any move if it helps them in their struggle. For instance, Khrushchev and Bulganin went to Belgrade recently in a mood that might be interpreted as an apology, with hat in hand, but it was not an apology and Tito understood it was a shift and a tactical move.

We say in here—again pointing out it was written in February when much alarmist talk filled the air—we say Russia wants peace because it needs peace. It is not equipped for a showdown with us at this time on a shooting basis so they are bargaining for time. If there is a part of this booklet we are proud of it is chapter 3, dealing with Russia's weaknesses. Communism in Russia, as we saw it, is under great stresses. They have many conflicts that might well be insoluble. They have problems which, even without a cold war, would still remain, and they are having terrible trouble in solving them.

I do not want to take too much of your time, but this is all a prelude to our thinking that a good deal of planning for the coming phase of what we call competitive coexistence is needed. If there is some money available that will aid us in this year of 1955 to accurately anticipate Russian moves, that will bring us into contact with them in ways that will not provoke a war but will still enable us to make ground in this struggle, we are confident the net result will be a gain to the United States.

I must apologize for not having our idea of a competitive coexistent council in more concrete terms, but, as we say in this book, that would be the task of a planning board, to understand the struggle and to perhaps plan the ways of bringing it to a successful conclusion.

I understand before this committee is a specific recommendation for certain moneys to be allotted for cultural endeavors. We believe that any of our artists that go abroad should recognize that in a sense they are American citizens who are doing a duty to their country and that their appearance and their performance and their conduct will have a direct bearing on the results of our trouble with the Communists. We think that they should attempt to get close to the people in the countries where they perform, they should be available at clinics where the young people who might be interested in the theater or in sports could get to them, and it should not be regarded as a triumphant parade or excursion, but as a definite contribution to good competitive coexistence.

I was reading that Oklahoma will be shown in Europe, and I think that is fine, and I understand some dignitary is giving the cast a garden party and that it will be the social event of the season. A little social life does not hurt anybody, but my opinion is that it will not particularly contribute to our success in the ideological struggle; but if it could be arranged, by planning and by knowledge of what is going on, for them to see the young people and talk to them and answer their questions, I am sure it would be a step forward.

We just came back from Russia so full of the belief that the American way of life has so much more to offer than the Russian way of life that if we can let the people of the world see it, believe me, any comparison is bound to tip the balance in our favor.

I think I am rambling a little bit here and perhaps getting away from the core of what you gentlemen are interested in, but that is our only message, the message of Mr. Hearst, that some comparison of what is going on must be grasped by our policymakers now, and some means of combating this cold war must be devised.

Mr. ROONEY. Thank you for your very interesting statement. You must realize that the committee has the advantage of advice from the State Department from the top level and has access to intelligence, and so forth, in regard to the situation between the Soviet Union and the United States today.

The conclusion reached by Mr. Hearst, General Sarnoff, and Theodore Repplier was that our propaganda offensive needs to sharpen its ideas and needs to be increased many times in size. Also, that we need to draw into our propaganda program more of the skills and talents of America. As Mr. Repplier says, "In America, we have private organizations—from the Philadelphia Symphony to the advertising council—whose weight must be added to the idea war."

One place to begin adding the weight of private organizations to our idea war would be to bring them in, in an advisory capacity, and thus make them part of, any program for the expansion of cultural, scientific, and social contacts which the Federal Government undertakes. Authority for this very step is contained in Public Law 402, 80th Congress, particularly in title VIII, section 801 (6). In carrying out the purposes of this act the Secretary of State is authorized "to create, with the approval of the Commission on Information and the Commission on Educational Exchange, such advisory committees as the Secretary may decide to be of assistance in formulating his policies for carrying out the purposes of this act." It is my understanding that the powers and authorities granted under this act of the Congress for the appointment of such an advisory committee on the arts and cultural exchange have never been exercised. In any event, now would seem to be a particularly appropriate time to create such an advisory committee.

This advisory committee, if it is appointed, will obviously be of great importance in our relations with other nations and it should, therefore, be composed of men of the highest caliber and leadership ability. If I may take the liberty of making a few suggestions I would think the following admirably exemplify the qualities needed: Theodore S. Repplier; Brig. Gen. David Sarnoff; Senators Alexander Wiley, H. Alexander Smith, Karl S. Mundt, Theodore Francis Green; William Randolph Hearst, Jr.; Eugene and Agnes E. Meyer, of the Washington Post and Times Herald; James C. Petrillo, George Meany; Walter Reuther; Dr. Detlev W. Bronk, president, National Academy of Sciences and the National Research Council; Alan T. Waterman, National Science Foundation; Dr. Leonard Carmichael, of the Smithsonian Institution; Dr. Sammy Lee, outstanding American athlete who recently made a special tour to 12 countries in the Far East to tell about the American way of life in behalf of the Department of State; Clarence E. Pickett, American Friends Service Committee; and Secretary of Agriculture Ezra Taft Benson.

Also, from the world of business and philanthropy: Nelson Rockefeller, Henry Ford II, and Harvey Firestone. From the theater and movies: Robert W. Dowling, president of the congressionally chartered American National Theater and Academy; Dr. Gilbert V. Hartke, president of the American Educational Theater Association; Ralph Becker, of the National Association of Legitimate Theaters; and Eric Johnston, president of the Motion Picture Association of America, Inc.,; and Lee Norvelle, president of the National Theater Conference.

From the art world, David E. Finley, director of the National Gallery of Art; Lloyd Goodrich, chairman of the Committee on Government and Art; Henry

R. Hope, editor of the College Art Journal.

As architects: Wallace K. Harrison, Pietro Belluschi, Eero Saarinen, and Otto Eggers.

From music: Dr. Howard Hanson, president of the 800,000-member National Music Council; Bruno Walter, conductor; Rudolf Bing, of the Metropolitan Opera Co.; Patrick Hayes, chairman of the Cultural Development Committee of the Washington Board of Trade; Dr. Frederick Fall, conductor of the United States Department of Agriculture Symphony Orchestra and former conductor-in-chief of the Vienna Volksoper; and Dr. Warner Lawson, head of the department of music at Howard University, Washington, D. C.

Also, Milo Christiansen, past president, American Recreation Society.

For composers and authors: Richard Rogers; Oscar Hammerstein II; Ira Gershwin; Norman Dello Joio; Gian-Carlo Menotti; William Faulkner and Ernest Hemingway, Nobel Prize winners; Harold Spivacke, of the Library of Congress; and Howard Mitchell, conductor of the National Symphony Orchestra, Washington, D. C.

Not Exactly in High

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, many of us have been troubled by the delays and confusion that have been notorious in the administration of the Refugee Relief Act.

The following editorial from the St. Louis Post-Dispatch suggests the experience of one single community with the law and the almost barren results that have followed as a result of what we in Congress hoped would be a useful piece of legislation:

NOT EXACTLY IN HIGH

The arrival of 34 refugees from Europe this week was a heart-warming experience for St. Louis as well as for the newcomers. They lived originally in Eastern Europe. Driven from there by war, they had spent years in oppression, wandering and confusion. Finally they reached the Statue of Liberty, where they read that great welcome to "the huddled masses yearning to breathe free."

These 34 refugees were rescued from the huddle of postwar Europe under terms of the Refugee Relief Act of 1953. So this is a good time to ask, once more, how the work of that legislation is progressing.

Readers will remember the congressional uproar last spring over the firing of Edward J. Corsi as deputee refugee administrator. It was disclosed then that while the law called for admission of 214,000 refugees by the end of 1956, only 3,000 bona fide refugees had been admitted. Criticism centered equally on the law itself and on its administrator, Scott McLeod, State Department security officer.

In the 5 months since then Mr. McLeod and the State Department have offered several hopeful statements about putting the program into "high gear." And the Department now says that "about 30,000" persons have been admitted to our shores, not specifying how many actually were refugees.

In short, half the time allotted for the refugee program has expired, and one-seventh of the number of refugees supposed to be admitted has been admitted.

Myths About Aging

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. RODINO. Mr. Speaker, the Members of this Congress are aware of my long-term interest in the special problems which face the older members of the American community in our time. I have always insisted that we must obtain more information as to the nature and complexity of these problems so that we may act intelligently and humanely to relieve them. We know that one result of the fact that our life expectancy has been increased by about 20 years since 1900 has given more people a chance to live longer. We know that census estimates indicate that, by 1975 there will be 20 million people aged 65 and over in this country—or nearly twice the number we have today.

Last year, in introducing my bill (H. R. 3313) to establish a commission to study old-age and retirement benefits, I said:

Some people talk as if the facts of our time—this miracle of a longer life—is in the nature of a national calamity. I do not agree with that kind of thinking for 1 minute. We have never, in this country, been afraid of problems growing out of progress. And one of the healthiest indications of the dynamics of democracy is the evidence that American communities, churches, labor unions, and public officials are starting to study these problems with the confidence that intelligence, sympathy, and imagination will produce good answers.

Mr. Speaker, the results of one such study have just appeared in the form of a 172-page report, The States and Their Older Citizens, conducted for the Council of State Governments. Summarizing the contents of this report, the Christian Science Monitor made the following comments:

The Council of State Governments has produced an excellent study of the needs of older people in the United States in response to a request from the Governors' Conference of 1954. Entitled "The States and Their Older Citizens," it draws together the findings of many studies made in various States and localities in the last few years.

The outstanding feature of this report is its indication that people of retirement age or near are more concerned now about retaining the opportunity to work than they are about increased pensions or other retirement income. This does not mean that company pensions, old-age insurance, and old-age assistance are unimportant, but that, with these foundations laid, the average oldster does not wish to incur idleness as the price of security.

The bill of objectives for older people formulated in the study lists, first, equal opportunity to work. In a program for action, the report urges governments, employers, and unions to abolish compulsory automatic retirement at a fixed age and to substitute flexible, selective retirement policies. It urges State governments to lead in abandoning the age critierion in hiring or laying off employees.

Other recommendations include: Assurance of adequate minimum income, including more liberal old-age assistance where needed; encouragement of older people to live in their own homes so far as feasible; provision to homelike institutional care for those who require it; rehabilitation work, including vocational retraining; and opportunity for older citizens to participate in recreational and other community activities.

Not all of the matter of employment opportunities is to be reached by legislation or even working contracts. "A prime requisite," says the study, "is an extensive program of public education—one that will dispel popular myths about aging. * * * Once the myths about aging and its inevitable helplessness are dispelled, the major roadblocks to constructive action for older citizens will have been removed."

I am convinced that a thorough study of this report would be of inestimable value to all of us. For it contains the statistical story of what is happening to our senior citizens in terms of the inadequacy of their income, of the problem of living arrangements and family relations, and the problem of employment. Moreover, it goes beyond this necessary background data to show how hundreds of communities throughout the country are beginning to seek the kind of good answers I predicted we would find.

We must, of course, know the facts—many more facts than we have available at the present. For in its own important way the factual story dispels some of the myths which have grown up in our time. One of these myths is that our older citizens retire from their jobs as soon as possible to live the rest of their years in the sun.

But, as this report shows, the facts are quite the opposite. Most older persons want to work and continue working as long as they are physically fit and can find employment. Less than 1 out of 25 workers retire to enjoy leisure, the remainder are compelled to retire either for reasons of health or because they have lost their jobs and cannot find new employment. Also cited in the report are the preliminary findings of a study of 3,515 employees aged 63 and 64, working in 265 businesses, industrial, governmental, and private organizations in 23 industries, which showed that older workers are opposed to compulsory retirement at a fixed age. According to these findings, 77 percent of the workers interviewed said that, if it were up to them alone, they would continue working for the same employer. Similarly, results of the 20th century fund retirement survey, also cited, show that 57 percent of pensioners are retired by the company because of age, that another 25 percent are retired because of poor health or accident, and that only 9 percent retired voluntarily to have some time to themselves. In my own State of New Jersey, for example, 42.4 percent of persons aged 65 and over are still working, another 16.5 percent are receiving old-age social-security benefits, and just 4.6 percent are receiving old-age assistance.

These are the kind of facts which will help to dispel the myths which so often becloud the real issues when we consider the problems of our older citizens. The time has come when we must consider those problems against the broad-gage background used in this study. For, as this report emphasizes, the overall problems of aging involve problems of opportunity to work, of inadequate income, of home and family relations, of physical and mental health, and of leisure time activities.

In many respects the second section of the report is the most challenging. For here the data goes behind the facts which are developed to show activity now underway in various communities throughout the land to meet the complex problems facing our senior citizens.

To meet the problem of housing—a special problem for the older members of our population—a former logging camp, in Ryderwood, Wash., is being transformed into a new community of retired workers. A Philadelphia settlement house, the Lighthouse, enlists volunteers to pack and deliver two meals a day to older people living alone in furnished rooms. In Boston, the first project of the Commonwealth Housing Foundation will contain 300 dwelling units for 400 persons at low rentals, of whom at least 50 percent are to be 65 years of age or over.

To provide the opportunity for older workers to participate in recreational activities in Detroit, the Automobile Workers Union, in 1953, established the first of three drop-in centers. The activities include educational and discussion programs, group games, community singing, hobbies, visiting sick persons in hospitals, and certain welfare activities. A day-center program in New York City combines the cooperation of the city's department of welfare, which supplies the staff; private social agencies, which provide building space and some equipment; and citizens who organize a separate board of directors for each of the 14 centers. One analysis of the value of this program showed that a group of older persons reduced their attendance at health clinics 50 to 70 percent after joining a center.

These, then, are a few of the many examples cited in the report of the activities now just beginning to develop on behalf of our senior citizens. But, as the report makes clear, they are few and far between. Indeed, the major conclusion growing out of this study is that we have only just begun to overcome the apathy and neglect which has too often characterized our attitude toward our senior citizens. We are just beginning to learn what society, the economy, and Government can and should do for the older person. We are just beginning to understand that each older person has an indispensable role to play in our society. We are just beginning to recognize that, in the words of the report:

Older as well as younger persons should be guaranteed their fullest expression, and that is impossible if attempts are made to impose uniform and preconceived ways of life upon them. For a great many older people, moreover, and for most of those with good health, the prerequisite of successful living is opportunity to be as productive both economically and socially as their capacities will permit.

Mr. Speaker, I am convinced that we should have more studies of this kind. My own bill, H. R. 574, would establish a commission on old-age and retirement benefits. Under its provisions a 12-member bipartisan commission would be established, the membership to be equally representative of the Government and of private citizens. For I have been concerned with the fact that we know almost nothing about the character and amount of present old-age benefits in terms of their adequacy. I have been greatly concerned with the economic plight of so many of our older men and women, and I believe we must separate the myth from the reality in this very vital area. Such a commission as I propose would accomplish such a purpose.

Meanwhile, I applaud the action of the Council of State Governments in preparing this admirable study and for making it available to all of us. For I am convinced that, in coping with the problem of aging, all resources must be mobilized—those of the public at large, the economy, and of Government at all levels.

Commercial Airline Subsidies

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. MORSE. Mr. President, I wish to include in the RECORD a point-by-point rebuttal by the McClure Syndicate on the attack made by Pan American World Airways, Inc., on Ray Tucker's column of June 30, 1955, whose column appears in approximately 200 newspapers throughout the country and is distributed through the McClure Syndicate.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

John A. Creedy, Pan American World Airways press agent at New York, has challenged the accuracy of my June 30 column on the attempt by the White House, the Budget Bureau, and the House of Representatives to reduce costly and unnecessary airline subsidies.

His criticism, although nowhere supported by facts or figures, raises the question of Tucker-Creedy integrity, as well as that of accuracy. In response to suggestions from numerous editors, I am replying to him, item by item.

Editors will note that my answers are substantiated by facts, figures, and official statements from such Federal agencies as the Civil Aeronautics Board, the Post Office Department, the General Accounting Office, congressional records and hearings, and the Supreme Court, with specific references to documents, dates, and pages.

My reply is, of course, too lenthy for publication, and I did not so intend or design it. I may note, however, that it is valuable data for a newspaper morgue, since it is a factual study of airplane subsidies, as well as of the attempt of a single company to operate permanently and profitably at the expense of American taxpayers, whereas rival lines facing the same problems pay their own way.

Sincerely,

RAY TUCKER,
Washington Columnist, McClure Newspaper Syndicate.

MEMORANDUM

TUCKER COLUMN

1. "It will decide whether Pan American World Airways shall continue to receive Federal subsidies which have totaled more than $1 billion since World War II."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

No such decision was before the Appropriations Committees. Who gets how much subsidy is determined by a judicial proceeding before the Civil Aeronautics Board laid down by the Civil Aeronautics Act of 1938. Whether Pan American should or should not get subsidy in 1956 was not an issue before the committee. The $1 billion figure is wildly exaggerated. A check with the proper Government office would have revealed the proper total as less than a fifth of this amount. The Government pays Pan American a subsidy for maintaining deficit air services essential to the foreign commerce, the Post Office and the national defense.

1. THE FACTS

The Appropriations Committee certainly did have before them the question of how much subsidy should go to Pan American World Airways. Senator HOLLAND, of Florida, who sponsored the increase in the subsidy appropriations, finally abandoned defending Pan American and based his case that the increase was needed for the sake of the small feeder airlines in the various States and districts. (CONGRESSIONAL RECORD, vol. 216, p. 7241, col. 1.) In reply it was pointed out that all the small feeder airlines in the country have subsidy claims totaling only $25 million; hence, if these lines are given priority to be paid first, as was done in the Comptroller General's letter of May 18, 1955, with respect to the 1955 appropriation which Senator DOUGLAS challenged Senator HOLLAND to do for the 1956 appropriation, obviously no increase over the $40 million figure set by the House would be required, since that sum would be more than adequate to take care of all the feeder lines in the country, providing they are given priority and are not squeezed out by Pan American. In fact, adding to the small feeder airlines, the helicopter lines and domestic trunklines, the total subsidy claims of all these lines, i. e., the total subsidy claims of all domestic airlines in the United States total only $32 million. So, again, it is obvious that the increase from the $40 million figure set by the House to the $52,500,000 figure set by the conference committee referred to in Tucker's column of June 30 is largely for the benefit of Pan American World Airways only.

Total airmail pay, including subsidies, since World War II, adds up to $1,150,000,000.

This figure excludes additional subsidies through the airport and Federal airways programs, which are estimated as almost as large as the airmail pay. No estimate of how much of the airmail pay was really a subsidy over and above the cost of services actually rendered in flying the mail is available, since no separation of the two was made until the fiscal year 1955.

TUCKER COLUMN

2. "The White House and a House Appropriations Subcommittee, headed by Representative JOHN J. ROONEY, from Brooklyn, cut the 1956 subsidy figure proposed by the CAB from $55 million to $40 million."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

The White House had nothing to do with the proceeding. Not Representative ROONEY, of Brooklyn, but Representative PRESTON, of Georgia, is head of the subcommittee. CAB

asked for $63 million. This was cut to $40 million in the House. Fifty-five million dollars was not mentioned by the House committee, but was the figure subsequently recommended by the Senate committee, and which the CAB said was likely to require a supplemental appropriation later.

2. THE FACTS

It is erroneous to say that the White House had nothing to do with the subsidy proceedings. In the fall of 1954 the Civil Aeronautics Board sought White House approval for a request to Congress for a supplemental appropriation of $31 million, which was in effect an attempt by the Civil Aeronautics Board to get back practically all the money which Congress had cut the preceding June. The White House did not approve this request and when the Federal budget was presented to the Congress by the President on January 17, 1955, the supplemental request of CAB had been whittled down by the White House from $31 million to $18,600,000. When the official special message, House Document No. 88, was transmitted in February by the White House to the Congress, the subsidy request had been whittled down still further to $15,200,000. In the end, the Congress voted only $8,900,000 which, added to the previous amount voted, totaled only $48,900,000, or considerably less than the Congress wound up voting for the following year.

It is correct that Congressman PRESTON, of Georgia, is head of the House Appropriations Subcommittee on the Commerce Department and Related Agencies (including the Civil Aeronautics Board). It also is true that when the congressional program for cutting subsidies began, the ranking Democrat was Congressman ROONEY, of Brooklyn, who was head of the subcommittee which embraced not only the State Department and the Justice Department but also the Commerce Department. It is entirely correct to say, as Tucker's column of May 4, 1955, did, that the cut made by the House in the 1956 appropriation down to $40 million was made at the strong urging of Congressman ROONEY.

TUCKER COLUMN

3. "The reduction is not so important as the purpose behind it, which was to force Pan Am to adopt economies that would make it self-sustaining."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

Not a single line of the record of the proceedings supports this.

3. THE FACTS

To the contrary, the record of the proceedings actively supports the contention that Congress intended to force economies in the Pan American. House Report No. 207, by the Committee on Appropriations, March 15, 1955, stated:

"A report from the investigative staff of this committee dated December 30, 1954, contained the following:

"The survey indicates that the Civil Aeronautics Board does not have accurate facts or figures regarding Pan American operations. Most of the subsidiaries have never been properly audited and some not at all, and there has not been insistence that the operations of the entire system be treated as an entity, as required by a recent Supreme Court decision. If corrective action were taken, substantial cuts in subsidy should result.

"The committee is of the opinion that the Supreme Sourt decision, if properly adhered to, will result in a substantial reduction in the amount of subsidy, and that the amount allowed by the Committee will be sufficient to make payments during the remainder of the fiscal year to domestic lines and international carriers who are not affected by the Supreme Court offset decision."

Following adoption by the Congress of the conference committee report, House Report No. 426, on April 19, 1955, the Comptroller General stated in his interpretation of the law, May 18, 1955, in his letter to the Chairman of the Civil Aeronautics Board:

"A review of the legislative history leaves little doubt that, notwithstanding the general terms of the appropriations statute as enacted, it was clearly intended by the Congress that the sum appropriated was not to be used in payments of subsidy to those carriers affected by the Supreme Court offset decision."

As a result of this decision, no part of the 1955 supplemental appropriation contained in Public Law 24, 84th Congress, was permitted to be paid to Pan American.

Of course, since Senator HOLLAND of Florida, did not extend the principle of the Comptroller General's decision, quoted above, to the 1956 appropriation (as Chairman HAYDEN, of the Senate Appropriations Committee, and Chairman CANNON, of the House Appropriations Committee had previously applied it to the 1955 supplemental) the lid is now off on subsidy spending in the direction of Pan American.

TUCKER COLUMN

4. "Pan Am gets the lion's share of taxpayers' money allotted to airlines subsidies."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

Not true. Local-service airlines copter companies get lion's share.

4. THE FACTS

For the fiscal year ending June 30, 1956, the airline receiving the largest amount of subsidy from the Public Treasury is Pan American, slated to get $17,769,000. (Sources: Hearings of House Appropriations Committee on CAB budget for fiscal 1956, p. 365; and Senate hearings on 1956 CAB budget, pp. 286–287.) The second most heavily subsidized airline, according to the official tabulations submitted by the Civil Aeronautics Board to the two Appropriations Committees is a local-service carrier, Frontier Airlines, due to get $3,074,000. Going down the list, only 2 airlines get more than $2 million each, and the rest in amounts going down as small as $1,000. The facts indicate that it is quite true to say that Pan American gets the lion's share of the taxpayers' money allotted to airlines subsidies, and it might be added that it is a pretty hungry lion at that.

It should not be forgotten that all big airlines except Pan American are now off subsidy for both their domestic and international operations, including specifically TWA, American, Eastern, United, Northwest, National, and Capital.

There are numerous certificated airlines who receive neither service mail pay nor subsidy, and about 2,400 nonschedules or charter airlines who also get no subsidy of any kind.

TUCKER COLUMN

5. "Its great overseas rival, Trans World Airlines, has just received a special citation from Postmaster General Arthur Summerfield congratulating it for operating without subsidies. Most other lines, foreign and domestic, pay their own way."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

Pan American is also off subsidy for operations comparable to those of TWA. In the recent past, PAA has received subsidy to maintain air services over certain thin-traffic, national-interest routes, such as those to South Africa, to the door of the Iron Curtain at Finland, to Australasia, and westwardly from Hong Kong. Incidentally, the Senate Appropriations Committee requested the CAB to clarify this distinction in the future. Foreign-flag airlines are heavily subsidized—many are government owned.

5. THE FACTS

It is true that Pan American operates over thin-traffic routes to South Africa, to Finland, and to Hong Kong, but Pan American has never revealed the specific subsidy costs of these specific routes. It is doubtful if, as, and when Pan American ever submits specific figures for these 3 specific routes, if these routes could be shown to justify more than a fraction of the total of $17,769,000 which Pan American is getting.

It is true that foreign-flag airlines have been receiving subsidies. However, on the Atlantic, both TWA and Seaboard & Western fly certificated, scheduled services, facing the same foreign competition that Pan American does—and they are able to do it without a single cent of subsidy. In the Pacific, Northwest Airlines flies to the Orient and successfully struggles against foreign-flag competition without subsidy. If these other airlines can meet foreign-flag competition successfully without constant recourse to the Public Treasury, the very natural question arises: Why can't Pan American?

TUCKER COLUMN

6. "In Senate debate on this question, Senator PAUL H. DOUGLAS, of Illinois, developed these facts about Pan Am's finances and its relationship with the CAB, the Treasury and the General Accounting Office."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

Unsubstantiated charges were made by Senator DOUGLAS. The other side of the debate which fully answered Senator DOUGLAS with the record facts is completely ignored by Tucker.

6. THE FACTS

Senator DOUGLAS' charges were anything but unsubstantiated. His charge that Pan American, in the most recent year for which figures are available, spent on its wholly-owned subsidiary, Intercontinental Hotels, Inc., $2,530,063 more than it received back, was substantiated by an official CAB tabulation appearing on pages 6907–6915 of the CONGRESSIONAL RECORD of June 14, 1955—and his figures were never, at any point in the congressional debate, contradicted. Senator DOUGLAS' charges concerning the granting of subsidies to Pan American by the Civil Aeronautics Board to cover almost their entire Federal income tax burden was substantiated by another CAB tabulation appearing on pages 6916–6918 of the CONGRESSIONAL RECORD of June 14, and these figures were never denied. The Senator's facts concerning the failure of the CAB yet to have implemented the Supreme Court decision was supported by a tabulation provided by Postmaster General Summerfield appearing on page 6920 of the CONGRESSIONAL RECORD of June 14, 1955, and these figures were never denied, nor has Mr. Creedy, of Pan American, denied the accuracy of these substantiating figures.

TUCKER COLUMN

6. "In Senate debate on this question, Senator PAUL H. DOUGLAS, of Illinois, developed these facts about Pan Am's finances and its relationship with the CAB, the Treasury, and the General Accounting Office."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

Unsubstantiated charges were made by Senator DOUGLAS. The other side of the debate which fully answered Senator DOUGLAS with the record facts is completely ignored by Tucker.

6. THE FACTS

Senator DOUGLAS' changes were anything but unsubstantiated. His charge that Pan American in the most recent year for which figures are available, spent on its wholly owned subsidiary Intercontinental Hotels, Inc. $2,530,063 more than it received back, was substantiated by an official CAB tabulation appearing on pages 6907–6915 of the CONGRESSIONAL RECORD of June 14, 1955, and his figures were never, at any point in the congressional debate, contradicted. Senator DOUGLAS' charges concerning the granting of subsidies to Pan American by the Civil Aeronautics Board to cover almost their en-

tire Federal income tax burden was substantiated by another CAB tabulation appearing on pages 6916–6918 of the CONGRESSIONAL RECORD of June 14, and these figures were never denied. The Senator's facts concerning the failure of the CAB yet to have implemented the Supreme Court decision was supported by a tabulation provided by Postmaster General Summerfield appearing on page 6920 of the CONGRESSIONAL RECORD of June 14, 1955, and these figures were never denied, nor has Mr. Creedy, of Pan American, denied the accuracy of these substantiating figures.

TUCKER COLUMN

7. "Pan Am receives between $8 million and $9 million a year from the Federal Treasury in order to pay its taxes to Uncle Sam. In some years, Pan American has received more than it owed in taxes, but it has simply pocketed the windfall."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

All of an airline's revenues, including Government subsidy and everything else, go into its bank accounts. It draws on these accounts to pay all of its expenses—wages of personnel, cost of fuel and other supplies, rentals, and facilities, interest on its debt, and income tax. It is no more accurate to say that the Government subsidy pays an airline's income tax than to say, for instance, that cargo shippers alone pay it.

Tucker's reference to a windfall refers to a CAB policy, changed many years ago, which applied to all airlines.

7. TAX ALLOWANCES AND TAX WINDFALLS

The Pan American argument is easily answered in that it is obvious that the $17,769,000 of Government subsidy goes into the Pan American till and that while a particular Government check might not be endorsed over to the Internal Revenue Service by the recipient, Pan American, it is obvious that receipt of the Government check relieves Pan American of the burden experienced by the average taxpayer throughout the United States, which is of paying their own Federal income taxes out of their own pockets. Furthermore, the various rate orders issued by the CAB specifically identify specific amounts given to Pan American as "Federal income-tax allowance." The CAB figures on page 6917 of the CONGRESSIONAL RECORD of June 14, 1955, which have not been denied by Pan American or anyone else, show that, for the calendar year 1953, excluding the Atlantic division (the subsidy amounts for which are still being debated at CAB) the CAB has already given to Pan American under the specific label of "allowances for Federal income taxes" the very large sum of $5,438,000, or 60 percent of the total Federal income taxes reported by Pan American to have been paid to the Treasury. A variety of proposals are being presently considered at the CAB for additional Federal income-tax allowance to be given to Pan American through its Atlantic division. The lowest of these proposals would result in the Government paying 87 percent of the total Federal income-tax burden of Pan American, and the highest of these proposals would leave the Government paying not just all of Pan American's Federal income taxes, but 102.4 percent of them. (Reference: p. 85 of CAB Order E8833 in CAB Docket 1706, Transatlantic Final Mail Rate Case, containing the recommendation that PAA should be allowed $7,958,000 as provision for Federal income taxes and exceptions taken by Postmaster General to initial decision of CAB in CAB Docket 1706, which exceptions are quoted on pp. 2204 and 2212 of Senate Appropriations Committee hearings on CAB budget for fiscal 1955, wherein it is noted that the proposal of CAB to pay the Atlantic division of Pan American $3,892,000 as Federal income-tax allowance would, when added to the $5,438,000 of Federal income-tax allowances already granted to the other three divisions of Pan American, make a total Federal income-tax allowance to Pan American World Airways, Inc., at the public expense, of $9,330,000, or 102.4 percent of the amount reported by Pan American and CAB Form 41, Accounting No. 9100. Income Taxes. Twelve months, to December 31, 1953, $9,110,000.) It is thus quite clear that the Government is paying the major part, and may wind up paying the entire amount—or even more than the entire amount—of the Federal income taxes of Pan American World Airways, Inc.

This is a fairly recent racket, beginning in a big way only with the year 1950, according to the official figures on page 6917 of the CONGRESSIONAL RECORD of June 14, 1955.

The figures indicate that this is also a unique racket, not shared in by other airlines and certainly not shared in by the general public.

It is as if, dear editor, you were able to go to the United States Information Agency of the United States Government and say: "I have to pay $1,000 of income taxes this year, so please give me about $1,000 to pay them with."

I don't know how far, dear editor, you would get with this request, and, in fact, I never heard of an editor or newspaperman who had the crust to try it; but, as you may have observed, there is no lack of gall or nerve on the part of the Pan American people which may explain in part why they get away with things that most people think: "It just can't happen here."

Turning now to the matter of tax windfalls, a charge brushed off by Pan American as something which "refers to a CAB policy changed many years ago," this situation refers to another variation on the basic theme under which you, dear editor, would go to the United States Information Agency and say: "I think I will have $1,200 of income taxes to pay this year, so please give me $1,200 with which to pay them." It subsequently might turn out that you would only have to pay $1,000 worth of income taxes; but since you have already received $1,200 from another agency of the Government with which to pay the $1,000, and nobody is making a squawk about it, you simply pocket the $200 as a windfall.

Pan American says this business of windfall, "refers to a CAB policy changed many years ago." Senator KILGORE, of the Appropriations Committee, says: "If the CAB does not have a new policy regarding tax allowances, it appears that the Postmaster General of the United States has not yet heard about it." (Hearings on S. 346, 83d Cong., 2d sess., p. 104.) So it is questionable if the barn door is locked even now, but Pan American makes no answer whatsoever about the horses which CAB admits have already escaped from the barn.

On page 2120 of the Senate appropriations hearings on the 1955 CAB appropriation, Senator KILGORE quoted from CAB Order E4561, in which the CAB made the following extraordinary admission:

"In computing such tax allowance in previous cases, however, the basis used has in many cases resulted in making provision for a greater amount of tax than would ever be paid by the carrier."

On page 2166 of these hearings, the CAB admitted to Senator KILGORE:

"The statement you just read is unquestionably a correct statement."

On pages 2121–2126, Senator KILGORE introduced sworn affidavits that during the period of approximately 1946–47:

"The Civil Aeronautics Board has apparently allowed Pan American approximately $1 million on account of taxes that will never become due."

Despite the fact that the CAB was asked a year ago to comment as to whether this affidavit is true or false, no statement whatsoever has been received from the CAB or from Pan American. And it is certainly not answered by Mr. Creedy's rebuttal. Furthermore, the same affidavit also stated with regard to American Overseas Airlines which has since been bought by Pan American World Airways, Inc., and for which the Civil Aeronautics Board at this very moment is proposing a retroactive subsidy increase of $8,792,000 in which case the money would obviously go to the new owner, Pan American World Airways, Inc.:

"It would therefore appear that a sum well in excess of three-fourths of a million dollars has been allowed AOA on account of taxes that will never be paid."

Again, the Civil Aeronautics Board was asked by Senator KILGORE to answer this charge and again no answer has since been forthcoming in more than a year.

Since the Civil Aeronautics Board admitted that tax windfalls had occurred in many cases in the past and since a lot of the rate cases are still open or have been reopened as far back as January 1946, the Civil Aeronautics Board was asked by Senator KILGORE to provide:

"A statement of the difference between the amounts of airmail pay and/or subsidies which the CAB has awarded from 1946 to date to companies holding airmail contracts for the purpose of enabling them to pay their Federal income taxes and, on the other hand, the sums actually paid by those same companies into the United States Treasury."

The Civil Aeronautics Board replied that the Board did not have the information available in its records.

Again, a year later, the Civil Aeronautics Board was asked at the Senate hearing on May 27, 1955:

"Who got how much tax windfall in what years, and, secondly, what has been done to recover the money?"

In response, Messrs. Mulligan and Roth, of the Civil Aeronautics Board staff, stated that they did not think a precise answer was possible. However, Civil Aeronautics Board Chairman Rizley said he wanted the committee to understand that the problem of tax windfalls was wholly new to him as the new Chairman of the CAB, but he saw no reason why there could not be a full and exact answer and he promised to give it.

Unfortunately, both this question and this promise of an answer, which occurred in the presence of witnesses at the hearing of Senator HOLLAND'S Senate Appropriations Subcommittee on May 27, 1955, were stricken from the official printed hearings, under mysterious circumstances.

To date, the answer still has not been given.

I now refer to page 7230 of the CONGRESSIONAL RECORD of June 16, 1955:

"Mr. DOUGLAS. Mr. President, have the windfalls been recaptured?

"Mr. HOLLAND. I am unable to say."

Senator HOLLAND went on to say:

"The agency of the Government to bring about recapture is the Internal Revenue Service of the Department of Justice, not CAB. That situation results from the law which Congress passed, and not from any attitude on the part of CAB."

However, this view conflicts with the view of the Comptroller General which is that the Civil Aeronautics Board has the necessary authority under present law. On May 20, 1955, the Comptroller General answered the inquiry of Senators KENNEDY and KILGORE, as to the responsibility for preventing or recovering the tax windfalls, as follows:

"The protective feature in the (Civil Aeronautics) Act, however, is the authority of the (Civil Aeronautics) Board, upon its own motion, to reopen a rate case at any time it is of the opinion that the return to the carrier is exceeding the amount which was contemplated at the time such rate was determined."

It is therefore perfectly clear: (1) that the Civil Aeronautics Board is responsible for these tax windfalls occurring in the first place and is fully empowered to recover the money under present law, and (2) the CAB has failed dismally since the problem was first raised in the Appropriations Committee a year ago, to lift a single finger to recover a single penny of the tax windfalls.

Perhaps Mr. Creedy would be glad to supply you or the Appropriations Committee with sworn affidavits in answer to the sworn affidavits of alleged tax windfalls of $1,750,000 and perhaps he would also care to supply you with an answer if tax windfalls have occurred in other years and what has been done to pay the money back to the Government.

TUCKER COLUMN

8. "Pan Am operates a chain of luxury hotels in Latin America, with fancy bars, golf courses, and swimming pools, on which it looses between $2 million and $3 million."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

Pan Am's wholly owned subsidiary, Intercontinental Hotels Corp., operates a chain of hotels, all but one of which are owned by others. They are an essential tool in the development of the tourist industry in Latin America. Tourist dollars spent at these hotels help provide Latin American countries with foreign exchange to buy goods produced by American workers. Intercontinental Hotels Corp. operated at a profit last year and continues to do so this year.

8. THE FACTS

The Pan American comment does not answer Tucker's charges. The facts reveal in 1953, the most recent year for which figures are available from the Civil Aeronautics Board, Pan American World Airways, Inc., spent on its 100-percent-owned subsidiary, Intercontinental Hotels Corp., $2,530,063 more than it received back (CONGRESSIONAL RECORD, June 14, 1955, top p. 6913). If Intercontinental Hotels Corp. is now operating at a profit, there are no audited Government figures to show so.

If Intercontinental Hotels Corp. is now operating at a profit, that is a trend in the right direction, and it may serve ultimately to repay some of the money which has been drained off by Intercontinental Hotels Corp. from Pan American, which in turn has been draining off over $17 million from the American taxpayers in subsidies. But Intercontinental Hotels Corp. has a long way to go before the debt is paid back.

Figures on page 387 of the House appropriations hearings on the CAB budget for 1956 indicate that, accumulatively, through December 31, 1954, Pan American had spent on Intercontinental Hotels Corp. $4,539,000 more than it received back. Comment by Creedy, of Pan Am, does not indicate the size of the present profits of Intercontinental Hotels Corp., nor whether such profits exceed the $4½ million cited above.

Pan American itself owns the Hotel Grande in Belem, Brazil, which is managed by Intercontinental Hotels Corp. Intercontinental Hotels Corp. owns entirely the Hotel Reforma in Mexico City; Intercontinental Hotels Corp. leases and operates the Hotel Victoria Plaza in Montevideo, Uruguay; and until very recently also leased and operated the Princess Hotel in Bermuda; and Intercontinental Hotels Corp. manages the following other hotels: Hotel Tequendama in Bogota, Columbia; Hotel Tamanaco in Caracas, Venezuela; Hotel Del Lago in Maracaibo, Venezuela; and the Hotel Carrera in Santiago, Chile.

This gives us a chain of seven hotels involved in the operations of Pan American and/or its 100-percent-owned subsidiary, Intercontinental Hotels Corp.

Each of these seven hotels can accurately be described, as Tucker has done, as luxury hotels. A yet-unreleased Government report states, "Each of the * * * applications show the completed cost to be in the luxury type of hotel, and these simply cannot be profitably supported by a tourist trade."

For example, when asked to comment upon the need for a hotel in Mexico City, the American Embassy commented, "It should not be a luxury hotel but should cater to the middle class wherein the tourist future of Mexico undoubtedly lies."

The Hotel Reforma in Mexico City was purchased by Intercontinental Hotels Corp. for over $2 million at a time when Pan American was losing on Intercontinental Hotels Corp. and was in turn soliciting subsidies of over $17 million from American taxpayers, and does not meet the standards described by the American Embassy.

Tucker's further descriptions of the luxury hotels containing, "fancy bars, golf courses, and swimming pools," is amply borne out by a mere glance at the 15-page plush, colored pamphlet passed out to prospective customers (a few of which have also been obtained by unsuspecting taxpayers). Editors who themselves cannot afford to stay in these places and unwittingly and unwillingly contribute toward them in their income taxes may relish reading a few extracts from this pamphlet:

With regard to the Hotel Grande in Belem, Brazil, which is 100 percent owned by Pan American: "* * * spacious guest rooms reflect the magnificence of the days of the Amazon throne, yet incorporate every modern facility for comfort and repose."

For those editors thinking of visiting Bogotá, Colombia, there is (if you can afford it and bear in mind you are helping to pay for it anyway) there is the Hotel Tequendama for which United States Government credits as well as United States Government airline subsidies are involved where it is said "Take delight in the lovely terraced Monserrate Room for dining, entertainment, the informal grill and coffee shop, and the intimate Chispas Bar."

The picture for the Hotel Tamanaco in Caracas, Venezuela, features the latest type kidney-shaped swimming pool surrounded by cabanas where citizens who can afford it sip their Latin American drinks while the rest of us stay home and work to pay for the Government credits and subsidies which went into this luxury hotel.

Ignoring the advice of the American Embassy that a hotel in Mexico City should be geared to a middle-class pocketbook, the ad for the Hotel Reforma, wholly owned by Intercontinental Hotels Corp., says, "the international society that congregates at the Reforma adds a further dash of color and excitement to a thrilling visit to Mexico City."

I'm sure that American editors everywhere will be glad to help pay for a suitable gathering place for the international set.

Then there is the Hotel Victoria Plaza in Montevideo, Uruguay, managed by Pan Am's Intercontinental Hotels Corp., despite the fact that the State Department is quoted in the official Government files that "the Department has no political interest whatsoever in the Montevideo hotel project."

The Pan American Intercontinental Hotels Corp. pamphlet states that "the cocktail lounge and Sapphire Room offer Montevidean interpretations of an enchanted evening."

In our tour, we should not forget the Hotel Carrera in Santiago, Chile, where it is stated that "the Robinson Crusoe Bar and the glamorous Carrera Night Club reflect the gaiety of Santiago's scintillating society."

TUCKER COLUMN

9. "According to Senator DOUGLAS, this loss is financed by many taxpayers who cannot afford an air voyage to the luxurious hostelries."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

Wrong. No subsidy money goes into the hotel company or ever has. On the other hand, under present subsidy policy, the CAB claims in full any net income realized by Pan American from investment in any affiliated company—with consequent reduction in subsidy requirements.

9. THE FACTS

The facts indicate that in 1953, while taking in from the Government over $17 million in airline subsidies, Pan American was at the same time passing along $2,530,063 to its 100-percent owned hotel subsidiary. Mr. Creedy has not denied these facts. Commonsense indicates that the Government subsidies go into the same big kitty of Pan American that the expenditures on its hotel chain come out of.

It might be different if the CAB actually subtracted from the airline subsidies given to Pan American the amount of money which Pan American drains off into its subsidiaries, but the Comptroller General of the United States, in answer to Senator DOUGLAS' specific question as to whether or not that subtraction is being made, replied on April 27, 1955: "The answer to this question is in the negative."

No facts have yet emerged to dispute the contention by Senator DOUGLAS that "what seems to be happening is that we are subsidizing Pan American, which in turn is subsidizing its wholly-owned hotel corporation." (CONGRESSIONAL RECORD, June 14, 1955, p. 6915, column 1.)

Senator DOUGLAS gave a specific example of just how airline subsidies are being diverted to hotel activities as follows, which example was at no point in the 3 days of Senate debate challenged and which is specifically not denied by Mr. Creedy, of Pan American:

"Mr. DOUGLAS. Mr. President, I find that the same man, John S. Woodbridge, controller of Pan American, is also controller of International Hotels Corp."

INTEREST-FREE LOAN TO HOTEL SUBSIDIARY

"I think the evidence will show that on the 14th of July 1953, Pan American advanced $2 million to Intercontinental Hotels Corp. By a letter on January 21, 1954, the controller of Pan American Airways informed the Intercontinental Hotels Corp. that this $2 million advance would not bear interest. This act of generosity was accomplished by the same man, writing a letter from himself in one capacity to himself in another capacity.

"The foregoing of interest on this single advance of Pan American to its hotels amounts to $80,000 a year at 4 percent, an item which we are covering through the subsidies."

TUCKER COLUMN

10. "According to Postmaster General Summerfield, Pan Am owes millions to the Government for past overpayments it has received for carrying the mail, which is another form of subsidy. But, despite Mr. Summerfield's urging, no suit to recover has been brought by the CAB or the Department of Justice."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

This couldn't be more wrong. CAB judicial proceedings have been heard to determine whether Pan Am owes the Government or the Government owes Pan Am. Final decisions are not yet it, but upon the record, the CAB staff admits that the Government owes Pan Am, not vice versa. As in the past, the judicial proceedings protect the Government from overpayment and substantial amounts due have been withheld from PAA in the interim. Money received for carrying the mail is simple compensation for services rendered. Subsidy is separate. The Government made $7 million profit last year on the mail Pan American carried. This is the difference between the money it received from the sale of stamps less costs of handling the mail and the money it paid Pan American for the work of carrying the mail.

10. THE FACTS

On June 8, 1954, Senator KILGORE inserted in the CONGRESSIONAL RECORD, page A4234, a tabulation received by him from the Postmaster General of the United States, Arthur E. Summerfield, indicating that under the principles of the unanimous Supreme Court decision of February 1, 1954, the Post Office had made assertions that Pan American had made excess earnings in its Pacific, Latin American, and Alaskan divisions totaling $6,815,000, which could be applied as offset against the mail payments for the Atlantic division of Pan American for the period 1946–53. In effect, the Postmaster General asserted that these were overpayments which had occurred and which could now be applied against pending claims. Prior to this year's vote in the Senate, Senator KILGORE inquired of the Post Office Department what had happened about these assertions of excess earnings available for offset, or overpayments, during the past year. On May 23, 1955 the solicitor of the Post Office Department replied: "Since none of the cases listed in the tabulation has been finally determined by the Board, the Department is unable to present any final results."

It is thus evident that in well over a year, nothing has been done by the Civil Aeronautics Board to answer the Postmaster General's assertions against overpayments to Pan American.

TUCKER COLUMN

11. "Most amazingly, as several congressional investigations disclose, neither the CAB nor the Comptroller General have complied with legal requirement that they audit Pan Am's finances and operations."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

This statement is plain astonishing. The CAB has testified that over 10,000 man-hours were spent in 1954 auditing PAA's books. An additional 597 man-hours were devoted to Pan Am's hotel subsidiary.

11. THE FACTS

On June 27, 1955, the Comptroller General of the United States made the following report, which completely answers the comment by Mr. Creedy, of Pan American:

"All divisions of Pan American World Airways, Inc., have never been audited simultaneously by the Civil Aeronautics Board, but have been audited for odd periods corresponding with pending divisional mail-rate cases. In our opinion, it is extremely important for all of Pan American's divisions and main accounting office to be audited for identical periods, with simultaneous completion dates, so that the complete financial results of the system as a whole can be coordinated and reviewed.

"The Board determines service-mail rates for each of Pan American's divisions separately and the determination involves four rate proceedings by sectors of operations—transatlantic, Latin American, transpacific, and Alaska. Since 1946, there has always been an open rate case pending on one or more divisions of this carrier. One of the inherent dangers in this situation is that over $200 million of centrally controlled revenues and expenses are allocated to the divisions by Pan American's main accounting office. Not only can a small change in allocation percentages cause a shifting of substantial amounts between a division on a final mail rate to another (or others) on an open rate, but the task confronting both the Board's audit and rate staffs of validating the amounts so shifted is overwhelming.

"The Board's audit staff has never verified the revenues and expenses allocated to the divisions. * * *

"Pan American's affiliates and associates also have never been audited, except for a preliminary or exploratory survey of its wholly owned domestic subsidiary, Intercontinental Hotels Corp., made during the latter part of calendar year 1954."

TUCKER'S COLUMN

12. "Both agencies have failed to comply with a Supreme Court decision to that effect, a decision which revealed the jurists' annoyance over this untidy state of affairs."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

This is a confused reference to a Supreme Court decision of February 1, 1954, in a test case against Chicago & Southern, not Pan American, which had nothing to do with auditing. In brief, the decision required that any excess earnings from one division of a company be applied to reduce subsidy in another division. Pan American has always believed that this makes sense and is on record as opposed to attempts by other airlines to change the Civil Aeronautics Act to upset the Supreme Court decision.

12. THE FACTS

The Supreme Court decision of February 1, 1954, contains not only the offset principle (that excess earnings from one division of an airline be used to reduce subsidy claims of other divisions of that same airline) but also the entity or entirety principle which has been, and still is, ignored by the CAB and Pan American. The Supreme Court stated in its unanimous decision, February 1, 1954: "The 'need' of the carrier is measured by the entirety of its operations not by the losses of one division or department."

At the Senate appropriations hearings, May 18, 1954 (p. 2195), Senator KILGORE stated: "It appears necessary that the CAB hold a consolidated proceeding for all parts of Pan American instead of continuing to treat them separately by divisions. The CAB has not yet held such a consolidated proceeding."

The investigative staff of the House Appropriations Committee in their report dated December 30, 1954, stated: "There has not been insistence that the operations of the entire (Pan American) system be treated as an entity as required by a recent Supreme Court decision."

The House Appropriations Committee in House Report No. 207, 84th Congress, March 15, 1954, stated: "The committee is of the opinion that the Supreme Court decision, properly adhered to, will result in a substantial reduction in the amount of subsidy."

The difficulty has always been that the four different divisions of Pan American have been, and still are, processed separately in separate CAB proceedings, for separate time periods, instead of having the whole airline taken up in its entirety as required by the Court decision.

Until a consolidated proceeding is held of all parts of Pan American at the same time period there will never be an end to Pan America's old pea-and-shell game.

The hodgepodge of the present system can best be illustrated by the time periods covered in the most recent CAB mail rate decisions on the four divisions of Pan American. (Source: CAB, ext. 8089). Note that no two of the Pan American divisions cover the same time period.

1. Pan Am Pacific division: Final rate decided November 21, 1951, for period November 16, 1945–December 31, 1953. On open rate since January 1, 1954.

2. Pan Am Alaska division: Final rate decided July 20, 1953 for period October 1, 1952–December 31, 1954. On open rate since January 1, 1955.

3. Pan Am Latin American division: Final rate decided September 1, 1953 for period January 1, 1953–December 30, 1954. Calendar 1952 still open and on open rate since December 31, 1954.

4. Pan Am Atlantic division: Final rate decided June 9, 1947 for period calendar year 1945. On open rate since January 1, 1946.

Of course, it is manifestly impossible to make an accurate offset, as the Court requires, because each of the divisions is on a different time period. No offset could be any more than an approximation under this divisional approach, which the CAB and Pan American are still continuing.

Notice that this system of CAB carefully avoids matching time periods, even for a single year. This is far removed from measuring the company in its entirety.

TUCKER COLUMN

13. "Despite Senator DOUGLAS' scorching analysis, a Senate Commerce Subcommittee headed by Senator SPESSARD HOLLAND, of Florida, increased the subsidy total from the House allowance of $40 million to $55 million. Although HOLLAND failed to answer the DOUGLAS indictment, the Senate voted for the larger amount by 51 to 25."

COMMENT BY MR. CREEDY, OF PAN AMERICAN

This just isn't true. Senator HOLLAND made a very full answer to the DOUGLAS charges. See the CONGRESSIONAL RECORD for June 16, 1955, page 7220 and following.

13. FACTS

The comment by Mr. Creedy, of Pan American, is purely a matter of opinion, as to whether Senator HOLLAND did or did not make "a very full answer to the Douglas charges." The reader will note from the CONGRESSIONAL RECORD of June 15, 1955, pages 7222, column 3, that when pinned down by Senator DOUGLAS on the three main questions (1) the loss of $2,500,000 by Pan American on its hotel subsidiary, (2) the use by Pan American of some $8 million with which to pay their Federal income taxes, and (3) the failure of the Government yet to have collected or applied as offset the $6,800,000 asserted by the Postmaster General under the Supreme Court decision, Senator HOLLAND, of Florida, put his defense of his proposal to increase the amount of subsidies over the House figure on a personal basis. Senator HOLLAND was chairman of the Senate Appropriations Subcommittee and was therefore referring a good bit to himself when he stated: "Let me say to the distinguished Senator from Illinois * * * that he is evidencing no confidence in the CAB * * * no confidence in the committee which has gone into this question in great detail." Toward the end of the conference committee between the House and Senate Appropriations Committees on June 28, 1955, Congressman FLOOD, of Pennsylvania, in this secret session, suggested: "There surely cannot be any harm in letting me write a few words in the committee report to provide that the little fellows should come first so they will not be squeezed out by the big fellow."

Senator HOLLAND leaned across the table and whispered to Congressman PRESTON, of Georgia: "This is a personal thing with me on account of DOUGLAS." Congressman PRESTON, of Georgia, squelched his colleague by saying: "We don't want the impression to get out that we are against big airlines."

Since all big airlines except Pan American are off subsidy, it is clear what was being talked about.

It is equally clear that in putting through the raise in the subsidy appropriations for Pan American, Senator HOLLAND based it on a personal plea, a powerful factor in a courtesy-minded Senate, and not on an answer to charges of Senator DOUGLAS.

Egg Prices

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a letter I have received from a constituent in North Dakota regarding the price of eggs.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FESSENDEN, N. DAK., *July 10, 1955.*

Senator LANGER.

DEAR MR. LANGER: I think I have written to you a number of years ago. So I am just too happy to tell you that it is more wonderful, to come to a man like Mr. LANGER with our problems. I just like to know about the eggs, cream, and cattle, and poultry that the farmer sells, has no price, especially the egg price. I would like to see that up to at least 35 cents a dozen. Its almost impossible to buy those high-priced groceries for that small amount of egg price we get.

I would sure be pleased if you could at least set the price on eggs a little higher and leave them up to a certain price. I told our groceryman that I was going to write a letter to Mr. LANGER. Then he said, "What are you going to write?" I said, "You'll find out, it will be in the paper. But my name will not appear there." I have others that will be on my side too. I don't know what we would do without you Mr. LANGER. You really have done much for us here in North Dakota.

Your friend,

MRS. PHILIP HUBER.

Arming for the Wrong War?

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, you will recall that many of us fought diligently against cuts in our Air Force, negligence in Air Force procurement, and unwise reductions in our conventional ground forces. Even while the bills were pending this Spring, I myself stood on the floor and urged a full-scale reappraisal of the administration's proposals before it was too late.

It is no secret that Gen. Matthew Ridgway, subject always to his subordination to higher authority, earnestly protested the cuts in our Army. He protested so earnestly that he was denied reappointment as Army Chief of Staff, but he did his duty, at least, as he saw it.

Now the magazine Nation's Business, a publication of the Chamber of Commerce of the United States, carriers an interview on our military affairs with Dr. Vannevar Bush. Dr. Bush was Director of the Office of Scientific Research and Development in World War II, he is a distinguished scientist and a deep student of military affairs. Dr. Bush suggests plainly that it is a great mistake for us to cut our ground forces and other conventional military forces so drastically that we may no longer be able to fight so-called brush-fire wars in the corners of the world.

There has been overemphasis, Dr. Bush says, on the possibility of atomic war. All of us recognize that we must be prepared to retaliate instantly against atomic attack—but what about the things we are neglecting? We must also be ready, Dr. Bush urges, "to handle those secondary wars" that may break out, and to handle them "by modern means that are not just the means of World War II dressed up a bit." These potential "secondary wars," he warns, "are not being given the attention they deserve."

It is now too late for us to remedy matters in this session. But once again I suggest that we here in this House, and particularly members of the Committee on Armed Services, have a direct obligation for a fresh reappraisal of our military needs and capacities. I hope that the second session of the 84th Congress will move swiftly to make that kind of study.

Under permission to revise and extend my remarks, I offer the Nations' Business interview with Dr. Vannevar Bush.

WE'RE ARMING FOR THE WRONG WAR—DR. VANNEVAR BUSH, PRESIDENT OF CARNEGIE INSTITUTION OF WASHINGTON AND WARTIME DIRECTOR OF THE OFFICE OF SCIENTIFIC RESEARCH AND DEVELOPMENT, TELLS KIND OF MILITARY PREPAREDNESS WE NEED

(A Nation's Business interview)

What are the prospects of atomic warfare?

We are headed into what you might call an atomic stalemate. This doesn't mean that war is obsolete. Minor wars may and probably will go on by what is usually called conventional means but no nation can depend on all-out war to impose its will.

If there is not much likelihood of warfare on a major scale, how are the differences and tensions between major powers to be settled?

I hope, of course, by diplomacy and by the growth and strength of the United Nations, which might take a generation. But in Korea we already have had an instance where a difference was approached by means of war. There has since been a war in Indochina, again by conventional means. One of our primary jobs in military planning is to be simultaneously ready for the all-out war and also be ready to handle these secondary wars by modern means that are not just the means of World War II dressed up a bit.

Are we ready for these secondary wars now?

I fear they are not being given the attention they deserve. I think there has been overemphasis on atomic warfare.

Military people, who are good thinkers, have been buried in the sheer necessity of thinking through the implications of the bomb, and trying to plan in regard to it. As a result, we haven't had enough emphasis on how we handle the secondary wars and, more important, how to prevent them from breaking out by being so ready that no one wants to start one.

I cannot see how A-bombs could be used in these minor wars—even tactically—without sooner or later tripping off the main catatrophe. If we should use A-bombs tactically the next thing would be to use them against lines of supply. Inevitably, I think the thing would just grow until we began to bomb cities, both ways.

Do you feel that the Russians understand this?

I think Russians are, above all, realists and therefore I can't conceive that they would deliberately undertake total war or a movement which would be bound to lead into total war unless they felt that they could eliminate us in a single, surprise strike. If they could do that, it would be a strong temptation. But if we maintain a position so that Russia knows that if they trip this thing off, Russia will be devastated, whatever else may happen, then I think there is no danger of their deliberately tripping it off.

We should, of course, maintain enormous strength, enormous retaliatory power, no matter how pleasant or soft the Russians may become.

Is a formal agreement not to use atomic weapons likely?

I think there will be formal agreements some time. I am not optimistic that we will have any such agreements early. Russia cannot suddenly alter its entire philosophy and open up its country to an inspection that is really thorough. Russia can't suddenly abolish the Iron Curtain and still maintain its regime, so I do not expect we will have a workable agreement early. But, on the other hand, if the world comes to the conclusion generally, as I think it will, that we must prevent atomic war breaking out even by accident, then I think after a time it wouldn't make too much difference whether there was a formal agreement or not. The actual situation would, in effect, be stabilized. Agreements of various sorts could follow but I think the state of mind has to appear first.

The countries of Europe were so impressed with the dangers of poison gas in the First World War that they agreed not to use it. Could we arrive at the same kind of agreement on atomic war?

That is a good comparison. We were not parties to an agreement to abolish poison gas, although in the second war neither we nor anyone else used it. There was no formal agreement, and yet everyone abstained. It is quite parallel to the situation that we have today, where there is no formal agreement and yet there has been abstention, which I think will continue.

But let me say this: If gas warfare had been introduced in the second war, it could have been very terrible, because powerful gases were developed. Beyond that we could conceive that biological warfare could be more terrible.

Methods of biological warfare not only have never been used, but there has been no national effort to produce such methods on a broad scale that I know of. Such national effort as there has been has been primarily dictated by the thought that we must know about it; we must be alert. We have no great national program on it, nor do I think anyone else has.

I think we could say, however, that if there had never been an atom bomb we would be in about the same position today that we are now in—the means would have been different, but the situation would have been substantially the same, because what has happened has not been merely production of the weapons. What has happened is that science has become applied to warfare and has transformed it absolutely and, in my opinion, has rendered it obsolete in the long run.

Does that mean we will develop new types of warfare more thoroughly, such as economic warfare, psychological warfare, and social warfare?

Well, if you envisage an atomic stalemate, with minor wars going on by conventional means, it will undoubtedly be accompanied by all of the means of international competition that we have always had. We won't abandon those for some time.

There seems to be so much confusion about the actual effects of atomic warfare that the ordinary man really doesn't know what to expect.

I believe that the Government of the United States should be utterly frank with the American people on this subject.

We should have thoroughly authoritative and complete statements as to what would happen if an H-bomb dropped.

I'm completely out of sympathy with a situation where the public learns the facts

through wrong channels before the Government finally speaks out and tells a little bit.

Now, mind you, I believe in keeping the technical aspects of our weapons secret wherever that knowledge would be of advantage to the enemy.

But, where the Russians undoubtedly know what the situation is on fall-out, what the radioactive effects are and all the rest of it, I see no reason for secrecy.

We tell altogether too much about the details of our guided missiles, of the airplanes we build, and so on. The Russians do not need a spy system to find out what we are doing along some of these lines. All they need to do is read our magazines and newspapers.

As a country and as a people, we talk too much about such things. I see no sense in publishing military technical details but I believe that there are essential things which the American public needs to know.

I believe that when the people are told those things authoritatively and completely there will be a better attitude toward this whole affair not only in this country but throughout the world.

I think that when all peoples of the world, in Russia and everywhere else, face these facts, danger of an all-out atomic war will be greatly reduced.

Isn't the inference then that hydrogen warfare could actually destroy nations as well as cities and perhaps cause serious damage to the world as a whole for generations?

I am not the authority to give you a complete answer to that. Such an answer would require the thought of geneticists in regard to mutations caused and their effect on the population.

It would require the point of view of physicists who know what the radioactive products are and how long they would remain in the soil. It would require the point of view of physiologists who know or can find out what the effect is, for example, of the ingestion of radioactive isotopes over a considerable period.

We are now getting information but my complaint is that we are getting it in fragments.

Is it possible that massive explosions could actually affect the position of the earth itself?

There is no danger of that whatever. There is also no danger of igniting the atmosphere. The night before Alamogordo, Dr. Conant and I were out on the desert where they were working on this first test. The situation just before the bomb went off was, needless to say, very tense. While we were waiting, a physicist came up and chatted with us. He said, "You know, I am disturbed about whether this bomb might ignite the atmosphere. The conclusion, I know, is that it will not, but I still think we might perhaps have overlooked something and that when this bomb goes off, it might ignite the nitrogen in the atmosphere and eliminate all life from the earth."

That was a comforting thought at that time in the morning but there was actually no danger then and there is no danger of such a result now. The atmosphere is too big and nitrogen doesn't ignite that way. Incidentally, a single heavy thunderstorm releases more energy than very many atomic bombs.

Just the same, if all-out atomic war should come, with hydrogen bombs and all the rest, it would drive civilization back on its knees in a way that it would not recover for centuries. There is no question about that.

Is there any size limit to the bombs that can be developed by using atomic power?

Of course there is a practical limit to the size one might want to handle, but there is no theoretical limit on the size.

That makes it all the more fearsome to a layman?

I know some people have been afraid to tell the full story for fear the American people do not have the determination and moral courage to face up to very grim things. I have no such fear.

The American people do at times go down crazy, wild alleys and they get all excited about queer things, but on things that are of great moment, when they have the facts and have time to think and after they get over their first confusion of mind, they think soundly and can be depended upon.

Is it not possible that most of the facts have been given out but in fragmentary fashion?

Yes. We now have all the essential facts but there is confusion. The public doesn't know whether to believe the people who say the whole matter has been overly exaggerated or whether to believe the alarmists who say that if a few bombs went off, all life on earth would cease.

The public wants authoritative statements that it can trust: for example, the extent, from a hereditary standpoint, of the damage by radioactive fallout or from the standpoint of poisoning the population. The way to find that out is to get a group of competent scients to report on it carefully. The National Academy of Sciences is making a general study of radioactivity's effect on living organisms.

I'm glad, also, to see that the United States has proposed that the United Nations assemble and evaluate the effects of nuclear radiation from atomic tests.

Is the chief block for full information civilian or military?

I think it is both. We have a civilian-military team in this country and we have a government with civilian power supreme. I'm not placing the blame on any individual, any group or any party. Moreover, I think people in Government have been as confused as people anywhere else. They haven't fully appreciated, therefore, the necessity for getting thoroughly competent and authoritative statements spread on the record.

As far as public statements have been concerned, the development of atomic knowledge is confined pretty much to the United States, Russia, Great Britain, and possibly one or two other countries. Is there any considerable body of knowledge in the smaller countries?

Don't forget that small countries produce thoroughly capable physicists, and any person with that knowledge and experience today have enough material so that he can become an expert in the field of nucleonics, atomistics, and atomic energy. So, while the main activity has been in the three countries, which you include, and in Canada, thinking about the subject from the standpoint of the physics involved goes on all over the world and has nothing to do with national boundaries except as the flow of information is restricted by security regulations.

What would prevent an ambitious smaller country from using atomic energy for its own purpose and suddenly challenging the world with atomic bombs?

In the first place, they couldn't do such a thing suddenly. They would have to shut down their power plants if they wanted to convert the material in them into bombs. I can't imagine a small country with a few bombs challenging the world.

The same restrictions and deterrents would apply to them as to the larger countries?

Of course, and more so.

The Domestic Parity Plan for Wheat

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HOPE. Mr. Speaker, we have a serious wheat problem in this country. This year we had a carryover of more than 1 billion bushels. The August crop report estimates that the production this year will be 910,958,000 bushels.

It is estimated that for the marketing year July 1, 1954, to July 1, 1955, total domestic consumption and exports amounted to 856 million bushels which is less than this year's crop to say nothing of the more than 1 billion bushel carryover.

ACREAGE HAS BEEN SEVERELY CUT

The surplus situation would be even more serious except for the fact that wheat acreage was cut from about 78 million acres in 1953 to 62 million acres in 1954, 55 million acres in 1955, and 55 million acres again for 1956.

Marketing quotas have been invoked and all wheat farmers who produce more than 15 acres of wheat can sell, generally speaking, without penalty only what they produce on their allotted acres. Any amount sold above that quantity must pay a penalty of 45 percent of parity, which penalty during this marketing year will be $1.13 per bushel.

PRICE SUPPORTS HAVE BEEN REDUCED

In addition, wheat price supports have been reduced from 90 percent of old parity, the rate for 1954 and preceding years, to 82½ percent of old parity in 1955 and 76 percent of transitional parity in 1956.

To state the figures in dollars and cents average price supports on wheat in 1954 were $2.24 per bushel, for 1955 they were $2.06 per bushel and for 1956 they will be $1.81 per bushel. This includes the 5 percent reduction in parity due to the shift to modernized parity. There will be another drop of 5 percent in the parity price for 1957 and an additional 5 percent drop in 1958.

With wheat stocks as high as they are at present if flexible supports are continued farmers can expect no more than 75 percent of transitional parity for 1957, which as near as can now be estimated will be $1.70 per bushel; for 1958 it will be $1.60.

Based upon the present supply situation acreage allotments will be no higher than 55 million acres in 1957 and 1958 if the present program of flexible price supports is kept in effect. In fact, the only thing which prevents a much smaller allotment is the provision of the law which says the minimum allotment shall be 55 million acres.

EFFECT OF FLEXIBLE PRICE SUPPORTS IS TO REDUCE FARMERS' INCOME

Flexible price supports have not had the effect of reducing wheat acreage or expanding wheat consumption. Such

acreage reductions as have taken place have been the result of acreage allotments and marketing quotas. The principal effect of flexible price supports has been to reduce farmers' income from wheat. Another effect has been to reduce the value of all governmental wheat stocks to the level of the reduced support price. This is compensated for to some extent by the fact that lower supports make it possible to reduce export subsidies.

FARMERS NOT RESPONSIBLE FOR PRESENT SITUATION

Farmers feel, and justifiably so, that they are not responsible for the present wheat-surplus situation. During the war and up until the crop-year of 1954, farmers were urged to go all out in the production of wheat. As a matter of fact, all of our present surplus has accumulated since the harvesting of the 1952 crop. On July 1, 1952, our carryover was only 256 million bushels, which is less than a normal or desirable carryover in these times. The large 1952 crop should have resulted in the imposition of marketing quotas and acreage allotments for 1953, but the then Secretary of Agriculture did not do so. Instead he set a goal of 72 million acres of wheat which was only 6 million acres less than the goal for the preceding year of 1952. As indicated above, acreage allotments and marketing quotas have been imposed for the 1954, 1955, and 1956 crops. Farmers have cooperated well in these programs with the result that there has been a substantial reduction in the total amount of wheat produced. However, declining exports and decreased use of wheat for livestock feeding has resulted in an increase in our carryover even with these reductions in production.

WHEAT PRODUCERS SEEKING MORE ACCEPTABLE PROGRAM

Confronted by the present situation, it is no wonder that wheat producers have been desperately looking for a more acceptable program. Many of them who have studied the matter feel there is great promise in the proposal known as the domestic parity plan, which has the support of both the National Grange and the National Association of Wheat Growers.

APPLICATION OF DOMESTIC PARITY PLAN

The purpose of these remark is to discuss and explain the domestic parity plan. This plan is also known by other names, such as the certificate plan and the two-price system. The term "two-price system," however, is a misnomer as applied to the domestic parity plan, because under this plan all wheat would be sold on the market at one price, that is, the going market price. The principles of this plan are in successful operation in the field of dairy products and have been discussed in connection with other commodities.

Briefly, the plan and its operation may be described as follows:

First, all wheat would be sold without marketing quotas or restrictions of any kind.

Second, at the beginning of each marketing year the Secretary of Agriculture would make an estimate of the average going market price for that year. He would also announce the parity price of wheat for the year.

Third, the Secretary would estimate the probable amount of wheat which would go into domestic consumption for human food during the marketing year. This amount, which for many years has been approximately 500 million bushels, would then be allotted among the wheat farms of the Nation on substantially the same basis as acreage allotments are made now, except that in this case the acreage would be translated into bushels and the allotment to each farm would be in bushels. Each wheat farmer would receive a certificate stating the number of bushels constituting his share of the estimated domestic consumption of wheat for food.

This certificate would have a value in dollars and cents of the number of bushels which it represented multiplied by the difference between the going market price of wheat as estimated by the Secretary and full parity.

Let us assume for the sake of illustration that the number of bushels represented by this certificate is 1,000 and that the difference between the estimated price of wheat and full parity is 75 cents per bushel. In that event the certificate would have a value of $750.

WHERE WOULD THE MONEY COME FROM?

The next question is how would the farmer realize cash on this certificate and from whence would the money come? The answer to that question is that each miller or other processor of wheat will have to purchase certificates covering the total amount of wheat which he processes for domestic consumption as human food.

It will not be necessary for farmers to deal directly with millers because under the pending legislation the Secretary of Agriculture is authorized through the Commodity Credit Corporation to buy and sell marketing certificates. Thus the Commodity Credit Corporation would act as a clearing house. Farmers would turn their certificates in to the Commodity Credit Corporation through the county agricultural stabilization committee and millers in turn would buy certificates from the Commodity Credit Corporation.

The program in general would be administered by the county agricultural stabilization committees which administer other agricultural programs.

This is but a brief outline of the program and I would like to develop it further by means of questions and answers as follows:

ACREAGE ALLOTMENTS

Question 1: Would there be acreage allotments under this program?

Answer: If times were normal it would be possible to operate without acreage allotments. Under conditions as they exist now it seems desirable to give the Secretary authority to impose acreage allotments for the following reasons:

First. It would prevent overproduction in the present and immediate future when we have such a large supply of wheat on hand.

Second. It would enable the Secretary to adjust production in line with the supply of corn and other feed grains.

Third. It would permit the Secretary to take into account world wheat supplies and prevent the production of excess supplies which could not be absorbed by the world market at fair prices.

Question 2: Without marketing quotas and penalties how could production be effectively restricted through acreage allotments?

Answer: This would be done by providing that no farm would receive a certificate unless the producer stayed within his overall wheat-acreage allotments. The value of this certificate would constitute an incentive sufficient to induce most producers to stay within their allotments. However, farmers growing wheat as a part of their crop rotation or in small quantities for feeding on the farm or who for some other reason were not interested in securing certificates would be free to exceed the current allotments without the payment of penalty. The amount of wheat involved in these cases would be small and would have little effect on market prices or total supply.

WHEAT LOANS

Question 3: Would there be wheat loans under this program?

Answer: If this program were being instituted at a time when production and carryovers were normal it would probably operate better without Government loans. However, in times like the present with large supplies of wheat and other grains on hand it seems advisable to have a low level loan to prevent the market price of wheat from going so low as to adversely affect the price of corn and other feed grains and to constitute a disturbing factor in the world market.

Under the provisions of the legislation now pending in Congress the level of these loans would be determined by the Secretary after taking the following factors into consideration:

First. The supply of the commodity in relation to the demand thereof.

Second. The economic feasibility of producing substitute crops on acreage withdrawn from the production of wheat.

Third. The price levels at which corn and other feed grains are being supported and the feed value of such grains in relation to wheat.

Fourth. The provisions of any international agreement relating to wheat to which the United States is a party.

Fifth. Foreign trade policies of friendly wheat-exporting countries.

Sixth. Other factors affecting international trade in wheat including exchange rates and currency regulations.

It is anticipated that most of the time such a loan program would not prevent the free movement of wheat into export channels without subsidies.

THIS PROGRAM WOULD NOT ADVERSELY AFFECT THE PRICE AND SUPPLY OF CORN AND OTHER FEED GRAINS

Question 4: Producers of corn and other feed grains have expressed the fear that this legislation might result in increasing the total quantity of livestock feed and have adverse effects upon the price thereof. Is there any basis for these fears?

Answer: No. It is realized by those who are sponsoring this legislation that whatever benefits accrue to wheat must not be at the expense of corn or any other crop. That is the reason for the provision in the legislation which protects corn by providing for price support on wheat at a level slightly higher than the support price on corn and in giving the Secretary the authority to impose acreage allotments. Under this authority the Secretary would be able to limit the amount of wheat which would be available for livestock feed if this was thought desirable.

However, all the evidence which is available indicates that if this program results in expanding wheat acreage it will reduce rather than increase the available supply of feed grains. This is because the feed value of the product of an average acre of wheat in this country is less than the production of the average acre if it were used for feed grains. In 1954 we produced approximately 37 percent more feed grains on the acres diverted from wheat than if they had been used for feed-wheat production.

Feed-grain production in the form of oats, barley, and grain sorghums in 1955 on land taken out of wheat will be over 50 percent greater than the feed value of the reduction in wheat production as a result of wheat marketing quotas. In addition, a part of the land diverted from wheat was used to contributed to our record crop of soybeans in prospect this year.

Based on August 1 estimates the increase in production of oats, barley, and grain sorghums in 1955 over the 10-year average 1944–53 will be 558 million bushels or 11.1 million tons, while the reduction in wheat production in the same period is only 243 million bushels or 7.3 million tons.

All of this means that shifts out of wheat acreage increase the available supply of feed grains and increases in wheat acreage decrease feed grain supplies even if all wheat produced on the increased acreage is used for livestock feed.

DOMESTIC PARITY PLAN WOULD NOT CONSTITUTE DUMPING

Question 5: Under the present farm program it is necessary to subsidize all wheat exports by direct payments from the Federal Treasury, thus constituting what is known as dumping and arousing resentment and antagonism from other wheat exporting and importing countries. Would the domestic parity plan constitute dumping in the export market?

Answer: It would not. Wheat going into export would move at the market price and without the benefit of a subsidy such as is being paid under our present program. The adoption of the domestic parity plan will enable us to get away from the charge of dumping. Furthermore the fact that producers would only receive the market price for wheat exported and that the Secretary of Agriculture has authority to impose effective acreage allotments will prevent the production of excessive quantities of wheat which might have the effect of lowering world prices.

PLAN WOULD BENEFIT TAXPAYERS

Question 6: How will the adoption of this plan affect the taxpayers of this country?

Answer: It will benefit them in several ways. First, it will do away with the need for export subsidies which during the last 6 years have amounted to $771 million. Second, by providing a market for wheat it will reduce and eventually eliminate the tremendous sums that are being paid every year as storage charges. Third, losses on wheat placed under price-support loans will be reduced or eliminated. Fourth, administrative costs of the wheat program will be reduced as compared with the present price-support loans and marketing quota program.

COST OF BREAD WILL NOT BE INCREASED

Question 7: Will this plan increase the cost of bread to domestic consumers?

Answer: No. Under this plan wheat will cost domestic millers less than they have been paying in recent years. This is true notwithstanding the fact that under this program wheat will cost millers 100 percent of parity instead of the 90 percent of parity which was in effect until the 1955 crop came on the market. However, wheat is shifting from old parity to modernized parity which will be in effect after 1958; 100 percent of modernized parity is less than 85 percent of the old parity.

It should also be kept in mind that the amount of wheat in a loaf of broad costs about 2½ cents and has little effect on the retail price. For instance, in January 1948, the farm price of wheat reached a peak of $2.81 per bushel, and the average price of a 1 pound loaf of bread was 13.8 cents. Today the farm price of wheat has dropped to $2, yet the average price of a pound loaf of bread has increased to 17.5 cents.

Question 8: What effect will this plan have on the production of quality wheat as compared with the price support plan which is now in effect?

Answer: Because all wheat will be sold on the open market its price will be based on quality and producers of those wheats most in demand by millers will receive premiums because of this high quality. Thus this plan, unlike the present program, will directly encourage and reward high-quality production and permit the value of wheat to be determined freely in the market place instead of by Government edict.

Question 9: It is contended that the distribution of domestic parity certificates among wheat farmers based upon past production without regard to the kind of wheat they produce is unfair in that a larger percentage of some kinds of wheat is consumed for human food than others.

Answer: In this respect the program follows the present law under which price supports are the same on wheat irrespective of whether it goes into domestic consumption for food, into export, for livestock feed, or simply piles up in the elevators. If this new plan is unfair then the present plan is unfair also.

However the real answer to this question is covered by the answer to question No. 8 which points out that the types of wheat in demand will bring higher prices on the market and the total income of producers of those types of wheat will be greater than the income of producers of less desirable types, although the value of the certificates in each case will be the same.

POULTRY PRODUCERS AND DAIRYMEN WILL BENEFIT

Question 10: What about poultry producers or dairymen who desire to produce wheat for feed or to purchase the same at feed prices?

Answer: Under this program they can produce all they need for feed on their own farms and will be able to purchase wheat at market prices for their further needs.

WILL HELP EXPORT TRADE

Question 11: Will this plan increase wheat exports?

Answer: In the long run it probably will because it will make it easier for exporters to carry on business with their customers. Under the existing program a great deal of the wheat exported comes out of Government stocks and in the case of the remainder exporters can make sales only after they have made arrangements with the CCC as to the amount of the subsidy which will be paid. The red-tape, delays, Government price fixing, and other annoyances brought about by this procedure constitutes a handicap which undoubtedly results in foreign buyers going to other countries such as Canada where it is easier to do business.

Under the domestic parity program exporters would be in a position to make their own deals without government interference.

Question 12: What would the cost of this program be to the Federal Government?

Answer: Practically nothing excepting the small cost of administration.

INCOME OF WHEAT FARMERS WILL BE INCREASED

Question 13: How would the wheat farmer's income under this plan compare with his income under existing support programs?

Answer: Estimates prepared by the Legislative Reference Service of the Library of Congress indicate that wheat producers would have received approximately the same income from their wheat under a domestic parity plan as they actually did receive in 1954 when supports were 90 percent. If an allowance is made for some increased use of wheat for feed and export there would be an income difference in favor of the domestic parity plan.

In 1955, with the support level dropped to 82½ percent of parity, producers would have received a minimum of 7 percent more income than they will realize under the current program for the wheat produced on the 55-million-acre national allotment.

In 1956, with the support level under the present program dropped even further to 76 percent of parity, the estimated minimum income advantage of the certificate plan is 9 to 10 percent.

SUMMARY

Question 14: Will you summarize the principal advantages of the domestic parity plan over the present program?

Answer: First. Returns to the farmer would be somewhat greater than under the present program, and there is a good prospect that expanded outlets might substantially increase these returns in the future. Second. Marketing quotas and marketing penalties would be eliminated and acreage controls greatly minimized and possibly eliminated in the course of time. Third. Relief to taxpayers would be afforded through an immediate substantial reduction in the costs of the present program and eventual elimination of practically all such costs. Fourth. To a large extent, it would take the Government out of the warehousing and marketing of wheat and in the end probably do away with such activities altogether. Fifth. Wheat would be produced for market instead of for Government loans and storage, thus encouraging the production of wheat with superior milling qualities. Sixth. Producers of livestock and poultry, wherever situated, would be able to produce wheat for feed or buy wheat at feed prices. Seventh. There would be some expansion of wheat exports through the elimination of redtape and other obstacles existing at present. Eighth. The plan would be a recognition of the fact that wheat is produced and used for various purposes and would furnish an effective method of moving wheat into its natural outlets and market channels. Ninth. It would return to the farmer greater freedom and control over his activities.

Mr. Dixon's Trouble

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, there has been a good deal of misunderstanding about the reason the special Senate Antimonopoly Subcommittee referred the testimony of Edgar H. Dixon, of the Dixon-Yates combine, to the Department of Justice. Suggestions have even been made that opponents of the Dixon-Yates deal overreached themselves in raising questions about the consistency of Mr. Dixon's testimony.

Just to clarify matters, the St. Louis Post-Dispatch carried an editorial which runs the record of the remarkable inconsistencies and lapses of memory involved in testimony before the Senate subcommittee and the Securities and Exchange Commission. Under permission to revise and extend my remarks, the editorial is offered for the RECORD:

The Kefauver Antimonopoly Subcommittee has taken a proper course in referring Edgar H. Dixon's testimony to the Attorney General for consideration whether it warrants prosecution for perjury.

The senior partner in the Dixon-Yates power syndicate now testifies to the investigators that he became worried about the dual role of Adolphe W. Wenzell as early as February of 1954.

He talked with his attorney at that time about the possibility that conflict-of-interest charges might be brought against the First Boston Corp. first vice president under the criminal code. His lawyer advised him to consult First Boston and the Bureau of the Budget.

First Boston advised its first vice president to quit his Budget Bureau post, in which he had already created the prototype for the Dixon-Yates deal and advised on the financing of the specific contract. To keep its own skirts clear, First Boston waived its fee for the Dixon-Yates contract—a substantial sum, for it had charged $150,000 plus $20,000 expenses in handling an earlier financing job for the Atomic Energy Commission.

Ten months after Mr. Dixon had received these double indications that Mr. Wenzell might be dynamite, he testified to the Securities and Exchange Commission in its hearings on equity capital for Dixon-Yates. He was asked to name First Boston officials with whom he had talked to get money-market information. Mr. Dixon replied that he had talked "directly or indirectly" with Duncan R. Linsley, one of First Boston's 40-odd vice presidents.

That was last December. Six months later, in June, Mr. Dixon was called back to testify in SEC's hearings on Dixon-Yates borrowings for the proposed plant. He was asked the same question and again gave the same answer.

Senator KEFAUVER now confronts Mr. Dixon with the fact that Mr. Linsley was out of the country at the time, and draws from Mr. Dixon the admission that he talked with Mr. Wenzell and that Mr. Wenzell was the only First Boston official he did talk with.

Whether Mr. Dixon's earlier statements were perjury or not, they certainly were at sharp variance with the story he now tells. That is par for the course. The Dixon-Yates affair has been one long and continuous record of secretiveness and misinformation about the public's business. Some people, no doubt, would like to sweep the whole mess under the rug and forget it. The Kefauver subcommittee should refuse to be diverted. The full truth is worth establishing, even if the contract has been cancelled.

Report to the People of the Second District of New Hampshire

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BASS of New Hampshire. Mr. Speaker, the first session of the 84th Congress has now adjourned. As I view it in retrospect it is obvious that during this crucial year many issues of tremendous importance to the people of the Second New Hampshire District have been debated and resolved before this body.

By personal letters, telephone calls, telegraph messages, and personal contact, my constituents have given me the benefit of their opinions on the major issues. To each of those who offered me their valuable advice, Mr. Speaker, I wish to express my most sincere appreciation.

The accomplishments of the 1st session of the 84th Congress represent congressional achievement, considering the fact that the executive and legislative branches of the Government were controlled by different political parties.

In the vital fields of foreign affairs, mutual assistance and national defense, we have experienced an unusual degree of harmony based on a genuine appreciation of the seriousness of present world and national conditions.

This, in large measure, reflects the gravity of the times and the able leadership of the President and the responsible leadership of Congress.

The major problem facing our country today is the assurance of world peace. It has long since been obvious that our best approach to this aim is the adherence to a strict and effective policy of internal strength.

In this field President Eisenhower had congressional accord, and I was privileged to support the administration in the following measures:

First. Extension of the Draft Act for 4 additional years.

Second. Authorization for the President to defend Formosa and the Pescadores Islands from Communist aggression.

Third. Establishment of a Reserve program to total 2,900,000 men by 1959 and increasing the service opportunities available to our young men entering the armed services.

Fourth. Allowed the President to continue for 3 more years the reciprocal trade program to assist our allies and friends in maintaining strong economies in face of the Communist threat.

Fifth. Extended certain war powers; revised the Philippine Trade Agreements Act and supported President Eisenhower's requests for military expenditures and atomic energy.

Through effective bipartisan senatorial support, treaties of worldwide importance were entered into with the Republic of China, Austria, and the West German Republic. In addition, Members of Congress supported the President and Secretary of State in their successful efforts to reduce world tension for which the whole free world has reason to be indebted.

On the domestic front, Congress and the President were often in disagreement and most of the legislation passed was of a noncontroversial nature. It has been my feeling that the Congress failed President Eisenhower and the people in the critical fields of aid to school construction, the building of an adequate road system, and the extension of social security. Among the items passed by the House which I supported were:

First. Increased to $1 the minimum wage to assist our skilled labor in New Hampshire compete with southern cheap labor. This is by far the most important item passed to help New Hampshire.

Second. Extended high rates of taxation on liquor, tobacco, and the 52-percent-tax rate for corporations.

Third. Repealed the penalty clause against farmers under the Commodity Credit Act and reduced to 3 percent the interest on farm disaster loans and extended the act.

Fourth. Increased salaries for public servants—our Federal judges, postal employees, members of the armed services, classified Government workers as well as employees and members of the legislative branch of our Government. This is in accordance with my belief that Government today as never before needs competent people.

In January the Congress will begin its second session and I am hopeful that it will follow more closely President Eisenhower's domestic program and continue a policy of bipartisanship in our foreign affairs. This will not be easy; 1956 is an election year and the pressure of politics will be formidable, but I am hopeful that the second session will be productive and beneficial to the people of the Nation and the people of the Second New Hampshire District.

Mr. Speaker, in conclusion, I would like to announce that I will be holding office hours in more than 60 towns throughout the New Hampshire Second District, starting after Labor Day and continuing for several months, so that I may be better acquainted with the problems of my constituents and better able to represent them. Thank you.

The Nursing Dilemma

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, I have written an article on the urgent need for more nurses, which will appear shortly in the Courier, the quarterly publication of the George Washington University Medical Center. Because of the great interest throughout the Nation in the nurse shortage and its effect on the health care of all people, I am inserting my article into the RECORD to make it available to all Members:

THE NURSING DILEMMA

(By the Honorable FRANCES P. BOLTON, Congresswoman from Ohio)

There is an urgent need for more nurses. This has long been recognized by the hospital and medical professions. Although we have more nurses on active duty today than ever before, an additional 60,000 could be used to good advantage today.

The need arises from growth in population, increased longevity, improvement in standards in care of the sick, new scientific and technical advances, care of veterans, and expanding Government, State, and city institution requirements—all of which are familiar to the readers of the Courier.

The situation has become so acute that it has given rise to proposed remedial Federal legislation. The Department of Health, Education, and Welfare has recommended Federal grants for the training of more practical nurses and for scholarships for the teacher training of graduate nurses and other public-health officials. I have introduced a bill which would give traineeships only to graduate nurses, which I hope might be passed in case it should be considered that Federal grants should be confined to this more limited field.

I intend to support the nursing-aid bills proposed by the Department of Health, Education, and Welfare when they come up for hearings before the House Committee on Foreign and Interstate Commerce, early in the next session of the Congress.

I do not, however, believe that such Federal grants will represent an actual remedy to the nursing dilemma. As urgently as they may be needed, they remain nevertheless an attempt to alleviate a bottleneck without actually getting at the reasons for the bottleneck itself. We cannot solve the nursing situation simply by continuing to increase Federal grants as the picture becomes worse. We must get at the basic problems which cause the difficulty which Federal grants are attempting to correct.

This requires careful study of the entire nursing field: a study undertaken by an authority which is unbiased, independent, and concerned primarily not with nurses, doctors, or hospitals, but with the patient himself, who is the person vitally to be considered on behalf of the public welfare.

I believe that such a study can best be made by a commission, set up along the lines of the Hoover Commission, composed of representatives of nurses, hospital administrators, doctors, laymen, and Congressmen and Senators, reporting to the Congress of the United States.

I have, therefore, introduced into the House of Representatives a bill (H. J. Res. 171) providing for the setting up of a National Commission on Nursing Services. This bill will be considered by the Interstate and Foreign Commerce Committee of the House early next year, at the same time that the committee holds hearings on the nursing legislation recommended by the Department of Health, Education, and Welfare. My bill has also been introduced into the Senate by Senator H. ALEXANDER SMITH. It is my hope that my bill will be enacted at the next session of the Congress.

WHY A COMMISSION ON NURSING SERVICES?

My conclusion that a Commission on Nursing Services was imperative was reached after a lifetime of interest in the profession of nursing and care of the sick, with all of the problems involved.

As a member of the board of the NOPHN, I worked arduously with the League of Nursing Education and the American Nurses Association to bring nurse training out of the apprentice method and into the education field. I have sat on hospital boards and with public-health groups where I have represented the public patient, and the patient public, over a long period of years. I have watched experimental efforts to improve the nursing situation with a growing sense of frustration; and finally, last year, decided to make a survey of my own in an attempt to gather facts which might serve as a guide to a solution.

Toward this end I sent a questionnaire to some 10,000 representative nurses and nursing associations, doctors, hospital administrators, nursing schools, educators, laymen, State governors, Federal and State health authorities, and others, to which more than 4,000 replied.

The main substance of the replies can be summed up in these two sentences: Everybody agreed that there was an urgent need for more nurses. But there was absolutely no agreement, within or among the related professional groups, as to what should be done about it.

It was because of this utter lack of agreement, this complete absence of recommendations, pointing in the main in any general direction, that I came to the decision that a constructive course of procedure could only be arrived at by submitting the entire problem for study and analysis to an impartial agency, such as a national commission.

I would like to comment briefly on the pattern of disagreement as revealed by the answers to my questionnaire.

As to the reasons for the nursing shortage, the majority said that nurses' pay was too low; but any occupational group would say that about itself. There were comments to the effect that "the private-duty nurse is pricing herself out of her profession"; some people cited state regulatory laws as the difficulty; others blamed restrictions imposed by the nurses' board; some discussed the inadequacy of nursing schools; and some said that today's opportunities in industrial and business fields proved more attractive to high-school girls than the profession of nursing. No clearcut pattern emerged.

As to nursing education, there was no agreement whatever. Some said that we need more hospital training courses; others that hospitals should not be permitted to operate schools of nursing. Some said that we need better teaching and administration in colleges and universities offering graduate nursing programs; others that we need more practical nurse education which should be handled in vocational schools and junior colleges. Some said Government should assume responsibility for training nurses; others that Government should have no part in it. Some said nursing should be taught in the high schools, etc. No clearcut pattern emerged.

On the subject of financial aid, opinions were again divided. Should such aid be administered on the national or local level; should it go to the schools or to the students; should it be directed chiefly toward better courses for highly skilled professional nurses or shorter courses for practical nurses? Again no clear-cut pattern emerged.

Perhaps this was not surprising—because as I realized, after due reflection, I was getting the views of three different groups, each of which viewed the picture, you might say, through its own particular glasses—for which they cannot in the least be blamed.

First—there are the doctors. They are professional men, operating, like any profession, on a basis of earned income. While every doctor assumes responsibility toward charity patients, the economy of the medical profession is, after all, one of pay received for services performed.

Next let us take the hospital administrators. A hospital is a tax-free and more or less public institution, with an obligation to care for charity patients from whom no pay can be expected, save as State or local welfare funds are supplied. A hospital does not operate for a profit—in fact, it usually operates at a deficit which is made up by philanthropic contributions from private individuals. This, of course, is not the case with city, State or Federal hospitals, which operate on public funds. The point I'm making is that the economy of a hospital is one of a public institution instead of a private business—whereas doctors are in the main in private business.

Now what of the nurses? Theirs is an occupation the financial rewards of which are today substantially below the average. Why therefore do young women go into the nursing profession? The answer comes back again and again from the literally thousands of nurses with whom I have corresponded; and it does one's heart good to hear it.

Most of these women are, in fact, dedicated to their profession. They have devoted their lives to the sick as a matter of choice. There is otherwise no possible explanation for their willingness to remain in the profession when in industry and Government other jobs are open at higher pay.

Small wonder that they grow weary and write: "The Florence Nightingale conception of pure altruism is a poor substitute for inadequate compensation."

Nevertheless I am convinced that a deep urge to care for the sick and make them well is the basic motivation behind the profession of nursing.

The nurses naturally are more keenly aware than any other group of the reasons contributing to the urgent need for more nurses today. Their associations, the ANA and the NLN, have done much constructive work on this problem and deserve great credit for it—far more indeed than is generally granted them. But contrast their economic status with that of the doctors and the hospitals. The nurses are employees; the doctors are in business for themselves; the hospitals are semipublic and charitable institutions. There is no common economic ground for all three professions. Therefore, all three cannot be expected to view problems in the same light.

And meanwhile the individual most concerned—namely the patient—has no spokesman; and he is after all the person primarily concerned.

I am interested in the setting up of a National Commission which will represent primarily the patient—the man who is sick—and acting in the interests of public welfare, reconcile the respective viewpoints of the nurses, the hospital administrators, and the doctors on behalf of a constructive program designed for better care of the patient.

WHAT PROBLEMS WOULD SUCH A COMMISSION CONSIDER?

The first problem might be that of defining the duties of a nurse.

It has been suggested by various students of the situation that if nurses could be relieved of nonnursing duties and thereby enabled to devote their full time to actual nursing, the problem might well be solved.

It is pointed out that in many hospitals today a nurse must devote much of her time to coordinating the work of the porter, the ambulance attendant, the messenger, the dietary aide, the plumber, the carpenter, the electrician, the painter, and the people delivering drugs, linen, food, and surgical supplies, etc., not to mention taking care of patients' visitors and flowers.

In addition, the nurse is usually required to handle the supply of a vast array of hospital instruments and utilities.

On top of that nurses are often expected today to possess, as surprising as this may seem, an accurate knowledge of the mechanical operation of a wide variety of intricate machines required for special treatments—which puts them practically in the classification of mechanical upkeep personnel. On the other hand, nurses these days are often instructed by doctors to use these machines in the care of patients—which gives nurses a responsibility almost equal to that of the doctors themselves. This presents a difficult question. Does one have to be a mechanical expert in order to administer treatments? Does this situation call for a special classification of "technician," for which as yet no particular allowance has been made in the medical and nursing profession?

Beyond that nurses are customarily expected to keep laboratory reports, housekeeping and dietary records, requisitions of repairs, equipment, supplies, records for business accounting, and personal time records, etc. In fact, it is reported that nurses spend up to one-third of their time in record work.

In view of the above, how much time do they have for actual bedside nursing? If recordkeepers, machine technicians, inventory up-keep personnel and administrative help, with no knowledge of nursing but knowledge of these particular functions could relieve the nurses of such responsibilities, would that solve the present nursing dilemma?

The second problem to be studied might be one of nursing education. Who is to educate the nurses? Hospital training schools, independent nursing schools, high schools, colleges or universities? And how is the cost to be met? Is the primary need today for more nurses with college and post-graduate work, who are professional experts, or is the primary need for more bedside nurses who can do a competent job after 2 years' training?

Another field to be investigated is that of licensing. There are various laws and regulations dealing with nursing in the various States. Who should be licensed, and on what basis? Are present restrictions in some parts of the country excluding qualified people from practising practical nursing; or are too many unqualified people allowed to practice and should legal qualifications be tightened? What should be done about the accrediting of schools of nursing by the nursing associations? Is this practice healthy by way of making certain that only competent people are admitted to the profession; or is it unhealthy because it discourages schools of nursing and makes it more difficult for girls in some parts of the country to enter the profession?

What about nurses pay? If the pay is too low to attract enough girls into the profession, what can be done about it and where is the money to come from? This latter problem raises of course the question of Federal aid; but as you can see from what I have said above, this is only one of many facets contributing to the difficulty. If a constructive pattern could be worked out for the education of nurses and the functioning of nurses, this might lead to a logical corrective course of action with respect to the compensation of nurses. None of these basic considerations are solved by the simple device of Federal grants for traineeships, or for more teaching. The latter are merely stop-gap measures, praiseworthy in object, but representing no actual solution.

WHY PUT CONGRESS IN THIS PICTURE?

It is the function of the Congress to look after the welfare of the people. In this particular case we are concerned with the welfare of the people who are sick and need hospital care.

In my many years of experience in the field of nursing I have learned that the man most concerned, namely the patient, needs a champion and a spokesman. No matter how dedicated the doctors, the hospitals, and the nurses may be to public service, they naturally look at things, as I said before, through their own glasses. Therefore, I think it is imperative that the Commission which I propose should include in its personnel Members of Congress, and that the Commission should make its report to the Congress.

The bill which I have introduced into the House of Representatives (H. J. Res. 171) provides for a Commission to be composed of 12 members as follows:

1. Four appointed by the President of the United States, two from the executive branch of the Government and two from private life;

2. Four appointed by the President of the Senate, two from the Senate and two from private life; and

3. Four appointed by the Speaker of the House of Representatives, two from the House of Representatives and two from private life.

Among the six members appointed from private life should be representatives of the nursing, hospital administration, and medical professions. Provision for members from the executive branch of the Government allows for adequate participation by the Department of Health, Education, and Welfare. But of particular importance, to my mind, is the provision for 2 Members from the Senate and 2 from the House of Representatives, plus the provision that the Commission, not later than 2 years from the time of its inception, shall give the Congress a report as to the reasons for the growing urgent need for nurses and recommendations as to what steps might best be taken to meet this demand.

Another reason for the participation of Members of the House and the Senate on this Commission is that under their urging it may be possible to gather together, for the benefit of the Commission, the many excellent and comprehensive studies on the nursing situation and the care of the sick that have already been made by hospital, nursing, and medical authorities in their respective fields.

Present nursing legislation, as imperative as it is—and as I said, I shall vote in favor of it—represents definitely in my opinion stopgap measures. I am a firm believer in legislation of whatever type is required to remedy the nursing dilemma on a long-term basis. But in order to determine just what type of legislation might be desirable or effective, I think we first need the findings of a Commission. That is why I have introduced House Joint Resolution 171, providing for a National Commission on Nursing Services.

Remarkable Doings on Housing

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, one of the most remarkable events we witnessed in this session was the spectacle of the official House Republican leaders begging us to kill all public housing—because, they said, that was the way to give President Eisenhower the pitifully inadequate 35,000 units per year of public housing he wanted.

The whole record of the Eisenhower administration on public housing has been hesitant, shifty, and doubtful. The President has never seemed able to make up his mind whether he believes in it. He has never advocated the full 135,000 units a year authorized in a bill sponsored by the late Senator Robert A. Taft, certainly no Socialist. But even when he advocates only 35,000 units, he gets precious little enthusiasm from his leaders in this body, and he himself seems positively apprehensive when we finally insist on giving him 45,000 units this year.

The St. Louis Post-Dispatch carried a perceptive editorial on the Republican performance on the housing bill. Under leave to revise and extend my remarks. I offer the editorial for the RECORD:

It is always interesting to observe the maneuvers by which the Republican leadership in Congress and the Republican leadership in the White House seek to compile a record both for and against public housing. Satisfying both the real estate lobby and the proponents of federally aided low-rent housing is a tricky business, and this year the maneuvers were especially intricate.

President Eisenhower is in favor of public housing. That is to say, he is in favor of some but not very much. He asked Congress to approve 35,000 units a year for 2 years. The Senate, prodded by those malicious Democrats looking for an issue, raised the ante by passing a bill authorizing 135,000 units a year for 4 years—the original level established by the original 1949 Housing Act, of which the late Senator Robert A. Taft was coauthor.

The fancy footwork came in the House, which has always been more responsive to the real estate lobby than the Senate. First, Congressman WOLCOTT persuaded the Rules Committee to bottle up the administration bill. Then, as adjournment drew near, he persuaded the House to adopt his own substitute, which called for no public housing at all.

Mr. WOLCOTT, supported by the entire GOP leadership, argued that to send the administration bill to conference would inevitably result in a program larger than 35,000 units a year for 2 years, since the bargaining would begin at that level. The way to support the administration, he and the GOP leaders said, was to defeat the administration's bill. This remarkable appeal enabled Republican Congressmen to cast a 4-to-1 vote (151 to 36) for the Wolcott substitute, and they picked up enough southern Democrats to adopt it, the Democrats dividing about 2 to 1 (66 to 152 votes) against.

But more wonders were yet to come. The conference committee, instead of compromising at the administration figure, approved 45,000 units in 1 year and left the second year to take care of itself. Whereupon the White House began fighting the compromise, even to the point of uttering vague threats of veto and special session. Tired and more than ready to quit, both branches adopted the conference bill anyway. The veto talk promptly ended, and the President is now expected to sign.

It is not often that an administration permits its House leadership to defeat an administration bill. Not often does an administration fight a bill giving it more than it asked for. But then, as we said, this is tricky business. Meanwhile the country can be grateful that public housing has been saved for another year.

What Has Happened to the White House Report on Energy Supplies and Resources Policy?

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. KILGORE. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a statement prepared by me entitled "What Has Happened to the White House Report on Energy Supplies and Resources Policy."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, 6 months have elapsed since release of the White House Report on Energy Supplies and Resources Policy. Inasmuch as this heralded document was presumed to suggest answers to problems involving the national security as well as the welfare of our people, I feel that we should wait no longer for an examination of whatever may have been accomplished in the half-year that has since expired. To remind you of the publicized importance of the group responsible for the report, let me point out that the committee's membership was made up of the Secretaries of the Department of State, Treasury, Defense, Justice, Interior, Commerce, and Labor, with the Director of the Office of Defense Mobilization serving as chairman.

Among other things, the committee expressed the opinion that coal and other energy industries "must maintain a level of operation which will make possible rapid expansion in output should that become necessary." The report also acknowledged that coal is "a great national asset." It further stated: "We recognize that serious unemployment exists in the coal industry."

Those obvious facts established and officially proclaimed, the report made a series of recommendations which, if carried out, would without question serve at least as a starting point in enabling coal to return to the position denied to it because of unfair governmental policies and practices. What I should like to know—and I feel that every Member of Congress who is familiar with the Cabinet study will be interesting in learning—is what the administration has done in the intervening 6 months to implement the report's recommendations. Take, for example, the following paragraphs:

"The committee believes that if the imports of crude and residual oils should exceed significantly the respective proportions that these imports of oils bore to the production of domestic crude oil in 1954, the domestic fuels situation could be so impaired as to endanger the orderly industrial growth which assures the military and civilian supplies and reserves that are necessary to the national defense. There would be an inadequate incentive for exploration and the discovery of new sources of supply.

"In view of the foregoing, the committee concludes that in the interest of national defense imports should be kept in the balance recommended above. It is highly desirable that this be done by voluntary, individual action of those who are importing or those who become importers of crude or residual oil. The committee believes that every effort should be made and will be made to avoid the necessity of governmental intervention.

"The committee recommends, however, that if in the future the imports of crude oil and residual fuel oils exceed significantly the respective proportions that such imported oils bore to domestic production of crude oil in 1954, appropriate action should be taken."

Make no mistake about it, it is not adequate restitution to merely check oil imports at the same rate or ratio at which they deluged United States markets in 1954. It is far from adequate relief for an industry that has been progressively sacrificed to a foreign product over the past 8 years. It may serve to prevent additional American workers from being unfairly separated from their jobs; it does nothing for those who have already been relegated to the ranks of the unemployed. The recommendations nevertheless did offer a modicum of hope for the industry as a whole assuming, of course, that the stipulated limit would be recognized by importers and enforced by government officials. To date, there is little evidence that this provision is being carried out. For the first 6 months of 1955 residual oil imports amounted to 78,010,900 barrels, an increase of 20 percent over the corresponding period last year. In view of the Cabinet committee's findings, plus the fact that the committee's recommendations were included by Congress in the extension of the Trade Agreements Act, these statistics are a shameful reflection on the patriotism and integrity of importing companies and responsible administration officials.

I was one of the 27 Members of the Senate who, on August 1, placed in the hands of the Director of Defense Mobilization a letter asking for information on what action has been taken or is contemplated to halt the continued defiance and disrepect of Government mandate by the grasping profiteers who have been funneling an ever increasing amount of foreign residual oil into the markets upon which the American coal miner and oil worker depend for their bread and butter. In response, the Director of Defense Mobilization has indicated that he is conducting an investigation into the matter and that he expects to issue a statement within the near future. We are eagerly awaiting results of this investigation.

At this time, I should like to emphasize that paragraph 3 in the recommendations which I have quoted above specifically stipulates that appropriate action should be taken in the event that the voluntary limitation program breaks down. Since there is no interpretation of the term, appropriate action, offered by the Cabinet committee, I would assume that it refers to legislation. As such, I trust that in the future, if it is necessary to enact a law to protect our security and economy from excessive imports, the administration will accept the principle implied in the verbiage of the Cabinet report and discontinue its active opposition to the efforts of Members of Congress who have time and again attempted to remedy the situation, only to be rebuffed by the hustling and bustling members of the Cabinet who have heretofore journeyed to Capitol Hill to cry out against every effort that has been made to place a definite restriction on oil imports.

Another phase of the Cabinet committee report which merits study after the 6 months since its release, is the chapter on natural gas regulation. On this subject, the Cabinet committee recommended prohibition of sales of natural gas by interstate pipelines which drive out competing fuels because the charges are below actual cost plus a fair proportion of fixed charges. When it came time to the actual enactment of a law to provide the carrying out of this provision, the administration again took off like a wounded elephant and refused to support the position which it had advocated.

Still another paragraph in the White House report deals with coal freight rates. Lest this recommendation be entirely forgotten by the administration—and I have no evidence that it is being remembered—I quote that paragraph in its entirety:

"In order to maintain coal's vitality as an instrument of national defense by improving currently its ability to compete with other fuels, the railroads, by voluntary action, and, in the absence thereof, the Interstate Commerce Commission, by compulsory order, should adjust freight rates to the extent necessary to remove the excessive and disproportionate contribution that coal rates are making to meet the cost of other unprofitable services of the railroad industry. Train-load rates should be established to reflect the lower costs of such service."

I feel that no one, including our great coal-hauling railroads, would object to whatever adjustment is necessary to bring about an equitable transportation rate structure. What appears to be lacking, however, is leadership on the part of the Government that would start the wheels rolling on the way to a fair and balanced system of hauling charges for coal and other commodities.

A move to encourage the sales of United States coal to countries abroad was also included in the Report on Energy Supplies and Resources Policy. At the present time, largely through the aggressive sales efforts of the industry, and supported by the encouragement of the men who mine the coal, our export program has been moving somewhat satisfactorily. I do not know whether the Government officials charged with the responsibility of carrying out the recommendations of the White House Report have had anything to do with promoting the sale of our coal abroad. I do know that the politically inspired export program, gratuitously announced by the then Director of the Foreign Operations Administration last year, burst like the bag of wind with which it had been inflated.

Then there was a recommendation relative to the Government's fuel purchasing policy. Whatever progress has been made in this direction remains intangible. Meanwhile, we who are interested in giving coal a fair opportunity to compete with other fuels in the sale of energy for use by the Government will not relent in our demands that this stated proposal by the Cabinet Committee be carried out.

As we approach the final 5 months of 1955, we trust that some action on the part of the administration will be forthcoming. Let me remind you that the bituminous coal industry is currently running at 50 to 60 million tons short of the annual production required to meet the accelerated demands of an emergency program. The deficit can be reduced if the report issued by the White House on February 26 is executed. Otherwise Congress may be forced to take the matter into its own hands immediately after the beginning of the new sessions in January of next year.

Calling Chairman Strauss

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, those who have the privilege of serving on the Joint Congressional Committee on Atomic Energy, as I do, have the opportunity to observe at firsthand the energy Adm. Lewis L. Strauss shows as Chairman of the Atomic Energy Commission.

It is reported that Admiral Strauss will be invited to testify on the now-dead Dixon-Yates deal before the Senate Antimonopoly Subcommittee completes its work. Under permission to revise and extend my remarks, I offer for the RECORD an editorial from the St. Louis Post-Dispatch on this matter:

CALLING CHAIRMAN STRAUSS

Chairman Strauss, of the Atomic Energy Commission, who is to be summoned to testify what he knows about the Dixon-Yates power deal, will be a welcome and essential witness. The admiral will be scheduled for appearance before the Kefauver Antimonopoly Subcommittee after the recess, which it is taking for about 6 weeks.

It was Admiral Strauss who acted as, in effect, President Eisenhower's floor leader in bludgeoning AEC into acceptance of the deal over the opposition of 3 of its 5 commissioners. There is even indication that the President's directive to AEC to sign the contract had been sought by he AEC Chairman as the means of coercing his fellow Commissioners into acting against their best judgment.

It was Admiral Strauss, with a long record of unfriendliness toward TVA, who led the fight to ram the contract down that Agency's throat.

Chairman Strauss, therefore, like Presidential Assistant Sherman Adams (who has so far twice declined to testify) knows a great deal the Kefauver Antimonopoly Subcommittee would like very much to know.

It was surely of facts known to these two that Senator KEFAUVER was referring, among others, when he said: "We feel there are many parts of [the contract] and negotiations in connection with it that have not seen the light of day."

Excise-Tax Reduction Is Overdue

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DINGELL. Mr. Speaker, as a member of the Committee on Ways and Means, I would like to address the membership of the House briefly on the subject of our excise-tax structure.

At the outset I would like to reiterate my strongest condemnation of excise taxes as a means of raising Federal revenues. I would also like to state for the record that I have opposed every excise levy since I have been a Member of Congress and have consistently voted to reduce or eliminate excises at every opportunity. I believe it is a modest statement to express the view that the Dingell record on excise taxation and the Republican record on excise taxation are not in any way in agreement. The truth of the matter is they are at complete variance.

I have waged an unrelenting battle in opposition to the enactment of excise taxes and have fought for the reduction of excises with unceasing vigor. The basis for my stand in opposition to these iniquitous superduper sales taxes is that I wholeheartedly subscribe to the principle of taxation according to ability to pay. I have strenuously objected to any tax legislation which departed from this historically honored tax principle and believe that it is a demonstrable fact that excises comprise the most regressive form of taxation.

Therefore, Mr. Speaker, I have consistently voted my convictions by opposing the imposition of excise taxes which bear their greatest burden on the middle- and low-income families in America. In this regard I would like to compare for a moment my position on excises as I have just stated it with the traditional position of the Republican Party on these onerous consumer exactions.

It can be said without contradiction that the Republican record on excise taxes is, indeed, an unsavory one. Let us examine the record of the Republican 80th Congress on this subject. At that time there were unmistakable indications and expressed intentions that the Republican Party was leaning in the direction of a Federal sales tax. A ranking Republican of the Committee on Ways and Means introduced a bill providing for a general manufacturers' sales tax. The then Republican chairman of the Committee on Ways and Means appointed a so-called special tax-study committee composed of New York bankers and Wall Street lawyers, which filed a report stating in part:

In the opinion of our committee, excise taxes should continue to form an important part of the Federal revenue system. A case can certainly be made for strengthening the excise tax structure.

It is significant to note that a ranking Republican member of the Committee on Ways and Means has again introduced legislation which would provide a general manufacturers' sales tax. This legislation having been introduced despite the knowledge that its impact would bear heaviest on the American families who are less able to bear the tax burden.

Other evidence of the Republican reliance on sales taxes as a source of Federal revenue in total disregard to the principle of ability to pay is found in the Republican record on the repeal of the so-called temporary wartime excise taxes. In the Revenue Act of 1943 provision was made for certain wartime excise tax rates. I opposed the inclusion in the legislation just as I have always opposed the imposition of any excise tax. While I was not successful in keeping these levies from being included in the bill, I did succeed in having a provision included which called for the termination of these taxes not later than 6 months after the cessation of hostilities.

At the time the Committee on Ways and Means was considering the Revenue Act of 1945, I succeeded in having a provision included that called for the termination of these wartime excise taxes on June 30, 1946—1 year before they would have been terminated under the provisions of the Revenue Act of 1943. This proposal which was included in the House-passed version of the 1945 bill was deleted in the Senate; but I would point out that the then existing law still provided a termination date for these wartime excises.

The 1946 election campaign found the Republican candidates for office eagerly pledging themselves to tax reduction generally and to excise-tax reduction in particular. The then ranking minority leader of the Committee on Ways and Means, who became chairman of the committee during the Republican 80th Congress, introduced a bill to repeal the wartime excise taxes in an effort to capitalize on the public's annoyance with these excise nuisance taxes. During the 1946 election campaign, all the Republican members of the Committee on Ways and Means promised in a public statement downward adjustments in Federal excise taxes.

But, Mr. Speaker, the Members of the House will well recall that when the Republican Party came into power in the 80th Congress one of the first major bills passed by the Republican majority was legislation to make permanent the temporary war excise-tax rates. This action was taken so that the Republicans could grant income-tax reduction to the privileged few who were fortunate enough to be in the upper-income brackets. At that time the Republican chairman of the Committee on Ways and Means blatantly announced that it was "the hope of the committee to be able to shift much of the burden that is now being carried by the income-tax group over to the excises, at least in part" and he added further:

Obviously, if we are going to extend the excise field we will have to include a great many items that are not now included.

Thus, the Republican tax philosophy of shifting the tax burden to the shoulders of the consumer and the lower income families becomes patently clear.

In the first session of the 81st Congress, the Democratic members of the

Committee on Ways and Means prepared legislation that would have granted excise tax relief of more than $1 billion. Unfortunately, the outbreak of the conflict in Korea prevented the Senate from favorably considering this legislation. The needs for financing the defense effort required by the Korean action made it necessary to temporarily defer tax reduction and to provide instead increased revenues. However, I was again successful in providing for a termination date of April 1, 1954, on the increases in the excise taxes which were enacted to finance the defense preparations required by the Korean incident. In the Republican 83d Congress the Republican Party again acted true to form by trying to enact legislation which would repeal the April 1, 1954, termination date and thereby make the Korean increases a permanent part of our excise-tax structure. However, the Democratic House Members with the threat of a motion to recommit forced the Republican Party to reluctantly provide a termination date so as to keep these excise increases from becoming permanent law. Thus, we have the Republican record of twice in recent years repudiating their campaign pledges of granting excise-tax relief and instead attempting to make excise increases that were necessary to finance defense preparations a permanent part of our Federal tax system.

Mr. Speaker, in addition to opposing excise taxes because of their regressive effect on consumers, I have also opposed them because of the adverse consequences they have had with respect to American industries and American labor. There are innumerable instances where discriminatory excise-tax rates have threatened the solvency of an entire American industry. The depressed economic conditions that have existed in industries affected by high excise-tax rates have frequently resulted in unemployment and have denied the opportunity for expansion that is so necessary to provide jobs for our growing American population.

As proof of this condition I would cite the alcoholic-beverage industry which has been the whipping boy of bigoted persons who have unfairly sought the detruction of this legal and honorable industry. The effect of the indiscretion of these people in imposing exorbitant excise taxes on this industry has resulted in a loss of Federal revenues and in the illicit trafficking in alcoholic beverages by bootleggers and moonshiners.

The motorcycle industry is another example of an American industry being virtually destroyed by high excise-tax rates. It was with a great deal of pleasure that I was able to support legislation in this Democratic Congress which removed the excise tax on motorcycles. The automobile industry is another example of an American industry that has been denied the opportunity to fully develop its expansion potentialities by reason of exorbitant excise-tax rates. Similarly the excise taxes on moderate-priced jewelry has not only depressed that industry but has also caused considerable unemployment in that area.

It is my intention during the 2d session of the 84th Congress to press for the enactment of the Dingell program for providing tax relief to the American taxpayer. I will insist that tax relief be considered in the following order of priority:

First. Excise taxes: Congress must give special attention to this category with a view to repealing all wartime excises and restoring others to their 1939 level.

Second. Individual income taxes: All taxpayers should be considered for tax reduction, but those in the lower-income brackets should be the first to have a substantial reduction made in their tax liability. In this connection action must be taken to increase exemption levels to an amount that is realistic and in conformity with today's cost of living.

Third. Corporate, normal, and surtax rates: These taxes should be restored to their levels existing prior to the Revenue Act of 1951.

It is my view that taxes must be kept at the minimum level consistent with the necessary functions of Government. But whatever tax burden that is imposed on the American public must be equitably distributed based on the ability to pay. Therefore, in granting tax relief in the forthcoming second session of the 84th Congress, it is essential that we bear in mind that the bulk of the tax relief granted during the Republican 83d Congress went to corporations and high-income individual taxpayers. This Republican program of tax relief to the privileged few which was enacted in the 83d Congress makes it imperative that the Democratic 84th Congress act to restore balance to our tax structure by granting tax relief first to our middle- and low-income taxpayers.

It was extremely gratifying to me that the distinguished chairman of the Committee on Ways and Means, the Honorable JERE COOPER, has established a subcommittee to study technical and administrative problems existing in our excise-tax structure. It is my view that by making improvements in this area and by providing substantial excise tax-rate reductions, the Congress will have taken a very significant step in giving renewed life to that most fundamental of all tax concepts—taxation according to ability to pay.

A Man Who Respects TVA

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, I do not wish to speak too frequently about the curious blindness of President Eisenhower toward the values of the Tennessee Valley Authority and his incapacity to comprehend the values that would be created by comparable river-valley developments in other areas.

It is worth notice, however, that many visitors from foreign lands consider the TVA one of the great achievements of the United States of America in the field of social engineering—the wise use of Government power for the benefit of the people.

In this connection, I offer a story by Donald Grant, of the staff of the St. Louis Post-Dispatch, who tells about the visit of Burma's Prime Minister, U Nu, to the Tennessee Valley country:

BURMA'S U NU IN TVA LAND
(By Donald Grant)

KNOXVILLE, TENN., July 16.—What does a neutralist look like? People on both sides of the Iron and Bamboo Curtains are in the process of finding out: India's Prime Minister Nehru has been visiting Russia, Poland, and Yugoslavia, while his foreign policy adviser, V. K. Krishna Menon, has visited China, Britain, Canada, and the United States. Indonesia's Prime Minister, Ali Sastroamidjojo, has been seeing the sights in Peiping.

In a comfortable farm home in Hardin Valley, in the foothills of the Great Smoky Mountains, 20 miles northwest of Knoxville, 2-year-old Bill Jones awoke from his afternoon nap last Saturday to see the face of Burma's Prime Minister, U Nu, smiling down at him. Bill smiled back.

Prime Minister Nu (the U simply means Mr.) was visiting the Jones farm as a part of his tour of the Tennessee Valley, to see for himself what TVA has meant to the people there. Burma has one of the lowest per capita incomes in the world—one report puts it at about $32 a year—and Nu naturally was interested in a region where, since TVA came into being, the per capita income has risen from $163 to $1,042 a year.

The Tennessee Valley was interested in U Nu, too. In the old days, when a Democratic administration sat in Washington, important foreign visitors were pretty common—people like Nehru of India, Queen Juliana of the Netherlands, and David Ben-Gurion of Israel. Lately, Washington hasn't been encouraging such visits. Prime Minister Nu, however, insisted on seeing the TVA, along with the Empire State Building in New York, the White House in Washington, Niagara Falls, the big Ford plant outside Detroit, the Grand Canyon, and California. He was the first head of a foreign state to visit TVA since the Republicans took over.

When Nu arrived at the Knoxville airport the crowd saw a short, square-cut man with what seemed to be a dark coat of tan on his wide, smiling face. He was wearing his Burmese sarong and headdress. Nu was met by TVA Chairman Brig. Gen. Herbert D. Vogel, also smiling. They drove together to the Andrew Johnson Hotel, and the rest of the party followed, in a sort of cavalcade of cars.

One of the women in the crowd at the airport, commenting later, said it was something like a circus coming to town, what with Nu in his sarong, with Mrs. Nu and Mrs. James Barrington, wife of the Burmese Ambassador at Washington, both in sarongs of brighter colors than that worn by the Prime Minister, and both women carrying gay and dainty parasols against the sun.

That night Nu attended a girls' 4-H Club meeting, ate half a sweet muffin baked by 14-year-old Jane Kyker, Blount County 4-H Club baking champion, and delivered a lecture on the need for a return to religion, morality, and self-discipline among youth. The 4-H Club girls seemed happy, but a little puzzled. Nu might have been better understood had he given them a bit of his own history: the Prime Minister was the village drunkard in Wakema, on the Irrawaddy Delta, by the time he had reached the age of 16.

At the age of 18 he reformed; at 48 he is one of the leading lay leaders of world Buddhism.

The next morning in Knoxville, Prime Minister Nu put on a black silk western business suit and a brown straw hat and went to the TVA headquarters to see a documentary film on the development of the Tennessee Valley. Nu found it exciting—the story of flood control, power generation, river navigation and, most of all, the improved living conditions for the people. Afterward he had many questions to ask.

He learned that the valley has almost three times the number of manufacturing establishments that it had in 1933, that the number of farms using electricity has increased from 3 percent to 93 percent. He was told how malaria, formerly a serious problem in the Tennessee Valley as it still is in Burma, has been all but eliminated. He learned how floods—which still ravage the Irrawaddy Valley where Nu was born—are now controlled in the Tennessee Valley, and how the use of the river for shipping has increased nearly tenfold.

You could see U Nu's enthusiasm for TVA mounting by the minute, even before he had seen a dam. At lunch, the Prime Minister raised his water glass in a toast: "To the everlasting prosperity of the TVA."

After lunch they took him to the Jones farm, where the Burma party and the TVA people sat beneath a big maple tree in the yard, on steel camp chairs borrowed from the Hardin Valley Consolidated School. Young Bill Jones' father, W. K. Jones, told how the land had been improved with TVA fertilizer and with the help of University of Tennessee agriculture experts. U Nu took off his jacket, revealing bright blue and white suspenders. It was hot.

The party moved on to the Fort Loudoun Dam, 25 miles southwest of Knoxville. Here Nu stood fascinated by the four big electric generators, each producing some 32,000 kilowatts of electricity, driven by the force of water falling over the dam, through great turbines connected to the generators by huge steel shafts. The generators were mounted in a large, spotlessly clean, hospital-gray room; there was a humming sound in the air.

"All this," marveled Nu, "turns great waste into great utility—for the benefit of people. It is beauty itself."

Then, as if not wishing to seem to be carried away, he added, with a smile: "But some people can see beauty in the face of a bulldog."

Outside the powerhouse the party clambered into two fishing launches and entered the locks, and the TVA technicians opened sluices which lowered the level of the water by 70 feet in about 20 minutes, by allowing some 12,640,000 gallons of water to flow on downstream. Later the locks were refilled, and the launches raised to their former level.

On land again, the cavalcade moved on to visit a University of Tennessee greenhouse where fertilizers were being tested, and a university machine shop, where seeds were being treated with high-frequency electric currents, just to see what would happen.

Outside the machine shop, Nu delivered his verdict on the day:

"It has been a very valuable time spent here. I am most interested in TVA because we have similar problems in Burma. Our 3 big rivers flood every 2 or 3 years and cause great damage. We have engaged American experts to begin surveys of two of the rivers, but of course we will need foreign exchange to pay for the experts and for the equipment to harness the rivers. * * *

"But I am most impressed by the possibilities of projects such as the TVA, and especially by what it can do for the people.

"After all, is it not the duty of good government to look after the people, and to protect them as far as possible against natural calamities?

"I look upon the TVA as a successful democratic meeting of a great challenge."

The Prime Minister of Burma did not mention the Dixon-Yates affair. U Nu in his scholarly days not only translated into Burmese Karl Marx's Das Kapital—but also Dale Carnegie's How To Win Friends and Influence People.

Rev. John A. Dronzek

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Lynn Telegram-News, Lynn, Mass., concerning the Reverend John A. Dronzek, pastor of St. Michael's Parish, West Lynn, Mass., who recently died:

REV. JOHN A. DRONZEK

Death came to one of the outstanding parish priests of the archdiocese of Boston early last night as the Reverend John A. Dronzek, pastor of St. Michael's Church in West Lynn, succumbed to a long illness.

The death of the beloved priest stunned the city. For months his flock had been aware of the seriousness of his condition, and yet his passing was a signal for genuine and heartfelt expressions of sorrow not only among the Polish people he had served so well but to members of neighboring parishes who had come to look upon him as their own in the past 30 years.

Father John, as he was affectionately known throughout the city, was a young man of only 32 years of age when he arrived in Lynn as successor to the late Father Takuski back in 1925. He had been a curate for only 9 short years, but despite his short experience and youth he soon demonstrated his capabilities as a pastor and administrator.

While he sought principally to enrich the spiritual life of his parishioners, Father Dronzek believed that faith flourished amid the wholesome family surroundings provided by picnics, reunions, and other social events. With that in mind, he sponsored many events in the early days of his pastorate which succeeded in focusing the spotlight upon the parish and provided many good times for adults and youngsters alike.

He was intensely interested in the parish organizations, advising and counselling them at every step of the way. Up until his fatal illness, he was the chaplain of every men's organization in the parish.

While he never sought to establish himself as the leader of the Polish people of West Lynn, Father Dronzek couldn't escape the mantle of leadership that seemed to be his. He was dynamic and forceful, energetic and driving. Small wonder that his people came to lean heavily upon him as the years passed.

Hardly a year passed without Father Dronzek embarking upon some project. If he wasn't renovating the church or school, he was seeking to improve the convent he constructed or the rectory. Under his leadership the St. Michael's parish plant developed to the point that it was one of the most extensive of its type for a small parish in the archdiocese. Fellow pastors marveled at Father Dronzek's ability to get so many things done with such a relatively small parish.

There is hardly a member of St. Michael's parish who hasn't some fond memory with which to associate the lifetime of Father Dronzek. The oldsters remember him as a kindly young priest first reporting here in 1925. Graduates of the school remember his interest in them and their ambitions. Hundreds of married couples whom he joined in holy matrimony recall his sincere interest in their futures.

Lynn is a great loser in the death of a man of Father Dronzek's calibre. Of his 62 years on this earth, it was the city's good fortune that his most productive ones should have been spent within its limits. His deeds and accomplishments will never be forgotten.

Who Doctored the Record?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, before the subject of the now dead Dixon-Yates contract is dropped, let us recognize that some unusual efforts were made to conceal and pervert the facts regarding that deal. Under permission to revise and extend my remarks, the following editorial from the St. Louis Post-Dispatch seems pertinent:

Whatever may have been the propriety of Adolphe H. Wenzell's serving on both sides of the table in the Dixon-Yates deal, his testimony before the Kefauver subcommittee makes two things very clear indeed.

First, it is clear that somebody in the Budget Bureau and in the Atomic Energy Commission undertook to conceal Mr. Wenzell's role in the Dixon-Yates negotiations.

Last August, in order to answer criticism of the contract and to fulfill President Eisenhower's directive that all facts pertaining to it be made public, these two agencies released to the press elaborate "chronologies" which purported to show the record of every conference and every document dealing with the subject.

Nowhere in these documents was Mr. Wenzell even mentioned. Nowhere was it revealed that he served as vice president of the investment firm which arranged financing for the Dixon-Yates deal, and also served as a Budget Bureau consultant who sat in on the formulation of Government politics which made the deal possible.

How did it happen that the chronologies mentioned a major conference on January 20, 1954, at which Mr. Dixon with the backing of J. Wesley McAfee of St. Louis proposed to build a power plant at West Memphis—but did not mention that Mr. Wenzell and another First Boston executive were present? How did it happen that one important conference which Mr. Wenzell attended with 8 or 10 others at the AEC, as well as a personal conference he held with AEC Chairman Lewis L. Strauss, were omitted from the record altogether?

To suppose that these omissions were pure coincidence strains credulity too much. Obviously, the allegedly complete record was not complete until Senator KEFAUVER's committee dug out the facts. Obviously, somebody in the administration edited the record before it was published.

Why? If Mr. Wenzell's role was proper—indeed yes, as the President said at his press

conference this week, why was the record of it covered up?

The second fact which Mr. Wenzell's testimony makes clear is that somebody in the administration has been guilty of shockingly misinforming the President. At his news conference June 29, the President said "Mr. Wenzell never was called in or asked a single thing about the Dixon-Yates contract." Mr. Wenzell's own testimony now shows this to have been untrue. The President's flat statement can be explained only on the assumption that his advisers on this matter failed to inform him completely, just as they failed inform the public completely.

Who edited the public record?

Who told the President only half the story?

The Kefauver subcommittee should press its inquiry until those questions are answered. And President Eisenhower, it seems to us, ought to be conducting his own inquiry into the same questions.

Appeasement of Communism

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. McCARTHY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOE MCCARTHY

Recently on the Senate floor, I was challenged by a Republican Senator to cite an instance in which the Eisenhower administration had appeased communism. I had been making the general argument that on this score the Eisenhower record was hardly better than that of the Democrats, and my challenger arose to demand chapter and verse. I replied: "Korea, Indochina, and the Tachen Islands." Since the Senate that day was debating a specific issue, that of whether it should risk expressing its views about Eastern Europe, I did not think the time appropriate for pressing the general charge I was making. But I realized then that we Republicans could not continue to encourage the notion that the appeasement business is a Democrat monopoly without doing great injury to the anti-Communist cause.

The record of the Eisenhower administration is one that I take no particular pleasure in documenting. I do not, however, see that it is possible for this country to get back on course until the American people realize fully the extent to which administration policies have steered us away from our objective of defeating communism.

COMMUNISTS ARE ASIA-FIRSTERS

The Eisenhower administration's record of knuckling under to communism has been enacted, for the most part, in the Far East—and this for the not too surprising reason that the Far East is the area in which the Communists have made serious efforts to beat us down.

Communist strategists, historically, have historically, have viewed the conquest of viewed the conquest of Europe as posterior to the conquest of Asia. Lenin stated very early in the game that, after Russia had been secured communism must seek to engulf Asia, and, as the first step toward this goal, China. Of course, if circumstances seemed to promise a cheap local victory in Europe—as they did in Eastern Europe during and immediately after the Second World War—the Communists would exploit their opportunities. But in the main, the battle in Europe would be a holding action, pending domination of Asia.

The Far East has always been, in Communist eyes, the free world's line of least resistance. In the Far East, there have been no strong national armies—except, before the war, the Japanese—that could destroy the armed forces the Communists planned to recruit from the native populations. In the Far East, resentment against the West, characterized by European imperialism and colonialism, has been running high for over a century. In the Far East, nationalistic sentiments have lately become articulate and militant, and the Communists have recognized the opportunity to shape Asiatic nationalism into their own mold. Moreover, after World War II, the Communists knew that real opposition would come, if it came at all, only from the United States—that while the Soviet Union would probably be confronted with a united anti-Communist front in Europe, the Western European countries would have no stomach for collective action in the Far East. For such reasons, the Communists have heeded Lenin's advice, and trained their sights on Asia.

Members of the Republican Party's right wing, so-called, have often been accused by our Europe-oriented press of being Asia-Firsters. The obvious answer here is that the Communists are Asia-Firsters, too.

THE DEMOCRAT LEGACY

Messrs. Truman, Acheson, and Marshall, in their day, advertised themselves as tough anti-Communists. But their policies, insofar as they were anti-Communist, affected only Europe where the risks were minimal. The Communists' main drive was in Asia, and the Democrats responded by attempting to build up Europe's defenses. The single exception was the Korean intervention; but in this case, too, the Democrat administration showed its stripes by backing down at precisely the point in history where we might have delivered world communism a serious setback.

The responsibility of Democrat administrations for the overthrow of Free China is second only to that of the Communists themselves. The Roosevelt administration betrayed China at Yalta by handing over to the Soviet Union strategic Chinese ports, and by inviting the Soviet armies to occupy Manchuria, China's richest industrial province. Under Truman, General Marshall attempted to force on China a coalition government with the Communists, and when that failed, the Truman administration deliberately denied to the Nationalist Government the military support that would have enabled Chiang Kai-shek to defeat the Communists on the battlefield.

Moreover, the Truman administration deliberately prevented the United States from defeating the Communists in Korea. Gen. Douglas MacArthur was relieved of his far eastern commands because he insisted on telling the American people that political considerations were denying our forces a military victory. The Truman administration established a privileged sanctuary across the Manchurian border from which Red Chinese aircraft could attack American troops and return with impunity. It further obliged the Communists by removing the Nationalist threat to the Red Army's rear. On June 27, 1950, President Truman announced, "I am calling upon the Chinese Government on Formosa to cease all air and sea operations against the mainland. The 7th Fleet will see that this is done."

The American Navy was thus ordered to protect an enemy that was engaged in a life and death struggle with the American Army.

But even with these handicaps, United States forces could have won in Korea had the Truman administration not forbidden further land advances in the spring of 1951. Why was our offensive stopped just short of victory? Because the Communists asked for a truce. The Communists knew that the American Army, if permited to do so, could break through their lines. A truce was requested on the theory that once hostilities had stopped, the United States would never resume the war, and would in time withdraw its forces from Korea. The Communists would thus have an opportunity to reestablish their military position in Korea; and meanwhile, the Communists reasoned, they would be free to turn primary attention southward, toward Indochina.

Such was the situation inherited by the Eisenhower administration. With the Communists asking for a truce to gain time in Korea and to facilitate a new aggression in Indochina, and with the American Armed Forces in a position to smash the Communist armies if they were permitted to do so, the disastrous Truman regime bowed out.

Now, the question that should be kept in mind as we proceed is, Did the Eisenhower administration, after it took the reins of Government, deal with Communist aggression in some way different from the Truman administration's way of dealing with it, or did it perpetuate its appeasement legacy? I contend that the record of the past 2½ years shows that the Eisenhower administration, at the beginning of every crisis, took a strong position, but eventually fell back in the face of Communist pressure, and settled into the old appeasement groove.

THE EISENHOWER APPEASEMENT: KOREA

We should look first at the handling of the Korean situation, since that was the first test of whether the Eisenhower administration was prepared to adopt new policies. As we have seen, the overriding question with respect to Korea was whether the Communists would be permitted to get out of a bad military situation there, and move on to a new and more promising aggression in the south. On April 16, 1953, President Eisenhower called attention to the danger and strongly indicated that his administration would not play the Communist game. A Korean armistice, the President said, "should mean no less importantly an end to the direct and indirect attacks upon the security of Indochina and Malaya. For any armistice in Korea that merely released aggressive armies to attack elsewhere would be a fraud."

But since any armistice that left the Communist armies intact would release Red Chinese forces for an attack against Indochina, the President's remarks implied there would be no armistice until we had won a military victory and had moved our lines forward to the Yalu.

And let us remember that from a military standpoint, we had a clear-cut victory within our grasp. Last year the Senate Subcommittee on Internal Security conducted an investigation of the conduct of the Korean war, and that subcommittee's report, unanimously adopted, settles, as conclusively as it can ever be settled, the question of whether the United States could have won that war. After it had heard the testimony of the field commanders in the Korean war theater, Gen. Mark Clark, Lt. Gen. George E. Stratemeyer, Gen. James A. Van Fleet, Lt. Gen. Edward M. Almond, and Adm. Charles Turner Joy, the subcommittee reported these conclusions:

1. The senior military commanders in the Korean war theater who appeared before the Internal Security Subcommittee of the Senate Committee on the Judiciary believed that victory in Korea was possible and desirable.

2. The senior military commanders in the Korean war theater who appeared before

the Internal Security Subcommittee of the Senate Committee on the Judiciary believed that the action required to achieve victory would not have resulted in World War III.

3. The senior military commanders in the Korean war theater who appeared before the Internal Security Subcommittee of the Senate Committee on the Judiciary believed that political considerations were permitted to overrule military necessity.

But even though we could have won the war, the new Eisenhower policy of firmness never got beyond the talking stage. The President did not change Truman's orders to our field commanders, and did not authorize a resumption of the march to the Yalu. Instead, the new administration gave the Communists their armistice.

The result has been precisely as expected. The Communists have proceeded to build up their military establishment in Korea while ours has progressively deteriorated. They have repeatedly violated the armistice agreement with no retaliation from us. The most tragic of these violations, in human terms, is the continued imprisonment of American servicemen. At the time of cessation of hostilities, in the summer of 1951, there were 941 Americans who, in the words of our Department of Defense, "there is reason to believe were at one time in Communist custody but for whom no accounting has yet been made." By the latest authoritative accounting, 465 American servicemen are still alive and are still in Communist prisons. Fifteen airmen, so far, have been released. The rest are held, as the 15 were held, as hostages, and are apparently to be used in bargaining with the free world for territorial concessions.

Finally, the Korean armistice permitted the Communists to concentrate military forces, and their attention, elsewhere—to move into Indochina, and to prepare an attack against Nationalist bastions in the Formosa Straits.

To oblige the Communists by granting them a truce when we were strong was appeasement where it was least justified. We held all of the military and political advantages, but for the sake of an illusory peace, proceeded to hand them over to our enemy.

THE EISENHOWER APPEASEMENT: INDOCHINA

Let us turn now to Indochina, and see how the Communists made the most of our generosity. By the spring of 1954, a crisis had developed there that was the direct consequence of appeasement in Korea. For 8 years the war between the Vietnam and the Viet Minh had been stalemated. By themselves, the Viet Minh had been unable to win a decisive victory. But after Chiang Kai-shek had been driven from the Chinese mainland, and the Korean war had ended, the Chinese Communists were in a position to intervene and thus to tip the scales in the Viet Minh's favor. Chinese volunteers and war materials poured into Indochina in decisive volume. As a result, French and Vietnam forces faced a crushing defeat at Dienbienphu, and a catastrophe on the Hanoi Peninsula.

The administration's reaction to this new Communist threat was, at first, encouraging. I think it is well to recall the statements of various American leaders as the crisis developed, for then we can see how fast and how far the administration retreated in the face of Communist pressure.

President Eisenhower, on August 4, 1953, explained that if Indonesia fell, "the peninsula, the last little bit of land hanging on down there, would be scarcely defensible." "All India," he continued, "would be outflanked," and "Burma would be in no position for defense." On April 7, 1954, the President was still warning that if Indochina fell, all of southeast Asia would collapse like "falling dominoes." The President said, that as the last domino in the line falls inevitably from the toppling of the first, the loss of Indochina would lead to the loss of Burma, of Thailand, and Indonesia, and a threat to Australia and New Zealand.

On March 29, 1954, before the Overseas Press Club of America, Secretary of State Dulles made his then-famous promise of collective defense of Indochina. "Under the conditions of today," Mr. Dulles warned, "the imposition on southeast Asia of the political system of Communist Russia and its Chinese Communist ally, by whatever means, would be a grave threat to the whole free community. The United States feels that that possibility should not be passively accepted but should be met by united action. This might have serious risks, but these risks are far less than would face us a few years from now if we dare not be resolute today."

On April 15, 1954, Admiral Radford, the Chairman of the Joint Chiefs of Staff—who was known at that time to be advising, privately, military opposition to the Communists at Dienbienphu—said this publicly: "The free nations cannot afford to permit a further extension of the power of militant communism in Asia. In the interests of preventing aggression full advantage should be taken of the fact that non-Communist Asia has a considerable potential for development of defensive military forces. * * * Indochina's loss would be the prelude to the loss of all southeast Asia and a threat to a far wider area."

The next day, on April 16, Vice President NIXON urged that American troops be used, if necessary to prevent Indochina from falling to the Communists. The Vice President took a stand squarely opposed to the sort of deal that the administration eventually agreed to. The following are excerpts from a digest of the Vice President's off-the-record speech, as it appeared in the New York Times:

"Negotiations with the Communists to divide the territory or in any form would result in Communist domination of a vital new area. * * * The United States as a leader of the free world cannot afford further retreat in Asia. It is hoped that the United States will not have to send troops there, but if this Government cannot avoid it, the administration must face up to the situation and dispach forces. * * * French pressure will be exerted at the conference (beginning April 26 at Geneva) for negotiation and the end of the fighting. The British will take a similar position, because of mounting Labor Party pressure and defections in the Conservative ranks. The British do not want to antagonize Red China, which they have recognized. This country is the only nation politically strong enough at home to take a position that will save Asia. Therefore the United States must go to Geneva and take a positive stand for united action by the free world."

These, of course, were heartening words; it seemed that the United States had at long last decided to face up courageously and realistically to Communist aggression. But in 10 short days everything had changed. On April 26, the Geneva Conference opened, and on that very day President Eisenhower announced that the United States was no longer prepared to hold the line against Communist aggression but was seeking a modus vivendi in Indochina. The British and French took the President's line, and repudiated Mr. Dulles' policy of united action. With electrifying swiftness, our strong position had been reduced to shambles, and the Western Powers abjectly agreed to hand over northern Indochina and 12 million human beings to the Communists.

On the 12th of May, 1954, Secretary Dulles weakly explained to his press conference that Indochina had not been so important after all.

EISENHOWER APPEASEMENT: THE FORMOSA STRAITS

Let us turn now to the growing crisis in the Formosa Straits, and our policy toward the Nationalist Government of China. To keep our China policy in proper perspective, we must remember that when it took office the Eisenhower administration was firmly committed to the view that the Nationalist Government in Formosa was the rightful Government of China, and that the Chinese Communists were criminal usurpers whose claim to rule the mainland was legally and morally fraudulent. Moreover, the Republican Party was officially on record against a passive policy toward China. The Republican platform of 1952 contained a solemn promise to seek the liberation of captive nations—the most conspicuous of which was, of course, China.

In its early days, the Eisenhower administration took steps to implement the Republican platform. In his first state of the Union message, the President revoked the Truman order directing the 7th Fleet to protect Communist China from attack by the Nationalists. Here is what the President said:

"[T]here is no longer any logic or sense in a condition that required the United States Navy to assume defensive responsibilities on behalf of the Chinese Communists. This permitted those Communists, with greater impunity, to kill our soldiers and those of our United Nations allies, in Korea.

"I am, therefore, issuing instructions that the 7th Fleet no longer be employed to shield Communist China."

This was the famous policy of unleashing Chiang Kai-shek. The President disavowed any aggressive intent on our part, but his message was interpreted as a go-ahead sign to Free China—an encouragement to make preparations for eventual liberation of the mainland. Meanwhile, the administration appeared determined that Free China should not lose any territories it then held. In September 1953 the Joint Chiefs of Staff unanimously recommended that the United States defend Quemoy and the Matsus. Aside from the fact that these islands were advance bases from which liberation forces could be launched, the Joint Chiefs recognized that they were vital to the defense of Formosa itself. The United States thereupon sent new equipment and technical personnel to Chiang Kai-shek, and the Nationalist Government was urged to fortify and garrison the offshore islands against the possibility of Communist attack. This the Nationalist Government did. Fifty thousand men were sent to Quemoy and twelve thousand to Matsu, and three airfields were built on Quemoy. Nationalist preparations continued throughout 1954.

Perhaps we should ask at this point why the administration was maintaining a strong position in the Formosa Straits, while it was giving ground in Korea and Indochina. The answer here is quite simple: The offshore islands were the third step on the Communist timetable. The Communists did not begin to exert serious pressures in this area until, first, they had been let off the hook in Korea, and, second, had won the Indochina war. But as soon as the Communists had achieved these objectives and turned their sights toward Formosa, the American position began to buckle. It is a familiar characteristic of appeasement that firm stands are taken when the enemy is momentarily inactive, only to be abandoned as soon as he shows signs of meaning business.

After their Indochina victory in the late spring of 1954, the Communists began to concentrate troops along the eastern coast of China, opposite Formosa and the offshore islands. This military buildup, especially the construction of airfields, would take some time; but the administration knew the Peiping regime was preparing an assault across the straits. Meanwhile, Communist aircraft began to batter the Tachens, Quemoy, and the Matsus.

In January of 1955, in the face of mounting Communist pressures, the administration began a new retreat. The first signs, as usual, were deceptive. The President ap-

pealed to Congress for blanket authority to use American Armed Forces in the Formosa area—a request that clearly suggested the American Government meant business about resisting further Communist aggression. But it shortly developed that the bellicose Formosa resolution was but a guise for concealing a policy of appeasement and retreat. The resolution was interpreted to give the President power to defend Formosa and the adjacent areas; but it was so worded as to give the President authority not to defend the Formosa area—which is what the administration proceeded to do. The Congress was thus deceived and maneuvered into a position where it could only look on resentfully as the new appeasement unfolded.

First, the administration ordered the Nationalist Government to hand over the Tachen Islands to the Communists. It is no longer a secret that Chiang Kai-shek came very close to disobeying this order, for his government saw the Tachen surrender as the first in a series of steps leading to total disintegration of the Nationalist position. But Chiang finally agreed to evacuate the islands because he was given to understand on no less authority than the President of the United States that if the Nationalists behaved in the Tachens, the United States would defend Quemoy and the Matsus.

The next blow fell on March 2, 1955. When asked at a press conference whether the United States would support an attempt by Chiang to liberate the mainland, President Eisenhower gave the astonishing answer: "The United States is not going to be a party to an aggressive war." Thus, in 2 short years, a war of liberation had become, in administration terminology, an "aggressive war."

Simultaneously, the State Department suggested a cease-fire in the Formosa Straits. Now, to add to their woes, the specter of Munich arose to haunt the Nationalists: Chiang feared that the American Government was preparing to deal directly with the Communists about a cease-fire and was thus ready to sell free China down the river. But on March 3 Secretary Dulles temporarily assuaged this particular fear. In a statement that was interpreted around the world as a solemn undertaking by the American Government, Mr. Dulles said: "The United States will not enter into any negotiations dealing with the territories or rights of the Republic of China except in cooperation with the Republic of China."

In April, the Communists appeared to be ready, at last, to attack Quemoy and the Matsus. For several tense weeks, America's position was in doubt. Although a clear statement from President Eisenhower that we would defend the islands would probably have caused the Communists to change their minds, and although the Joint Chiefs had recommended that the islands be defended, the President remained ominously silent. Finally, in May, the administration said the United States would defend Quemoy and the Matsus only if they were attacked in conjunction with an attack on Formosa itself. This meant, of course, that Quemoy and the Matsus would not be defended, since it would be foolhardy for the Communists to attack simultaneously the offshore islands and Formosa.

The Communist attack on Quemoy and the Matsus did not materialize as soon as anticipated. The Peiping regime apparently realized the chances were good that the Eisenhower administration could be talked into giving them the islands without a fight. But the Communists would not wait forever.

It is reliably reported that on his recent visit to the United States, Krishna Menon, India's goodwill ambassador, conveyed to President Eisenhower and Secretary Dulles a Chinese Communist ultimatum to the effect that unless the United States agreed to a conference dealing with Quemoy and the Matsus, those islands would be attacked immediately following the Big Four Conference. It is an educated guess that the Soviet leaders repeated this threat to President Eisenhower at Geneva.

At any rate, on August 1, just a week after the close of the Big Four Conference, the administration did what it had promised 5 months previously it never would do: It entered into direct negotiations with the Chinese Communists about questions that vitally affect the rights, territories, and interests of the Republic of China—without the participation of the Republic of China. Mr. Dulles announced that at the conference the United States would seek a cease-fire in the Formosa straits.

It thus appears that the administration will force Chiang to hand over Quemoy and the Matsus if it can obtain, in return, a Communist agreement to a cease-fire.

Now, let us be very clear about why a cease-fire in the Formosa Straits cannot possibly benefit the free world and is just another instance of appeasing communism. In Communist eyes, cease-fire agreements are made to be broken when it is advantageous to do so. From our point of view, such agreements are presumably made with the purpose of keeping them. Thus, in ordering Chiang Kai-shek to observe a cease-fire arrangement in the Formosa Straits, the administration restores precisely the situation that existed when President Truman ordered the Seventh Fleet to protect Communist China against Nationalist attack: The Communist regime is protected by the American Government. If such an agreement is signed, the Communists will be free to move their forces in any direction they choose—possibly to the south for another crack at the Malay Peninsula, possibly to the north for a renewal of the attack on South Korea, and possibly they will keep their main strength right where it is in preparation for a later attack against Formosa when the Communists feel they can move against the main Nationalist position without incurring American military opposition.

Moreover, a cease-fire will deal the forces of Chiang Kai-shek a mortal blow. Not only will free China lose—assuming Quemoy and the Matsus are thrown in as part of the deal—its advance bases for an attack upon the mainland; the Nationalists will be hard put to mount an effective defense against Communist attack. Chiang Kai-shek has always insisted—and who is to disagree with him?—that the moment his forces lose hope of returning to the mainland, the will to defend against Communist attacks will no longer exist.

Such is the record of the Eisenhower administration in its first 2½ years of office—a record of giving ground in every instance in which the Communists exerted heavy pressures against free world positions. It is a record of appeasement, retreat, and surrender in the pattern of the Truman administration—and it shows not the slightest sign of abating.

LIBERATION VERSUS AGGRESSIVE WAR

I think the best measure of the administration's appeasement policy is a comparison of the Republican Party platform in 1952—which presumably represented the original administration view of our objectives—with certain statements made by Secretary Dulles on July 26, 1955. The relevant plank of the Republican platform is as follows:

"We shall again make liberty into a beacon light of hope that will penetrate the dark places. That program will give the Voice of America a real function. It will mark the end of the negative, futile, and immoral policy of containment which abandons countless human beings to a despotism and godless terrorism, which in turn enables the rulers to forge the captives into a weapon for our destruction."

Those were the Republican views on liberation 3 years ago. Now let us listen to Mr. Dulles' discussion of the subject in 1955:

"There is no doubt that North Korea is a part of Korea, but the security treaty which we made with the Republic of Korea makes clear that the United States will not extend its protection other than to areas which we recognize as having been lawfully brought under the jurisdiction of the Republic of Korea and we do not believe that aggressive force is such a lawful means.

"There is no doubt but that North Vietnam is part of Vietnam, but we stated in connection with the Indochina armistice that we were opposed to any renewal of aggression to bring about the unification of Vietnam.

"Both the Republic of China and the Chinese People's Republic claim that the area held by the other is part of China. But in connection with the mutual security treaty which the United States made with the Republic of China, it was agreed that the Republic of China would not use force except as a matter of joint agreement."

In other words, attempts by the free peoples of Asia to recover their homelands are now defined by the Government of the United States—just as the Communists themselves define them—as "aggressive wars." What a mammoth betrayal of our fighting allies. What a monstrous perversion of international morality.

Let us test the administration's definition of aggressive war by some events of the past. The administration is saying that any attempt to achieve a rightful objective by force is aggressive and therefore wicked. But is not the American Revolution condemned by this definition of aggression? Our revolution was a resort to force in order to drive out tyrants and establish a free government. The reasoning of the Eisenhower administration would have prevented George Washington from undertaking offensive operations.

Or take the Civil War. Here is an even closer analogy to the Far Eastern situation. In 1861, the South seceded from the Union, and the question for the North was whether to resort to force in order to reunify the country, or permit permanent dissolution of the Union. As we compare that situation with the Korean problem today, let us note that in 1861 the cards were stacked in favor of the administration definition; for the moral position of the South was much stronger than that of the Communists in North Korea. The South had accomplished its secession peacefully and there was obviously no danger of the South attacking the North. And yet Mr. Eisenhower and Mr. Dulles seem to be saying that Abraham Lincoln committed an act of aggression when he employed force to keep the Union together. If the administration is prepared to stick by its present definition of aggressive war, then I am afraid our history books need an extensive job of rewriting.

Or take our position vis a vis occupied Europe during the Second World War. Is the Eisenhower administration now saying that the armies led by Gen. Dwight D. Eisenhower embarked on a war of aggression against Nazi Germany when they landed in Normandy in 1944? Probably not, but how is that situation distinguished from the one in the Far East today? The Nazis had conquered various countries by force, and the exiled leaders of those countries proposed, with American and British aid, to recapture their homelands by force. If the present administration position is the correct one, we should have desisted from forcible liberation. And let us not be put off by the argument that because an armistice has been signed in Korea and Indochina, the situation now is different. For France and Germany, in 1940, also concluded an armistice. Yet we left no stone unturned to persuade the

French people to resume hostilities and help us liberate their country. And there was very little talk emanating from General Eisenhower's headquarters about the United States being a "party to an aggressive war."

No, this talk about "aggressive war" in behalf of restoring freedom to captive Asiatic countries will not wash. Characterizing such liberation efforts as "aggressive wars" is simply an attempt to rationalize a weak, cowardly, and immoral American foreign policy.

UNITED STATES MUST PERMIT AND SUPPORT FREE ASIATIC OFFENSIVE OPERATIONS

One year or two years from now, it may be too late to liberate Asia. By that time the will and the capacity of the free Indochinese, the free Koreans, and the free Chinese to undertake serious military operations may no longer exist. Today, however, those nations have under arms a million and a half men ready and eager to attempt to liberate their homelands. Perhaps, they will be unsuccessful. But if there is a chance of success, it is morally and practically indefensible for our Government to prevent these nations from making the attempt.

At the present time the free Asiatic nations are in a position to launch a huge, three-pronged pincers movement against Communist China. It should be the policy of the United States to encourage the launching of such an attack. South Vietnam should be encouraged to attack North Vietnam; Free China, to cross the Formosa straits; and South Korea to move north from the 38th parallel. The free Asiatic countries should receive at least material and technical assistance from the United States.

There is every reason to believe that once the armies of free China have landed on the mainland, they will be joined by great numbers of the Chinese people. If the Korean war is a good precedent, desertions from the Red Army itself will occur in substantial volume. During the Korean war, over 90 percent of the Chinese soldiers who ended up in allied prison camps were deserters—men who chose freedom, at great personal risk, in preference to continuing to serve the Communist regime.

I am convinced that such a policy is the only alternative to an appeasement policy. In an ideological struggle of this sort, a static situation is impossible. This is a dynamic struggle in which we move either backward or forward. We can continue to give ground—to appease, to retreat and to surrender—as the Eisenhower administration has done, and the Truman administration before it; or we can start to gain ground. There is no middle course. Either the Communists will win or we will.

As I say, there is no guaranty that Asian wars of liberation will succeed. But the United States, in my judgment, cannot afford to miss what may be our last opportunity to defeat communism without the total commitment of American Armed Forces. The free Asiatic peoples want to fight. In justice to them, and in justice to the millions of American boys who will otherwise be called upon to sacrifice their lives in a total war against communism, we must permit and help our allies to carry the fight to the enemy.

Guilt by Association With Umbrellas

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PRICE. Mr. Speaker, one of the ways to find out what people are really thinking is to read the newspaper columns carrying letters to the editor.

The St. Louis Post-Dispatch recently carried a letter to the editor commenting on the amusing incident when, it is alleged, our distinguished Vice President made the President and Mrs. Eisenhower stand in the rain at the Washington airport upon their return from Geneva. Under permission to revise and extend my remarks, I insert the letter in the RECORD:

NO WONDER

To the EDITOR OF THE POST-DISPATCH:

To determine why Vice President NIXON banned umbrellas at the Washington Airport, because they might be regarded as a symbol of appeasement, let us apply the guilt-by-association techniques of the Eisenhower administration.

V. M. Molotov says that if he were an American he would join the Republican Party. President Eisenhower is a Republican. So, by association, Molly and Ike think alike?

More than 2 years ago, Adlai E. Stevenson advocated nonaggression pacts with Russia, and more conferences, to relieve world tensions. He was violently attacked by several members of the Eisenhower team and called soft on communism. Last week, at Geneva, President Eisenhower advocated, among other things, nonaggression pacts with Russia and more conferences to relieve world tensions. If Adlai was soft on communism, what does that make Ike?

In the 1954 congressional campaign, the Republican policy committee employed a faked recording in which a voice with a Russion accent said, "Vote Democratic—Moscow orders this." Now Ike reveals that Premier Bulganin, of Russia, has begged Ike to run for reelection. If, in 1954, a Moscow endorsement was bad, and the Republican policy committee wanted to vote against a candidate chosen by Moscow, how will you vote in 1956?

No wonder NIXON is nervous.

Mrs. JOHN B. CURRIE.
GREAT BARRINGTON, MASS.

A Review of the Social Security Amendments of 1954

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. REED of New York. Mr. Speaker, President Eisenhower has termed the old-age and survivors insuranse system of the Social Security Act "the cornerstone of the Government's program to promote the economic security of the individual." Since the inception of the social-security program in 1935, the Congress of the United States has enacted six bills making major amendments to the social-security system. The most recent of these was the social security amendments of 1954, Public Law 761 of the 83d Congress, which, in my view, made the most sweeping improvements in the program since its original enactment. One of the most gratifying experiences of my congressional career was to be the author of the social security amendments of 1954 and to serve as chairman of the Committee on Ways and Means at the time this legislation was being considered by the Congress.

It will soon be 1 year ago that the 1954 amendments to our social-security law were approved by the President. It is appropriate, therefore, that we should briefly review the broad scope of those amendments, consider their impact on the social-security program, and the contribution these amendments have made to the welfare of our people.

The principal provisions of the social-security amendments of 1954 may be enumerated as follows:

First. Old-age and survivors insurance coverage was extended to approximately 10 million persons who work during the course of the year in jobs previously excluded from the program. The result is that approximately 9 out of 10 jobs in paid civilian employment are now covered under social security.

Second. Social-security benefits were increased for persons on the benefit rolls, for persons who will retire in the future, and their survivors. The range of increases in primary insurance amounts was from $5 to $23.50 per month with comparable adjustments in survivors and dependency benefits.

Third. In computing average monthly wage, the total earnings on which benefits are computed and on which contributions are made was raised from $3,600 to $4,200. It was also provided that up to 5 years in which earnings were lowest or nonexistent could be dropped from the computation.

Fourth. The limitation on earnings of beneficiaries—the so-called work clause—was liberalized to permit a beneficiary to earn as much as $1,200 a year without any loss of benefit, and the age at which the retirement test would not be applicable was reduced from 75 years to 72 years.

Fifth. Under the disability freeze provision, the benefit rights and entitlement of an individual were preserved for the period of disability.

Sixth. An adjustment was provided in the schedule of contribution rates so as to insure continued actuarial soundness of the system.

Seventh. The temporary increase in Federal payments to States for public assistance was extended for 2 years through September 30, 1956, so that the benefit amounts of persons receiving public assistance would not have to be reduced.

Since the enactment of these amendments, I have received countless communications from farmers and other persons expressing approval of the extension of old-age and survivors insurance coverage to farm families and of the other improvements made in the system by the Social Security Amendments of 1954. These amendments eliminated many of the basic causes of instances of low benefits, so that an individual's benefit level will more realistically reflect the individual's earnings on which he customarily depends for his support. The important improvements made in the old-age and survivors insurance system by the 1954 amendments have done much to remove inequities that were existing in the system and to make the program more adequately serve its intended purpose.

A review of comparable statistics for May 1954 and May 1955 indicates the tremendous growth in the social-security program that has occurred since the enactment of the 1954 amendments. In excess of one million new beneficiaries have been added to the benefit rolls in that short time. In May 1954 there were 6.4 million persons receiving old-age and survivors insurance benefits; in May 1955 the number of beneficiaries had increased to 7.4 million persons. Monthly benefit payments have increased from $275 million in May 1954 to $377 million for a comparable period in 1955. The average primary insurance benefit received by a retired worker has increased from $51.72 per month to $60.85 per month. The number of people covered by old-age and survivors insurance working in a particular week has increased from 45.7 million persons in 1954 to an estimated 54 million persons in 1955. Despite increased benefit payments, the assets of the old-age and survivors insurance trust fund has increased from $19.6 billion in 1954 to $20.7 billion in 1955.

These statistics clearly reveal the increasing importance of the old-age and survivors insurance program in protecting our American citizens in their old age and upon the untimely death of the principal family provider.

I have taken the time of the membership of the House to set forth the recent gains that have been made in our social-security program because I realize the tremendous interest there is in this program on the part of the people of our Nation. It is my hope that with careful study and prudent planning we can accomplish further improvements in our social-security program.

The Los Angeles County Senior Citizens Service Center

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. KUCHEL. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement prepared by me on the establishment of the Los Angeles County senior citizens service center.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, there is now pending in the Senate Committee on Labor and Public Welfare a bill, S. 693, introduced by the distinguished Senator from Michigan [Mr. PORTER] and a great many other Senators, to establish the United States Commission on the Aging and Aged.

I was honored to be asked to be one of the authors of this measure. I feel rather confident that the proposal to establish such a Commission will receive favorable consideration when the Congress returns next January.

Such a Commission, in my opinion, will perform a magnificent service to our country and to our society through focusing enlightened attention on the problems of our older citizens and on programs for the solution of those problems. In this connection, I am happy to report that one of the great communities of my State, the county of Los Angeles, has recently taken a great new forward step of its own in this very field. I refer to the establishment of a senior citizens service center, where older people of the community may seek and obtain information and counseling in a single place on the various problems which come up in their personal lives.

Ten years ago, in order to assist several hundred thousand veterans returning from World War II to reestablish themselves in civilian life, the county established a veterans' service center. This continues to service the day-to-day problems that inevitably occur in so large a group.

In a county of 5 million people, the group described as "senior citizens" is also of considerable size. Many of these citizens are alone. Occasions arise when they need to seek advice, information and assistance. The county board of supervisors felt that if these older citizens could turn to one central place, it would lighten their problems by the very fact that they would be simplified.

The senior citizens service center will be under the direction of the man who has directed the veterans' service center since it was founded, Mr. Arthur Tryon. The cost will be small. A small staff will be augmented by volunteers, older people themselves whose active minds necessitate their keeping busy at something useful and helpful.

The plan is set forth in a letter from Mr. Arthur J. Will, the chief administrative officer of Los Angeles County, to the board of supervisors, as follows:

"The proposal closely parallels the veterans' service center, instituted some 10 years ago to provide a central information, counseling and referral service for war veterans in the Los Angeles area. The outstanding contribution of the veterans' service center has merited nationwide acclaim. It is now proposed that the same concept be established for the needs, guidance and counseling of the aged, as well as those community organizations devoted to the same purpose.

"The senior citizens service center would be under the general direction of Mr. Tryon, chairman of that committee, who is in the position of old-age counselor, without compensation (bureau of public assistance). Adequate quarters are available in the presently leased space at 306 West Third Street, on the floor immediately below the veterans' service center. This would permit the use of the receptionist and the telephone services already available in the veterans' service center, and more particularly, the benefit of experience resulting from the continuous supervision of Mr. Tryon, who also serves as executive director of the veterans' service center.

"The proposal offers one of the most promising and tangible ideas yet advanced for assisting the aged, and for integrating, coordinating, and providing a central clearing house for all community agencies participating directly or indirectly in the same problem. It is proposed that the program be initiated on a modest scale so as to permit a flexible operation capable of adjustment as the needs arise. The following gives some idea of how the program will develop:

"1. The superintendent of charities, who is directly concerned with the aged and their employability, will immediately assign a nucleus of approximately six positions, thereby permitting concentration of such departmental activities in a logical and central place.

"2. The California Department of Employment will assign personnel for assisting in the placement of aged persons.

"3. The A. F. of L. and CIO will maintain representatives.

"4. The city and county recreation departments can from time to time provide recreation counseling and advice for community agencies and for aged clubs and groups who are developing recreation programs geared to this segment of our population.

"5. The Legal Aid Foundation will provide services.

"6. The schools can participate in offering advice and counseling on adult education programs suitable for the aged. The county superintendent of schools will assign one person to the center.

"The program will be developed through the full use of cooperating agencies and personnel. Conferences have been held with a few carefully chosen community leaders and officials of community agencies. All have endorsed the plan of the senior citizens service center and have pledged their enthusiastic support to such an activity. Many have volunteered the statement that the proposed center appeared to be the most economical and down-to-earth approach to meeting the problems of the aging, which service was desperately needed in Los Angeles County."

Record of the 1st Session of the 84th Congress

EXTENSION OF REMARKS
OF
HON. GRACIE PFOST
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mrs. PFOST. Mr. Speaker, for the benefit of the people of Idaho, and particularly those of the First Congressional District, I would like to sum up the record of the 1st session of the 84th Congress and my part in it.

A Democratic Congress worked in comparative harmony with a Republican President—in sharp contradiction to the political cold war that was forecast. The legislative record shows that in most instances Democrats supported the President's foreign policy to a greater extent than did the members of his own party. On domestic issues, Democrats supplied the winning roll-call votes in almost every case where the Eisenhower program was enacted. Two of the President's major legislative requests—his trade and public housing programs—were passed only because the Democrats came to his rescue. A majority of House Republicans voted to kill both of them.

We Democrats sincerely tried to give the President's requests fair, just, and reasonable consideration. I know that I approached every piece of legislation recommended with a "What's best for the people?" and a "What's best for Idaho?" attitude. Our job—my job—was made easier, I must confess, by the fact that much of the Eisenhower foreign policy and part of his domestic policy has been taken lock, stock, and barrel from Democratic programs.

On the other hand, the Democrats maintained a responsible, constructive opposition. We vigorously opposed

those moves and measures which ignored the common good. We successfully fought the infamous Dixon-Yates giveaway—and I predict we will fight the Hells Canyon giveaway to an equally successful finish. And although we increased the President's budget requests in a number of instances—for medical research on cancer and arthritis, and for school lunches as examples—we proved a good friend to the taxpayer by cutting the President's over-all budget requests on unnecessary items by $1.8 billion—a substantial savings.

IN THE PEOPLE'S INTEREST

I believe we Democrats demonstrated again this session that we are the party of the people—of the workingman and woman, of the farmer, of the small-business man.

First. Social security: Democratic-sponsored amendments to the Social Security Act passed by the House will benefit over a million deserving women by allowing them to draw old-age and survivors benefits at 62 instead of 65. Other amendments allow disabled workers to draw benefits at 50, continue disabled dependent children's benefits after they are 18, and extend coverage under old-age insurance programs to certain professional groups. The Senate will consider the amendments next session.

Second. Taxes: We Democrats tried to reduce taxes for the smaller income groups. A $20 reduction was passed by the House but administration disapproval killed it in the Senate.

Third. Minimum wage: Over the opposition of the administration, the minimum wage was increased from 75 cents to $1. The administration held out for only 90 cents. Employers who hire less than six people are exempt.

Fourth. Farm legislation:

With dairy and other farm income down for the third year in a row, I supported the bill passed by the House and opposed by the administration, to restore high, rigid price supports for all basic commodities. The Senate did not act on this bill. I am seriously concerned about the deepening farm recession.

This session also passed a bill to place a ceiling on disaster-loan interest rates at 3 percent instead of the 5 percent set by Secretary Benson. Legislation was enacted to increase farmer ownership of the farm-credit system, and to modernize the REA loan allocation system. I am also glad to report that a bill was passed to prevent speculation in onions, one of Idaho's important crops.

Fifth. Small business: This session of Congress extended the Small Business Administration for 2 years, and increased its revolving fund. The SBA has approved more than 1,700 loans to small business in the gross amount of $87 million. A bill was also passed by the House to curb the influence of bank holding companies.

GOOD SESSION FOR THE WEST

This has been a relatively good session for the West. I had an opportunity to serve Idaho and other Western States as chairman of the Public Lands Subcommittee of the House Interior and Insular Affairs Committee. This is a particularly valuable assignment for an Idahoan, since public lands comprise almost 68 percent of the State. This session my subcommittee considered 64 bills and reported 23. Sixteen were passed by both the House and the Senate.

First. Sugar: I was one of the sponsors of the bill the House passed to change sugar quotas. Under this measure, Idaho sugar beet farmers—and all American sugar producers—will be able to plant a reasonable acreage of the crop so essential to their operations. I regret that the bill was stalled in the Senate.

Second. Mining: I also authored a bill to extend scheduled termination dates of the domestic minerals purchase program for tungsten, manganese, chromite, mica, asbestos, beryl, and columbium-tantalum-bearing ores, which would have stabilized the industry for some time. Because of positive assurance of a Presidential veto, I reluctantly settled for a compromise which Administration spokesmen led us to believe the President would sign. The compromise bill merely increased quotas, but kept scheduled termination dates. The bill passed both Houses, but when it reached the White House it was vetoed.

Third. Hells Canyon:

As the principal sponsor of the Hells Canyon bill in the House, it was a red-letter day for me when hearings were opened in the Irrigation and Reclamation Subcommittee of the House Interior Committee, of which I am a member. A number of Idahoans came East at their own expense to testify. In spite of heavy lobbying by the Idaho Power and other power companies, the bill was favorably reported by the subcommittee shortly before adjournment, and on a straight party vote—Democrats for, and Republicans against. A Senate subcommittee took similar action

The bill was therefore ready for full House and Senate committee consideration when Congress reconvenes in January. Hells Canyon legislation had never been so far along toward passage before. Yet the Federal Power Commission with ruthless haste awarded the Idaho Power Co. a license to build three low, single-purpose dams in the Hells Canyon stretch of the Snake River. The fight for the high dam is far from over, however. We who believe in the full development of our natural resources for the benefit of all of the people are not giving up. In the end the people's interest will prevail.

Fourth. Public works: Starts on a large number of projects not requested by the administration were written into the public-works appropriation bill by the Democratic Congress. A million-dollar start was authorized for Ice Harbor. This is the first Federal dam on the lower or middle Snake River. Among other projects on which long-delayed work can now begin are the Yellowtail Dam in Montana, and the Hills Creek Dam and Coos Bay projects in Oregon.

IMPORTANT ACCOMPLISHMENTS

This Congress passed a number of other bills which will give assistance to those who need and deserve it.

First. Veterans and servicemen: The direct VA loan program was extended for 2 years, and broadened to include home improvements. The same benefits were extended to GI farmers. Disabled veterans were given until October 1956 to apply for the purchase of special automobiles, and this privilege was extended to veterans of the Korean conflict. Legislation was enacted to permit men and women in the service on January 31, 1955, to continue to build up GI school benefits.

Second. Pay adjustments: We Democrats were successful in winning a fairer pay increase for both Federal and postal employees than was recommended by the administration. As a member of the House Post Office and Civil Service Committee, I was in the middle of both pay raise fights—on the side of the employee. I voted against any increase in my own salary, however.

Third. Retirement: Bills were enacted to liberalize benefits to railmen's wives and widows, and to give a cost-of-living increase to Federal retirees and survivors. Both were well deserved.

Fourth. Conservation: Conservationists do not have as much to cheer about as I had hoped they would, but this session of Congress passed a bill releasing $13½ million of earmarked wildlife funds that had been tied up in the Treasury for 10 years, and also increased by 10 percent the appropriations for the Fish and Wildlife Service, the Forest Service, and the Soil Conservation Service.

THE CHALLENGE AHEAD

Much yet remains to be done in the 2d session of the 84th Congress. A satisfactory way must be found, for example, to finance the highway program. The President suggested a special bond issue which would have cost the taxpayers $11 billion in interest. A bill was brought to the floor of the House which called for financing the highway program by pay-as-you-use taxes, but it was defeated. We seriously need more and better highways, particularly in the West, so I hope a satisfactory highway bill can be worked out early next session.

Our schools must also have help. For the first time in history a school construction bill cleared a committee of the Congress this session. The bill provides for a 4-year program of grants to help States meet the crucial classroom shortage. Idaho would receive $1¾ million a year, or $7 million over the 4-year period. An attempt will be made to bring the bill up for action as soon as the new session convenes.

A bill should be passed to move agricultural surpluses out of warehouses and on to meager American dinner tables. It doesn't make sense to have food wasting in warehouses while many Americans suffer from a substandard diet.

There are many other problems—taxes remain high, the cost of living remains high, and farm income is down approximately 30 percent. We Democrats will continue to give careful consideration to any remedies the administration offers for any of our problems—and to offer remedies of our own. We will support the President when we believe his pro-

posals are in the people's interest, and vigorously oppose those proposals which would benefit only the privileged few.

We have demonstrated we are not blinded by partisanship. We are not giving our enemies an opportunity to say that a Republican President and a Democratic Congress have divided and weakened America. We know that the President's program cannot be successful without the Democratic Party.

Whether the world has moved toward peace in the past few months—only time will tell. We all pray that the apparent change of heart and the willingness of the Soviet leaders to negotiate is sincere. But we must not pin all of our faith in these developments. We must continue to take every practical step to keep the free world strong—we must not be lulled into a false sense of security.

Fair Trade

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 2, 1955

Mr. MARTIN of Iowa. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me on the results of one business leader in the fight for fair trade.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Recently the Senate Small Business Committee took official notice in its weekly staff report of the activities of one of the leaders in the fight for fair trade. Those who believe the repeal of fair trade would deliver a hard blow to the small retailer should be encouraged by the results of the Sheaffer Pen Co.'s drive to enforce fair-trade merchandising of its products. The pen company's experience seems to show that a national brand manufacturer can prevent illegal price cutting of its products without losing sales volume.

Last year the Iowa company intensified its efforts to enforce resale price maintenance of its products and declared all-out war on price cutters of Sheaffer pens. Detective agencies and shopping services were retained to check retailers suspected of bootlegging pens and pen products and all dealers throughout the country were warned that retail discounting of Sheaffer merchandise would not be permitted.

In the past 18 months, this company has cut off 650 retail outlets for price cutting, has started legal action against 397 discounters, has obtained fair-trade injunctions against 54 and fair-trade agreements from 230 retailers otherwise faced with legal action. Thus, fair-trade violations have been reduced to a trickle," the company said.

The pen company has spent nearly $1,500,000 in a year and a half in its fair-trade drive. In that time sales have risen steadily. Net sales for the fiscal year ended February 28, 1955, were $27,072,821, an increase of 7.6 percent over the preceding year. Some of the gain is attributed by the company to the increased support of retailers in appreciation of the Sheaffer fight for fair trade.

This successful experience of one company should be heartening to the many thousands of small, independent retail stores throughout the Nation who still refrain from joining in vicious price-cutting practices, which, in the end, are competitively harmful to everybody, even the discounter himself.

Help the Consumer

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DAVIDSON. Mr. Speaker, I have introduced House Resolution 220 to establish a select seven-man committee of the House to study the problems of consumers. It is my belief that such a study is absolutely necessary. The study I propose would include consideration of all the problems confronting consumers today. The committee would give particular attention to advertising methods, the effectiveness of the Federal Trade Commission and the need for a permanent Federal agency for consumers.

As we all know, the Government maintains vast departments devoted to labor, agriculture, and business. Nowhere, however, is there any comparable agency which is concerned with the consumers' welfare. Who is there to speak on behalf of all the consumers when Congress considers legislation affecting their interest? Who speaks up for the consumer at Presidential Cabinet meetings? No one. Which agency of the Government provides information and assistance to consumers? None. What Federal efforts are being made to protect, inform, and help the consumer? Very few, I am sorry to say.

Not only is there no adequate governmental service available to consumers, but the lack of it is highlighted by the vast Federal agencies devoted to all the other major economic groups found in American society.

Let us consider only one field where such a Federal agency could be of service. Here in Congress in the necessary course of all legislative proposals, each bill, following its introduction, is referred to a committee. There it remains unless the Member who introduced it contacts the chairman of the committee and requests that the usual reports from the interested administrative agencies be obtained. This is an absolutely essential step in order to obtain any sort of consideration for the measure. The committee then requests the reports. Nowhere in the Federal Government can any congressional committee obtain a report as to the effect of a bill on the consumers or secure an administrative opinion on the needs of the consumers. Where can we go to get some plain information on the consumers' interest? I submit that there is no Federal agency in existence at this time which is in a position to supply this data and information. I do not mean that critically. No agency is charged with that responsibility directly, although the Federal Trade Commission does have a bureau where members of the public can go when they have been sufficiently aroused to file a complaint.

We have recently held extensive hearings on a subject of vital concern to the consumers: Federal regulation of natural gas producers. Many witnesses appeared and testified that the consumers need continued Federal control and protection. Has any agency of the Federal Government reported to the committee that this is the case? Has any agency of the Federal Government testified to that well-established fact? I think not.

As further indication of the present compelling need for the establishment of a consumers' department we need only look at any edition of a newspaper or tune in certain radio and television commercials to find an abundance of misleading bait advertising.

Would you like an aluminum combination storm and screen window, triple section, heavy gage, satin finished, and made of all extruded aluminum? A Philadelphia newspaper carried an advertisement for such a window priced at $9.95. New York newspapers, television, and radio advertisements have offered such windows for as little as $7.50. Baltimore and Boston have also been plagued by similar bait advertisements.

I challenge anyone to buy this window. An attempt to do so will be met by a fast-talking salesman's spiel that "there is a 3 months' factory delay for this window, installation charges, and special carpentry will be over $10 for each window; no guaranty goes with this window and it needs to be scrubbed with steel wool weekly; it will rust and corrode; but this other window, selling for $32.50, is available immediately and with a guaranty, not for years, not for a lifetime, but forever." The fact that the company offering the window has been in business only 6 months is not mentioned.

Perhaps it is uranium stock you would like. Offers abound in public advertisements. Each company is, of course, actually producing and the stock sells for only 5 cents a share. Sure the company is producing. It is producing profits for the promoters. Even the New York Stock Exchange is alarmed by the rash of these fake promotions.

Have you ever been in the unfortunate position of having to answer the advertisement for a funeral complete for $100? Yes; it is "complete." There are only a few extras, such as cards, potted palms, chairs, pallbearers, plot, lowering charge, and several other incidentals which bring the cost up to $500; and for this fee you do not get much more than the simplest pine box.

Are the bereaved even able to think about these incidentals so casually mentioned? Certainly they cannot. Not until payment is demanded—and then, it's much too late.

The housewife is confronted with her usual multitude of problems, but generally overlooked is the poultry inspection situation. Most meat is inspected and stamped by United States inspectors, but not poultry. Only about 20 percent of

commercially slaughtered poultry is inspected under voluntary arrangements. The other 80 percent may be in any condition from fairly clean to disease-ridden, tubercular birds, slaughtered under filthy, unsanitary conditions.

A recent advertisement in the cautious New York Times points up the extremes to which bait advertising and gimmick selling have gone. According to this advertisement you can now purchase for only $17.85, a special phonograph record brush which "operates on an extremely simple nuclear principle." This is the atomic age and the high pressure sales promotions are part of it.

The Nation is being deluged by outright phony and fraudulent offers to sell just about anything. Scandals have been uncovered in garden seedling sales and in sewing machines, stocks and bonds.

Automation, wtih adequate planning, can create more goods for a better life. But the innocent consumer will still have to figure out which is the legitimate offer and which the baited trap.

Local district attorneys, States' attorneys, and the better business bureaus are doing an outstanding, but unfortunately inadequate job in this field. The better business bureau can point out the evils. The county district attorney has his hands full with increasing crime. The States' attorneys are equally burdened by the tremendously growing case loads and the same size staff.

As an indication of the extensive bait advertising uncovered by the better business bureau, this pointed statement, contained in the May issue of the New York City bureau's Monthly Memo, is most succinct:

> Unfortunately, we still have some advertising appearing in newspapers and on radio and TV offering aluminum storm windows installed for less than $8, reupholstery of living-room furniture for $59, vacuum cleaners for $12, and electric sewing machines for $23. Everybody loves a bargain, but when the facts reveal that these low-priced items cost the advertiser more than the advertised price and can only be sold at a loss, it takes no mental giant to conclude that these highly ballyhooed offers are insincere and are made solely for the purpose of getting leads to sell much higher-priced models of the same kind of product.

It is time for all the facts to be exposed, prices and monopolistic practices vitally affecting consumers are mounting. In many fields the consumers' interest is entirely overlooked. Distribution practices and the quality of basic foods constitutes such an area. The poultry situation has already been mentioned. In addition, the cost of milk to the consumer remains virtually static while the return of the farmer goes down. Where does the difference go?

A great many more examples could be cited. However, the need for the proposed study is clear, I believe. The knowledge and information to be gained is sorely needed. The increase in public information would be most helpful. The consumers are entitled to know where their dollars go. I respectfully urge the adoption of my resolution.

Accomplishments of the Select Committee on Survivor Benefits

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HARDY. Mr. Speaker, under unanimous consent previously granted, I present for printing in the RECORD a statement of the work accomplished by the Select Committee on Survivor Benefits during the present session.

As chairman of the committee, I am proud of the record which has been made, and I desire to express my appreciation to all of the members of the committee whose cooperation has made this record possible. In addition, I would like to express the committee's appreciation to the several Government agencies who have cooperated consistently with the committee, and the veterans' organizations who likewise have demonstrated a spirit of cooperation with the committee and a genuine desire to be helpful.

On June 28, 1955, our committee reported to the House, H. R. 7089. House Report No. 993, 84th Congress, 1st session, accompanied this legislation.

The committee's report in considerable detail comments on the many provisions of the commmittee's bill. It will not be my purpose, in this summary for the RECORD, to attempt to paraphrase the committee's report, but rather to highlight again certain provisions of the committee's bill that demonstrate its fiber and tenor.

The work of the select committee was begun in the 2d session of the 83d Congress. Because of time limitations the job could not be completed, but under the able leadership of my colleague from Massachusetts [Mr. BATES], a firm foundation was laid for the activities of the committee that was recreated by the present Congress.

The purpose of the committee was to attempt to bring some order to the present confused survivor benefits picture. The combination of laws today represents a hodge-podge which in practical application results in many cases of actual hardship and in serious inequities which offend the sense of justice.

At the present time there are seven standing committees of the House that have jurisdiction in the field of survivor benefits for Armed Forces and former Armed Forces personnel. This select committee, by its resolution, having been authorized to report legislation, has attempted to bring into focus all existing survivor benefits, and by consolidation and coordination make of the present hodge-podge an orderly package of survivor benefits which is equitable in its practical application.

The five major survivor benefits which exist today are:

First. Six months' death gratuity.

Second. Servicemen's indemnity of $10,000.

Third. Veterans' Administration compensation.

Fourth. Social security.

Fifth. Federal employee's compensation.

In the committee's bill the 6 month's death gratuity is continued. At the present time where this payment is based on 6 months' basic pay, plus special and incentive pays, the survivors of enlisted men are receiving a minimum payment of $468, while survivors of high ranking officers are eligible to receive a maximum of $7,656. The committee's bill provides that the minimum payment in the future will be $800 and the maximum payment $3,000. This will provide for larger benefits for the lower enlisted grades, and will curtail somewhat the excessive payments in the higher ranks.

The servicemen's indemnity of $10,000 is currently paid at the rate of $92.90 per month for a period of 10 years and then abruptly ceases. The committee proposes that this be discontinued and these payments in the future be replaced by higher VA compensation. In so doing one of the five existing programs would be eliminated.

At the present time VA compensation rates are set at a fixed dollar amount for certain classes of beneficiaries, with income limitations considered for some, but not all, and rate differentials for deaths occuring in peacetime and wartime.

The committee's bill proposes that for widows the compensation be a base of $112 per month plus 12 percent of the basic pay of the serviceman. Under this formula the minimum payment to a widow would be $122 per month and the maximum payment $242 per month. At the present time, under VA compensation, the monthly payment for a wartime death is $87 and $69.60 for a peacetime death. The committee's bill provides for certain upward adjustments in compensation payments to children only and dependent parents.

With regard to dependent parents, there is currently an income limitation which if exceeded precludes the parents from receiving any VA compensation. If the income of the parent is slightly less than this statutory maximum the full benefit is receivable. The committee in attempting to overcome this "all or nothing" philosophy provided a sliding scale of benefits. Under this provision, as the parents' income increases, VA compensation decreases. Thus, a parent could receive in income an amount greater than the present statutory limitation and continue to receive some VA compensation on a reduced basis.

At the present time all men in the Armed Forces are being provided with a constructive social-security wage credit of $160 per month. This gratuitous wage credit has been retroactively granted since September 15, 1940, and is currently in effect. There have been no contributions to the OASI trust fund for these credits, but the Federal Government has a moral, if not legal, obliga-

tion to the trust fund for reimbursement of benefits expended by virtue of this $160 wage credit. To date no funds have been appropriated as reimbursements to the OASI trust fund. The present amount accrued will approximate three-quarters of a billion dollars.

The committee did not deem it appropriate or financially sound to continue indefinitely the granting of gratuitous wage credits to Armed Forces personnel.

In its bill the committee recommends that all Armed Forces personnel be placed under social security on a contributory basis.

Under existing law, survivors of certain reservists have the right of election to receive either Federal Employees' Compensation Act benefits or VA compensation. Only survivors of reservists have this right of election. Since 1949, when FECA benefits were significantly increased, the survivors of thousands of reservists have elected the benefits under FECA, which were considerably in excess of benefits to which they would have been entitled under VA compensation.

This disparity in treatment of Armed Forces survivors offends one's sense of equity.

The committee's bill provides that extension of FECA benefits to certain Armed Forces personnel be terminated.

There are other provisions of the committee's bill which we feel do much to remove certain inequities and to provide a more uniform and concise survivor benefit package for Armed Forces personnel than exists today.

Under the provisions of the committee's bill no person today receiving compensation payments from any source will experience a reduction in his present survivor benefits. Those on the rolls today will have the right of election to the higher benefits provided under the committee's bill.

As to cost, the proposed legislation for the first 8 or 10 years, by providing the right of election, may prove to be somewhat more costly than existing legislation. However, by placing all Armed Forces personnel under social security on a contributory basis, where the serviceman himself as an employee will make a monthly contribution, it is projected that within 8 or 10 years the cost to the Federal Government of the proposed survivor benefit bill will be less than the cost of legislation on the books today.

There are today approximately 465,000 cases on the various death compensation rolls. The annual expenditure required of the Federal Government approximates a half billion dollars.

In closing, I would like to emphasize the thoroughness with which the committee considered the legislation which was reported. In the present session the committee met 57 times, holding 29 public hearings and 28 executive sessions or hearings. I am of the opinion that the committee's bill represents a composite of the thinking of the best available talent on the subject of survivor benefits both within and without the Government.

My colleagues, Mr. KILDAY and Mr. BATES, with me are members of the Armed Services Committee and we have long been interested in the subject of survivor benefits for Armed Forces personnel. Certain inequities which exist have been a source of concern to us. Therefore, it was gratifying to me to have an opportunity to serve with them on a select committee created exclusively to deal with this subject.

As chairman of the select committee I felt extremely fortunate to have as members, in addition to Mr. BATES and Mr. KILDAY, our very able and distinguished colleagues, Mr. TEAGUE of Texas and Mr. KEAN of New Jersey. Mr. TEAGUE, currently chairman of the Committee on Veterans' Affairs, brought us his wide experience in the field of veterans' legislation, and Mr. KEAN, a ranking member of the Committee on Ways and Means, added his vast store of knowledge on the subject of social security.

The task assigned the committee was an extremely difficult one, but I feel that the committee has accomplished its assignment. The committee's bill passed the House on July 13 and is currently pending before the Senate Finance Committee. It is our hope that favorable action will be taken by the other body of the Congress early in the 2d session of the 84th Congress.

Secretary Ezra Taft Benson's Ordeal

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. BROWNSON. Mr. Speaker, I would like to have included into the RECORD the following editorials from the Denver Post entitled "Ezra Benson's Ordeal," in four installments.

The Post's discussion of the farm problem is a complete one and presents very ably the Eisenhower administration's new farm program:

EZRA BENSON'S ORDEAL—I

Ezra Taft Benson, the Secretary of Agriculture and a man of courage and principle, is marked for political obliteration.

Mr. Benson is being zeroed in for the attack of 1956. The Democrats and their allies, from the National Farmers Union to the CIO, are mounting an assault on the Eisenhower farm program. The objective will be the Presidency, of course. The tactics will revolve about an appeal to the discontented and fearful noncommercial farmer, who will be described as a human sacrifice to corporate agriculture.

The weapons in this campaign against Mr. Benson and his policies will be statistics:

"Prices received by farmers have dropped 22 percent since their high point in 1951. * * *

"The net income of farmers has dropped 13 percent in the past 2 years.

"Farmers alone are no better off than they were before World War II.

"The Republican Party, the author of flexible price supports, is forcing farmers into an agricultural depression.

"Benson's real (though secret) objective is to wipe out all price supports, after having obtained 'full flexibility'."

The Secretary's enemies are already charging him with the "failure" of his "2-year experiment with the sliding scale theory of price supports." They are indicting him for bankruptcies in the dairy industry, for increases in the farm mortgage debt, for incurring unnecessary losses to the Government on price support operations.

Just this week an adviser to Mr. Benson told a Massachusetts farm audience that the postwar decline in farm income was an emergence from "a dream world, and no one expected it would last." A Democratic Senator, JOE O'MAHONEY, of Wyoming, seized on that as an issue which may "turn the scales in 1956."

Critics of the present administration acknowledge that "Eisenhower prosperity" is a modern phenomenon. But, they say, "In this pleasant sea of well-being, agriculture is an island of pessimism, hardship, and general discontent. For farmers, 1955 is a year of real depression."

So Mr. Benson and his farm policies are the handles on the otherwise less-than-vulnerable Eisenhower administration. And it is with those handles that the Democrats hope they may dislodge Republicans—if not Ike himself, then lesser candidates for State and National offices.

Ezra Benson himself has shown no inclination to run, to equivocate or to trim his sails. He survived the elections of 1954 amid rumbling threats to restore high and rigid price supports (threats that did not materialize). For Mr. Benson believes that the other side of the debate on farm policy, his side, will stand the test of public scrutiny.

What is the "other side"? What is the "whole story"? We'll discuss that tomorrow.

EZRA BENSON'S ORDEAL—II

Those who are trying to pin responsibility on Secretary of Agriculture Benson for a 22-percent drop in farm prices since 1951 conveniently neglected to mention 2 facts. The first is that the so-called high of 1951 coincided with the Korean war—a war which, since that time, has been mercifully brought to a halt. The second calculated omission is this: Almost two-thirds of the drop in farm prices took place between 1951 and January 1953—the year that Mr. Eisenhower (and Mr. Benson) took office.

The parity ratio, which describes prices received by farmers against those paid for goods and services, dropped from 113 in February 1951 to 94 in January 1953. Right now it stands at 84. In the last year that ratio has hovered within a range of 84 to 87, suggesting the first stability since 1951.

Does this drop in farm prices, plus an alleged 13 percent decline in the net income of farm people, foretell an economic collapse throughout the country? That would depend, it seems to us, on other important factors. For example:

Total agricultural production this year may break all records. While prices will average below those of 1954, that loss may be entirely offset by increased marketings and lower costs of production.

As to the charge that farmers' take-home pay has slumped to pre-World War II levels, that is nonsense. Per capita net income of farm people was $930 in 1952, $904 in 1953 and $907 in 1954. (The estimates for 1955 are not yet available.

During the 5-year period just before World War II, per capita income of farm people was one-fourth to one-third of today's levels, or from $200 to $300 a year; and that difference, even when adjusted in terms of present inflation, hardly confirms the claim that the farmer is the abused class in American life.

Figures other than those picked out to illustrate upcoming calamity suggest that American agriculture is not likely to sink into ruin tomorrow. Farm real-estate valu-

ations jumped by 2 percent from 1954 to 1955. Farm debts are only 11 percent of farm assets, as compared with 19 percent in 1940 and 21 percent in 1930. The average equity of farm families (meaning total assets minus debts) is fixed at $22,000, or about $5,000 higher than the comparable figure for nonfarm families.

Finally, it should be recalled and repeated that the major factor in the reduction of agriculture's total income has been the decline in farm prices—two-thirds of which took place before flexible support prices came into effect, and before the present administration moved into Washington.

How, then, can the so-called agricultural depression complained of be attributed to the present administration's policy of forcing farm prices down? Obviously, it cannot.

It is Mr. Benson's contention that the accumulated weight of some $7.5 billion worth of farm commodities, owned outright by the Government under price support, forced down farm prices in the United States. Those surpluses, consisting largely of wheat, corn, and cotton, were amassed under a program of rigid supports at 90 percent of parity.

Mr. Benson insisted in 1954, and holds to the position now, that "the program which got us into this mess would never get us out." The record proves, in our opinion, that he is right.

What about this rigid versus flexible price-support fight? Is the present administration actually "father" of the idea? We'll discuss that tomorrow.

EZRA BENSON'S ORDEAL—III

The high priests of high and rigid farm price supports who preach that the evil plan of flexibility was a creation of the Republican 80th Congress, are gambling that the miserable memory of the American people will remain that way—unremedied. But, for the record—

We had flexible price supports before World War II. They ranged between 52 and 75 percent of parity. Wheat was supported at 52 percent of parity in 1938, 56 percent in 1939, and 57 percent in 1940.

In 1948 the platforms of both parties endorsed flexible price supports. Mr. Harry S. Truman in fact recommended flexible price supports to that same "worst" 80th Congress which approved it. And Mr. Truman said at that time:

"Now we must look ahead to a farm price-support policy geared to our improved farm economy. Many shifts in production will have to be made, and flexible price supports will help us make them in an orderly manner. * * *"

The leaders of all farm groups favored flexible supports in 1948. Congress approved the act of that year, but postponed use of the flexible-support provisions for 2 years. (Subsequently the date when such supports were to become effective was extended to 1955.)

There has not been a Secretary of Agriculture for 20 years who did not, at one time or another, favor flexible supports. They include Henry Wallace and Clinton Anderson (who still favor such supports, by the way); Claude Wickard and Charles Brannan.

So why this great cry of anguish over the sudden imposition of flexible price supports, that hideous device to squeeze the profits from little farmers and force them into vassalage of the corporate farming system?

It was not until this year that Mr. Benson had any authority to reduce supports at all, and especially on the basic crops. When he did belatedly receive that authority, he fixed support on cotton, peanuts, and tobacco at 90 percent, corn at 87, rice at 85, and wheat at 82½.

And what happened to the dairy industry after Mr. Benson dropped support prices on milk and butterfat to 75 percent of parity in the spring of 1954? Critics of the Benson program complain that "dairy farmers received 8 percent less cash in 1954 than the year before—for 3½ percent more milk." And, they complain, sales of butter for consumption increased by $42 million over 1953, but reduced prices cost dairy farmers 10 times that much.

But Ezra Benson can justify the application of the sliding scale theory in dairying, without hesitation or apology. Per capita consumption of butter climbed 6 percent in 1954–55, reversing a trend the other way. The consumption of cheese climbed 10 percent.

Since the end of July, last year, the Commodity Credit Corporation stocks of dairy products were reduced by 50 percent; and CCC purchases of butter during October–July were 56 percent below those of the same period the previous year.

It is confidently expected that by the close of the 1955–56 marketing year, the holdings of butter, nonfat dry milk and cheese will be modest. And in the all-important matter of the "milk-feed price ratio—the relationship of milk prices to feed prices," the July 1955 crop report of the USDA said: "In July the milk-feed ratio was 3 percent above average, 9 percent above a year earlier, and as favorable as any for July in the last decade."

Today the USDA insists that the farmers have culled their low-producing cows; that there are fewer cows in dairy herds than a year ago and the herds are producing more milk per cow. The result has been that more people are using more dairy products; and the dairy industry is less dependent upon the accumulation of mountains of stored dairy products in costly Government and leased warehouses for its solvency and future prosperity.

What is the genesis and the goal of the get-Benson campaign and why? Discussion of that will conclude this editorial series on the subject in the Sunday Roundup editorial section.

EZRA BENSON'S ORDEAL—IV

Ezra Taft Benson's heroic efforts to shrink the Government's holdings of farm products and to modify the role of Government in managed agriculture are piling up fancied political demerits for the Eisenhower administration.

The Eisenhower farm program is under attack by those who are trying to make quick political capital of adjustments from a wartime to a peacetime economy. That adjustment has been painful in some segments of agriculture. It has been accompanied by some decline in farm prices and net farm income. And it has coincided with a continuing population trend from farm to city and a revolution in farming techniques—from automation to enlargement of the family-size farm.

But Mr. Benson is fighting back, with the firm support of President Eisenhower and the concurrence of a large part of United States agriculture. The Secretary's problem is complicated, however, by forces and influences quite beyond his control; and those are precisely what Mr. Benson's enemies are converting to their own purposes. For example:

There is a vast and constantly changing difference in the size, output, and general efficiency of United States farms. The trend from farm to city, which has been going on for 200 years, today finds only 13.5 percent of our total population living on farms. That is 22.1 million persons in a total of 165 million.

That broad and changing variation has created conditions under which a price that represents parity or equality for one producer may spell bankruptcy for another, and a bonanza for still another.

Now, about 2 million of the 5.5 million units classed as farms in the United States produce 85 percent of the farm products which go to market annually. They are known as the commercial or family-size farms, operated by the farmer, his family, and some seasonal hired help.

The income of the 2 million commercial farmers compares favorably with that of nonfarm people of similar capabilities and with similar investments. If that were the group from which farm statistics were obtained, and with which government were primarily concerned, the so-called farm problem could be discussed, at least, in simpler, more understandable terms.

But there are 3.5 million farm operators who sell only 15 percent of the food and fiber that go to market. Within that group there are 1.5 million farm operators at the lower end of the scale who have less than $1,000 income a year. They are part-time or underemployed farmers. Their marketings are so meager that they benefit little, if any, from price-support programs.

The averages for the three groups mentioned, when set forth as farm statistics, are misleading. And any plan that attempts to endow all with parity or equality—or which purports to guarantee them something simply because they call themselves farmers—can hardly be harmonized with the real interests of American agriculture as such.

So there are really two problems here: That of the commercial farmers and of the low-income farmers. The latter need rural-development programs and assistance in the development of new jobs in areas where they are concentrated. They need low interest and liberal credit to expand their operations and to buy machinery. Their children need vocational training. But for many of those people the solution to their problem does not lie in the land at all.

When Secretary Benson discusses the farm problem in such realistic terms, however, there are always critics around to accuse him of playing toady to the "rich fatcats of the Farm Bureau." And those same dissenters go on to parlay that unwarranted class distinction into political opposition to the present administration. The genesis of that opposition is partisan politics in the main, proceeding from indefensible economic and social doctrines. The goal: Defeat of the present administration with its philosophical approach to managed agriculture and the substitution of a gigantic and undiscriminating system of subsidy, at the taxpayers' expense.

Ezra Taft Benson and the Eisenhower administration are undertaking great and basic reform in agricultural policy. The dire consequences of that reform have not come to pass, except as their enemies—by gross distortion of history and current fact—misread the indexes of farm welfare and deliberately pass that misinformation on to the uneasy public. We hope Mr. Benson remains on the course he is pursuing. It is the right way for Americans.

Termination of Rapid Amortization

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. EBERHARTER. Mr. Speaker, on June 19, 1953, I addressed a letter to the Secretary of the Treasury, the Honorable George M. Humphrey, requesting that the Treasury Department make recommendations for the termination of

the rapid amortization authority granted under the Internal Revenue Code. I took this action because of my belief that the need for tax incentives for capital investment in the defense program had largely been eliminated and, as I stated in my letter to the Secretary, "the accelerated depreciation—rapid amortization—is undoubtedly costing the Federal Government many hundreds of millions of dollars in the way of revenue."

Two years later that same Secretary of the Treasury, the Honorable George M. Humphrey, has apparently come to my point of view. He has recently recommended that the granting of authorizations for rapid amortization be either terminated or greatly restricted. Between the date of my letter to the Secretary and the time of his recommendation, several additional billion dollars of capital investment have been certified for rapid tax amortization with the result that the Federal revenues have sustained very substantial losses.

Members of the House will recall that present law provides that a business wishing to take a rapid tax writeoff on a capital investment for defense-facility construction can arrange to do so by obtaining a certificate of necessity covering the facility involved. This certificate permits the writeoff of the investment in a 5-year period instead of over the normal lifetime of the asset as required under normal depreciation procedures. The law requires that the certification relate to the defense effort.

At the inception of the national-defense program instituted in connection with the Korean conflict, the rapid amortization provision of the Internal Revenue Code provided a necessary incentive for defense-plant expansion.

It is my view that the administration of this program providing for the issuance of certificates of necessity has exceeded the original intent of Congress. In conducting the program the administrators have certified high percentages of the construction cost without taking proper account of the fact that in most instances those plants would have obvious production uses in peacetime, and in some cases a certificate has been granted where only a very tenuous defense relationship existed.

The accelerated amortization program does not constitute a cash grant or subsidy of a defense plant by the Federal Government. However, its end result is similar in that it brings about reductions in Federal income taxes during the acceleration period, it makes more cash available to the taxpayer, it helps to finance the cost of new facilities, and it has the nature of an interest-free loan of funds that would be otherwise available to the Federal Government. The resulting reduction in Federal income-tax collections resulting from tax amortization occurs at a time when tax rates and interest rates are high. These facts magnify the gain to business and the loss to Government from the amortization privilege.

To date over 20,000 certificates of necessity have been issued under the present program at an average certificate rate of 60 percent with the result that over $18 billion of plant investments has been certified for rapid tax writeoff. At the present time there are 900 applications pending for the issuance of a certificate of necessity covering approximately $5 billion in plant investment. The action of the Secretary of the Treasury in asking for the termination of this program more than 2 years after I first expressed concern over the problem to the Secretary comes in my opinion rather late.

The effect of the delay by the Eisenhower administration is that the Federal Government has had to borrow money and pay interest charges thereon to make up for the deficit in receipts caused by the tax postponement occurring under rapid tax amortization.

The ordinary taxpayer has had to pay in several ways for the cost of the tax amortization program. He has had to pay in higher cost of Government purchases because a company with a certificate of necessity is allowed to use the additional amortization as a cost factor to get higher prices from the Government. He has had to pay interest on the portion of the Federal deficit that resulted from the loss of tax revenues through rapid amortization. He has also had to bear in higher taxes the distortion in the distribution in the tax burden that occurred under the rapid amortization.

It is a matter of great concern to me that the Eisenhower administration did not act more promptly to either restrict or terminate this practice of granting rapid tax amortization. In the early days of the armament buildup that attended the Korean defense effort, speed in the allocation of defense contracts was essential. However, Secretary Humphrey and other responsible officials of the administration have had long months since my letter to make the necessary review of the program. That they have failed to do so more promptly will cost the American taxpayer several billions of dollars in added taxes and interest charges.

The Future of Highway Legislation

EXTENSION OF REMARKS
OF
HON. BRADY GENTRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. GENTRY. Mr. Speaker, it has now been a few days since highway legislation was defeated in the House. It would seem well, therefore, to discuss the situation which this has brought about and the possibilities of future legislation for better highways for our poople.

At the Governors' Conference at Lake George, N. Y., on July 12, 1954, more than 1 year ago, President Eisenhower, speaking through Vice President NIXON, launched a drive for a greatly expanded highway program.

Few proposals were ever advanced with such attendant publicity. Meetings supporting it were held throughout the country, and those in Washington were widely publicized. Editorial writers, commentators, columnists, and many public speakers joined in the chorus that a great system of modern highways was a vital necessity for our country's future. It was described by some Republicans as a key proposal in what was termed the dynamic program of the Republican administration.

As a result of the impetus that was being given an expanded highway-construction program the President appointed a committee to make a report to him as to the desirability of such a program and the ways and means of realizing it. This committee became known as the Clay committee because of its chairmanship by Gen. Lucius Clay. Subsequently this committee made its report.

The recommendations of the Clay committee, which in effect were adopted by the administration, involved major expenditures, especially by the States and the Federal Government. They concerned not only the 40,000 miles comprising the interstate highway system but the entire more than 3 million miles of roadways in our country and were generally characterized as a $101 billion program, a fairly large portion of which was to be contributed by agencies of Government other than the Federal Government. Particular emphasis, however was placed on the reconstruction of the interstate system, which was held by the Clay committee to be a primary obligation of the Federal Government. It had been estimated by the highway departments of the States that the reconstruction of the interestate system would cost $27 billion, of which the Federal Government's share, as recommended by the committee, would have been approximately $25 billion.

The Clay committee further recommended that Congress accept the thesis that the interstate system be reconstructed to modern standards; that the construction be accomplished in a fixed number of years; that the funds for its construction be allocated yearly according to its needs within the various States instead of by the traditional formula heretofore used in Federal aid; and, that these funds be raised through a new Federal corporation which would issue and sell bonds, the last of which would mature in 1987.

The Fallon highway bill, which was reported by the Committee on Public Works and finally rejected by the House last week, accepted the principle of every recommendation by the Clay committee except that pertaining to the creation of a Federal corporation to finance the reconstruction of the interstate system by the issuance of long-term bonds and one other provision concerning toll roads which, by common consent of both Democrats and Republicans, had been dropped. Since it was obvious that the Republicans would have supported the Fallon bill almost unanimously had it contained the Clay committee financing provision, and since it is possible that this same difficulty may be encountered if we are to have highway legislation in the next session of Congress, it might be well to first dis-

cuss in some detail the worthiness of the Federal corporation idea as applied to highway legislation.

Just what would the Federal corporation have done, as planned by the Clay committee? It would have issued $21 billion in bonds, with which to partially finance the construction of the Interstate System. The interest on these bonds would have been $11,500,000,000, or 55 percent of the principal of the bonds. These bonds finally would have been paid in 1987. By General Clay's testimony the interest on the bonds would have been substantially higher than if they had been issued by the Treasury. He estimated that the additional interest required to be paid in order to have them issued outside the Government would be from $475 million to $1,900,000,000. This high interest rate would have resulted from the fact that the bill incorporating the Clay committee financing provision specifically stated that the bonds of the Federal Corporation would not be a debt of the Federal Government. General Clay testified that while not a debt of the Federal Government they would be a moral obligation of the Government and would, of course, have to be paid by the Government.

By this arrangement, the Clay committee was seeking to capitalize the 2-cent gas tax now levied by the Federal Government as a general revenue tax, which it said would be sufficient to pay off the bonds by 1987, and provide $622 million yearly in Federal aid through that date. Such calculations wholly disregarded the fact that $622 million is insufficient Federal aid today—it actually is $700 million at present—and would be a mere yearly pittance long before that distant day in 1987 on which the bonds finally would have been paid, and, at which time we will have twice the number of vehicles and almost three times the ton-miles of traffic we have on the highways today. In freezing the 2-cent gas tax returns for 32 years, it also wholly disregarded the finding of the Bureau of Public Roads that even though the Interstate System is constructed by 1965 there will have to be additional construction thereon between 1965 and 1985 of $9,700,000,000. All these great, additional outlays would come at a time, under the Clay committee bond financing provision, when the taxpayers of our country also would be paying the $11,500,000,000 interest on only $21 billion of the Federal Corporation bonds.

Up to the present every dollar expended by the Federal Government on roads has been subject to authorizing legislation by Congress, full budgetary control, complete appropriation procedure, and has been paid out of general revenue and accounted for within the statutory debt limit. It would be a revolutionary departure from fiscal fundamentals and long recognized governmental principles to adopt the Federal corporation idea in financing highway construction. If we begin, in effect, capitalizing taxes out of general revenue for highway construction it could and would be adopted for other purposes and would finally result in the complete destruction of the authority of Congress over the appropriation of public funds. If we pile up debts for which succeeding generations must pay, the least we should do is to leave them an honest set of books in order that they will know the sum total of obligations bequeathed to them.

While the administration bill, which included the Federal corporation device, specifically provided that the bonds of the Federal corporation would not be a debt of the Government, it also included a provision that gave the Government the authority to accept these bonds as security for all fiduciary trust and public funds, including that of social security. It is completely contradictory to say in one section that the corporation bonds would not be a debt of the Government and then declare in another that they are eligible for Government trust-fund investment. And, it is unthinkable that Congress would ever pass legislation which would permit bonds not guaranteed by the Government to be sold to its trust funds. This alone should have resulted in the rejection of the Federal corporation idea from any highway legislation.

Our committee, as well as this House, had a great amount of other evidence on the validity of the Clay committee financing provision. On March 30, 1953, President Eisenhower, in a message to Congress, said:

> In the state of the Union message I expressed my deep concern for the well-being of all our citizens and the attainment of equality of opportunity for all. I further stated that our social rights are a most important part of our heritage and must be guarded and defended with all of our strength. I firmly believe that the primary way of accomplishing this is to recommend the creation of a commission to study the means of achieving a sounder relationship between Federal, State, and local governments.

Pursuant to the above statement by the President he created the Commission on Intergovernmental Relations and directed it to examine the role of the National Government in relation to the States and their political subdivisions. On this Commission were many of the country's ablest citizens. This Commission rendered its report in June 1955 after more than 2 years of the most exhaustive study. In reaching its decision it had before it the report of the Clay committee to which it had given long and careful consideration. In the chapter in its report on the financing of highways, it had the following to say:

> The Commission recommends that the expanded highway program be financed substantially on a pay-as-you-go basis and that Congress provide additional revenues for this purpose, primarily from increased motor fuel taxes.
>
> The effect of the Commission's recommendation on highway aids will be to increase Federal expenditures. An increase in taxes is preferable to deficit financing as a means of supporting larger highway outlays by the National Government. The latter method would result in high interest charges and would shift the burden to citizens of a future generation, who will have continuing highway and other governmental responsibilities of their own to finance.

It must have weighed very heavily with the President's Commission on Intergovernmental Relations to find that his Clay committee's Federal corporation bond proposal was without merit. Yet, that was the effect of their very forceful and logical recommendation quoted above and released in June at the very crux of the controversy over highway legislation. But that was not all. The Honorable Joseph Campbell, a 1954 appointee of President Eisenhower as Comptroller General, appeared before both the Senate and House Committees on Public Works while these committees were considering highway legislation. On each occasion he strongly disapproved the recommendation of the Clay committee that a Federal corporation be organized outside the regular channels of the Government in order to sell bonds in the deficit financing of a highway program. Among other things, Comptroller General Campbell stated:

> Insofar as we are aware, such a financial arrangement for a Federal expenditure program of the scale and magnitude contemplated for the proposed Federal Highway Corporation has never been used by the Federal Government.
>
> The corporate form of government activity is objectionable because, for the most part, it is free from the normal safeguards set up by the Congress to maintain adequate control over the conduct of public business and the expenditure of public funds.

In passing on the validity of the Federal corporation idea it is well to remember that before final action in the House last week on the highway bill, and even before action thereon in our House Committee on Public Works, the Senate had passed a highway bill in which not only the Federal corporation proposal but all other major recommendations of the President and the Clay committee were rejected. The final vote in the Senate on the Gore highway bill was 60 to 31. After a long and thorough Senate debate 13 of the 47 Republican Senators had joined with the Democrats in opposition to the main points of the President's program, including the Federal corporation device.

The President's Secretary of the Treasury was a witness before the House Public Works Committee during the consideration of highway legislation. While expressing a preference for the Clay committee recommendation concerning financing of highway construction, as would be expected from a member of the President's own Cabinet, Secretary Humphrey definitely did not disapprove the financial provision of the Fallon bill reported by your committee. In fact, he stated that neither he nor any other Secretary of the Treasury would ever object to a pay-as-you-go program. He also testified that the credit program as recommended by the Clay committee would be inflationary and that the pay-as-you-go program of the Fallon bill would not. And, he affirmatively confirmed that from $475,000,000 to $1,900,000,000 interest which would be paid on the bonds under the Federal Corporation plan would result from the higher interest rate occasioned solely by their being issued by the Federal corporation instead of by the Treasury.

It can also be said to the credit of the Fallon highway bill that the one Presi-

dential recommendation which the Public Works Committee did not accept had received substantial criticism from numerous other citizens of repute throughout our country. Many public figures had pointed out the obvious fact that it was nothing more or less than deficit financing. In addition to the 13 Republican Members of the Senate, the President's own Commission on Intergovernmental Relations and his own Comptroller General, Mr. Campbell, it had been denounced by Senator BYRD, considered by almost everyone as the Senate's outstanding financial authority. Among many other things, Senator BYRD had stated that it amounted to an attempt to deceive the American people as to the amount of their Federal debt.

Just how did this financial provision get into the report of the Clay committee? This seemingly is answered by a statement made in January of this year by General Clay himself. Speaking on his committee's recommendation, the General said:

> We want to avoid a higher debt limit, further taxes, or greater deficit.

These were highly laudable ambitions but in its proposal to expend $21 billion under the limitations of this statement, the Clay committee left itself no fiscally responsible course of action. The political situation being what it always is in Washington, it is not difficult to understand why this Presidentially appointed committee would necessarily accept assignment to the committee in the knowledge that it would not be advisable to advocate either the raising of taxes, increasing the public debt or doing deficit financing. But, it is somewhat amazing that the Clay committee felt it had found a way by which Congress could authorize the borrowing of $21 billion, pay almost $12 billion interest on it, and still evade each of these political liabilities. Certainly only a severely strained interpretation would admit of any such claim.

The hurdle supposedly was accomplished by simply saying in the act of authorization of the Federal corporation that its bonds would not be a debt of the Federal Government. Congress was thereby being asked to authorize obligations against the people of our country but declaring at the same time that they were not debts. Yet they would have to pay them. And, General Clay himself testified as much. If any hurdle remained it was to be eliminated by having the Federal corporation keep its books separate and apart from the Treasury Department. Even accepting this slight-of-hand way of evading the charge of raising the national debt and making necessary an increase by Congress of our debt limit, it still is more than difficult to understand the assertions of the Clay committee that no deficit financing was involved. Borrowing $21 billion in any manner by which the taxpayers must repay it, along with $12 billion interest, would seem to be deficit financing with a vengeance.

This Federal highway corporation idea is represented as an easy way. It is the painless solution. It deludes the people into believing that somehow they are to get something for nothing. It holds out the promise that if the Federal corporation is set up as another bond-selling deficit financing agency, somewhat outside the Government but with the Government and the taxpayers still morally but not legally responsible for its acts and obligations, your highway problem is solved. What a snare and delusion. All such a gimmick would do would be to widen and deepen our Government's financial jungle, and with our taxpayers right in the bottom of the pit. What could be more vicious in its evil potentialities for a government's fiscal soundness than this financial device? It could be the beginning of a chain of Federal corporations, each one nibbling away a portion of the Government's general revenue which, during the boom time of the last few years, still has been insufficient to pay our yearly expenses and prevent deficit financing. This is illustrated by the fact that a paper with the integrity and repute of the Christian Science Monitor seriously suggested in a front page article a few days after the Clay financing plan was publicized that the schoolroom shortage problem could also be solved in like manner by the organization of a Federal school corporation and assigning to it part of the revenue of the Treasury for long-term capitalization. It is worth noting that no one has suggested what will happen to the present manifold obligations of the Treasury when all its revenues are assigned to newly organized Federal corporations in order to secure entirely new services and benfits not now enjoyed. It must be admitted that its possibilities are tremendous. It would seem charitable to say, as did Senator Byrd, that this provision would have evaded fiscal responsibility by legerdemain and public debt by definition.

In desperately trying to reach an easy solution of a problem incapable of any such solution, the Clay committee violated basic principles of fiscal responsibility. The more reasonable and more logical appraisal of the President's own Comptroller General, the President's own Commission on Intergovernmental Relations, the considerable number of the President's own party members in the Senate, and of Senator Byrd and many others, must be accepted as to the undesirability of the financing provision recommended by the Clay committee and rejected by your Committee on Public Works in the Fallon bill which we reported to you.

It is worthy of note that while this political juggling act in high finance was taking place a few months ago, our known Federal debt was $278 billion and we were still extending our record of constantly recurring yearly deficits. Not only was that true but the Secretary of Defense had just announced that defense expenditures could be expected to remain at or above the then present level for a considerable number of years. No one has been sufficiently bold to predict that so-called normal expenses of Government will ever again be reduced. Unless there is a decided change in the political climate, they will continue to increase.

Now, with this record before us your Public Works Committee, Democrats and Republicans alike, voted 22 to 9 to favorably report the Fallon bill which contained all major recommendations of the Clay committee except the Federal corporation device. Yet, when it came to a final vote on the Fallon bill in the House last week only 29 of more than 200 Republicans voted for it. Even though only 4 of the 15 Republican Members on the Public Works Committee voted against favorably reporting the Fallon bill to the House, 9 of the 15 finally voted against it. Remember, too, that at the time the vote was taken in the House all other possible highway legislation had already been eliminated. It was the Fallon bill or nothing. After having espoused a campaign of many months for highway legislation, after having wrung every possible political benefit from it, after a Democratic controlled committee had cooperated in reporting a bill that generally followed Clay committee recommendations except in the one highly questionable particular of a $21 billion high-interest bond issue, they disowned their own child and voted against better highways for our country.

It is true that many of the Democrats had opposed the administration recommendations from the beginning. Some were not convinced that a sum such as was recommended should be expended within the proposed number of years. Some felt that the Fallon bill, in making the administration recommendations fiscally responsible by substituting user-taxes for the dangerous Federal corporation bond proposal, had assumed a political liability for their party. Other Democrats who were inclined to vote for it did not do so when it became obvious that the Republicans, with practical unanimity, were voting to kill their own baby. Still, almost half the Democrats voted for the Fallon bill and better highways for the American people.

Even in defeat there were some great virtues in the highway measure on which your Public Works Committee had labored for many months. While it was known as a 13-year bill, actually the construction under it, and the payments for such construction, would have covered a period of almost 16 years, commencing immediately upon its enactment. Under the total authorization of $24 billion provided therein, it meant a Federal expenditure of $1.5 billion per year, instead of $2.5 billion per year as it was considered by the general public when first proposed as a 10-year program. The construction period recommended by the Clay committee was extended to make certain that sufficient time was allowed to guarantee that every possible economy; would be effected in construction contracts. This money would have been expended wholly within our own country, which, while not a complete novelty, certainly should have commended it. All costs for labor would have gone into the pockets of American workers and all materials would have been purchased from American business. The $24 billion would have been expended for something we not only greatly need now, but for which the need will be desperate long before the termination of the 16-year period in which it could have been realized under

the proposed legislation. It could not have been other than of great value in advancing our economy and, if highway authorities are correct, it would have paid for itself. Stated differently, now that highway legislation has been rejected, we will be paying for a great highway system in loss of time, human life, and destruction to property, but we won't be getting the highways. Although it is true that many motorists might not greatly use the limited mileage of the Interstate System, the Fallon bill, by also providing for the accelerated construction of the remainder of the Federal-aid system, would have guaranteed good highways for everyone. Finally, the enactment of the bill not only would have avoided inflation, not only would not have greatly increased our national debt, it would have been an example of sound fiscal policy at its very best.

It can be taken for granted that our Republican friends really would have liked the great highway system they had proclaimed to the world that they wanted, provided, of course, every "t" was crossed and every "i" dotted with respect to the Federal corporation device. But, that would have made the American taxpayers pay an extra almost $12 billion in interest, a possible almost $2 billion of which would have been necessary only to give some little appearance of validity to the claim that we were not raising our public debt. If your Public Works Committee had been willing to report such a financial provision, the Fallon bill would have gotten some 200 Republican votes instead of 29 and we would have had highway legislation. But if there was to be full fiscal responsibility in connection with the building of highways, if equitable user-taxes were to be imposed on those who would profit greatly by their direct use of the new highways and thereby prevent raising the public debt and destroying the peoples' earnings through needless inflation, then their desire for highways was lost and the legislation could not be realized. In the final interment of the Fallon bill it sometimes seemed that our Republican friends might be more interested in the issuance of many billions in bonds carrying high interest rates than they were in securing highway legislation that would provide a greatly expanded highway system for the people of our country.

We are told that the Republicans are saying in defense of their votes on highway legislation that they had promised not to raise taxes. If they were not willing to have the highway user pay for finer highways—highways which will make him money and which he even now is paying for even though he is not getting them—then why all the tremendous campaign and publicity regarding the vital necessity of a greatly expanded modern highway system? If it is remembered correctly, the Republicans also promised not to permit further deficit financing. In adopting the Clay committee financing provision they were embracing deficit financing not only to its fullest but in a manner highly dangerous to sound fiscal policy. And, by accepting the Clay deficit-financing program they not only were just delaying the imposition of additional taxes, they were also making it absolutely certain that the taxes, when levied, would be at least $12 billion more than if levied at the present time, this sum representing the amount of interest which the Clay committee deficit-financing plan entailed.

It now seems that the trucking industry is receiving plaudits for killing highway legislation. It is being said that the big tractor-trailer commercial highway operators induced a 100,000-telegram barrage of Washington in opposition to the Fallon bill and that this secured the votes for its defeat. Even if true, one might wonder whether this is all gain and no loss for the trucking industry. The 600,000 heavy commercial trucks operating on our highways, comprising only 1 percent of our motor vehicles but monopolizing a great share of our country's roads, not only congest the highways and make motoring an onerous burden for the other 57 million motorists, they are the vehicles which contribute so disproportionately to the destruction of our roadways. To a very great extent the operation of freight trains on the highways had made necessary the highway legislation which the commercial truckers are given credit for having defeated.

It is very true that a motor-fuel tax alone is a highly inadequate measure of road use for the heavy vehicle. The owners of the 48 million automobiles of our country which weigh between 1 and 2 tons as compared to the heavy trucks' weight of 36 tons, and which travel an average of only 9,000 miles yearly as compared to the heavy trucks' approximately 50,000 miles, would seem to have a particularly great interest in the user taxes to be imposed provided the Federal Government is to furnish substantial funds for highway construction. And, if there is to be an imposition of a Federal gas tax of 3 cents, certainly the disparity such a levy creates as between the automobile and small-truck owners on one side and the commercial-truck owners on the other should be equalized in some manner. It should be remembered in this connection that the Federal Government has provided less than $7.5 billion for highways during the entire 40-year life of the Bureau of Public Roads. If it is to furnish more than 3 times as much in 1 piece of legislation—and it would seem that it should—it certainly is only right and proper that equitable user taxes be imposed with which to pay at least a substantial portion of it.

It can be said for the Fallon bill that it not only represented fiscal responsibility, its user tax approximated equity as between user groups. If there was injustice in the tax provision, it was against the 57 million automobile and small-truck owners and not against the big, commercial tractor-trailer operator. The 40,000 to 80,000 pound trucks have never paid a tax commensurate with their use of the highways, their damage to the highways, the congestion they create on the highways, and the great inconvenience their relatively small numbers necessarily cause to the general motoring public. As they continue to multiply, and especially if they become higher, wider, longer, and heavier, for all of which their lobby continually applies increasing pressure, they will finish the job of making nervous wrecks of America's motorists. It is only natural to object to taxes, regardless of the advantages they may bring, provided it is felt that others may be made to pay them or should pay them. But there seems little doubt that the trucking industry might have paid their portion of the taxes imposed by the Fallon bill and still have made more profits than it will realize from the continued use of our present greatly congested, time-consuming, and highly inadequate arterial highways. In an address in New York City after the plan was unfolded to reconstruct the 40,000 miles of interstate system and there had been time to study it, Karl Richards, head of the Motor Truck Division of the American Manufacturer's Association and secretary of the highway policy committee of that association, said that the trucking industry alone would save $1½ billion yearly on just labor and accident costs by such reconstruction. That would amount to a saving for the trucking industry alone of $23 billion in the 16-year construction period or twice the amount of the proposed additional taxes against not just the trucking industry, but the entire motorcar industry. It would seem conclusive that Mr. Richards, who is an honorable, able man and, by reason of his employment, greatly interested in the trucking industry, can be relied upon for the facts concerning this situation. It would also seem conclusive from the carefully prepared presentation of this national authority that the trucking industry was getting a bargain in the Fallon highway bill.

The big trucker has flaunted the entreaties of the highway administrators of the Bureau of Public Roads and of the 48 States with reference to the axle weights and gross weights which the highways can reasonably withstand. With powerful lobbies he has pressured State legislatures into increasing the weight of his load and the size of his truck even when highway administrators were pleading that his action could only result in inordinate damage to the Nation's highways, which they were trying to protect in order to serve him. He has maintained this action without ceasing through the years. While this was going on, records in many courthouses throughout our country were being made which attest the fact that he did not always abide by the laws which he could not change by the pressure of his lobby. Naturally his violations of weight limitations were causing highway destruction and needless economic loss to the other 57 million motorists and to our country generally.

So, while there is reveling in the applause which the big commercial truckers are now receiving for their contribution in defeating a fine highway sytem for our people, while an unjust tax situation is being continued in behalf of the large vehicle combinations at the expense

of the general motoring public, I just wonder if the final reaction to this wrecking operation is going to be as rosy as it now appears on the morning after. While the many telegrams reaching Washington were quite formidable, they will not build a highway system and, in the end, they may serve to remind our people not only of what caused the present condition of our highways but also of what prevented us from getting the kind of highways we need and must have.

Now it is being said on all sides that we ought to pass a highway bill. Some are suggesting the calling of a special session and the President himself has mentioned such a possibility. Others are saying that there should be a compromise on highway legislation. The Fallon bill was a compromise and a considerable compromise at that. There would now seem to be nothing left on which compromise should be made. Had the Democratic members of your Committee on Public Works agreed to report the Gore Senate bill, which was sponsored by Senate Democrats and a strong minority of Senate Republicans, a bill that rejected all the President's recommendations, it would have passed. Had that happened, the President would have been placed in a very trying and very embarrassing position.

Having reported a bill which followed every Presidential recommendation except one—a bill in which the only rejected provision was one condemned by the President's own appointed Comptroller General, by his own Commission on Intergovernmental Relations, and by a substantial number of his own Republican Senators—there seems reason to wonder not only as to whether there is anything on which to comprise but especially as to whether there is any highway legislation for which the Republicans might vote, except, of course, that which would provide for a bond issue and a great increase in the people's debt. Since the President's own Secretary of the Treasury testified that the substituted financing section was fiscally responsible, uninflationary, and unobjectionable to him, what else could be asked? The substituted tax provision, while possibly not equitable to the 57 million automobile and small truck owners, was at least a step in that direction.

Your Committee on Public Works was given, and it accepted as a duty, the assignment of writing a tax provision in highway legislation. In reporting the Fallon bill, it felt that it had acted responsibly and that it had presented an excellent measure to the House. In view of the great need for better highways and the enormous losses being suffered by the traveling public in the use of the present ones, it is somewhat difficult to understand the House vote on this measure. An expenditure of $24 billion in 16 years for better highways and the promotion of our economy is a large one but it is relatively small when it is considered that, if there is no change in the present rate of expenditure, we shall spend in the same 16-year period $650 billion on defense, $55 billion on foreign aid, and more than $67 billion on public works. It might be added that a portion of the public works program, justly or unjustly, is oftentimes referred to as pork-barrel. As finally presented to the House after it had been amended, no such criticism of the Fallon bill would have been merited.

Therefore, if and when the House determines to again consider highway legislation, might it not be well for us to seriously ask ourselves the question as to whether that consideration should not be given to the very proposal which we recently rejected so hastily? If we are to act responsibly, if taxes are to be imposed equitably as between the groups of motorists which should mainly pay for highways, it is difficult to conceive of legislation that would more fairly accomplish that purpose. In the interest of our country and its people the Republicans ought to be willing to forego the unwise investment bankers high interest multibillion dollar bond issue and the Democrats should forget, if such influenced them, that the administration originally recommended the highway program. The sole issue should be whether our motorists need better roads and whether they can afford the user-taxes that will build them. The answer seems to be that they do need them and that they actually will be saving money when they pay the taxes necessary to secure them. To act in the obvious interest of the people, the duty of Congress seems quite clear.

A Tribute to Oveta Culp Hobby

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. REED of New York. Mr. Speaker, pursuant to the terms of Reorganization Plan No. 1 of 1953, the Nation's 10th Cabinet post was created by law on April 11, 1953. That new Cabinet office was the position of Secretary of the newly created Department of Health, Education, and Welfare.

To become the first Secretary of Health, Education, and Welfare in the history of our great Nation the President selected an outstanding citizen who had a distinguished record of public service prior to assuming the new Cabinet post. The Honorable Oveta Culp Hobby, as the Nation's first Secretary of Health, Education, and Welfare, further distinguished herself by her performance of duty in her new position.

In his message to Congress of March 12, 1953, pertaining to the establishment of the Department of Health, Education, and Welfare, the President of the United States in outlining the need for the new executive department and defining its purposes stated as follows:

> But good intent and high purpose are not enough; all such programs depend for their success upon efficient, responsible administration.

Secretary Hobby provided in full measure both efficient and responsible administration. In addition to those attributes, she demonstrated an organizational genius and an understanding of public needs to the end that the vital functions performed by the multifold agencies under her supervision attained outstanding achievements in the field of public service during her tenure in office.

Under the guidance of Secretary Hobby expanded Federal-State programs were developed to provide better schools, improved medical facilities, more realistic care for the disabled and the aged, liberalized child welfare services, and accelerated medical research. She instituted a program of vocational rehabilitation and education that in the years to come will find increasing numbers of our disabled again becoming productive, self-sufficient citizens.

Secretary Hobby must share in the credit for the improvements that were made in our social security program by the Social Security Amendments of 1954. Her department worked in close cooperation with the Committee on Ways and Means to prepare this important legislation which provided liberalized benefits, expanded coverage, and improvements in the retirement test.

It is not possible to detail Mrs. Hobby's many accomplishments as Secretary of Health, Education, and Welfare. Suffice it to say that every American citizen will realize enduring benefits from her capable and selfless performance of duty.

Mrs. Hobby has recently found compelling personal reasons that have necessitated her return to private life. Her absence from public office will be sorely felt by those who were privileged to work with her and, indeed, by all Americans.

Mr. Speaker, it is reported that one of her Cabinet colleagues once referred to Mrs. Hobby as "the best darn man in the Cabinet." I would like to join in that remark and observe also that she is one of the most gracious ladies I have ever met.

Mrs. Secretary, you have performed your task well and have the grateful thanks of your fellow citizens.

Synthetic Fuels

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. SAYLOR. Mr. Speaker, on June 15, I recommended to the Congress that it consider the feasibility of diverting into a synthetic-fuels project some of the vast Federal expenditures that are now being earmarked for the development of commercial atomic energy. Since then I have inquired further into the possibilities of a synthesis-fuels industry, and I have also attempted to pursue the multitudinous reports on atomic energy that have originated in this country and abroad. I believe that it is

now time to take another look at the situation.

Many of the statements issued from Geneva during the conference on atoms for peace have tended to give the impression that commercial application of atomic power on a universal scale is just around the corner. The general public has been led to believe that electricity produced by nuclear fission will soon be marketable at prices far less than the cost involved in the use of conventional fuels. On closer examination, however, we discover that cheap electric power from the atom is still confined to the realm of theory; there are no definite assurances, in fact, that reactors will ever be able to produce the lowest-cost electricity, particularly in areas within close proximity of the coal areas of our country.

There are too many factors involved for us to go all out in the direction of atomic power to the exclusion of coal and other fuels. If the Government is going to subsidize construction of the reactors and other necessary facilities, if the Government is going to undertake to insure property and personnel against damage that could be inflicted in the event of an accident in an atomic plant, if the Government is going to underwrite commercial operations against losses incurred in developmental programs—then there may be a basis for the assertion that nuclear fission will become a principal source of electric power. I would imagine that it can be authoritatively stated that electricity at TVA rates can be made available in various areas of the country if the Federal Government is willing to pour sufficient funds into the atomic energy program.

The hazard problem alone would add considerable expense to overall operational costs of a commercial atomic energy plant unless—as has been suggested by some of the ready spenders of Federal funds—the Government is willing to accept insurance risk. Harold L. Price, Director of the Division of Civilian Application, United States Atomic Energy Commission, has stated that the hazard catastrophe potential is more serious than anything now known in the insurance industry. Mr. Price states that the possibility of a serious catastrophe seems very remote, but he nevertheless raised a question which is of maximum importance in the promotion of nuclear fission on a commercial basis.

In our enthusiasm for this new type of power, let us try to be realistic and attempt to determine just how much it would be practical for our Government to invest in the program. Fuel experts are of the opinion that, even if the most optimistic predictions on atomic power come true, this method of generation will provide only about 10 percent of the electricity to be consumed by the United States in 1975. The fact is that coal, which has always been the principal source of electric power, will be consumed in constantly increasing quantities by the utilities within the next 20 years. Coal will get a rising share of newly developed electric capacity; it will also supplant oil and gas under boilers as the reserves of those short-term fuels gradually become depleted. According to the United States Geological Survey there are upward of 1 trillion 200 billion tons of recoverable coal in the United States—enough to produce more than a billion tons a year for a thousand years. Because of this abundance of coal, America can face the future with full confidence that there will be ample supplies of liquid and gaseous fuels irrespective of the duration of our petroleum and natural gas resources. These fuels will come from coal through synthesis.

The Bureau of Mines has informed me that, according to the consensus of experts in the field, the fuels synthesis process will eventually furnish the bulk of our requirements of liquid fuels. The Bureau of Mines further states:

> The switch from petroleum and natural gas to coal in the long run is understandable when one considers that more than 80 percent of our mineral fuels (exclusive of radioactive materials) is coal—enough to last for centuries.

Both Japan and Germany manufactured important amounts of synthetic gasoline and oil during World War II. In the Union of South Africa, a new synthetic-fuels plant is expected to produce annually a total of 55 million gallons of gasoline, 7 million gallons of oil, and 15 million gallons of chemicals.

One of the methods for producing fuels and chemicals from coal is the hydrogenation process. The Carbide & Carbon Chemicals Co., which at Institute, W. Va., in 1952 pioneered the first commercial plant to produce chemicals directly from raw coal, has isolated and identified more than 100 different chemicals in its short history. Some of these chemicals have interesting possibilities as medicines, new fabrics, paints, plastics, and insecticides. Whereas it took nerly an hour to process coal by German methods, Carbide's new process does it in about 4 minutes.

The research which eventually led to the establishment of the Carbide hydrogenation plant was actually undertaken because the company was concerned about the future supplies of petroleum and natural gas, and it was decided to explore the possibilities of a synthesis fuels plant in this country. While the need for manufacturing gasoline and oil from coal has not yet materialized, there is no question about the ability of the Carbide plant to produce them. Dr. J. George Davidson, president of the company, said at the time of the plant's opening:

> Carbide & Carbon has no intention of making any gasoline at Institute if we can help it, but we would have to be pretty dull if after running the plant for a few years we didn't know how to make gasoline.

Certainly it would not be fair to a progressive organization such as the Carbide Co. if the United States Government were to subsidize construction of a plant to be operated in competition with this firm, and I want it understood that I am making no such recommendation. I am convinced, however, that it would be to the distinct advantage of this Nation—from the standpoint of security as well as to protect fuel supplies for use over the long range—if some of the money which is going into the development of atomic power for commercial use would be diverted into one or more synthesis plants. The time has arrived for at least the consideration of such a program.

With billions of dollars being invested each year in the Nation's defense structure, the future need for synthetic fuels cannot be questioned. Should the United States be forced into another world conflict, there is definite danger that we would be prevented from bringing any foreign oil whatsoever into our ports. Under these circumstances our industrial and military machines would place such a sudden demand upon the petroleum and natural gas industries of this country that a supplementary supply by synthesis might be the only deterrent to a fuels shortage. What better investment, then, could be made at this time that a potential stockpile of gasoline and oil in the form of a coal hydrogenation plant?

Despite the fact that there has been some upturn in the production of coal during the first 8 months of this year, as compared with 1954 output, there is heavy unemployment in some of the coal-mining communities of America. Here is a laboring force eager to participate in the construction of a synthetic-fuels plant. By providing employment for these men the Government would encourage them to remain in coal areas and thus be available for mining work when demands for coal increase. In my district we have the men, and we have adequate coal and water resources for the operation of such a plan. The citizenry of my area are most enthusiastic about the possibility of having the Government give some attention to the idea.

Mr. Speaker, perhaps during the second session of this Congress it would be advisable to review the progress that has been made thus far in synthetic fuels and to look into their potentials and the expected time that they will become a necessary part of the overall energy program. Congress should solicit the views of fuel experts connected with the petroleum, natural-gas, and coal industries, as well as with Union Carbide and other firms which have ventured in some way or another into synthetic-fuels research. Let us ascertain whether or not it would be to the general interest if we were to earmark some funds for the building of coal, oil, and gas plants that would be available for conversion into commercial enterprises.

No doubt we will also hear from those factions whose objection to such a program is that synthesis fuels cannot compete with other sources of energy on a price basis. I say to you that neither can atomic energy compete. Let me quote for your perusal the following two paragraphs of a news story from Geneva that appeared in the Wall Street Journal:

> Now turn to America. The United States, with abundant cheap coal and oil, really has no urgent need for atom power. Officials of the companies which make reactors say frankly that most of their utility company customers have no early expectation of cutting costs by building atom plants; their primary motive is to stake this out as an area of private rather than public power.

At this time, I quote from an editorial that appeared in the United States Press Association's Commentary on National Affairs. This editorial material is used widely in newspapers throughout the country and I recommend it to you because it raises a question which has too often been overlooked in the headlong drive toward a utopia powered by atomic energy:

PEACEFUL POLLUTION

It is a long time since anyone has believed in a gas saver so miraculous that the car owner is required to stop now and then to bail out the tank * * * but the topflight physicists of the United States, Britain, France, and the U. S. S. R. now know how to get power out of the atom and create, at the same time, more atomic fuel than they burned in the first place.

In their Geneva confab, the scientific wizards have revealed their innermost, hitherto top secrets—on the peaceful uses of atomic energy—including the last remaining secret of the neutron which forever banishes the fear of running out of what it takes to stoke the atomic furnace.

There is obvious emphasis in the enthusiastic reports from this latest Geneva Conference that the discussions have nothing to do with the earlier and more homicidal use of the atom. It is all a part, of course, of the furious effort to distract the world's attention from further progress at annihilation. Yet it is difficult for the unscientific mind to grasp the fact that these dissectors of protons and neutrons can share their innermost secrets, yet reveal nothing of military significance.

But discussion of a study of the earth, air, and water around the vast plutonium plant at Hanford, Wash., revealed something of a hazard that has been kept pretty quiet since the early days of atomic tinkering. In spite of elaborate protective measures, the plant is leaking radioactivity which is showing up in fishes in the Columbia River, in birds and even in jackrabbits. The concentration (or radiophosphorus) was found to be over 100,000 times normal in small fish and 5 times as great in some birds, yet the biologists considered this well below the dangerous levels. They admitted, however, that if the concentration in the Columbia River were to reach the allowable maximum for drinking water, the fish could not be eaten.

This, together with earlier discussions of the problem of disposing of radioactive trash from atomic plants, suggests that when atomic energy comes into general use, ash removal will be far more costly than fuel.

You can't fill in swamps with it. And you can't kick it around till it gets lost. That takes thousands of years.

Mr. Speaker, it is my hope that the day is not too far away when there will have been developed a safe and efficient method of using the atom to generate electricity and for other peacetime purposes. But, meanwhile, it should be remembered that the United States cannot afford to invest indiscriminately in a project whose practicability has not yet been established. Coal is a proved source of heat and power and of gaseous and liquid fuels. Under the circumstances, is it not logical to consider investing in a number of synthetic-fuels plants rather than to continue to spend vast amounts in the belief that the dollar sign will eventually efface the question mark that hovers over commercial atomic power?

Results of the Republican Tax Program of the 83d Congress

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. REED of New York. Mr. Speaker, it has always been my opinion that our free-enterprise system operates best when there is the minimum amount of governmental restriction and regulation that is consistent with the protection of the public interest. When American initiative and ingenuity are permitted to go forward without artificial restraints imposed by needless barriers in our tax structure and without other unnecessary governmental restraints, it can be expected that our American economy will prosper and expand. I have seen this happen time and time again with agriculture, labor, and business sharing in the resulting benefits because of the built-in incentives contained in our free-enterprise economy.

It is for that reason that I now view with great interest the healthy condition of our economy and the effect of the tax reduction program carried out in the Republican 83d Congress. It will be recalled that in 1954 the greatest tax reduction program in the history of our Nation was carried out with total annual tax relief of $7.4 billion being granted to our American taxpayers. At that time individual income taxes were reduced $3 billion; excise taxes were slashed $1 billion; the expiration of the excess-profits tax reduced the tax burden by another $2 billion; and $1.4 billion in tax savings resulted from the enactment of the Internal Revenue Code of 1954.

The tax reduction that resulted from the enactment of the Internal Revenue Code of 1954 was only an incidental effect of this monumental legislation. Principally, this legislation was designed to provide a just and equitable tax law and a sound tax structure that would be conducive to the dynamic development of our American economy.

Recent economic statistics released by the Department of Commerce indicate that this program of tax reduction and tax revision has acted to stimulate our economy and provide unprecedented prosperity in our Nation.

Calendar year 1953 was the peak year for our Nation's economy as a whole previous to 1955. This new high in the level of economic activity has been achieved despite drastically reduced Federal expenditures. Statistics for 1955 indicate that the current year will substantially exceed in terms of production, employment, and income any other comparable period in our history. For example, our gross national product in 1953 was $364.5 billion; the annual rate in the second quarter of 1955 is $385 billion. Personal income in 1953 was $286 billion; the annual rate in July 1955 was $301 billion. The industrial production index—1947 to 1949 equals 100—for 1953 averaged 134; for July 1955 the index stood at 140. Average weekly earnings in manufacturing for 1953 was $71.69; a comparable figure for July 1955 stood at $75.76. Employment in 1953 averaged 62.2 million persons; in July 1955 a comparable figure was 64.9 million persons.

Thus, it is apparent that by creating an economic environment that is favorable to development and growth we have achieved a prosperity never before attained in our history. It is a prosperity in which our citizens from every segment of our economy have shared.

Under the able leadership of our President and the distinguished Secretary of the Treasury and with sound legislation enacted by the Congress, our country today can view with confidence new economic and social goals to be obtained in the foreseeable future. But continuing to act with prudence and courage, we can look forward to sustained national progress and prosperity.

Mr. Speaker, it is gratifying to me, as it must be to all the Members in the House of Representatives, to review the salutary advantages that have been derived from the tax program enacted during the Republican 83d Congress.

How the Settlement of Kansas Affected Our National Life—The Struggle Between Freedom and Slavery Still Goes On

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. SHORT. Mr. Speaker, a few years ago William Colfax Markham endowed the Markham lecture course to be delivered at Baker University in Baldwin, Kans.

Dr. Markham is a widely known publisher, a great poet, and true statesman. He has done as much or more for the development of our public highways and country roads as any other one man in this country. He is a philanthropist who has served his God, his country, and his fellow man well.

To my surprise and gratification, I was invited to deliver the Markham lecture at Baker University on May 30, 1954. Because I have had many requests for copies of that address I include it under permission to extend my remarks in the CONGRESSIONAL RECORD:

President Horn, friends of Baker University, citizens of the great State of Kansas and my fellow Americans, the history of Kansas is long, rugged, challenging, thrilling, and romantic. As far back as 1541 Francisco De Coronado traveled over the plains of what is now Kansas and for the two centuries following, fur traders from Louisiana and Spanish explorers came into what is now your great State. Those explorations and surveys were followed by expeditions by men like Lewis and Clark in 1804 and later by Col. John C. Fremont.

From about 1830 to 1854 Kansas was an Indian territory settled by many different Indian tribes, many of whom had been

driven from the east and southeast of this great State. White men who dared settle the Indian territory during those years, particularly since Missouri became a State in 1821 until 1854 when Kansas became an organized territory, did so at great risk and great peril. Those pioneer men and women who marched westward to carve out of the wilderness a mighty empire were men and women who prized liberty, who sought new and larger freedoms and who through their fortitude and patience and perseverance, through hardships and sacrifices and endurances helped build this great commonwealth in the center of our great Nation.

Kansas is in the heart of America which your great United States Senator John J. Ingalls once characteristically said was the "navel of the Nation." And the activities and incidents attendant to the forming of an organized territory and the carving out of a State here in the heart of America led the great historian George Bancroft to say that "Kansas was the miracle of the ages."

I hope that we have not forgotten completely those brave men and women who marched westward in covered wagons, who lived in dugouts, and houses; who burned buffalo chips for fuel, who lived on buffalo and antelope and deer and prairie chicken and wild game until they could carve out homesteads, cultivate the soil, build them crude huts, to make Kansas one of the leading States of our Union.

I want to say now, President Horn, that I consider it a rare privilege, a great pleasure and a distinct honor to be invited to come back to this memorable institution of learning, my beloved alma mater, Baker University, at its 96th commencement. And especially being a Missourian I am flattered and more than honored, just a wee bit surprised, that I would be invited to speak on this particular day in the history of Kansas celebrating the 100th anniversary of the signing of the Kansas-Nebraska bill that repealed the Missouri Compromise. I am much aware of the events that took place from 1854, 100 years ago today when Franklin Pierce as President signed this bill, down to January 29, 1861, 7 years later. I am reminded of all the tumult and turmoil and strife and conflict and the highway robbery and the arson and the murders that were committed between the people of Missouri and Kansas back and forth across the line that separated them. So I am just a bit surprised and I am much aware that the events that took place during those years of 1854 to 1861 while Kansas was a Territory, would hardly encourage a warm welcome to any neighbor from Missouri.

Nevertheless I am glad to be here. And lest I forget it I want to point out that in spite of the fact that Quantril a little later with 400 men marched into Lawrence and sacked it killing ruthlessly 150 helpless citizens and burned the town, some of you Jayhawkers got what was given by you to my fellow Missourians in the days gone by because of the retaliatory power you possessed in inflicting punishment upon the Missouri maurauders.

Not all Missourians were cutthroats and assassins, though we can boast of our share of the men who stole elections in those days. It hasn't completely died out. You know there is a little machine that operates in Kansas City, that still operates effectively, because it goes back a long time. They still vote people who have been dead for 20 years by taking the names off the tombstone and can when they ask to see ballots they have written, destroy or burn those ballots. Pendergastism can still do a more effective job than was done back in Kansas when it was a Territory. But not all of the Missourians even in those days of the 1850's were bad people and not all of them were against the views entertained by many of the early settlers of Kansas who came from New England and Pennsylvania and in whose breasts fiercely burned the love of freedom.

It might interest you to know that my own grandfather who came from the hills of east Tennessee in 1849 on his way to California, when he hit the Ozarks in southwest Missouri said, "This is as near heaven as I ever hope or want to get" so he settled there. And though he came from Roane County, east Tennessee, which happens to be the county of our former great Speaker of the House, Mr. RAYBURN, of Texas, he believed in the Union and he fought for the Union and he fought the bushwackers in Stone County of southwest Missouri north of the Arkansas line at the same time John Brown and Jim Lane and Charley Robinson and some others were fighting them over on the Kansas side of the Missouri line.

Not all of the Kansans agreed in those terrible years. Kansas became a Territory in 1854 and until she was admitted to the Union, in 1861, LeCompton, Leavenworth, and Atchison were proslavery. But you have old Wakarusa, Lawrence, and Topeka that believed in free soil and free men and free State. So the conflict was intense first between the white settlers who had fought the native Indian tribes, later on between the white men themselves, who so violently disagreed in their views on the matter of slavery.

My friends, Baker University here at Baldwin is really a most suitable place to commemorate the signing of the Kansas-Nebraska Act of a century ago because Baldwin is the first stopping place along the Old Santa Fe Trail. The Federal Government had established it in 1853 and 40 days after Franklin Pierce had signed the Kansas-Nebraska bill allowing them to decide whether or not they wanted to be freemen or slaves. Within 40 days after he signed the bill, Bishop Ames sent a preacher on horseback into the territory of Kansas whose job it was to spy out the land and see what contributions the church could make in helping to improve and encourage educational and cultural development of the lives of this new prospective State. So it came to pass that the first sermon to white settlers in Kansas was preached by the Reverend William H. Goode on July 9, 1854, in the Kibbee cabin just north of Baldwin.

Here at this place on the Santa Fe Trail in this particularly sacred spot steeped in history, we gather on this anniversary so meaningful in the history of this great State. My, what a change. Today this rectangle, 210 miles stretching from Nebraska on the north to Oklahoma on the south, 410 miles from Missouri on the east to Colorado on the west, with 2 million people, rich in oil, coal, lead, and zinc, is the breadbasket of America, the greatest wheat-producing State in the Nation and in the world, with the great oil refineries, with your flour mills, with your cattle raising and livestock, and meatpacking industry.

Kansas had only 100,000 people at the beginning of the Civil War. After Horace Greeley and Abraham Lincoln had come out to the Territory and made speeches against the extension of slavery, Kansas showed her appreciation and loyalty to the cause of the North and against slavery by sending more than 20,000 troops, President Horn, out of approximately 100,000 population. And in every conflict in which we have been engaged since as a Nation, the loyal sons and citizens of Kansas who believe in freedom have always shown a willingness if not an eagerness to contribute their part in order to bring about victory and to extend the blessings of liberty which we ourselves enjoy to others less fortunate.

This legislation signed by the President and passed by the Congress in 1854 making Kansas a Territory naturally had a massive and almost terrible impact. A violent situation arose between proslavery and antislavery factions. Fraudulent elections were held, conflicting constitutions were written, rival slates of candidates were elected. There was bitterness and strife and bloodshed so that Kansas was referred to in the days of John Brown as "bleeding Kansas." It resulted in the historic Lincoln-Douglas debate, through which it helped prepare the way for Lincoln to enter the White House. It triggered the Civil War; it laid the base for the great Republican Party. This great act permitted the people in Kansas and Nebraska to determine whether each State should come into the Union as free or slave.

The impact of the settlement of Kansas upon our national life was momentous and far reaching. It determined the future destiny of our country, when the repeal of the Missouri Compromise aroused men as they had never been aroused before. How mightily the course of the history of the United States was changed by raising this one great question, whether this great State of Kansas should be settled by homesteaders or by planters with servants? This by the way brought forth a new party, the Republican Party, dedicated to free soil, to free labor, to free speech, and to free men.

Thus it is that Kansas stands as a symbol in our Nation of the eternal struggle between freedom and slavery. Today 100 years later after the signing of the Kansas-Nebraska Act which evolved from the issue of slavery a fight for men's minds again envelopes the world. Again Kansas has a central role in this crusade. This time she provides, instead of the issue as 100 years ago, the man. She provides a Kansan to lead the crusade for freedom. I asked President Eisenhower 3 or 4 weeks ago saying I would like a statement from him to read to the Jayhawkers out here in the heart of America on this particular occasion. Though he happened more or less accidently to have been born in Texas he said he spent the impressionable years of his young life here in Kansas on the rolling prairies of your sublime and ostentatious climate where you can have heat and cold and everything between. If you don't like the weather just wait 15 minutes and you will get a different brand. I want to read to you, President Horn, this letter sent as a greeting to you through me from the President of the United States:

THE WHITE HOUSE,
May 28, 1954.

The Honorable DEWEY SHORT,
The House of Representatives,
Washington, D. C.

DEAR DEWEY: I wish I could be present when you deliver the Markham lecture at Baker University. I know how vivid and absorbing will be your treatment of the effect of the settlement of Kansas on our national life.

In this great event and the closely related settlement of Nebraska were embedded many issues that loom important in the history of our country. A symbol of westward expansion, the settlement of the Kansas territory characterized the Nation's growth during the 19th century. Strongly influenced at birth by the terrible intellectual and physical struggle involving slavery in this country, Kansas visually symbolized the tension and the strife that finally burst into the War Between the States. In many ways these events of a century ago was the genesis of the Republican Party.

It is fitting, therefore, that during this centennial year—a year in which slavery and freedom on a global scale are in deadly contest for supremacy—Americans everywhere should give recognition to this deeply meaningful anniversary.

Sincerely,

DWIGHT D. EISENHOWER.

My only regret about this occasion this afternoon is that your dear friend and my dear friend, one of the greatest boosters Baker University ever had, a fraternity

brother of mine, and perhaps that is the only reason I was invited to deliver this lecture, is not present. Although he knows that while I was born and lived all my life in the Ozarks in southwest Missouri that I am more or less a Kansan by adoption because I did graduate from Baker University and taught for 4 happy years down at Southwestern at Winfield under a great Baker alumnus, Dr. Albert Emanuel Kirk, whom I am happy to see is present this afternoon with his son-in-law, Harold Case, whom I am going to stay over to hear tomorrow. I refer to Billy Markham. We call him Dad Markham down in the Delta House.

I have this letter from Dad Markham. As you know he is a great publisher, poet, and statesman, who has done as much for the development of our national highways and Federal roads as any other one man in this country. He now lives at Swarthmore, Pa., but I have written to him 3 or 4 times and on May the 10th Dad Markham wrote me:

"DEAR DEWEY: In reference to your receiving a message from President Eisenhower for you to include in your address at Baldwin I would like to suggest that I presume that this will be addressed to you and I want to request that having incorporated it in your address you turn it over to President Horn with the suggestion that I shall be very glad to have the message framed and hung up on the Old Castle Museum.

"Fraternally,

"W. C. MARKHAM."

And I turn it over to you now, President Horn.

On an occasion like this naturally it is a great temptation to reminisce. I have reviewed and brought out altogether too inadequately and too briefly the romantic challenging and interesting history of the territory of the State of Kansas. But for the few minutes remaining I would like for us to turn our thought about to this great conflict between freedom and slavery that is still raging throughout the world.

Lincoln said shortly after Kansas became a State, that this Republic could not remain half slave and half free. I don't think that this world can forever remain half slave and half free. Twice in our generation we have fought and won two world wars but have lost the peace in both instances. In addition we have been engaged in a sort of so-called police action over in Korea that has cost us over 145,000 casualties and more than $15 billion. Fortunately the spilling of blood has ceased. The shooting has been stopped, but no one can rest assured that there is any peace in the Far East or anywhere else in the world in this tragic and sad hour.

It's an uneasy truce under which we live, I have had my fingers crossed ever since negotiations began at Panmunjom. My fears question whether there can be any permanent peace or economic stability in the Far East or throughout the world with a divided Korea. You cannot arbitrarily draw an artificial line across a country dividing it in two, separating 30 millions of people of the same origin, who speak the same language, have the same ideals and aspirations and hopes to remain at peace, anymore than you could divide the people of the United States east and west of the Mississippi River.

There is no peace in the world today and I fear there will be none in our time because unfortunately after winning two World Wars and becoming bogged down in a Korean stalemate the world today is divided into two armed camps between East and West, between free men and slaves. And unfortunately since V–E and V–J Days in 1945, less than a decade since, our so-called ally has reached out and drawn within her orbit nearly 800 million of peoples or nearly one-third of the total of the world's population. The western countries that believe in God, believe in the Christian religion are alined against a country that is dogmatic and aethistic that considers all religions an opiate of the people. Wonderful nations that believe in the democratic processes of free men, in government of and by and for the people stand against other nations behind the Iron Curtain that believe in totalitarian powers of government under a ruthless dictatorship. These wonderful nations that believe in the fundamental economic philosophy of private enterprise and individual initiative face another group of nations that believe in everything owned and controlled by the state, and the individual a helpless cog in a grinding wheel. There are two contrasting philosophies of life, two hostile, irreconcilable ideologies of politics, religion and economics. The world which the President referred to is separated between slaves and free men in the fight that is going on today.

Now then whether you like it or not, or whether I like it, we have got to put forth every effort in our power to live decently with men, to achieve a just and a lasting peace because the world is so small. It is closer from Baldwin, Kans., to Leningrad than it was from Baldwin to Kansas City in the Civil War. The remotest spot on this earth is only a few hours from Baldwin. Coming back from Australia after visiting the Far East and Korea, this was several years ago, I spoke to the Chamber of Commerce at Honolulu at its noon luncheon and had dinner with my family the next evening in Washington, D. C. The year following, coming back from the Near East, I had breakfast in Bermuda, lunch in my office, spent 3 hours in Washington and that evening had dinner with my folks down in southwest Missouri near the Kansas-Oklahoma line. And I was traveling in an ox cart, a C–54. The other day two of our boys flew from Los Angeles to New York in 3 hours and 45 minutes.

We are going to have to do our best to get along with other people but we also know this, enigmatic as the Russian people are they are bent on world domination and as long as you have 14 mad dogs in the Kremlin, as long as this hungry Russian bear reaches out with her hungry paws and pulls in all of the countries in eastern Europe from the Baltic to the Balkans, as long as she takes over all of Manchuria, the south half of Sakhalin and the north half of Korea, and now is backing the aggression in Indochina and threatening all southeast Asia, we must remain practical and be realistic and fortify ourselves against any eventuality. In sheer self-protection and for our own survival in this global conflict between slavery and freedom today we must build up and maintain our military might, our economic strength, and our spiritual power. We must build up and maintain our military might and remain invincible on land, sea, and in the air. We must live within our means, preserve the value of the dollar, expand a healthy economy, and fortify our religious faith. There is no easy way out of our dilemma.

A day or two after his confirmation by the United States Senate, Secretary of Defense Wilson came into my office and paid me a courtesy call and I said, "Mr. Secretary, I feel flattered and honored that you called on me. We are going to have to work together as a team. I think the President and the American people are most fortunate to persuade a man with your long and successful business experience to dispose of your stock and to accept one of the most responsible positions in our Government, a job that forced one man to leap out of the window and another man to resign. I think we are lucky to have you, Mr. Wilson, who as head of General Motors employed 486,000 people doing a $7 billion volume of business each year. Agreed, Mr. Secretary, that is peanuts to what you have now. Instead of employing fewer than a half million people you have 5 million working for you, 3½ million in uniform, 1,280,000 civilians, and instead of doing a volume of $7 billion a year, in 1 year we spent over $52 billion on our national defense, twice as much money as our total national debt at the end of World War I which was 26 billion."

We can't forever go on with all our wealth and resources, our inventive, scientific genius carrying such an onerous load. Heavy as our taxes are, great as the sacrifices made, it's much cheaper to have adequate national defense than to suffer defeat. And anyone who has traveled through the Third Reich or Japan since the close of World War II will realize that without an argument. We must build up and maintain our strength on land, sea, and in the air, but we must also realize that the same time we cannot have military might without economic strength. So America must be strong not only militarily but economically because the battlefront can never be stronger than the homefront. We want security, but we have to secure it with solvency. The two are wed. Whenever you divorce them you destroy both. Lenin once wrote that America, like every capitalistic country, would spend herself into bankruptcy.

The hope of Stalin and Molotov is that we will knock ourselves out by our own profligacy. They know that a bankrupt nation never licked anybody and never will. If they can syphon off our wealth in economic and military aid to foreign nations all over the world, if they can engage us in sideline wars on the vast periphery of the Soviet Union, Korea yesterday, Indochina today, Iran tomorrow, if Russia can drain our resources and bleed us white, then she can win the cold war and she can win this conflict between freedom and slavery without ever firing a shot or losing a man. She has been doing a pretty good job of it.

I don't want us to become bogged down in another jungle war. If we must fight I want us to choose the place and the time on grounds to our advantage. Should we become involved in another global conflict I think I can assure you there will be no sanctuary behind any line of demarcation.

America must remain strong in these trying and troublesome times. During these days of tumult and terror, of toil and trouble, we have got to remain strong not only in military strength, but also in an economic sense because after all every military man with whom I have talked, be he admiral or general, will quickly confess to you that after all, the thing that won World War II for the allies over the axis power was not only the men in uniform in our Army, Navy, and Marine Corps and Air Force, it was also the men and women who toiled on our farms, in our mines and forests and factories, that produced the food and the weapons and the sinews of war to feed, clothe, and equip 12 million men and women in our own Armed Forces, and millions of our allies, to save the battle of Stalingrad and the battle of Britain.

But there is one other way in which I think we have got to be strong. Not only must we build up and maintain our military might against this threat facing us, not only preserve our economic strength without which you cannot build up strong military forces, but folks, most important of all is to have a moral resurgence, a spiritual revival in this country where men and women will realize that no nation or people can be stronger than the intelligence and character of its citizens.

We must realize that we are engaged in a global war for the hearts and minds and souls of men. We are not going to win the global conflict between slavery and freedom with guns and tanks and planes and bombs alone. As I tried to tell my fraternity brothers down at the Delta House last night, this is an ideological war in which we are engaged. It is a war between ideals and philosophies

and the only way to overcome a bad philosophy is with a good one.

An idea can be the most dangerous weapon on earth. You can't shoot it with a rifle, you can't stab it with a bayonet, you can't destroy it with an atomic bomb. Truth, though crushed to the earth, will rise again; murder, though it hath no tongue, will speak with most miraculous organ. —

Let us go forth from this commencement at Baker University, whose history has been side by side with the history of Kansas, this institution of learning that realizes the importance and the value of religious training in vocations of spiritual idealism, this college to which Abraham Lincoln contributed at its beginning and which has proved its worth over almost a century of time. Because of the magnificent contribution which Baker has given not only to the physical development and material growth, but to the spiritual enlightenment and the moral advancement of this great State and Nation, let us go forth from this commencement resolved in our hearts and in our wills that we will put forth every effort to keep America strong, not only to build up and maintain military might, not only to preserve our economic strength, but to extend good will and to teach a gospel of love, a fellowship, and cooperation with men everywhere in order that we can end this age-old conflict between slavery on the one hand and freedom on the other and bring about a just and lasting peace among ourselves and all men.

The Distinguished Leadership of Joseph W. Martin, Jr.

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. REED of New York. Mr. Speaker, the Honorable JOSEPH W. MARTIN, JR., of the 14th Congressional District of Massachusetts, deserves the praise and appreciation of the Nation for his outstanding leadership in the House of Representatives and as an influential leader in our national affairs.

Since 1939 the beloved gentleman from Massachusetts has served as either Speaker or minority leader of the House of Representatives. Previous to that time he had served in a succession of important positions in the House of Representatives since first coming to Congress in 1925.

It has been my cherished privilege to claim JOE MARTIN as a friend and colleague during his entire term of service in the United States Congress. In war and in peace, in adversity and in prosperity, the example and wisdom of this sturdy New Englander have lent courage and forthrightness to all who have served with him. His perception and understanding embody the steadfastness of the past, the reality of the present, and the hope of the future. The leadership qualities of JOSEPH W. MARTIN, JR., put him foremost as the guardian of the rights and liberties of men and of nations.

The counsel and guidance of our admired minority leader have served to ease the legislative burdens that each of us must bear. Regardless of seniority in the House or tenure in office, each Member of this distinguished body has done his assigned tasks better because of the able leadership of our esteemed colleague. JOE MARTIN'S knowledge of the problems confronting all geographical areas of our Nation and his awareness of the needs of each segment of our economy have made his judgment on national matters respected by all.

Mr. Speaker, in closing, I would like to express the view that our American ideals and our way of life will long endure under the able leadership of our beloved minority leader, JOSEPH W. MARTIN, JR., of Massachusetts.

PROCEEDINGS OF THE SENATE SUBSEQUENT TO SINE DIE ADJOURNMENT

REPORT OF COMMITTEE ON BANKING AND CURRENCY ENTITLED "SUMMARY OF ACTIVITIES" (S. REPT. NO. 1306)

Pursuant to the order of the Senate of August 1, 1955,

Mr. FULBRIGHT, from the Committee on Banking and Currency, on August 10, 1955, submitted a report of that commitee entitled "Summary of Activities," which was ordered to be printed.

PROCEEDINGS OF THE HOUSE SUBSEQUENT TO SINE DIE ADJOURNMENT

APPOINTMENTS BY THE SPEAKER SUBSEQUENT TO SINE DIE ADJOURNMENT OF THE HOUSE—THEODORE ROOSEVELT CENTENNIAL COMMISSION

The SPEAKER, pursuant to the provisions of Public Law 183, 84th Congress, and the order of the House of August 2, 1955, empowering him to appoint commissions, boards, and committees authorized by law or by the House, did, on August 25, 1955, appoint as members of the Theodore Roosevelt Centennial Commission the following Members on the part of the House to serve with himself: LEO W. O'BRIEN, Democrat, of New York; STEVEN B. DEROUNIAN, Republican, of New York.

APPOINTMENTS BY THE SPEAKER SUBSEQUENT TO SINE DIE ADJOURNMENT OF THE HOUSE—FRANKLIN DELANO ROOSEVELT MEMORIAL COMMISSION

The SPEAKER, pursuant to the provisions of Public Law 372, 84th Congress, and the order of the House of August 2, 1955, empowering him to appoint commissions, boards, and committees authorized by law or by the House, did, on August 25, 1955, appoint as members of the Franklin Delano Roosevelt Memorial Commission the following Members on the part of the House: JOHN W. MCCORMACK, Democrat, of Massachusetts; EUGENE J. KEOGH, Democrat, of New York; KATHARINE ST. GEORGE, Republican, of New York; PAUL F. SCHENCK, Republican, of Ohio.
